Notes:

- The dependency and priority is based on the information available as of February 19, 2009.
- Where individual IDs are listed, there is a desire that an ID providing similar requirements of functionality be progressed within the working group.
- The **Risk** column indicates the perceived risk of an ID progressing to RFC in the required timeframe.
 - **Low:** RFC number probable in required publication timeframe
 - **Medium:** RFC number likely in required publication timeframe
 - **High:** RFC number unlikely in required publication timeframe
 - **Critical:** RFC number unlikely when publication is imminent
- The **3GPP2 Priority** column indicates criticality of the ID to the 3GPP2 specification.
 - **Desirable:** Desire to include functionality in referenced release
 - **Critical:** Required functionality in referenced release
- The **3GPP2 Need** column briefly describes the basic functional need.
- IETF/IESG Status is based on "IETF ID Tracker" at <https://datatracker.ietf.org/public/pidtracker.cgi>. IDs that have been advanced to RFC are marked in **green**. IDs in risk of meeting the publication date are marked in **red**. IDs with a Risk level of High or Critical, are Definite, and have Critical 3GPP2 Priority are highlighted in **yellow** in the list.
