 25 field to '1'; otherwise, the mobile station shall set this field to
 26 '0'.

1		This field consists of the subfields shown in Table 2.7.1.3.2.1-
2		6.
3		The mobile station shall set each subfield to '1' if the
4		corresponding message integrity algorithm is supported by
5		the mobile station; otherwise, the mobile station shall set the
6		subfield to '0'.
7		The mobile station shall set the RESERVED subfield to
8		'00000000'.
9	SIG_INTEGRITY_REQ	- Signaling message integrity algorithm requested by the mobile
10		station.
11		If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
12		mobile station shall set this field as follows; otherwise, the
13		mobile station shall omit this field.
14		The mobile station shall include this field and set it to the
15		value corresponding to the message integrity algorithm
16		requested as shown in Table 2.7.1.3.2.1-7.
17	NEW_KEY_ID	- New key identifier.
18		If MSG_INT_INFO_INCL is included and is set to '1', the
19		mobile station shall include this field and set it as follows;
20		otherwise, the mobile station shall omit this field.
21		The mobile station shall set this field as follows:
22		• If LAST_2G_KEY_ID equals '00', the mobile station shall
23		set this field to '01'.
24		• If LAST_2G_KEY_ID equals '01', the mobile station shall
25		set this field to '00'.
26	NEW_SSEQ_H_INCL	- The include indicator of the 24 MSB of the security sequence
27		number.
28		If MSG_INT_INFO_INCL is included and is set to '1', the
29		mobile station shall include this field and set it as follows;
30		otherwise, the mobile station shall omit this field.
31		The mobile station shall set this field to '0' if any of the
32		following is true:
33		• If SIG_ENCRYPT_SUP is included and the ECMEA or REA
34		subfield in SIG_ENCRYPT_SUP is set to '1'
35		• RESTORE_KEYS is equal to '1'.
36		In all other cases, the mobile station shall set this field to '1'.
37	NEW_SSEQ_H	- The 24-bit value used to initialize the 24 MSB of the crypto-
38		sync.
39		If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
40		station shall include this field and set this field as follows;
41		otherwise, the mobile station shall omit this field.
42		The mobile station shall set this field to a 24-bit value that
43		will be used as the initial value of the 24 MSB of the crypto-
44		sync for both forward and reverse link message integrity.

- 1 NEW_SSEQ_H_SIG - The signature of NEW_SSEQ_H
- 2 If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
- 3 station shall include this field and set this field as follows;
- 4 otherwise, the mobile station shall omit this field.
- 5 The mobile station shall set this field to the digital signature
- 6 of the NEW_SSEQ_H computed as described in 2.3.12.4.5.
- 7 FOR_PDCH_SUPPORTED- Forward Packet Data Channel supported indicator.
- 8 If P_REV_IN_USE_s is less than nine, the mobile station shall
- 9 omit this field; otherwise, the mobile station shall include this
- 10 field and set it as follows.
- 11 If the mobile station supports the Forward Packet Data
- 12 Channel, then the mobile station shall set this field to '1';
- 13 otherwise, the mobile station shall set this field to '0'.
- 14 FOR_PDCH Capability
- 15 Type-specific fields - Forward Packet Data Channel capability information.
- 16 If the FOR_PDCH_SUPPORTED field is included and is set to
- 17 '1', the mobile station shall include this field and set it as
- 18 defined in 2.7.4.27.5; otherwise, the mobile station shall omit
- 19 this field.
- 20 EXT_CH_IND - Extended Channel Indicator.
- 21 If the CH_IND field is not included or is included but is not
- 22 set to '00', the mobile station shall omit this field; otherwise,
- 23 the mobile station shall include this field and set it as follows.
- 24 The mobile station shall set this field as shown in Table
- 25 2.7.1.3.2.4-11 to request a physical resource.
- 26

1

Table 2.7.1.3.2.4-11. Extended Channel Indicator

EXT_CH _IND (Binary)	Physical Resource(s) Requested
00000	Reserved
00001	F-PDCH + F-CPCCH + R-FCH
00010	F-PDCH + F-CPCCH + R-DCCH
00011	F-PDCH + F-FCH + R-FCH
00100	F-PDCH + F-DCCH + R-DCCH
00101	F-PDCH + F-FCH + R-FCH + R-DCCH
00110	F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH
00111	Reserved
01000	F-PDCH + R-PDCH + F-CPCCH
01001	F-PDCH + R-PDCH + F-CPCCH + R-FCH
01010	F-PDCH + R-PDCH + F-CPCCH + R-DCCH
01011	F-PDCH + R-PDCH + F-FCH + R-FCH
01100	F-PDCH + R-PDCH + F-DCCH + R-DCCH
01101	F-PDCH + R-PDCH + F-FCH + R-FCH + R-DCCH
01110	F-PDCH + R-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH

EXT_CH _IND (Binary)	Physical Resource(s) Requested
01111	F-PDCH + F-FCH + F-DCCH + R-DCCH
10000	F-PDCH + F-CPCCH + F-DCCH + R-DCCH
10001	F-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH
10010	F-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH

10111 ~11111	Reserved

1 SIGN_SLOT_CYCLE_INDEX – Sign of the slot cycle index.

2 If P_REV_IN_USE_s is less than 11, or if the
3 SLOT_CYCLE_INDEX field is set to '000', the mobile station
4 shall omit this field; otherwise, the mobile station shall
5 include this field and set it as follows:

6 The mobile station shall set this field as specified in Table
7 2.7.1.3.2.1-8 to the sign of the preferred slot cycle index,
8 SLOT_CYCLE_INDEX_p (see 2.6.2.1.1). The absolute value of
9 the preferred slot cycle index, SLOT_CYCLE_INDEX_p, is
10 specified in the SLOT_CYCLE_INDEX field of this message.

- 1 ADD_SERV_INSTANCE_INCL- Additional service instances included indicator.
 2 If P_REV_IN_USE_s is less than 11 or if SR_ID is included and
 3 set to '111', the mobile station shall omit this field; otherwise,
 4 the mobile station shall include this field and set it as follows:
 5 If at least one occurrence of the ADD_SR_ID field is included
 6 in this message, the mobile station shall set this field to '1';
 7 otherwise, the mobile station shall set this field to '0'.
 8 If SYNC_ID_INCL is equal to '0' and
 9 MAX_ADD_SERV_INSTANCE_s is equal to '0', the mobile
 10 station shall set this field to '0'.
- 11 NUM_ADD_SERV_INSTANCE- Number of additional service instances included.
 12 If ADD_SERV_INSTANCE_INCL is not included or is included
 13 and set to '0', the mobile station shall omit this field;
 14 otherwise, the mobile station shall include this field and set it
 15 to the number of additional service instances included in this
 16 message.
 17 If SYNC_ID_INCL is equal to '0', the mobile station shall set
 18 this field to a value less than or equal to
 19 MAX_ADD_SERV_INSTANCE_s.
- 20 If ADD_SERV_INSTANCE_INCL is included and set to '1', the mobile station shall include
 21 NUM_ADD_SERV_INSTANCE occurrences of the following variable-field record:
- 22 ADD_SR_ID - Additional service reference identifier.
 23 If SYNC_ID_INCL is set to '0', the mobile station shall set this
 24 field as follows:
 25 • If the service instance provides a service reference
 26 identifier, the mobile station shall set this field to the
 27 service reference identifier specified by the service
 28 instance. If the service instance does not provide a service
 29 reference identifier, the mobile station shall set this field
 30 to the smallest unused service reference identifier value
 31 between 1 and 6 (inclusive).
 32 Otherwise, the mobile station shall set this field to the service
 33 reference identifier corresponding to the service option
 34 connection that the mobile station requests to be restored
 35 from the stored service configuration.
- 36 ADD_DRS - Additional Data Ready to Send indicator.
 37 If the service instance corresponding to the ADD_SR_ID field
 38 of this record has data to send, the mobile station shall set
 39 this field to '1'; otherwise, the mobile station shall set this
 40 field to '0'.
- 41 ADD_SERVICE_OPTION_INCL - Additional service option included indicator.
 42 If SYNC_ID_INCL is set to '1', the mobile station shall omit
 43 this field; otherwise, the mobile station shall include this field
 44 and set it as follows:

- 1 The mobile station shall set this field to '0' if the requested
2 service option number of the service instance corresponding
3 to the ADD_SR_ID field of this record is the same as
4 SERVICE_OPTION; otherwise, the mobile station shall set this
5 field to '1'.
- 6 ADD_SERVICE_OPTION – Additional service option number.
- 7 If the ADD_SERVICE_OPTION_INCL field of this record is not
8 included or is included and set to '0', the mobile station shall
9 omit this field; otherwise, the mobile station shall include this
10 field and set it to the value specified in [30], corresponding to
11 the requested service option number of the service instance
12 corresponding to the ADD_SR_ID field of this record.
- 13 ADD_QOS_PARMS_INCL – Additional QoS parameters included indicator.
- 14 If SYNC_ID_INCL is set to '1', the mobile station shall omit
15 this field; otherwise, the mobile station shall include this field
16 and set it as follows:
- 17 If QoS parameters for the service instance corresponding to
18 the ADD_SR_ID field of this record are included in this
19 message, the mobile station shall set this field to '1';
20 otherwise, the mobile station shall set this field to '0'.
- 21 The mobile station shall not set this field to '1' if MOB_QOS_s
22 is set to '0'.
- 23 ADD_QOS_PARMS_LEN – Additional Length of the block of QoS parameters.
- 24 If the ADD_QOS_PARMS_INCL field of this record is not
25 included or is included and is set to '0', the mobile station
26 shall omit this field; otherwise, the mobile station shall
27 include this field and set it to the combined length of the
28 ADD_QOS_PARMS field and the ADD_QOS_RESERVED field
29 of this record, in octets.
- 30 ADD_QOS_PARMS – Additional QoS parameters block.
- 31 If the ADD_QOS_PARMS_INCL field of this record is not
32 included or is included and is set to '0', the mobile station
33 shall omit this field; otherwise, the mobile station shall
34 include this field and set it to the set of QoS parameter values
35 as defined in accordance with the requirements for the
36 requested service option and/or for the user, per
37 subscription.
- 38 ADD_QOS_RESERVED – Additional QoS reserved bits.
- 39 If the ADD_QOS_PARMS_INCL field of this record is not
40 included or is included and is set to '0', the mobile station
41 shall omit this field; otherwise, the mobile station shall
42 include the minimum number of bits of '0', such that the
43 combined length of the QOS_PARMS field and of this field is
44 an integer number of octets.

- 1 BCMC_INCL - BCMC information included indicator
- 2 If the P_REV_IN_USE_s is less than eleven, the mobile station
- 3 shall omit this field; otherwise, the mobile station shall
- 4 include this field and set it as follows:
- 5 The mobile station shall set this field to '1' if one or more
- 6 BCMC_PROGRAM_IDs are included in the message;
- 7 otherwise, the mobile station shall set this field to '0'.
- 8 BCMC_ORIG_ONLY_IND - BMC origination only indicator
- 9 If the BCMC_INCL field is not included or is included and is
- 10 set to '0', the mobile station shall omit this field; otherwise,
- 11 the mobile station shall include this field and set it as follows:
- 12 The mobile station shall set this field to '1' to indicate that
- 13 this origination is only for BMC and no point to point call is
- 14 requested in this message; otherwise the mobile station shall
- 15 set this field to '0'.
- 16 FUNDICATED_BCMC_SUPPORTED - Fundicated BMC capability type-specific
- 17 supported indicator.
- 18 If the BCMC_INCL field is not included or is included and is
- 19 set to '0', the mobile station shall omit this field; otherwise,
- 20 the mobile station shall include this field and set it as follows.
- 21 If the mobile station supports Fundicated BMC channel
- 22 configurations, the mobile station shall set this field to '1';
- 23 otherwise, the mobile station shall set this field to '0'.
- 24 FUNDICATED_BCMC Capability
- 25 Type-specific fields - FUNDICATED_BCMC capability information.
- 26 If the FUNDICATED_BCMC_SUPPORTED field is included and
- 27 is set to '1', the mobile station shall include this field and set
- 28 it as defined in 2.7.4.27.7; otherwise, the mobile station shall
- 29 omit this field.
- 30 AUTH_SIGNATURE_INCL - Authorization signature included indication.
- 31 If the BCMC_INCL field is not included or is included and is
- 32 set to '0', the mobile station shall omit this field; otherwise,
- 33 the mobile station shall include this field and set it as follows.
- 34 The mobile station shall set this field to '1' to indicate that the
- 35 authorization signature is included in this message for some
- 36 of the BMC flows included in this message; otherwise, the
- 37 mobile station shall set this field to '0'.
- 38 TIME_STAMP_SHORT_LENGTH - Length of time stamp included in this message.
- 39 If the AUTH_SIGNATURE_INCL field is not included or is
- 40 included and is set to '0', the mobile station shall omit this
- 41 field; otherwise, the mobile station shall include this field and
- 42 set it as follows:

1 If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include
 2 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
 3 otherwise, the mobile station shall include 1 occurrence of the following variable length
 4 record:

5 **BCMC_FLOW_DISCRIMINATOR** – BCMC Flow discriminator.

6 The length of this field shall be determined by the value of the
 7 **BCMC_FLOW_DISCRIMINATOR_LEN** as follows: if
 8 **BCMC_FLOW_DISCRIMINATOR_LEN** is set to '000', this field
 9 is omitted; otherwise, the length of this field shall be
 10 **BCMC_FLOW_DISCRIMINATOR_LEN** bits.

11 The mobile station shall set this field to the BCMC flow
 12 discriminator requested.

13 **AUTH_SIGNATURE_IND** - Authorization signature indicator.

14 If the **AUTH_SIGNATURE_INCL** field is not included or is
 15 included and is set to '0', the mobile station shall omit this
 16 field; otherwise, the mobile station shall include this field and
 17 set it as follows:

18 The mobile station shall set this field to '1' to indicate that the
 19 authorization signature is included in this message for this
 20 BCMC flow; otherwise, the mobile station shall set this field to
 21 '0'.

22 **AUTH_SIGNATURE_SAME_IND** - Authorization signature same as previous BCMC
 23 flow indicator.

24 If the **AUTH_SIGNATURE_IND** field is not included or is
 25 included and is set to '0', the mobile station shall omit this
 26 field; otherwise, the mobile station shall include this field and
 27 set it as follows:

28 The mobile station shall set this field to '1' to indicate that the
 29 authorization signature generated for this BCMC flow is the
 30 same as the one generated for the BCMC flow listed prior to
 31 this BCMC flow in this message; otherwise, the mobile station
 32 shall set this field to '0'.

33 For the first BCMC flow listed in this message, the mobile
 34 station shall set this field to '0'.

35 **BAK_ID** - BAK identifier.

36 If the **AUTH_SIGNATURE_SAME_IND** field is not included or
 37 is included and is set to '1', the mobile station shall omit this
 38 field; otherwise, the mobile station shall include this field and
 39 set it as follows:

40 The mobile station shall set this field to BAK identifier used to
 41 generate the Authorization signature included in this
 42 message.

- 1 AUTH_SIGNATURE - Authorization signature.
- 2 If the AUTH_SIGNATURE_SAME_IND field is not included or
3 is included and is set to '1', the mobile station shall omit this
4 field; otherwise, the mobile station shall include this field and
5 set it as follows:
- 6 The mobile station shall set this field to the Authorization
7 signature computed for this BCMC flow as specified in
8 2.6.13.9.
- 9 REV_PDCH_SUPPORTED - Reverse Packet Data Channel supported indicator.
- 10 If P_REV_IN_USE_S is less than 11 or
11 FOR_PDCH_SUPPORTED is not included or is included and is
12 set to '0', the mobile station shall omit this field; otherwise,
13 the mobile station shall include this field and set it as follows.
- 14 If the mobile station supports the Reverse Packet Data
15 Channel (R-PDCH), the mobile station shall set this field to '1';
16 otherwise, the mobile station shall set this field to '0'.
- 17 REV_PDCH Capability
- 18 Type-specific fields - Reverse Packet Data Channel capability information.
- 19 If the REV_PDCH_SUPPORTED field is included and is set to
20 '1', the mobile station shall include this field and set it as
21 defined in 2.7.4.27.6; otherwise, the mobile station shall omit
22 this field.
- 23 BAND_SUB_REP_INCL - Band class – band subclass report included
- 24 If P_REV_IN_USE_S is less than eleven, the mobile station shall
25 omit this field; otherwise, the mobile station shall include this
26 field and set it as follows:
- 27

- 1 If CAND_BAND_INFO_REQ_s is equal to '1' and the mobile
 2 station supports at least 1 band class and band subclass (if
 3 applicable) combination queried by the base station, the
 4 mobile station shall set this field to '1'; otherwise, the mobile
 5 station shall set this field to '0'.
- 6 NUM_BAND_SUBCLASS – Number of band class - band subclass capabilities reported
 7
 8 If BAND_SUB_REP_INCL is set to '0' or is not included, this
 9 field shall be omitted; otherwise, the mobile station shall
 10 include this field and set it as follows:
 11
 12 If the mobile station supports all candidate band class and
 13 band subclass (if applicable) combinations queried by the
 14 base station, the mobile station shall set this field to '0000';
 otherwise, the mobile station shall set this field to the number
 of band class-band subclass capabilities reported.
- 15 If the NUM_BAND_SUBCLASS field is included in this message, the mobile station shall
 16 include NUM_BAND_SUBCLASS occurrences of the BAND_SUBCLASS_SUP field:
- 17 BAND_SUBCLASS_SUP – Band class-band subclass supported indicator
 18
 19 The mobile station shall set this field as specified in section
 2.6.14.1.
- 20 ADD_GEO_LOC_INCL – Additional Geo-location included indicator.
 21
 22 If P_REV_IN_USE_s is less than twelve, the mobile station shall
 23 omit this field; otherwise, the mobile station shall include this
 24 field and set it as follows.
 25
 26 If the message is to contain the ADD_GEO_LOC_TYPE field,
 the mobile station shall set this field to '1'; otherwise, the
 mobile station shall set this field to '0'.
- 27 ADD_GEO_LOC_TYPE_LEN_IND – Additional Geo-Location Type Length Indicator.
 28
 29 If ADD_GEO_LOC_INCL is included in the message and is set
 30 to '1', the mobile station shall include this field and shall set it
 31 as described below; otherwise, the mobile station shall omit
 this field.
 32
 33 The mobile station shall set this field to '0' to indicate length
 34 of the ADD_GEO_LOC_TYPE field is 16 bits. The mobile
 35 station shall set this field to '1' to indicate length of the
 ADD_GEO_LOC_TYPE field is 24 bits.
- 36 ADD_GEO_LOC_TYPE – Additional Geo-Location Type.
 37
 38 If ADD_GEO_LOC_INCL is included in the message and is set
 39 to '1', the mobile station shall include this field and shall set it
 40 as described below; otherwise, the mobile station shall omit
 this field.

1
2
3
4
5

This field consists of the subfields shown in 2.7.4.46-1.
The mobile station shall set each subfield to '1' if the corresponding capability is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

1

2

MOB_TERM – Mobile terminated calls accepted indicator.

3

4

5

6

If the mobile station is configured to accept mobile terminated calls while operating with the current roaming status (see 2.6.5.3), the mobile station shall set this bit to '1'. Otherwise, the mobile station shall set this bit to '0'.

7

SLOT_CYCLE_INDEX – Slot cycle index.

8

9

10

If P_REV_IN_USE_s is less than 11, or if MIN_SLOT_CYCLE_INDEX is equal to '0', the mobile station shall perform the following:

11

12

13

14

15

- If the mobile station is configured for slotted mode operation, the mobile station shall set this field to max (0, SLOT_CYCLE_INDEX_p) (see 2.6.2.1.1). Otherwise, the mobile station shall set this field to '000'.

Otherwise, the mobile station shall perform the following:

16

17

18

19

20

21

22

23

- If the mobile station is configured for slotted mode operation, the mobile station shall set this field to the absolute value of the preferred slot cycle index, SLOT_CYCLE_INDEX_p (see 2.6.2.1.1); otherwise, the mobile station shall set this field to '000'. The sign of SLOT_CYCLE_INDEX_p is specified in the SIGN_SLOT_CYCLE_INDEX field of this message (see Table 2.7.1.3.2.1-8).

24

MOB_P_REV – Protocol revision of the mobile station.

25

The mobile station shall set this field to '00001100'.

1	SCM	– Station class mark.
2		The mobile station shall set this field to the station class mark
3		of the mobile station. See 2.3.3.
4	REQUEST_MODE	– Requested mode code. The mobile station shall set this field
5		to the value shown in Table 2.7.1.3.2.4-1 corresponding to its
6		current configuration.
7	SERVICE_OPTION	– Service option.
8		If the mobile station accepts the service option specified by
9		the mobile-station-addressed page, it shall set this field as
10		follows:
11		• If the page record to which the mobile station is
12		responding contained a SERVICE_OPTION field, the
13		mobile station shall set this field to the service option
14		number specified in the SERVICE_OPTION field of the
15		page record to which the mobile station is responding.
16		• If the page record to which the mobile station is
17		responding did not contain a SERVICE_OPTION field, the
18		mobile station shall set this field to the default option
19		number ‘0000000000000001’.
20		If the mobile station does not accept the service option
21		specified by the mobile-station-addressed page to which the
22		mobile station is responding and the mobile station has an
23		alternative service option to request, the mobile station shall
24		set this field to the service option code specified in [30]
25		corresponding to the alternative service option.
26		If the mobile station does not accept the service option
27		specified by the mobile-station-addressed page to which the
28		mobile station is responding and the mobile station does not
29		have an alternative service option to request, the mobile
30		station shall set this field to ‘0000000000000000’ to reject the
31		service option specified by the page record of the <i>General Page</i>
32		<i>Message</i> or <i>Universal Page Message</i> to which the mobile
33		station is responding.
34		If the mobile station is not responding to a page and the
35		service option for this call setup is not known, the mobile
36		station shall set this field to ‘0000000000000001’ to indicate
37		the base station is not to use this field ⁸² .
38	PM	– Privacy mode indicator.
39		To request voice privacy, the mobile station shall set this field
40		to ‘1’; otherwise, the mobile station shall set this field to ‘0’.
41	NAR_AN_CAP	– Narrow analog capability.

⁸² This scenario could occur only in a Direct Channel Assignment call setup.

- 1 If the mobile station is capable of narrow analog operation,
 2 the mobile station shall set this bit to '1'; otherwise, the
 3 mobile station shall set this bit to '0'. The mobile station shall
 4 set this bit to '0'.
- 5 ENCRYPTION_SUPPORTED – Encryption algorithms supported by the mobile station.
 6 If P_REV_IN_USE_s is greater than or equal to seven or
 7 AUTH_MODE is equal to '00', the mobile station shall omit
 8 this field. If P_REV_IN_USE_s is less than seven and
 9 AUTH_MODE is not equal to '00', then the mobile station
 10 shall set this field as specified in table 2.7.1.3.2.4-5.
- 11 NUM_ALT_SO – Number of alternative service options.
 12 If P_REV_IN_USE_s is less than seven, the mobile station shall
 13 set this field to the number of alternative service options it
 14 supports other than the one specified in the
 15 SERVICE_OPTION field. The mobile station shall set this field
 16 to a value less than or equal to MAX_NUM_ALT_SO_s.
 17 If P_REV_IN_USE_s is equal to or greater than seven, the
 18 mobile station shall set this field to the number of alternate
 19 service options, which either have no service option group
 20 number assigned or do not belong to the same service option
 21 group whose bitmap is being included. The alternate service
 22 option numbers are other than the one specified in the
 23 SERVICE_OPTION field. The mobile station shall set this field
 24 to a value less than or equal to MAX_NUM_ALT_SO_s.
- 25 ALT_SO – Alternative service option.
 26 The mobile station shall include NUM_ALT_SO occurrences of
 27 this field. The mobile station shall set this field to the value
 28 specified in [30], corresponding to the alternative service
 29 option supported by the mobile station.
 30 If P_REV_IN_USE_s is equal to or greater than seven, the
 31 mobile station shall include NUM_ALT_SO occurrences of in
 32 this field. The mobile station shall set this field to the service
 33 option number defined in [30] corresponding to the alternate
 34 service options which either have no service option group
 35 number assigned or do not belong to the same service option
 36 group whose bitmap is included in this message.
- 37 UZID_INCL – User Zone Identifier included indicator.
 38 If P_REV_IN_USE_s is less than six, the mobile station shall
 39 omit this field; otherwise, the mobile station shall include this
 40 field and set it as follows.
 41 If the message is to contain the User Zone Identifier, the
 42 mobile station shall set this field to '1'; otherwise, the mobile
 43 station shall set this field to '0'.
- 44 UZID – User Zone Identifier.

1 If the UZID_INCL field is included in the message and is set to
 2 '1', the mobile station shall include this field and set it to
 3 UZID_S; otherwise, the mobile station shall omit this field.

4 CH_IND – Channel Indicator.

5 If P_REV_IN_USE_S is less than six, the mobile station shall
 6 omit this field; otherwise, the mobile station shall include this
 7 field and set it, as shown in Table 2.7.1.3.2.5-1, to request
 8 physical resources.

9 **Table 2.7.1.3.2.5-1. Channel indicator**

CH_IND (binary)	Channel(s) Requested
00	Refer to EXT_CH_IND
01	Fundamental Channel
10	Dedicated Control Channel
11	Fundamental Channel and Dedicated Control Channel

10

11 OTD_SUPPORTED – Orthogonal transmit diversity supported indicator

12 If P_REV_IN_USE_S is less than six, the mobile station shall
 13 omit this field; otherwise, the mobile station shall include this
 14 field and set it as follows.

15 If the mobile station supports orthogonal transmit diversity, it
 16 shall set this field to '1'; otherwise, the mobile station shall set
 17 this field to '0'.

18 QPCH_SUPPORTED – Quick Paging Channel supported indicator.

19 If P_REV_IN_USE_S is less than six, the mobile station shall omit
 20 this field; otherwise, the mobile station shall include this field
 21 and set it as follows.

22 If the mobile station supports the Quick Paging Channel, the
 23 mobile station shall set this field to '1'; otherwise, the mobile
 24 station shall set this field to '0'.

25 ENHANCED_RC – Enhanced radio configuration supported indicator.

26 If P_REV_IN_USE_S is less than six, the mobile station shall omit
 27 this field; otherwise, the mobile station shall include this field
 28 and set it as follows.

29 If the mobile station supports any radio configuration in the
 30 Radio Configuration Class 2 (see 1.1.1), the mobile station shall
 31 set this field to '1'; otherwise, the mobile station shall set this
 32 field to '0'.

33 FOR_RC_PREF – Forward Radio Configuration preference.

- 1 If P_REV_IN_USE_S is less than six, the mobile station shall
 2 omit this field; otherwise, the mobile station shall include this
 3 field and set it as follows.
- 4 The mobile station shall set this field to its preferred Radio
 5 Configuration for the Forward Fundamental Channel and/or
 6 Forward Dedicated Control Channel.
- 7 REV_RC_PREF – Reverse Radio Configuration preference.
- 8 If P_REV_IN_USE_S is less than six, the mobile station shall
 9 omit this field; otherwise, the mobile station shall include this
 10 field and set it as follows.
- 11 The mobile station shall set this field to its preferred Radio
 12 Configuration for the Reverse Fundamental Channel and/or
 13 Reverse Dedicated Control Channel.
- 14 FCH_SUPPORTED – Fundamental Channel supported indicator.
- 15 If P_REV_IN_USE_S is less than six, the mobile station shall
 16 omit this field; otherwise, the mobile station shall include this
 17 field and set it as follows.
- 18 The mobile station shall set this field to ‘1’ if the mobile
 19 station supports Fundamental Channel; otherwise, the mobile
 20 station shall set this field to ‘0’.
- 21 FCH Capability Type specific fields – Fundamental Channel capability information.
- 22 If the FCH_SUPPORTED field is included and is set to ‘1’, the
 23 mobile station shall include this field and set it as described
 24 in 2.7.4.27.1; otherwise, the mobile station shall omit this
 25 field.
- 26 DCCH_SUPPORTED – Dedicated Control Channel supported indicator.
- 27 If P_REV_IN_USE_S is less than six, the mobile station shall
 28 omit this field; otherwise, the mobile station shall include this
 29 field and set it as follows.
- 30 The mobile station shall set this field to ‘1’ if the mobile
 31 station supports Dedicated Control Channel; otherwise, the
 32 mobile station shall set this field to ‘0’.
- 33 DCCH Capability Type specific fields– Dedicated Control Channel capability information.
- 34 If DCCH_SUPPORTED is included and is set to ‘1’, the mobile
 35 station shall include this field and set it as defined in
 36 2.7.4.27.2; otherwise, the mobile station shall omit this field.
- 37 REV_FCH_GATING_REQ – Reverse Fundamental Channel eighth gating mode request
 38 indicator.
- 39 If P_REV_IN_USE_S is less than six, the mobile station shall
 40 omit this field; otherwise, the mobile station shall include this
 41 field and set it as follows:

1 If the mobile station requests to turn on the reverse
2 Fundamental Traffic Channel gating mode in Radio
3 Configurations 3, 4, 5, and 6, the mobile station shall set this
4 field to '1'; otherwise, the mobile station shall set this field to
5 '0'.

6 STS_SUPPORTED – STS supported indicator.

7 If P_REV_IN_USE_S is less than seven, the mobile station shall
8 omit this field; otherwise, the mobile station shall include this
9 field and set it as follows.

10 The mobile station shall set this field to '1' if the mobile
11 station supports Space Time Spreading Transmit Diversity;
12 otherwise, the mobile station shall set this field to '0'.

13 3X_CCH_SUPPORTED – 3X Common Channels supported.

14 If P_REV_IN_USE_S is less than seven, the mobile station shall
15 omit this field; otherwise, the mobile station shall include this
16 field and set it as follows.

17 The mobile station shall set this field to '1' if the mobile
18 station supports the Spreading Rate 3 common channels (3X
19 BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile
20 station shall set this field to '0'.

21 WLL_INCL – WLL information included indicator.

22 If P_REV_IN_USE_S is less than seven, the mobile station shall
23 omit this field; otherwise, the mobile station shall include this
24 field and set it as follows.

25 If the mobile station is a Wireless Local Loop device, the
26 mobile station shall set this field to '1'; otherwise, the mobile
27 station shall set this field to '0'.

28 WLL_DEVICE_TYPE – WLL device type indicator.

29 If WLL_INCL is not included, or if WLL_INCL is included and
30 is set to '0', the mobile station shall omit this field; otherwise,
31 the mobile station shall set this field as follows.

32 The mobile station shall set this field to the
33 WLL_DEVICE_TYPE value shown in Table 2.7.1.3.2.1-3
34 corresponding to the mobile station device type.

35 HOOK_STATUS – WLL terminal hook status.

36 If WLL_INCL is not included, or if WLL_INCL is included and
37 is set to '0', the mobile station shall omit this field; otherwise,
38 the mobile station shall set this field to the value shown in
39 Table 2.7.1.3.2.1-4 corresponding to the hook state.

- 1 ENC_INFO_INCL – Encryption fields included.
- 2 If P_REV_IN_USE_S is less than seven, the mobile station shall
- 3 omit this field; otherwise, the mobile station shall include this
- 4 field and set it as follows:
- 5 The mobile station shall set this field to '1' if the encryption
- 6 related fields are included; otherwise the mobile station shall
- 7 set this field to '0'. The mobile station shall set this field to '0'
- 8 if the base station does not support encryption or the mobile
- 9 station does not support any of the encryption modes
- 10 supported by the base station.
- 11 SIG_ENCRYPT_SUP – Signaling encryption supported indicator.
- 12 If ENC_INFO_INCL is included and is set to '1', the mobile
- 13 station shall include this field; otherwise, the mobile station
- 14 shall omit this field. If this field is included, the mobile
- 15 station shall set this field to indicate which signaling
- 16 encryption algorithms are supported by the mobile station.
- 17 This field consists of the subfields shown in Table 2.7.1.3.2.1-
- 18 5.
- 19 If this field is included, the mobile station shall set the
- 20 subfields as follows:
- 21 The mobile station shall set the CMEA subfield to '1'.
- 22 The mobile station shall set each other subfield to '1' if the
- 23 corresponding signaling encryption algorithm is supported by
- 24 the mobile station; otherwise, the mobile station shall set the
- 25 subfield to '0'.
- 26 The mobile station shall set the RESERVED subfield to
- 27 '00000'.
- 28 D_SIG_ENCRYPT_REQ – Dedicated channel signaling encryption request indicator.
- 29 If ENC_INFO_INCL is included and is set to '1', the mobile
- 30 station shall include this field; otherwise, the mobile station
- 31 shall omit this field. If this field is included, the mobile
- 32 station shall set this field to '1' to request signaling encryption
- 33 to be turned on for signaling messages sent on f-dsch and r-
- 34 dsch, and to '0' to request signaling encryption to be turned
- 35 off for signaling messages sent on f-dsch and r-dsch.
- 36 C_SIG_ENCRYPT_REQ – Common channel signaling encryption request indicator.
- 37 If ENC_INFO_INCL is included and is set to '1', the mobile
- 38 station shall include this field; otherwise, the mobile station
- 39 shall omit this field. If this field is included, the mobile
- 40 station shall set this field to '1' to request signaling encryption
- 41 to be turned on for signaling messages sent on f-csch and r-
- 42 csch, and to '0' to request signaling encryption to be turned
- 43 off for signaling messages sent on f-csch and r-csch.
- 44 NEW_SSEQ_H – The 24-bit value used to initialize the 24 MSB of the crypto-
- 45 sync.

1			If SIG_ENCRYPT_SUP is included and the ECMEA or REA
2			subfield in SIG_ENCRYPT_SUP is set to '1', the mobile station
3			shall include this field; otherwise, the mobile station shall
4			omit this field. If this field is included, the mobile station
5			shall set this field to a 24-bit value that will be used as the
6			initial value of the 24 MSB of the crypto-sync for both forward
7			and reverse link message encryption and integrity (if message
8			integrity is performed).
9	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
10			If the NEW_SSEQ_H field is included in the message, the
11			mobile station shall set this field to the digital signature of the
12			NEW_SSEQ_H as described in 2.3.12.4.5; otherwise, the
13			mobile station shall omit this field.
14	UI_ENCRYPT_REQ	-	Request for user information encryption on the traffic channel
15			indicator.
16			If ENC_INFO_INCL is included and is set to '1', the mobile
17			station shall include this field; otherwise, the mobile station
18			shall omit this field. If this field is included, the mobile
19			station shall set this field to '1' to request user information
20			encryption, and to '0' to request no user information
21			encryption.
22	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
23			If ENC_INFO_INCL is included and is set to '1', the mobile
24			station shall include this field; otherwise, the mobile station
25			shall omit this field. If this field is included, the mobile
26			station shall set this field to indicate the supported user
27			information encryption algorithms.
28			This field consists of the subfields shown in Table 2.7.1.3.2.4-
29			9.
30			The mobile station shall set each subfield to '1' if the
31			corresponding user information encryption algorithm is
32			supported by the mobile station; otherwise, the mobile station
33			shall set the subfield to '0'.
34			The mobile station shall set the RESERVED subfield to
35			'000000'.
36	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
37			indicator.
38			If P_REV_IN_USE _s is less than seven, the mobile station shall
39			omit this field; otherwise, the mobile station shall include this
40			field and set it as follows.
41			The mobile station shall set this field to '1' if the SYNC_ID
42			field is included in this message; otherwise, the mobile station
43			shall set this field to '0'.
44			If SYNC_ID_SUPPORTED _s is equal to '0', the mobile station
45			shall set this field to '0'.

1 If BAND_CLASS_INFO_REQ_s is equal to '1' and the mobile
2 station supports the CDMA band class specified by
3 ALT_BAND_CLASS_s, then the mobile station shall set this
4 field to '1'; otherwise, the mobile station shall set this field to
5 '0'.

6 MSG_INT_INFO_INCL - Signaling message integrity information included indicator.
7 If P_REV_IN_USE_s is less than nine, the mobile station shall
8 omit this field; otherwise, the mobile station shall include this
9 field and set it as follows.
10 If MSG_INTEGRITY_SUP_s is set to '0', the mobile station shall
11 set this field to '0'; otherwise, the mobile station shall set this
12 field to '1'.

13 SIG_INTEGRITY_SUP_INCL - Signaling message integrity information included
14 indicator.
15 If MSG_INT_INFO_INCL is included and is set to '1', the
16 mobile station shall include this field and set it as follows;
17 otherwise, the mobile station shall omit this field.
18 If the mobile station supports other integrity algorithm(s) in
19 addition to the default integrity algorithm, the mobile station
20 shall set this field to '1'; otherwise, the mobile station shall set
21 this field to '0'.

22 SIG_INTEGRITY_SUP - Signaling integrity algorithm supported by the mobile station.
23 If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
24 mobile station shall set this field as follows; otherwise, the
25 mobile station shall omit this field.
26 The mobile station shall set this field to indicate the
27 supported message integrity algorithms in addition to the
28 default integrity algorithm.

1		This field consists of the subfields shown in Table 2.7.1.3.2.1-
2		6.
3		The mobile station shall set each subfield to '1' if the
4		corresponding message integrity algorithm is supported by
5		the mobile station; otherwise, the mobile station shall set the
6		subfield to '0'.
7		The mobile station shall set the RESERVED subfield to
8		'00000000'.
9	SIG_INTEGRITY_REQ	- Signaling message integrity algorithm requested by the mobile
10		station.
11		If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
12		mobile station shall set this field as follows; otherwise, the
13		mobile station shall omit this field.
14		The mobile station shall include this field and set it to the
15		value corresponding to the message integrity algorithm
16		requested as shown in Table 2.7.1.3.2.1-7.
17	NEW_KEY_ID	- New key identifier.
18		If MSG_INT_INFO_INCL is included and is set to '1', the
19		mobile station shall include this field and set it as follows;
20		otherwise, the mobile station shall omit this field.
21		The mobile station shall set this field as follows:
22		• If LAST_2G_KEY_ID equals '00', the mobile station shall
23		set this field to '01'.
24		• If LAST_2G_KEY_ID equals '01', the mobile station shall
25		set this field to '00'.
26	NEW_SSEQ_H_INCL	- The include indicator of the 24 MSB of the security sequence
27		number.
28		If MSG_INT_INFO_INCL is included and is set to '1', the
29		mobile station shall include this field and set it as follows;
30		otherwise, the mobile station shall omit this field.
31		The mobile station shall set this field to '0' if any of the
32		following is true:
33		• If SIG_ENCRYPT_SUP is included and the ECMEA or REA
34		subfield in SIG_ENCRYPT_SUP is set to '1'
35		• RESTORE_KEYS is equal to '1'.
36		In all other cases, the mobile station shall set this field to '1'.
37	NEW_SSEQ_H	- The 24-bit value used to initialize the 24 MSB of the crypto-
38		sync.
39		If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
40		station shall include this field and set this field as follows;
41		otherwise, the mobile station shall omit this field.
42		The mobile station shall set this field to a 24-bit value that
43		will be used as the initial value of the 24 MSB of the crypto-
44		sync for both forward and reverse link message integrity.

1 The mobile station shall set this field to the
2 TIME_STAMP_SHORT_LENGTH least significant bits of the
3 time stamp parameter used to generate the Authorization
4 signature included in this message.

5 NUM_BCMC_PROGRAMS- Number of BCMC Programs

6 If the BCMC_INCL field is not included or is included and is
7 set to '0', the mobile station shall omit this field; otherwise,
8 the mobile station shall include this field and set it as follows:

9 The mobile station shall set this field to the number of BCMC
10 programs included in this message minus 1.

11 The mobile station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following
12 variable length record:

13 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

14 The mobile station shall set this field to one less than the
15 length, in bits, of the BCMC_PROGRAM_ID of this program.

16 BCMC_PROGRAM_ID - BCMC program Identifier

17 The length of this field shall be one more than the value of
18 BCMC_PROGRAM_ID_LEN bits.

19 The mobile station shall set this field to the identifier of the
20 BCMC program corresponding to one or more flows that the
21 mobile station is requesting.

22 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

23 The mobile station shall set this field to the length, in bits, of
24 the BCMC_FLOW_DISCRIMINATOR of this program. To
25 request all flows associated with this BCMC_PROGRAM_ID,
26 the mobile station may set this field to '000'.

27 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators

28 The length of this field shall be determined by the value of the
29 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
30 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
31 is omitted; otherwise, the length of this field shall be
32 BCMC_FLOW_DISCRIMINATOR_LEN bits.

33 The mobile station shall set this field to the number of flow
34 discriminators included for this program minus one.

35 If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include
36 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
37 otherwise, the mobile station shall include 1 occurrence of the following variable length
38 record:

39 BCMC_FLOW_DISCRIMINATOR - BCMC Flow discriminator.

40 The length of this field shall be determined by the value of the
41 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
42 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
43 is omitted; otherwise, the length of this field shall be
44 BCMC_FLOW_DISCRIMINATOR_LEN bits.

1		The mobile station shall set this field to the BCMC flow
2		discriminator requested.
3	BCMC_PREF	- BCMC preference indicator
4		If the BCMC_PREF_INCL field is not included or is included
5		and is set to '0', the mobile station shall omit this field;
6		otherwise, the mobile station shall include this field and set it
7		as follows:
8		The mobile station shall set this field to '1' to indicate that the
9		mobile station has higher preference for this BCMC flow than
10		the incoming call for which this message is sent; otherwise,
11		the mobile station shall set this field to '0'.
12	AUTH_SIGNATURE_IND	- Authorization signature indicator.
13		If the AUTH_SIGNATURE_INCL field is not included or is
14		included and is set to '0', the mobile station shall omit this
15		field; otherwise, the mobile station shall include this field and
16		set it as follows:
17		The mobile station shall set this field to '1' to indicate that the
18		authorization signature is included in this message for this
19		BCMC flow; otherwise, the mobile station shall set this field to
20		'0'.
21	AUTH_SIGNATURE_SAME_IND	- Authorization signature same as previous BCMC
22		flow indicator.
23		If the AUTH_SIGNATURE_IND field is not included or is
24		included and is set to '0', the mobile station shall omit this
25		field; otherwise, the mobile station shall include this field and
26		set it as follows:
27		The mobile station shall set this field to '1' to indicate that the
28		authorization signature generated for this BCMC flow is the
29		same as the one generated for the BCMC flow listed prior to
30		this BCMC flow in this message; otherwise, the mobile station
31		shall set this field to '0'.
32		For the first BCMC flow listed in this message, the mobile
33		station shall set this field to '0'.
34	BAK_ID	- BAK identifier.
35		If the AUTH_SIGNATURE_SAME_IND field is not included or
36		is included and is set to '1', the mobile station shall omit this
37		field; otherwise, the mobile station shall include this field and
38		set it as follows:
39		The mobile station shall set this field to BAK identifier used to
40		generate the Authorization signature included in this
41		message.
42	AUTH_SIGNATURE	- Authorization signature.

1 If the AUTH_SIGNATURE_SAME_IND field is not included or
 2 is included and is set to '1', the mobile station shall omit this
 3 field; otherwise, the mobile station shall include this field and
 4 set it as follows:

5 The mobile station shall set this field to the Authorization
 6 signature computed for this BCMC flow as specified in
 7 2.6.13.9.

8 REV_PDCH_SUPPORTED - Reverse Packet Data Channel supported indicator.
 9 If P_REV_IN_USE_S is less than 11 or
 10 FOR_PDCH_SUPPORTED is not included or is included and is
 11 set to '0', the mobile station shall omit this field; otherwise,
 12 the mobile station shall include this field and set it as follows.
 13 If the mobile station supports the Reverse Packet Data
 14 Channel (R-PDCH), the mobile station shall set this field to '1';
 15 otherwise, the mobile station shall set this field to '0'.

16 REV_PDCH Capability Type-specific fields - Reverse Packet Data Channel capability
 17 information.
 18 If the REV_PDCH_SUPPORTED field is included and is set to
 19 '1', the mobile station shall include this field and set it as
 20 defined in 2.7.4.27.6; otherwise, the mobile station shall omit
 21 this field.

22 BAND_SUB_REP_INCL - Band class - band subclass report included
 23 If P_REV_IN_USE_S is less than eleven, the mobile station shall
 24 omit this field; otherwise, the mobile station shall include this
 25 field and set it as follows:
 26 If CAND_BAND_INFO_REQ_S is equal to '1' and the mobile
 27 station supports at least 1 band class and band subclass (if
 28 applicable) combination queried by the base station, the
 29 mobile station shall set this field to '1'; otherwise, the mobile
 30 station shall set this field to '0'.

31

32 NUM_BAND_SUBCLASS - Number of band class - band subclass capabilities reported
 33 If BAND_SUB_REP_INCL is set to '0' or is not included, this
 34 field shall be omitted; otherwise, the mobile station shall
 35 include this field and set it as follows:
 36 If the mobile station supports all candidate band class and
 37 band subclass (if applicable) combinations queried by the
 38 base station, the mobile station shall set this field to '0000';
 39 otherwise, the mobile station shall set this field to the number
 40 of band class-band subclass capabilities reported.

41 If the NUM_BAND_SUBCLASS field is included in this message, the mobile station shall
 42 include NUM_BAND_SUBCLASS occurrences of the BAND_SUBCLASS_SUP field:

- 1 BAND_SUBCLASS_SUP – Band class-band subclass supported indicator
- 2 The mobile station shall set this field as specified in section
- 3 2.6.14.1.
- 4

1 2.7.1.3.2.6 Authentication Challenge Response Message

2 MSG_TAG: AUCRM

3

Field	Length (bits)
AUTHU	18

4 AUTHU – Authentication challenge response.

5 The mobile station shall set this field as specified in
6 2.3.12.1.4.

7

2.7.1.3.2.7 Status Response Message

MSG_TAG: STRPM

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL_INFO_LEN}$

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD_LEN}$

}

- 4 QUAL_INFO_TYPE – Qualification information type.
 5 The mobile station shall set this field to the QUAL_INFO_TYPE
 6 field in the corresponding *Status Request Message*.
- 7 QUAL_INFO_LEN – Qualification information length.
 8 The mobile station shall set this field to the QUAL_INFO_LEN
 9 field in the corresponding *Status Request Message*.
- 10 Type-specific fields – Type-specific fields.
 11 The mobile station shall set these fields to the qualification
 12 information in the corresponding *Status Request Message*.

13 The mobile station shall include all the records requested in the corresponding *Status*
 14 *Request Message*. The mobile station shall include one occurrence of the following fields
 15 for each information record to be included:

- 16 RECORD_TYPE – Information record type.
 17 The mobile station shall set this field to the record type value
 18 shown in Table 2.7.4-1 corresponding to the type of this
 19 information record.
- 20 RECORD_LEN – Information record length.
 21 The mobile station shall set this field to the number of octets
 22 included in the type-specific fields of this information record.
- 23 Type-specific fields – Type-specific fields.
 24 The mobile station shall set these fields to the information as
 25 specified in 2.7.4 for the specific type of records. The mobile
 26 station shall only specify the information corresponding to the
 27 included qualification information.

 2 MSG_TAG: ESTRPM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	8 × QUAL_INFO_LEN
NUM_INFO_RECORDS	4

NUM_INFO_RECORDS occurrences of the following record:

{ (NUM_INFO_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM_INFO_RECORDS)

4

5 QUAL_INFO_TYPE – Qualification information type.

6 The mobile station shall set this field to the QUAL_INFO_TYPE
 7 field in the corresponding *Status Request Message*.

8 QUAL_INFO_LEN – Qualification information length.

9 The mobile station shall set this field to the QUAL_INFO_LEN
 10 field in the corresponding *Status Request Message*.

11 Type-specific fields – Type-specific fields.

12 The mobile station shall set these fields to the qualification
 13 information in the corresponding *Status Request Message*.

14 NUM_INFO_RECORDS – Number of information records included.

15 The mobile station shall set this field to the number of
 16 information records which are included. The mobile station
 17 shall include all the records requested in the corresponding
 18 *Status Request Message*.

19 The mobile station shall include one occurrence of the following fields for each information
 20 record which is included:

21 RECORD_TYPE – Information record type.

22 The mobile station shall set this field to the record type value
 23 shown in Table 2.7.4-1 corresponding to the type of this
 24 information record.

1 2.7.1.3.2.11 Device Information Message
 2 MSG_TAG: DIM

3

Field	Length (bits)
WLL_DEVICE_TYPE	3
NUM_INFO_RECORDS	5

NUM_INFO_RECORDS occurrences of the following record:

{ (NUM_INFO_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM_INFO_RECORDS)

4

5 WLL_DEVICE_TYPE – WLL device type indicator.
 6 The mobile station shall set this field to the
 7 WLL_DEVICE_TYPE value shown in Table 2.7.1.3.2.1-3
 8 corresponding to the mobile station device type.

9 NUM_INFO_RECORDS – Number of information records included.
 10 The mobile station shall set this field to the number of
 11 information records which are included.

12 The mobile station shall include one occurrence of the following fields for each information
 13 record which is included:

14 RECORD_TYPE – Information record type.
 15 The mobile station shall set this field to the record type code
 16 shown in Table 2.7.4-1 corresponding to the type of this
 17 information record.

18 RECORD_LEN – Information record length.
 19 The mobile station shall set this field to the number of octets
 20 in the type-specific fields of this record.

21 Type-specific fields – Type-specific fields.
 22 The mobile station shall set these fields as specified in 2.7.4
 23 for this type of information record.

24

1 2.7.1.3.2.12 Security Mode Request Message
 2 MSG_TAG: SMRM

3

Field	Length (bits)
UI_ENC_INCL	1
UI_ENCRYPT_SUP	0 or 8
SIG_ENC_INCL	1
SIG_ENCRYPT_SUP	0 or 8
C_SIG_ENCRYPT_REQ	0 or 1
NEW_SSEQ_H_INCL	1
NEW_SSEQ_H	0 or 24
NEW_SSEQ_H_SIG	0 or 8
MSG_INT_INFO_INCL	1
SIG_INTEGRITY_SUP_INCL	0 or 1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3

4

5 UI_ENC_INCL – User information encryption fields included.

6 The mobile station shall set this field to ‘1’ if the user
 7 information encryption related fields are included in this
 8 message; otherwise, the mobile station shall set this field to
 9 ‘0’.

10 UI_ENCRYPT_SUP – User information encryption supported indicator.

11 If UI_ENC_INCL is equal to ‘1’, the mobile station shall
 12 include this field; otherwise, the mobile station shall omit this
 13 field. If this field is included, the mobile station shall set this
 14 field to indicate the supported user information encryption
 15 algorithms.

16 This field consists of the subfields shown in Table 2.7.1.3.2.4-
 17 9.

18 The mobile station shall set each subfield to ‘1’ if the
 19 corresponding user information encryption algorithm is
 20 supported by the mobile station; otherwise, the mobile station
 21 shall set the subfield to ‘0’.

22 The mobile station shall set the RESERVED subfield to
 23 ‘000000’.

24 SIG_ENC_INCL – Signaling encryption fields included.

- 1 The mobile station shall set this field to '1' if the following two
 2 fields related to signaling encryption fields are included in this
 3 message; otherwise, the mobile station shall set this field to
 4 '0'.
- 5 SIG_ENCRYPT_SUP – Signaling encryption supported indicator.
- 6 If SIG_ENC_INCL is equal to '1', the mobile station shall
 7 include this field; otherwise, the mobile station shall omit this
 8 field. If this field is included, the mobile shall set this field to
 9 indicate the supported signaling encryption algorithms
 10 supported by the mobile station.
- 11 This field consists of the subfields shown in Table 2.7.1.3.2.1-
 12 5.
- 13 If this field is included, the mobile station shall set the
 14 subfields as follows:
- 15 The mobile station shall set the CMEA subfield to '1'.
- 16 The mobile station shall set each other subfield to '1' if the
 17 corresponding signaling encryption algorithm is supported by
 18 the mobile station; otherwise, the mobile station shall set the
 19 subfield to '0'.
- 20 The mobile station shall set the RESERVED subfield to
 21 '00000'.
- 22 C_SIG_ENCRYPT_REQ – Common channel signaling encryption request indicator.
- 23 If SIG_ENC_INCL is equal to '1', the mobile station shall
 24 include this field; otherwise, the mobile station shall omit this
 25 field. If this field is included, the mobile station shall set this
 26 field to '1' to request signaling encryption to be turned on for
 27 signaling messages sent on f-csch and r-csch, and to '0' to
 28 request signaling encryption to be turned off for signaling
 29 messages sent on f-csch and r-csch.
- 30 NEW_SSEQ_H_INCL – The NEW_SSEQ included indicator.
- 31 The mobile station shall set this field to '1' if NEW_SSEQ_H is
 32 included in this message; otherwise, the mobile station shall
 33 set this field to '0'.
- 34 If MSG_INTEGRITY_SUP_s is equal to '0', the mobile station
 35 shall set this field to '1' if the mobile station is to include the
 36 NEW_SSEQ_H and NEW_SSEQ_H_SIG fields.
- 37 If MSG_INTEGRITY_SUP_s is equal to '1', the mobile station
 38 shall set this field to '0'.
- 39 NEW_SSEQ_H – The 24-bit value used to initialize the 24 MSB of crypto-sync.
- 40 If NEW_SSEQ_H_INCL is set to '1', the mobile station shall
 41 include this field; otherwise, the mobile station shall omit this
 42 field. If this field is included, the mobile station shall set this
 43 field to a 24-bit value that will be used as the initial value of
 44 the 24 MSB of the crypto-sync for both forward and reverse
 45 link message encryption and integrity.

- 1 NEW_SSEQ_H_SIG - The signature of NEW_SSEQ_H
- 2 If NEW_SSEQ_H is included, the mobile station shall include
- 3 this field; otherwise, the mobile station shall omit this field. If
- 4 this field is included, the mobile station shall set this field to
- 5 the digital signature of the NEW_SSEQ_H computed as
- 6 described in 2.3.12.4.5.
- 7 MSG_INT_INFO_INCL - Signaling message integrity information included indicator.
- 8 If MSG_INTEGRITY_SUP_s is equal to '0', the mobile station
- 9 shall set this field to '0'; otherwise, the mobile station shall set
- 10 this field to '1'.
- 11 SIG_INTEGRITY_SUP_INCL - Signaling message integrity information included
- 12 indicator.
- 13 If MSG_INT_INFO_INCL is set to '0', the mobile station shall
- 14 omit this field; otherwise, the mobile station shall include this
- 15 field and set it as follows:
- 16 If the mobile station supports other integrity algorithm(s) in
- 17 addition to the default integrity algorithm, the mobile station
- 18 shall set this field to '1'; otherwise, the mobile station shall set
- 19 this field to '0'.
- 20 SIG_INTEGRITY_SUP - Signaling integrity algorithm supported by the mobile station.
- 21 If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
- 22 mobile station shall set this field as follows; otherwise, the
- 23 mobile station shall omit this field.
- 24 The mobile station shall set this field to indicate the
- 25 supported message integrity algorithm in addition to the
- 26 default integrity algorithm.
- 27 This field consists of the subfields shown in Table 2.7.1.3.2.1-
- 28 6.
- 29 The mobile station shall set each subfield to '1' if the
- 30 corresponding message integrity algorithm is supported by
- 31 the mobile station; otherwise, the mobile station shall set the
- 32 subfield to '0'.
- 33 The mobile station shall set the RESERVED subfield to
- 34 '00000000'.
- 35 SIG_INTEGRITY_REQ - Signaling message integrity algorithm requested by the mobile
- 36 station.
- 37 If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
- 38 mobile station shall set this field as follows; otherwise, the
- 39 mobile station shall omit this field.
- 40 The mobile station shall include this field and set it to the
- 41 value corresponding to the message integrity algorithm
- 42 requested as shown in Table 2.7.1.3.2.1-7.
- 43

 2 MSG_TAG: AURSPM

3

Field	Length (bits)
RES	128
SIG_INTEGRITY_SUP_INCL	1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3
NEW_KEY_ID	2
NEW_SSEQ_H	24

4

5 RES – The output, RES, of the User Authentication Function.
 6 The mobile station shall set this field to the output, RES, of
 7 the function as specified in Figure 2.3.12.5.2-2. If the UIM
 8 returns a RES value with length smaller than 128, the mobile
 9 station shall store the RES value in the most significant bits
 10 of the RES field and pad the least significant bits with ‘0’s.

11 SIG_INTEGRITY_SUP_INCL – Signaling message integrity information included
 12 indicator.
 13 If the mobile station supports other integrity algorithm(s) in
 14 addition to the default integrity algorithm, the mobile station
 15 shall set this field to ‘1’; otherwise, the mobile station shall set
 16 this field to ‘0’.

- SIG_INTEGRITY_SUP** – Signaling integrity algorithm supported indicator.
- If **SIG_INTEGRITY_SUP_INCL** is set to ‘1’, the mobile station shall set this field as follows; otherwise, the mobile station shall omit this field.
- The mobile station shall set this field to indicate the supported message integrity algorithms in addition to the default integrity algorithm.
- This field consists of the subfields shown in Table 2.7.1.3.2.1-6.
- The mobile station shall set each subfield to ‘1’ if the corresponding message integrity algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to ‘0’.
- The mobile station shall set the **RESERVED** subfield to ‘00000000’.
- SIG_INTEGRITY_REQ** – Signaling message integrity algorithm requested by the mobile station.
- If **SIG_INTEGRITY_SUP_INCL** is set to ‘1’, the mobile station shall set this field as follows; otherwise, the mobile station shall omit this field.
- The mobile station shall include this field and set it to the value corresponding to the message integrity algorithm requested as shown in Table 2.7.1.3.2.1-7.
- NEW_KEY_ID** – New key identifier.
- The mobile station shall set this field as follows:
- If **LAST_3G_KEY_ID** equals ‘10’, the mobile station shall set this field to ‘11’.
 - If **LAST_3G_KEY_ID** equals ‘11’, the mobile station shall set this field to ‘10’.
- NEW_SSEQ_H** – The 24-bit value used to initialize the 24 MSB of the crypto-sync.
- The mobile station shall set this field to a 24-bit value that will be used as the initial value of the 24 MSB of the crypto-sync for both forward and reverse link message integrity.

1 2.7.1.3.2.14 Authentication Resynchronization Message

2 MSG_TAG: AURSYNM

3

Field	Length (bits)
CON_MS_SQN	48
MAC_S	64

4

5 CON_MS_SQN – The concealed sequence number of the authentication vector.
 6 The mobile station shall set this field to the output,
 7 CON_MS_SQN, of the function as specified in Figure
 8 2.3.12.5.2-3.

9 MAC_S – Message authentication code for resynchronization.
 10 The mobile station shall set this field to the output, MAC_S, of
 11 the function as specified in Figure 2.3.12.5.2-3.

12

1 2.7.1.3.2.15 Reconnect Message
 2 MSG_TAG: RCNM

3

Field	Length (bits)
ORIG_IND	1
SYNC_ID_INCL	1
SYNC_ID_LEN	0 or 4
SYNC_ID	0 or (8 × SYNC_ID_LEN)
SERVICE_OPTION	0 or 16
SR_ID	0 or 3
ADD_SERV_INSTANCE_INCL	0 or 1
NUM_ADD_SERV_INSTANCE	0 or 3

NUM_ADD_SERV_INSTANCE occurrences of the following record:

{ (NUM_ADD_SERV_INSTANCE)

ADD_SR_ID	3
-----------	---

} (NUM_ADD_SERV_INSTANCE)

SDB_INCL	0 or 1
NUM_FIELDS	0 or 8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHAR _i	8
-------------------	---

} (NUM_FIELDS)

- 4 ORIG_IND – Origination indicator
- 5 If this message is being sent in place of an *Origination*
- 6 *Message*, the mobile station shall set this field to '1'; if this
- 7 message is being sent in place of a *Page Response Message*,
- 8 the mobile station shall set this field to '0'.
- 9 SYNC_ID_INCL – Service Configuration synchronization identifier included
- 10 indicator.
- 11 The mobile station shall set this field to '1' if the SYNC_ID
- 12 field is included in this message; otherwise, the mobile station
- 13 shall set this field to '0'.
- 14 If SYNC_ID_SUPPORTED_s is equal to '0', the mobile station
- 15 shall set this field to '0'.
- 16 SYNC_ID_LEN – Service Configuration synchronization identifier length
- 17 indicator.

1 If the SYNC_ID_INCL field is set to '0', the mobile station shall
2 omit this field; otherwise, the mobile station shall include this
3 field and set it as follows:

4 The mobile station shall set this field to the length of the
5 SYNC_ID field included in this message.

6 SYNC_ID – Service Configuration synchronization identifier.

7 If the SYNC_ID_INCL field is set to '0', the mobile station shall
8 omit this field; otherwise, the mobile station shall include this
9 field and set it as follows:

10 The mobile station shall set this field to the Service
11 Configuration synchronization identifier corresponding to the
12 stored service configuration.

13 SERVICE_OPTION – Service option number.

14 If the SYNC_ID_INCL field is set to '1', the mobile station shall
15 omit this field; otherwise, the mobile station shall include this
16 field and set it as follows:

17 If the ORIG_IND field is set to '1', the mobile station shall set
18 this field to the service option number corresponding to the
19 service being reconnected.

20 If the ORIG_IND field is set to '0', the mobile station shall set
21 this field as follows:

22 • If the mobile station accepts the service option specified
23 by the mobile-station-addressed page, the mobile station
24 shall set this field to the service option number specified
25 in the SERVICE_OPTION field of the page record to which
26 the mobile station is responding.

27 • If the mobile station does not accept the service option
28 specified by the mobile-station-addressed page to which
29 the mobile station is responding and the mobile station
30 has an alternative service option to request, the mobile
31 station shall set this field to the service option code
32 specified in [30] corresponding to the alternative service
33 option.

34 • If the mobile station does not accept the service option
35 specified by the mobile-station-addressed page to which
36 the mobile station is responding and the mobile station
37 does not have an alternative service option to request, the
38 mobile station shall set this field to '0000000000000000'
39 to reject the service option specified by the page record of
40 the *General Page Message* or *Universal Page Message* to
41 which the mobile station is responding.

- 1 SR_ID – Service reference identifier.
- 2 If the ORIG_IND field is set to '0', the mobile station shall omit
- 3 this field; otherwise, the mobile station shall include this field
- 4 and set it as follows.
- 5 If the SYNC_ID_INCL field is set to '0', the mobile station shall
- 6 set this field as follows:
- 7 • If the service instance provides a service reference
- 8 identifier, the mobile station shall set this field to the
- 9 service reference identifier specified by the service
- 10 instance. If the service instance does not provide a service
- 11 reference identifier, the mobile station shall set this field
- 12 to the smallest unused service reference identifier value
- 13 between 1 and 6 (inclusive).
- 14 Otherwise, the mobile station shall set this field as follows:
- 15 • If the mobile station requests the restoration of a single
- 16 service option connection from the stored service
- 17 configuration, the mobile station shall set this field to the
- 18 corresponding service reference identifier
- 19 • If the mobile station requests the restoration of more than
- 20 one but not all service option connections from the stored
- 21 service configuration, the mobile station shall set this field
- 22 to the service reference identifier corresponding to one of
- 23 the service option connections to be restored.
- 24 • Otherwise (that is, the mobile station requests the
- 25 restoration of all the service option connections from the
- 26 stored service configuration), the mobile station shall set
- 27 this field to '111'.
- 28 ADD_SERV_INSTANCE_INCL- Additional service instances included indicator.
- 29 If the ORIG_IND field is set to '0' or P_REV_IN_USE_s is less
- 30 than 11 or if SYNC_ID_INCL is set to '0' or if SR_ID is
- 31 included and set to '111', the mobile station shall omit this
- 32 field; otherwise, the mobile station shall include this field and
- 33 set it as follows:
- 34 If at least one occurrence of the ADD_SR_ID field is included
- 35 in this message, the mobile station shall set this field to '1';
- 36 otherwise, the mobile station shall set this field to '0'.
- 37 NUM_ADD_SERV_INSTANCE- Number of additional service instances included.
- 38 If ADD_SERV_INSTANCE_INCL is not included or is included
- 39 and set to '0', the mobile station shall omit this field;
- 40 otherwise, the mobile station shall include this field and set it
- 41 to the number of additional service instances included in this
- 42 message.

1 If ADD_SERV_INSTANCE_INCL is included and set to '1', the mobile station shall include
2 NUM_ADD_SERV_INSTANCE occurrences of the following record:

3 ADD_SR_ID – Additional service reference identifier.

4 The mobile station shall set this field to the service reference
5 identifier corresponding to the service option connection that
6 the mobile station requests to be restored from the stored
7 service configuration.

8 SDB_INCL – Short Data Burst included indicator.

9 If P_REV_IN_USE_s is less than eleven, the mobile station shall
10 omit this field; otherwise, the mobile station shall include this
11 field and set it as follows:

12 If a Short Data Burst (i.e., data burst message with burst type
13 equal to '000110', see [30]) is being included in this message,
14 the mobile station shall set this field to '1'; otherwise, the
15 mobile station shall set this field to '0'.

16 The mobile station shall set this field to '0' if
17 SDB_IN_RCNM_IND_s or SDB_SUPPORTED_s is equal to '0'.

18 NUM_FIELDS – Number of characters in this message.

19 If SDB_INCL is set to '0', the mobile station shall omit this
20 field; otherwise, the mobile station shall include this field and
21 set it as follows:

22 The mobile station shall set this field to the number of CHAR_i
23 fields included in this message.

24 If SDB_INCL is included and set to '1', the mobile station shall include NUM_FIELDS
25 occurrences of the following record:

26 CHAR_i – Character.

27 The mobile station shall set these fields to the corresponding
28 octet of the data burst stream.

29

30

1 2.7.1.3.2.16 Radio Environment Message

2 MSG_TAG: REM

Field	Length (bits)
MODE_DISABLED	1
TKZ_MODE_IND	1

3 MODE_DISABLED - Mode disabled indicator.

4 The mobile station shall set this field to '1' if any of the
5 following conditions is true:

- 6 • RER_COUNT is equal to $(RER_MAX_NUM_MSG_S - 1)$ and
7 the TKZ_MODE_IND field in this message is set to '0', or
- 8 • TKZ_COUNT is equal to $(TKZ_MAX_NUM_MSG_S - 1)$ and
9 the TKZ_MODE_IND field in this message is set to '1'.

10 Otherwise, the mobile station shall set this field to '0'.

11 TKZ_MODE_IND - Tracking zone mode indicator.

12 The mobile station shall set this field to '1' if the *Radio*
13 *Environment Message* is sent for tracking zone mode;
14 otherwise, the mobile station shall set this field to '0'.

- 3 There are no Layer 3 fields associated with this message.
- 4

1 2.7.1.3.2.18 General Extension Message
 2 MSG_TAG: GEM

Field	Length (bits)
NUM_GE_REC	8

NUM_GE_REC occurrences of the following record:

{ (NUM_GE_REC)

GE_REC_TYPE	8
GE_REC_LEN	8
GE_REC	8 x GE_REC_LEN

} (NUM_GE_REC)

MESSAGE_TYPE	8
MESSAGE_REC	variable

- 3 NUM_GE_REC - Number of General Extension Records included in this message.
 4 The mobile station shall set this field to the number of general
 5 extension records included in this message. Mobile station shall
 6 set this field to a value greater than 0.
- 7 GE_REC_TYPE - Type of General Extension Record.
 8 The mobile station shall set this field based on the type of record
 9 as specified in Table 2.7.1.3.2.17-1.

10 **Table 2.7.1.3.2.17-1. General Extension Record Type values**

GE_REC_TYPE (binary)	Description
00000000	Supported Band Class - Subclass
00000001	Additional Geo Location Type Record
00000010-11111111	Reserved

- 11 GE_REC_LEN - Length of the General Extension Record.
 12 The mobile station shall set this field to the length in octets of the
 13 general extension record following the GE_REC_LEN field.
- 14 GE_REC - General Extension Record.
 15 The mobile station shall set this field according to the previous
 16 occurrence of the GE_REC_TYPE in this message. If the
 17 GE_REC_TYPE is set to '00000000' then the mobile station shall
 18 set the GE_REC to the following:

19

NUM_BAND_SUBCLASS	5
-------------------	---

NUM_BAND_SUBCLASS occurrences of the following field:

{ (NUM_BAND_SUBCLASS)

BAND_SUBCLASS_SUP	1
-------------------	---

} (NUM_BAND_SUBCLASS)

Reserved	0-7
----------	-----

1 NUM_BAND_SUBCLASS – Number of band class - band subclass capabilities reported
 2 If the mobile station supports all candidate band class and
 3 band subclass (if applicable) combinations queried by the
 4 base station, the mobile station shall set this field to ‘00000’;
 5 otherwise, the mobile station shall set this field to the number
 6 of band class-band subclass capabilities reported.

7 If the NUM_BAND_SUBCLASS field is included in this message, the mobile station shall
 8 include NUM_BAND_SUBCLASS occurrences of the BAND_SUBCLASS_SUP field:

9 BAND_SUBCLASS_SUP – Band class - Band subclass supported indicator
 10 The mobile station shall set this field as specified in section
 11 2.6.14.1.

12 RESERVED – Reserved bits.
 13 This field shall contain the number of bits required to make
 14 the entire GE_REC field an integer number of octets in length.
 15 All bits of this field shall be set to zeros.

16 If the GE_REC_TYPE is set to ‘00000001’ then the mobile station shall set the GE_REC to
 17 the following:

ADD_GEO_LOC_TYPE_LEN_IND	1
ADD_GEO_LOC_TYPE	16 or 24
Reserved	0-7

19 ADD_GEO_LOC_TYPE_LEN_IND – Additional Geo-Location Type Length Indicator.
 20 The mobile station shall set this field to ‘0’ to indicate length
 21 of the ADD_GEO_LOC_TYPE field is 16 bits. The mobile
 22 station shall set this field to ‘1’ to indicate length of the
 23 ADD_GEO_LOC_TYPE field is 24 bits.

24 ADD_GEO_LOC_TYPE – Additional Geo-Location Type.
 25 This field consists of the subfields shown in 2.7.4.46-1.
 26 The mobile station shall set each subfield to ‘1’ if the
 27 corresponding capability is supported by the mobile station;
 28 otherwise, the mobile station shall set the subfield to ‘0’.

29 RESERVED – Reserved bits.

- 1 This field shall contain the number of bits required to make
2 the entire GE_REC field an integer number of octets in length.
3 All bits of this field shall be set to zeros.
- 4 MESSAGE_TYPE - Message type of the message included in the *General*
5 *Extension Message*.
- 6 This field shall contain the message type value for the
7 message following this field. When transmitting the general
8 extension message over r-csch, then mobile station shall set
9 the first 2 MSB of this field to '00'. The mobile station shall
10 set this field according to [4].
- 11 MESSAGE_REC - Message extended through the General Extension message.
12 The mobile station shall set this field to the message that is
13 being extended using the *General Extension Message*.
14
15

1 2.7.2 r-dsch

2 During Traffic Channel operation, the mobile station sends signaling messages to the base
3 station using the r-dsch.

4 2.7.2.1 Reserved

5 2.7.2.2 Reserved

6 2.7.2.3 PDU Formats for Messages on r-dsch

7 The messages sent on the r-dsch are summarized in Table 2.7.2.3-1.

1

Table 2.7.2.3-1. Messages on r-dsch

Message Name	MSG_TAG	Section Number	P_REV_I N_USE⁸³
<i>Order Message</i>	ORDM	2.7.2.3.2.1	All

1 2.7.2.3.2.1 Order Message
 2 MSG_TAG: ORDM

3

Field	Length (bits)
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	8 × ADD_RECORD_LEN
CON_REF_INCL	0 or 1
CON_REF	0 or 8

4

- 5 ORDER – Order code.
 6 The mobile station shall set this field to the ORDER code.
 7 See 2.7.3.
- 8 ADD_RECORD_LEN – Additional record length.
 9 The mobile station shall set this field to the number of octets
 10 in the order-specific fields included in this message.
- 11 Order-specific fields – Order-specific fields.
 12 The mobile station shall include order-specific fields as
 13 specified in 2.7.3.
- 14 CON_REF_INCL – Connection reference included indicator.
 15 If the order carried by this message is not a Call Control order
 16 (2.6.10), the mobile station shall omit this field; otherwise, the
 17 mobile station shall include this field and set it as follows:
 18 The mobile station shall set this field to ‘1’ if the connection
 19 reference field is included in this message; otherwise, it shall
 20 set this field to ‘0’.
- 21 CON_REF – Connection reference.
 22 If the CON_REF_INCL field is not included, or is included but
 23 is set to ‘0’, the mobile station shall omit this field; otherwise,
 24 the mobile station shall include this field and shall set it to
 25 the value of the connection reference assigned to the service
 26 option connection of the call, to which this message
 27 corresponds.

28

1 2.7.2.3.2.2 Authentication Challenge Response Message

2 MSG_TAG: AUCRM

3

Field	Length (bits)
AUTHU	18

4

5 AUTHU – Authentication challenge response.

6 The mobile station shall set this field as specified in
7 2.3.12.1.4.

8

1 2.7.2.3.2.3 Flash With Information Message
 2 MSG_TAG: FWIM

3

Field	Length (bits)
-------	---------------

Zero or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

4

5 The mobile station shall include one occurrence of the following record for each information
 6 record to be included:

7 RECORD_TYPE – Information record type.

8 The mobile station shall set this field to the record type code
 9 shown in Table 2.7.4-1 corresponding to the type of this
 10 information record.

11 RECORD_LEN – Information record length.

12 The mobile station shall set this field to the number of octets
 13 in the type-specific fields of this record.

14 Type-specific fields – Type-specific fields.

15 The mobile station shall set these fields as specified in 2.7.4
 16 for this type of information record.

17

1 2.7.2.3.2.4 Data Burst Message
 2 MSG_TAG: DBM

3

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHAR _i	8
-------------------	---

} (NUM_FIELDS)

4

- 5 MSG_NUMBER – Message number within the data burst stream.
 6 The mobile station shall set this field to the number of this
 7 message within the data burst stream.
- 8 BURST_TYPE – Data burst type.
 9 The mobile station shall set the value of this field for the type
 10 of this data burst as defined in [30]. If the mobile station sets
 11 this field equal to ‘111110’, it shall set the first two CHAR_i
 12 fields of this message equal to
 13 EXTENDED_BURST_TYPE_INTERNATIONAL as described in
 14 the definition of CHAR_i below. If the mobile station sets this
 15 field equal to ‘111111’, it shall set the first two CHAR_i fields of
 16 this message equal to the EXTENDED BURST TYPE as
 17 described in the definition of CHAR_i below.
- 18 NUM_MSGS – Number of messages in the data burst stream.
 19 The mobile station shall set this field to the number of
 20 messages within this data burst stream.
- 21 NUM_FIELDS – Number of characters in this message.
 22 The mobile station shall set this field to the number of CHAR_i
 23 fields included in this message.
- 24 CHAR_i – Character.
 25 The mobile station shall include NUM_FIELDS occurrences of
 26 this field. The mobile station shall set these fields to the
 27 corresponding octet of the data burst stream.

13
14
15

If the BURST_TYPE field of this message is equal to ‘111110’, the first two CHARi octets shall represent a 16 bit EXTENDED_BURST_TYPE_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED_BURST_TYPE_INTERNATIONAL field shall specify the COUNTRY_BURST_TYPE. The mobile station shall set the value of the COUNTRY_BURST_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	8 × (NUM_FIELDS - 2)

16
17
18
19
20
21
22

If the BURST TYPE field of this message is equal to ‘111111’, the first two CHARi octets shall represent a single, 16 bit, EXTENDED BURST TYPE field, as shown below. The mobile station shall set the value of the EXTENDED BURST TYPE according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	8 × (NUM_FIELDS - 2)

23

2.7.2.3.2.5 Pilot Strength Measurement Message

MSG_TAG: PSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1

Zero or more occurrences of the following record:

Field	Length (bits)
PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1

4

5

REF_PN – Time reference PN sequence offset.

6

The mobile station shall set this field to the PN sequence offset of the pilot used by the mobile station to derive its time reference, relative to the zero offset pilot PN sequence in units of 64 PN chips.

7

8

9

10

PILOT_STRENGTH – Pilot strength in dB.

11

The mobile station shall set this field to

12

$$\lfloor -2 \times 10 \log_{10} PS \rfloor,$$

13

where PS is the strength of the pilot used by the mobile station to derive its time reference (see [2]), measured as specified in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0, the mobile station shall set this field to '000000'. If this value is greater than '111111', the mobile station shall set this field to '111111'.

14

15

16

17

18

19

KEEP – Keep pilot indicator.

20

If the handoff drop timer (see 2.6.6.2.3) corresponding to the pilot used by the mobile station to derive its time reference (see [2]) has expired, the mobile station shall set this field to '0'; otherwise, the mobile station shall set this field to '1'.

21

22

23

24

25

If $P_REV_IN_USE_S$ is less than or equal to three, the mobile station shall include one occurrence of the three-field record given below for each pilot in the Active Set and for each Candidate Set pilot reported (the number of Candidate Set pilots reported shall not exceed 5), other than the pilot identified by the REF_PN field. If $P_REV_IN_USE_S$ is greater than three and $SOFT_SLOPE_S$ is equal to '000000', the mobile station shall include one

26

27

28

29

1 occurrence of the three-field record given below for each pilot in the Active Set and for each
 2 pilot in the Candidate Set, other than the pilot identified by the REF_PN field. If
 3 P_REV_IN_USE_s is greater than three and SOFT_SLOPE_s is not equal to '000000', the
 4 mobile station shall include one occurrence of the three-field record given below for each
 5 pilot in the Active Set, for each pilot in the Candidate Set whose strength exceeds T_ADD,
 6 and shall also include one occurrence of the three-field record given below for each pilot in
 7 the Candidate Set whose strength satisfies the following inequality:

$$8 \quad 10 \times \log_{10} PS > \frac{\text{SOFT_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} PS_i + \frac{\text{ADD_INTERCEPT}_s}{2}$$

9 where the summation is performed over all pilots currently in the Active Set. The mobile
 10 station shall not include these fields for the pilot identified by the REF_PN field.

11 The mobile station shall order any occurrences of the three-field record given below which
 12 correspond to pilots in the Active Set such that they occur before any occurrences of the
 13 three-field record given below which correspond to pilots in the Candidate Set.

14 PILOT_PN_PHASE – Pilot measured phase.

15 The mobile station shall set this field to the phase of the pilot
 16 PN sequence relative to the zero offset pilot PN sequence of
 17 this pilot, in units of one PN chip, as specified in 2.6.6.2.4.

18 PILOT_STRENGTH – Pilot strength in dB.

19 The mobile station shall set this field to

$$20 \quad \lfloor -2 \times 10 \log_{10} PS \rfloor,$$

21 where PS is the strength of this pilot, measured as specified
 22 in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0,
 23 the mobile station shall set this field to '000000'. If this value
 24 is greater than '111111', the mobile station shall set this field
 25 to '111111'.

26 KEEP – Keep pilot indicator.

27 If the handoff drop timer (see 2.6.6.2.3) corresponding to this
 28 pilot has expired, the mobile station shall set this field to '0';
 29 otherwise, the mobile station shall set this field to '1'.

30

1 2.7.2.3.2.6 Power Measurement Report Message
 2 MSG_TAG: PMRM

3

Field	Length (bits)
ERRORS_DETECTED	5
PWR_MEAS_FRAMES	10
LAST_HDM_SEQ	2
NUM_PILOTS	4

NUM_PILOTS occurrences of the following field:

{ (NUM_PILOTS)

PILOT_STRENGTH	6
----------------	---

} (NUM_PILOTS)

DCCH_PWR_MEAS_INCL	1
DCCH_PWR_MEAS_FRAMES	0 or 10
DCCH_ERRORS_DETECTED	0 or 5
SCH_PWR_MEAS_INCL	1
SCH_ID	0 or 1
SCH_PWR_MEAS_FRAMES	0 or 16
SCH_ERRORS_DETECTED	0 or 10

4

5 ERRORS_DETECTED – Number of detected bad frames.

6 When the Forward Fundamental Channel is assigned, the
 7 mobile station shall set this field to the number of bad frames
 8 detected (BAD_FRAMES_s, see 2.6.4.1.1] on the Forward
 9 Fundamental Channel.

10 If P_REV_IN_USE_s is greater than or equal to six and only the
 11 Forward Dedicated Control Channel is assigned, the mobile
 12 station shall set this field to the number of bad frames
 13 detected on the Forward Dedicated Control Channel
 14 (DCCH_BAD_FRAMES_s, see 2.6.4.1.1].

15 If the number of bad frames received on this channel within
 16 the measurement period is less than or equal to 31, the
 17 mobile station shall set this field to that number. If that
 18 number exceeds 31, the mobile station shall set this field to
 19 '11111'.

- 1 PWR_MEAS_FRAMES – Number of power measurement frames.
 2
 3 When the Forward Fundamental Channel is assigned, the
 4 mobile station shall set this field to the number of frames
 5 received on the Forward Fundamental Channel within the
 6 measurement period (TOT_FRAMES_s, see 2.6.4.1.1).
 7
 8 If P_REV_IN_USE_s is greater than or equal to six and only the
 9 Dedicated Control Channel is assigned, the mobile station
 10 shall set this field to the number of frames received on the
 11 Dedicated Control Channel (DCCH_TOT_FRAMES_s, see
 12 2.6.4.1.1).
 13
 14 LAST_HDM_SEQ – *Extended Handoff Direction Message* or a *General Handoff*
 15 *Direction Message*, or *Universal Handoff Direction Message*
 16 *sequence number*.
 17
 18 If an *Extended Handoff Direction Message*, a *General Handoff*
 19 *Direction Message*, or *Universal Handoff Direction Message*
 20 has been received during this call, the mobile station shall set this
 21 field to the value of the HDM_SEQ field from the *Extended*
 22 *Handoff Direction Message*, the *General Handoff Direction*
 23 *Message* or the *Universal Handoff Direction Message* that
 24 determined the current Active Set. If no *Extended Handoff*
 25 *Direction Message*, *General Handoff Direction Message*, or
 26 *Universal Handoff Direction Message* has been received during
 27 this call, the mobile station shall set this field to ‘11’.
 28
 29 NUM_PILOTS – Number of pilots reported.
 30
 31 The mobile station shall set this field to the number of pilots
 32 in the current Active Set.
 33
 34 PILOT_STRENGTH – Pilot strength in dB.
 35
 36 The mobile station shall include one occurrence of this field
 37 for each pilot in the Active Set. If the Active Set contains
 38 more than one pilot, the mobile station shall include the pilot
 39 strengths in the same order as in the *Extended Channel*
 40 *Assignment Message*, *Extended Handoff Direction Message*,
 41 *General Handoff Direction Message* or the *Universal Handoff*
 42 *Direction Message* that determined the current Active Set.
 43
 44 The mobile station shall set each occurrence of this field to
 45
$$\lfloor -2 \times 10 \log_{10} PS \rfloor,$$

 46 where PS is the strength of the pilot, measured as specified in
 47 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0, the
 48 mobile station shall set this field to ‘000000’. If this value is
 49 greater than ‘111111’, the mobile station shall set this field to
 50 ‘111111’.
 51
 52 DCCH_PWR_MEAS_INCL - Forward Dedicated Control Channel power measurement
 53 included.

- 1 If both Forward Fundamental Channel and Forward
 2 Dedicated Control Channel are assigned, the mobile station
 3 shall set this field equal to '1'; otherwise, the mobile shall set
 4 this field to '0'.
- 5 DCCH_PWR_MEAS_FRAMES - Number of received Dedicated Control Channel
 6 frames.
- 7 If DCCH_PWR_MEAS_INCL is set to '0', the mobile station
 8 shall omit this field; otherwise, the mobile station shall set
 9 this field to the number of frames received on the Dedicated
 10 Control Channel within the measurement period
 11 (DCCH_TOT_FRAMES_s, see 2.6.4.1.1).
- 12 DCCH_ERRORS_DETECTED - Number of detected bad Dedicated Control Channel
 13 frames.
- 14 If DCCH_PWR_MEAS_INCL is set to '0', the mobile station
 15 shall omit this field; otherwise, the mobile station shall set
 16 this field to the number of bad frames
 17 (DCCH_BAD_FRAMES_s) detected on the Forward Dedicated
 18 Control Channel.
- 19 If DCCH_BAD_FRAMES_s exceeds 31, the mobile station shall
 20 set this field to '11111'; otherwise, the mobile station shall set
 21 this field to DCCH_BAD_FRAMES_s [see 2.6.4.1.1).
- 22 SCH_PWR_MEAS_INCL - Supplemental Channel power measurement included
 23 indicator.
- 24 If FOR_SCH_FER_REP_s is set to '1' and this message is to
 25 report the frame counts at the end of the burst on an
 26 assigned Supplemental Channel, the mobile station shall set
 27 this field to '1'; otherwise, the mobile station shall set this
 28 field to
- 29 SCH_ID - Forward Supplemental Channel identifier.
- 30 If the SCH_PWR_MEAS_INCL is set to '0', the mobile station
 31 shall omit this field; otherwise, the mobile shall set this field
 32 to the Identifier of the Forward Supplemental Channel of
 33 which the frame counts are being reported in this message.
- 34 SCH_PWR_MEAS_FRAMES - Number of received Supplemental Channel frames.
- 35 If SCH_PWR_MEAS_INCL is set to '0', the mobile station shall
 36 omit this field; otherwise, the mobile station shall set this field
 37 to the total number of frames (SCH_TOT_FRAMES_s) received
 38 during the burst duration on the Supplemental Channel
 39 specified by SCH_ID. If this measurement is greater than or
 40 equal to $2^{16} - 1$, the mobile station shall set this field to
 41 '1111111111111111'.
- 42 SCH_ERRORS_DETECTED - Number of detected bad Supplemental Channel frames.

If SCH_PWR_MEAS_INCL is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall set this field to the number of bad frame detected on the Forward Supplemental Channel of the SCH_ID for the duration of the forward burst on this channel.

If the number of bad frames (SCH_BAD_FRAMES_s) detected on the SCH_ID Supplemental Channel during the burst is greater than 1023, the mobile station shall set this field to '111111111'.

1 2.7.2.3.2.7 Send Burst DTMF Message
 2 MSG_TAG: BDTMFM

3

Field	Length (bits)
NUM_DIGITS	8
DTMF_ON_LENGTH	3
DTMF_OFF_LENGTH	3

NUM_DIGITS occurrences of the following field:

{ (NUM_DIGITS)

DIGIT _i	4
--------------------	---

} (NUM_DIGITS)

CON_REF_INCL	1
CON_REF	0 or 8

4

5 NUM_DIGITS – Number of DTMF digits.

6

The mobile station shall set this field to the number of DTMF digits included in this message.

7

8 DTMF_ON_LENGTH – DTMF pulse width code.

9

The mobile station shall set this field to the DTMF_ON_LENGTH value shown in Table 2.7.2.3.2.7-1 corresponding to the requested width of DTMF pulses to be generated by the base station.

10

11

12

13

Table 2.7.2.3.2.7-1. Recommended DTMF Pulse Width

DTMF_ON_LENGTH Field (binary)	Recommended Pulse Width
000	95 ms
001	150 ms
010	200 ms
011	250 ms
100	300 ms
101	350 ms
All other DTMF_ON_LENGTH codes are reserved.	

14

1 DTMF_OFF_LENGTH – DTMF inter-digit interval code.
 2 The mobile station shall set this field to the
 3 DTMF_OFF_LENGTH value shown in Table 2.7.2.3.2.7-2
 4 corresponding to the requested minimum interval between
 5 DTMF pulses to be generated by the base station.

7 **Table 2.7.2.3.2.7-2. Recommended Minimum Inter-digit Interval**

DTMF_OFF_LENGTH Field (binary)	Recommended Minimum Inter-digit Interval
000	60 ms
001	100 ms
010	150 ms
011	200 ms
All other DTMF_OFF_LENGTH codes are reserved.	

8
 9 DIGIT_i – DTMF digit.
 10 The mobile station shall include one occurrence of this field
 11 for each DTMF digit to be generated by the base station. The
 12 mobile station shall set each occurrence of this field to the
 13 code value shown in Table 2.7.1.3.2.4-4 corresponding to the
 14 dialed digit.

15 CON_REF_INCL – Connection reference included indicator.
 16 The mobile station shall set this field to ‘1’ if the connection
 17 reference field is included in this message; otherwise, it shall
 18 set this field to ‘0’.

19 CON_REF – Connection reference.
 20 If the CON_REF_INCL field is set to ‘0’, the mobile station
 21 shall omit this field; otherwise, the mobile station shall
 22 include this field and shall set it to the value of the
 23 connection reference assigned to the service option
 24 connection of the call, to which this message corresponds.

3

Field	Length (bits)
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD_LEN}$

4

5 RECORD_TYPE – Information record type.

6 The mobile station shall set this field to the record type value
7 shown in Table 2.7.4-1 corresponding to the type of this
8 information record.

9 RECORD_LEN – Information record length.

10 The mobile station shall set this field to the number of octets
11 included in the type-specific fields of this information record.

12 Type-specific fields – Type-specific fields.

13 The mobile station shall set these fields as specified in 2.7.4
14 for this type of record.

15

1 2.7.2.3.2.9 Origination Continuation Message
 2 MSG_TAG: ORCM

3

Field	Length (bits)
DIGIT_MODE	1
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHARi	4 or 8
-------	--------

} (NUM_FIELDS)

Zero or more occurrences of the following record:

{

RECORD TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

- 4 DIGIT_MODE – Digit mode indicator.
 5 The mobile station shall set this field to the DIGIT_MODE
 6 value from the *Origination Message* for which this message is
 7 a continuation.
- 8 NUM_FIELDS – Number of dialed digits in this message.
 9 The mobile station shall set this field to the number of dialed
 10 digits included in this message.
- 11 CHARi – A dialed digit or character.
 12 The mobile station shall include NUM_FIELDS occurrences of
 13 this field. The mobile station shall include occurrences of this
 14 field for all dialed digits after those sent in the *Origination*
 15 *Message* of which this message is a continuation. If the
 16 DIGIT_MODE field is set to ‘0’, the mobile station shall set
 17 each occurrence of this field to the code value shown in Table
 18 2.7.1.3.2.4-4 corresponding to the dialed digit. If the
 19 DIGIT_MODE field is set to ‘1’, the mobile station shall set
 20 each occurrence of this field to the ASCII representation
 21 corresponding to the dialed digit, as specified in [9], with the
 22 most significant bit set to ‘0’.

23 If the MORE_RECORDS field in the last *Origination Message*, of which this message is a
 24 continuation, is set to ‘1’, the mobile station shall include one or more occurrences of the
 25 following three-field record; otherwise, the mobile station shall not include the following
 26 record.

- 27 RECORD_TYPE – Information record type.

3

Field	Length (bits)
LAST_HDM_SEQ	2

One or more occurrences of the following field:

{

PILOT_PN	9
----------	---

}

4

5 LAST_HDM_SEQ – *Extended Handoff Direction Message, General Handoff*
 6 *Direction Message, or Universal Handoff Direction Message*
 7 *sequence number.*

8

The mobile station shall set this field to the value of the HDM_SEQ field from the *Extended Handoff Direction Message, General Handoff Direction Message, or the Universal Handoff Direction Message* that determined the current Active Set.

9

10

11

12

PILOT_PN – Pilot PN sequence offset.

13

The mobile station shall include one occurrence of this field for each pilot in the current Active Set. The mobile station shall set this field to the pilot PN sequence offset, relative to the zero offset pilot PN sequence in units of 64 PN chips, for this pilot. If the Active Set contains more than one pilot, the mobile station shall include the pilot offsets in the same order as in the *Extended Handoff Direction Message, the General Handoff Direction Message, or the Universal Handoff Direction Message* that determined the current Active Set.

1 2.7.2.3.2.11 Parameters Response Message
 2 MSG_TAG: PRSM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following record:

{

PARAMETER_ID	16
PARAMETER_LEN	10
PARAMETER	0 or PARAMETER_LEN + 1

}

4

5 The mobile station shall include one occurrence of the following three-field record for each
 6 occurrence of the PARAMETER_ID field in the Forward Traffic Channel *Retrieve Parameters*
 7 *Message* to which this message is a response. See Annex E.

8 PARAMETER_ID – Parameter identification.

9 The mobile station shall set this field to the value of the
 10 PARAMETER_ID field for this parameter from the *Retrieve*
 11 *Parameters Message* to which this message is a response.

12 PARAMETER_LEN – Parameter length.

13 The mobile station shall set this field to the length shown in
 14 Table E-1 corresponding to this PARAMETER_ID.

15 If the mobile station is unable to return the value of this
 16 parameter, or if the parameter identification is unknown, the
 17 mobile station shall set this field to '111111111'.

18 PARAMETER – Parameter value.

19 The mobile station shall set this field equal to the value of the
 20 parameter shown in Table E-1 corresponding to the
 21 PARAMETER_ID field of the record.

22 If the mobile station is unable to return the value of this
 23 parameter, or if the parameter identification is unknown, the
 24 mobile station shall omit this field.

SERV_REQ_SEQ	3
REQ_PURPOSE	4
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

4

5 SERV_REQ_SEQ – Service request sequence number.

6 The mobile station shall set this field to the service request
 7 sequence number pertaining to this request message as
 8 specified in 2.6.4.1.2.1.1.

9 REQ_PURPOSE – Request purpose.

10 The mobile station shall set this field to the appropriate
 11 REQ_PURPOSE code from Table 2.7.2.3.2.12-1 to indicate the
 12 purpose of the message.

13 **Table 2.7.2.3.2.12-1. REQ_PURPOSE Codes**

REQ_PURPOSE (binary)	Meaning
0000	Indicates that the purpose of the message is to accept a proposed service configuration.
0001	Indicates that the purpose of the message is to reject a proposed service configuration.
0010	Indicates that the purpose of the message is to propose a service configuration.
All other REQ_PURPOSE codes are reserved.	

14

15

1			
2	RECORD_TYPE	–	Information record type.
3			If the REQ_PURPOSE code is set to '0010', the mobile station
4			shall include this field and set it as follows; otherwise, the
5			mobile station shall omit this field.
6			The mobile station shall set this field to the record type value
7			shown in Table 2.7.4-1 corresponding to the Service
8			Configuration information record.
9	RECORD_LEN	–	Information record length.
10			If the REQ_PURPOSE code is set to '0010', the mobile station
11			shall include this field and set it as follows; otherwise, the
12			mobile station shall omit this field.
13			The mobile station shall set this field to the number of octets
14			included in the type-specific fields of the Service
15			Configuration information record.
16	Type-specific fields	–	Type-specific fields.
17			If the REQ_PURPOSE code is set to '0010', the mobile station
18			shall include this field and set it as follows; otherwise, the
19			mobile station shall omit this field.
20			The mobile station shall set these fields as specified in 3.7.5.7
21			for the Service Configuration information record.

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN

} (NUM_NGHR_PN)

2

- 3 SIZE_OF_REQ_BLOB – Size of the request information block of bytes (REQ_BLOB).
4 The mobile station shall set this field to the number of bytes
5 in the Reverse Supplemental Code Channel or the Reverse
6 Supplemental Channel request block of bytes (REQ_BLOB).
7 REQ_BLOB – Reverse Supplemental Code Channel or Reverse
8 Supplemental Channel request block of bytes.
9 The mobile station shall include information in this field
10 containing the parameters that specify the characteristics of
11 the Reverse Supplemental Code Channels or the Reverse
12 Supplemental Channel request. The mobile station shall set
13 this field in accordance with the connected Service Option.
14 USE_SCRM_SEQ_NUM – Use *Supplemental Channel Request Message* sequence
15 number indicator.
16 The mobile station shall set this field to '1' if the *Supplemental*
17 *Channel Request Message* sequence number is included in
18 this message; otherwise, the mobile station shall set this field
19 to '0'.
20 SCRM_SEQ_NUM – *Supplemental Channel Request Message* sequence number.

- 1 If USE_SCRM_SEQ_NUM is set to '1', the mobile station shall
 2 set this field to the *Supplemental Channel Request Message*
 3 sequence number that the base station is to include in a
 4 *Supplemental Channel Assignment Message* or *Extended*
 5 *Supplemental Channel Assignment Message* which is in
 6 response to this message; otherwise, the mobile station shall
 7 omit this field.
- 8 REF_PN – Time reference PN sequence offset.
- 9 If SIZE_OF_REQ_BLOB is set to '0000' and
 10 USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
 11 omit this field; otherwise, the mobile station shall set this field
 12 to the PN sequence offset of the pilot used by the mobile
 13 station to derive its time reference, relative to the zero offset
 14 pilot PN sequence in units of 64 PN chips.
- 15 PILOT_STRENGTH – Reference pilot strength in dB.
- 16 If SIZE_OF_REQ_BLOB is set to '0000' and
 17 USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
 18 omit this field; otherwise, the mobile station shall set this field
 19 to
- 20
$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$
- 21 where PS is the strength of the pilot used by the mobile
 22 station to derive its time reference (see [2]), measured as
 23 specified in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less
 24 than 0, the mobile station shall set this field to '000000'. If
 25 this value is greater than '111111', the mobile station shall
 26 set this field to '111111'.
- 27 NUM_ACT_PN – Number of reported pilots in the Active Set.
- 28 If SIZE_OF_REQ_BLOB is set to '0000' and
 29 USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
 30 omit this field; otherwise, the mobile station shall set this field
 31 to the number of reported pilots in the Active Set other than
 32 the pilot identified by the REF_PN field.
- 33 If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile
 34 station shall not include any occurrence of the following record; otherwise, the mobile
 35 station shall include one occurrence of the following two-field record for each pilot in the
 36 Active Set other than the pilot identified by the REF_PN field:
- 37 ACT_PN_PHASE – Active pilot measured phase.
- 38 The mobile station shall set this field to the phase of this pilot
 39 PN sequence relative to the zero offset pilot PN sequence, in
 40 units of one PN chip, as specified in 2.6.6.2.4.
- 41 ACT_PILOT_STRENGTH – Active pilot strength in dB.
- 42 The mobile station shall set this field to
- 43
$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

1 where PS is the strength of this pilot, measured as specified
 2 in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0,
 3 the mobile station shall set this field to '000000'. If this value
 4 is greater than 63, the mobile station shall set this field to
 5 '111111'.

6 NUM_NGHBR_PN – Number of reported neighbor pilots in the Candidate Set and
 7 the Neighbor Set.

8 If SIZE_OF_REQ_BLOB is set to '0000', the mobile station
 9 shall omit this field; otherwise, the mobile station shall set
 10 this field as follows:

11 The mobile station shall set this field to the number of
 12 reported pilots which are not in the Active Set and have
 13 measurable strength that exceeds ($T_{ADD_S} - T_{MULCHAN_S}$).
 14 ($NUM_ACT_PN + NUM_NGHBR_PN$) shall not exceed 8. If
 15 there are more than ($8 - NUM_ACT_PN$) pilots not in the Active
 16 Set with strength exceeding ($T_{ADD_S} - T_{MULCHAN_S}$),
 17 the mobile station shall set NUM_NGHBR_PN to
 18 ($8 - NUM_ACT_PN$) and report the NUM_NGHBR_PN strongest
 19 pilots not in the Active Set.

20 If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile
 21 station shall not include any occurrence of the following record; otherwise, the mobile
 22 station shall include one occurrence of the following two-field record for each of the
 23 NUM_NGHBR_PN reported pilots.

24 NGHBR_PN_PHASE – Neighbor pilot measured phase.

25 The mobile station shall set this field to the phase of this pilot
 26 PN sequence relative to the zero offset pilot PN sequence, in
 27 units of one PN chip, as specified in 2.6.6.2.4.

28 NGHBR_PILOT_STRENGTH – Neighbor pilot strength.

29 The mobile station shall set this field to

$$30 \lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

31 where PS is the strength of this pilot, measured as specified
 32 in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0,
 33 the mobile station shall set this field to '000000'. If this value
 34 is greater than 63, the mobile station shall set this field to
 35 '111111'.

36 REF_PILOT_REC_INCL – Additional pilot information included indicator.

37 If SIZE_OF_REQ_BLOB is set to '0000', the mobile station
 38 shall omit this field; otherwise, the mobile station shall
 39 include this field and set it as follows:

40 The mobile station shall set this field to '1' if additional
 41 reference pilot information listed in the
 42 REF_PILOT_REC_TYPE and REF_RECORD_LEN fields are
 43 included. The mobile station shall set this field to '0' if the
 44 corresponding pilot is the common pilot and there is no
 45 additional pilot information included.

46 REF_PILOT_REC_TYPE – Reference pilot record type.

1 If REF_PILOT_REC_INCL is included and set to '0', the mobile
 2 station shall omit this field. If REF_PILOT_REC_INCL is
 3 included and set to '1', the mobile station shall set this field to
 4 the REF_PILOT_REC_TYPE value shown in Table
 5 2.7.2.3.2.34-1 corresponding to the type of Pilot Record
 6 specified by this record.

7 REF_RECORD_LEN – Pilot record length for the reference pilot.
 8 If REF_PILOT_REC_INCL is included and set to '0', the mobile
 9 station shall omit this field. If REF_PILOT_REC_INCL is
 10 included and set to '1', the mobile station shall set this field to
 11 the number of octets in the type-specific fields of this pilot
 12 record.

13 Type-specific fields – Pilot record type-specific fields for the reference pilot.
 14 If REF_PILOT_REC_INCL is included and set to '0', the mobile
 15 station shall omit this field. If REF_PILOT_REC_INCL is
 16 included and set to '1', the mobile station shall include type-
 17 specific fields based on the REF_PILOT_REC_TYPE of this
 18 pilot record.

19
 20 If REF_PILOT_REC_TYPE is equal to '000', the mobile station shall include the following
 21 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
PILOT_WALSH	(WALSH_LENGTH + 6)
RESERVED	0 to 7 (as needed)

23
 24 QOF – Quasi-orthogonal function index.
 25 The mobile station shall set this field to the index of the
 26 Quasi-orthogonal function of the corresponding Auxiliary
 27 Pilot.

28 WALSH_LENGTH – Length of the Walsh code for the reference pilot.
 29 The mobile station shall set this field to the WALSH_LENGTH
 30 value shown in Table 2.7.2.3.2.34-2 corresponding to the
 31 length of the Walsh code for the pilot that is used as the
 32 Auxiliary Pilot.

33 PILOT_WALSH – Walsh code for the Auxiliary Pilot used by the mobile station
 34 to derive its time reference.
 35 The mobile station shall set this field to the Walsh code
 36 corresponding to the Auxiliary Pilot.

- 1 RESERVED – Reserved bits.
- 2 The mobile station shall set all the bits of this field to ‘0’ to
- 3 make the entire record octet-aligned.
- 4 If SIZE_OF_REQ_BLOB is set to ‘0000’ and USE_SCRM_SEQ_NUM is set to ‘0’, the mobile
- 5 station shall not include any occurrence of the following record; otherwise, the mobile
- 6 station shall include one occurrence of the following record for each pilot in the Active Set
- 7 other than the pilot identified by the REF_PN field:
- 8 PILOT_REC_INCL – Additional pilot information included indicator.
- 9 The mobile station shall set this field to ‘1’ if additional pilot
- 10 information listed in the PILOT_REC_TYPE and RECORD_LEN
- 11 fields are included. The mobile station shall set this field to
- 12 ‘0’ if the corresponding pilot is the common pilot and there is
- 13 no additional pilot information included.
- 14 PILOT_REC_TYPE – Reference pilot record type.
- 15 If PILOT_REC_INCL is set to ‘0’, the mobile station shall omit
- 16 this field; otherwise, the mobile station shall set this field to
- 17 the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
- 18 corresponding to the type of Pilot Record specified by this
- 19 record.
- 20 RECORD_LEN – Pilot record length.
- 21 If PILOT_REC_INCL is set to ‘0’, the mobile station shall omit
- 22 this field; otherwise, the mobile station shall set this field to
- 23 the number of octets in the type-specific fields of this pilot
- 24 record.
- 25 Type-specific fields – Pilot record type-specific fields.
- 26 If PILOT_REC_INCL is set to ‘0’, the mobile station shall omit
- 27 this field; otherwise, the mobile station shall include type-
- 28 specific fields based on the PILOT_REC_TYPE of this pilot
- 29 record as described in 3.7.6.1.
- 30
- 31 If SIZE_OF_REQ_BLOB is set to ‘0000’ and USE_SCRM_SEQ_NUM is set to ‘0’, the mobile
- 32 station shall not include any occurrence of the following record; otherwise, the mobile
- 33 station shall include one occurrence of the following record for each of the
- 34 NUM_NGHBR_PN reported pilots.
- 35 PILOT_REC_INCL – Additional pilot information included indicator.
- 36 The mobile station shall set this field to ‘1’ if additional pilot
- 37 information listed in the PILOT_REC_TYPE and RECORD_LEN
- 38 fields are included. The mobile station shall set this field to
- 39 ‘0’ if the corresponding pilot is the common pilot and there is
- 40 no additional pilot information included.
- 41 PILOT_REC_TYPE – Reference pilot record type.

1 If PILOT_REC_INCL is set to '0', the mobile station shall omit
2 this field; otherwise, the mobile station shall set this field to
3 the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
4 corresponding to the type of Pilot Record specified by this
5 record.

6 RECORD_LEN – Pilot record length.

7 If PILOT_REC_INCL is set to '0', the mobile station shall omit
8 this field; otherwise, the mobile station shall set this field to
9 the number of octets in the type-specific fields of this pilot
10 record.

11 Type-specific fields – Pilot record type-specific fields.

12 If PILOT_REC_INCL is set to '0', the mobile station shall omit
13 this field; otherwise, the mobile station shall include type-
14 specific fields based on the PILOT_REC_TYPE of this pilot
15 record as described in 3.7.6.1.

16

17

2.7.2.3.2.19 Candidate Frequency Search Response Message

MSG_TAG: CFSRSM

Field	Length (bits)
LAST_CFSRM_SEQ	2
TOTAL_OFF_TIME_FWD	6
MAX_OFF_TIME_FWD	6
TOTAL_OFF_TIME_REV	6
MAX_OFF_TIME_REV	6
PCG_OFF_TIMES	1
ALIGN_TIMING_USED	1
MAX_NUM_VISITS	0 or 5
INTER_VISIT_TIME	0 or 6

LAST_CFSRM_SEQ – Candidate Frequency Search Request Message sequence number.

The mobile station shall set this field to the value of the CFSRM_SEQ field from the Candidate Frequency Search Request Message to which this message is a response.

TOTAL_OFF_TIME_FWD – Total time that the mobile station is off the Forward Traffic Channel.

The mobile station shall set this field to the mobile station's estimate of the total number of frames or power control groups for which the mobile station will need to suspend its current Forward Traffic Channel processing in order to tune to the Candidate Frequency, to perform the requested search, and to re-tune to the Serving Frequency. If the mobile station requires multiple visits to the Candidate Frequency to complete the requested search, the mobile station shall set this field to the total number of frames (if PCG_OFF_TIME is set to '0') or power control groups (if PCG_OFF_TIME is set to '1') for all visits to the Candidate Frequency in a search period.

MAX_OFF_TIME_FWD – Maximum time the mobile station is away from the Forward Traffic Channel.

The mobile station shall set this field to the mobile station's estimate of the maximum number of frames (if PCG_OFF_TIME is set to '0') or power control groups (if PCG_OFF_TIME is set to '1') for which the mobile station will need to suspend its current Forward Traffic Channel processing during a visit to the Candidate Frequency, to perform a part of the requested search, and to re-tune to the Serving Frequency.

- 1 TOTAL_OFF_TIME_REV – Total time that the mobile station is away from the Reverse
2 Traffic Channel.
- 3 The mobile station shall set this field to the mobile station's
4 estimate of the total number of frames or power control
5 groups for which the mobile station will need to suspend its
6 current Reverse Traffic Channel processing in order to tune to
7 the Candidate Frequency, to perform the requested search,
8 and to re-tune to the Serving Frequency. If the mobile station
9 requires multiple visits to the Candidate Frequency to
10 complete the requested search, the mobile station shall set
11 this field to the total number of frames or power control
12 groups for all visits to the Candidate Frequency in a search
13 period.
- 14 MAX_OFF_TIME_REV – Maximum time the mobile station is away from the Reverse
15 Traffic Channel.
- 16 The mobile station shall set this field to the mobile station's
17 estimate of the maximum number of frames or power control
18 groups for which the mobile station will need to suspend its
19 current Forward Traffic Channel processing during a visit to
20 the Candidate Frequency, to perform a part of the requested
21 search, and to re-tune to the Serving Frequency.
- 22 PCG_OFF_TIMES – Indicator if off times are expressed in units of power control
23 groups.
- 24 If P_REV_IN_USE_s is less than six, the mobile station shall set
25 this field to '0'; otherwise, the mobile station shall set this
26 field as follows:
- 27 The mobile station shall set this field to '1' if it expresses
28 TOTAL_OFF_TIME_FWD, MAX_OFF_TIME_FWD,
29 TOTAL_OFF_TIME_REV, and MAX_OFF_TIME_REV in units of
30 power control groups; otherwise, the mobile station shall set
31 this field to '0' so that TOTAL_OFF_TIME_FWD,
32 MAX_OFF_TIME_FWD, TOTAL_OFF_TIME_REV, and
33 MAX_OFF_TIME_REV are expressed in units of frames.
- 34 ALIGN_TIMING_USED – Alignment timing used indicator.
- 35 The mobile station shall set this field to '1' if it will align the
36 times of its visits away from the Serving Frequency, as
37 requested by the base station; otherwise, the mobile station
38 shall set this field to '0'.
- 39 MAX_NUM_VISITS – Maximum number of visits per search period.

1 If the ALIGN_TIMING_USED field is set to '0', the mobile
2 station shall omit this field; otherwise, the mobile station
3 shall include this field and set it to the maximum number of
4 visits per search period minus one.

5 INTER_VISIT_TIME – Inter-visit time.

6 If the mobile station includes the MAX_NUM_VISITS field and
7 sets it to a value other than 0, the mobile station shall include
8 this field and set it as described below; otherwise, the mobile
9 station shall omit this field.

10 The mobile station shall set INTER_VISIT_TIME to

11
$$\min (63, \lceil inter_visit_time / search_time_resolution \rceil)$$

12 where

13 *search_time_resolution* is equal to 0.02 if the mobile
14 station sets PCG_OFF_TIMES to '0'; otherwise,
15 *search_time_resolution* is equal to 0.00125,

16 and

17 *inter_visit_time* is the mobile station's estimate of the
18 time, in seconds, between the beginning of consecutive
19 visits away from the Serving Frequency.

20

1 2.7.2.3.2.20 Candidate Frequency Search Report Message
 2 MSG_TAG: CFSRPM

3

Field	Length (bits)
LAST_SRCH_MSG	1
LAST_SRCH_MSG_SEQ	2
SEARCH_MODE	4
MODE_SPECIFIC_LEN	8
Mode-specific fields	8 × MODE_SPECIFIC_LEN

4

5 LAST_SRCH_MSG – Indicator for the type of message that started the search being
 6 reported.
 7 If this message is being sent to report the results of a single
 8 search or a periodic search started by a *Candidate Frequency*
 9 *Search Control Message* or by a *Candidate Frequency Search*
 10 *Request Message*, the mobile station shall set this field to ‘0’;
 11 otherwise, the mobile station shall set this field to ‘1’.

12 LAST_SRCH_MSG_SEQ – Sequence number received in the message that started the
 13 search being reported.
 14 If this message is being sent in response to a *Candidate*
 15 *Frequency Search Control Message*, the mobile station shall
 16 set this field to the value of the CFSCM_SEQ field from the
 17 *Candidate Frequency Search Control Message*.
 18 If this message is being sent in response to a *Candidate*
 19 *Frequency Search Request Message*, the mobile station shall
 20 set this field to the value of the CFSRM_SEQ field from the
 21 *Candidate Frequency Search Request Message*.
 22 If this message is being sent in response to a *General Handoff*
 23 *Direction Message* or a *Universal Handoff Direction Message*,
 24 the mobile station shall set this field to the value of the
 25 HDM_SEQ field from the *General Handoff Direction Message*
 26 or the *Universal Handoff Direction Message*.

27 SEARCH_MODE – Search mode.
 28 The mobile station shall set this field to the SEARCH_MODE
 29 value shown in Table 3.7.3.3.2.27-2 corresponding to the type
 30 of search specified by the *Candidate Frequency Search*
 31 *Request Message* that specified the search parameters.

32 MODE_SPECIFIC_LEN – Length of mode-specific fields included in this message.

33 Mode-specific fields – Search mode-specific fields.
 34 The mobile station shall include mode-specific fields based on
 35 the SEARCH_MODE of this message.

1 If SEARCH_MODE is equal to '0000', the mobile station shall include the following fields:

2

Field	Length (bits)
BAND_CLASS	5
CDMA_FREQ	11
SF_TOTAL_RX_PWR	5
CF_TOTAL_RX_PWR	5
NUM_PILOTS	6

NUM_PILOTS occurrences of the following record:

{ (NUM_PILOTS)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
RESERVED_1	3

} (NUM_PILOTS)

NUM_PILOTS occurrences of the following record:

{ (NUM_PILOTS)

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN

} (NUM_PILOTS)

3

4 BAND_CLASS - Band class.

5 If this message is being sent to report an unsuccessful hard
 6 handoff attempt, the mobile station shall set this field to the
 7 CDMA band class corresponding to the CDMA Frequency
 8 Assignment for the Target Frequency, as specified in [30]. If
 9 this message is being sent to report measurements on a
 10 Candidate Frequency, the mobile station shall set this field to
 11 the CDMA band class corresponding to the CDMA Frequency
 12 Assignment for the Candidate Frequency, as specified in [30].

13 CDMA_FREQ - Frequency assignment.

1 If this message is being sent to report an unsuccessful hard
 2 handoff attempt, the mobile station shall set this field to the
 3 CDMA Channel number, in the specified CDMA band class,
 4 corresponding to the CDMA Frequency Assignment for the
 5 Target Frequency, as specified in [2]. If this message is being
 6 sent to report measurements on a Candidate Frequency, the
 7 mobile station shall set this field to the CDMA Channel
 8 number, in the specified CDMA band class, corresponding to
 9 the CDMA Frequency Assignment for the Candidate
 10 Frequency, as specified in [2].

11 SF_TOTAL_RX_PWR – Total received power on the Serving Frequency.
 12 The mobile station shall set this field to
 13
$$\min(31, \lceil (10 \times \log_{10}(\text{total_received_power}) + 110) / 2 \rceil)$$

 14 where *total_received_power* is the mean input power received
 15 by the mobile station on the Serving Frequency, in mW/1.23
 16 MHz.

17 CF_TOTAL_RX_PWR – Indicates the total received power on the Target Frequency or
 18 the Candidate Frequency.
 19 If this message is being sent to report an unsuccessful hard
 20 handoff attempt, the mobile station shall include the total
 21 received power on the Target Frequency; if this message is
 22 being sent to report measurements on a Candidate
 23 Frequency, the mobile station shall include the total received
 24 power on the Candidate Frequency.
 25 The mobile station shall set this field to
 26
$$\min(31, \lceil (10 \times \log_{10}(\text{total_received_power}) + 110) / 2 \rceil)$$

 27 where *total_received_power* is the mean input power received
 28 by the mobile station on the Target Frequency or the
 29 Candidate Frequency, in mW/1.23 MHz.

30 NUM_PILOTS – Number of pilots.
 31 The mobile station shall set this field to the number of pilots
 32 included in this message. The mobile station shall set this
 33 field to a value from 0 to N_{8m} , inclusive.

34 The mobile station shall include NUM_PILOTS occurrences of the following three-field
 35 record:

36 PILOT_PN_PHASE – Pilot measured phase.
 37 The mobile station shall set this field to the phase of the pilot
 38 PN sequence relative to the zero offset pilot PN sequence of
 39 this pilot, in units of one PN chip, as specified in 2.6.6.2.4.

40 PILOT_STRENGTH – Pilot strength in dB.
 41 The mobile station shall set this field to
 42
$$\lfloor -2 \times 10 \times \log_{10} \text{PS} \rfloor,$$

1 where PS is the strength of this pilot, measured as specified
 2 in 2.6.6.2.2. If this value ($-2 \times 10 \log_{10} PS$) is less than 0,
 3 the mobile station shall set this field to '000000'. If this value
 4 is greater than 63, the mobile station shall set this field to
 5 '111111'.

6 RESERVED_1 – Reserved bits.

7 The mobile station shall set this field to '000'.

8 The mobile station shall include NUM_PILOTS occurrences of the following record in the
 9 same order as the pilots listed above.

10 PILOT_REC_INCL – Additional pilot information included indicator.

11 The mobile station shall set this field to '1' if additional pilot
 12 information listed in the PILOT_REC_TYPE and RECORD_LEN
 13 fields are included. The mobile station shall set this field to
 14 '0' if the corresponding pilot is the common pilot and there is
 15 no additional pilot information included.

16 PILOT_REC_TYPE – Reference Pilot record type

17 If PILOT_REC_INCL is set to '0', the mobile station shall omit
 18 this field; otherwise, the mobile station shall set this field to
 19 the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
 20 corresponding to the type of Pilot Record specified by this
 21 record.

22 RECORD_LEN – Pilot record length.

23 If PILOT_REC_INCL is set to '0', the mobile station shall omit
 24 this field; otherwise, the mobile station shall set this field to
 25 the number of octets in the type-specific fields of this pilot
 26 record.

27 Type-specific fields – Pilot record type-specific fields.

28 If PILOT_REC_INCL is set to '0', the mobile station shall omit
 29 this field; otherwise, the mobile station shall include type-
 30 specific fields based on the PILOT_REC_TYPE of this pilot
 31 record as described in 3.7.6.1.

32

1 2.7.2.3.2.21 Periodic Pilot Strength Measurement Message

2 MSG_TAG: PPSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1
SF_RX_PWR	5
NUM_PILOT	4

NUM_PILOT occurrences of the following record:

{ (NUM_PILOT)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1

} (NUM_PILOT)

NUM_PILOT occurrences of the following record:

{ (NUM_PILOT)

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN

} (NUM_PILOT)

NUM_SUP	0 or 2

NUM_SUP occurrences of the following fields:

{ (NUM_SUP)

SCH_ID	1
FPC_SCH_CURR_SETPT	8

} (NUM_SUP)

3

4

REF_PN - Time reference PN sequence offset.

- 1 The mobile station shall set this field to the PN sequence
 2 offset of the pilot used by the mobile station to derive its time
 3 reference, relative to the zero offset pilot PN sequence in units
 4 of 64 PN chips.
- 5 PILOT_STRENGTH - Pilot strength in dB.
 6 The mobile station shall set this field to
 7
$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

 8 where PS is the strength of the pilot used by the mobile
 9 station to derive its time reference (see [2]), measured as
 10 specified in 2.6.6.2.2. If this value is less than 0, the mobile
 11 station shall set this field to '000000'. If this value is greater
 12 than '111111', the mobile station shall set this field to
 13 '111111'.
- 14 KEEP - Keep pilot indicator.
 15 If the handoff drop timer (see 2.6.6.2.3) corresponding to the
 16 pilot used by the mobile station to derive its time reference
 17 (see [2]) has expired, the mobile station shall set this field to
 18 '0'; otherwise, the mobile station shall set this field to '1'.
- 19 SF_RX_PWR - The received power spectral density of the Serving Frequency.
 20 The mobile station shall set this field to
 21
$$\min(31, \lceil (10 \times \log_{10}(\text{spec_density}) + 120) / 2 \rceil)$$

 22 where *spec_density* is the mobile station received power
 23 spectral density of the Serving Frequency, in mW/1.23MHz.
 24 If this value is less than 0, the mobile station shall set this
 25 field to '00000'.
- 26 NUM_PILOT - Number of Pilots.
 27 The mobile station shall set this field to the number of other
 28 reported pilots of the Active Set and the Candidate Set.
- 29 The mobile station shall include NUM_PILOT occurrences of the following three-field record,
 30 one for each pilot in the Active Set and one for each pilot in the Candidate Set, other than
 31 the pilot identified by the REF_PN field.
- 32 PILOT_PN_PHASE - Pilot measured phase.
 33 The mobile station shall set this field to the phase of the pilot
 34 PN sequence relative to the zero offset pilot PN sequence of
 35 this pilot, in units of one PN chip, as specified in 2.6.6.2.4.
- 36 PILOT_STRENGTH - Pilot strength in dB.
 37 The mobile station shall set this field to
 38
$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

 39 where PS is the strength of this pilot, measured as specified
 40 in 2.6.6.2.2. If this value is less than 0, the mobile station
 41 shall set this field to '000000'. If this value is greater than
 42 '111111', the mobile station shall set this field to '111111'.

- 1 KEEP - Keep pilot indicator.
- 2 If the handoff drop timer (see 2.6.6.2.3) corresponding to this
- 3 pilot has expired, the mobile station shall set this field to '0';
- 4 otherwise, the mobile station shall set this field to '1'.
- 5 The mobile station shall include NUM_PILOTS occurrences of the following record in the
- 6 same order as the pilots listed above.
- 7 PILOT_REC_INCL - Additional pilot information included indicator.
- 8 The mobile station shall set this field to '1' if additional pilot
- 9 information listed in the PILOT_REC_TYPE and RECORD_LEN
- 10 fields are included. The mobile station shall set this field to
- 11 '0' if the corresponding pilot is the common pilot and there is
- 12 no additional pilot information included.
- 13 PILOT_REC_TYPE - Reference Pilot record type
- 14 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 15 this field; otherwise, the mobile station shall set this field to
- 16 the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
- 17 corresponding to the type of Pilot Record specified by this
- 18 record.
- 19 RECORD_LEN - Pilot record length.
- 20 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 21 this field; otherwise, the mobile station shall set this field to
- 22 the number of octets in the type-specific fields of this pilot
- 23 record.
- 24 Type-specific fields - Pilot record type-specific fields.
- 25 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 26 this field; otherwise, the mobile station shall include type-
- 27 specific fields based on the PILOT_REC_TYPE of this pilot
- 28 record as described in 2.7.2.3.2.34.
- 29 SETPT_INCL - Setpoint information included indicator.
- 30 The mobile station shall set this field to '1' if setpoint
- 31 information is included in this message; otherwise, the mobile
- 32 station shall set this field to '0'.
- 33 FCH_INCL - Fundamental Channel included indicator.
- 34 If SETPT_INCL is equal to '1', the mobile station shall include
- 35 this field and set it as follows; otherwise, the mobile station
- 36 shall omit this field.
- 37 If P_REV_IN_USE_s is less than nine, the mobile station shall
- 38 do the following:
- 39 The mobile station shall set this field to '1' if
- 40 FPC_PRI_CHAN_s is equal to '0'; otherwise, the mobile
- 41 station shall set this field to '0'.
- 42 If P_REV_IN_USE_s is greater than or equal to nine, the mobile
- 43 station shall do the following:

- 1 FPC_SCH_CURR_SETPT - The supplemental channel outer loop E_b/N_t setpoint.
2 The mobile station shall set this field to the value of the power
3 control outer loop E_b/N_t setpoint, in units of 0.125 dB,
4 currently in use in the Channel specified by SCH_ID.
5
6

2.7.2.3.2.22 Outer Loop Report Message

MSG_TAG: OLRM

Field	Length (bits)
FCH_INCL	1
FPC_FCH_CURR_SETPT	0 or 8
DCCH_INCL	1
FPC_DCCH_CURR_SETPT	0 or 8
NUM_SUP	2

NUM_SUP occurrences of the following fields:

{ (NUM_SUP)

SCH_ID	1
FPC_SCH_CURR_SETPT	8

} (NUM_SUP)

- 4
- 5 FCH_INCL – Fundamental Channel included indicator.
- 6 The mobile station shall set this field to ‘1’ if
- 7 FPC_FCH_CURR_SETPT is included; otherwise the mobile
- 8 station shall set this field to ‘0’.
- 9 FPC_FCH_CURR_SETPT – The outer loop E_b/N_t setpoint of the Fundamental Channel.
- 10 If FCH_INCL is set to ‘1’, the mobile station shall set this field
- 11 to the value of the E_b/N_t setpoint, in units of 0.125 dB,
- 12 currently in use in the Fundamental Channel power control
- 13 outer loop estimation; otherwise, the mobile station shall omit
- 14 this field.
- 15 DCCH_INCL – Dedicated Control Channel included indicator.
- 16 The mobile station shall set this field to ‘1’ if the
- 17 FPC_DCCH_CURR_SETPT field is included; otherwise the
- 18 mobile station shall set this field to ‘0’.
- 19 FPC_DCCH_CURR_SETPT – The outer loop E_b/N_t setpoint of the Forward Dedicated
- 20 Channel.
- 21 If DCCH_INCL is set to ‘1’, the mobile station shall set this
- 22 field to the value of the E_b/N_t setpoint, in units of 0.125 dB,
- 23 currently in use in the Dedicated Channel power control outer
- 24 loop estimation; otherwise, the mobile station shall omit this
- 25 field.
- 26 NUM_SUP – The number of Supplemental Channels.
- 27 The mobile station shall set this field to the total number of
- 28 the Supplemental Channels reported by this message.

1 The mobile station shall in NUM_SUP occurrences of the following two fields:

2 SCH_ID – The Supplemental Channel index.

3 The mobile station shall set this field to the Supplemental
4 Channel index to indicate the Forward Supplemental Channel
5 that to be reported

6 FPC_SCH_CURR_SETPT – The supplemental outer loop E_b/N_t setpoint.

7 The mobile station shall set this field to the value of the power
8 control outer loop E_b/N_t setpoint, in units of 0.125 dB,
9 currently in use in the Channel specified by SCH_ID.

 7 mobile station shall set this field to ‘0’.
- 8 CH_IND – Channel indicator.
 9 If CH_IND_INCL is set to ‘0’, the mobile station shall omit this
 10 field; otherwise, the mobile station shall include this field and
 11 set it as shown in Table 2.7.1.3.2.4-6 to request a new
 12 physical channel configuration.
- 13 EXT_CH_IND - Extended Channel Indicator.
 14 If the CH_IND field is not included, or is included and not set
 15 to ‘00’, the mobile station shall omit this field; otherwise, the
 16 mobile station shall include this field and set it as shown in
 17 Table 2.7.1.3.2.4-11 to request a new physical channel
 18 configuration.

19

2.7.2.3.2.25 Extended Release Response Message

MSG_TAG: ERRM

Field	Length (bits)
RSC_MODE_IND	1
RSCI	0 or 4
RSC_END_TIME_UNIT	0 or 2
RSC_END_TIME_VALUE	0 or 4

3

4 RSC_MODE_IND – Reduced slot cycle mode indicator.

5 The mobile station shall set this field to '1' to indicate that it
6 will operate in the reduced slot cycle mode following release of
7 the traffic channel; otherwise, the mobile station shall set this
8 field to '0'.

9 RSCI – Reduced slot cycle index.

10 If RSC_MODE_IND is equal to '1', the mobile station shall
11 include this field and set it to the value of the reduced slot
12 cycle index, as specified in Table 2.7.1.3.2.1-8; otherwise, the
13 mobile station shall omit this field.

14 The mobile station shall set this field to a value less than the
15 registered slot cycle index, SLOT_CYCLE_INDEX_REG.

16 RSC_END_TIME_UNIT – Reduced slot cycle mode end time unit.

17 If RSC_MODE_IND is equal to '0', the mobile station shall
18 omit this field; otherwise, the mobile station shall set this field
19 according to Table 2.7.3.5-1 to indicate the units of the
20 RSC_END_TIME_VALUE field.

21 RSC_END_TIME_VALUE – Reduced slot cycle mode end time value.

22 If RSC_MODE_IND is equal to '0', the mobile station shall
23 omit this field; otherwise, the mobile station shall include this
24 field and set it as follows:

25 The mobile station shall set this field to the system time, in
26 units of time specified by RSC_END_TIME_UNIT(modulo 16),
27 at which the mobile station is to exit the reduced slot cycle
28 mode.

2.7.2.3.2.27 Pilot Strength Measurement Mini Message

MSG_TAG: PSMMM

Field	Length (bits)
PSMM_POS	3
PILOT_STRENGTH	6
RANK	3

PSMM_POS – *Pilot Strength Measurement Message* position.

The mobile station shall set this field to an index corresponding to the position, within the last sent *Pilot Strength Measurement Message* (see 2.7.2.3.2.5) or *Extended Pilot Strength Measurement Message* (see 2.7.2.3.2.34), of the Active-Set pilot whose strength is being reported. The mobile station shall use a value of 0 to report the pilot represented by the REF_PN field in the last sent *Pilot Strength Measurement Message* or *Extended Pilot Strength Measurement Message*. The mobile station shall use a value of n, where n is an integer greater than 0, to report the pilot represented by the nth occurrence of the PILOT_PN_PHASE field in the last sent *Pilot Strength Measurement Message* or *Extended Pilot Strength Measurement Message*.

PILOT_STRENGTH – Pilot strength in dB.

The mobile station shall set this field to

$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

where PS is the strength of this Active-Set pilot, measured as specified in [2]. If this value is less than 0, the mobile station shall set this field to '000000'. If this value is greater than '111111', the mobile station shall set this field to '111111'.

RANK – Rank order.

The mobile station shall set this field to the rank order of the pilot whose strength is being reported, relative to all other pilots in the current Active Set. The mobile station shall use a value of 0 to report the strongest pilot in the current Active Set.

1 2.7.2.3.2.28 Supplemental Channel Request Mini Message

2 MSG_TAG: SCRMM

3

Field	Length (bits)
REQ_BLOB	16

4

5 REQ_BLOB – Reverse Supplemental Channel request block of bytes.
6 The mobile station shall include information in this field
7 containing the parameters that specify the characteristics of
8 the Reverse Supplemental Channels request. The mobile
9 station shall set this field in accordance with the connected
10 Service Options.

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	Variable (Value of BCMC_PROGRAM_ID_LEN + 1)
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN

NUM_FLOW_DISCRIMINATOR+1 or 1 occurrences of the following variable length record:

{ (NUM_FLOW_DISCRIMINATOR+1) or 1

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN
-------------------------	-----------------------------

} (NUM_FLOW_DISCRIMINATOR+1) or 1

} (0 or NUM_BCMC_PROGRAMS)

4

- 1 GATING_DISCONNECT_IND - Reverse pilot gating or service disconnect indicator.
2 If the mobile station requests that reverse pilot gating
3 operation to be performed, the mobile station shall set this
4 field to '1'; otherwise (if the mobile station requests that the
5 service option connection specified by CON_REF to be
6 released), the mobile station shall set this field to '0'.
- 7 CON_REF - Connection reference.
8 If the GATING_DISCONNECT_IND field is set to '1', the mobile
9 station shall omit this field; otherwise, the mobile station
10 shall include this field and set it as follows:
11 To request the release of a service option connection, the
12 mobile station shall set this field to the connection reference
13 corresponding to one of the service option connections
14 requested to be released; otherwise the mobile station shall
15 set this field to '00000000'.
- 16 PURGE_SERVICE - Purge service instance indicator.
17 If the GATING_DISCONNECT_IND field is set to '1', the mobile
18 station shall omit this field; otherwise, the mobile station
19 shall include this field and set it as follows:
20 If the CON_REF is not set to '00000000' and if the packet
21 data service instance identified by CON_REF has been
22 inactivated, the mobile station shall set this field to '1';
23 otherwise, the mobile station shall set this field to '0'. When
24 CON_REF is set to '00000000', this field does not have any
25 significance.
- 26 ADD_CON_REF_INCL - Additional connection reference included indicator.
27 If the GATING_DISCONNECT_IND field is set to '1', the mobile
28 station shall omit this field; otherwise, the mobile station
29 shall include this field and set it as follows:
30 If at least one occurrence of the ADD_CON_REF field is
31 included in this message, then the mobile station shall set
32 this field to '1'; otherwise, the mobile station shall set this
33 field to '0'.
- 34 NUM_ADD_CON_REF - Number of additional connection references.
35 If the ADD_CON_REF_INCL field is included and set to '1', the
36 mobile station shall include this field and set it to one less
37 than the number of occurrences of the ADD_CON_REF field
38 included in this message; otherwise, the mobile station shall
39 omit this field.
- 40 ADD_CON_REF - Additional connection reference.

1 The mobile station shall set this field to the connection
2 reference corresponding to a service option connection that is
3 requested to be released.

4 **ADD_PURGE_SERVICE** - Additional purge service instance indicator.

5 If the packet data service instance identified by the
6 **ADD_CON_REF** field has been inactivated, the mobile station
7 shall set this field to '1'; otherwise, the mobile station shall set
8 this field to '0'.

9 **BCMC_INFO_INCL** - BCMC information includes indicator.

10 If the mobile station includes BCMC related fields in this
11 message, the mobile station shall set this field to '1';
12 otherwise, the mobile station shall set this field to '0'.

13 **NUM_BCMC_PROGRAMS**- Number of BCMC Programs

14 If the **BCMC_INFO_INCL** field is set to '0', the mobile station
15 shall omit this field; otherwise, the mobile station shall
16 include this field and set it as follows:

17 If the mobile station is requesting the release of all the BCMC
18 programs being monitored, the mobile station shall set this
19 field to '000000'; otherwise, the mobile station shall set this
20 field to the number of BCMC programs included in this
21 message.

22 The mobile station shall include **NUM_BCMC_PROGRAMS** occurrences of the following
23 variable length record:

24 **BCMC_PROGRAM_ID_LEN** - Length of **BCMC_PROGRAM_ID** field

25 The mobile station shall set this field to one less than the
26 length, in bits, of the **BCMC_PROGRAM_ID** of this program.

27 **BCMC_PROGRAM_ID** - BCMC program Identifier

28 The length of this field shall be one more than the value of
29 **BCMC_PROGRAM_ID_LEN** bits.

30 The mobile station shall set this field to the identifier of the
31 BCMC program corresponding to one or more flows that the
32 mobile station is requesting to release.

33 **BCMC_FLOW_DISCRIMINATOR_LEN** - Length of **BCMC_FLOW_DISCRIMINATOR** field

34 The mobile station shall set this field to the length, in bits, of
35 the **BCMC_FLOW_DISCRIMINATOR** of this program. To
36 request release of all flows associated with this
37 **BCMC_PROGRAM_ID**, the mobile station may set this field to
38 '000'.

2.7.2.3.2.30 Resource Release Request Mini Message

MSG_TAG: RRRMM

Field	Length (bits)
GATING_DISCONNECT_IND	1
CON_REF	0 or 8
PURGE_SERVICE	0 or 1

GATING_DISCONNECT_IND - Reverse pilot gating or service disconnect indicator.

If the mobile station requests that reverse pilot gating operation to be performed, the mobile station shall set this field to '1'; otherwise (if the mobile station requests that the service option connection specified by CON_REF to be released), the mobile station shall set this field to '0'.

CON_REF - Connection reference.

If the GATING_DISCONNECT_IND field is set to '1', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the connection reference corresponding to the service option connection that is requested to be released.

PURGE_SERVICE - Purge service instance indicator.

If the GATING_DISCONNECT_IND field is set to '1', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

If the packet data service instance identified by CON_REF has been inactivated, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

- 1 TAG – Call initiation transaction identifier.
- 2 The mobile station shall set this field to the identifier for the
- 3 transaction corresponding to SR_ID.
- 4 CH_IND – Channel indicator.
- 5 The mobile station shall set this field as shown in Table
- 6 2.7.2.3.2.32-1, to request physical resources.

1

Table 2.7.2.3.2.32-1. Channel Indicator

CH_IND (binary)	Channel(s) Requested
000	No additional channels requested.
001	Fundamental Channel.
010	Dedicated Control Channel.
011	Reserved.
100	Continuous Reverse Pilot Channel.
101	Fundamental Channel and Continuous Reverse Pilot Channel.
110	Reserved.
111	Refer to EXT_CH_IND.

2

3

EXT_CH_IND - Extended Channel Indicator.

4

5

6

If CH_IND is set to '111, then the mobile station shall set this field as shown in Table 2.7.1.3.2.4-11; otherwise, the mobile station shall omit this field.

- 1 SR_ID – Service reference identifier.
- 2 If the SYNC_ID_INCL field is set to ‘0’, the mobile station shall
- 3 set this field as follows:
- 4 o If the service instance provides a service reference
- 5 identifier, the mobile station shall set this field to the
- 6 service reference identifier specified by the service
- 7 instance. If the service instance does not provide a service
- 8 reference identifier, the mobile station shall set this field
- 9 to the smallest unused service reference identifier value
- 10 between 1 and 6 (inclusive).
- 11 Otherwise, the mobile station shall set this field as follows:
- 12 o If the mobile station requests the restoration of a single
- 13 service option connection from the stored service
- 14 configuration, the mobile station shall set this field to the
- 15 corresponding service reference identifier.
- 16 o If the mobile station requests the restoration of more than
- 17 one but not all service option connections from the stored
- 18 service configuration, the mobile station shall set this field
- 19 to the service reference identifier corresponding to one of
- 20 the service option connections to be restored.
- 21 o Otherwise (that is, the mobile station requests the
- 22 restoration of all remaining service option connections
- 23 from the stored service configuration), the mobile station
- 24 shall set this field to ‘111’.
- 25 GLOBAL_EMERGENCY_CALL – Global emergency call indicator.
- 26 The mobile station shall set this field to ‘1’, if the mobile
- 27 station recognizes that this is an emergency call; otherwise,
- 28 the mobile station shall set this field to ‘0’.
- 29 MS_INIT_POS_LOC_IND – Mobile Initiated Position Location Session indicator.
- 30 If the GLOBAL_EMERGENCY_CALL field is set to ‘0’, the
- 31 mobile station shall omit this field; otherwise, the mobile
- 32 station shall include this field and shall set it as follows:
- 33 The mobile station shall set this field to ‘1’ if
- 34 MS_INIT_POS_LOC_SUP_IND_s is equal to ‘1’ and if the mobile
- 35 station is to initiate a position location session associated
- 36 with this emergency call; otherwise, the mobile station shall
- 37 set this field to ‘0’.

- 1 NEW_SINFO_INCL – Encryption fields included.
- 2 The mobile station shall set this field to '1' if the encryption
3 related fields are included; otherwise the mobile station shall
4 set this field to '0'. The mobile station shall set this field to '0'
5 if the base station does not support encryption or the mobile
6 station does not support any of the encryption modes
7 supported by the base station.
- 8 UI_ENCRYPT_REQ – Request for user information encryption on the traffic channel
9 indicator.
- 10 If NEW_SINFO_INCL is set to '1', the mobile station shall
11 include this field; otherwise, the mobile station shall omit this
12 field. If this field is included, the mobile station shall set this
13 field to '1' to request user information encryption, and to '0' to
14 request no user information encryption.
- 15 UI_ENCRYPT_SUP – User information encryption supported indicator.
- 16 If NEW_SINFO_INCL is set to '1', the mobile station shall
17 include this field; otherwise, the mobile station shall omit this
18 field. If this field is included, the mobile station shall set this
19 field to indicate the supported user information encryption
20 algorithms.
- 21 This field consists of the subfields shown in Table 2.7.1.3.2.4-
22 9.
- 23 The mobile station shall set each subfield to '1' if the
24 corresponding user information encryption algorithm is
25 supported by the mobile station; otherwise, the mobile station
26 shall set the subfield to '0'.
- 27 The mobile station shall set the RESERVED subfield to
28 '000000'.
- 29 SERVICE_OPTION – Requested service option for this origination.
- 30 The mobile station shall set this field to the value specified in
31 [30], corresponding to the requested service option.
- 32 MORE_SO_INFO_INCL – More service option information included.
- 33 If MAX_NUM_ALT_SO_S is equal to '000', the mobile station
34 shall set this field to '0'; otherwise, the mobile station shall set
35 this field as follows:
- 36 If any alternate service option number or/and service option
37 bitmap is to be included in this message, the mobile station
38 shall set this field to '1', otherwise, the mobile station shall set
39 this field to '0'. In other words, MORE_SO_INFO_INCL is set to
40 '1', if NUM_ALT_SO is included and not set to '000' or/and
41 SO_BITMAP_IND is included and not set to '00'.
- 42 NUM_ALT_SO – Number of alternative service options.

1 If MORE_SO_INFO_INCL is set to '0', the mobile station shall
 2 omit this field; otherwise, the mobile station shall set this field
 3 to the number of supported alternative service options which
 4 either have no service option group number assigned or do
 5 not belong to the same service option group whose bitmap is
 6 include in the message.

7 The mobile station shall include NUM_ALT_SO occurrences of the following field:

8 ALT_SO – Alternative service option.

9 The mobile station shall set this field to the value specified in
 10 [30], corresponding to the alternative service option supported
 11 by the mobile station. These alternate service options are
 12 either have not service option group number assigned or do
 13 not belong to the same service option group whose bitmap is
 14 included in this message.

15 SO_BITMAP_IND – SO bitmap indicator.

16 If MORE_SO_INFO_INCL is set to '0', the mobile station shall
 17 omit this field; otherwise, the mobile station shall include this
 18 field and set it as defined in Table 2.7.1.3.2.4-10.

19 SO_GROUP_NUM – Service option group number.

20 If the field SO_BITMAP_IND is included and not set to '00', the
 21 mobile station shall include this field and set this field to the
 22 service option group number of which the bitmap is to be
 23 included; otherwise, the mobile station shall omit this field.

24 SO_BITMAP – Service option bitmap.

25 If the field SO_BITMAP_IND is included and not set to '00', the
 26 mobile station shall include the bitmap of size $2^{(1+SO_BITMAP_IND)}$
 27 bits of the service option group number
 28 (SO_GROUP_NUM); otherwise, the mobile station shall omit
 29 this field;

30 When the service option bitmap is included, if there are more
 31 than $(2^{(1+SO_BITMAP_IND)})$ service options defined for the
 32 service option group, the mobile station shall include the
 33 bitmap containing the least significant bits $(2^{(1+SO_BITMAP_IND)})$
 34 of the service option group.

35 The mobile station shall set a bit in this bitmap to '1', if the
 36 mobile station supports the service option for which this bit
 37 represents; otherwise, the mobile station shall set a bit in this
 38 bitmap to '0'.

39 DRS – Data ready to send indicator.

40 If the service instance corresponding to SR_ID has data to
 41 send, the mobile station shall set this field to '1'; otherwise,
 42 the mobile station shall set this field to '0'.

- 1 PREV_SID_INCL - Previous System Identification (SID) included indicator.
 2 The mobile station shall set this field to '1' if:
- 3 - The mobile station determines that the SID has been
 4 changed after a packet data dormant handoff, and
 5 - This message includes the main service instance (see
 6 [42]).
 7 Otherwise, the mobile station shall set this field to '0'.
- 8 PREV_SID - Previous System Identification.
 9 If PREV_SID_INCL is set to '0', the mobile station shall omit
 10 this field; otherwise, the mobile station shall include this field
 11 and set it as follows:
 12 The mobile station shall set this field to the previous SID.
- 13 PREV_NID_INCL - Previous Network Identification (NID) included indicator.
 14 The mobile station shall set this field to '1' if:
- 15 - The mobile station determines that NID has been changed
 16 after a packet data dormant handoff, and
 17 - This message includes the main service instance (see
 18 [42]).
 19 Otherwise, the mobile station shall set this field to '0'.
- 20 PREV_NID - Previous Network Identification.
 21 If PREV_NID_INCL is set to '0', the mobile station shall omit
 22 this field; otherwise, the mobile station shall include this field
 23 and set it as follows:
 24 The mobile station shall set this field to the previous NID.
- 25 PREV_PZID_INCL - Previous Packet Zone ID (PZID) included indicator.
 26 The mobile station shall set this field to '1' if:
- 27 - The mobile station determines that the Packet Zone ID
 28 has been changed after a packet data dormant handoff,
 29 and
 30 - This message includes the main service instance (see
 31 [42]).
 32 Otherwise, the mobile station shall omit this field.
- 33 PREV_PZID - Previous Packet Zone ID.
 34 If PREV_PZID_INCL is set to '0', the mobile station shall omit
 35 this field; otherwise, the mobile station shall include this field
 36 and set it as follows:
 37 The mobile station shall set this field to the previous PZID.
- 38 DIALED_DIGS_INCL - Dialed digits included indicator.

- 1 The mobile station shall set this field to '1' if the dialed digits
2 related fields are included in this message; otherwise, the
3 mobile station shall set this field to '0'.
- 4 **DIGIT_MODE** – Digit mode indicator.
- 5 If the DIALED_DIGS_INCL field is set to '0', the mobile station
6 shall omit this field; otherwise, the mobile station shall
7 include this field and shall set it as follows:
- 8 This field indicates whether the dialed digits are 4-bit DTMF
9 codes or 8-bit ASCII codes using a specified numbering plan.
- 10 To originate the call using the binary representation of DTMF
11 digits (i.e., CHARi fields are represented in Table 2.7.1.3.2.4-
12 4), the mobile station shall set this field to '0'. To originate
13 the call using ASCII characters, the mobile station shall set
14 this field to '1'.
- 15 **NUMBER_TYPE** – Type of number.
- 16 If the DIALED_DIGS_INCL field is set to '0', or if
17 P_REV_IN_USE_s < 9 and DIGIT_MODE is set to '0', the mobile
18 station shall omit this field; otherwise, the mobile station
19 shall include this field and shall set it as follows:
- 20 The mobile station shall set this field to the NUMBER_TYPE
21 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
22 of the number as defined in [7], Section 4.5.9.
- 23 If this field is included and the mobile station determines that
24 the user has entered an international number (for example,
25 with a leading "+" as specified in [39] for Plus Code Dialing or
26 an international access code), the mobile station should set
27 this field to '001'.
- 28 **NUMBER_PLAN** – Numbering plan.
- 29 If the DIALED_DIGS_INCL field is set to '0' or if the
30 DIGIT_MODE field is set to '0', the mobile station shall omit
31 this field; otherwise, the mobile station shall include this field
32 and shall set it as follows:
- 33 The mobile station shall set this field to the NUMBER_PLAN
34 value shown in Table 2.7.1.3.2.4-3 corresponding to the
35 requested numbering plan as defined in [7], Section 4.5.9.
- 36 **NUM_FIELDS** – Number of dialed digits in this message.
- 37 If the DIALED_DIGS_INCL field is set to '0', the mobile station
38 shall omit this field; otherwise, the mobile station shall
39 include this field and shall set it as follows:

1 The mobile station shall set this field to the number of dialed
2 digits included in this message.

3 The mobile station shall include NUM_FIELDS occurrences of the following field:

4 CHARi – A dialed digit or character.

5 If the DIGIT_MODE field is set to '0', the mobile station shall
6 set each occurrence of this field to the code value shown in
7 Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the
8 DIGIT_MODE field is set to '1', the mobile station shall set
9 each occurrence of this field to the ASCII representation
10 corresponding to the dialed digit, as specified in [9], with the
11 most significant bit set to '0'.

12 NUM_RECS – Number of records.

13 The mobile station shall set this field to the number of
14 information records included with this message.

15 The mobile station shall include NUM_RECS occurrences of the following three-field record.

16 RECORD_TYPE – Information record type.

17 The mobile station shall set this field to the record type value
18 shown in Table 2.7.4-1.

19 The mobile station shall not include the record type for QoS
20 Parameters information record if MOB_QOS_s is equal to '0'.

21 RECORD_LEN – Information record length.

22 The mobile station shall set this field to the number of octets
23 in the type-specific fields included in this record.

24 Type-specific fields – Type-specific fields.

25 The mobile station shall include type-specific fields as
26 specified in 2.7.4.

27 SYNC_ID_INCL – Service Configuration synchronization identifier included
28 indicator.

29 The mobile station shall set this field to '1' if the SYNC_ID
30 field is included in this message; otherwise, the mobile station
31 shall set this field to '0'.

32 If SYNC_ID_SUPPORTED_s is equal to '0', the mobile station
33 shall set this field to '0'.

- 1 ADD_SR_ID – Additional service reference identifier.
- 2 If SYNC_ID_INCL is set to ‘0’, the mobile station shall set this
- 3 field as follows:
- 4 • If the service instance provides a service reference
- 5 identifier, the mobile station shall set this field to the
- 6 service reference identifier specified by the service
- 7 instance. If the service instance does not provide a service
- 8 reference identifier, the mobile station shall set this field
- 9 to the smallest unused service reference identifier value
- 10 between 1 and 6 (inclusive).
- 11 Otherwise, the mobile station shall set this field to the service
- 12 reference identifier corresponding to the service option
- 13 connection that the mobile station requests to be restored
- 14 from the stored service configuration.
- 15 ADD_DRS – Additional Data Ready to Send indicator.
- 16 If the service instance corresponding to the ADD_SR_ID field
- 17 of this record has data to send, the mobile station shall set
- 18 this field to ‘1’; otherwise, the mobile station shall set this
- 19 field to ‘0’.
- 20 ADD_TAG – Additional call initiation transaction identifier.
- 21 The mobile station shall set this field to the identifier for the
- 22 transaction corresponding to the ADD_SR_ID field of this
- 23 record.
- 24 ADD_SERVICE_OPTION_INCL - Additional service option included indicator.
- 25 If SYNC_ID_INCL is set to ‘1’, the mobile station shall omit
- 26 this field; otherwise, the mobile station shall include this field
- 27 and set it as follows:
- 28 The mobile station shall set this field to ‘0’ if the requested
- 29 service option number of the service instance corresponding
- 30 to the ADD_SR_ID field of this record is the same as
- 31 SERVICE_OPTION; otherwise, the mobile station shall set this
- 32 field to ‘1’.
- 33 ADD_SERVICE_OPTION – Additional service option number.
- 34 If the ADD_SERVICE_OPTION_INCL field of this record is not
- 35 included or is included and is set to ‘0’, the mobile station
- 36 shall omit this field; otherwise, the mobile station shall
- 37 include this field and set it to the value specified in [30],
- 38 corresponding to the requested service option number of the
- 39 service instance corresponding to the ADD_SR_ID field of this
- 40 record.
- 41 ADD_NUM_RECS – Additional number of records.
- 42 The mobile station shall set this field to the number of
- 43 information records included in this record for the service
- 44 instance corresponding to the ADD_SR_ID field in this record.

- 1 The mobile station shall include ADD_NUM_RECS occurrences of the following three-field
 2 record.
- 3 ADD_RECORD_TYPE - Additional information record type.
- 4 The mobile station shall set this field to the record type value
 5 shown in Table 2.7.4-1.
- 6 The mobile station shall not include the record type for QoS
 7 Parameters information record if MOB_QOS_s is equal to '0'.
- 8 ADD_RECORD_LEN - Additional information record length.
- 9 The mobile station shall set this field to the number of octets
 10 in the type-specific fields included in this record.
- 11 Type-specific fields - Type-specific fields.
- 12 The mobile station shall include type-specific fields as
 13 specified in 2.7.4.
- 14
- 15 BCMC_INCL - BCMC information included indicator
- 16 If the P_REV_IN_USE_s is less than 11, the mobile station shall
 17 omit this field; otherwise, the mobile station shall include this
 18 field and set it as follows:
- 19 The mobile station shall set this field to '1' if one or more
 20 BCMC_PROGRAM_IDs are included in the message;
 21 otherwise, the mobile station shall set this field to '0'.
- 22 BCMC_ORIG_ONLY_IND - BCMC origination only indicator
- 23 If the BCMC_INCL field is not included or is included and is
 24 set to '0', the mobile station shall omit this field; otherwise,
 25 the mobile station shall include this field and set it as follows:
- 26 The mobile station shall set this field to '1' to indicate that
 27 this origination is only for BCMC and no point to point call is
 28 requested in this message; otherwise the mobile station shall
 29 set this field to '0'.
- 30 AUTH_SIGNATURE_INCL - Authorization signature included indication.
- 31 If the BCMC_INCL field is not included or is included and is
 32 set to '0', the mobile station shall omit this field; otherwise,
 33 the mobile station shall include this field and set it as follows:
- 34 The mobile station shall set this field to '1' to indicate that the
 35 authorization signature is included in this message for some
 36 of the BCMC flows included in this message; otherwise, the
 37 mobile station shall set this field to '0'.
- 38 TIME_STAMP_SHORT_LENGTH - Length of time stamp included in this message.

1 If the AUTH_SIGNATURE_INCL field is not included or is
 2 included and is set to '0', the mobile station shall omit this
 3 field; otherwise, the mobile station shall include this field and
 4 set it as follows:

5 The mobile station shall set this field to the length of the time
 6 stamp, in units of bits, included in this message.

7 TIME_STAMP_SHORT - Time stamp short.

8 If the AUTH_SIGNATURE_INCL field is not included or is
 9 included and is set to '0', the mobile station shall omit this
 10 field; otherwise, the mobile station shall include this field and
 11 set it as follows:

12 The mobile station shall set this field to the
 13 TIME_STAMP_SHORT_LENGTH least significant bits of the
 14 time stamp parameter used to generate the Authorization
 15 signature included in this message.

16 NUM_BCMC_PROGRAMS- Number of BCMC Programs

17 If the BCMC_INCL field is not included or is included and is
 18 set to '0', the mobile station shall omit this field; otherwise,
 19 the mobile station shall include this field and set it as follows:

20 The mobile station shall set this field to the number of BCMC
 21 programs included in this message minus 1.

22 The mobile station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following
 23 variable length record:

24 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

25 The mobile station shall set this field to one less than the
 26 length, in bits, of the BCMC_PROGRAM_ID of this program.

27 BCMC_PROGRAM_ID - BCMC program Identifier

28 The length of this field shall be one more than the value of
 29 BCMC_PROGRAM_ID_LEN bits.

30 The mobile station shall set this field to the identifier of the
 31 BCMC program corresponding to one or more flows that the
 32 mobile station will continue to monitor or start to monitor
 33 upon receiving confirmation of delivery of this message or is
 34 requesting transmission.

35 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

36 The mobile station shall set this field to the length, in bits, of
 37 the BCMC_FLOW_DISCRIMINATOR of this program. To
 38 request all flows associated with this BCMC_PROGRAM_ID,
 39 the mobile station may set this field to '000'.

- 1 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators
- 2 The length of this field shall be determined by the value of the
- 3 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
- 4 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
- 5 is omitted; otherwise, the length of this field shall be
- 6 BCMC_FLOW_DISCRIMINATOR_LEN bits.
- 7 The mobile station shall set this field to the number of flow
- 8 discriminators included for this program minus one.
- 9 If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include
- 10 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
- 11 otherwise, the mobile station shall include 1 occurrence of the following variable length
- 12 record:
- 13 BCMC_FLOW_DISCRIMINATOR - BCMC Flow discriminator.
- 14 The length of this field shall be determined by the value of the
- 15 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
- 16 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
- 17 is omitted; otherwise, the length of this field shall be
- 18 BCMC_FLOW_DISCRIMINATOR_LEN bits.
- 19 The mobile station shall set this field to the BCMC flow
- 20 discriminator requested.
- 21 AUTH_SIGNATURE_IND - Authorization signature indicator.
- 22 If the AUTH_SIGNATURE_INCL field is not included or is
- 23 included and is set to '0', the mobile station shall omit this
- 24 field; otherwise, the mobile station shall include this field and
- 25 set it as follows:
- 26 The mobile station shall set this field to '1' to indicate that the
- 27 authorization signature is included in this message for this
- 28 BCMC flow; otherwise, the mobile station shall set this field to
- 29 '0'.
- 30 AUTH_SIGNATURE_SAME_IND - Authorization signature same as previous BCMC
- 31 flow indicator.
- 32 If the AUTH_SIGNATURE_IND field is not included or is
- 33 included and is set to '0', the mobile station shall omit this
- 34 field; otherwise, the mobile station shall include this field and
- 35 set it as follows:
- 36 The mobile station shall set this field to '1' to indicate that the
- 37 authorization signature generated for this BCMC flow is the
- 38 same as the one generated for the BCMC flow listed prior to
- 39 this BCMC flow in this message; otherwise, the mobile station
- 40 shall set this field to '0'.
- 41 For the first BCMC flow listed in this message, the mobile
- 42 station shall set this field to '0'.
- 43 BAK_ID - BAK identifier.

1 If the AUTH_SIGNATURE_SAME_IND field is not included or
2 is included and is set to '1', the mobile station shall omit this
3 field; otherwise, the mobile station shall include this field and
4 set it as follows:

5 The mobile station shall set this field to BAK identifier used to
6 generate the Authorization signature included in this
7 message.

8 AUTH_SIGNATURE - Authorization signature.

9 If the AUTH_SIGNATURE_SAME_IND field is not included or
10 is included and is set to '1', the mobile station shall omit this
11 field; otherwise, the mobile station shall include this field and
12 set it as follows:

13 The mobile station shall set this field to the Authorization
14 signature computed for this BCMC flow as specified in
15 2.6.13.9.

16

1

2 2.7.2.3.2.33 Extended Flash With Information Message

3 MSG_TAG: EFWIM

4

Field	Length (bits)
CON_REF_INCL	1
CON_REF	0 or 8
NUM_REC	4

NUM_REC occurrences of the following record:

{ (NUM_REC)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM_REC)

5

6 CON_REF_INCL – Connection reference included indicator.
 7 The mobile station shall set this field to ‘1’ if the connection
 8 reference field is included in this message; otherwise, it shall
 9 set this field to ‘0’.

10 CON_REF – Connection reference.
 11 If the CON_REF_INCL field is set to ‘0’, the mobile station
 12 shall omit this field; otherwise, the mobile station shall
 13 include this field and shall set it to the value of the
 14 connection reference assigned to the service option
 15 connection of the call, to which this message corresponds.

16 NUM_REC – Number of records.
 17 The mobile station shall set this field to the number of
 18 information records included with this message.

19 The mobile station shall include NUM_REC occurrence of the following three-field record:

20 RECORD_TYPE – Information record type.
 21 The mobile station shall set this field to the record type code
 22 shown in Table 2.7.4-1 corresponding to the type of this
 23 information record.

1 2.7.2.3.2.34 Extended Pilot Strength Measurement Message
 2 MSG_TAG: EPSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1
REF_PILOT_REC_INCL	1
REF_PILOT_REC_TYPE	0 or 3
REF_RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × REF_RECORD_LEN
SF_RX_PWR	5
NUM_PILOTS	4

NUM_PILOTS occurrences of the following record:

{ (NUM_PILOTS)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1
PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN

} (NUM_PILOTS)

RESQ_IND_INCL	1
---------------	---

NUM_PILOTS occurrences of the following record :

{ (0 or NUM_PILOTS)

RESQ_IND	1
----------	---

} (0 or NUM_PILOTS)

3

4

REF_PN – Time reference PN sequence offset.

5

The mobile station shall set this field to the PN sequence offset of the pilot used by the mobile station to derive its time reference, relative to the zero offset pilot PN sequence in units of 64 PN chips.

6

7

8

9

PILOT_STRENGTH – Pilot strength in dB.

10

The mobile station shall set this field to

1 $\lfloor -2 \times 10 \log_{10} PS \rfloor$,
 2 where PS is the strength of the pilot used by the mobile
 3 station to derive its time reference (see [2]), measured as
 4 specified in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less
 5 than 0, the mobile station shall set this field to '000000'. If
 6 this value is greater than '111111', the mobile station shall
 7 set this field to '111111'.

8 **KEEP** - Keep pilot indicator.
 9 If the handoff drop timer (see 2.6.6.2.3) corresponding to the
 10 pilot used by the mobile station to derive its time reference
 11 (see [2]) has expired, the mobile station shall set this field to
 12 '0'; otherwise, the mobile station shall set this field to '1'.

13 **REF_PILOT_REC_INCL** - Reference pilot information included indicator.
 14 The mobile station shall set this field to '1' if additional
 15 reference pilot information listed in the
 16 **REF_PILOT_REC_TYPE** and **REF_RECORD_LEN** fields are
 17 included. The mobile station shall set this field to '0' if the
 18 corresponding pilot is the common pilot and there is no
 19 additional pilot information included.

20 **REF_PILOT_REC_TYPE** - Reference pilot record type.
 21 If **REF_PILOT_REC_INCL** is set to '1', the mobile station shall
 22 set this field to the **REF_PILOT_REC_TYPE** value shown in
 23 Table 2.7.2.3.2.34-1 corresponding to the type of Pilot Record
 24 specified by this record.

25

26

Table 2.7.2.3.2.34-1. Pilot Record Types

Description	REF_PILOT_REC_TYPE PILOT_REC_TYPE (binary)
Auxiliary Pilot	000
All other REF_PILOT_REC_TYPE or PILOT_REC_TYPE values are reserved	

27

28 If **REF_PILOT_REC_INCL** is set to '0', the mobile station shall
 29 omit this field.

30 **REF_RECORD_LEN** - Reference pilot record length.

31 If **REF_PILOT_REC_INCL** is set to '1', the mobile station shall
 32 set this field to the number of octets in the type-specific fields
 33 of this pilot record.

34 If **REF_PILOT_REC_INCL** is set to '0', the mobile station shall
 35 omit this field.

36 **Type-specific fields** - Pilot record type-specific fields.

1 If REF_PILOT_REC_INCL is set to '1', the mobile station shall
 2 include type-specific fields based on the
 3 REF_PILOT_REC_TYPE of this pilot record.

4 If REF_PILOT_REC_INCL is set to '0', the mobile station shall
 5 omit this field.

6

7 If REF_PILOT_REC_TYPE is equal to '000', the mobile station shall include the following
 8 fields:

9

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
PILOT_WALSH	(WALSH_LENGTH + 6)
RESERVED	0 to 7 (as needed)

10

11 QOF - Quasi-orthogonal function index.
 12 The mobile station shall set this field to the index of the
 13 Quasi-orthogonal function of the corresponding Auxiliary
 14 Pilot.

15 WALSH_LENGTH - Length of the Walsh code for the reference pilot.
 16 The mobile station shall set this field to the WALSH_LENGTH
 17 value shown in Table 2.7.2.3.2.34-2 corresponding to the
 18 length of the Walsh code for the pilot that is used as the
 19 Auxiliary Pilot.

20

Table 2.7.2.3.2.34-2. Walsh Code Length

WALSH_LENGTH (binary)	Length of the Walsh Code
'000'	64
'001'	128
'010'	256
'011'	512
'100' - '111'	Reserved

21

22 PILOT_WALSH - Walsh code for the Auxiliary Pilot used by the mobile station
 23 to derive its time reference.

24 The mobile station shall set this field to the Walsh code
 25 corresponding to the Auxiliary Pilot.

26 RESERVED - Reserved bits.

1 The mobile station shall set all the bits of this field to '0' to
2 make the entire record octet-aligned.

3

4 SF_RX_PWR – The received power spectral density of the Serving Frequency.

5 The mobile station shall set this field to

$$6 \quad \lceil (10 \times \log_{10}(\text{spec_density}) + 120) / 2 \rceil$$

7 where *spec_density* is the mobile station received power
8 spectral density of the Serving Frequency, in mW/1.23MHz,
9 averaged over the last N_{12m} frames (see 2.6.6.2.5.1).

10 If this value is less than 0, the mobile station shall set this
11 field to '00000'.

12 NUM_PILOTS – Number of pilots reported.

13 The mobile station shall set this field to the number of pilots
14 being reported other than the reference pilot.

15 The mobile station shall include NUM_PILOTS occurrences of the following record: one
16 occurrence for each pilot in the Active Set, for each pilot in the Candidate Set whose
17 strength exceeds T_ADD, and for each pilot in the Candidate Set whose strength satisfies
18 the following inequality:

$$19 \quad 10 \times \log_{10} PS > \frac{\text{SOFT_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} PS_i + \frac{\text{ADD_INTERCEPT}_s}{2}$$

20 where the summation is performed over all pilots currently in the Active Set. The mobile
21 station shall not include these fields for the pilot identified by the REF_PN field.

22 The mobile station shall order any occurrences of the following record which correspond to
23 pilots in the Active Set such that they occur before any occurrences of the following record
24 which correspond to pilots in the Candidate Set.

25 PILOT_PN_PHASE – Pilot measured phase.

26 The mobile station shall set this field to the phase of the pilot
27 PN sequence relative to the zero offset pilot PN sequence of
28 this pilot, in units of one PN chip, as specified in 2.6.6.2.4.

29 PILOT_STRENGTH – Pilot strength in dB.

30 The mobile station shall set this field to

$$31 \quad \lfloor -2 \times 10 \log_{10} PS \rfloor,$$

32 where PS is the strength of this pilot, measured as specified
33 in 2.6.6.2.2. If this value ($\lfloor -2 \times 10 \log_{10} PS \rfloor$) is less than 0,
34 the mobile station shall set this field to '000000'. If this value
35 is greater than '111111', the mobile station shall set this field
36 to '111111'.

- 1 KEEP - Keep pilot indicator.
- 2 If the handoff drop timer (see 2.6.6.2.3) corresponding to this
- 3 pilot has expired, the mobile station shall set this field to '0';
- 4 otherwise, the mobile station shall set this field to '1'.
- 5 PILOT_REC_INCL - Additional pilot information included indicator.
- 6 The mobile station shall set this field to '1' if additional pilot
- 7 information listed in the PILOT_REC_TYPE and RECORD_LEN
- 8 fields are included. The mobile station shall set this field to
- 9 '0' if the corresponding pilot is the common pilot and there is
- 10 no additional pilot information included.
- 11 PILOT_REC_TYPE - Reference pilot record type.
- 12 If PILOT_REC_INCL is set to '1', the mobile station shall set
- 13 this field to the PILOT_REC_TYPE value shown in Table
- 14 2.7.2.3.2.34-1 corresponding to the type of Pilot Record
- 15 specified by this record.
- 16 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 17 this field.
- 18 RECORD_LEN - Pilot record length.
- 19 If PILOT_REC_INCL is set to '1', the mobile station shall set
- 20 this field to the number of octets in the type-specific fields of
- 21 this pilot record.
- 22 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 23 this field.
- 24 Type-specific fields - Pilot record type-specific fields.
- 25 If PILOT_REC_INCL is set to '1', the mobile station shall
- 26 include type-specific fields based on the PILOT_REC_TYPE of
- 27 this pilot record as described in 3.7.6.1.
- 28 If PILOT_REC_INCL is set to '0', the mobile station shall omit
- 29 this field.
- 30 RESQ_IND_INCL - Call rescue flag included indicator.
- 31 The mobile station shall set this field to '1' if a pilot in the
- 32 mobile station's Active Set was autonomously promoted since
- 33 the last *Extended Handoff Direction Message*, *General Handoff*
- 34 *Direction Message*, or *Universal Handoff Direction Message* was
- 35 received; otherwise, the mobile station shall set this field to
- 36 '0'.
- 37 If RESQ_IND_INCL is set to '1', the mobile station shall include NUM_PILOTS occurrences
- 38 of the following one-field record in the same order as the pilots listed above.
- 39 RESQ_IND - Call rescue flag.

1
2
3
4
5
6
7
8

The mobile station shall set this field to '1' if the corresponding pilot was autonomously promoted to the Active Set since the last *Extended Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message* was received; otherwise, the mobile station shall set this field to '0'.

1 2.7.2.3.2.35 Extended Handoff Completion Message
 2 MSG_TAG: EHOCM

3

Field	Length (bits)
LAST_HDM_SEQ	2
NUM_PILOTS	4

NUM_PILOTS occurrences of the following record:

{ (NUM_PILOTS)

PILOT_PN	9
PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN

} (NUM_PILOTS)

4

5 LAST_HDM_SEQ – *Extended Handoff Direction Message, General Handoff*
 6 *Direction Message, or Universal Handoff Direction Message*
 7 *sequence number.*

8 The mobile station shall set this field to the value of the
 9 HDM_SEQ field from the *Extended Handoff Direction Message,*
 10 *General Handoff Direction Message, or the Universal Handoff*
 11 *Direction Message* that determined the current Active Set.

12 NUM_PILOTS – Number of pilots reported.

13 The mobile station shall set this field to the number of pilots
 14 in the current Active Set.

15 The mobile station shall include NUM_PILOTS occurrences of the following record: one
 16 occurrence for each pilot in the Active Set. If the Active Set contains more than one pilot,
 17 the mobile station shall include the pilot information in the same order as in the *Extended*
 18 *Handoff Direction Message, the General Handoff Direction Message, or the Universal Handoff*
 19 *Direction Message* that determined the current Active Set.

20 PILOT_PN – Pilot PN sequence offset.

21 The mobile station shall set this field to the pilot PN sequence
 22 offset, relative to the zero offset pilot PN sequence in units of
 23 64 PN chips, for this pilot.

24 PILOT_REC_INCL – Additional pilot information included indicator.

25 The mobile station shall set this field to ‘1’ if additional pilot
 26 information listed in the PILOT_REC_TYPE and RECORD_LEN
 27 fields are included. The mobile station shall set this field to
 28 ‘0’ if the corresponding pilot is the common pilot and there is
 29 no additional pilot information included.

- 1 PILOT_REC_TYPE - Reference pilot record type.
- 2 If PILOT_REC_INCL is set to '0', the mobile station shall omit
3 this field; otherwise, the mobile station shall set this field to
4 the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
5 corresponding to the type of Pilot Record specified by this
6 record.
- 7 RECORD_LEN - Pilot record length.
- 8 If PILOT_REC_INCL is set to '0', the mobile station shall omit
9 this field; otherwise, the mobile station shall set this field to
10 the number of octets in the type-specific fields of this pilot
11 record.
- 12 Type-specific fields - Pilot record type-specific fields.
- 13 If PILOT_REC_INCL is set to '0', the mobile station shall omit
14 this field; otherwise, the mobile station shall include type-
15 specific fields based on the PILOT_REC_TYPE of this pilot
16 record as described in 2.7.2.3.2.34.
- 17
- 18
- 19

1 2.7.2.3.2.36 Security Mode Request Message
 2 MSG_TAG: SMRM

3

Field	Length (bits)
UI_ENC_INCL	1
UI_ENCRYPT_SUP	0 or 8
NUM_RECS	0 or 3

NUM_RECS + 1 occurrences of the following two field record
 { (NUM_RECS + 1)

CON_REF	0 or 8
UI_ENCRYPT_REQ	0 or 1

} (NUM_RECS + 1)

SIG_ENC_INCL	1
SIG_ENCRYPT_SUP	0 or 8
D_SIG_ENCRYPT_REQ	0 or 1
NEW_SSEQ_H_INCL	1
NEW_SSEQ_H	0 or 24
NEW_SSEQ_H_SIG	0 or 8
MSG_INT_INFO_INCL	1
SIG_INTEGRITY_SUP_INCL	0 or 1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3

4

5 UI_ENC_INCL – User information encryption fields included.

6 The mobile station shall set this field to ‘1’ if the user
 7 information encryption related fields are included in this
 8 message; otherwise, the mobile station shall set this field to
 9 ‘0’.

10 UI_ENCRYPT_SUP – User information encryption supported indicator.

11 If UI_ENC_INCL is equal to ‘1’, the mobile station shall
 12 include this field; otherwise, the mobile station shall omit this
 13 field. If this field is included, the mobile station shall set this
 14 field to indicate the supported user information encryption
 15 algorithms.

- 1 This field consists of the subfields shown in Table 2.7.1.3.2.4-
2 9.
- 3 The mobile station shall set each subfield to '1' if the
4 corresponding user information encryption algorithm is
5 supported by the mobile station; otherwise, the mobile station
6 shall set the subfield to '0'.
- 7 The mobile station shall set the RESERVED subfield to
8 '000000'
- 9 NUM_REC – Number of user information encryption records.
- 10 If UI_ENC_INCL is equal to '1', the mobile station shall
11 include this field; otherwise, the mobile station shall omit this
12 field. If this field is included, the mobile station shall set this
13 field to number of user information encryption records
14 included in this message minus 1.
- 15 The mobile station shall include NUM_REC + 1 occurrences of the following two field record
- 16 CON_REF – Connection reference corresponding to the service instance
17 requesting for encryption.
- 18 If UI_ENC_INCL is equal to '1', the mobile station shall
19 include this field; otherwise, the mobile station shall omit this
20 field. If this field is included, the mobile station shall set this
21 field to the connection reference of the service option
22 connection corresponding to this user information encryption
23 request record.
- 24 UI_ENCRYPT_REQ – Request for user information encryption on the traffic channel
25 indicator.
- 26 The mobile station shall set this field to '1' to request user
27 information encryption for the user information corresponding
28 to the service option connection identified by CON_REF;
29 otherwise, the mobile station shall set this field to '0'.
- 30 SIG_ENC_INCL – Signaling encryption fields included.
- 31 The mobile station shall set this field to '1' if the following two
32 fields related to signaling encryption fields are included in this
33 message. Otherwise, the mobile station shall set this field to
34 '0'.
- 35 SIG_ENCRYPT_SUP – Signaling encryption supported indicator.
- 36 If SIG_ENC_INCL is equal to '1', the mobile station shall
37 include this field; otherwise, the mobile station shall omit this
38 field. If this field is included, the mobile shall set this field to
39 indicate the supported signaling encryption algorithms
40 supported by the mobile station.

- 1 This field consists of the subfields shown in Table 2.7.1.3.2.1-
2 5.
- 3 If this field is included, the mobile station shall set the
4 subfields as follows:
- 5 The mobile station shall set the CMEA subfield to '1'.
- 6 The mobile station shall set each other subfield to '1' if the
7 corresponding signaling encryption algorithm is supported by
8 the mobile station; otherwise, the mobile station shall set the
9 subfield to '0'.
- 10 The mobile station shall set the RESERVED subfield to
11 '00000'.
- 12 **D_SIG_ENCRYPT_REQ** – Dedicated channel signaling encryption request indicator.
13
14 If SIG_ENC_INCL is equal to '1', the mobile station shall
15 include this field; otherwise, the mobile station shall omit this
16 field. If included the mobile station shall set this field to '1' to
17 request signaling encryption to be turned on for signaling
18 messages sent on f-dsch and r-dsch, and to '0' to request
19 signaling encryption to be turned off for signaling messages
sent on f-dsch and r-dsch.
- 20 **NEW_SSEQ_H_INCL** – The NEW_SSEQ included indicator.
21
22 The mobile station shall set this field to '1' if NEW_SSEQ_H is
23 included in this message; otherwise, the mobile station shall
set this field to '0'.
- 24 If MSG_INTEGRITY_SUP_s is equal to '0', the mobile station
25 shall set this field to '1' if the mobile station is to include the
26 NEW_SSEQ_H and NEW_SSEQ_H_SIG fields.
- 27 If MSG_INTEGRITY_SUP_s is equal to '1', the mobile station
28 shall set this field to '0'.
- 29 **NEW_SSEQ_H** – The 24-bit value used to initialize the 24 MSB of crypto-sync.
30
31 If NEW_SSEQ_H_INCL is set to '1', the mobile station shall
32 include this field; otherwise, the mobile station shall omit this
33 field. If this field is included, the mobile station shall set this
34 field to a 24-bit value that will be used as the initial value of
35 the 24 MSB of the crypto-sync for both forward and reverse
link message integrity.
- 36 **NEW_SSEQ_H_SIG** – The signature of NEW_SSEQ_H
37
38 If NEW_SSEQ_H is included, the mobile station shall include
39 this field; otherwise, the mobile station shall omit this field. If
40 this field is included, the mobile station shall set this field to
41 the digital signature of the NEW_SSEQ_H computed as
described in 2.3.12.4.5.

- 1 MSG_INT_INFO_INCL – Signaling message integrity information included indicator.
2 If MSG_INTEGRITY_SUP_s is equal to ‘0’, the mobile station
3 shall set this field to ‘0’; otherwise, the mobile station shall set
4 this field to ‘1’.
- 5 SIG_INTEGRITY_SUP_INCL – Signaling message integrity information included
6 indicator.
7 If MSG_INT_INFO_INCL is set to ‘0’, the mobile station shall
8 omit this field; otherwise, the mobile station shall include this
9 field and set it as follows:
10 If the mobile station supports other integrity algorithm(s) in
11 addition to the default integrity algorithm, the mobile station
12 shall set this field to ‘1’; otherwise, the mobile station shall set
13 this field to ‘0’.
- 14 SIG_INTEGRITY_SUP – Signaling integrity algorithm supported by the mobile station.
15 If SIG_INTEGRITY_SUP_INCL is included and is set to ‘1’, the
16 mobile station shall set this field as follows; otherwise, the
17 mobile station shall omit this field.
18 The mobile station shall set this field to indicate the
19 supported message integrity algorithm in addition to the
20 default integrity algorithm.
21 This field consists of the subfields shown in Table 2.7.1.3.2.1-
22 6.
23 The mobile station shall set each subfield to ‘1’ if the
24 corresponding message integrity algorithm is supported by
25 the mobile station; otherwise, the mobile station shall set the
26 subfield to ‘0’.
27 The mobile station shall set the RESERVED subfield to
28 ‘00000000’.
- 29 SIG_INTEGRITY_REQ – Signaling message integrity algorithm request indicator.
30 If SIG_INTEGRITY_SUP_INCL is included and is set to ‘1’, the
31 mobile station shall set this field as follows; otherwise, the
32 mobile station shall omit this field.
33 The mobile station shall include this field and set it to the
34 value corresponding to the message integrity algorithm
35 requested as shown in Table 2.7.1.3.2.1-7.

36

1 2.7.2.3.2.37 Call Cancel Message
 2 MSG_TAG: CLCM

3

Field	Length (bits)
TAG	4
ADD_TAG_INCL	1
NUM_ADD_TAG	0 or 3

NUM_ADD_TAG occurrences of the following field:

{ (NUM_ADD_TAG)

ADD_TAG	4
---------	---

} (NUM_ADD_TAG)

4

5 TAG – Transaction identifier.

6 The mobile station shall set this field to the TAG value in the
 7 list TAG_OUTSTANDING_LIST in the *Enhanced Origination*
 8 *Message* sent to originate this call.

9 ADD_TAG_INCL - Additional call initiation transaction identifiers included
 10 indicator.

11 If at least one occurrence of the ADD_TAG field is included in
 12 this message, the mobile station shall set this field to '1';
 13 otherwise, the mobile station shall set this field to '0'.

14 NUM_ADD_TAG - Number of additional call initiation transaction identifiers
 15 included.

16 If ADD_TAG_INCL is set to '0', the mobile station shall omit
 17 this field; otherwise, the mobile station shall include this field
 18 and set it to the number of occurrences of the ADD_TAG field
 19 included in this message.

20 If ADD_TAG_INCL is set to '1', the mobile station shall include NUM_ADD_TAG occurrences
 21 of the following field:

22 ADD_TAG – Additional call initiation transaction identifier.

23 The mobile station shall set this field to the TAG value in the
 24 *Enhanced Origination Message*.

25

1 2.7.2.3.2.38 Device Information Message
 2 MSG_TAG: DIM

3

Field	Length (bits)
WLL_DEVICE_TYPE	3
NUM_INFO_RECORDS	5

NUM_INFO_RECORDS occurrences of the following record:

{ (NUM_INFO_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM_INFO_RECORDS)

4

5 WLL_DEVICE_TYPE – WLL device type indicator.
 6 The mobile station shall set this field to the
 7 WLL_DEVICE_TYPE value shown in Table 2.7.1.3.2.1-3
 8 corresponding to the mobile station device type.

9 NUM_INFO_RECORDS – Number of information records included.
 10 The mobile station shall set this field to the number of
 11 information records which are included.

12 The mobile station shall include one occurrence of the following fields for each information
 13 record which is included:

14 RECORD_TYPE – Information record type.
 15 The mobile station shall set this field to the record type code
 16 shown in Table 2.7.4-1 corresponding to the type of this
 17 information record.

18 RECORD_LEN – Information record length.
 19 The mobile station shall set this field to the number of octets
 20 in the type-specific fields of this record.

21 Type-specific fields – Type-specific fields.
 22 The mobile station shall set these fields as specified in 2.7.4
 23 for this type of information record.

24

1 2.7.2.3.2.39 Base Station Status Request Message
 2 MSG_TAG: BSSREQM

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	8 × QUAL_INFO_LEN
NUM_RECORD	4

NUM_RECORD occurrences of the following record:

{ (NUM_RECORD)

RECORD_TYPE	8
RECORD_LENGTH	8
Record type specific fields	variable
RESERVED	0-7 (as required)

} (NUM_RECORD)

- 3 QUAL_INFO_TYPE - Qualification information type.
 4 The mobile station shall set this field to the value shown in
 5 Table 3.7.2.3.2.15-1 to show the inclusion of qualification
 6 information in the type-specific fields.
- 7 QUAL_INFO_LEN - Qualification information length.
 8 The mobile station shall set this field to the number of octets
 9 included in the type-specific fields of the qualification
 10 information.
- 11 Type-specific fields - Type-specific fields.
 12 The mobile station shall set these fields to the qualification
 13 information according to the QUAL_INFO_TYPE field.
 14 If QUAL_INFO_TYPE is equal to '00000000', the type-specific
 15 fields are omitted.
 16 If QUAL_INFO_TYPE is equal to '00000001', the mobile
 17 station shall use the following fixed-length format for the
 18 type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
RESERVED	3

19
 20
 21
 22

If QUAL_INFO_TYPE is equal to '00000010', the mobile station shall use the following fixed-length format for the type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
OP_MODE	8
RESERVED	3

1
2
3
4
5
6

25
26
27
28
29

BAND_CLASS - Band class.
The mobile station shall set this field to the CDMA band class, as specified in [30].

OP_MODE - Operating mode.
The mobile station shall set this field as shown in Table 3.7.2.3.2.15-3 to specify the operating mode qualification information.

RESERVED - Reserved bits.
The mobile station shall set this field to '000'.

NUM_RECORD - Number of requested record fields in this message.
The mobile station shall set this field to the number of occurrences of RECORD_TYPE field in this message.

The mobile station shall include NUM_RECORD occurrences of the following variable-length record, one for each information record that is requested:

RECORD_TYPE - Information record type.
The mobile station shall set this field to the record type value shown in Table 2.7.2.3.2.39-1 corresponding to the information record requested.

Table 2.7.2.3.2.39-1. Base Station Status Request Information Record Types

Information Record Requested	Record Type
Pilot Information	00000000
Reserved	00000001- 11111111

RECORD_LENGTH - Information record length.
The mobile station shall set this field to the length, in octets, of the record type specific fields included in this record.

Record type specific

fields - Record type specific fields

The mobile station shall set this field to the type specific fields corresponding to this record type.

If the RECORD_TYPE field is set to '00000000', the mobile station shall set the record type specific field as follows:

Field	Length (bits)
NUM_PILOTS	4
SID_NID_REQ	1

NUM_PILOTS occurrences of the following one field record:

{ NUM_PILOTS)

PILOT_PN	9
----------	---

}(NUM_PILOTS)

LAT_LONG_REQ	1
--------------	---

- 1 NUM_PILOTS - Number of Pilots reported.
- 2 The mobile station shall set this field to the number of pilots
- 3 whose information is requested in this message.
- 4 The mobile station shall set this field to a number equal or
- 5 greater than one.
- 6 SID_NID_REQ - SID, NID information requested indicator.
- 7 The mobile station shall set this field to '1' if it also requests
- 8 the SID and NID information for these pilots; otherwise, the
- 9 mobile station shall set this field to '0'.
- 10 The mobile station shall include NUM_PILOTS occurrences of the following one-field
- 11 record:
- 12 PILOT_PN - Pilot PN sequence offset index.
- 13 The mobile station shall set this field to the pilot PN sequence
- 14 offset for the base station, in units of 64 PN chips, whose
- 15 Base Station identification number information is being
- 16 requested.
- 17 LAT_LONG_REQ - Base station LAT/LONG information requested indicator.
- 18 The mobile station shall set this field to '1' if it also requests
- 19 the LAT/LONG information for these pilots; otherwise, the
- 20 mobile station shall set this field to '0'.
- 21 RESERVED - Reserved bits.
- 22 The mobile station shall add reserved bits as needed in order
- 23 to make the length of the record equal to an integer number
- 24 of octets. The mobile station shall set these bits to '0'.
- 25
- 26

1 2.7.2.3.2.40 CDMA Off Time Report Message
 2 MSG_TAG: COTRM

Field	Length (bits)
CDMA_OFF_TIME_ENABLE	1
CDMA_OFF_TIME_START	0 or 6
CDMA_OFF_TIME_UNIT	0 or 2
CDMA_OFF_TIME_MODE	0 or 1
CDMA_OFF_TIME	0 or 4
CDMA_OFF_TIME_PERIOD	0 or 6

3

4 CDMA_OFF_TIME_ENABLE – Off time reporting enable

5 The mobile station shall set this field to '1' if the mobile
 6 station plans to suspend its CDMA Traffic Channel
 7 processing. The mobile station shall set this field to '0' to
 8 cancel a previously reported CDMA Traffic Channel
 9 processing suspension.

10 CDMA_OFF_TIME_START – The start time when the mobile station moves away from
 11 the CDMA Traffic Channel.

12 If CDMA_OFF_TIME_ENABLE is set to '0', the mobile station
 13 shall omit this field; otherwise, the mobile station shall
 14 include this field and set it as follows:

15 The mobile station shall set this field to the System Time, in
 16 units of 80 ms (modulo 64), at which the mobile station plans
 17 to go away from the CDMA Traffic Channel.

18 CDMA_OFF_TIME_UNIT – Time unit used in CDMA_OFF_TIME

19 If CDMA_OFF_TIME_ENABLE is set to '0', the mobile station
 20 shall omit this field; otherwise, the mobile station shall
 21 include this field and set it as follows:

22 The mobile station shall set this field to the time unit used in
 23 CDMA_OFF_TIME, as specified in Table 2.7.2.3.2.40-1

Table 2.7.2.3.2.40-1. CDMA Off Time Unit

CDMA_OFF_TIME_UNIT (binary)	Time Unit (decimal)
00	80 ms
01	0.5 sec
10	1 sec
11	RESERVED

- CDMA_OFF_TIME_MODE** – CDMA off time mode

If **CDMA_OFF_TIME_ENABLE** is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to ‘1’ if **CDMA_OFF_TIME** is periodic; otherwise, the mobile station shall set this field to ‘0’.
- CDMA_OFF_TIME** – The total time that the mobile station plans to be away from the CDMA Traffic Channel.

If **CDMA_OFF_TIME_ENABLE** is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to one less than the mobile station’s estimate of the total time it is off the CDMA Traffic Channel, in units of **CDMA_OFF_TIME_UNIT**.
- CDMA_OFF_TIME_PERIOD** – The time between **CDMA_OFF_TIME**

If **CDMA_OFF_TIME_MODE** is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the time minus 10 seconds, in units of 10 seconds, between the beginning of successive **CDMA_OFF_TIME**.

2.7.2.3.2.41 Authentication Response Message

MSG_TAG: AURSPM

Field	Length (bits)
RES	128
SIG_INTEGRITY_SUP_INCL	1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3
NEW_KEY_ID	2
NEW_SSEQ_H	24

RES – The output, RES, of the User Authentication Function.

The mobile station shall set this field to the output, RES, of the function as specified in Figure 2.3.12.5.2-2. If the UIM returns a RES value with length smaller than 128, the mobile station shall store the RES value in the most significant bits of the RES field and pad the least significant bits with '0's.

SIG_INTEGRITY_SUP_INCL – Signaling message integrity information included indicator.

If the mobile station supports other integrity algorithm(s) in addition to the default integrity algorithm, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

SIG_INTEGRITY_SUP – Signaling integrity algorithm supported by the mobile station.

If SIG_INTEGRITY_SUP_INCL is set to '1', the mobile station shall set this field as follows; otherwise, the mobile station shall omit this field.

The mobile station shall set this field to indicate the supported message integrity algorithms in addition to the default integrity algorithm.

This field consists of the subfields shown in Table 2.7.1.3.2.1-6.

The mobile station shall set each subfield to '1' if the corresponding message integrity algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

The mobile station shall set the RESERVED subfield to '00000000'.

- 1 SIG_INTEGRITY_REQ – Signaling message integrity algorithm requested by the mobile
2 station.
- 3 If SIG_INTEGRITY_SUP_INCL is set to ‘1’, the mobile station
4 shall set this field as follows; otherwise, the mobile station
5 shall omit this field.
- 6 The mobile station shall include this field and set it to the
7 value corresponding to the message integrity algorithm
8 requested as shown in Table 2.7.1.3.2.1-7.
- 9 NEW_KEY_ID – New key identifier.
- 10 The mobile station shall set this field as follows:
- 11 • If LAST_3G_KEY_ID equals ‘10’, the mobile station shall
12 set this field to ‘11’.
- 13 • If LAST_3G_KEY_ID equals ‘11’, the mobile station shall
14 set this field to ‘10’.
- 15 NEW_SSEQ_H – The 24-bit value used to initialize the 24 MSB of the crypto-
16 sync.
- 17 The mobile station shall set this field to a 24-bit value that
18 will be used as the initial value of the 24 MSB of the crypto-
19 sync for both forward and reverse link message integrity.
- 20

1 2.7.2.3.2.42 Authentication Resynchronization Message

2 MSG_TAG: AURSYNM

3

Field	Length (bits)
CON_MS_SQN	48
MAC_S	64

4

5 CON_MS_SQN – The concealed sequence number of the authentication vector.
 6 The mobile station shall set this field to the output,
 7 CON_MS_SQN, of the function as specified in Figure
 8 2.3.12.5.2-3.

9 MAC_S – Message authentication code for resynchronization.
 10 The mobile station shall set this field to the output, MAC_S, of
 11 the function as specified in Figure 2.3.12.5.2-3.

12

- 1 2.7.2.3.2.43 ITBSPM Request Message
- 2 MSG_TAG: ITBSPMRM

Field	Length (bits)
BCMC_REQ_TYPE	4
NUM_BCMC_PROGRAMS	0 or 8

If NUM_BCMC_PROGRAMS field is included,
 NUM_BCMC_PROGRAMS+1 occurrences of the following
 record

{ (NUM_BCMC_PROGRAMS+1)

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	Variable (Value of BCMC_PROGRAM_ID_L EN + 1)
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIM INATOR_LEN

NUM_FLOW_DISCRIMINATOR+1 or 1 occurrences of the
 following variable length record:

{ (NUM_FLOW_DISCRIMINATOR+1) or 1

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIM INATOR_LEN
-------------------------	---------------------------------

} (NUM_FLOW_DISCRIMINATOR+1) or 1

} (NUM_BCMC_PROGRAMS+1)

- 3
- 4 BCMC_REQ_TYPE – BCMC Request Type.

- 5 The mobile station shall set this field as specified in Table
- 6 2.7.2.3.2.43-1 to request transmission of ITBSPM over traffic
- 7 channel.

1

Table 2.7.2.3.2.43-1 BCMC Request Type

Value (binary)	BCMC Request
0000	Request information for all BCMC_FLOW_IDs
0001	Request information for Traffic Channel BCMC_FLOW_IDs
0010	Request information for BCMC_FLOW_IDs (See section 2.6.13.11) specified in this message
0011- 1111	Reserved

2

3 NUM_BCMC_PROGRAMS– Number of BCMC programs included.

4 If BCMC_REQ_TYPE is not set to '0010', the mobile station
5 shall omit this field; otherwise, the mobile station shall
6 include this field and set it as follows.7 The mobile station shall set this field to the number of BCMC
8 programs included in this message minus 1.9 If the NUM_BCMC_PROGRAMS field is included, the mobile station shall include
10 NUM_BCMC_PROGRAMS+1 occurrences of the following record:

11 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

12 The mobile station shall set this field to one less than the
13 length, in bits, of the BCMC_PROGRAM_ID of this program.

14 BCMC_PROGRAM_ID - BCMC program Identifier

15 The length of this field shall be one more than the value of
16 BCMC_PROGRAM_ID_LEN bits.17 The mobile station shall set this field to the identifier of the
18 BCMC program corresponding to one or more flows that the
19 mobile station will continue to monitor or start to monitor
20 upon receiving confirmation of delivery of this message or is
21 requesting transmission.

22 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

23 The mobile station shall set this field to the length, in bits, of
24 the BCMC_FLOW_DISCRIMINATOR of this program. To
25 request all flows associated with this BCMC_PROGRAM_ID,
26 the mobile station may set this field to '000'.

1 NUM_FLOW_DISCRIMINATOR - Number of BMC flow discriminators

2 The length of this field shall be determined by the value of the
3 BMC_FLOW_DISCRIMINATOR_LEN as follows: if
4 BMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
5 is omitted; otherwise, the length of this field shall be
6 BMC_FLOW_DISCRIMINATOR_LEN bits.

7 The mobile station shall set this field to the number of flow
8 discriminators included for this program minus one.

9 If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include
10 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
11 otherwise, the mobile station shall include 1 occurrence of the following variable length
12 record:

13 BMC_FLOW_DISCRIMINATOR – BMC Flow Discriminator.

14 The length of this field shall be determined by the value of the
15 BMC_FLOW_DISCRIMINATOR_LEN as follows: if
16 BMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
17 is omitted; otherwise, the length of this field shall be
18 BMC_FLOW_DISCRIMINATOR_LEN bits.

19 The mobile station shall set this field to the discriminator of
20 the BMC flow.

21

22

1 2.7.2.3.2.44 Handoff Supplementary Information Notification Message
 2 MSG_TAG: HOSINM

Field	Length (bits)
NUM_HO_SUP_REC	8

NUM_HO_SUP_REC occurrences of the following three-field record:

{

HO_SUP_REC_TYPE	3
HO_SUP_REC_LEN	5
HO_SUP_REC	8 x HO_SUP_REC_LEN

}

- 3 NUM_HO_SUP_REC - Number of handoff supplementary information record.
 4 The mobile station shall set this field based on the number of
 5 handoff supplementary information record included in this
 6 message. If the mobile station does not have any handoff
 7 supplementary handoff information to report, then the mobile
 8 station shall set this field to zero.
- 9 HO_SUP_REC_TYPE - Handoff supplementary information record type.
 10 The mobile station shall set this field based on the type of the
 11 HO_SUP_REC field included in this message.
- 12 HO_SUP_REC_LEN - Handoff supplementary information record length.
 13 The mobile station shall set this field to the number of octets
 14 in the fields included in this record following this field.
- 15 HO_SUP_REC - Handoff supplementary record.
 16 The handoff supplementary record fields are determined by
 17 the value of HO_SUP_REC_TYPE, as described below.

18 If HO_SUP_REC_TYPE = '000', the HO_SUP_REC field shall be:

19

PILOT_PN	9
AP_ID_LEN	4
AP_ID	16 x AP_ID_LEN
IOS_MSC_ID	24
IOS_CELL_ID	16
RESERVED	0-7 (as required)

20

21 If HO_SUP_REC_TYPE field is set to '000', the base station shall include the following sub-
 22 fields in HO_SUP_REC field:

1	PILOT_PN	-	Pilot PN sequence offset index.
2			The mobile station shall set this field to the pilot PN sequence
3			offset of a base station, in units of 64 PN chips.
4	AP_ID_LEN	-	Access Point identification length.
5			The base station shall set this field to the length of the access
6			point identification in units of 16 bits.
7	AP_ID	-	AP_ID of a base station.
8			The mobile station shall set this field to AP_ID value
9			(see 2.6.2.2.19) corresponding to the PILOT_PN reported in
10			this record.
11	IOS_MSC_ID	-	MSC_ID of a base station.
12			The mobile station shall set this field to MSC_ID value
13			(see 2.6.2.2.19) corresponding to the PILOT_PN reported in
14			this record.
15	IOS_CELL_ID	-	CELL_ID of a base station.
16			The mobile station shall set this field to CELL_ID value (see
17			2.6.2.2.19) corresponding to the PILOT_PN reported in this
18			record.
19	RESERVED	-	Reserved bits.
20			The mobile station shall set all the bits of this field to '0' to
21			make entire record octet aligned.
22			

1 2.7.2.3.2.45 General Extension Message

2 MSG_TAG: GEM

3 The format of this message is the same as when transmitted on r-csch. Please see section
4 2.7.1.3.2.18.

5

6

1 2.7.3 Orders

2 *Order Messages* are sent by the mobile station on the r-csch and on the r-dsch. The
3 general PDU format used on the r-csch is defined in 2.7.1.3.2.2, and the general PDU
4 format used on the r-dsch is defined in 2.7.2.3.2.1. There are many specific types of *Order*
5 *Messages*, as shown in Table 2.7.3-1.

6 The mobile station may send on the r-csch any type of order shown in Table 2.7.3-1 with a
7 'Y' in the first column, but shall not send on the r-csch any type of order with an 'N' in the
8 first column. The mobile station may send on the r-dsch any type of order shown in
9 Table 2.7.3-1 with a 'Y' in the second column, but shall not send on the r-dsch any type of
10 order with an 'N' in the second column. The mobile station shall be capable of sending all
11 types of orders shown in Table 2.7.3-1 with a 'Y' in the sixth column.

12 An order consists of a 6-bit order code and zero or more order-specific fields. The mobile
13 station shall set the ORDER field in the *Order Message* to the order code shown in Table
14 2.7.3-1 corresponding to the type of order being sent.

15 If the order qualification code in the fourth column of Table 2.7.3-1 is '00000000' and there
16 are no other additional fields as shown by an 'N' in the fifth column, the mobile station
17 shall include no order qualification code or other order-specific fields in the *Order Message*.
18 The order qualification code of such a message is implicitly '00000000'.

19 If the order qualification code is not '00000000' and there are no other additional fields as
20 shown in Table 2.7.3-1 by an 'N' in the fifth column, the mobile station shall include the
21 order qualification code as the only order-specific field in the *Order Message*.

22 If there are other additional fields as shown in Table 2.7.3-1 by a 'Y' in the fifth column, the
23 mobile station shall include order-specific fields as specified in the corresponding
24 subsection of this section.

25

1 **Table 2.7.3-1. Order and Order Qualification Codes Used on the r-dsch and the r-csch**

r-csch Order	r-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	More Fields other than ORDQ	Support Req'd	P_REV_IN_USE⁸⁴	Name/Function
Y	Y	000010	00000000	Y	Y	All	<i>Base Station Challenge Order (see 2.7.3.1)</i>
Y	Y	000011	00000000	N	Y	All	<i>SSD Update Confirmation Order</i>
Y	Y	000011	00000001	N	Y	All	<i>SSD Update Rejection Order</i>
N	Y	000101	0000nnnn	N	Y	All	<i>Parameter Update Confirmation Order (where 'nnnn' is the Request Number)</i>
-	-	001011	00000000	-	-	-	<i>Reserved (Previously: Request Wide Analog Service Order)</i>
		001011	00000001				<i>Reserved (Previously: Request Narrow Analog Service Order)</i>
		001011	00000010				<i>Reserved (Previously: Request Analog Service Order)</i>
Y	Y	010000	00000000	N	Y	All	<i>Mobile Station Acknowledgment Order (see [4])</i>
N	Y	010011	00000000	Y	N	< 7	<i>Service Option Request Order (Band Class 0 only; see 2.7.3.2)</i>
N	Y	010100	00000000	Y	Y	< 7	<i>Service Option Response Order (Band Class 0 only; see 2.7.3.3)</i>
Y	Y	010101	00000000	N	Y	All	<i>Release Order (normal release)</i>
Y	Y	010101	00000001	N	Y	All	<i>Release Order (with power-down indication)</i>
N	Y	010101	00000010	N	Y	≥ 6	<i>Release Order (with service inactive indication)</i>

⁸⁴ P_REV_IN_USE equal to "All" implies all values applicable to the Band Class.

r-csch Order	r-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	More Fields other than ORDQ	Support Req'd	P_REV_I N_USE⁸⁴	Name/Function
N	Y	010101	00000011	Y	N	≥ 11	<i>Release Order</i> (with reduced slot cycle mode indication; see 2.7.3.5)
N	Y	010111	00000000	N	N	All	<i>Long Code Transition Request Order</i> (request public)
N	Y	010111	00000001	N	N	All	<i>Long Code Transition Request Order</i> (request private)
N	Y	010111	00000010	N	Y	All	<i>Long Code Transition Response Order</i> (use public)
N	Y	010111	00000011	N	N	All	<i>Long Code Transition Response Order</i> (use private)
N	Y	011000	00000000	N	Y	All	<i>Connect Order</i>
N	Y	011001	0000nnnn	N	Y	All	<i>Continuous DTMF Tone Order</i> (where 'nnnn' is the tone per Table 2.7.1.3.2.4-4).
N	Y	011001	11111111	N	Y	All	<i>Continuous DTMF Tone Order</i> (Stop continuous DTMF tone)
N	Y	011101	nnnnnnnn	N	Y	<7	<i>Service Option Control Order</i> (Band Class 0 only; the specific control is designated by 'nnnnnnnn' as determined by each service option)
Y	Y	011110	nnnnnnnn	N	N	All	<i>Local Control Response Order</i> (specific response as designated by 'nnnnnnnn' as determined by each system)
Y	Y	011111	00000001	Y	Y	All	<i>Mobile Station Reject Order</i> (unspecified reason; see 2.7.3.4)
Y	Y	011111	00000010	Y	Y	All	<i>Mobile Station Reject Order</i> (message not accepted in this state; see 2.7.3.4)
Y	Y	011111	00000011	Y	Y	All	<i>Mobile Station Reject Order</i> (message structure not acceptable; see 2.7.3.4)

r-csch Order	r-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	More Fields other than ORDQ	Support Req'd	P_REV_I N_USE⁸⁴	Name/Function
Y	Y	011111	00000100	Y	Y	All	<i>Mobile Station Reject Order</i> (message field not in valid range; see 2.7.3.4)
N	Y	011111	00000101	Y	Y	All	<i>Mobile Station Reject Order</i> (message type or order code not understood; see 2.7.3.4)
Y	Y	011111	00000110	Y	Y	All	<i>Mobile Station Reject Order</i> (message requires a capability that is not supported by the mobile station; see 2.7.3.4)
Y	Y	011111	00000111	Y	Y	All	<i>Mobile Station Reject Order</i> (message cannot be handled by the current mobile station configuration; see 2.7.3.4)
Y	Y	011111	00001000	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (response message would exceed allowable length; see 2.7.3.4)
Y	Y	011111	00001001	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (information record is not supported for the specified band class and operating mode; see 2.7.3.4)
N	Y	011111	00001010	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (search set not specified; see 2.6.6.2.5.1)
N	Y	011111	00001011	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (invalid search request; see 2.6.6.2.5.1)
N	Y	011111	00001100	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (invalid Frequency Assignment; see 2.6.6.2.5.1)
N	Y	011111	00001101	Y	Y	≥ 4	<i>Mobile Station Reject Order</i> (search period too short; see 2.6.6.2.5.1)

r-csch Order	r-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	More Fields other than ORDQ	Support Req'd	P_REV_I N_USE⁸⁴	Name/Function
Y	N	011111	00001110	Y	Y	≥ 6	<i>Mobile Station Reject Order</i> (RC does not match with the value in the field DEFAULT_CONFIG; see 2.6.3.3 and 2.6.3.5)
N	Y	011111	00010000	Y	Y	≥ 7	<i>Mobile Station Reject Order</i> (call assignment not accepted; see 2.7.3.4)
N	Y	011111	00010001	Y	Y	≥ 7	<i>Mobile Station Reject Order</i> (no call control instance present with the specified identifier; see 2.7.3.4)
N	Y	011111	00010010	Y	Y	≥ 7	<i>Mobile Station Reject Order</i> (a call control instance is already present with the specified identifier; see 2.7.3.4)
N	Y	011111	00010011	Y	Y	≥ 7	<i>Mobile Station Reject Order</i> (TAG received does not match any of the TAG stored; see 2.7.3.4)
Y	Y	011111	00010100	Y	Y	≥ 10	<i>Mobile Station Reject Order</i> (UAK not supported)
N	Y	011111	00010101	Y	Y	≥ 9	<i>Mobile Station Reject Order</i> (stored configuration already restored at channel assignment)
Y	Y	011111	00010110	Y	Y	≥ 10	<i>Mobile Station Reject Order</i> (The MAC-I field (see [4]) is missing)
Y	Y	011111	00011000	Y	Y	≥ 10	<i>Mobile Station Reject Order</i> (The MAC-I field (see [4]) is present but invalid)
Y	Y	011111	00011001	Y	Y	≥ 10	<i>Mobile Station Reject Order</i> (The security sequence number is invalid)
Y	Y	011111	00011010	Y	Y	≥ 10	<i>Mobile Station Reject Order</i> (The message can not be decrypted)

r-csch Order	r-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	More Fields other than ORDQ	Support Req'd	P_REV_I N_USE⁸⁴	Name/Function
Y	Y	011111	00011011	Y	Y	≥ 11	<i>Mobile Station Reject Order</i> (Requested stored service configuration is not available)
Y	Y	011111	00011100	Y	Y	≥ 11	<i>Mobile Station Reject Order</i> (PLCM_TYPE mismatch)
Y	Y	011111	00011101	Y	Y	≥ 12	<i>Mobile Station Reject Order</i> (General Extension Record contains a record type that is not supported)
Y	Y	011111	00011110	Y	Y	≥ 12	<i>Mobile Station Reject Order</i> (General Extension Record contains a field value outside its permissible range)
Y	Y	011111	00011111	Y	Y	≥ 12	<i>Mobile Station Reject Order</i> (General Extension Record contains a field value that is not supported)
Y	Y	011111	00100000	Y	Y	≥ 12	<i>Mobile Station Reject Order</i> (General Extension Record not acceptable, unspecified reason)
N	Y	100000	00000000	N	Y	≥ 8	<i>Call Rescue Cancel Order</i>
Y	Y	100001	00000000	N	Y	≥ 10	<i>Security Mode Completion Order</i>
Y	N	100010	00000000	Y	N	≥ 11	<i>Fast Call Setup Order</i> (indicates mobile station request to operate in a fast call setup mode, see 2.7.3.6)
Y	N	100010	00000001	Y	N	≥ 11	<i>Fast Call Setup Order</i> (indicates mobile station response to operate in a fast call setup mode, see 2.7.3.6)
N	Y	100011	00000000	N	Y	≥ 11	<i>Shared Channel Configuration Order</i> (requests R-FCH assignment)
N	Y	100011	00000001	N	Y	≥ 11	<i>Shared Channel Configuration Order</i> (requests R-FCH release)
All other codes are reserved.							

1 2.7.3.1 Base Station Challenge Order

2

Order-Specific Field	Length (bits)
ORDQ	8
RANDBS	32

3

4

ORDQ – Order qualification code.

5

The mobile station shall set this field to '00000000'.

6

RANDBS – Random challenge data.

7

The mobile station shall set this field as specified in 2.3.12.1.5.

8

9

1 2.7.3.2 Service Option Request Order

2

Order-Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

3

4 ORDQ – Order qualification code.

5 The mobile station shall set this field to '00000000'.

6 SERVICE_OPTION – Service option.

7 The mobile station shall set this field to the service option
8 code specified in [30], corresponding to the requested or
9 alternative service option.

10

1 2.7.3.3 Service Option Response Order

2

Order-Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

3

4 ORDQ – Order qualification code.

5 The mobile station shall set this field to ‘00000000’.

6 SERVICE_OPTION – Service option.

7 The mobile station shall set this field to the service option
 8 code specified in [30], corresponding to the accepted service
 9 option, or to ‘0000000000000000’ to reject the proposed
 10 service option. See 2.6.4.1.2.2.1.

11

1 2.7.3.4 Mobile Station Reject Order

2

Order-Specific Field	Length (bits)
ORDQ	8
REJECTED_TYPE	8

If the order is sent on the Access Channel or Enhanced Access Channel and

REJECTED_TYPE is '00000111',
or if the order is sent on the Reverse Traffic Channel and

REJECTED_TYPE is '00000001',
the order-specific fields also include the following two fields:

RESERVED_1	2
REJECTED_ORDER	6
REJECTED_ORDQ	8

If the order is sent on the Reverse Traffic Channel and
REJECTED_TYPE is '00001100',
the order-specific fields also include the following field:

REJECTED_PARAM_ID	16
-------------------	----

If the order is sent on the Access Channel or Enhanced Access Channel and

REJECTED_TYPE is '00001100',
or if the order is sent on the Reverse Traffic Channel and
REJECTED_TYPE is '00000011', '00101000',
'00001110', or '00101010',

the order-specific fields also include the following field:

REJECTED_RECORD	8
-----------------	---

If the ORDQ is '00010000', '00010001', or '00010010', the
order-specific fields also include the following fields:

CON_REF	8
---------	---

If the ORDQ is '00010011', the order-specific fields also
include the following fields:

CON_REF	8
TAG	4

REJECTED_PDU_TYPE	0 or 2
RESERVED_2	0 - 7 (as needed)

3

4

ORDQ – Order qualification code.

- 1 The mobile station shall set this field to the ORDQ value
2 shown in Table 2.7.3-1 corresponding to the reason for
3 rejecting the message.
- 4 REJECTED_TYPE – Message type of rejected message.
- 5 The mobile station shall set this field to the value of the
6 MSG_TYPE or the MSG_ID (see [4]) field of the message being
7 rejected.
- 8 If the MSG_TYPE or the MSG_ID (see [4]) field is not 8 bits,
9 the mobile station shall set the least significant bits of this
10 field to the value of the MSG_TYPE field and set all the
11 remaining bits to ‘0’.
- 12 RESERVED_1 – Reserved bits.
- 13 The mobile station shall set this field to ‘00’.
- 14 REJECTED_ORDER – Order type of rejected message.
- 15 If the rejected message was an *Order Message*, the mobile
16 station shall set this field to the value of the ORDER field in
17 the rejected message.
- 18 Otherwise, the mobile station shall omit this field.
- 19 REJECTED_ORDQ – Order qualification code of rejected message.
- 20 If the rejected message was an *Order Message* including an
21 ORDQ field, the mobile station shall set this field to the value
22 of the ORDQ field in the rejected message. If the rejected
23 message was an *Order Message* not including an ORDQ field,
24 the mobile station shall set this field to ‘00000000’.
- 25 Otherwise, the mobile station shall omit this field.
- 26 REJECTED_PARAM_ID – Parameter identification of the rejected parameter.
- 27 If the rejected message was a *Set Parameters Message*, the
28 mobile station shall set this field to the PARAMETER_ID of the
29 first parameter for which the requested operation could not be
30 completed.
- 31 Otherwise, the mobile station shall omit this field.
- 32 REJECTED_RECORD – Record type of the rejected information record.
- 33 If the rejected message was a *Feature Notification Message*, an
34 *Alert With Information Message*, *Extended Alert With*
35 *Information Message*, *Extended Flash With Information*
36 *Message*, or a *Flash With Information Message*, the mobile
37 station shall set this field to the RECORD_TYPE field of the
38 first information record that could not be accepted.
- 39 Otherwise, the mobile station shall omit this field.
- 40 CON_REF – Connection reference.
- 41 The mobile station shall set this field to the value of the
42 connection reference of the service option connection
43 corresponding to the call.

- 1 TAG – Transaction identifier.
 2 The mobile station shall set this field to the transaction
 3 identifier (received from the base station) of the call
 4 assignment being rejected.
- 5 REJECTED_PDU_TYPE – PDU type of the rejected message.
 6 If P_REV_IN_USE_s is less than six, the mobile station shall
 7 omit this field; otherwise, the mobile station shall set this field
 8 to the REJECTED_PDU_TYPE code shown in Table 2.7.3.4-1
 9 corresponding to the PDU type of the message being rejected.

10

11

Table 2.7.3.4-1. REJECTED_PDU_TYPE codes

REJECTED_PDU_ TYPE (binary)	Description
00	20 ms regular message
01	5 ms mini message
01	Reserved
11	Reserved

12

- RESERVED_2 – Reserved bits.

13

14

15

16

17

The mobile station shall add reserved bits as needed in order to make the total length of this record containing order-specific fields equal to an integer number of octets. The mobile station shall set these bits to '0'.

1 2.7.3.5 Release Order

2

Order-Specific Field	Length (bits)
ORDQ	8

If the ORDQ is '00000011', the mobile station shall include the following order-specific record:

RSC_MODE_IND	1
RSCI	0 or 4
RSC_END_TIME_UNIT	0 or 2
RSC_END_TIME_VALUE	0 or 4

3

ORDQ – Order qualification code.

4

The mobile station shall set this field to the order qualification code, in accordance with Table 2.7.3-1.

5

6

RSC_MODE_IND – Reduced slot cycle mode indicator.

7

If ORDQ is equal to '00000011', the mobile station shall include this field and set it as specified below; otherwise, the mobile station shall omit this field.

8

9

10

The mobile station shall set this field to '1' to indicate that it will operate in the reduced slot cycle mode following release of the traffic channel; otherwise, the mobile station shall set this field to '0'.

11

12

13

14

RSCI – Reduced slot cycle index.

15

If RSC_MODE_IND is included and equal to '1', the mobile station shall include this field and set it to the value of the reduced slot cycle index, as specified in Table 2.7.1.3.2.1-8; otherwise, the mobile station shall omit this field.

16

17

18

1 The mobile station shall set this field to a value less than the
2 registered slot cycle index, SLOT_CYCLE_INDEX_REG.

3 RSC_END_TIME_UNIT – Reduced slot cycle mode end time unit.

4 If RSC_MODE_IND is equal to '0', the mobile station shall
5 omit this field; otherwise, the mobile station shall set this field
6 according to Table 2.7.3.5-1 to indicate the units of the
7 RSC_END_TIME_VALUE field.

8 **Table 2.7.3.5-1. RSC_END_TIME_UNIT and MAX_RSC_END_TIME_UNIT values**

Field (binary)	Description
00	unit is 4 seconds
01	unit is 20 seconds
10	unit is 100 seconds
11	RESERVED

9 RSC_END_TIME_VALUE – Reduced slot cycle mode end time value.

10 If RSC_MODE_IND is equal to '0', the mobile station shall
11 omit this field; otherwise, the mobile station shall include this
12 field and set it as follows:

13 The mobile station shall set this field to the system time, in
14 units of time specified by RSC_END_TIME_UNIT(modulo 16),
15 at which the mobile station is to exit the reduced slot cycle
16 mode.

17

18

2.7.3.6 Fast Call Setup Order

Order-Specific Field	Length (bits)

ORDQ – Order qualification code.

The mobile station shall set this field to the ORDQ value shown in Table 2.7.3-1.

RSC_MODE_IND – Reduced slot cycle mode indicator.

The mobile station shall set this field to ‘1’ to indicate that it will operate in the reduced slot cycle mode; otherwise, the mobile station shall set this field to ‘0’.

RSCI – Reduced slot cycle index.

If RSC_MODE_IND is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it to the value of the reduced slot cycle index, as specified in Table 2.7.1.3.2.1-8.

The mobile station shall set this field to a value less than the registered slot cycle index, SLOT_CYCLE_INDEX_REG.

RSC_END_TIME_UNIT – Reduced slot cycle mode end time unit.

If RSC_MODE_IND is equal to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall set this field according to Table 2.7.3.5-1 to indicate the units of the RSC_END_TIME_VALUE field.

RSC_END_TIME_VALUE – Reduced slot cycle mode end time value.

If RSC_MODE_IND is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the system time, in units of time specified by RSC_END_TIME_UNIT(modulo 16), at which the mobile station is to exit the reduced slot cycle mode.

1 2.7.4 Information Records

2 On the r-csch, information records may be included in the *Status Response Message*, the
3 *Extended Status Response Message*, and the *Device Information Message*. On the r-dsch,
4 information records may be included in the *Origination Continuation Message*, the *Enhanced*
5 *Origination Message*, the *Flash With Information Message*, the *Extended Flash With*
6 *Information Message*, the *Service Request Message*, the *Service Response Message*, the
7 *Status Message*, and the *Status Response Message*. Table 2.7.4-1 lists the information
8 record type values that may be used with each message type. The following sections
9 describe the contents of each of the record types in detail.

10

1

Table 2.7.4-1. Information Record Types

Information Record	Record Type (binary)	QUAL_INFO_TYPE (binary)	Message Type	r-csc h	r-dsch	P_REV_I N_USE⁸⁵
Reserved	00000001	-	None	-	-	-
Reserved for Obsolete Identification	00000010	-				-
Keypad Facility	00000011	-	Flash	N	Y	All
Called Party Number	00000100	-	Flash	N	Y	All
Calling Party Number	00000101	-	Flash	N	Y	All
		-	Origination Continuation	N	Y	
		-	Enhanced Origination Message	N	Y	
Reserved for Obsolete Identification	00000110	-	-	-	-	-
Call Mode	00000111	00000000	Status [1]	N	Y	< 7
Terminal Information	00001000	00000010	Status [1]	Y	Y	All
Roaming Information	00001001	00000010	Status [1]	Y	Y	All
Security Status	00001010	00000000	Status [1]	N	Y	All
Connected Number	00001011		Flash	N	Y	All
IMSI	00001100	00000000	Status [1]	Y	Y	All

Extended Record Type — International	11111110	-	Country-Specific			1, ≥ 4

All other record type values are reserved.

“Flash” refers to either the *Flash With Information Message* or the *Extended Flash With Information Message*.

“DIM” refers to the *Device Information Message*.

[1] This information record may be included in a *Status Message*, a *Status Response Message*, or an *Extended Status Response Message*.

[2] This information record may be included in a *Status Response Message* or an *Extended Status Response Message*.

1 2.7.4.1 Reserved

2

1 2.7.4.2 Keypad Facility

2 This information record can be included in a *Flash With Information Message* and allows the
 3 user to send characters entered via a keyboard or other such terminal.

4

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following field:

{

CHAR _i	8
-------------------	---

}

5

6 CHAR_i – Character.

7 The mobile station shall include one occurrence of this field
 8 for each character entered. The mobile station shall set each
 9 occurrence of this field to the ASCII representation
 10 corresponding to the character entered, as specified in [9],
 11 with the most significant bit set to '0'.

12

1 2.7.4.3 Called Party Number

2 This information record identifies the called party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4

Zero or more occurrences of the following field:

{	
CHARi	8
}	
RESERVED	1

3

4 NUMBER_TYPE – Type of number.

5 The mobile station shall set this field to the NUMBER_TYPE
6 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
7 of the called number, as defined in [7], Section 4.5.9.8 If the mobile station determines that the user has entered an
9 international number (for example, with a leading “+” as
10 specified in [39] for Plus Code Dialing or an international
11 access code), the mobile station should set this field to ‘001’.

12 NUMBER_PLAN – Numbering plan.

13 The mobile station shall set this field to the NUMBER_PLAN
14 value shown in Table 2.7.1.3.2.4-3 corresponding to the
15 numbering plan used for the called number, as defined in [7],
16 Section 4.5.9.

17 CHARi – Character.

18 The mobile stations shall include one occurrence of this field
19 for each character in the called number. The mobile station
20 shall set each occurrence of this field to the ASCII
21 representation corresponding to the character, as specified in
22 [9], with the most significant bit set to ‘0’.

23 RESERVED – Reserved bit.

24 The mobile station shall set this field to ‘0’.

25

1 2.7.4.4 Calling Party Number

2 This information record can be included in a *Flash With Information Message* and identifies
 3 the calling party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5

17
18
19
20
21
22
23
24

NUMBER_TYPE – Type of number.
 The mobile station shall set this field to the NUMBER_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the calling number, as defined in [7], Section 4.5.9.

If the mobile station determines that this number is an international number (for example, with a leading “+” as specified in [39] for Plus Code Dialing or an international access code), the mobile station should set this field to ‘001’.

NUMBER_PLAN – Numbering plan.
 The mobile station shall set this field to the NUMBER_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the calling number, as defined in [7], Section 4.5.9.

PI – Presentation indicator.
 This field indicates whether or not the calling number should be displayed.

The mobile station shall set this field to the PI value shown in Table 2.7.4.4-1 corresponding to the presentation indicator, as defined in [7], Section 4.5.9.

Table 2.7.4.4-1. Presentation Indicators

Description	PI (binary)
Presentation allowed	00
Presentation restricted	01
Number not available	10
Reserved	11

SI – Screening indicator.

This field indicates how the calling number was screened.

The mobile station shall set this field to the SI value shown in Table 2.7.4.4-2 corresponding to the screening indicator value, as defined in [7], Section 4.5.9.

Table 2.7.4.4-2. Screening Indicators

Description	SI (binary)
User-provided, not screened	00
User-provided, verified and passed	01
User-provided, verified and failed	10
Network-provided	11

CHARi – Character.

The mobile stations shall include one occurrence of this field for each character in the calling number. The mobile station shall set each occurrence of this field to the ASCII representation corresponding to the character, as specified in [9], with the most significant bit set to '0'.

RESERVED – Reserved bits.

The mobile station shall set this field to '00000'.

1 2.7.4.5 Reserved

2

3

1 2.7.4.6 Call Mode

2 This information record can be included in a *Status Message* or a *Status Response Message*
 3 to return the mobile station's preferred call mode and call-related information.

4 If P_REV_IN_USE_s is equal to or greater than seven, this information record will not be
 5 requested by the base station (see 3.7.2.3.2.15 & 3.7.4.4).

6

Type-Specific Field	Length (bits)
ORIG_MODE	1
PRI_SERVICE	16
SEC_SERVICE	16
RESERVED	7

7

8 ORIG_MODE – Origination mode indicator.
 9 If the current call is a mobile-originated call, the mobile
 10 station shall set this field to '0'. If the current call is a mobile-
 11 terminated call, the mobile station shall set this field to '1'.

12 PRI_SERVICE – Primary service option.
 13 The mobile station shall set this field to the value specified in
 14 [30], corresponding to the current primary service option. If
 15 no primary service option is active, the mobile station shall
 16 set this field to '0000000000000000'.

17 SEC_SERVICE – Secondary service option.
 18 The mobile station shall set this field to the value specified in
 19 [30], corresponding to the current secondary service option. If
 20 no secondary service option is active, the mobile station shall
 21 set this field to '0000000000000000'.

22 RESERVED – Reserved bits.
 23 The mobile station shall set this field to '0000000'.

24

1 2.7.4.7 Terminal Information

2 This information record can be included in a *Status Message*, a *Status Response Message*,
 3 or an *Extended Status Response Message* to return configuration information about the
 4 mobile station.

Type-Specific Field	Length (bits)
MOB_P_REV	8
MOB_MFG_CODE	8
MOB_MODEL	8
MOB_FIRM_REV	16
SCM	8
LOCAL_CTRL	1
SLOT_CYCLE_INDEX	3

One or more occurrences of the following field:

{	
SERVICE_OPTION	16
}	
SIGN_SLOT_CYCLE_INDEX	0 or 1
RESERVED	0 – 7 (as needed)

5

6 MOB_P_REV – Protocol revision of the mobile station.

7 If the status request does not specify a band class, the mobile
 8 station shall set this field to '00001100'; otherwise, the
 9 mobile station shall set this field to the MOB_P_REV
 10 associated with the requested band class and operating mode.

11 MOB_MFG_CODE⁸⁶ – Manufacturer code.

12 This field identifies the manufacturer of the mobile station.

13 The mobile station shall set this field to the manufacturer
 14 code assigned to its manufacturer.

15 MOB_MODEL – Model number.

16 This number is assigned by the manufacturer for a particular
 17 model.

18 The mobile station shall set this field to the model number
 19 assigned by the manufacturer for this mobile station.

⁸⁶ This information will not be accurate if the ME uses an ESN with a 14-bit manufacturer code or includes a pseudo-ESN based on MEID.

1 RESERVED – Reserved bits.
2 The mobile station shall add reserved bits as needed in order
3 to make the length of the entire information record equal to
4 an integer number of octets. The mobile station shall set
5 these bits to '0'.
6

2.7.4.8 Roaming Information

This information record can be included in a *Status Message*, a *Status Response Message*, or an *Extended Status Response Message* to return roaming information about the mobile station.

Type-Specific Field	Length (bits)
ACCOLC	4
MOB_TERM_HOME	1
MOB_TERM_FOR_SID	1
MOB_TERM_FOR_NID	1

Zero or more occurrences of the following record:

{

SID	15
NID	16

}

RESERVED	0 - 7 (as needed)
----------	-------------------

5

6

ACCOLC – Overload class.

7

The mobile station shall set this field to the access overload class assigned to the mobile station.

8

9

MOB_TERM_HOME – Home (non-roaming) registration enable indicator.

10

If the mobile station is configured to receive mobile station terminated calls when not roaming, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'. See 2.6.5.3.

11

12

13

14

MOB_TERM_FOR_SID – Foreign SID roaming registration enable indicator.

15

If the mobile station is configured to receive mobile station terminated calls when it is a foreign SID roamer, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'. See 2.6.5.3.

16

17

18

19

MOB_TERM_FOR_NID – Foreign NID roaming registration enable indicator.

20

If the mobile station is configured to receive mobile station terminated calls when it is a foreign NID roamer, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'. See 2.6.5.3.

21

22

23

24

1 The mobile station shall include one occurrence of the following two-field record for each
2 home (non-roaming) (SID, NID) pair (see 2.6.5.2):

3 SID – System identification.

4 The mobile station shall set this field to the SID value for this
5 (SID, NID) pair.

6 NID – Network identification.

7 The mobile station shall set this field to the NID value for this
8 (SID, NID) pair.

9 RESERVED – Reserved bits.

10 The mobile station shall add reserved bits as needed in order
11 to make the length of the entire information record equal to
12 an integer number of octets. The mobile station shall set
13 these bits to '0'.

14

1 2.7.4.9 Security Status

2 This information record can be included in a *Status Message* or a *Status Response Message*
 3 to return the authentication, encryption, and voice privacy modes of the mobile station.

4

Type-Specific Field	Length (bits)
AUTH_MODE	2
ENCRYPT_MODE	2
PRIVATE_LCM	1
RESERVED	3

5

6 AUTH_MODE – Authentication mode.

7 If the mobile station provided standard authentication
 8 information at the initiation of this call, the mobile station
 9 shall set this field to '01'; otherwise, the mobile station shall
 10 set this field to '00'. All other values are reserved.

11 ENCRYPT_MODE – Message encryption mode.

12 The mobile station shall set this field to the value shown in
 13 Table 3.7.2.3.2.8-2 corresponding to the message encryption
 14 mode currently in use for this call.

15 PRIVATE_LCM – Private long code mask indicator.

16 If the mobile station is using the private long code mask for
 17 this call, the mobile station shall set this field to '1'. If the
 18 mobile station is using the public long code mask for this call,
 19 the mobile station shall set this field to '0'.

20 RESERVED – Reserved bits.

21 The mobile station shall set this field to '000'.

22

1 2.7.4.10 Connected Number

2 This information record can be included in a *Flash With Information Message* to identify the
 3 responding party to a call.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

4 NUMBER_TYPE – Type of number.

5 The mobile station shall set this field to the NUMBER_TYPE
 6 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
 7 of the connected number as defined [7], Section 4.5.9.

8 If the mobile station determines that this number is an
 9 international number (for example, with a leading “+” as
 10 specified in [39] for Plus Code Dialing or an international
 11 access code), the mobile station should set this field to ‘001’.

12 NUMBER_PLAN – Numbering plan.

13 The mobile station shall set this field to the NUMBER_PLAN
 14 value shown in Table 2.7.1.3.2.4-3 corresponding to the
 15 numbering plan used for the connected number, as defined,
 16 in [7], Section 4.5.9.

17 PI – Presentation indicator.

18 This field indicates whether or not the connected number
 19 should be displayed. The mobile station shall set this field to
 20 the PI value shown in Table 2.7.4.4-1 corresponding to the
 21 presentation indicator, as defined in [7], Section 4.5.9.

22 SI – Screening indicator.

23 This field indicates how the connected number was screened.
 24 The mobile station shall set this field to the SI value shown in
 25 Table 2.7.4.4-2 corresponding to the screening indicator
 26 value, as defined in [7], Section 4.5.9.

- 1 CHARi – Character.
- 2 The mobile station shall include one occurrence of this field
3 for each character in the connected number. The mobile
4 station shall set each occurrence of this field to the ASCII
5 representation corresponding to the character, as specified in
6 [9], with the most significant bit set to '0'.
- 7 RESERVED – Reserved bits.
- 8 The mobile station shall set this field to '00000'.
- 9

1 2.7.4.11 IMSI

2 This information record can be included in a *Status Message*, a *Status Response Message*,
 3 or an *Extended Status Response Message* to return the mobile station's operational IMSI.

Type-Specific Field	Length (bits)
IMSI_CLASS	1
IMSI_ADDR_NUM	3
MCC_O	10
IMSI_O_11_12	7
IMSI_O_S	34
RESERVED	1

11
12
13
14
15
16
17
18
19
20
21
22

- IMSI_CLASS – If IMSI_O is a class 0 IMSI, the mobile station shall set this field to '0'; otherwise, the mobile station shall set this field to '1'.
- IMSI_ADDR_NUM – Number of IMSI_O address digits.
If IMSI_O is a class 1 IMSI, the mobile station shall set this field to four less than the number of digits in the NMSI; otherwise, the mobile station shall set this field to '000'.
- MCC_O – Mobile Country Code of the operational IMSI.
The mobile station shall set this field to MCC_O_s. (see 2.3.1).
- IMSI_O_11_12 – The 11th and 12th digits of the operational IMSI.
The mobile station shall set this field to IMSI_O_11_12_s. (see 2.3.1).
- IMSI_O_S – Last ten digits of the operational IMSI.
The mobile station shall set this field to IMSI_O_S. (see 2.3.1.)
- RESERVED – Reserved bit.
The mobile station shall set this field to '0'.

1 2.7.4.12 ESN

2 This information record can be included in a *Status Message*, a *Status Response Message*,
 3 or an *Extended Status Response Message* to return the mobile station ESN.

Type-Specific Field	Length (bits)
ESN	32

4

5

ESN – Mobile station electronic serial number.

6

7

8

9

If the mobile station has a R-UIM which indicates that UIM ID is to be used, the mobile station shall set this field to UIM ID (see [40]); otherwise, the mobile station shall set this field to its ESN_p (see 2.3.2).

10

1 2.7.4.13 Band Class Information

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return band class information about the mobile station.

Type-Specific Field	Length (bits)
BAND_CLASS_INFO	8 × RECORD_LEN

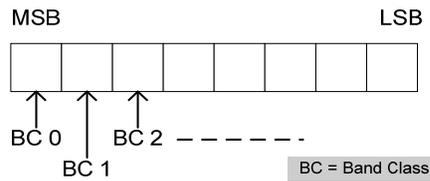

4

5 BAND_CLASS_INFO – Band class information.

6 This field indicates which band classes are supported by the
 7 mobile station.

8 The mobile station shall set the Nth most significant bit of
 9 this field to ‘1’ if the Nth band class defined in [45] is
 10 supported by the mobile station; otherwise, the mobile station
 11 shall set the Nth most significant bit of this field to ‘0’.

12 Example of this field coding is shown in Figure 2.7.4.13-1.

13

14 **Figure 2.7.4.13-1. BAND_CLASS_INFO field coding**

15 The mobile station shall add reserved bits as needed in order
 16 to make the length of the entire information record equal to
 17 an integer number of octets. The mobile station shall set
 18 these bits to ‘0’.

19

1 2.7.4.14 Power Class Information

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return power class information about the mobile station.

4

Type-Specific Field	Length (bits)
MAX_EIRP	8

5

6 MAX_EIRP – Maximum effective isotropic radiated power (EIRP).

7 The mobile station shall set this field to the minimum EIRP at
 8 maximum output (in dBW) for the mobile station plus 60 (see
 9 [11]). When the mobile station output power is expressed in
 10 ERP, it may be converted to EIRP by adding 2 dB to the ERP
 11 value.⁸⁷

12

⁸⁷ For example, if a mobile station has a minimum ERP at maximum output of -4 dBW, then the mobile station sets this field to 58.

1 2.7.4.15 Operating Mode Information

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return operating mode information about the mobile station.

4

5

Type-Specific Field	Length (bits)
OP_MODE_INFO	8 × RECORD_LEN

6

7 OP_MODE_INFO – Operating mode information.

8 This field indicates which operating modes are supported by
 9 the mobile station in the band class for which information is
 10 requested.

11 This field currently consists of the following subfields which
 12 are included in the information record in the order shown in
 13 Table 2.7.4.15-1 for P_REV_IN_USE_S less than or equal to
 14 three and in Table 2.7.4.15-2 for P_REV_IN_USE_S greater
 15 than three.

16

17 **Table 2.7.4.15-1. OP_MODE for P_REV_IN_USE_S Less Than or Equal to Three**

Subfield	Length (bits)	Subfield Description
OP_MODE0	1	CDMA mode in Band Class 1 and Band Class 4
OP_MODE1	1	CDMA mode in Band Class 0 and Band Class 3
OP_MODE2	1	Reserved (Previously: Analog mode)
OP_MODE3	1	Reserved (Previously: wide analog mode)
OP_MODE4	1	Reserved (Previously: narrow analog mode)
RESERVED	3	Reserved Bits

18

Table 2.7.4.15-2. OP_MODE for P_REV_IN_USE_s Greater Than Three

Subfield	Length (bits)	Subfield Description	Standards
OP_MODE0	1	CDMA mode	
OP_MODE1	1	CDMA mode ⁸⁸	
OP_MODE2	1	Reserved (Previously: Analog mode)	
OP_MODE3	1	Reserved (Previously: Wide analog mode)	
OP_MODE4	1	Reserved (Previously: Narrow analog mode)	
OP_MODE5	1	DS-41	[32]
OP_MODE6	1	MC-MAP	[31]
RESERVED	1	–	–

The mobile station shall set each subfield to '1', if the corresponding operating mode is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

RESERVED – Reserved bits.

The mobile station shall set each bit in this field to '0'.

When more operating modes are defined, the reserved bits will be used for the new corresponding subfields. Sufficient octets will also be added to this field to accommodate the corresponding new subfields. All the undefined bits in an additional octet will be reserved bits.

If all bits are set to '0' in an octet and all succeeding octets, the mobile station shall omit the octet and the succeeding octets.

⁸⁸ The mobile station shall set OP_MODE1 the same as OP_MODE0.

1 2.7.4.16 Service Option Information

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return service option information about the mobile station.

4

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following field:

{

RESERVED	6
FORWARD_SUPPORT	1
REVERSE_SUPPORT	1
SERVICE_OPTION	16

}

5

6 The mobile station shall include one occurrence of the following record for each service
 7 option supported:

- 8 RESERVED – Reserved bits.
 9 The mobile station shall set this field to ‘000000’.
- 10 FORWARD_SUPPORT – Support indicator for Forward Traffic Channel.
 11 The mobile station shall set this field to ‘1’ if the service
 12 option specified in the SERVICE_OPTION field is supported on
 13 the Forward Traffic Channel.
- 14 REVERSE_SUPPORT – Support indicator for Reverse Traffic Channel.
 15 The mobile station shall set this field to ‘1’ if the service
 16 option specified in the SERVICE_OPTION field is supported on
 17 the Reverse Traffic Channel.
- 18 SERVICE_OPTION – Service option.
 19 The mobile station shall set this field to the value specified in
 20 [30] for the service option supported.

21

22

2.7.4.17 Multiplex Option Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return multiplex option information about the mobile station. The mobile station shall include at least one, and not more than six, instances of the record within the type-specific field according to the following rules:

- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 1. If this instance is included, the mobile station shall support Multiplex Option 1 for forward and reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 2. If this instance is included, the mobile station shall support Multiplex Option 2 for forward and reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 3, 5, 7, 9, 11, 13, or 15 and with FOR_NUM_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX_OPTION to the highest numbered multiplex option from the set {3, 5, 7, 9, 11, 13, 15} which the mobile station supports for reverse operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX_OPTION from that set for reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 4, 6, 8, 10, 12, 14, or 16 and with FOR_NUM_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX_OPTION to the highest numbered multiplex option from the set {4, 6, 8, 10, 12, 14, 16} which the mobile station supports for reverse operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX_OPTION from that set for reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 3, 5, 7, 9, 11, 13, or 15 and with REV_NUM_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX_OPTION to the highest numbered multiplex option from the set {3, 5, 7, 9, 11, 13, 15} which the mobile station supports for forward operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX_OPTION from that set for forward operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX_OPTION is set to 4, 6, 8, 10, 12, 14, or 16 and with REV_NUM_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX_OPTION to the highest numbered multiplex option from the set {4, 6, 8, 10, 12, 14, 16} which the mobile station supports for forward operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX_OPTION from that set for forward operation.
- Within the type-specific field, the mobile station shall include at least one instance of a record in which FOR_NUM_BITS is set to a value other than '00000000'.

- Within the type-specific field, the mobile station shall include at least one instance of a record in which REV_RATES is set to a value other than '00000000'.

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following record:

{

MULTIPLEX_OPTION	16
FOR_NUM_BITS	8
REV_NUM_BITS	8

}

4

5 The mobile station shall include one occurrence of the following record for each specified
6 multiplex option according to the previously stated rules:

- 7 MULTIPLEX_OPTION – Supported multiplex option.
- 8 The mobile station shall set this field to the number of the
9 supported multiplex option from the set {1, 2, 3, 4, 5, 6, 7, 8,
10 9, 10, 11, 12, 13, 14, 15, 16} (e.g., 1 corresponds to Multiplex
11 Option 1).
- 12 FOR_NUM_BITS – Forward Traffic Channel number of bits per frame.
- 13 If FOR_NUM_BITS = '00000000', then the specified multiplex
14 option in this record shall indicate the supported multiplex
15 option for the Reverse Traffic Channel only. In this case, no
16 further interpretation of the FOR_NUM_BITS field shall be
17 made. The mobile station shall not set both FOR_NUM_BITS
18 and REV_NUM_BITS equal to '00000000' in the same
19 information record.
- 20 If MULTIPLEX_OPTION is equal to 1, 3, 5, 7, 9, 11, 13, or 15,
21 this field consists of the subfields specified in Table 2.7.4.17-
22 1 which are included in the information record in the order
23 shown in the table. The subfields in Table 2.7.4.17-1 refer to
24 the number of bits per frame supported on the Fundamental
25 Channel of the Forward Traffic Channel.

26

Table 2.7.4.17-1. Forward Fundamental Traffic Channel Number of Bits per Frame for Forward Multiplex Option 1

Subfield	Length (bits)	Subfield Description
RS1_9600_FOR	1	172 bits per F-FCH frame
RS1_4800_FOR	1	80 bits per F-FCH
RS1_2400_FOR	1	40 bits per F-FCH frame
RS1_1200_FOR	1	16 bits per F-FCH frame
RESERVED	4	Reserved Bits

If MULTIPLEX_OPTION is equal to 2, 4, 6, 8, 10, 12, 14, or 16, this field consists of the subfields specified in Table 2.7.4.17-2 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-2 refer to the number of bits per frame supported on the Fundamental Channel of the Forward Traffic Channel.

Table 2.7.4.17-2. Forward Fundamental Traffic Channel Number of Bits per Frame for Forward Multiplex Option equal to 2

Subfield	Length (bits)	Subfield Description
RS2_14400_FOR	1	267 bits per F-FCH frame
RS2_7200_FOR	1	125 bits per F-FCH frame
RS2_3600_FOR	1	55 bits per F-FCH frame
RS2_1800_FOR	1	21 bits per F-FCH frame
RESERVED	4	Reserved Bits

The mobile station shall set the subfields specified in Tables 2.7.4.17-1 and 2.7.4.17-2, corresponding to the Forward Traffic Channel number of bits per frame supported by the mobile station for this multiplex option to '1', and shall set the remaining subfields to '0'. The mobile station shall set RESERVED to '0000'.

REV_NUM_BITS – Reverse Traffic Channel transmission rates.

If REV_NUM_BITS is equal to '00000000', then the specified multiplex option in this record indicate the supported multiplex option for the Forward Traffic Channel only. In this case, no further interpretation of the REV_NUM_BITS field shall be made. The mobile station shall not set both FOR_NUM_BITS and REV_NUM_BITS equal to '00000000' in the same information record.

If MULTIPLEX_OPTION is equal to 1, 3, 5, 7, 9, 11, 13, or 15, this field consists of the subfields specified in Table 2.7.4.17-3 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-3 refer to the number of bits per frame supported on the Fundamental Channel of the Reverse Traffic Channel.

Table 2.7.4.17-3. Reverse Fundamental Traffic Channel Number of Bits per Frame for Reverse Multiplex Option equal to 1

Subfield	Length (bits)	Subfield Description
RS1_9600_REV	1	172 bits per R-FCH frame
RS1_4800_REV	1	80 bits per R-FCH frame
RS1_2400_REV	1	40 bits per R-FCH frame
RS1_1200_REV	1	16 bits per R-FCH frame
RESERVED	4	Reserved Bits

If MULTIPLEX_OPTION is equal to 2, 4, 6, 8, 10, 12, 14, or 16, this field consists of the subfields specified in Table 2.7.4.17-4 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-4 refer to the number of bits per frame supported on the Fundamental Channel of the Reverse Traffic Channel.

Table 2.7.4.17-4. Reverse Fundamental Traffic Channel Number of Bits per Frame for Reverse Multiplex Option equal to 2

Subfield	Length (bits)	Subfield Description
RS2_14400_REV	1	267 bits per R-FCH frame
RS2_7200_REV	1	125 bits per R-FCH frame
RS2_3600_REV	1	55 bits per R-FCH frame
RS2_1800_REV	1	21 bits per R-FCH frame
RESERVED	4	Reserved Bits

The mobile station shall set the subfields specified in Table 2.7.4.17-3 and Table 2.7.4.17-4 corresponding to the Reverse Traffic Channel transmission number of bits per frame supported by the mobile station for this multiplex option to '1', and shall set the remaining subfields to '0'. The mobile station shall set RESERVED to '0000'.

1 2.7.4.18 Service Configuration

2 The format of the Service Configuration information record is defined in 3.7.5.7.

3

4

1 2.7.4.19 Called Party Subaddress

2 This information record identifies the called party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

3

4 EXTENSION_BIT – The extension bit.

5 The mobile station shall set this field to ‘1’.

6 SUBADDRESS_TYPE – Type of subaddress.

7 The mobile station shall set this field to the
 8 SUBADDRESS_TYPE value shown in Table 2.7.4.19-1
 9 corresponding to the type of the subaddress, as defined in [7],
 10 Section 4.5.8.

11

12 **Table 2.7.4.19-1. Subaddress Types**

Description	SUBADDRESS TYPE (binary)
NSAP (see [34])	000
User specified	010
Reserved	others

13

14 ODD/EVEN_INDICATOR – The indicator of odd/even bits.

15 The mobile station shall set this field to the
 16 ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2
 17 corresponding to the indicator of even/odd bits, as defined in
 18 [7], Section 4.5.8. This field is only used when the type of
 19 subaddress is “User specified” and the coding is BCD.

20

1

Table 2.7.4.19-2. Odd/Even Indicator

Description	ODD/EVEN INDICATOR (binary)
Even number of address signals	0
Odd number of address signals	1

2

3

RESERVED – Reserved bits.

4

The mobile station shall set this field to '000'.

5

CHARi – Character.

6

The mobile station shall include one occurrence of this field for each character in the called party subaddress.

7

8

When the SUBADDRESS_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

9

10

11

When the SUBADDRESS_TYPE field is set to '010', the user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets.

12

13

When interworking with CCITT Recommendation X.25 networks, BCD coding should be applied.

14

15

16

1 2.7.4.20 Calling Party Subaddress

2 This information record identifies the calling party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR _i	8
-------------------	---

}

3

4 EXTENSION_BIT – The extension bit.

5 The mobile station shall set this field to ‘1’.

6 SUBADDRESS_TYPE – Type of subaddress.

7 The mobile station shall set this field to the
8 SUBADDRESS_TYPE value shown in Table 2.7.4.19-1
9 corresponding to the type of the subaddress, as defined in [7],
10 Section 4.5.10.

11 ODD/EVEN_INDICATOR – The indicator of odd/even bits.

12 The mobile station shall set this field to the
13 ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2
14 corresponding to the indicator of even/odd bits, as defined in
15 [7], Section 4.5.10. It is only used when the type of
16 subaddress is “User specified” and the coding is BCD.

17 RESERVED – Reserved bits.

18 The mobile station shall set this field to ‘000’.

19 CHAR_i – Character.

20 The mobile station shall include one occurrence of this field
21 for each character in the calling party subaddress.

22 When the SUBADDRESS_TYPE field is equal to ‘000’, the
23 NSAP address shall be encoded using the preferred binary
24 encoding specified in [35].

25 When the SUBADDRESS_TYPE field is set to ‘010’, user-
26 specified subaddress field is encoded according to the user
27 specification, subject to a maximum length of 20 octets.
28 When interworking with [36] networks, BCD coding should be
29 applied.

30

2.7.4.21 Connected Subaddress

This information record identifies the subaddress of the responding party.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{	
CHAR _i	8
}	

EXTENSION_BIT – The extension bit.

The mobile station shall set this field to '1'.

SUBADDRESS_TYPE – Type of subaddress.

The mobile station shall set this field to the SUBADDRESS_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.14.

ODD/EVEN_INDICATOR – The indicator of odd/even bits.

The mobile station shall set this field to the ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.14. It is only used when the type of subaddress is "User specified" and the coding is BCD.

RESERVED – Reserved bits.

The mobile station shall set this field to '000'.

CHAR_i – Character.

The mobile station shall include one occurrence of this field for each character in the connected subaddress.

When the SUBADDRESS_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

When the SUBADDRESS_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

1 2.7.4.22 Power Control Information

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return the minimum power control step size supported by the
 4 mobile station (see 2.1.2.3.2).

Type-Specific Field	Length (bits)
MIN_PWR_CNTL_STEP	3
RESERVED	5

5

6 MIN_PWR_CNTL_STEP – Minimum power control step size
 7 The mobile station shall set this field to the PWR_CNTL_STEP
 8 value associated with the minimum closed loop power control
 9 step size shown in Table 3.7.3.3.2.25-1 that the mobile
 10 station supports.

11 RESERVED – Reserved bits.
 12 The mobile station shall set this field to ‘00000’.

13

1 2.7.4.23 IMSI_M

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return the mobile station's IMSI_M_p.

Type-Specific Field	Length (bits)
IMSI_M_CLASS	1
IMSI_M_ADDR_NUM	3
MCC_M	10
IMSI_M_11_12	7
IMSI_M_S	34
RESERVED	1

4

5 IMSI_M_CLASS – IMSI_M Class assignment of the mobile station.

6 The mobile station shall set this field to '0'.

7 IMSI_M_ADDR_NUM – Number of IMSI_M_p address digits.

8 The mobile station shall set this field to '000'.

9 MCC_M – Mobile Country Code of the MIN based IMSI.

10 The mobile station shall set this field the MCC_M_p. See 2.3.1.

11 IMSI_M_11_12 – The 11th and 12th digits of IMSI_M.

12 The mobile station shall set this field to IMSI_M_11_12_p.
 13 See 2.3.1.

14 IMSI_M_S – Last ten digits of the IMSI_M.

15 The mobile station shall set this field to IMSI_M_S_p. See
 16 2.3.1.

17 RESERVED – Reserved bit.

18 The mobile station shall set this field to '0'.

19

1 2.7.4.24 IMSI_T

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return the mobile station's IMSI_T.

Type-Specific Field	Length (bits)
IMSI_T_CLASS	1
IMSI_T_ADDR_NUM	3
MCC_T	10
IMSI_T_11_12	7
IMSI_T_S	34
RESERVED	1

4

5 IMSI_T_CLASS – IMSI_T Class assignment of the mobile station.
 6 If the mobile station's IMSI_T is a class 0 IMSI, the mobile
 7 station shall set this field to '0'; otherwise, the mobile station
 8 shall set this field to '1'.

9 IMSI_T_ADDR_NUM – Number of IMSI_T_p address digits.
 10 If the mobile station's IMSI_T is a class 1 IMSI, the mobile
 11 station shall set this field to four less than the number of
 12 digits in the NMSI; otherwise, the mobile station shall set this
 13 field to '000'.

14 MCC_T – Mobile Country Code of the IMSI_T.
 15 The mobile station shall set this field to the MCC_T_p.
 16 See 2.3.1.

17 IMSI_T_11_12 – The 11th and 12th digits of the IMSI_T_p.
 18 The mobile station shall set this field to IMSI_T_11_12_p.
 19 See 2.3.1.

20 IMSI_T_S – Last ten digits of the IMSI_T_p.
 21 The mobile station shall set this field to IMSI_T_S_p. See 2.3.1.

22 RESERVED – Reserved bit.
 23 The mobile station shall set this field to '0'.

24

1 2.7.4.25 Capability Information

2 This information record identifies whether the following optional or MOB_P_REV dependent
 3 features are supported by the mobile station.

4

Type-Specific Field	Length (bits)
ACCESS_ENTRY_HO	1
ACCESS_PROBE_HO	1
ANALOG_SEARCH	1
HOPPING_BEACON	1
MAHHO	1
PUF	1
ANALOG_553A	1

R_SCH_DELAYED_ARQ_SUPPORTED	1
SO_73_OP_0_SUPPORTED	1
RESERVED	0 - 7 (as needed)

2

3 ACCESS_ENTRY_HO

– Access Entry Handoff Support.

4

5

6

7

This field identifies the mobile station's support for access entry handoff (see 2.6.2.3). The mobile station shall set this field to '1' if access entry handoff is supported; otherwise, the mobile station shall set this field to '0'.

8 ACCESS_PROBE_HO

– Access Probe Handoff Support.

1			This field identifies the mobile station's support for access
2			probe handoff (see 2.6.3.1.3.3). The mobile station shall set
3			this field to '1' if access probe handoff is supported; otherwise,
4			the mobile station shall set this field to '0'.
5	ANALOG_SEARCH	-	Analog Search Support.
6			This field identifies the mobile station's support for analog
7			searching (see 2.6.6.2.10). The mobile station shall set this
8			field to '1' if analog searching is supported; otherwise, the
9			mobile station shall set this field to '0'. The mobile station
10			shall set this field to '0'.
11	HOPPING_BEACON	-	Hopping Beacon Support.
12			This field identifies the mobile station's support for hopping pilot
13			beacons. The mobile station shall set this field to '1' if hopping
14			pilot beacons are supported; otherwise, this field shall be set to
15			'0'.
16	MAHHO	-	Mobile Assisted Hard Handoff Support.
17			This field identifies the mobile station's support for mobile
18			assisted hard handoff. The mobile station shall set this field to
19			'1'.
20	PUF	-	Location Power Up Function Support.
21			This field identifies the mobile station's support for location
22			power up function (see 2.6.4.1.7).
23			If MOB_P_REV _p is equal to '0000101', the mobile station shall
24			set this field to '1'; otherwise the mobile station shall set this
25			field as follows:
26			If the mobile station supports location power up function, the
27			mobile station shall set this field to '1', otherwise, the mobile
28			station shall set this field to '0'.
29	ANALOG_553A	-	Analog Support.
30			This field identifies the mobile station's compatibility with [12].
31			The mobile station shall set this field to '0'.
32	QPCH	-	Quick Paging Channel Support.
33			This field identifies the mobile station's support for the Quick
34			Paging Channel. The mobile station shall set this field to '1' if
35			the Quick Paging Channel is supported; otherwise, the mobile
36			station shall set this field to '0'.
37	SLOTTED_TIMER	-	Slotted Timer Support.
38			This field identifies the mobile station's support for the Slotted
39			Timer. The mobile station shall set this field to '1' if the Slotted
40			Timer is supported; otherwise, the mobile station shall set this
41			field to '0'.
42	CHM_SUPPORTED	-	Control Hold Mode supported indicator.

1 The mobile station shall set this field to '1' to indicate that the
 2 mobile station supports the Control Hold Mode; otherwise, the
 3 mobile station shall set this field to '0'.

4 **GATING_RATE_SET** – Set of supported Reverse Pilot gating rates.
 5
 6 If CHS_SUPPORTED is included and is set to '1', the mobile
 7 station shall set this field to value shown in Table 2.7.4.25-1
 8 corresponding to the set of supported reverse pilot gating
 9 rates; otherwise the mobile station shall omit this field.

10 **Table 2.7.4.25-1. Set of Supported Reverse Pilot Gating Rates**

GATING_RATE SET field (binary)	Gating Rates Capability
00	Gating rates 1
01	Gating rates 1 and ½
10	Gating rates 1, ½ and ¼
11	Reserved

11
 12 **EXT_CAP_INCLUDED** – Extended Capabilities Included indicator.
 13 The mobile station shall set this field to '1' to indicate that
 14 extended capability indicators are included in this record;
 15 otherwise, the mobile station shall set this field to '0'.
 16 **MABO** – Mobile Assisted Burst Operation capability indicator.
 17 If EXT_CAP_INCLUDED is set to '0', the mobile station shall omit
 18 this field; otherwise, the mobile station shall include this field
 19 and set it as follows:
 20 The mobile station shall set this field to '1' if it supports the
 21 Mobile Assisted Burst Operation capability; otherwise, the
 22 mobile station shall set this field to '0'.
 23 **SDB** – Short Data Burst supported indicator.
 24 If EXT_CAP_INCLUDED is set to '0', the mobile station shall
 25 omit this field; otherwise, the mobile station shall include this
 26 field and set it as follows:
 27 If MOB_P_REV_p is greater or equal to 11 and if the mobile
 28 station supports packet data service as specified in [42], the
 29 mobile station shall set this field to '1'⁸⁹.

⁸⁹ Short Data Burst Capability support is mandatory for the mobile station with MOB_P_REV_p greater than or equal to 11 that supports packet data service as specified in [42]

1 The mobile station shall set this field to '1' if it supports the
2 flexible rate feature (the capability to support a non-listed
3 frame format) on any of the forward or reverse Fundamental,
4 Supplemental or Dedicated Control channels; otherwise, the
5 mobile station shall set this field to '0'.

6 F_FCH_FLEX_SUPPORTED – Forward Fundamental channel flexible rate feature
7 supported indicator.

8 The mobile station shall include this field only if
9 FLEX_SUPPORTED is equal to '1'. If this field is included, the
10 mobile station shall set this field to '1' if it supports the
11 flexible rate feature for the Forward Fundamental Channel;
12 otherwise, the mobile station shall set this field to '0'.

13 R_FCH_FLEX_SUPPORTED – Reverse Fundamental channel flexible rate feature
14 supported indicator.

15 The mobile station shall include this field only if
16 FLEX_SUPPORTED is equal to '1'. If this field is included, the
17 mobile station shall set this field to '1' if it supports the
18 flexible rate feature for the Reverse Fundamental Channel;
19 otherwise, the mobile station shall set this field to '0'.

20 F_DCCH_FLEX_SUPPORTED – Forward Dedicated Control channel flexible rate feature
21 supported indicator.

22 The mobile station shall include this field only if
23 FLEX_SUPPORTED is equal to '1'. If this field is included, the
24 mobile station shall set this field to '1' if it supports the
25 flexible rate feature for the Forward Dedicated Control
26 Channel; otherwise, the mobile station shall set this field to
27 '0'.

28 R_DCCH_FLEX_SUPPORTED – Reverse Dedicated Control channel flexible rate feature
29 supported indicator.

30 The mobile station shall include this field only if
31 FLEX_SUPPORTED is equal to '1'. If this field is included, the
32 mobile station shall set this field to '1' if it supports the
33 flexible rate feature for the Reverse Dedicated Control
34 Channel; otherwise, the mobile station shall set this field to
35 '0'.

36 F_SCH_FLEX_SUPPORTED – Forward Supplemental channel flexible rate feature
37 supported indicator.

38 The mobile station shall include this field only if
39 FLEX_SUPPORTED is equal to '1'. If this field is included, the
40 mobile station shall set this field to '1' if it supports the
41 flexible rate feature for the Forward Supplemental Channel;
42 otherwise, the mobile station shall set this field to '0'.

43 R_SCH_FLEX_SUPPORTED – Reverse Supplemental channel flexible rate feature
44 supported indicator.

1		The mobile station shall include this field only if
2		FLEX_SUPPORTED is equal to '1'. If this field is included, the
3		mobile station shall set this field to '1' if it supports the
4		flexible rate feature for the Reverse Supplemental Channel;
5		otherwise, the mobile station shall set this field to '0'.
6	VAR_SUPPORTED	– Variable rate feature supported indicator.
7		The mobile station shall set this field to '1' if it supports the
8		variable rate feature (the capability to support rate
9		determination) on any of the forward or reverse Supplemental
10		channels; otherwise, the mobile station shall set this field to
11		'0'.
12	F_SCH_VAR_SUPPORTED	– Forward Supplemental Channel Variable Rate supported
13		indicator.
14		The mobile station shall include this field only if
15		VAR_SUPPORTED is equal to '1'. If this field is included, the
16		mobile station shall set this field to '1' if it supports the
17		variable rate feature on the Forward Supplemental Channels.
18	R_SCH_VAR_SUPPORTED	– Reverse Supplemental Channel Variable Rate supported
19		indicator.
20		The mobile station shall include this field only if
21		VAR_SUPPORTED is equal to '1'. If this field is included, the
22		mobile station shall set this field to '1' if it supports the
23		variable rate feature on the Reverse Supplemental Channels.
24	MAX_SUM_NUM_BITS_C	– Maximum sum of number of bits corresponding to
25		Convolutional rates in the variable rate set.
26		The mobile station shall include this field only if
27		F_SCH_VAR_SUPPORTED is equal to '1'. If this field is
28		included, the mobile station shall set this field to the
29		maximum of the sum of possible information bits per 20 ms
30		corresponding to the Convolutional Code rates in the Variable
31		Rate Set for a Forward Supplemental Channel below which
32		the mobile station is capable of performing rate determination
33		on the forward supplemental channel when Convolutional
34		coding is used.
35	MAX_SUM_NUM_BITS_T	– Maximum sum of number of bits corresponding to Turbo
36		Code rates in the variable rate set
37		The mobile station shall include this field only if
38		F_SCH_VAR_SUPPORTED is equal to '1'. If this field is
39		included, the mobile station shall set this field to the
40		maximum of the sum of possible information bits per 20 ms
41		corresponding to the Turbo Code rates in the Variable Rate
42		Set for a Forward Supplemental Channel below which the
43		mobile station is capable of performing rate determination on
44		the forward supplemental channel when Turbo coding is
45		used.

- 1 CS_SUPPORTED – Concurrent Services supported indicator.
 2 If the mobile station supports concurrent services, the mobile
 3 station shall set this field to ‘1’; otherwise, the mobile station
 4 shall set this field to ‘0’.
- 5 F_SCH_LTU_TAB_SUPPORTED – Forward Supplemental Channel Downloadable LTU
 6 tables supported indicator.
 7 If the mobile station supports downloadable LTU Tables for
 8 Forward Supplemental Channel, the mobile station shall set
 9 this field to ‘1’; otherwise, the mobile station shall set this
 10 field to ‘0’.
- 11 R_SCH_LTU_TAB_SUPPORTED – Reverse Supplemental Channel Downloadable LTU
 12 tables supported indicator.
 13 If the mobile station supports downloadable LTU Tables for
 14 Reverse Supplemental Channel, the mobile station shall set
 15 this field to ‘1’; otherwise, the mobile station shall set this
 16 field to ‘0’.
- 17 ERAM_SUPPORTED – Enhanced Rate Adaptation Mode supported indicator.
 18 If FLEX_SUPPORTED or VAR_SUPPORTED is set to ‘1’, the
 19 mobile station shall include this field; otherwise, the mobile
 20 station shall omit this field. If included, the mobile station
 21 shall set this field to ‘1’ if the mobile station supports the
 22 Enhanced Rate Adaptation Mode; otherwise, the mobile
 23 station shall set this field to ‘0’.
- 24 PDCH_CHM_SUPPORTED – PDCH Control Hold Mode supported indicator.
 25 The mobile station shall set this field to ‘1’ to indicate that the
 26 mobile station supports the PDCH Control Hold Mode;
 27 otherwise, the mobile station shall set this field to ‘0’.
- 28 REV_FCH_GATING_SUPPORTED – Reverse Fundamental eighth gating mode
 29 supported indicator.
 30 If the Reverse Fundamental Traffic Channel gating mode is
 31 supported, the mobile station shall set this field to ‘1’;
 32 otherwise, the mobile station shall set this field to ‘0’.
- 33 RER_MODE_SUPPORTED – Radio environment reporting mode supported indicator.
 34 The mobile station shall set this field to ‘1’ if it supports radio
 35 environment reporting mode; otherwise, the mobile station
 36 shall set this field to ‘0’.
- 37 ADD_NUM_SYNC_ID_INCL – Additional number of synchronization identifiers included
 38 indicator.
 39 If this record is to contain the ADD_NUM_SYNC_ID field, the
 40 mobile station shall set this field to ‘1’; otherwise, the mobile
 41 station shall set this field to ‘0’.
- 42 ADD_NUM_SYNC_ID – Additional number of synchronization identifiers.

- 1 If ADD_NUM_SYNC_ID_INCL field is set to '1', the mobile
 2 station shall include this field and set it to the number of
 3 SYNC_ID's supported minus 5; otherwise it shall omit this
 4 field.
- 5 RSC_MODE_SUPPORTED – Reduced Slot Cycle Mode supported indicator.
 6 The mobile station shall set this field to '1' if it supports the
 7 reduced slot cycle mode; otherwise, the mobile station shall
 8 set this field to '0'.
- 9 TKZ_MODE_SUPPORTED – Tracking zone mode supported indicator.
 10 The mobile station shall set this field to '1' if it supports
 11 tracking zone mode; otherwise, the mobile station shall set
 12 this field to '0'.
- 13 F_SCH_EARLY_TERM_SUPPORTED – Forward Supplemental Channel early termination
 14 supported indicator.
 15 The mobile station shall set this field to '1' if the mobile
 16 station supports early termination for Forward Supplemental
 17 Channel; otherwise, the mobile station shall set this field to
 18 '0'.
- 19 ~~POWER_CONTROL~~RPC_MODE_01_SUPPORTED – Reverse Power Control Mode 01
 20 supported indicator.
 21 The mobile station shall set this field to '1' if the mobile
 22 station supports reverse power control mode '01' for ~~RC11~~
 23 and RC12 reverse link RC08; otherwise, the mobile station
 24 shall set this field to '0'.
- 25 F_SCH_DELAYED_ARQ_SUPPORTED – Forward Supplemental Channel Delayed ARQ
 26 Support indicator.
 27 The mobile station shall set this field to '1' if the mobile
 28 station supports the use of delayed ARQ for forward link RC
 29 11 or 12.
- 30 R_SCH_DELAYED_ARQ_SUPPORTED – Reverse Supplemental Channel Delayed ARQ
 31 Support indicator.
 32 The mobile station shall set this field to '1' if the mobile
 33 station supports the use of delayed ARQ for reverse link RC 8.
- 34 SO_73_OP_0_SUPPORTED – Service Option 73 Operating Point '0' support indicator
 35 The mobile station shall set this field to '1' if the mobile
 36 station supports encoding and decoding at the operating point
 37 '0' for service option 73.
- 38 RESERVED – Reserved bits.
 39 The mobile station shall add reserved bits as needed in order
 40 to make the length of the entire information record equal to
 41 an integer number of octets. The mobile station shall set
 42 these bits to '0'.

43

1 2.7.4.26 Extended Record Type - International

2 The use of this record type is country-specific. The first ten bits of the type-specific fields
3 shall include the Mobile Country Code (MCC) associated with the national standards
4 organization administering the use of the record type. Encoding of the MCC shall be as
5 specified in 2.3.1.3. The remaining six bits of the first two octets of the type-specific fields
6 shall be used to specify the country-specific record type.

7

1 2.7.4.27 Channel Configuration Capability Information

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return channel configuration capability information about the
 4 mobile station.

5

Type-Specific Field	Length (bits)
OTD_SUPPORTED	1
FCH_SUPPORTED	1
FCH Type-specific fields	0 or Variable
DCCH_SUPPORTED	1
DCCH Type-specific fields	0 or Variable
FOR_SCH_SUPPORTED	1
FOR_SCH Type-specific fields	0 or Variable
REV_SCH_SUPPORTED	1
REV_SCH Type-specific fields	0 or Variable
RESERVED_1	0 or 2
STS_SUPPORTED	1
3X_CCH_SUPPORTED	1
CCSH_SUPPORTED	0 or 1
FOR_PDCH_SUPPORTED	1
FOR_PDCH Capability Type-specific fields	0 or variable
FOR_PDCH_SCH_SUPPORTED	0 or 1
REV_PDCH_SUPPORTED	0 or 1
REV_PDCH Capability Type-specific fields	0 or variable
FUNDICATED_BCNC_SUPPORTED	1
FUNDICATED_BCNC Type-specific fields	0 or variable
SCH_BCNC_SUPPORTED	1
RESERVED	0 - 7 (as needed)

6

7 OTD_SUPPORTED – OTD supported indicator.

8

The mobile station shall set this field to '1' if the mobile station supports orthogonal transmission diversity; otherwise, the mobile station shall set this field to '0'.

9

10

- 1 FCH_SUPPORTED – Fundamental Channel supported indicator.
 2 The mobile station shall set this field to '1', if the mobile
 3 station supports the Fundamental Channel; otherwise, the
 4 mobile station shall set this field to '0'.
- 5 FCH Type-specific fields – Fundamental Channel configuration capability information.
 6 If the FCH_SUPPORTED field is set to '1', the mobile station
 7 shall include this field and set it as described in 2.7.4.27.1;
 8 otherwise the mobile station shall omit this field.
- 9 DCCH_SUPPORTED – Dedicated Control Channel supported indicator.
 10 The mobile station shall set this field to '1' if the mobile
 11 station supports the Dedicated Control Channel; otherwise,
 12 the mobile station shall set this field to '0'.
- 13 DCCH Type specific fields– Fundamental Channel configuration capability information.
 14 If the DCCH_SUPPORTED field is set to '1', the mobile station
 15 shall include this field and set it as described in 2.7.4.27.2;
 16 otherwise the mobile station shall omit this field.
- 17 FOR_SCH_SUPPORTED – Forward Supplemental Channel supported indicator.
 18 The mobile station shall set this field to '1' if the mobile
 19 station supports the Forward Supplemental Channel;
 20 otherwise, the mobile station shall set this field to '0'.
- 21 FOR_SCH Type-
 22 specific fields – Forward Supplemental Channel Configuration Capability
 23 Information.
 24 If the FOR_SCH_SUPPORTED field is set to '1', the mobile
 25 station shall include this field and set it as described in
 26 2.7.4.27.3; otherwise the mobile station shall omit this field.
- 27 REV_SCH_SUPPORTED – Reverse Supplemental Channel supported indicator.
 28 The mobile station shall set this field to '1' if the mobile
 29 station supports the Reverse Supplemental Channel;
 30 otherwise, the mobile station shall set this field to '0'.
- 31 REV_SCH Type-
 32 specific fields – Reverse Supplemental Channel Configuration capability
 33 information.
 34 If the REV_SCH_SUPPORTED field is set to '1', the mobile
 35 station shall include this field and set it as described in
 36 2.7.4.27.4; otherwise the mobile station shall omit this field.
- 37 RESERVED_1 – Reserved bits.
 38 If both the FOR_SCH_SUPPORTED and
 39 REV_SCH_SUPPORTED fields are set to '0', the mobile station
 40 shall omit this field. Otherwise, the mobile station shall
 41 include this field and set this field to '00'.
- 42 STS_SUPPORTED – STS supported indicator.

- 1 The mobile station shall set this field to '1' if the mobile
2 station supports Space Time Spreading Transmit Diversity;
3 otherwise, the mobile station shall set this field to '0'.
- 4 **3X_CCH_SUPPORTED** – 3X Common Channel supported.
- 5 The mobile station shall set this field to '1' if the mobile
6 station supports the Spreading Rate 3 common channels (3X
7 BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile
8 station shall set this field to '0'.
- 9 **CCSH_SUPPORTED** – CCSH supported indicator.
- 10 If the FOR_SCH_SUPPORTED field is set to '0', the mobile
11 station shall omit this field; otherwise the mobile station shall
12 include this field and set it as follows.
- 13 If the mobile station supports Code Combining Soft Handoff,
14 the mobile station shall set this field to '1'; otherwise, the
15 mobile station shall set this field to '0'.
- 16 **FOR_PDCH_SUPPORTED** – Forward Packet Data Channel supported indicator.
- 17 If the mobile station supports the Forward Packet Data
18 Channel, then the mobile station shall set this field to '1';
19 otherwise, the mobile station shall set this field to '0'.
- 20 **FOR_PDCH Capability**
- 21 **Type-specific fields** – Forward Packet Data Channel capability information.
- 22 If the FOR_PDCH_SUPPORTED field is set to '1', the mobile
23 station shall include this field and set it as described in
24 2.7.4.27.5; otherwise the mobile station shall omit this field.
- 25 **FOR_PDCH_SCH_SUPPORTED** – Simultaneous support of F-PDCH and F-SCH indicator.
- 26 If FOR_PDCH_SUPPORTED is set to '0', or
27 FOR_SCH_SUPPORTED is set to '0', the mobile station shall
28 omit this field; otherwise, the mobile station shall include this
29 field and set it as follows:
- 30 The mobile station shall set this field to '1' if it supports the
31 simultaneous assignment of F-PDCH and F-SCH; otherwise,
32 the mobile station shall set this field to '0'.
- 33 **REV_PDCH_SUPPORTED** – Reverse Packet Data Channel supported indicator.
- 34 If FOR_PDCH_SUPPORTED is set to '0', the mobile station
35 shall omit this field; otherwise, the mobile station shall
36 include this field and set it as follows.
- 37 If the mobile station supports the Reverse Packet Data
38 Channel (R-PDCH), the mobile station shall set this field to '1';
39 otherwise, the mobile station shall set this field to '0'.
- 40 **REV_PDCH Capability**
- 41 **Type-specific fields** – Forward Packet Data Channel capability information.

2.7.4.27.1 FCH Type-specific Fields

The Fundamental Channel configuration capability information included in the FCH Type-specific fields contains the following subfields:

FCH_FRAME_SIZE	1
FOR_FCH_LEN	3
FOR_FCH_RC_MAP	3 × FOR_FCH_LEN
REV_FCH_LEN	3
REV_FCH_RC_MAP	3 × REV_FCH_LEN

FCH_FRAME_SIZE – Fundamental Channel Frame Size capability indicator.

If in addition to the 20 ms frame size the mobile station also supports the 5 ms frame size on the Fundamental Channel, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

FOR_FCH_LEN – Forward Fundamental Channel Configuration information length.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR_FCH_RC_MAP field. [If RC_BITMAP_CAPABILITY_EXT_ALLOWED_s is '0', then the mobile station shall not set this field to a value greater than 3.](#)

FOR_FCH_RC_MAP – Forward Fundamental Radio Configuration information.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2] Table 3.1.3.1-1) are supported by the mobile station on the Forward Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Forward Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

Table 2.7.4.27.1-1. Forward Channel Radio Configurations Supported

Subfield	Length (bits)	Subfield Description
RC1	1	Radio Configuration 1
RC2	1	Radio Configuration 2
RC3	1	Radio Configuration 3
RC4	1	Radio Configuration 4
RC5	1	Radio Configuration 5
RC6	1	Radio Configuration 6
RC7	1	Radio Configuration 7
RC8	1	Radio Configuration 8
RC9	1	Radio Configuration 9
RC11	1	Radio Configuration 11
RC12	1	Radio Configuration 12

REV_FCH_LEN – Reverse Fundamental Channel Configuration information length.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the REV_FCH_RC_MAP field. [If RC_BITMAP_CAPABILITY_EXT_ALLOWED_s is '0', then the mobile station shall not set this field to a value greater than 2.](#)

REV_FCH_RC_MAP – Reverse Fundamental Radio Configuration information.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2] Table 2.1.3.1-1) are supported by the mobile station on the Reverse Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-2.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Reverse Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

1

Table 2.7.4.27.1-2. Reverse Channel Radio Configurations Supported

Subfield	Length (bits)	Subfield Description
RC1	1	Radio Configuration 1
RC2	1	Radio Configuration 2
RC3	1	Radio Configuration 3
RC4	1	Radio Configuration 4
RC5	1	Radio Configuration 5
RC6	1	Radio Configuration 6
RC8	1	Radio Configuration 8

2

3

2.7.4.27.2 DCCH Type-Specific Fields

The Dedicated Control Channel configuration capability information included in the DCCH Type-specific fields contains the following subfields:

DCCH_FRAME_SIZE	2
FOR_DCCH_LEN	3
FOR_DCCH_RC_MAP	3 × FOR_DCCH_LEN
REV_DCCH_LEN	3
REV_DCCH_RC_MAP	3 × REV_DCCH_LEN

- DCCH_FRAME_SIZE – Frame Size supported indicator on the Dedicated Control Channel.
The mobile station shall set this field to the frame size supported for the forward and reverse DCCH, as shown in Table 2.7.4.27.2-1.

Table 2.7.4.27.2-1. DCCH Frame Size Supported

DCCH_FRAME_SIZE (binary)	Description
00	Either 5 ms or 20 ms frame sizes (not dynamically switchable)
01	20 ms frame size only
10	5 ms frame size only
11	Both 5 ms and 20 ms frame sizes (Dynamically switchable)

- FOR_DCCH_LEN – Forward Dedicated Control Channel Configuration information length.
The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR_DCCH_RC_MAP field. [If RC_BITMAP_CAPABILITY_EXT_ALLOWEDs is '0', then the mobile station shall not set this field to a value greater than 3.](#)
- FOR_DCCH_RC_MAP – Forward Dedicated Channel Radio Configuration information.
The mobile station shall set this field as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Forward Dedicated Control Channel.
This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

1			The mobile station shall set each indicator to '1' if the
2			corresponding Radio Configuration on the Forward Dedicated
3			Control Channel is supported by the mobile station;
4			otherwise, the mobile station shall set the indicator to '0'. The
5			mobile station shall set any unused bits in the field to '0'.
6	REV_DCCH_LEN	–	Reverse Dedicated Control Channel Configuration information
7			length.
8			The mobile station shall set this field to the number of 3 bit
9			units required to specify the length, in bits, of the
10			REV_DCCH_RC_MAP field. If
11			RC_BITMAP_CAPABILITY_EXT_ALLOWEDs is '0', then the
12			mobile station shall not set this field to a value greater than 2.
13	REV_DCCH_RC_MAP	–	Reverse Dedicated Control Channel Radio Configuration
14			information.
15			The mobile station shall set this field as described below to
16			indicate which Radio Configurations (see [2]) are supported by
17			the mobile station on the Reverse Dedicated Control Channel.
18			This field consists of the sequence of 1-bit indicators, each
19			indicating the mobile station support for specific Radio
20			Configuration. Bit positions of these indicators in the field
21			and corresponding Radio Configurations are specified in Table
22			2.7.4.27.1-2.
23			The mobile station shall set each indicator to '1' if the
24			corresponding Radio Configuration on the Reverse Dedicated
25			Control Channel is supported by the mobile station;
26			otherwise, the mobile station shall set the indicator to '0'. The
27			mobile station shall set any unused bits in the field to '0'.
28			

2.7.4.27.3FOR_SCH Type-Specific Fields

The Forward Supplemental Channel configuration capability information included in the FOR_SCH Type-specific fields contains the following subfields:

FOR_SCH_LEN	3
FOR_SCH_RC_MAP	3 × FOR_SCH_LEN
FOR_SCH_NUM	2

FOR_SCH_NUM occurrences of the following fields:

{ (FOR_SCH_NUM)

FOR_TURBO_SUPPORTED	1
FOR_MAX_TURBO_BLOCK_SIZE	0 or 4
FOR_CONV_SUPPORTED	1
FOR_MAX_CONV_BLOCK_SIZE	0 or 4
FOR_FRAME_40_SUPPORTED	1
FOR_FRAME_80_SUPPORTED	1
FOR_MAX_RATE	4

} (FOR_SCH_NUM)

FOR_SCH_LEN – Forward Supplemental Channel information length in units of 3 bits.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR_SCH_RC_MAP field. [If RC_BITMAP_CAPABILITY_EXT_ALLOWED_s is '0', then the mobile station shall not set this field to a value greater than 3.](#)

FOR_SCH_RC_MAP – Forward Supplemental Channel Radio Configuration capability.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2] Table 3.1.3.1-1) are supported by the mobile station on the Forward Supplemental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Forward Supplemental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

- 1 FOR_SCH_NUM – Number of Forward Supplemental Channels.
 2 The mobile station shall set this field to the number of
 3 Forward Supplemental Channels supported by the mobile
 4 station.
 5 If the FOR_SCH_NUM field is greater than zero, the mobile
 6 station shall include one occurrence of the following 8 fields
 7 for each Forward Supplemental Channel supported by the
 8 mobile station. The first occurrence is SCH0 related
 9 information. The second occurrence (if any) is SCH1 related
 10 information.
 11 FOR_TURBO_SUPPORTED – Forward Turbo Coding supported indicator.
 12 If the mobile station supports Turbo Coding on this Forward
 13 Supplemental Channel, it shall set this field to ‘1’; otherwise,
 14 the mobile station shall set this field to ‘0’.
 15 FOR_MAX_TURBO_BLOCK_SIZE– Forward maximum Turbo Coding block size.
 16 If the field FOR_TURBO_SUPPORTED is set to ‘0’, the mobile
 17 station shall omit this field; otherwise the mobile station shall
 18 include this field and set it to the maximum block size
 19 allowed for Turbo coding (see Table 2.7.4.27.3-1).

Table 2.7.4.27.3-1. Block Size

FOR_MAX_TURBO_BLOCK_SIZE REV_MAX_TURBO_BLOCK_SIZE FOR_MAX_CONV_BLOCK_SIZE REV_MAX_CONV_BLOCK_SIZE (binary)	Block Size	
	R-SCH RC 3, and 5, and 8 F-SCH RC 3, 4, 6, and 7, 11, and 12	R-SCH RC 4 and 6 F-SCH RC 5, 8 and 9
0000	172	267
0001	360	552

1 2.7.4.27.4 REV_SCH Type-Specific Fields

2 The Reverse Supplemental Channel configuration capability information included in the
 3 REV_SCH Type-specific fields contains the following subfields:

4

REV_SCH_LEN	3
REV_SCH_RC_MAP	3 × REV_SCH_LEN
REV_SCH_NUM	2

REV_SCH_NUM occurrences of the following fields:

{ (REV_SCH_NUM)

REV_TURBO_SUPPORTED	1
REV_MAX_TURBO_BLOCK_SIZE	0 or 4
REV_CONV_SUPPORTED	1
REV_MAX_CONV_BLOCK_SIZE	0 or 4
REV_FRAME_40_SUPPORTED	1
REV_FRAME_80_SUPPORTED	1
REV_MAX_RATE	4

} (REV_SCH_NUM)

5

6 REV_SCH_LEN – Reverse Supplemental Channel information length in units of
 7 3 bits.

8 The mobile station shall set this field to the number of 3 bit
 9 units required to specify the length, in bits, of the
 10 REV_SCH_RC_MAP field. [If](#)
 11 [RC_BITMAP_CAPABILITY_EXT_ALLOWED_s is '0', then the](#)
 12 [mobile station shall not set this field to a value greater than 2.](#)

13 REV_SCH_RC_MAP – Reverse Supplemental Channel Radio Configuration
 14 capability.

15 The mobile station shall set this field as described below to
 16 indicate which Radio Configurations (See [2] Table 2.1.3.1-1)
 17 are supported by the mobile station on the Reverse
 18 Supplemental Channel.

19 This field consists of the sequence of 1-bit indicators, each
 20 indicating the mobile station support for specific Radio
 21 Configuration. Bit positions of these indicators in the field
 22 and corresponding Radio Configurations are specified in Table
 23 2.7.4.27.1-2.

1 The mobile station shall set each indicator to '1' if the
2 corresponding Radio Configuration on the Reverse
3 Supplemental Channel is supported by the mobile station;
4 otherwise, the mobile station shall set the indicator to '0'. The
5 mobile station shall set any unused bits in the field to '0'.

6 REV_SCH_NUM – Number of Reverse Supplemental Channels

7 The mobile station shall set this field to the number of
8 Reverse Supplemental Channels supported by the mobile
9 station.

10 If the REV_SCH_NUM field is greater than zero, the mobile
11 station shall include one occurrence of the following 8 fields
12 for each Reverse Supplemental Channel supported by the
13 mobile station. The first occurrence is SCH0 related
14 information. The second occurrence (if any) is SCH1 related
15 information.

16 REV_TURBO_SUPPORTED – Reverse Turbo Coding supported indicator.

17 If the mobile station supports Turbo Coding on this Reverse
18 Supplemental Channel, it shall set this field to '1'; otherwise,
19 the mobile station shall set this field to '0'.

20 REV_MAX_TURBO_BLOCK_SIZE– Reverse maximum Turbo Coding block size.

21 If the field REV_TURBO_SUPPORTED is set to '0', the mobile
22 station shall omit this field; otherwise the mobile station shall
23 include this field and set it to the maximum block size
24 allowed for Turbo coding (see Table 2.7.4.27.3-1).

25 REV_CONV_SUPPORTED– Reverse Convolutional Coding supported indicator.

26 If the mobile station supports Convolutional Coding on this
27 Reverse Supplemental Channel, it shall set this field to '1';
28 otherwise, the mobile station shall set this field to '0'.

29 REV_MAX_CONV_BLOCK_SIZE – Reverse maximum Convolutional Coding block size.

30 If the field REV_CONV_SUPPORTED is set to '0', the mobile
31 station shall omit this field; otherwise the mobile station shall
32 include this field and set it to the maximum block size
33 allowed for Convolutional coding (see Table 2.7.4.27.3-1).

34 REV_FRAME_40_SUPPORTED – Reverse 40ms frame indicator.

35 If the mobile station supports 40 ms frames on this Reverse
36 Supplemental Channel, it shall set this field to '1'; otherwise,
37 the mobile station shall set this field to '0'.

38 REV_FRAME_80_SUPPORTED – Reverse 80ms frame indicator.

39 If the mobile station supports 80 ms frames on this Reverse
40 Supplemental Channel, it shall set this field to '1'; otherwise,
41 the mobile station shall set this field to '0'.

42 REV_MAX_RATE – Maximum reverse supplemental channels rate

43 The mobile station shall set this field according to Table
44 2.7.4.27.3-2 to indicate the maximum reverse supplemental
45 channel frame rate supported.

1

2

2.7.4.27.5 FOR_PDCH Type-specific Fields

The Forward Packet Data Channel configuration capability information included in the FOR_PDCH Type-specific fields contains the following subfields:

ACK_DELAY	1
NUM_ARQ_CHAN	2
FOR_PDCH_LEN	2
FOR_PDCH_RC_MAP	$3 \times (\text{FOR_PDCH_LEN} + 1)$
CH_CONFIG_SUP_MAP_LEN	2
CH_CONFIG_SUP_MAP	$3 \times (\text{CH_CONFIG_SUP_MAP_LEN} + 1)$

ACK_DELAY – Delay for the acknowledgment sent on the Reverse Acknowledgment Channel.

If the mobile station requires a 2-slot delay to send an acknowledgment on the R-ACKCH, then the mobile station shall set this subfield to '1'; otherwise (the mobile station requires a 1-slot delay), the mobile station shall set this subfield to '0'.

NUM_ARQ_CHAN – Number of Physical Layer ARQ Channels supported.

The mobile station shall set this subfield to the number of Physical Layer ARQ Channels that it supports, minus two.

The mobile station shall not set this field to '11'.

FOR_PDCH_LEN – Forward Packet Data Channel Configuration information length.

The mobile station shall set this subfield to one less than the number of 3 bit units required to specify the length of the FOR_PDCH_RC_MAP subfield.

FOR_PDCH_RC_MAP – Forward Packet Data Channel Radio Configuration information.

The mobile station shall set this subfield as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Forward Packet Data Channel.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific Radio Configuration. Bit positions of these indicators in the subfield and corresponding Radio Configurations are specified in Table 2.7.4.27.5-1.

1 The mobile station shall set each indicator to '1' if the
 2 corresponding Radio Configuration on the Forward Packet
 3 Data Channel is supported by the mobile station; otherwise,
 4 the mobile station shall set the indicator to '0'. The mobile
 5 station shall set any unused bits in the subfield to '0'.
 6

7 **Table 2.7.4.27.5-1. Forward Packet Data Channel Radio Configurations Supported**

Subfield	Length (bits)	Subfield Description
RC10	1	Radio Configuration 10
Reserved	$3 \times (\text{FOR_PDCH_LEN} + 1) - 1$	Reserved

8
 9 **CH_CONFIG_SUP_MAP_LEN** – Channel Configuration Supported Bitmap length.
 10 The mobile station shall set this field to one less than the
 11 number of 3 bit units required to specify the length, in bits, of
 12 the CH_CONFIG_SUP_MAP field.

13 **CH_CONFIG_SUP_MAP** – Channel Configuration Supported Bitmap.
 14 The mobile station shall set this subfield as described below
 15 to indicate which physical channel configurations are
 16 supported by the mobile station.

17 This subfield consists of the sequence of 1-bit indicators, each
 18 indicating the mobile station support for a specific channel
 19 configuration. Bit positions of these indicators in the subfield
 20 and corresponding channel configurations are specified in
 21 Table 2.7.4.27.5-2.

22 The mobile station shall set each indicator to '1' if the
 23 corresponding channel configuration is supported by the
 24 mobile station; otherwise, the mobile station shall set the
 25 indicator to '0'. The mobile station shall set any unused bits
 26 in the field to '0'.

27 The mobile station shall set the subfield F-PDCH_1 to '1', or
 28 the subfield F-PDCH_2 to '1', or the subfields F-PDCH_1 and
 29 F-PDCH_2 to '1'.

30 The mobile station shall set the subfields F-PDCH_1 and F-
 31 PDCH_3 to the same value.

32 The mobile station shall set the subfields F-PDCH_2 and F-
 33 PDCH_4 to the same value.

1

Table 2.7.4.27.5-2. F-PDCH Channel Configurations Supported

Subfield	Length (bits)	Subfield Description
F-PDCH_1	1	F-PDCH + F-CPCCH + R-FCH
F-PDCH_2	1	F-PDCH + F-CPCCH + R-DCCH
F-PDCH_3	1	F-PDCH + F-FCH + R-FCH
F-PDCH_4	1	F-PDCH + F-DCCH + R-DCCH
F-PDCH_5	1	F-PDCH + F-FCH + R-FCH + R-DCCH
F-PDCH_6	1	F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH

2

2.7.4.27.6 REV_PDCH Type-specific Fields

The Reverse Packet Data Channel configuration capability information included in the REV_PDCH Type-specific fields contains the following subfields:

REV_PDCH_LEN	2
REV_PDCH_RC_MAP	$3 \times (\text{REV_PDCH_LEN} + 1)$
REV_PDCH_CH_CONFIG_SUP_MAP_LEN	2
REV_PDCH_CH_CONFIG_SUP_MAP	$3 \times (\text{REV_CH_CONFIG_SUP_MAP_LEN} + 1)$
REV_PDCH_MAX_SIZE_SUPPORTED_ENCODE R_PACKET	2

REV_PDCH_LEN – Reverse Packet Data Channel Configuration information length.

The mobile station shall set this subfield to one less than the number of 3 bit units required to specify the length of the REV_PDCH_RC_MAP subfield.

REV_PDCH_RC_MAP – Reverse Packet Data Channel Radio Configuration information.

The mobile station shall set this subfield as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Reverse Packet Data Channel.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific Radio Configuration. Bit positions of these indicators in the subfield and corresponding Radio Configurations are specified in Table 2.7.4.27.6-1.

The mobile station shall set each indicator to ‘1’ if the corresponding Radio Configuration on the Reverse Packet Data Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to ‘0’. The mobile station shall set any unused bits in the subfield to ‘0’.

Table 2.7.4.27.6-1. Reverse Packet Data Channel Radio Configurations Supported

Subfield	Length (bits)	Subfield Description
RC7	1	Radio Configuration 7
Reserved	$3 \times (\text{REV_PDCH_LEN} + 1) - 1$	Reserved

REV_PDCH_CH_CONFIG_SUP_MAP_LEN – Reverse Packet Data Channel Channel Configuration Supported Bitmap length.

1 The mobile station shall set this field to one less than the
2 number of 3 bit units required to specify the length, in bits, of
3 the REV_PDCH_CH_CONFIG_SUP_MAP field.

4 REV_PDCH_CH_CONFIG_SUP_MAP – Reverse Packet Data Channel Channel
5 Configuration Supported Bitmap.

6 The mobile station shall set this subfield as described below
7 to indicate which physical channel configurations are
8 supported by the mobile station.

9 This subfield consists of the sequence of 1-bit indicators, each
10 indicating the mobile station support for a specific channel
11 configuration. Bit positions of these indicators in the subfield
12 and corresponding channel configurations are specified in
13 Table 2.7.4.27.6-2.

14 The mobile station shall set each indicator to '1' if the
15 corresponding channel configuration is supported by the
16 mobile station; otherwise, the mobile station shall set the
17 indicator to '0'. The mobile station shall set any unused bits
18 in the field to '0'. The mobile station shall set the
19 indicator corresponding to the channel configuration F/R-
20 PDCH_0 to '1'.

21 The mobile station shall set the subfield F/R-PDCH_1 to '1',
22 or the subfield F/R-PDCH_2 to '1', or the subfields F/R-
23 PDCH_1 and F/R-PDCH_2 to '1'.

24 The mobile station shall set the subfields F/R-PDCH_1 and
25 F/R-PDCH_3 to the same value.

26 The mobile station shall set the subfields F/R-PDCH_2 and
27 F/R-PDCH_4 to the same value.

1

Table 2.7.4.27.6-2. F/R-PDCH Channel Configurations Supported

Subfield of F/R-PDCH Channel Configurations	Length (bits)	Subfield Description
F/R-PDCH_0	1	F-PDCH + R-PDCH + F-CPCCH
F/R-PDCH_1	1	F-PDCH + R-PDCH + F-CPCCH + R-FCH
F/R-PDCH_2	1	F-PDCH + R-PDCH + F-CPCCH + R-DCCH
F/R-PDCH_3	1	F-PDCH + R-PDCH + F-FCH + R-FCH
F/R-PDCH_4	1	F-PDCH + R-PDCH + F-DCCH + R-DCCH
F/R-PDCH_5	1	F-PDCH + R-PDCH + F-FCH + R-FCH + R-DCCH
F/R-PDCH_6	1	F-PDCH + R-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH

2

3 **REV_PDCH_MAX_SIZE_SUPPORTED_ENCODER_PACKET** - Reverse Packet Data Channel
4 Maximum Size Encoder Packet supported

5

6

7

The mobile station shall set this field to the maximum size encoder packet it supports as specified in Table 2.7.4.27.6-3. (see [2] and [3]).

8

Table 2.7.4.27.6-3. Maximum supported encoder packet size.

REV_PDCH_MAX_SIZE_SUPPORTED_ENCODER_PACKET (binary)	Maximum supported encoder packet size. (bits)
00	12312

1 2.7.4.27.7 FUNDICATED_BCMC Type-specific Fields

2 The Fundicated Channel BCMC capability information included in the
3 FUNDICATED_BCMC Type-specific fields contains the following subfields:

FUNDICATED_BCMC_CH_SUP_MAP_LEN	2
FUNDICATED_BCMC_CH_SUP_MAP	3 × (FUNDICATED_B CMC_CH_SUP_M AP_LEN + 1)

5
6 FUNDICATED_BCMC_CH_SUP_MAP_LEN – Fundicated Channel BCMC channel
7 configurations supported bitmap length.

8 The mobile station shall set this field to one less than the
9 number of 3 bit units required to specify the length, in bits, of
10 the FUNDICATED_BCMC_CH_SUP_MAP field.

11 FUNDICATED_BCMC_CH_SUP_MAP – Fundicated Channel BCMC channel configurations
12 supported bitmap.

13 The mobile station shall set this subfield as described below
14 to indicate which physical channel configurations are
15 supported by the mobile station.

16 This subfield consists of the sequence of 1-bit indicators, each
17 indicating the mobile station support for a specific channel
18 configuration. Bit positions of these indicators in the subfield
19 and corresponding channel configurations are specified in
20 Table 2.7.4.27.7-1.

21 The mobile station shall set each indicator to '1' if the
22 corresponding channel configuration is supported by the
23 mobile station; otherwise, the mobile station shall set the
24 indicator to '0'. The mobile station shall set any unused bits
25 in the field to '0'.

26 The mobile station shall not set all the indicators in this
27 subfield to '0'.

28

1

Table 2.7.4.27.7-1. Fundicated BCMC Channel Configurations Supported

Subfield	Length (bits)	Subfield Description
Fundicated BCMC Channel Configuration 1	1	a) F-FCH + F-DCCH + R-DCCH b) F-PDCH + F-FCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 2	1	a) F-FCH + R-FCH + F-DCCH + R-DCCH b) F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 3	1	a) F-CPCCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 4	1	a) F-CPCCH + F-FCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 5	1	a) F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if R-PDCH is supported

- NUM_MO_FOR_FCH – Number of Forward Fundamental Channel Multiplex Options.
The mobile station shall set this field to the number of the Forward Fundamental Channel Multiplex Options supported by the mobile station.
If NUM_MO_FOR_FCH is not equal to '0000', the mobile station shall include NUM_MO_FOR_FCH occurrences of the following two fields for each supported Forward Fundamental Channel multiplex option:
- MO_FOR_FCH – Forward Fundamental Channel multiplex option.
The mobile station shall set this field to the Forward Fundamental Channel multiplex option.
- FOR_NUM_BITS_FCH – Forward Fundamental Channel number of bits per frame.
The mobile station shall set this field as described below to indicate which number of bits per frame are supported by the mobile station on the Forward Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific number of bits per frame. Bit positions of these indicators in the field and corresponding number of bits per frame are specified in Table 2.7.4.28-1 if MO_FOR_FCH is equal to 1, Table 2.7.4.28-2 if MO_FOR_FCH is equal to 2, and Table 2.7.4.28-3 if MO_FOR_FCH is equal to 0x704.

The mobile station shall set each indicator to '1' if the corresponding number of bits per frame on the Forward Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'.

Table 2.7.4.28-1. Forward Fundamental Channel Number of Bits per Frame for MO_FOR_FCH equal to 1

Subfield	Length (bits)	Subfield Description
RS1_9600_FOR	1	172 bits per F-FCH frame
RS1_4800_FOR	1	80 bits per F-FCH frame
RS1_2400_FOR	1	40 bits per F-FCH frame
RS1_1200_FOR	1	16bits per F-FCH frame
RESERVED	4	Reserved Bits

Table 2.7.4.28-2. Forward Fundamental Channel Number of Bits per Frame for MO_FOR_FCH equal to 2

Subfield	Length (bits)	Subfield Description
RS2_14400_FOR	1	267 bits per F-FCH frame
RS2_7200_FOR	1	125 bits per F-FCH frame

RS2_1800_FOR	1	21 bits per F-FCH frame
RESERVED	4	Reserved Bits

1
2

Table 2.7.4.28-3. Forward Fundamental Channel Number of Bits per Frame for MO_FOR_FCH equal to 0x704

Subfield	Length (bits)	Subfield Description
R1	1	Highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0000])
R2	1	Second highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0001])
R3	1	Third highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0010])
R4	1	Forth highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0011])
R5	1	Fifth Second highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0100])
R6	1	Sixth highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0101])
R7	1	Seventh highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0110])
R8	1	Eighth highest possible number of bits on F-FCH (specified by NUM_BITS _S [FFCH_NBIT_TABLE_ID][0111])

3

4 NUM_MO_REV_FCH – Number of Reverse Fundamental Channel Multiplex Options.
 5 The mobile station shall set this field to the number of the
 6 Reverse Fundamental Channel Multiplex Options supported
 7 by the mobile station.

8

9

10

11

If NUM_MO_REV_FCH is not equal to '0000', the mobile station shall include NUM_MO_REV_FCH occurrences of the following two fields for each supported Reverse Fundamental Channel multiplex option:

12

MO_REV_FCH – Reverse Fundamental Channel multiplex option.

13

14

The mobile station shall set this field to the Reverse Fundamental Channel multiplex option.

15

REV_NUM_BITS_FCH– Reverse Fundamental Channel number of bits per frame.

The mobile station shall set this field as described below to indicate which number of bits per frame are supported by the mobile station on the Reverse Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for number of bits per frame. Bit positions of these indicators in the field and corresponding number of bits per frame are specified in Table 2.7.4.28-4 if MO_REV_FCH is equal to 1, Table 2.7.4.28-5 if MO_REV_FCH is equal to 2, and Table 2.7.4.28-6 if MO_REV_FCH is equal to 0x704.

The mobile station shall set each indicator to '1' if the corresponding number of bits per frame on the Reverse Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'.

Table 2.7.4.28-4. Reverse Fundamental Channel Number of Bits per Frame for MO_REV_FCH equal to 1

Subfield	Length (bits)	Subfield Description
RS1_9600_REV	1	172 bits per R-FCH frame
RS1_4800_REV	1	80 bits per R-FCH frame
RS1_2400_REV	1	40 bits per R-FCH frame
RS1_1200_REV	1	16 bits per R-FCH frame
RESERVED	4	Reserved Bits

RS2_1800_REV	1	21 bits per R-FCH frame
RESERVED	4	Reserved Bits

1
2

Table 2.7.4.28-6. Reverse Fundamental Channel Number of Bits per Frame for MO_REV_FCH equal to 0x704

Subfield	Length (bits)	Subfield Description
R1	1	Highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0000])
R2	1	Second highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0001])
R3	1	Third highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0010])
R4	1	Forth highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0011])
R5	1	Fifth Second highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0100])
R6	1	Sixth highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0101])
R7	1	Seventh highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0110])
R8	1	Eighth highest possible number of bits on R-FCH (specified by NUM_BITS _S [RFCH_NBIT_TABLE_ID][0111])

3

4
5

NUM_MO_FOR_DCCH – Number of Forward Dedicated Control Channel Multiplex Options.

6
7
8

The mobile station shall set this field to the number of the Forward Dedicated Control Channel Multiplex Options supported by the mobile station.

9
10
11
12

If NUM_MO_FOR_DCCH is not equal to '0000', the mobile station shall include NUM_MO_FOR_DCCH occurrence of the following one field for each supported Forward Dedicated Control Channel multiplex option:

13
14
15

MO_FOR_DCCH – Forward Dedicated Control Channel multiplex option.
The mobile station shall set this field to the Forward Dedicated Control Channel multiplex option.

16
17

NUM_MO_REV_DCCH – Number of Reverse Dedicated Control Channel Multiplex Options.

- 1 The mobile station shall set this field to the number of the
 2 Reverse Dedicated Control Channel Multiplex Options
 3 supported by the mobile station.
- 4 If NUM_MO_REV_DCCH is not equal to '0000', the mobile
 5 station shall include NUM_MO_REV_DCCH occurrence of the
 6 following one field for each supported Reverse Dedicated
 7 Control Channel multiplex option:
- 8 MO_REV_DCCH – Reverse Dedicated Control Channel multiplex option.
- 9 The mobile station shall set this field to the Reverse Dedicated
 10 Control Channel multiplex option.
- 11 NUM_MO_FOR_SCH – Number of Forward Supplemental Channel Multiplex Options.
- 12 The mobile station shall set this field to the number of
 13 Forward Supplemental Channel Multiplex Options supported
 14 by the mobile station included in this message. The mobile
 15 station shall include the multiplex option associated with the
 16 highest data rate it supports for each combination of MuxPDU
 17 type, rate set, and block size⁹¹.
- 18 If NUM_MO_FOR_SCH is not equal to '0000', the mobile
 19 station shall include NUM_MO_FOR_SCH occurrence of the
 20 following two fields:
- 21 FOR_SCH_ID – Forward Supplemental Channel identifier.
- 22 The mobile station shall set this field to specify the Forward
 23 Supplemental Channel to which the Forward Supplemental
 24 multiplex option supported by the mobile station
 25 corresponds.
- 26 MO_FOR_SCH – Forward Supplemental Channel multiplex option.
- 27 The mobile station shall set this field to the Forward
 28 Supplemental Channel multiplex option associated with the
 29 maximum data rate (see [3]) that the mobile station
 30 supports⁹².
- 31 NUM_MO_REV_SCH – Number of Reverse Supplemental Channel Multiplex Options.

⁹¹ If any Rate Set 1 multiplex option is included, then mobile station support of MuxPDU Type 1 is implied and the mobile station is not required to include multiplex option 0x03. If any Rate Set 2 multiplex option is included, then mobile station support of MuxPDU Type 2 is implied and the mobile station is not required to include multiplex option 0x04 (see [3]).

⁹² If the mobile station supports the multiplex option associated with the maximum data rate, the mobile station shall support all lower data rates as specified in [3].

1 The mobile station shall set this field to the number of
 2 Reverse Supplemental Channel Multiplex Options included in
 3 this message. The mobile station shall include the multiplex
 4 option associated with the highest data rate it supports for
 5 each combination of MuxPDU type, rate set, and block size⁹³.

6 If NUM_MO_REV_SCH is not equal to '0000', the mobile
 7 station shall include NUM_MO_REV_SCH occurrence of the
 8 following two fields:

9 REV_SCH_ID – Reverse Supplemental Channel identifier.

10 The mobile station shall set this field to specify the Reverse
 11 Supplemental Channel to which the Reverse Supplemental
 12 multiplex option supported by the mobile station
 13 corresponds.

14 MO_REV_SCH – Reverse Supplemental Channel multiplex option.

15 The mobile station shall set this field to the Reverse
 16 Supplemental Channel multiplex option associated with the
 17 maximum data rate (see [3]) that the mobile station
 18 supports⁹⁴.

19 NUM_MO_FOR_PDCH – Number of Forward Packet Data Channel multiplex options.

20 The mobile station shall set this field to the number of
 21 Forward Packet Data Channel Multiplex Options supported
 22 by the mobile station.

23 If NUM_MO_FOR_PDCH is not equal to '0000', the mobile station shall include
 24 NUM_MO_FOR_PDCH occurrences of the following one-field record:

25 MO_FOR_PDCH – Forward Packet Data Channel multiplex option.

26 The mobile station shall set this field to the Forward Packet
 27 Data Channel multiplex option.

28 NUM_MO_REV_PDCH – Number of Reverse Packet Data Channel multiplex options.

29 The mobile station shall set this field to the number of
 30 Reverse Packet Data Channel Multiplex Options supported by
 31 the mobile station.

32 If NUM_MO_REV_PDCH is not equal to '0000', the mobile station shall include
 33 NUM_MO_REV_PDCH occurrences of the following one-field record:

⁹³ If any Rate Set 1 multiplex option is included, then mobile station support of MuxPDU Type 1 is implied and the mobile station is not required to include multiplex option 0x03. If any Rate Set 2 multiplex option is included, then mobile station support of MuxPDU Type 2 is implied and the mobile station is not required to include multiplex option 0x04 (see [3]).

⁹⁴ If the mobile station supports the multiplex option associated with the maximum data rate, the mobile station shall support all lower data rates as specified in [3].

- 1 MO_REV_PDCH – Reverse Packet Data Channel multiplex option.
2 The mobile station shall set this field to the Reverse Packet
3 Data Channel multiplex option (see [3]).
- 4 RESERVED – Reserved bits.
5 The mobile station shall add reserved bits as needed in order
6 to make the length of the entire information record equal to
7 an integer number of octets. The mobile station shall set
8 these bits to '0'.
9

1 2.7.4.29 Geo-Location Capability

2 This information record identifies the geo-location capabilities of the mobile station. The
 3 mobile station shall use the following fixed-length format for the type-specific fields:

4

Type-Specific Field	Length (bits)
GEO_LOC	3
RESERVED	5

5

6

GEO_LOC – Geo-location.

7

The mobile station shall set this field to the value shown in Table 2.7.4. 29-1.

8

9

Table 2.7.4.29-1. Geo-location Codes

GEO_LOC (binary)	Type of Wireless Assisted GPS Identifiers
000	No mobile station assisted geo-location capabilities
001	IS-801 capable (Advanced Forward Link Triangulation only)
010	IS-801 capable (Advanced Forward Link Triangulation and Global Positioning Systems)
011	Global Positioning Systems only
All other GEO_LOC_TYPE values are reserved.	

10

RESERVED – Reserved bit.

11

The mobile station shall set this field to ‘00000’.

12

13

2.7.4.30 Band Subclass Information

This information record can be included in a *Status Response Message*, or an *Extended Status Response Message* to return band subclass information about the mobile station.

Type-Specific Field	Length (bits)
BAND_SUBCLASS_INFO	8 × RECORD_LEN

BAND_SUBCLASS_INFO – Band subclass information.

This field indicates which band subclasses are supported by the mobile station.

The mobile station shall set this field to the band subclass information corresponding to the BAND_CLASS specified in the *Status Request Message*.

The mobile station shall set this field as follows:

- If the mobile station does support the BAND_CLASS specified in the the *Status Request Message* but there is no subclass defined for this band class, the mobile station shall set this field to '10000000' and set the RECORD_LEN field for this record to '00000001'.

Otherwise, the mobile station shall set the Nth most significant bit of this field to '1' if the Nth sub-band class defined in [45] corresponding to the BAND_CLASS specified in the *Status Request Message* is supported by the mobile station; otherwise, the mobile station shall set the Nth most significant bit of this field to '0'. Example of this field coding is shown in Figure 2.7.4.30-1.

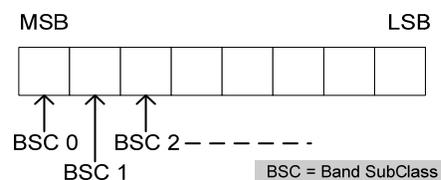

Figure 2.7.4.30-1. BAND_SUBCLASS_INFO field coding

The mobile station shall add reserved bits as needed in order to make the length of the entire information record equal to an integer number of octets. The mobile station shall set these bits to '0'.

1 2.7.4.31 Global Emergency Call

2 This information record identifies that an emergency call is being originated. This record
 3 may be included in a *Flash With Information Message* or an *Extended Flash With Information*
 4 *Message* and allows the user to originate an emergency call.

5

Type-Specific Field	Length (bits)
NUM_INCL	1
DIGIT_MODE	0 or 1
NUMBER_TYPE	0 or 3
NUMBER_PLAN	0 or 4
NUM_CHAR	0 or 8

NUM_CHAR occurrences of the following field:

{ (NUM_CHAR)

CHAR _i	4 or 8
-------------------	--------

} (NUM_CHAR)

MS_ORIG_POS_LOC_IND	1
RESERVED	0 to 7 (as needed)

6

7 NUM_INCL – Dialed number included indicator.
 8 The mobile station shall set this field to ‘1’ to indicate that the
 9 dialed digits are included in this information record;
 10 otherwise, the mobile station shall set this field to ‘0’.

11 DIGIT_MODE – Digit mode indicator.
 12 If NUM_INCL is set to ‘1’, the mobile station shall set this field
 13 to indicate whether the dialed digits are 4-bit DTMF codes or
 14 8-bit ASCII codes using a specified numbering plan;
 15 otherwise, the mobile station shall omit this field.
 16 To originate the call using the binary representation of DTMF
 17 digits, the mobile station shall set this field to ‘0’. To originate
 18 the call using ASCII characters, the mobile station shall set
 19 this field to ‘1’.

20 NUMBER_TYPE – Type of number.
 21 If NUM_INCL is set to ‘1’ and the DIGIT_MODE field is set to
 22 ‘1’, the mobile station shall set this field to the
 23 NUMBER_TYPE value shown in Table 2.7.1.3.2.4-2
 24 corresponding to the type of the called number, as defined in
 25 [7], Section 4.5.9; otherwise, the mobile station shall omit this
 26 field.

27 NUMBER_PLAN – Numbering plan.

1			If NUM_INCL is set to '1' and the DIGIT_MODE field is set to
2			'1', the mobile station shall set this field to the
3			NUMBER_PLAN value shown in Table 2.7.1.3.2.4-3
4			corresponding to the numbering plan used for the called
5			number, as defined in [7], Section 4.5.9; otherwise, the mobile
6			station shall omit this field.
7	NUM_CHAR	–	Number of characters.
8			If NUM_INCL is set to '1', the mobile station shall set this field
9			to the number of characters included in this record;
10			otherwise, the mobile station shall omit this field.
11	CHARi	–	Character.
12			If the NUM_INCL is set to '1', the mobile stations shall include
13			NUM_CHAR occurrences of this field.
14			If the DIGIT_MODE field is set to '0', the mobile station shall
15			set each occurrence of this field to the code value shown in
16			Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the
17			DIGIT_MODE field is set to '1', the mobile station shall set
18			each occurrence of this field to the ASCII representation
19			corresponding to the character, as specified in [9], with the
20			most significant bit set to '0'.
21	MS_INIT_POS_LOC_IND	–	Mobile Initiated Position Location Session indicator.
22			The mobile station shall set this field to '1' if
23			MS_INIT_POS_LOC_SUP_IND _s is equal to '1' and if the mobile
24			station is to initiate a position location session associated
25			with this emergency call; otherwise, the mobile station shall
26			set this field to '0'.
27	RESERVED	–	Reserved bits.
28			The mobile station shall add reserved bits as needed in order
29			to make the length of the entire information record equal to
30			an integer number of octets. The mobile station shall set
31			these bits to '0'.
32			

1 2.7.4.32 Hook Status

2 This information record shall indicate the status of the hook switch in Wireless Local Loop
 3 mobile stations. The mobile station shall use the following fixed-length format for the type-
 4 specific fields:

5

Type-Specific Field	Length (bits)
HOOK_STATUS	4
RESERVED	4

6

7 HOOK_STATUS – WLL terminal hook status.
 8 The mobile station shall set this sub-field to the value shown
 9 in Table 2.7.1.3.2.1-4 corresponding to the hook state.

10 RESERVED – Reserved bits.
 11 The mobile station shall set this field to '0000'.

12

1 2.7.4.33 QoS Parameters

2 This information record conveys to the user the QoS parameters associated with the service
 3 to be provided:

Type-Specific Field	Length (bits)
QoS Parameters	variable
RESERVED	0 - 7 (as needed)

4

5 QoS Parameters - Block containing the QoS Parameters.

6 The mobile station shall set this field to the QoS parameters
 7 associated with the user (per subscription), service type (e.g.,
 8 assured vs. non-assured services) and the service option. The
 9 details of the QoS parameters may be found in documents
 10 describing the service options.

11 RESERVED - Reserved bits for octet alignment.

12 The mobile station shall add the minimum number of bits
 13 necessary to make the record length in bits an integral
 14 multiple of 8. The mobile station shall set these bits to '0'.

15

1 2.7.4.34 Encryption Capability

2 This information record identifies the encryption capability of the mobile station.

3

Type-Specific Field	Length (bits)
SIG_ENCRYPT_SUP	8
UI_ENCRYPT_SUP	8

4

5 SIG_ENCRYPT_SUP – Signaling Encryption supported indicator.

6 The mobile station shall set this field to indicate which
7 signaling encryption algorithms are supported by the mobile
8 station, as shown in Table 2.7.1.3.2.1-5.

9 The mobile station shall set the subfields as follows:

10 The mobile station shall set the CMEA subfield to ‘1’.

11 The mobile station shall set each subfield to ‘1’ if the
12 corresponding signaling encryption algorithm is supported by
13 the mobile station; otherwise, the mobile station shall set the
14 subfield to ‘0’.

15 The mobile station shall set the RESERVED subfield to
16 ‘00000’.

17 UI_ENCRYPT_SUP – User information encryption supported indicator.

18 The mobile station shall set this field to indicate the
19 supported user information encryption algorithms, as shown
20 in Table 2.7.1.3.2.4-9.

21 The mobile station shall set each subfield to ‘1’ if the
22 corresponding user information encryption algorithm is
23 supported by the mobile station; otherwise, the mobile station
24 shall set the subfield to ‘0’.

25 The mobile station shall set the RESERVED subfield to
26 ‘000000’.

27

1 2.7.4.35 Signaling Message Integrity Capability

2 This information record identifies the signaling message integrity capability of the mobile
3 station.

4

Type-Specific Field	Length (bits)
SIG_INTEGRITY_SUP	8

5

6 SIG_INTEGRITY_SUP – Signaling message integrity supported by the mobile station.

7 The mobile station shall set this field to indicate the
8 supported message integrity algorithm in addition to the
9 default integrity algorithm.

10 This field consists of the subfields shown in Table 2.7.1.3.2.1-
11 6.

12 The mobile station shall set each subfield to ‘1’ if the
13 corresponding message integrity algorithm is supported by
14 the mobile station; otherwise, the mobile station shall set the
15 subfield to ‘0’.

16 The mobile station shall set the RESERVED subfield to
17 ‘00000000’.

18

19

1 2.7.4.36 UIM_ID

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return the mobile station UIM_ID.

4

Type-Specific Field	Length (bits)
UIM_ID_LEN	4
UIM_ID	8 × UIM_ID_LEN
RESERVED	0 - 7 (as needed)

5

6 UIM_ID_LEN – The length of mobile station User Identity Module identifier.
 7 The mobile station shall set this field to the length, in units of
 8 octets, of its User Identity Module identifier. If the mobile
 9 station does not have a User Identity Module identifier, the
 10 mobile station shall set this field to '0000'.

11 UIM_ID – Mobile station User Identity Module identifier.
 12 The mobile station shall set this field to its User Identity
 13 Module identifier (see [40]).

14 RESERVED – Reserved bits for octet alignment.
 15 The mobile station shall add the minimum number of bits
 16 necessary to make the record length in bits an integral
 17 multiple of 8. The mobile station shall set these bits to '0'.

18

1 2.7.4.37 ESN_ME

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return the mobile station ESN_ME.

4

Type-Specific Field	Length (bits)
ESN_ME_LEN	4
ESN_ME	8 × ESN_ME_LEN
RESERVED	0 - 7 (as needed)

5

6 ESN_ME_LEN – The length of mobile equipment electronic serial number.
 7 The mobile station shall set this field to the length, in units of
 8 octets, of its mobile equipment electronic serial number.

9 ESN_ME⁹⁵ – Mobile equipment electronic serial number.
 10 The mobile station shall set this field to ESN_p (see 2.3.2).

11 RESERVED – Reserved bits for octet alignment.
 12 The mobile station shall add the minimum number of bits
 13 necessary to make the record length in bits an integral
 14 multiple of 8. The mobile station shall set these bits to ‘0’.

15

⁹⁵ The ESN_ME field is always set to ESN_p and never carries UIM ID value.

1 2.7.4.38 MEID

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return the mobile station MEID.

Type-Specific Field	Length (bits)
MEID_LEN	4
MEID	8 × MEID_LEN
RESERVED	0 - 7 (as needed)

4

5 MEID_LEN – The length of MEID.

6 The mobile station shall set this field to the length, in units of
 7 octets, of the MEID field in this record.

8 MEID – Mobile Equipment Identifier.

9 If the mobile station has a R-UIM which indicates that
 10 SF_EUIMID is to be used in place of MEID, the mobile station
 11 shall set this field to SF_EUIMID (see [40]); otherwise, the
 12 mobile station shall set this field to its MEID_p (see 2.3.2).

13 RESERVED – Reserved bits for octet alignment.

14 The mobile station shall add the minimum number of bits
 15 necessary to make the record length in bits an integral
 16 multiple of 8. The mobile station shall set these bits to '0'.

17

2.7.4.39 Extended Keypad Facility

This information record can be included in a *Flash With Information Message* and allows the user to send characters entered via a keyboard or other such terminal.

Type-Specific Field	Length (bits)
NUMBER_INFO_INCL	1
NUMBER_TYPE	0 or 3
NUMBER_PLAN	0 or 4
NUM_FIELDS	6

NUM_FIELDS occurrences of the following field:

{	
CHARi	8
}	
RESERVED	0 - 7 (as needed)

NUMBER_INFO_INCL – Number included indicator.

The mobile station shall set this field to ‘1’ if NUMBER_TYPE and NUMBER_PLAN fields are included in this record; otherwise, the mobile station shall set this field to ‘0’.

NUMBER_TYPE – Type of number.

If NUMBER_INFO_INCL is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile shall set this field to the NUMBER_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the characters included in this record, as defined in [7], Section 4.5.9.

If the mobile station determines that this number is an international number (for example, with a leading “+” or as specified in [39] for Plus Code Dialing or an international access code), the mobile station should set this field to ‘001’.

NUMBER_PLAN – Numbering plan.

If NUMBER_INFO_INCL is set to ‘0’, the mobile station shall omit this field; otherwise, the mobile station shall set this field to the NUMBER_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the characters in this record, as defined in [7], Section 4.5.9.

NUM_FIELDS – Number of characters in this message.

The mobile station shall set this field to the number of CHARi fields in this message.

CHARi – Character.

2.7.4.40 SYNC_ID

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return the SYNC_IDs corresponding to stored service configurations.

Type-Specific Field	Length (bits)
NUM_SYNC_ID	5
SID	0 or 15
NID	0 or 16

NUM_SYNC_ID occurrences of the following fields:

{ (NUM_SYNC_ID)

SYNC_ID_LEN	4
SYNC_ID	(8 x SYNC_ID_LEN)

} (NUM_SYNC_ID)

RESERVED	0 - 7 (as needed)
----------	-------------------

- NUM_SYNC_ID - The number of SYNC_IDs included in this message.
- The mobile station shall set this field to the number of SYNC_IDs, corresponding to the stored service configurations associated with SID_s and NID_s, included in this message. If the mobile station does not have any stored service configuration associated with SID_s and NID_s, the mobile station shall set this field to '00000'.
- SID - System identification.
- If the NUM_SYNC_ID field is set to '00000', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:
- The mobile station shall set this field to SID_s.
- NID - Network identification.
- If the NUM_SYNC_ID field is set to '00000', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:
- The mobile station shall set this field to NID_s.

The mobile station shall include NUM_SYNC_ID occurrences of the following variable length record:

- SYNC_ID_LEN - Service Configuration synchronization identifier length.

1 2.7.4.41 Extended Terminal Information

2 This information record can be included in a *Status Response Message*, or an *Extended*
 3 *Status Response Message* to return configuration information about the mobile station.

Type-Specific Field	Length (bits)
MOB_P_REV	8
MOB_MFG_CODE	8
MOB_MODEL	8
MOB_FIRM_REV	16
SCM	8
LOCAL_CTRL	1
SLOT_CYCLE_INDEX	3
SIGN_SLOT_CYCLE_INDEX	0 or 1
SO_INCL	1
NUM_SO	0 or 6
<i>{(NUM_SO + 1)}</i>	
SERVICE_OPTION	16
<i>}{(NUM_SO+ 1)}</i>	
SO_GROUP_INCL	1
NUM_SO_GROUP	0 or 5
<i>{ (NUM_SO_GROUP + 1)}</i>	
SO_BITMAP_IND	2
SO_GROUP_NUM	0 or 5
SO_BITMAP	0 or 2 ⁽¹⁺ SO_BITMAP_IND)
<i>} (NUM_SO_GROUP + 1)</i>	
RESERVED	0 to 7 (as needed)

4

5 MOB_P_REV – Protocol revision of the mobile station.

6 If the status request does not specify a band class, the mobile
 7 station shall set this field to '00001100'; otherwise, the
 8 mobile station shall set this field to the MOB_P_REV
 9 associated with the requested band class and operating mode.

1 The mobile station shall set this field as specified in Table
 2 2.7.1.3.2.1-8 to the sign of the registered slot cycle index,
 3 SLOT_CYCLE_INDEX_REG (see 2.6.2.1.1). The absolute value of
 4 the registered slot cycle index, SLOT_CYCLE_INDEX_REG,
 5 is specified in the SLOT_CYCLE_INDEX field of this message.

6 SO_INCL - Service option inclusion indicator.

7 If there is a service option supported by the mobile station
 8 which does not belong to any service option group assigned
 9 (see [30]), the mobile station shall set this field '1'; otherwise,
 10 the mobile station shall set this field to '0'.

11 NUM_SO - Number of service option included indicator.

12 If the SO_INCL is set to '0', the mobile station shall omit this
 13 field; otherwise, the mobile station shall set this field to the
 14 number of service option to be included minus one.

15 If SO_INCL is set to '1', the mobile station shall include NUM_SO + 1 occurrences of the
 16 following variable-field record:

17 SERVICE_OPTION - Supported service option.

18 If the SO_INCL is set to '0', the mobile station shall omit this
 19 field; otherwise, the mobile station shall set this field as
 20 follow:

21 If the requested operating mode is CDMA, the mobile station
 22 shall include one occurrence of this field for each service
 23 option supported by the mobile station (see [30]) which has no
 24 service option group number assigned.

25 SO_GROUP_INCL - Service option group inclusion indicator.

26 If the requested operating mode is CDMA, the mobile station
 27 shall set this field to '1' if any of the supported service option
 28 belongs to a service option group; otherwise, the mobile
 29 station shall set this field to '0'.

30 NUM_SO_GROUP - Number of service option group included indicator.

31 If the SO_GROUP_INCL is set to '0', the mobile station shall
 32 omit this field; otherwise, the mobile station shall set this field
 33 to the number of service option groups to be included minus
 34 one.

35 If SO_GROUP_INCL is set to '1', the mobile station shall include NUM_SO_GROUP + 1
 36 occurrences of the following variable-field record:

37 SO_BITMAP_IND - Service option bitmap indicator.

38 The mobile station shall set this field as defined in Table
 39 2.7.1.3.2.4-10.

40 SO_GROUP_NUM - Service option group number.

41 If SO_BITMAP_IND is included and not set to '00', the mobile
 42 station shall include this field and set this field to service
 43 option group number defined in [30], of the bitmap to be
 44 included in this message; otherwise, the mobile station shall
 45 omit this field.

- 1 SO_BITMAP – Service option bitmap.
- 2 If SO_BITMAP_IND is included and is not set to '00', the
3 mobile station shall include the bitmap of the service option
4 group (SO_GROUP_NUM); otherwise, the mobile station shall
5 omit this field.
- 6 When the service option bitmap is included, if there are more
7 than $(2^{(1+SO_BITMAP_IND)})$ service options defined in [30]
8 for the service option group [SO_GROUP_NUM], the mobile
9 station shall include the bitmap containing the least
10 significant bits $(2^{(1+SO_BITMAP_IND)})$ for the service option
11 group.
- 12 RESERVED – Reserved bits.
- 13 The mobile station shall set this field to '0' to make the entire
14 record octet-aligned.
- 15

2.7.4.42 Extended Service Option Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return service option information about the mobile station or the service option group information requested by the base station.

Type-Specific Field	Length (bits)
SO_GROUP_INCL	1
NUM_SO_GROUP	0 or 5
{ (NUM_SO_GROUP+1)	
SO_BITMAP_IND	2
SO_GROUP_NUM	0 or 5
REV_BITMAP_INCL	0 or 1
FOR_SUP_SO_BITMAP	0 or $2^{(1+SO_BITMAP_IND)}$
REV_SUP_SO_BITMAP	0 or $2^{(1+SO_BITMAP_IND)}$
} (NUM_SO_GROUP + 1)	
SO_INCL	1
NUM_SO	0 or 6
REVERSE_SUPPORT_INCL	0 or 1
{ (NUM_SO + 1)	
FORWARD_SUPPORT	1
REVERSE_SUPPORT	0 or 1
SERVICE_OPTION	16
} (NUM_SO + 1)	
RESERVED	0 - 7 (as needed)

SO_GROUP_INCL - Service option group inclusion indicator.

If the requested operating mode is CDMA, the mobile station shall set this field to '1' if any of the supported service option belongs to a service option group; otherwise, the mobile station shall set this field to '0'.

NUM_SO_GROUP - Number of service option group included indicator.

1 If REV_BITMAP_INCL is included and set to '0', the mobile
 2 station shall omit this field; otherwise the mobile station shall
 3 include the bitmap of the service option group
 4 (SO_GROUP_NUM) as follow:

5 If the service option specified by REV_SUP_SO_BITMAP is
 6 supported on reverse traffic channel, the mobile station shall
 7 set the corresponding bit to '1'; otherwise, the mobile station
 8 shall set this bit to '0'.

9 SO_INCL - Service option inclusion indicator.

10 If there is a service option supported by the mobile station
 11 which does not belong to any service option group assigned
 12 (see [30]), the mobile station shall set this field '1'; otherwise,
 13 the mobile station shall set this field to '0'.

14 NUM_SO - Number of service option included indicator.

15 If the SO_INCL is set to '0', the mobile station shall omit this
 16 field; otherwise, the mobile station shall set this field to the
 17 number of service option to be included minus one.

18 REVERSE_SUPPORT_INCL - Reverse service option support included indicator.

19 If the SO_INCL is set to '0', the mobile station shall omit this
 20 field; otherwise, the mobile station shall include this field and
 21 set it as follow:

22 The mobile station shall set this field to '0' to indicate
 23 FORWARD_SUPPORT is used to specify the service option
 24 supports for both forward traffic channel and reverse traffic
 25 channel; otherwise the mobile station shall set this field to '1'.

26 If SO_INCL is set to '1', the mobile station shall include NUM_SO + 1 occurrences of the
 27 following variable-field record:

28 FORWARD_SUPPORT - Support indicator for Forward Traffic Channel.

29 The mobile station shall set this field as follow:

30 If REVERSE_SUPPORT_INCL is set to '1', the mobile station
 31 shall set this field to '1' if the service option specified in the
 32 SERVICE_OPTION field is supported on the Forward Traffic
 33 Channel.

34 If REVERSE_SUPPORT_INCL is set to '0', the mobile station
 35 shall set this field to '1' if the service option specified in the
 36 SERVICE_OPTION field is supported on the forward traffic
 37 channel and on reverse traffic channel

38 REVERSE_SUPPORT - Support indicator for Reverse Traffic Channel.

39 If REVERSE_SUPPORT_INCL field is not included or is set to
 40 '0', the mobile station shall omit this field; otherwise the
 41 mobile station shall include this field and set it as follows:

42 The mobile station shall set this field to '1' if the service
 43 option specified in the SERVICE_OPTION field is supported on
 44 the Reverse Traffic Channel.

- 1 SERVICE_OPTION – Service option.
- 2 If the requested operating mode is CDMA, the mobile station
- 3 shall includes one occurrence of this field for each service
- 4 option supported by the mobile station (see [30]) which has no
- 5 service option group number assigned.
- 6 RESERVED – Reserved bits.
- 7 The mobile station shall set all the bits of this field to '0' to
- 8 make the entire record octet-aligned.
- 9

1 2.7.4.43 Band Class and Band Subclass Information

2 When this information record is included in a *Status Response Message* or an *Extended*
 3 *Status Response Message*, the mobile station shall include all the band classes and band
 4 subclasses that it supports.

5

Type-Specific Field	Length (bits)
NUM_BAND_CLASS	3

NUM_BAND_CLASS + 1 occurrences of the following record:

{ (NUM_BAND_CLASS + 1)

BAND_CLASS_REC_LEN	5
BAND_CLASS	5
SUBCLASS_INFO_INCL	1
SUBCLASS_REC_LEN	0 or 5

SUBCLASS_REC_LEN + 1 occurrences of the following
 subrecord:

{ (SUBCLASS_REC_LEN + 1)

SUBCLASS_SUP	1
--------------	---

} (SUBCLASS_REC_LEN + 1)

BAND_CLASS_RESERVED	0 – 7 (as needed)
---------------------	-------------------

} (NUM_BAND_CLASS + 1)

RESERVED	0 – 7 (as needed)
----------	-------------------

6 NUM_BAND_CLASS – Number of band classes.

7 The mobile station shall set this field to the number of band
 8 classes included in the record minus one.

9 The mobile station shall include NUM_BAND_CLASS + 1 occurrences of the following
 10 record:

11 BAND_CLASS_REC_LEN – Band class information record length.

12 The mobile station shall set this field to the number of octets
 13 included in this record starting from this field and ending
 14 with BAND_CLASS_RESERVED.

15 BAND_CLASS – Band class

16 This field specifies a band class supported by the mobile
 17 station. The mobile station shall set this field according to the
 18 values defined in [45].

19 SUBCLASS_INFO_INCL – Band subclass information included

1 The mobile station shall set this field to '0' when it is not
2 aware of any band subclasses associated with the
3 BAND_CLASS field above; otherwise, the base station shall set
4 this field to '1'.

5 SUBCLASS_REC_LEN – Band subclass subrecord length

6 If SUBCLASS_INFO_INCL is set to '0', the base station shall
7 omit this field; otherwise, the mobile station shall set this field
8 to the number of band subclass supported indicator fields
9 included in the subrecord minus 1.

10 If the SUBCLASS_REC_LEN field is included, the mobile station shall include
11 SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included
12 corresponds to band subclass '0' and the Nth field included corresponds to band subclass
13 'N-1'.

14 SUBCLASS_SUP – Band subclass supported indicator

15 The mobile station shall set this field to '1' if the
16 corresponding band subclass is supported for the associated
17 BAND_CLASS; otherwise, the mobile station shall set this
18 field to '0'.

19 BAND_CLASS_RESERVED – Reserved bits.

20 The mobile station shall add reserved bits as needed in order
21 to make the length of the record equal to an integer number
22 of octets. The mobile station shall set each of these bits to '0'.

23 RESERVED – Reserved bits.

24 The mobile station shall add reserved bits as needed in order
25 to make the length of the entire record equal to an integer
26 number of octets. The mobile station shall set each of these
27 bits to '0'.

28

1 2.7.4.44 EXT_UIM_ID

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return the mobile station EXT_UIM_ID.

4

Type-Specific Field	Length (bits)
EXT_UIM_ID_LEN	4
EXT_UIM_ID	8 × EXT_UIM_ID_LEN
RESERVED	0 - 7 (as needed)

5

6 EXT_UIM_ID_LEN – The length of mobile station Extended User Identity Module
 7 identifier.

8 The mobile station shall set this field to the length, in units of
 9 octets, of its Extended User Identity Module identifier. If the
 10 mobile station does not have an Extended User Identity
 11 Module identifier, the mobile station shall set this field to
 12 '0000'.

13 EXT_UIM_ID – Mobile station Extended User Identity Module identifier.

14 The mobile station shall set this field to its Extended User
 15 Identity Module identifier (see [40]).

16 RESERVED – Reserved bits for octet alignment.

17 The mobile station shall add the minimum number of bits
 18 necessary to make the record length in bits an integral
 19 multiple of 8. The mobile station shall set these bits to '0'.

20

21

1 2.7.4.45 MEID_ME

2 This information record can be included in a *Status Response Message* or an *Extended*
 3 *Status Response Message* to return the mobile station MEID_ME.

4

Type-Specific Field	Length (bits)
MEID_ME_LEN	4
MEID_ME	8 × MEID_ME_LEN
RESERVED	0 - 7 (as needed)

5

6 MEID_ME_LEN – The length of MEID_ME.
 7 The mobile station shall set this field to the length, in units of
 8 octets, of the MEID_ME field. If the mobile station does not
 9 have an MEID_ME, the mobile station shall set this field to
 10 ‘0000’.

11 MEID_ME⁹⁷ – Mobile equipment MEID.
 12 The mobile station shall set this field to MEID_p (see 2.3.2).

13 RESERVED – Reserved bits for octet alignment.
 14 The mobile station shall add the minimum number of bits
 15 necessary to make the record length in bits an integral
 16 multiple of 8. The mobile station shall set these bits to ‘0’.

17

⁹⁷ The MEID_ME field is always set to MEID_p and never carries EUIM ID value.

1 2.7.4.46 Additional Geo-Location Capability

2 This information record identifies the additional geo-location capabilities of the mobile
 3 station. The mobile station shall use the following fixed-length format for the type-specific
 4 fields:

5

Type-Specific Field	Length (bits)
ADD_GEO_LOC_LEN	4
ADD_GEO_LOC	8 × ADD_GEO_LOC_LEN
RESERVED	4

- 6
- 7 ADD_GEO_LOC_LEN – The length of Additional Geo-location.
 8 The mobile station shall set this field to the length, in units of
 9 octets, of the ADD_GEO_LOC field.
- 10 ADD_GEO_LOC – Additional Geo-location.
 11 The mobile station shall set this field to indicate which geo-
 12 location capabilities are supported by the mobile station.
 13 This field consists of the subfields shown in 2.7.4.46-1.
 14 The mobile station shall set each subfield to ‘1’ if the
 15 corresponding capability is supported by the mobile station;
 16 otherwise, the mobile station shall set the subfield to ‘0’.
- 17

1

Table 2.7.4.46-1. Encoding Additional Geo-location Codes⁹⁸

Subfield	Length (bits)	Subfield Description
QZSS	1	Support of QZSS
GLONASS	1	Support of GLONASS
Galileo	1	Support Galileo
Compass / BeiDou	1	Support of COMPASS_BEIDOU
WAAS	1	Support of WAAS
EGNOS	1	Support of EGNOS
MSAS	1	Support of MSAS
HRPD	1	Support of HRPD
UMB	1	Support of UMB
Modernized GPS	1	Support of Modernized GPS
RESERVED	6	Reserved bits

2

RESERVED - Reserved bits for octet alignment.

3

The mobile station shall set these bits to '0'.

4

5

⁹⁸ Additional values for this field can be defined in [30].

3 REQUIREMENTS FOR BASE STATION CDMA OPERATION

This section defines requirements that are specific to CDMA base station equipment and operation.

3.1 Reserved

3.2 Reserved

3.3 Security and Identification

3.3.1 Authentication

The base station may be equipped with a database that includes unique mobile station authentication keys, shared secret data, or both for each registered mobile station in the system. This database is used for authentication of mobile stations that are equipped for authentication operation.

If the base station supports mobile station authentication, it shall provide the following capabilities: The base station shall send and receive authentication messages and perform the authentication calculations described in 2.3.12.1.

3.3.2 Encryption

If the base station supports mobile station authentication (see 3.3.1), it may also support message encryption by providing the capability to send encryption control messages and the ability to perform the operations of encryption and decryption as specified in 2.3.12.2.

3.3.3 Voice Privacy

If the base station supports mobile station authentication (see 3.3.1), it may also support voice privacy using the private long code mask, as specified in 2.3.12.3.

3.3.4 Extended-Encryption

If the base station supports mobile station authentication (see 3.3.1), it may also support Extended-Encryption for Signaling Messages and User Information as specified in 2.3.12.4.

3.3.5 Message Integrity

If the base station supports message integrity, it shall provide the message integrity capability as specified in 2.3.12.5.5.

3.4 Supervision

3.4.1 Access Channel or Enhanced Access Channel

The base station shall continually monitor each active Access Channel or Enhanced Access Channel or both. The base station should provide control in cases of overload by using either the *Access Parameters Message* or the *Enhanced Access Parameters Message*.

3.4.2 Reverse Traffic Channel

The base station shall continually monitor each active Reverse Traffic Channel to determine if the call is active. If the base station detects that the call is no longer active, the base station shall declare loss of Reverse Traffic Channel continuity (see 3.6.4).

3.5 Reserved

3.6 Layer 3 Processing

This section describes base station Layer 3 processing. It contains frequent references to the messages that flow between the base station and the mobile station. While reading this section, it may be helpful to refer to the message formats (see 2.7 and 3.7), and to the call flow examples (see Annex B and Annex C). The values for the time and numeric constants used in this section (e.g., T_{1b} and N_{4m}) are specified in Annex D.

Base station processing consists of the following types of processing:

- *Pilot and Sync Channel Processing* - During *Pilot and Sync Channel Processing*, the base station transmits the Pilot Channel and Sync Channel which the mobile station uses to acquire and synchronize to the CDMA system while the mobile station is in the *Mobile Station Initialization State*.
- *Common Channel Processing* - During *Common Channel Processing*, the base station transmits the Paging Channel and/or the Forward Common Control Channel/Broadcast Control Channel which the mobile station monitors to receive messages while the mobile station is in the *Mobile Station Idle State* and the *System Access State*.
- *Access Channel and Enhanced Access Channel Processing* - During *Access Channel and Enhanced Access Channel Processing*, the base station monitors the Access Channel and/or the Enhanced Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.
- *Traffic Channel Processing* - During *Traffic Channel Processing*, the base station uses the Forward and Reverse Traffic Channels to communicate with the mobile station while the mobile station is in the *Mobile Station Control on the Traffic Channel State*.

3.6.1 Pilot and Sync Channel Processing

During *Pilot and Sync Channel Processing*, the base station transmits the Pilot and Sync Channels which the mobile station uses to acquire and synchronize to the CDMA system while the mobile station is in the *Mobile Station Initialization State*.

3.6.1.1 Preferred Set of CDMA Channels

The preferred set of frequency assignments are the CDMA Channels on which the mobile station attempts to acquire the CDMA system (see [2]).

The base station shall support at least one member of the preferred set of frequency assignments. The base station may support additional CDMA Channels.

3.6.1.2 Pilot Channel Operation

The Pilot Channel (see [2]) is a reference channel which the mobile station uses for acquisition, timing, and as a phase reference for coherent demodulation.

The base station shall continually transmit a Pilot Channel for every CDMA Channel supported by the base station, unless the base station is classified as a hopping pilot beacon.

1 3.6.1.3 Sync Channel Operation

2 The Sync Channel (see [2]) provides the mobile station with system configuration and
3 timing information.

4 The base station shall transmit at most one Sync Channel for each supported CDMA
5 Channel. The base station shall support a Sync Channel on at least one member of the
6 preferred set of frequency assignments that it supports. The base station should support a
7 Sync Channel on every member of the preferred set of frequency assignments that it
8 supports.

9 If the base station operates in Band Class 0 or Band Class 3, and supports the Primary
10 CDMA Channel, then the base station shall transmit a Sync Channel on the Primary CDMA
11 Channel.

12 The base station shall continually send the *Sync Channel Message* on each Sync Channel
13 that the base station transmits.

14 3.6.2 Common Channel Processing

15 3.6.2.1 Paging Channel and Forward Common Control Channel Procedures

16 During *Common Channel Processing*, the base station transmits the Paging Channel or the
17 Forward Common Control Channel (see [2]) which the mobile station monitors to receive
18 messages while the mobile station is in the *Mobile Station Idle State* and the *System Access*
19 *State*.

20 The base station may transmit up to seven Paging Channels on each supported CDMA
21 Channel. The base station may transmit up to seven Forward Common Control Channels
22 and one Primary Broadcast Control Channel on each supported CDMA Channel.

23 For each Paging Channel that the base station transmits, the base station shall continually
24 send valid Paging Channel messages (see 3.7.2), which may include the *Null Message* (see
25 [4]).

26 The base station shall not send any message which is not completely contained within two
27 consecutive Paging Channel or Forward Common Control Channel slots, unless the
28 processing requirements for the message explicitly specify a different size limitation.⁹⁹

29 3.6.2.1.1 CDMA Channel Determination

30 The base station may send the *CDMA Channel List Message Extended CDMA Channel List*
31 *Message* and the *Flex Duplex CDMA Channel List Message* on the Paging Channel. When
32 the base station supports Broadcast Control Channel, the base station shall send the
33 *Extended CDMA Channel List Message* and may send the *Flex Duplex CDMA Channel List*
34 *Message* on the Primary Broadcast Control Channel.

35 When the base station sends a *CDMA Channel List Message* or an *Extended CDMA Channel*
36 *List Message* or a *Flex Duplex CDMA Channel List Message* on the Paging Channel or on the

⁹⁹See, for example, [14] which specifies processing requirements for the *Data Burst Message*.

1 Primary Broadcast Control Channel, the base station shall determine the assigned band
 2 and CDMA Channel using the mobile station hashing procedures for the corresponding
 3 P_REV_IN_USE.

4 3.6.2.1.2 Common Channel Determination

5 To determine the mobile station's assigned Paging Channel or Forward Common Control
 6 Channel, the base station shall use the hash function specified in 2.6.7.1 with the following
 7 inputs:

- 8 • IMSI_S based on the IMSI with which the mobile station registered (see 2.3.1)
- 9 • Number of Paging Channels or Forward Common Control Channels which the base
 10 station transmits on the mobile station's assigned CDMA Channel.

11 3.6.2.1.3 Paging Slot Determination

12 To determine the assigned Paging Channel or Forward Common Control Channel slots for a
 13 mobile station with a given slot cycle index, the base station shall select a number PGSLOT
 14 using the hash function specified in 2.6.7.1 with the following inputs:

- 15 • IMSI_S based on the IMSI with which the mobile station registered (see 6.3.1)
- 16 • Maximum number of Paging Channel or Forward Common Control Channel slots
 17 (2048).

18 The assigned Paging Channel or Forward Common Control Channel slots for the mobile
 19 station are those slots for which

$$20 \quad (\lfloor t/4 \rfloor - \text{PGSLOT}) \bmod (16 \times T) = 0,$$

21 where t is the System Time in 20ms frames, and T is the slot cycle length in units of 1.28
 22 seconds given by

$$23 \quad T = 2^i,$$

24 where i is the slot cycle index which can take the values -4, -3, -2, -1, 0, 1, 2, 3, 4, 5, 6,
 25 and 7.

26 When the base station is able to determine that the mobile station is operating in the
 27 slotted mode and is able to determine the mobile station's preferred slot cycle index, the
 28 base station determines the slot cycle index to use for the mobile station as follows:

- 29 • If the base station is able to determine that the mobile station is operating in the
 30 reduced slot cycle mode, the base station uses $\min(\text{reduced slot cycle index,}$
 31 $\text{preferred slot cycle index, maximum slot cycle index})$ for the mobile station's slot
 32 cycle index.
- 33 • Otherwise:
 - 34 + If the base station supports negative values of slot cycle index, the base station
 35 uses $\min(\text{preferred slot cycle index, maximum slot cycle index})$ for the mobile
 36 station's slot cycle index.
 - 37 + Otherwise, the base station uses $\max(0, \min(\text{preferred slot cycle index,}$
 38 $\text{maximum slot cycle index}))$ for the mobile station's slot cycle index.

1 When the base station is not able to determine whether the mobile station is operating in
 2 the slotted mode, or the base station is not able to determine the mobile station's preferred
 3 slot cycle index, the base station uses for the mobile station's slot cycle index the smaller of
 4 the maximum slot cycle index and 1.

5 3.6.2.1.4 Message Transmission and Acknowledgment Procedures

6 The Paging Channel or Forward Common Control Channel acknowledgment procedures
 7 facilitate the reliable exchange of messages between the base station and the mobile station
 8 on the f-csch and r-csch. The acknowledgment procedures and requirements are described
 9 in [4].

10 3.6.2.2 Overhead Information

11 The base station sends overhead messages to provide the mobile station with the
 12 information that it needs to operate with the base station. If the base station supports the
 13 Primary Broadcast Control Channel for overhead messages and is not a pilot beacon, it
 14 shall support the Forward Common Control Channel for all other general page information.

15 The base station with a P_REV greater than six that supports Broadcast Control Channel
 16 shall send overhead messages on the Primary Broadcast Control Channel. The base
 17 station with a P_REV greater than six that does not support the Broadcast Control Channel
 18 shall send overhead messages on each Paging Channel. The overhead messages sent on
 19 the Primary Broadcast Control Channel are:

- 20 1. *ANSI-41 System Parameters Message*
- 21 2. *User Zone Identification Message*
- 22 3. *Private Neighbor List Message*
- 23 4. *Extended Global Service Redirection Message*
- 24 5. *Extended CDMA Channel List Message*
- 25 6. *MC-RR Parameters Message*
- 26 7. *Universal Neighbor List Message*
- 27 8. *Enhanced Access Parameters Message*
- 28 9. *ANSI-41 RAND Message*
- 29 10. *BCMC Service Parameters Message*
- 30 11. *Access Point Identification Message*
- 31 12. *Access Point Identification Text Message*
- 32 13. *Access Point Pilot Information Message*
- 33 14. *General Overhead Information Message*
- 34 15. *Frequent General Overhead Information Message*
- 35 16. *Flex Duplex CDMA Channel List Message*
- 36 17. *Alternative Technologies Information Message*

1 The overhead messages on the Paging Channel are:

- 2 1. *System Parameters Message*
- 3 2. *Neighbor List Message* (Band Class 0 only)
- 4 3. *Access Parameters Message*
- 5 4. *CDMA Channel List Message*
- 6 5. *Extended System Parameters Message*
- 7 6. *Extended Neighbor List Message* (band classes other than Band Class 0)
- 8 7. *General Neighbor List Message*
- 9 8. *Global Service Redirection Message*
- 10 9. *User Zone Identification Message*
- 11 10. *Private Neighbor List Message*
- 12 11. *Extended Global Service Redirection Message*
- 13 12. *Extended CDMA Channel List Message*
- 14 13. *BCMC Service Parameters Message*
- 15 14. *Access Point Identification Message*
- 16 15. *Access Point Identification Text Message*
- 17 16. *Access Point Pilot Information Message*
- 18 17. *General Overhead Information Message*
- 19 18. *Frequent General Overhead Information Message*
- 20 19. *Flex Duplex CDMA Channel List Message*
- 21 20. *Alternative Technologies Information Message*

22 The base station shall maintain a configuration sequence number (CONFIG_SEQ) for
23 configuration messages transmitted on the Paging Channel, and shall increment
24 CONFIG_SEQ modulo 64 whenever the base station modifies the following messages:

- 25 1. *System Parameters Message*
- 26 2. *Neighbor List Message* (Band Class 0 only)
- 27 3. *CDMA Channel List Message*
- 28 4. *Extended System Parameters Message*
- 29 5. *Extended Neighbor List Message* (band classes other than Band Class 0)
- 30 6. *General Neighbor List Message*
- 31 7. *Global Service Redirection Message*
- 32 8. *User Zone Identification Message*
- 33 9. *Private Neighbor List Message*

- 1 10. *Extended Global Service Redirection Message*
- 2 11. *Extended CDMA Channel List Message*
- 3 12. *Access Point Identification Message*
- 4 13. *Access Point Identification Text Message*
- 5 14. *Access Point Pilot Information Message*
- 6 15. *General Overhead Information Message*
- 7 16. *Frequent General Overhead Information Message*
- 8 17. *Flex Duplex CDMA Channel List Message*
- 9 18. *Alternative Technologies Information Message*

10 The base station shall maintain a configuration sequence number (CONFIG_SEQ) for
 11 configuration messages transmitted on the Primary Broadcast Control Channel, and shall
 12 increment CONFIG_SEQ modulo 64 whenever the base station modifies the following
 13 messages:

- 14 1. *ANSI-41 System Parameters Message*
- 15 2. *User Zone Identification Message*
- 16 3. *Private Neighbor List Message*
- 17 4. *Extended Global Service Redirection Message*
- 18 5. *Extended CDMA Channel List Message*
- 19 6. *MC-RR Parameters Message*
- 20 7. *Universal Neighbor List Message*
- 21 8. *Access Point Identification Message*
- 22 9. *Access Point Identification Text Message*
- 23 10. *Access Point Pilot Information Message*
- 24 11. *General Overhead Information Message*
- 25 12. *Frequent General Overhead Information Message*
- 26 13. *Flex Duplex CDMA Channel List Message*
- 27 14. *Alternative Technologies Information Message*

28 The base station shall maintain an access configuration sequence number
 29 (ACC_CONFIG_SEQ) for the Access Channel, and shall increment ACC_CONFIG_SEQ
 30 modulo 64 whenever the base station modifies the *Access Parameters Message*.

31 The base station shall maintain an access configuration sequence number
 32 (ACC_CONFIG_SEQ) for the Enhanced Access Channel, and shall increment
 33 ACC_CONFIG_SEQ modulo 64 whenever the base station modifies the *Enhanced Access*
 34 *Parameters Message*.

1 On each Primary Broadcast Control Channel which the base station transmits, the base
 2 station shall send each of the following system overhead messages at least once per T_{1b}
 3 seconds:

- 4 1. *Extended CDMA Channel List Message*
- 5 2. *ANSI-41 System Parameters Message*
- 6 3. *MC-RR Parameters Message*
- 7 4. *Enhanced Access Parameters Message*
- 8 5. *Universal Neighbor List Message*

9 If the base station supports Primary Broadcast Control Channels, and the base station is
 10 sending the *ANSI-41 RAND Message*, it shall send it at least once per T_{1b} seconds.

11 If the base station supports Primary Broadcast Control Channels, and the base station is
 12 sending the *Access Point Pilot Information Message*, it shall send it completely at
 13 least once during every 16 paging slot interval that satisfies the following:

14 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{APPIM_PERIOD_INDEX}} = 0$, where SYS_TIME_s is the system time in units of
 15 80 ms.

16 If the base station supports Primary Broadcast Control Channels, and the base station is
 17 sending the *Access Point Identification Message*, it shall send it at least once per T_{1b}
 18 seconds.

19 If the base station supports Primary Broadcast Control Channels, and the base station is
 20 sending the *Access Point Identification Text Message*, it shall send it at least once per
 21 T_{1b} seconds.

22 If the base station supports Primary Broadcast Control Channels, and the base station is
 23 sending the *General Overhead Information Message*, it shall send it completely at
 24 least once during every 16 paging slot interval that satisfies the following:

25 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{GEN_OVHD_CYCLE_INDEX}} = 0$, where SYS_TIME_s is the system time in units
 26 of 80 ms.

27 If the base station supports Primary Broadcast Control Channels, and the base station is
 28 sending the *Alternative Technologies Information Message*, it shall send it completely
 29 at least once during every 16 paging slot interval that satisfies the following:

30 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{ATIM_CYCLE_INDEX}} = 0$, where SYS_TIME_s is the system time in units of
 31 80 ms.

32 If the base station supports Primary Broadcast Control Channels, and the base station is
 33 sending the *Frequent General Overhead Information Message*, it shall send it at least
 34 once per T_{1b} seconds.

35 If the base station supports Primary Broadcast Control Channels, and the base station is
 36 sending the *Flex Duplex CDMA Channel List Message*, it shall send it at least once
 37 per T_{1b} seconds.

38 On each of the Paging Channels the base station transmits, the base station shall send
 39 each of the following system overhead messages at least once per T_{1b} seconds:

- 1 1. *Access Parameters Message*
- 2 2. *CDMA Channel List Message*
- 3 3. *Extended System Parameters Message*
- 4 4. *System Parameters Message*

5 For the messages sent on the Paging Channel, if the base station is operating in Band
 6 Class 1, Band Class 3, or Band Class 4 and MIN_P_REV is less than seven, the base
 7 station shall send the *Extended Neighbor List Message*, and may also send the
 8 *General Neighbor List Message*. If the base station is operating in Band Class 0 and
 9 MIN_P_REV is less than seven, the base station shall send the *Neighbor List*
 10 *Message*, and may also send the *General Neighbor List Message*. If the base station
 11 is sending the *Neighbor List Message*, it shall send it at least once per T_{1b} seconds.
 12 If the base station is sending the *Extended Neighbor List Message*, it shall send it at
 13 least once per T_{1b} seconds. If the base station is sending the *General Neighbor List*
 14 *Message*, it shall send it at least once per T_{1b} seconds. If the base station is sending
 15 the *Frequent General Overhead Information Message*, it shall send it at least once per
 16 T_{1b} seconds. If the base station is sending *Access Point Pilot Information Message*, it
 17 shall send it completely at least once during every 16 paging slot interval that
 18 satisfies the following:

19 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{APPIM_PERIOD_INDEX}} = 0$, where SYS_TIME_s is the system time in units
 20 of 80 ms. If the base station is sending *Access Point Identification Message and*
 21 *Access Point Identification Text Message*, it shall send these messages at least once
 22 per T_{1b} seconds. If the base station is sending the *General Overhead Information*
 23 *Message*, it shall send it completely at least once during every 16 paging slot
 24 interval that satisfies the following:

25 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{GEN_OVHD_CYCLE_INDEX}} = 0$, where SYS_TIME_s is the system time in
 26 units of 80 ms. If the base station is sending the *Alternative Technologies Information*
 27 *Message*, it shall it shall send it completely at least once during every 16 paging slot
 28 interval that satisfies the following:

29 $\lfloor \text{SYS_TIME}_s / 16 \rfloor \bmod 2^{\text{ATIM_CYCLE_INDEX}} = 0$, where SYS_TIME_s is the system time in units of
 30 80 ms.

31 Overhead Messages sent on the Primary Broadcast Control Channel shall be transmitted
 32 on a continuous basis, consecutively.

33 If the base station uses addressing modes requiring use of only the IMSI_M_S, independent
 34 of values of the IMSI_M_11_12 and MCC_M, the base station shall set IMSI_T_SUPPORTED
 35 to '0', MCC to '1111111111', and IMSI_11_12 to '1111111' in the *Extended System*
 36 *Parameters Message*, *MC-RR Parameters Message*, and *ANSI-41 System Parameters*
 37 *Message*.

38 If the base station sets IMSI_T_SUPPORTED to '1', the base station shall not set
 39 PREF_MSID_TYPE to '00' in the *Extended System Parameters Message* and *ANSI-41 System*
 40 *Parameters Message*.

1 The base station may send a *Global Service Redirection Message* on any given Paging
2 Channel. If the message is sent, the base station shall send it at least once per T_{1b}
3 seconds.

4 If P_REV is greater than or equal to six, the base station may send an *Extended Global*
5 *Service Redirection Message*. If the message is sent, the base station shall send it at least
6 once per T_{1b} seconds. The base station may send this message to redirect only those
7 mobile stations with MOB_P_REV equal to or greater than six.

8 When both the *Global Service Redirection Message* and the *Extended Global Service*
9 *Redirection Message* are sent, the base station shall use the *Global Service Redirection*
10 *Message* for mobile stations with MOB_P_REV less than six, and shall use the *Extended*
11 *Global Service Redirection Message* for mobile stations with MOB_P_REV equal to or greater
12 than six. When only the *Global Service Redirection Message* is sent and this message is for
13 mobile station with MOB_P_REV less than six, the base station shall set EXCL_P_REV_MS
14 to '1'.

15 If only the *Global Service Redirection Message* is sent and this message is for redirecting all
16 mobile stations, the base station shall set EXCL_P_REV_MS to '0'.

17 The base station may send a *User Zone Identification Message*. If the message is sent, the
18 base station shall send it at least once per T_{1b} seconds.

19 The base station may send a *Private Neighbor List Message*. If the message is sent, the base
20 station shall send it at least once per T_{1b} seconds.

21 The base station may send an *Extended CDMA Channel List Message*. If the message is
22 sent, the base station shall send it at least once per T_{1b} seconds.

23 The base station may send a *Flex Duplex CDMA Channel List Message*. If the message is
24 sent, the base station shall send it at least once per T_{1b} seconds.

25 3.6.2.3 Mobile Station Directed Messages

26 The base station may send the following messages directed to a mobile station on the f-
27 csch. If the base station sends a message, the base station shall comply with the specified
28 requirements for sending the message, if any:

- 29 1. *Abbreviated Alert Order*
- 30 2. *Audit Order*
- 31 3. *Authentication Challenge Message*
- 32 4. *Base Station Challenge Confirmation Order*
- 33 5. *Channel Assignment Message* (if P_REV_IN_USE < eight)
- 34 6. *Data Burst Message*
- 35 7. *Extended Channel Assignment Message*
- 36 8. *Fast Call Setup Order*
- 37 9. *Feature Notification Message*

- 1 10. *General Page Message*
- 2 11. *Intercept Order*
- 3 12. *Local Control Order*
- 4 13. *Lock Until Power-Cycled Order*
- 5 14. *Maintenance Required Order*
- 6 15. *PACA Message*
- 7 16. *Registration Accepted Order*
- 8 17. *Registration Rejected Order*
- 9 18. *Registration Request Order*
- 10 19. *Release Order*
- 11 20. *Reorder Order*
- 12 21. *Retry Order*
- 13 22. *Security Mode Command Message*
- 14 23. *Service Redirection Message*
- 15 24. *Slotted Mode Order*
- 16 25. *SSD Update Message*
- 17 26. *Status Request Message*
- 18 27. *TMSI Assignment Message*
- 19 28. *Universal Page Message* (Forward Common Control Channel Only)
- 20 29. *Unlock Order*
- 21 30. *User Zone Reject Message*
- 22 31. *General Extension Message*

23 The base station shall not send the *Channel Assignment Message* if P_REV_IN_USE is
24 greater than or equal to nine.

25 The base station should send at least one *General Page Message* in each Paging Channel
26 slot. The base station shall not omit a *General Page Message* in two adjacent Paging
27 Channel slots.

28 The base station should send at least one *General Page Message* or *Universal Page Message*
29 in each Forward Common Control Channel slot. The base station shall not omit both a
30 *General Page Message* and a *Universal Page Message* in two adjacent slots.

31 The base station shall not send an *Extended Channel Assignment Message* that is
32 addressed to multiple mobile stations using the *General Extension Message*.

33 3.6.2.3.1 Processing when the General Page Message is Used

34 The base station shall use the following rules for selecting the Paging Channel or Forward
35 Common Control Channel slot in which to send a message to a mobile station:

- 1 • If the base station is able to determine that the mobile station is operating in the
2 non-slotted mode, the base station may send the message to the mobile station in
3 any Paging Channel or Forward Common Control Channel slot.
- 4 • If the base station is able to determine that the mobile station is operating in the
5 slotted mode and is able to determine the mobile station's slot cycle index (see
6 2.6.2.1.1.3), the base station shall send the message at least once in an assigned
7 Paging Channel slot for the mobile station (see 3.6.2.1.3), with the position within
8 the slot subject to the following limitations:
- 9 – If the mobile station has registered with a class 0 IMSI, the base station shall
10 not send the message in the assigned Paging Channel slot after sending a
11 *General Page Message* with CLASS_0_DONE set to '1' in that slot.
- 12 – If the mobile station has registered with a class 1 IMSI, the base station shall
13 not send the message in the assigned Paging Channel slot after sending a
14 *General Page Message* with CLASS_1_DONE set to '1' in that slot.
- 15 – If the mobile station has been assigned a TMSI, the base station shall not send
16 the message in the assigned Paging Channel slot after sending a *General Page*
17 *Message* with TMSI_DONE set to '1' in that slot.
- 18 • If the base station is able to determine that the mobile station is operating in the
19 slotted mode and that the mobile station is not waiting for a priority access channel
20 assignment and that the slotted timer in the mobile station is not active, and the
21 base station is able to determine the mobile station's slot cycle index (see
22 2.6.2.1.1.3), the base station shall send the message at least once in an assigned
23 Forward Common Control Channel slot for the mobile station (see 3.6.2.1.3), with
24 the position within the slot subject to the following limitations:
- 25 – If the mobile station has registered with a class 0 IMSI, the base station shall
26 not send the message in the assigned Forward Common Control Channel slot
27 after sending a *General Page Message* with CLASS_0_DONE set to '1' in that
28 slot.
- 29 – If the mobile station has registered with a class 1 IMSI, the base station shall
30 not send the message in the assigned Forward Common Control Channel slot
31 after sending a *General Page Message* with CLASS_1_DONE set to '1' in that
32 slot.
- 33 – If the mobile station has been assigned a TMSI, the base station shall not send
34 the message in the assigned Forward Common Control Channel slot after
35 sending a *General Page Message* with TMSI_DONE set to '1' in that slot.
- 36 • If the base station is able to determine that the mobile station is operating in the
37 slotted mode and that the mobile station is waiting for a priority access channel
38 assignment, or that the slotted timer in the mobile station is active, the base station
39 may send the message to the mobile station in any Forward Common Control
40 Channel slot with the position within the slot subject to the following limitation:

- 1 – If the mobile station has registered with a class 0 IMSI, the base station shall
2 not send the message in any Forward Common Control Channel slot after
3 sending a *General Page Message* with CLASS_0_DONE set to '1' in that slot.
- 4 – If the mobile station has registered with a class 1 IMSI, the base station shall
5 not send the message in any Forward Common Control Channel slot after
6 sending a *General Page Message* with CLASS_1_DONE set to '1' in that slot.
- 7 – If the mobile station has been assigned a TMSI, the base station shall not send
8 the message in any Forward Common Control Channel slot after sending a
9 *General Page Message* with TMSI_DONE set to '1' in that slot.
- 10 • If the base station is not able to determine whether the mobile station is operating
11 in the non-slotted mode, or the base station is not able to determine the mobile
12 station's slot cycle index, the base station shall assume that the mobile station is
13 operating in the slotted mode with a slot cycle index which is the smaller of
14 MAX_SLOT_CYCLE_INDEX and 1. The base station shall send the message at least
15 once in an assigned Paging Channel or Forward Common Control Channel slot for
16 the mobile station (see 3.6.2.1.3), with the position within the slot subject to the
17 following limitations:
 - 18 – If the mobile station has registered with a class 0 IMSI, the base station shall
19 not send the message in the assigned Paging Channel or Forward Common
20 Control Channel slot after sending a *General Page Message* with
21 CLASS_0_DONE set to '1' in that slot.
 - 22 – If the mobile station has registered with a class 1 IMSI, the base station shall
23 not send the message in the assigned Paging Channel or Forward Common
24 Control Channel slot after sending a *General Page Message* with
25 CLASS_1_DONE set to '1' in that slot.
 - 26 – If the mobile station has been assigned a TMSI, the base station shall not send
27 the message in the assigned Paging Channel or Forward Common Control
28 Channel slot after sending a *General Page Message* with TMSI_DONE set to '1' in
29 that slot.

30 The base station should send messages directed to mobile stations operating in the slotted
31 mode as the first messages in the slot.

32 If the base station sends a *General Page Message* with ORDERED_TMSIS set to '1' in a slot,
33 the base station shall order page records with PAGE_CLASS equal to '10' in ascending
34 order such that if a particular TMSI_CODE value for one page record is greater than the
35 TMSI_CODE value for another page record, the page record with the greater TMSI_CODE
36 value is sent later in the slot.

37 3.6.2.3.2 Processing when the Universal Page Message is Used

38 The base station shall use the following rules for selecting the Forward Common Control
39 Channel slot in which to send a message to a mobile station:

- 40 • If the base station is able to determine that the mobile station is operating in the
41 non-slotted mode, the base station may send the message to the mobile station in
42 any Forward Common Control Channel slot.

- 1 • If the base station is able to determine that the mobile station is capable of
2 operating in the slotted mode and that the mobile station is waiting for a priority
3 access channel assignment, or that the slotted timer in the mobile station is active,
4 the base station may send the message to the mobile station in any Forward
5 Common Control Channel slot with the position within the slot subject to the
6 following limitation:
- 7 – The base station shall not send the message later in the slot than a *Universal*
8 *Page Message* which lacks a mobile station-directed message announcement
9 and which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that
10 mobile station.
- 11 • If the base station is able to determine that the mobile station is operating in the
12 slotted mode and that the mobile station is not waiting for a priority access channel
13 assignment and that the slotted timer in the mobile station is not active and the
14 base station is able to determine the mobile station's slot cycle index (see
15 2.6.2.1.1.3.3), the base station shall send the message at least once in an assigned
16 Forward Common Control Channel slot for the mobile station (see 3.6.2.1.3) or in
17 the following slot, with the position within these two slots subject to the following
18 limitation:
- 19 – The base station shall not send the message later in the slot than a *Universal*
20 *Page Message* that lacks a mobile station-directed message announcement and
21 which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that mobile
22 station.
- 23 • If the base station is not able to determine whether the mobile station is operating
24 in the non-slotted mode, or the base station is not able to determine the mobile
25 station's slot cycle index, the base station shall assume that the mobile station is
26 operating in the slotted mode with a slot cycle index which is the smaller of
27 MAX_SLOT_CYCLE_INDEX and 1. The base station shall send the message at least
28 once in an assigned Forward Common Control Channel slot for the mobile station
29 (see 3.6.2.1.3), or in the following slot, with the position within these two slots
30 subject to the following limitation:
- 31 – The base station shall not send the message later in the slot than a *Universal*
32 *Page Message* that lacks a mobile station-directed message announcement and
33 which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that mobile
34 station.

35 The base station should send messages directed to both mobile stations operating in the
36 slotted mode and mobile stations operating in the non-slotted mode later in the slot than
37 the *Universal Page Message*.

1 3.6.2.4 Broadcast Messages

2 3.6.2.4.1 Broadcast Messages Sent on the Paging Channel

3 The base station may transmit *Data Burst Messages* directed to broadcast addresses.
4 When transmitting broadcast messages that are to be received by mobile stations operating
5 in the slotted mode, the base station may use broadcast page records (see 3.7.2.3.2.17) in
6 accordance with the broadcast procedures specified in 3.6.2.4.1 to announce the presence
7 of broadcast *Data Burst Messages* on the Paging Channel. The base station should use the
8 rules specified in 3.6.2.4.1.1 for selecting the Paging Channel slot in which to send a
9 broadcast *Data Burst Message*.

10 3.6.2.4.1.1 Broadcast Procedures for Slotted Mode

11 The base station may announce the presence of broadcast *Data Burst Messages* on the
12 Paging Channel by paging, using a broadcast address with PAGE_CLASS equal to '11' and
13 PAGE_SUBCLASS equal to '00'.

14 3.6.2.4.1.1.1 General Overview

15 The base station may transmit *Data Burst Messages* directed to broadcast addresses. Since
16 mobile stations operating in slotted mode do not constantly monitor a Paging Channel, it is
17 necessary to use special procedures to ensure that mobile stations operating in the slotted
18 mode are able to receive the message. The base station may either send a broadcast
19 message in many slots, or may send a broadcast message in a predetermined paging slot.
20 This single transmission of the pending broadcast message may be announced by a
21 preceding "broadcast page". A broadcast page is a *General Page Message* record with the
22 PAGE_CLASS field set to '11'.

23 If pending transmission of the broadcast message is announced by the broadcast page,
24 mobile stations use the BC_ADDR and the BURST_TYPE fields of the broadcast page record
25 to determine whether or not to receive the announced broadcast message. The base
26 station sets the value of the BC_ADDR according to the requirements of the standards
27 related to the BURST_TYPE. There is a predetermined timing relationship between the
28 sending of the broadcast page and the sending of the related broadcast message. This
29 timing relationship allows mobile stations to determine which slot to monitor in order to
30 receive the broadcast message.

31 To reduce the overhead for sending broadcast pages or broadcast messages, a base station
32 may use periodic broadcast paging (see 3.6.2.4.1.1.2.1.2). When periodic broadcast paging
33 is enabled, broadcast pages or broadcast messages are sent only once during a broadcast
34 paging cycle. Mobile stations that are operating in the slotted mode and are configured to
35 receive broadcast messages monitor the paging channel during the slot in which the
36 broadcast pages or broadcast messages are sent. For the purpose of periodic broadcast
37 paging, system time is divided into broadcast paging cycles, each having a duration of $(B +$
38 $3)$ Paging Channel slots, where B is a power of two. In each broadcast paging cycle, the
39 first paging slot may contain broadcast pages or broadcast messages.

1 3.6.2.4.1.1.2 Requirements for Sending Broadcast Messages

2 3.6.2.4.1.1.2.1 Broadcast Delivery Options

3 When transmitting broadcast messages that are to be received by mobile stations operating
4 in the slotted mode and monitoring the Paging Channel, the base station shall use one of
5 the two following procedures to transmit a broadcast message.

6 3.6.2.4.1.1.2.1.1 Method 1: Multi-Slot Broadcast Message Transmission

7 The base station may send a broadcast message using this method without regard to
8 whether periodic broadcast paging is enabled or disabled (see 3.6.2.4.1.1.2.3).

9 When using this method, the base station shall send the broadcast message in a sufficient
10 number of paging slots such that it may be received by any mobile station that is operating
11 in the slotted mode. For example, the base station may send the broadcast message in M
12 successive paging slots where M is the number of slots in a maximum paging cycle as
13 defined in 2.6.2.1.1.3.3.

14 3.6.2.4.1.1.2.1.2 Method 2: Periodic Broadcast Paging

15 If the base station sends a broadcast message using this method, then the base station
16 shall enable periodic broadcast paging (see 3.6.2.4.1.1.2.3).

17 To deliver a broadcast message using this method, the base station should perform the
18 following:

- 19 • If the number and size of the broadcast messages waiting to be sent are such that
20 the messages can be sent in a single slot, the base station should send the
21 broadcast messages in the first slot of the next broadcast paging cycle (see
22 2.6.2.1.1.3.3).
- 23 • If there is a single broadcast message waiting to be sent, the base station should
24 send the broadcast message beginning in the first slot of the next broadcast paging
25 cycle (see 2.6.2.1.1.3.3).
- 26 • Otherwise, the base station should first include a broadcast page for each broadcast
27 message to be sent, in a *General Page Message* that is sent in the first slot of the
28 next broadcast paging cycle (see 2.6.2.1.1.3.3). The base station should then send
29 the related broadcast messages in the paging slots specified in 3.6.2.4.1.1.2.4.

30 3.6.2.4.1.1.2.2 Duplicate Broadcast Message Transmission

31 If the base station sends a broadcast message or a broadcast page and an associated
32 broadcast message more than once when periodic broadcast paging is enabled (see
33 3.6.2.4.1.1.2.3), then all repetitions of the broadcast message or the broadcast page and
34 the associated broadcast message should be sent within $4 \times (B + 3)$ paging slots of the
35 paging slot in which the broadcast message or broadcast page was first sent. ($B + 3$ is the
36 duration of the broadcast paging cycle as defined in 2.6.2.1.1.3.3).

37 When a base station sends a broadcast message or a broadcast page when periodic
38 broadcast paging is enabled (see 3.6.2.4.1.1.2.3), and the base station has a second,
39 different broadcast message to send which contains identical BURST_TYPE and BC_ADDR
40 fields, then the base station shall wait $4 \times (B + 3)$ paging slots after the first slot of the

1 broadcast paging cycle containing the final sending of the first broadcast message or
 2 broadcast page before sending the second, different broadcast message or related
 3 broadcast page.

4 3.6.2.4.1.1.2.3 Periodic Broadcast Paging

5 The base station uses the BCAST_INDEX field of the *Extended System Parameters Message*
 6 to specify the current state of periodic broadcast paging to all mobile stations.

7 To enable periodic broadcast paging, the base station shall set the BCAST_INDEX field of
 8 the *Extended System Parameters Message* to an unsigned 3-bit number in the range 1-7,
 9 equal to the broadcast slot cycle index as defined in 2.6.2.1.1.3.3. The value of the
 10 BCAST_INDEX field may exceed the value of the MAX_SLOT_CYCLE_INDEX field sent in
 11 the *System Parameters Message*.

12 To indicate that periodic broadcast paging is either disabled or is not supported by the base
 13 station, the base station shall set the BCAST_INDEX field to '000'.

14 3.6.2.4.1.1.2.4 Broadcast Message Slot Determination

15 When a base station uses broadcast paging, it shall determine the slot in which to send the
 16 corresponding broadcast message using the following procedures:

- 17 • The base station shall consider a broadcast page to have been sent in the paging
 18 slot in which the *General Page Message* containing the broadcast page began.
- 19 • The reference slot is defined as the paging slot in which the broadcast page was
 20 sent.
- 21 • Let n represent the ordinal number of the broadcast page relative to other broadcast
 22 pages that are contained in the same *General Page Message* ($n = 1, 2, 3, \dots$). The
 23 base station shall send the broadcast message announced by broadcast page n in
 24 the paging slot that occurs $n \times 3$ paging slots after the reference slot.

25 3.6.2.4.2 Broadcast Messages Sent on the Broadcast Control Channel

26 The base station may transmit *Data Burst Messages* directed to broadcast addresses when
 27 NUM_BCCH_BCAST_s does not equal '000'. When transmitting broadcast messages that
 28 are to be received by mobile stations operating in the slotted mode, the base station may
 29 use enhanced broadcast pages (see 3.7.2.3.2.17 and 3.7.2.3.2.36) in accordance with the
 30 broadcast procedures specified in 3.6.2.4.2 to announce the presence of broadcast *Data*
 31 *Burst Messages* on the Broadcast Control Channel. The base station should use the rules
 32 specified in 3.6.2.4.2.1 for selecting the Broadcast Control Channel slot in which to send a
 33 broadcast *Data Burst Message*.

34 3.6.2.4.2.1 Broadcast Procedures for Slotted Mode

35 The base station may announce the presence of broadcast *Data Burst Messages* on the
 36 Broadcast Control Channel by sending an enhanced broadcast page.

37 3.6.2.4.2.1.1 General Overview

38 The base station may transmit *Data Burst Messages* directed to broadcast addresses. Since
 39 mobile stations operating in slotted mode do not constantly monitor a Broadcast Control

1 Channel, it is necessary to use special procedures to ensure that mobile stations operating
2 in the slotted mode are able to receive the message. The base station may either send an
3 enhanced broadcast page in many Forward Common Control Channel slots, directing the
4 mobile station to the appropriate Broadcast Control Channel slot, or the base station may
5 also send an enhanced broadcast page in a predetermined slot, called a broadcast slot, on
6 the Forward Common Control Channel, directing the mobile station to a specified
7 Broadcast Control Channel slot.

8 If pending transmission of the broadcast message is announced by the enhanced broadcast
9 page, mobile stations use the BC_ADDR and the BURST_TYPE fields of the enhanced
10 broadcast page record to determine whether or not to receive the announced broadcast
11 message. The base station sets the value of the BC_ADDR according to the requirements of
12 the standards related to the BURST_TYPE. The timing relationship between the sending of
13 the enhanced broadcast page and the sending of the related broadcast message is specified
14 in the enhanced broadcast page. This timing relationship allows mobile stations to
15 determine which Broadcast Control Channel slot to monitor in order to receive the
16 broadcast message.

17 To reduce the overhead for sending broadcast pages or broadcast messages, a base station
18 may use Periodic Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.1.2). When Periodic
19 Enhanced Broadcast Paging is enabled, enhanced broadcast pages are sent only once
20 during a broadcast paging cycle. Mobile stations that are operating in the slotted mode
21 and are configured to receive broadcast messages monitor the Forward Common Control
22 Channel during the broadcast slot in which the enhanced broadcast pages are sent. For
23 the purpose of Periodic Enhanced Broadcast Paging, system time is divided into broadcast
24 paging cycles, each having a duration of $(B + 7)$ Forward Common Control Channel slots,
25 where B is a power of two. In each broadcast paging cycle, the first Forward Common
26 Control Channel slot may contain enhanced broadcast pages.

27 3.6.2.4.2.1.2 Requirements for Sending Broadcast Messages

28 3.6.2.4.2.1.2.1 Broadcast Delivery Options

29 When transmitting broadcast messages that are to be received by mobile stations operating
30 in the slotted mode and monitoring the Forward Common Control Channel/Broadcast
31 Control Channel, the base station shall use one of the two following procedures to transmit
32 a broadcast message.

33 3.6.2.4.2.1.2.1.1 Method 1: Multi-Slot Enhanced Broadcast Paging

34 The base station may send a broadcast message using this method without regard to
35 whether Periodic Enhanced Broadcast Paging is enabled or disabled (see 3.6.2.4.2.1.2.3).

36 When using this method, the base station shall send the enhanced broadcast page in a
37 sufficient number of Forward Common Control Channel slots such that it may be received
38 by any mobile station that is operating in the slotted mode. The enhanced broadcast page
39 then directs mobile stations to a subsequent Broadcast Control Channel slot.

40 The base station shall not send an enhanced broadcast page that directs a mobile station
41 to receive a broadcast message on the Primary Broadcast Control Channel.

1 The base station shall not send a broadcast message on the Forward Common Control
2 Channel.

3 3.6.2.4.2.1.2.1.2 Method 2: Periodic Enhanced Broadcast Paging

4 If the base station sends a broadcast message using this method, then the base station
5 shall enable Periodic Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.3).

6 To deliver a broadcast message using this method, the base station should perform the
7 following:

- 8 • The base station should first include an enhanced broadcast page for each
9 broadcast message to be sent, in a page that is sent on the Forward Common
10 Control Channel in the first slot of the next broadcast paging cycle (see
11 2.6.2.1.1.3.3). The base station should then send the corresponding broadcast
12 messages in the Broadcast Control Channel slots specified in 3.6.2.4.2.1.2.4.

13 The base station shall not send an enhanced broadcast page that directs a mobile station
14 to receive a broadcast message on the Primary Broadcast Control Channel.

15 The base station shall not send a broadcast message on the Forward Common Control
16 Channel.

17 3.6.2.4.2.1.2.2 Duplicate Broadcast Message Transmission

18 If the base station sends an enhanced broadcast page and an associated broadcast
19 message more than once when Periodic Enhanced Broadcast Paging is enabled (see
20 3.6.2.4.2.1.2.3), then all repetitions of the enhanced broadcast page should be sent within
21 $4 \times (B + 7)$ slots of the slot in which the enhanced broadcast page was first sent. ($B + 7$ is
22 the duration of the broadcast paging cycle as defined in 2.6.2.1.1.3.3).

23 When a base station sends an enhanced broadcast page when Periodic Enhanced
24 Broadcast Paging is enabled (see 3.6.2.4.2.1.2.3), and the base station has a second,
25 different broadcast message to send which contains identical BURST_TYPE and BC_ADDR
26 fields, then the base station shall wait $4 \times (B + 7)$ paging slots after the first slot of the
27 broadcast paging cycle containing the final sending of the first broadcast message or
28 enhanced broadcast page before sending the second, different enhanced broadcast page.

29 3.6.2.4.2.1.2.3 Periodic Enhanced Broadcast Paging

30 The base station uses the BCAST_INDEX fields of the *MC-RR Parameters Message* to specify
31 the current state of Periodic Enhanced Broadcast Paging to all mobile stations.

32 To enable Periodic Enhanced Broadcast Paging, the base station shall set the
33 BCAST_INDEX field to a non-zero unsigned 3-bit number equal to the broadcast slot cycle
34 index as defined in 2.6.2.1.1.3.3.

35 To indicate that Periodic Enhanced Broadcast Paging is either disabled or is not supported
36 by the base station, the base station shall set the BCAST_INDEX field to '000'.

37 3.6.2.4.2.1.2.4 Broadcast Message Slot Determination

38 When a base station uses broadcast message announcement, it shall determine the slot in
39 which to send the corresponding broadcast message using the following procedures:

- 1 • The base station shall consider an enhanced broadcast page to have been sent in
2 the Forward Common Control Channel slot in which the page message containing
3 the enhanced broadcast page began.
- 4 • The reference slot is defined as the Forward Common Control Channel slot in which
5 the enhanced broadcast page was sent.
- 6 • The base station shall send a first transmission of the broadcast message
7 announced by the enhanced broadcast page in the Broadcast Control Channel slot
8 which begins $40 \text{ ms} \times (1 + \text{TIME_OFFSET})$ later than the beginning of the slot in
9 which the page message containing the enhanced broadcast page began. The base
10 station may send a repetition of the broadcast message announced by the enhanced
11 broadcast page in the Broadcast Control Channel slot which begins $40 \text{ ms} \times (1 +$
12 $\text{REPEAT_TIME_OFFSET})$ later than the Broadcast Control Channel slot in which the
13 first transmission began.

14 3.6.2.4.3 Broadcast Messages Sent on the Forward Common Control Channel

15 The Forward Common Control Channel is used for transmission of broadcast messages
16 only when there is not a secondary Broadcast Control Channel allocated, i.e.,
17 NUM_BCCH_BCAST equals '000'. The base station may transmit *Data Burst Messages*
18 directed to broadcast addresses. When transmitting broadcast messages that are to be
19 received by mobile stations operating in the slotted mode, the base station may use
20 enhanced broadcast page records (see 3.7.2.3.2.17 and 3.7.2.3.2.36) in accordance with
21 the broadcast procedures specified in 3.6.2.4.3 to announce the presence of broadcast
22 *Data Burst Messages* on the Forward Common Control Channel. The base station shall
23 send the broadcast messages on the Forward Common Control Channel where the
24 enhanced broadcast page is sent. The base station should use the rules specified in
25 3.6.2.4.3.1 for selecting the Forward Common Control Channel slot in which to send a
26 broadcast *Data Burst Message*.

27 3.6.2.4.3.1 Broadcast Procedures for Slotted Mode

28 The base station may announce the presence of broadcast *Data Burst Messages* on the
29 Forward Common Control Channel by sending an enhanced broadcast page.

30 3.6.2.4.3.1.1 General Overview

31 The base station may transmit *Data Burst Messages* directed to broadcast addresses. Since
32 mobile stations operating in slotted mode do not constantly monitor a Forward Common
33 Control Channel, it is necessary to use special procedures to ensure that mobile stations
34 operating in the slotted mode are able to receive the message. The base station may either
35 send a broadcast message in many Forward Common Control Channel slots, or may send a
36 broadcast message in a predetermined Forward Common Control slot. This single
37 transmission of the pending broadcast message may be announced by a preceding
38 “enhanced broadcast page”.

39 If pending transmission of the broadcast message is announced by the enhanced broadcast
40 page, mobile stations use the BC_ADDR and the BURST_TYPE fields of the enhanced
41 broadcast page record to determine whether or not to receive the announced broadcast

1 message. The base station sets the value of the BC_ADDR according to the requirements of
2 the standards related to the BURST_TYPE. There is a predetermined timing relationship
3 between the sending of the enhanced broadcast page and the sending of the related
4 broadcast message. This timing relationship allows mobile stations to determine which
5 Forward Common Control Channel slot to monitor in order to receive the broadcast
6 message.

7 To reduce the overhead for sending enhanced broadcast pages or broadcast messages, a
8 base station may use periodic enhanced broadcast paging (see 3.6.2.4.3.1.2.1.2). When
9 periodic enhanced broadcast paging is enabled, enhanced broadcast pages or broadcast
10 messages are sent only once during a broadcast paging cycle. Mobile stations that are
11 operating in the slotted mode and are configured to receive broadcast messages monitor
12 the Forward Common Control Channel during the Forward Common Control Channel slot
13 in which the enhanced broadcast pages or broadcast messages are sent. For the purpose
14 of periodic enhanced broadcast paging, system time is divided into broadcast paging cycles,
15 each having a duration of $(B + 7)$ Forward Common Control Channel slots, where B is a
16 power of two. In each broadcast paging cycle, the first Forward Common Control Channel
17 slot may contain enhanced broadcast pages or broadcast messages.

18 3.6.2.4.3.1.2 Requirements for Sending Broadcast Messages

19 3.6.2.4.3.1.2.1 Broadcast Delivery Options

20 When transmitting broadcast messages that are to be received by mobile stations operating
21 in the slotted mode and monitoring the Forward Common Control Channel, the base
22 station shall use one of the two following procedures to transmit a broadcast message.

23 3.6.2.4.3.1.2.1.1 Method 1: Multi-Slot Broadcast Message Transmission

24 The base station may send a broadcast message using this method without regard to
25 whether periodic enhanced broadcast paging is enabled or disabled (see 3.6.2.4.3.1.2.3).

26 When using this method, the base station shall send the broadcast message in a sufficient
27 number of Forward Common Control Channel slots such that it may be received by any
28 mobile station that is operating in the slotted mode. For example, the base station may
29 send the broadcast message in M successive paging slots where M is the number of slots in
30 a maximum paging cycle as defined in 2.6.2.1.1.3.3.

31 3.6.2.4.3.1.2.1.2 Method 2: Periodic Enhanced Broadcast Paging

32 If the base station sends a broadcast message using this method, then the base station
33 shall enable periodic enhanced broadcast paging (see 3.6.2.4.3.1.2.3).

34 To deliver a broadcast message using this method, the base station should perform the
35 following:

- 36 • If the number and size of the broadcast messages waiting to be sent are such that
37 the messages can be sent in a single slot, the base station should send the
38 broadcast messages in the first slot of the next broadcast paging cycle (see
39 2.6.2.1.1.3.3).

- 1 • If there is a single broadcast message waiting to be sent, the base station should
2 send the broadcast message beginning in the first slot of the next broadcast paging
3 cycle (see 2.6.2.1.1.3.3).
- 4 • Otherwise, the base station should first include an enhanced broadcast page for
5 each broadcast message to be sent, in a *General Page Message* or a *Universal Page*
6 *Message* that is sent in the first slot of the next broadcast paging cycle (see
7 2.6.2.1.1.3.3). The base station should then send the related broadcast messages
8 in the Forward Common Control Channel slots specified in 3.6.2.4.3.1.2.4.

9 3.6.2.4.3.1.2.2 Duplicate Broadcast Message Transmission

10 If the base station sends a broadcast message or an enhanced broadcast page and an
11 associated broadcast message more than once when periodic enhanced broadcast paging is
12 enabled (see 3.6.2.4.3.1.2.3), then all repetitions of the broadcast message or the enhanced
13 broadcast page and the associated broadcast message should be sent within $4 \times (B + 7)$
14 slots of the Forward Common Control Channel slot in which the broadcast message or
15 enhanced broadcast page was first sent. $(B + 7)$ is the duration of the broadcast paging
16 cycle as defined in 2.6.2.1.1.3.3).

17 When a base station sends a broadcast message or an enhanced broadcast page when
18 periodic enhanced broadcast paging is enabled (see 3.6.2.4.3.1.2.3), and the base station
19 has a second, different broadcast message to send which contains identical BURST_TYPE
20 and BC_ADDR fields, then the base station shall wait $4 \times (B + 7)$ Forward Common Control
21 Channel slots after the first slot of the enhanced broadcast paging cycle containing the final
22 sending of the first broadcast message or enhanced broadcast page before sending the
23 second, different broadcast message or related enhanced broadcast page.

24 3.6.2.4.3.1.2.3 Periodic Enhanced Broadcast Paging

25 The base station uses the BCAST_INDEX field of the *MC-RR Parameters Message* to specify
26 the current state of periodic enhanced broadcast paging to all mobile stations.

27 To enable periodic enhanced broadcast paging, the base station shall set the
28 BCAST_INDEX field of the *MC-RR Parameters Message* to an unsigned 3-bit number in the
29 range 1-7, equal to the broadcast slot cycle index as defined in 2.6.2.1.1.3.3. The value of
30 the BCAST_INDEX field may exceed the value of the MAX_SLOT_CYCLE_INDEX field sent
31 in the *System Parameters Message*.

32 To indicate that periodic enhanced broadcast paging is either disabled or is not supported
33 by the base station, the base station shall set the BCAST_INDEX field to '000'.

34 3.6.2.4.3.1.2.4 Broadcast Message Slot Determination

35 When a base station uses enhanced broadcast paging, it shall determine the slot in which
36 to send the corresponding broadcast message using the following procedures:

- 37 • The base station shall consider an enhanced broadcast page to have been sent in
38 the Forward Common Control Channel slot in which the *General Page Message* or
39 the *Universal Page Message* containing the enhanced broadcast page began.
- 40 • The reference slot is defined as the Forward Common Control Channel slot in
41 which the enhanced broadcast page was sent.

- The base station shall send a first transmission of the broadcast message announced by the enhanced broadcast page in the Forward Common Control Channel slot which begins $40 \text{ ms} \times (1 + \text{TIME_OFFSET})$ later than the beginning of the slot in which the page message containing the enhanced broadcast page began. The base station may send a repetition of the broadcast message announced by the enhanced broadcast page in the Forward Common Control Channel slot which begins $40 \text{ ms} \times (1 + \text{REPEAT_TIME_OFFSET})$ later than the Forward Common Control Channel slot in which the first transmission began.

3.6.2.5 Quick Paging Channel Processing

The base station may support a Quick Paging Channel. The base station may transmit up to three Quick Paging Channels on each supported CDMA Channel.

When a Quick Paging Channel is supported, the base station shall transmit paging indicators to the mobile station in the assigned positions in the assigned Quick Paging Channel slot. The base station shall set the paging indicators to “ON” if the mobile station is operating in the slotted mode and is to receive the Paging Channel or Forward Common Control Channel in the assigned Paging Channel or Forward Common Control Channel slot following its assigned Quick Paging Channel slot.

When the base station changes CONFIG_MSG_SEQ, the base station should set the paging indicators for all mobile stations to “ON” for each Quick Paging Channel slot for a time interval T (in units of 1.28 seconds), such that

$$T = N \times 2^{\text{MAX_SLOT_CYCLE_INDEX}},$$

where N is an integer greater than or equal to one.

If the base station supports configuration change indicators on the Quick Paging Channel, when the base station changes CONFIG_MSG_SEQ, the base station shall set all configuration change indicators to “ON” for each Quick Paging Channel slot for a time interval of T_{31m} seconds. At all other times, the base station shall set all configuration change indicators to “OFF”.

If the base station does not support configuration change indicators on the Quick Paging Channel, then the base station shall set all configuration change indicators to “OFF”.

When the base station sends a broadcast message using Multi-Slot Broadcast Message Transmission (see 3.6.2.4.1.1.2.1.1), the base station should set all paging indicators to “ON” for the Quick Paging Channel slot which begins 100 ms prior to the beginning of the Paging Channel slot in which the broadcast message begins.

When the base station sends an enhanced broadcast page using Multi-Slot Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.1.1), the base station should set all paging indicators to “ON” for the Quick Paging Channel slot which begins 100 ms prior to the beginning of the Forward Common Control Channel slot in which the message containing the enhanced broadcast page begins.

When the base station sends an enhanced broadcast page using Periodic Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.1.2), the base station should set all broadcast indicators to “ON” for the Quick Paging Channel broadcast slot which begins 100 ms prior

1 to the beginning of the Forward Common Control Channel slot in which the message
 2 containing the enhanced broadcast page begins. At all other times, the base station shall
 3 set all broadcast indicators for a Quick Paging Channel broadcast slot to “OFF”.

4 When the base station sends a broadcast page using Periodic Broadcast Paging (see
 5 3.6.2.4.1.1.2.1.2), the base station should set all broadcast indicators to “ON” for the Quick
 6 Paging Channel broadcast slot which begins 100 ms prior to the beginning of the Paging
 7 Channel slot in which the message containing the broadcast page begins. At all other
 8 times, the base station shall set all broadcast indicators for a Quick Paging Channel
 9 broadcast slot to “OFF”.

10 The base station shall set all reserved indicators to “OFF”.

11 3.6.2.5.1 Quick Paging Channel Determination

12 To determine the mobile station’s assigned Quick Paging Channel, the base station shall
 13 use the hash function specified in 2.6.7.1 with the following inputs:

- 14 • IMSI_S based on the IMSI with which the mobile station registered (see 2.3.1)
- 15 • Number of Quick Paging Channels which the base station transmits on the mobile
 16 station’s assigned CDMA Channel.

17 3.6.2.5.2 Quick Paging Channel Slot Determination

18 The mobile station’s assigned Quick Paging Channel slots are those slots for which

$$19 \lfloor (t+5)/4 \rfloor - \text{PGSLOT} \bmod (16 \times T) = 0,$$

20 where t is the System Time in 20ms frames, PGSLOT is selected in the range 0 to 2047 by
 21 using the hash function specified in 2.6.7.1, and T is the slot cycle length in units of 1.28
 22 seconds such that

$$23 T = 2^i,$$

24 and i is the slot cycle index which can take the values -4, -3, -2, -1, 0, 1, 2, 3, 4, 5, 6, and
 25 7.

26 3.6.2.5.3 Paging Indicator Position Determination

27 To determine the mobile station’s assigned paging indicators, the base station shall use the
 28 same formula as used by the mobile station (see 2.6.2.1.2.2).

29 3.6.2.5.4 Configuration Change Indicator Position Determination

30 Configuration change indicators are transmitted on the first Quick Paging Channel.

31 If the Quick Paging Channel data rate is 2400 bps (indicator rate is 4800 bps), the bit
 32 positions of the first pair of configuration change indicators in a Quick Paging Channel slot
 33 shall be the last two bits in the first 40 ms half of the Quick Paging Channel slot. The bit
 34 positions of the second pair of configuration change indicators in a Quick Paging Channel
 35 slot shall be the last two bits in the Quick Paging Channel slot.

36 If the Quick Paging Channel data rate is 4800 bps (indicator rate is 9600 bps), the bit
 37 positions of the first four configuration change indicators in a Quick Paging Channel slot
 38 shall be the last four bits in the first 40 ms half of the Quick Paging Channel slot. The bit

1 position of the second four configuration change indicators in a Quick Paging Channel slot
2 shall be the last four bits in the Quick Paging Channel slot.

3 3.6.2.5.5 Broadcast Indicator Position Determination

4 Broadcast indicators are transmitted on the first Quick Paging Channel.

5 On the first Quick Paging Channel, if the Quick Paging Channel data rate is 2400 bps
6 (indicator rate is 4800 bps), the broadcast indicator positions are described as follows:

- 7 • The two Quick Paging Channel bit positions prior to the last two bits in the first 40
8 ms half of a Quick Paging Channel broadcast slot are broadcast indicators. The two
9 Quick Paging Channel bit positions prior to the last two bits in a Quick Paging
10 Channel broadcast slot are also broadcast indicators.

11 On the first Quick Paging Channel, if the Quick Paging Channel data rate is 4800 bps
12 (indicator rate is 9600 bps), the broadcast indicator positions are described as follows:

- 13 • The four Quick Paging Channel bit positions prior to the last four bits in the first 40
14 ms half of a Quick Paging Channel broadcast slot are broadcast indicators. The
15 four Quick Paging Channel bit positions prior to the last four bits in a Quick Paging
16 Channel broadcast slot are also broadcast indicators.

17 3.6.2.5.6 Reserved Indicator Positions

18 On the first Quick Paging Channel, if the Quick Paging Channel data rate is 2400 bps
19 (indicator rate is 4800 bps), the reserved indicator positions are described as follows:

- 20 • The two Quick Paging Channel bit positions prior to the last two bits in the first 40
21 ms half of a Quick Paging Channel slot that is not a Quick Paging Channel
22 Broadcast slot are reserved. The two Quick Paging Channel bit positions prior to
23 the last two bits in a Quick Paging Channel slot that is not a Quick Paging Channel
24 Broadcast slot are also reserved.

25 On the first Quick Paging Channel, if the Quick Paging Channel data rate is 4800 bps
26 (indicator rate is 9600 bps), the reserved indicator positions are described as follows:

- 27 • The four Quick Paging Channel bit positions prior to the last four bits in the first 40
28 ms half of a Quick Paging Channel slot that is not a Quick Paging Channel
29 Broadcast slot are reserved. The four Quick Paging Channel bit positions prior to
30 the last four bits in a Quick Paging Channel slot that is not a Quick Paging Channel
31 Broadcast slot are also reserved.

32 On Quick Paging Channels other than the first Quick Paging Channel, if the Quick Paging
33 Channel data rate is 2400 bps (indicator rate is 4800 bps), the reserved indicator positions
34 are described as follows:

- 35 • The last four Quick Paging Channel bit positions in the first 40 ms half of a Quick
36 Paging Channel slot are reserved. The last four Quick Paging Channel bit positions
37 in a Quick Paging Channel slot are also reserved.

38 On Quick Paging Channels other than the first Quick Paging Channel, if the Quick Paging
39 Channel data rate is 4800 bps (indicator rate is 9600 bps), the reserved indicator positions
40 are described as follows:

- The last eight Quick Paging Channel bit positions in the first 40 ms half of a Quick Paging Channel slot are reserved. The last eight Quick Paging Channel bit positions in a Quick Paging Channel slot are also reserved.

3.6.3 Access Channel and Enhanced Access Channel Processing

During *Access Channel Processing*, the base station monitors the Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.

Each Access Channel is associated with a Paging Channel. Up to 32 Access Channels can be associated with a Paging Channel. The number of Access Channels associated with a particular Paging Channel is specified in the *Access Parameters Message* sent on that Paging Channel.

If the base station supports Access Channels, the base station shall continually monitor all Access Channels associated with each Paging Channel that the base station transmits.

If the base station supports Enhanced Access Channels, then during *Enhanced Access Channel Processing*, the base station monitors the Enhanced Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.

Each Enhanced Access Channel is associated with a Forward Common Control Channel. Up to 32 Enhanced Access Channels can be associated with a Forward Common Control Channel. The number of Enhanced Access Channels associated with a particular Forward Common Control Channel is specified in the *Enhanced Access Parameters Message* sent on the Primary Broadcast Control Channel.

If the base station supports Enhanced Access Channel, the base station shall continually monitor all Enhanced Access Channels associated with each Forward Common Control Channel that the base station transmits.

3.6.3.1 Reserved

3.6.3.2 Reserved

3.6.3.3 Response to Page Response Message and Reconnect Message

If the base station receives a *Page Response Message* or a *Reconnect Message* with the ORIG_IND field set to '0', the base station should send a *Channel Assignment Message* (if in response to a *Page Response Message*), an *Extended Channel Assignment Message*, or a *Release Order*. The base station may also start authentication procedures (see 2.3.12), start TMSI assignment procedures (see 2.3.15), send a *Data Burst Message*, or request status information records with the *Status Request Message*.

If the base station sends the *Extended Channel Assignment Message*, the base station may include more than one pilot to be in the Active Set.

If the base station sends a *Channel Assignment Message* or an *Extended Channel Assignment Message*, the base station shall perform the following:

- If the message directs the mobile station to a CDMA Traffic Channel, the base station shall begin *Traffic Channel Processing* (see 3.6.4) for the mobile station.

- 1 • If the reverse channel corresponding to forward channel included in this message is
2 separated by flexible channel spacing, the base station shall extend this message
3 using the General Extension Message and include a Reverse Channel Information
4 Record that specifies the reverse frequency to be used by the mobile station for the
5 traffic channel.
- 6 • Layer 3 shall send a *mobile station inactive on common channel* indication to Layer 2
7 (see [4]).

8 The base station may instruct the mobile station to use the stored service configuration
9 (that is, both the Service Configuration information record and the Non-negotiable Service
10 Configuration information record) by setting the GRANTED_MODE field of the *Extended*
11 *Channel Assignment Message* to '11'.

12 3.6.3.4 Response to Orders

13 No requirements.

14 3.6.3.5 Response to Origination Message and Reconnect Message

15 If the base station receives an *Origination Message*, *Call Recovery Request Message* or a
16 *Reconnect Message* with the ORIG_IND field set to '1', the base station should send a
17 *Channel Assignment Message* (if in response to an *Origination Message*), an *Extended*
18 *Channel Assignment Message*, an *Intercept Order*, a *Reorder Order*, a *Release Order*, a *Retry*
19 *Order*, a *PACA Message*, a *Service Redirection Message* or a *Service Status Order*. The base
20 station may also commence authentication procedures (see 2.3.12) or TMSI assignment
21 procedures (see 2.3.15). The base station may also request status information records with
22 the *Status Request Message*.

23 If the base station sends the *Extended Channel Assignment Message*, the base station may
24 include more than one pilot to be in the Active Set.

25 If the base station sends a *Channel Assignment Message* or an *Extended Channel*
26 *Assignment Message*, the base station shall perform the following:

- 27 • If the message directs the mobile station to a CDMA Traffic Channel, the base
28 station shall begin *Traffic Channel Processing* (see 3.6.4) for the mobile station.
- 29 • If the reverse channel corresponding to forward channel included in this message is
30 separated by flexible channel spacing, the base station shall extend this message
31 using the General Extension Message and include a Reverse Channel Information
32 Record that specifies the reverse frequency to be used by the mobile station for the
33 traffic channel.
- 34 • The base station shall raise a *mobile station inactive on common channel* indication
35 for the mobile station.

36 If the base station sends a *Channel Assignment Message*, the base station shall not set
37 RESPOND equal to '0' when ASSIGN_MODE = '001', ASSIGN_MODE = '010', or
38 ASSIGN_MODE = '101'. If the base station sends an *Extended Channel Assignment*
39 *Message*, the base station shall not set RESPOND equal to '0' when ASSIGN_MODE = '001'
40 or ASSIGN_MODE = '010'.

1 The base station may instruct the mobile station to use the stored service configuration
2 (that is, both the Service Configuration information record and the Non-negotiable Service
3 Configuration information record) by setting the GRANTED_MODE field of the *Extended*
4 *Channel Assignment Message* to '11'.

5 If the base station receives an *Origination Message* and the GLOBAL_EMERGENCY_CALL
6 indicator is set to '1' and the service associated with this origination is a voice service, the
7 base station shall recognize this as an emergency call and should process the message
8 using an implementation-dependent procedure which may include ignoring the dialed
9 digits. If the base station receives an *Origination Message* and the
10 GLOBAL_EMERGENCY_CALL indicator is set to '1' and the service associated with this
11 origination is not a voice service, the base station may recognize this as an emergency call
12 and should process the message using an implementation-dependent procedure which may
13 include ignoring the dialed digits.

14 3.6.3.6 Response to Registration Message

15 If the base station receives a *Registration Message*, the base station may send a *Registration*
16 *Accepted Order*, a *Registration Rejected Order*, or a *Service Redirection Message*. The base
17 station may also start authentication procedures (see 2.3.12), may start TMSI assignment
18 procedures (see 2.3.15), or may request status information records with the *Status Request*
19 *Message*.

20 If the *Registration Message* specifies a power-down registration, Layer 3 shall send a *mobile*
21 *station inactive on common channel* indication to Layer 2 (see [4]).

22 When responding to a *Registration Message* that requests extended encryption, if the base
23 station decides to turn on extended encryption and the CMEAKEY is available at the base
24 station, the base station shall send a *Registration Accepted Order* with encryption
25 information. Before the CMEAKEY is available, the base station may send a *Registration*
26 *Accepted Order* without any encryption information. When the CMEAKEY becomes
27 available, if the base station decides to turn on extended encryption, the base station shall
28 send a *Registration Accepted Order* with encryption information.

29 3.6.3.7 Response to Data Burst Message

30 If the base station receives a *Data Burst Message* with BURST_TYPE indicating Short Data
31 Burst (see [30]), the base station may send a *Retry Order*.

32 3.6.3.8 Reserved

33 3.6.3.9 Reserved

34 3.6.3.10 Service Redirection

35 If the base station sends a *Service Redirection Message* to the mobile station, Layer 3 shall
36 send a *mobile station inactive on common channel* indication to Layer 2 (see [4]).

37 3.6.3.11 Response to General Extension Message

38 If the base station receives a message that is extended through *General Extension Message*
39 the base station shall store the records and process the message as specified in section
40 3.6.3.1-3.6.3.8.

1 3.6.4 Traffic Channel Processing

2 During *Traffic Channel Processing*, the base station uses the Forward and Reverse Traffic
3 Channels to communicate with the mobile station while the mobile station is in the *Mobile*
4 *Station Control on the Traffic Channel State*.

5 Traffic Channel processing consists of the following substates:

- 6 • *Traffic Channel Initialization Substate* - In this substate, the base station begins
7 transmitting on the Forward Traffic Channel and receiving on the Reverse Traffic
8 Channel.
- 9 • *Traffic Channel Substate* - In this substate, the base station exchanges Traffic
10 Channel frames with the mobile station in accordance with the current service
11 configuration. While in this substate, one or more Call Control instances can be
12 activated (see 3.6.8).
- 13 • *Release Substate* - In this substate, the base station disconnects the calls and the
14 physical channels.

15 3.6.4.1 Special Functions and Actions

16 The base station performs the following special functions and actions in one or more of the
17 Traffic Channel processing substates:

18 3.6.4.1.1 Forward Traffic Channel Power Control

19 Forward Traffic Channel Power Control procedures do not apply to Forward Packet Data
20 Channel.

21 When the base station enables Forward Traffic Channel power control, the mobile station
22 reports frame error rate statistics to the base station using the *Power Measurement Report*
23 *Message*.

24 The base station may enable Forward Traffic Channel power control using the *System*
25 *Parameters Message* sent on the Paging Channel and the *Power Control Parameters Message*
26 sent on the Forward Traffic Channel. The base station may enable Forward Traffic Channel
27 power control using the *MC-RR Parameters Message* sent on the Primary Broadcast Control
28 Channel and the *Power Control Parameters Message* sent on the Forward Traffic Channel.
29 The base station may enable periodic reporting which causes the mobile station to report
30 frame error rate statistics at specified intervals. The base station may also enable
31 threshold reporting which causes the mobile station to report frame error rate statistics
32 when the frame error rate reaches a specified threshold.¹⁰⁰

33 The base station may use the reported frame error rate statistics to adjust the transmit
34 power of the Forward Traffic Channel.

¹⁰⁰In this section the term base station may imply multiple cells or sectors.

1 3.6.4.1.2 Service Configuration and Negotiation

2 During Traffic Channel operation, the mobile station and base station communicate
3 through the exchange of Forward and Reverse Traffic Channel Configurations. The mobile
4 station and base station use a common set of attributes for building and interpreting
5 Traffic Channel frames. This set of attributes, referred to as a service configuration,
6 consists of both negotiable and non-negotiable parameters.

7 The set of negotiable service configuration parameters consists of the following:

- 8 1. Forward and Reverse Multiplex Options: These control the way in which the
9 information bits of the Forward and Reverse Traffic Channel frames, respectively,
10 are divided into various types of traffic, such as signaling traffic, primary traffic
11 and secondary traffic. A multiplex option together with a radio configuration
12 specifies the frame structures and transmission rates (see [3]). The Multiplex
13 Options which support Supplemental Code Channel transmission and
14 Supplemental Channel transmission on the Forward and Reverse Traffic
15 Channels are included in [3]. Invocation of Supplemental Code Channel
16 operation on the Forward or Reverse Traffic Channels occurs by transmission of
17 the *Supplemental Channel Request Message*, the *Supplemental Channel*
18 *Assignment Message*, and the *General Handoff Direction Message*. The Multiplex
19 Options which support Supplemental Code Channel transmission and
20 Supplemental Channel transmission on the Forward and Reverse Traffic
21 Channels are included in [3]. The multiplex option used for the Forward Traffic
22 Channel can be the same as that used for the Reverse Traffic Channel, or it can
23 be different.
- 24 2. *Forward and Reverse Traffic Channel Configurations*: These include the radio
25 configurations and other necessary attributes for the Forward and Reverse Traffic
26 Channels. The Traffic Channel Configuration used can be different for the
27 Forward and Reverse Traffic Channels or it can be the same.
- 28 3. Forward and Reverse Traffic Channel Transmission Rates: These are the
29 transmission rates actually used for the Forward and Reverse Traffic Channels,
30 respectively. The transmission rates for the Forward Traffic Channel can include
31 all of the transmission rates supported by the radio configuration associated with
32 the Forward Traffic Channel multiplex option, or a subset of the supported rates.
33 Similarly, the transmission rates used for the Reverse Traffic Channel can include
34 all rates supported by the radio configuration associated with the Reverse Traffic
35 Channel multiplex option, or a subset of the supported rates. The transmission
36 rates used for the Forward Traffic Channel can be the same as those used for the
37 Reverse Traffic Channel, or they can be different.
- 38 4. Service Option Connections: These are the services in use on the Traffic Channel.
39 There can be multiple service option connections. It is also possible that there is
40 no service option connection, in which case the base station uses the Forward
41 Traffic Channel as follows:
 - 42 • Sends signaling traffic and null traffic on the Forward Fundamental
43 Channel.

- 1 • Sends signaling traffic on the Forward Dedicated Control Channel.
- 2 • If F-CPCCH is assigned, sends power control bits on the F-CPCCH;
- 3 otherwise, sends power control bits on the Forward Fundamental Channel
- 4 if FPC_PRI_CHAN is set to '0'; sends power control bits on the Forward
- 5 Dedicated Control Channel if FPC_PRI_CHAN is set to '1'.

6 Associated with each service option connection are a service option, a Forward
7 Traffic Channel traffic type, a Reverse Traffic Channel traffic type, and a service
8 option connection reference. The associated service option formally defines the
9 way in which traffic bits are processed by the mobile station and base station. The
10 associated Forward and Reverse Traffic Channel traffic types specify the types of
11 traffic used to support the service option. A service option can require the use of a
12 particular type of traffic, such as primary or secondary, or it can accept more than
13 one traffic type. A service option can be one-way, in which case it can be
14 supported on the Forward Traffic Channel only or the Reverse Traffic Channel
15 only. Alternatively, a service option can be two-way, in which case it can be
16 supported on the Forward and Reverse Traffic Channels simultaneously.
17 Connected service options can also invoke operation on Supplemental Code
18 Channels in either one or both of the Forward and Reverse Traffic Channels by
19 negotiating a multiplex option that supports operation on Supplemental Code
20 Channels (see [3] for Multiplex Options applicable to Supplemental Code
21 Channels), and by using the appropriate Supplemental Code Channel related
22 messages (i.e., the *Supplemental Channel Request Message*, the *Supplemental*
23 *Channel Assignment Message*, and the *General Handoff Direction Message*). After
24 Supplemental Code Channels have been assigned by the base station, the
25 connected service option can transmit primary and/or secondary traffic on
26 Supplemental Code Channels. Connected service options can also invoke
27 operation on Supplemental Channels in either one or both of the Forward and
28 Reverse Traffic Channels by negotiating a multiplex option that supports operation
29 on Supplemental Channels (see [3] for Multiplex Options applicable to
30 Supplemental Channels) and by using the appropriate Supplemental Channel
31 related messages (i.e., the *Supplemental Channel Request Message*, the *Universal*
32 *Handoff Direction Message*, the *Supplemental Channel Request Mini Message*, the
33 *Extended Supplemental Channel Assignment Message*, the *Forward Supplemental*
34 *Channel Assignment Mini Message*, and the *Reverse Supplemental Channel*
35 *Assignment Mini Message*). After Supplemental Channels have been assigned by
36 the base station, the connected service option can transmit primary and/or
37 secondary traffic on Supplemental Channels. The associated service option
38 connection reference provides a means for uniquely identifying the service option
39 connection. The reference serves to resolve ambiguity when there are multiple
40 service option connections in use.

41 The non-negotiable service configuration parameters are sent from the base station to the
42 mobile stations only, and consist of the following:

- 1 1. *Reverse Pilot Gating Rate*: This controls the way in which the reverse pilot is gated
2 on the Reverse Pilot Channel. The base station specifies the reverse pilot gating rate
3 to be used in the *Service Connect Message*, the *General Handoff Direction Message*,
4 and the *Universal Handoff Direction Message*.
- 5 2. *Forward and Reverse Power Control Parameters*: These consist of forward power
6 control operation mode, outer loop power control parameters (e.g. target frame error
7 rate, minimum E_b/N_t setpoint, and maximum E_b/N_t setpoint) for the Forward
8 Fundamental Channel and Forward Dedicated Control Channel, and Power Control
9 Subchannel indicator which indicates where the mobile station is to perform the
10 primary inner loop estimation and the base station is to multiplex the Power Control
11 Subchannel.
- 12 3. *Logical to Physical Mapping*: This is a table of logical to physical mapping entries,
13 consisting of service reference identifier, logical resource, physical resource, forward
14 flag, reverse flag, and priority.
- 15 4. *Partition Table*: The base station may include this table to specify the number of bits
16 allocated for each service in the Fundamental Channel or Dedicated Control
17 Channel.
- 18 5. *SCH LTU Size Table*: The base station may include this table to specify the number
19 of bits per supplemental channel LTU.
- 20 6. Information related to Variable Rate feature (the capability to support rate
21 determination) on Forward and Reverse Supplemental Channels
- 22 7. Information related to Flexible Rate feature (the capability to support non-listed
23 rates) on Forward and Reverse Fundamental Channel, Dedicated Control Channel,
24 and Supplemental Channels

25 The mobile station can request a default service configuration associated with a service
26 option at call origination, and can request new service configurations during Traffic
27 Channel operation. A requested service configuration can differ greatly from its
28 predecessor or it can be very similar. For example, the mobile station can request a service
29 configuration in which all of the service option connections are different from those of the
30 existing configuration; or the mobile station can request a service configuration in which
31 the existing service option connections are maintained with only minor changes, such as a
32 different set of transmission rates or a different mapping of service option connections to
33 Forward and Reverse Traffic Channel traffic types.

34 If the mobile station requests a service configuration that is acceptable to the base station,
35 they both begin using the new service configuration. If the mobile station requests a
36 service configuration that is not acceptable to the base station, the base station can reject
37 the requested service configuration or propose an alternative service configuration. If the
38 base station proposes an alternative service configuration, the mobile station can accept or
39 reject the base station's proposed service configuration, or propose yet another service
40 configuration. This process, called service negotiation, ends when the mobile station and
41 base station find a mutually acceptable service configuration, or when either the mobile
42 station or base station rejects a service configuration proposed by the other.

1 It is also possible for the base station to request a default service configuration, associated
2 with a service option, when paging the mobile station and to request new service
3 configurations during Traffic Channel operation. The service negotiation proceeds as
4 described above, but with the roles of the mobile station and base station reversed.

5 For CDMA mode operation in Band Class 0, the mobile station and base station can also
6 use an alternative method for negotiating a service configuration known as service option
7 negotiation. Service option negotiation is similar to service negotiation, but offers less
8 flexibility for specifying the attributes of the service configuration. During service option
9 negotiation, the base station or mobile station specifies only which service option is to be
10 used. There is no facility for explicitly specifying the multiplex options, traffic types or
11 transmission rates to be used on the Forward and Reverse Traffic Channels in conjunction
12 with the service option. Instead, implicit service configuration attributes are assumed. In
13 particular, the Forward and Reverse Multiplex Options and transmission rates are
14 assumed to be the default multiplex options and transmission rates associated with the
15 requested service option, and the traffic type for both the Forward and Reverse Traffic
16 Channels is assumed to be primary traffic. Furthermore, a service configuration
17 established using service option negotiation is restricted to having only a single service
18 option connection.

19 At mobile station origination and termination, the type of negotiation to use, either service
20 negotiation or service option negotiation, is indicated in the *Channel Assignment Message*.
21 Service negotiation is always used with the *Extended Channel Assignment Message*. If a
22 CDMA-to-CDMA hard handoff occurs during the call, the type of negotiation to use
23 following the handoff is indicated in the *Extended Handoff Direction Message*, *General*
24 *Handoff Direction Message*, or *Universal Handoff Direction Message*.

25 For CDMA mode operation in band classes other than Band Class 0, only service
26 negotiation is to be used.

27 The following messages are used to support service negotiation:

- 28 1. *Service Request Message*: The mobile station can use this message to propose a
29 service configuration, or to accept or reject a service configuration proposed in a
30 *Service Response Message*. The base station can use this message to propose a
31 service configuration, or to reject a service configuration proposed in a *Service*
32 *Response Message*.
- 33 2. *Service Response Message*: The mobile station can use this message to accept or
34 reject a service configuration proposed in a *Service Request Message*, or to propose
35 an alternative service configuration. The base station can use this message to
36 reject a service configuration proposed in a *Service Request Message*, or to propose
37 an alternative service configuration.
- 38 3. *Service Connect Message*: The base station can use this message to accept a
39 service configuration proposed in a *Service Request Message* or *Service Response*
40 *Message*, and instruct the mobile station to begin using the service configuration.
41 The base station may use this message to instruct the mobile station to use the
42 stored service configuration (that is, both the Service Configuration information
43 record and the Non-negotiable Service Configuration information record) based on

- 1 the value of the SYNC_ID that the mobile station has reported in the *Origination*
 2 *Message* or *Page Response Message*. If P_REV_IN_USE is greater than or equal to
 3 11, the base station can use this message to instruct the mobile station to use the
 4 stored service configuration (that is, both the Service Configuration information
 5 record and the Non-negotiable Service Configuration information record) based on
 6 the value of the SYNC_ID that the base station has included in this message.
- 7 4. *Service Connect Completion Message*: The mobile station can use this message to
 8 acknowledge the transition to a new service configuration.
 - 9 5. *Service Option Control Message*: The mobile station and base station can use this
 10 message to invoke service option specific functions.
 - 11 6. *Extended Channel Assignment Message*: The base station can use this message to
 12 accept or reject the initial service configuration proposed by the mobile station in
 13 an *Origination Message* or a *Page Response Message*.

14 The following messages are used to support service option negotiation:

- 15 1. *Service Option Request Order*: The mobile station and base station can use this
 16 message either to request a service option or suggest an alternative service option.
- 17 2. *Service Option Response Order*: The mobile station and base station can use this
 18 message to accept or reject a service option request.
- 19 3. *Service Option Control Order*: The mobile station and base station can use this
 20 message to invoke service option specific functions.

21 The following messages are used to support both service negotiation and service option
 22 negotiation:

- 23 1. *Origination Message*: The mobile station can use this message to propose an initial
 24 service configuration.
- 25 2. *Channel Assignment Message*: The base station can use this message to accept or
 26 reject the initial service configuration proposed by the mobile station in an
 27 *Origination Message* or a *Page Response Message*, and to indicate which type of
 28 negotiation, either service negotiation or service option negotiation, is to be used
 29 during the call.
- 30 3. *Extended Handoff Direction Message*: The base station can use this message to
 31 indicate which type of negotiation, either service negotiation or service option
 32 negotiation, is to be used following a CDMA-to-CDMA hard handoff.
- 33 4. *General Handoff Direction Message*: The base station can use this message to
 34 indicate which type of negotiation, either service negotiation or service option
 35 negotiation, is to be used following a CDMA-to-CDMA hard handoff. The base
 36 station can use this message to accept a service configuration proposed in a *Service*
 37 *Request Message* or *Service Response Message*. The base station can also use this
 38 message to instruct the mobile station to begin using the service configuration.

- 1 5. *General Page Message* or *Universal Page Message*: The base station can use a
2 mobile-station-addressed page in a *General Page Message* or *Universal Page*
3 *Message* to propose an initial service configuration.
- 4 6. *Page Response Message*: The mobile station can use this message to accept or
5 reject the initial service configuration proposed by the base station in a mobile-
6 station-addressed page, or to propose an alternative initial service configuration.
- 7 7. *Status Request Message*: The base station can use this message to request service
8 capability information from the mobile station.
- 9 8. *Status Response Message*: The mobile station can use this message to return the
10 service capability information requested by the base station in a *Status Request*
11 *Message*.
- 12 9. *Extended Status Response Message*: The mobile station can use this message to
13 return the service capability information requested by the base station in a *Status*
14 *Request Message*.
- 15 10. *Universal Handoff Direction Message*: The base station can use this message to
16 indicate which type of negotiation, either service negotiation or service option
17 negotiation, is to be used following a CDMA-to-CDMA hard handoff. The base
18 station can use this message to accept a service configuration proposed in a *Service*
19 *Request Message* or *Service Response Message*. The base station can also use this
20 message to instruct the mobile station to begin using the service configuration.

21 3.6.4.1.2.1 Use of Variables

22 3.6.4.1.2.1.1 Maintaining the Service Request Sequence Number

23 The base station shall maintain a service request sequence number variable,
24 SERV_REQ_NUM, for use with service negotiation. Upon beginning Traffic Channel
25 processing, the base station shall set SERV_REQ_NUM to 0. Each time the base station
26 sends a new *Service Request Message*, it shall set the SERV_REQ_SEQ field of the message
27 to the current value of SERV_REQ_NUM and shall then set SERV_REQ_NUM equal to
28 (SERV_REQ_NUM + 1) modulo 8.

29 3.6.4.1.2.1.2 Maintaining the Service Connect Sequence Number

30 The base station shall maintain a service connect sequence number variable,
31 SERV_CON_NUM, for use with service negotiation. Upon beginning Traffic Channel
32 processing, the base station shall set SERV_CON_NUM to 0. Each time the base station
33 sends a new *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal*
34 *Handoff Direction Message* containing a service configuration record, it shall set the
35 SERV_CON_SEQ field of the message to the current value of SERV_CON_NUM and shall
36 then set SERV_CON_NUM equal to (SERV_CON_NUM + 1) modulo 8.

37 3.6.4.1.2.1.3 Assigning Service Option Connection References

38 When the base station assigns a service option connection reference for use in identifying a
39 new service option connection during service negotiation, the base station shall use the
40 following criteria:

- 1 1. The base station shall not assign a reference equal to '00000000'; and
- 2 2. The base station shall not assign a reference that is associated with a service
- 3 option connection of the current service configuration; and
- 4 3. If there was a previous service configuration, the base station shall not assign a
- 5 reference that was associated with a service option connection of the previous
- 6 service configuration.

7 3.6.4.1.2.1.4 Maintaining the Service Negotiation Indicator Variable

8 The base station shall maintain a service negotiation indicator variable, SERV_NEG, to
9 indicate which type of negotiation to use, either service negotiation or service option
10 negotiation. The base station shall set SERV_NEG to enabled whenever service negotiation
11 is to be used, and shall set SERV_NEG to disabled whenever service option negotiation is to
12 be used. The precise rules for setting SERV_NEG are specified in 3.6.4.2 and 3.6.6.2.2.2.

13 For CDMA operation in band classes other than Band Class 0, the base station shall set
14 SERV_NEG to enabled.

15 3.6.4.1.2.1.5 Maintaining the Service Option Request Number

16 The base station shall maintain a service option request number variable, SO_REQ, for use
17 with service option negotiation. The base station shall set SO_REQ to a special value,
18 NULL, if the base station does not have an outstanding service option request. If the base
19 station has an outstanding service option request, the base station shall set SO_REQ to the
20 number of the service option associated with the outstanding request.

21 3.6.4.1.2.2 Service Subfunctions

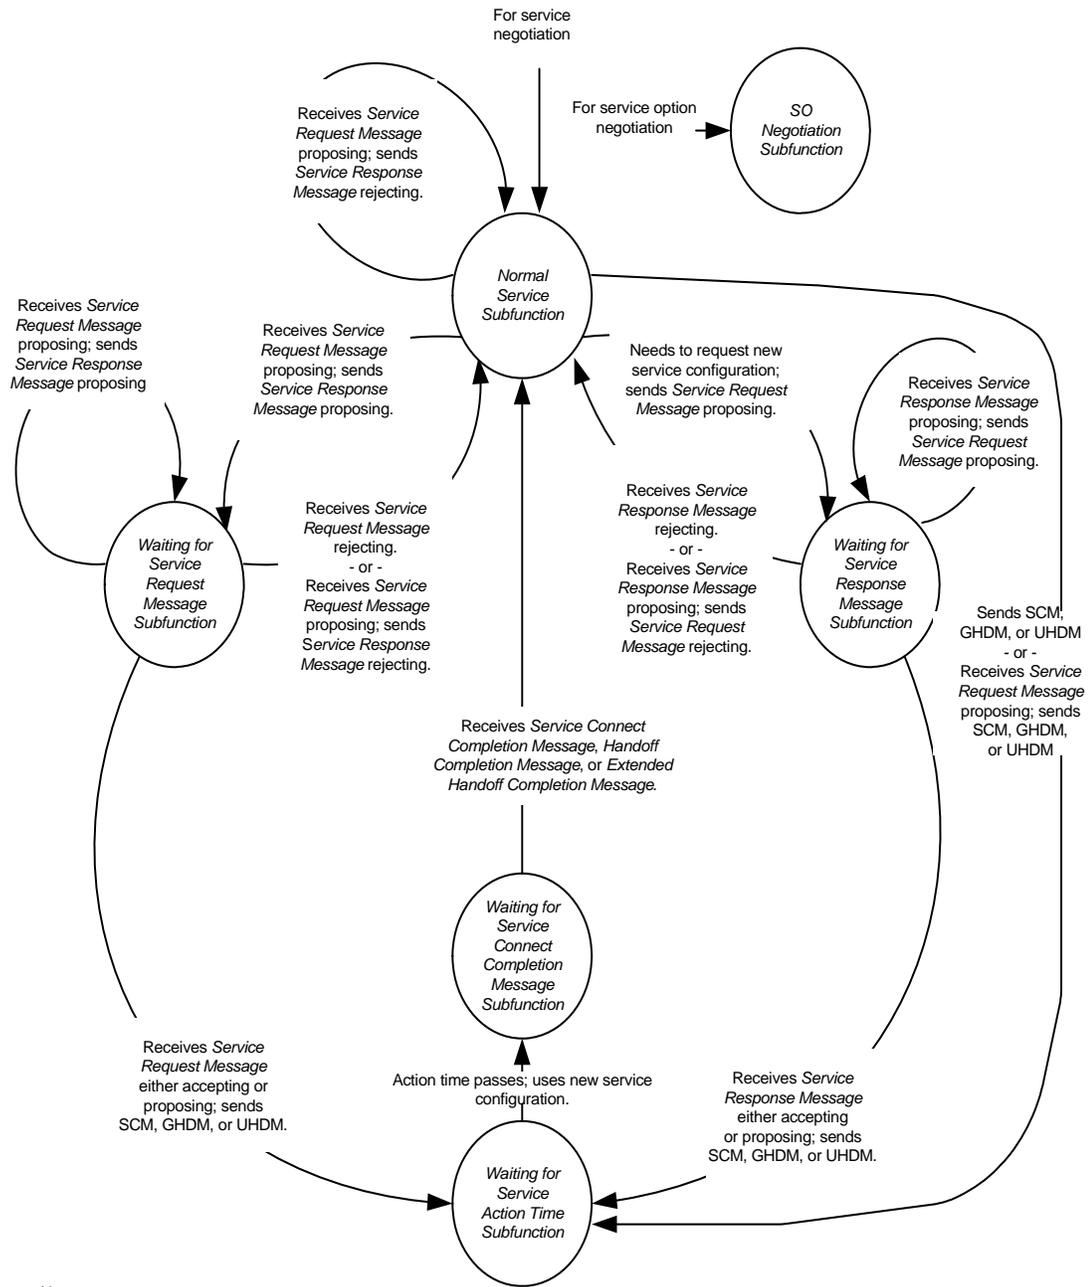

22 As illustrated in Figure 3.6.4.1.2.2-1, the base station supports service configuration and
23 negotiation by performing the following set of service subfunctions.

- 24 • *Normal Service Subfunction* - While this subfunction is active, the base station
25 processes service configuration requests from the mobile station and sends service
26 configuration requests to the mobile station.
- 27 • *Waiting for Service Request Message Subfunction* - While this subfunction is active,
28 the base station waits to receive a *Service Request Message*.
- 29 • *Waiting for Service Response Message Subfunction* - While this subfunction is active,
30 the base station waits to receive a *Service Response Message*.
- 31 • *Waiting for Service Action Time Subfunction* - While this subfunction is active, the
32 base station waits for the action time associated with a new service configuration.
- 33 • *Waiting for Service Connect Completion Message Subfunction* - While this subfunction
34 is active, the base station waits to receive a *Service Connect Completion Message*, a
35 *Handoff Completion Message*, or an *Extended Handoff Completion Message*.
- 36 • *SO Negotiation Subfunction* - While this subfunction is active and the base station is
37 operating in Band Class 0, the base station supports service option negotiation with
38 the mobile station.

1 The *SO Negotiation Subfunction* supports service option negotiation. All of the other service
2 subfunctions support service negotiation.

3 At any given time during Traffic Channel processing, only one of the service subfunctions is
4 active. For example, when the base station first begins Traffic Channel processing, either
5 the *Normal Service Subfunction* or the *SO Negotiation Subfunction* is active. Each of the
6 other service subfunctions may become active in response to various events which occur
7 during the Traffic Channel substates. Typically, the base station processes events
8 pertaining to service configuration and negotiation in accordance with the requirements for
9 the active service subfunction. However, some Traffic Channel substates do not allow for
10 the processing of certain events pertaining to service configuration and negotiation, or
11 specify requirements for processing such events which supersede the requirements of the
12 active service subfunction.

13

- Notes:
- SCM stands for *Service Connect Message*.
 - GHDM stands for *General Handoff Direction Message*.
 - UHDM stands for *Universal Handoff Direction Message*.
 - Processing for special cases, such as timeouts and errors, is not shown in this diagram.

Figure 3.6.4.1.2.2-1. Base Station Service Subfunctions

1 3.6.4.1.2.2.1 Normal Service Subfunction

2 While this subfunction is active, the base station processes service configuration requests
3 from the mobile station and sends service configuration requests to the mobile station.

4 While the *Normal Service Subfunction* is active, the base station shall perform the following:

- 5 • The base station shall process Forward and Reverse Traffic Channel frames in
6 accordance with the current service configuration. The base station shall discard
7 any Reverse Traffic Channel frame which has a format that is not supported by the
8 base station. The base station may discard any type of Reverse Traffic Channel
9 traffic that is not signaling traffic and is not part of the current service
10 configuration.
- 11 • To initiate service negotiation for a new service configuration, the base station shall
12 send a *Service Request Message* to propose the new service configuration and shall
13 activate the *Waiting for Service Response Message Subfunction*.
- 14 • For any service option connection that is part of the current service configuration,
15 the base station may send a *Service Option Control Message* to invoke a service
16 option specific function in accordance with the requirements for the associated
17 service option.
- 18 • The base station may send a *Service Connect Message*, a *General Handoff Direction*
19 *Message*, or a *Universal Handoff Direction Message* containing a service
20 configuration record. If the base station sends this message, the base station shall
21 activate the *Waiting for Service Action Time Subfunction*.
- 22 • If SERV_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
23 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 24 • If the base station receives one of the following service negotiation messages, the
25 base station shall process the message according to the specified requirements, if
26 any:
 - 27 1. *Service Connect Completion Message*
 - 28 2. *Service Option Control Message*: If the service option connection specified by the
29 message is part of the current service configuration, and the service option
30 specified by the message is the same as the service option associated with the
31 service option connection, the base station shall process the message in
32 accordance with the requirements for the service option.
 - 33 3. *Service Request Message*: The base station shall process the message as follows:
 - 34 • If the purpose of the message is to propose a service configuration, the base
35 station shall process the message as follows:
 - 36 – If the base station accepts the proposed service configuration, the base
37 station shall send a *Service Connect Message*, a *General Handoff Direction*
38 *Message*, or a *Universal Handoff Direction Message* containing a service
39 configuration record and shall activate the *Waiting for Service Action Time*
40 *Subfunction*.

- 1 – If the base station does not accept the proposed service configuration
2 and does not have an alternative service configuration to propose, the
3 base station shall send a *Service Response Message* to reject the
4 proposed service configuration.
- 5 – If the base station does not accept the proposed service configuration
6 and has an alternative service configuration to propose, the base station
7 shall perform one of the following actions:
- 8
- 9 o Send a *Service Response Message* to propose the alternative
10 service configuration and shall activate the *Waiting for Service*
11 *Request Message Subfunction*, or
- 12 o Send a *Service Connect Message*, a *General Handoff Direction*
13 *Message*, or a *Universal Handoff Direction Message* containing a
14 service configuration record and shall activate the *Waiting for*
15 *Service Action Time Subfunction*

16 4. *Service Response Message*

- 17 • If the base station receives one of the following service option negotiation messages,
18 the base station shall process the message according to the specified requirements,
19 if any:

- 20 1. *Service Option Request Order*
- 21 2. *Service Option Response Order*
- 22 3. *Service Option Control Order*

23 3.6.4.1.2.2.2 *Waiting for Service Request Message Subfunction*

24 While this subfunction is active, the base station waits to receive a *Service Request*
25 *Message*.

26 While the *Waiting for Service Request Message Subfunction* is active, the base station shall
27 perform the following:

- 28 • If the base station does not receive a *Service Request Message*, the base station shall
29 activate the *Normal Service Subfunction*.
- 30 • The base station shall process Forward and Reverse Traffic Channel frames in
31 accordance with the current service configuration. The base station shall discard
32 any Reverse Traffic Channel frame which has a format that is not supported by the
33 base station. The base station may discard any type of Reverse Traffic Channel
34 traffic that is not signaling traffic and is not part of the current service
35 configuration.
- 36 • For any service option connection that is part of the current service configuration,
37 the base station may send a *Service Option Control Message* to invoke a service
38 option specific function in accordance with the requirements for the associated
39 service option.

- 1 • If SERV_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
2 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 3 • If the base station receives one of the following service negotiation messages, the
4 base station shall process the message according to the specified requirements, if
5 any:
- 6 1. *Service Connect Completion Message*
- 7 2. *Service Option Control Message*: If the service option connection specified by the
8 message is part of the current service configuration, and the service option
9 specified by the message is the same as the service option associated with the
10 service option connection, the base station shall process the message in
11 accordance with the requirements for the service option.
- 12 3. *Service Request Message*: The base station shall process the message as follows:
- 13 • If the purpose of the message is to accept a proposed service configuration,
14 the base station shall perform one of the following actions:
- 15 – The base station shall send a *Service Connect Message*, *General Handoff*
16 *Direction Message*, or *Universal Handoff Direction Message* and shall
17 activate the *Waiting for Service Action Time Subfunction*.
- 18 – The base station shall send a *Service Request Message* to propose an
19 alternative service configuration and shall activate the *Waiting for Service*
20 *Response Message Subfunction*.
- 21 • If the purpose of the message is to reject a proposed service configuration,
22 the base station shall activate the *Normal Service Subfunction*.
- 23 • If the purpose of the message is to propose a service configuration, the base
24 station shall process the message as follows:
- 25 – If the base station accepts the proposed service configuration, the base
26 station shall send a *Service Connect Message*, a *General Handoff Direction*
27 *Message*, or a *Universal Handoff Direction Message* containing a service
28 configuration record and shall activate the *Waiting for Service Action Time*
29 *Subfunction*.
- 30 – If the base station does not accept the proposed service configuration
31 and does not have an alternative service configuration to propose, the
32 base station shall send a *Service Response Message* to reject the
33 proposed service configuration. The base station shall activate the
34 *Normal Service Subfunction*.
- 35 – If the base station does not accept the proposed service configuration
36 and has an alternative service configuration to propose, the base station
37 shall perform one of the following actions:
- 38 o Send a *Service Response Message* to propose the alternative service
39 configuration, or

- 1 o Send a *Service Connect Message*, a *General Handoff Direction*
 2 *Message*, or a *Universal Handoff Direction Message* containing a
 3 service configuration record and shall activate the *Waiting for Service*
 4 *Action Time Subfunction*

5 4. *Service Response Message*

- 6 • If the base station receives one of the following service option negotiation messages,
 7 the base station shall process the message according to the specified requirements,
 8 if any:

- 9 1. *Service Option Request Order*
 10 2. *Service Option Response Order*
 11 3. *Service Option Control Order*

12 3.6.4.1.2.2.3 *Waiting for Service Response Message Subfunction*

13 While this subfunction is active, the base station waits to receive a *Service Response*
 14 *Message*.

15 While the *Waiting for Service Response Message Subfunction* is active, the base station shall
 16 perform the following:

- 17 • If the base station does not receive a *Service Response Message*, the base station
 18 shall activate the *Normal Service Subfunction*.
- 19 • The base station shall process Forward and Reverse Traffic Channel frames in
 20 accordance with the current service configuration. The base station shall discard
 21 any Reverse Traffic Channel frame which has a format that is not supported by the
 22 base station. The base station may discard any type of Reverse Traffic Channel
 23 traffic that is not signaling traffic and is not part of the current service
 24 configuration.
- 25 • For any service option connection that is part of the current service configuration,
 26 the base station may send a *Service Option Control Message* to invoke a service
 27 option specific function in accordance with the requirements for the associated
 28 service option.
- 29 • If SERV_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
 30 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 31 • If the base station receives one of the following service negotiation messages, the
 32 base station shall process the message according to the specified requirements, if
 33 any:
- 34 1. *Service Connect Completion Message*
- 35 2. *Service Option Control Message*: If the service option connection specified by the
 36 message is part of the current service configuration, and the service option
 37 specified by the message is the same as the service option associated with the
 38 service option connection, the base station shall process the message in
 39 accordance with the requirements for the service option.

- 1 3. *Service Request Message*: The base station should not process the Layer 3 fields
2 of the message.
- 3 4. *Service Response Message*: The base station shall process the message as
4 follows:
- 5 • If the service request sequence number (SERV_REQ_SEQ) from the message
6 does not match the sequence number of the *Service Request Message* for
7 which the base station is expecting a response, the base station shall not
8 process the Layer 3 fields of the message.
 - 9 • If the purpose of the message is to accept a proposed service configuration,
10 the base station shall perform one of the following actions:
 - 11 – The base station shall send a *Service Connect Message*, a *General*
12 *Handoff Direction Message*, or a *Universal Handoff Direction Message*
13 containing a service configuration record and shall activate the *Waiting*
14 *for Service Action Time Subfunction*. Or
 - 15 – The base station shall send a *Service Request Message* to propose an
16 alternative service configuration.
 - 17 • If the purpose of the message is to reject a proposed service configuration,
18 the base station shall activate the *Normal Service Subfunction*.
 - 19 • If the purpose of the message is to propose a service configuration, the base
20 station shall process the message as follows:
 - 21 – If the base station accepts the proposed service configuration, the base
22 station shall send a *Service Connect Message*, a *General Handoff Direction*
23 *Message*, or a *Universal Handoff Direction Message* containing a service
24 configuration record and shall activate the *Waiting for Service Action Time*
25 *Subfunction*.
 - 26 – If the base station does not accept the proposed service configuration
27 and does not have an alternative service configuration to propose, the
28 base station shall send a *Service Request Message* to reject the proposed
29 service configuration. The base station shall activate the *Normal Service*
30 *Subfunction*.
 - 31 – If the base station does not accept the proposed service configuration
32 and has an alternative service configuration to propose, the base station
33 shall perform one of the following actions:
 - 34 o Send a *Service Request Message* to propose the alternative service
35 configuration, or
 - 36 o Send a *Service Connect Message*, a *General Handoff Direction*
37 *Message*, or a *Universal Handoff Direction Message* containing a
38 service configuration record and shall activate the *Waiting for Service*
39 *Action Time Subfunction*

- 1 • If the base station receives one of the following service option negotiation messages,
2 the base station shall process the message according to the specified requirements,
3 if any:

- 4 1. *Service Option Request Order*
5 2. *Service Option Response Order*
6 3. *Service Option Control Order*

7 3.6.4.1.2.2.4 *Waiting for Service Action Time Subfunction*

8 While this subfunction is active, the base station waits for the action time associated with a
9 new service configuration.

10 While the *Waiting for Service Action Time Subfunction* is active, the base station shall
11 perform the following:

- 12 • Prior to the action time associated with the *Service Connect Message*, a *General*
13 *Handoff Direction Message*, or *Universal Handoff Direction Message* containing a
14 service configuration record, the base station shall process Forward and Reverse
15 Traffic Channel frames in accordance with the current service configuration. The
16 base station shall discard any Reverse Traffic Channel frame which has a format
17 that is not supported by the base station. The base station may discard any type of
18 Reverse Traffic Channel traffic that is not signaling traffic and is not part of the
19 current service configuration.
- 20 • At the action time associated with the *Service Connect Message*, *General Handoff*
21 *Direction Message*, or *Universal Handoff Direction Message* containing a service
22 configuration record, the base station shall begin to use the service configuration
23 specified by the *Service Connect Message*, the *General Handoff Direction Message*, or
24 the *Universal Handoff Direction Message* containing a service configuration record,
25 as the current service configuration and shall begin to process Forward and Reverse
26 Traffic Channel frames accordingly. The base station shall activate the *Waiting for*
27 *Service Connect Completion Message Subfunction*.
- 28 • If SERV_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
29 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 30 • If the base station receives one of the following service negotiation messages, the
31 base station shall process the message according to the specified requirements, if
32 any:
- 33 1. *Service Connect Completion Message*
- 34 2. *Service Option Control Message*: If the service option connection specified by the
35 message is part of the current or pending service configuration, and the service
36 option specified by the message is the same as the service option associated
37 with the service option connection, the base station shall process the message
38 in accordance with the requirements for the service option.
- 39 3. *Service Request Message*

- 1 4. *Service Response Message*
- 2 • If the base station receives one of the following service option negotiation messages,
- 3 the base station shall process the message according to the specified requirements,
- 4 if any:
- 5 1. *Service Option Request Order*
- 6 2. *Service Option Response Order*
- 7 3. *Service Option Control Order*

8 3.6.4.1.2.2.5 *Waiting for Service Connect Completion Message Subfunction*

9 While this subfunction is active, the base station waits to receive a *Service Connect*

10 *Completion Message*, a *Handoff Completion Message*, or an *Extended Handoff Completion*

11 *Message*.

12 While the *Waiting for Service Connect Completion Message Subfunction* is active, the base

13 station shall perform the following:

- 14 • If the base station has sent a *Service Connect Message* and does not receive a
- 15 *Service Connect Completion Message*, or if the base station has sent a *General*
- 16 *Handoff Direction Message* or a *Universal Handoff Direction Message* containing a
- 17 Service Configuration record and does not receive a *Handoff Completion Message*, or
- 18 an *Extended Handoff Completion Message*, the base station shall activate the *Normal*
- 19 *Service Subfunction*.
- 20 • The base station shall process Forward and Reverse Traffic Channel frames in
- 21 accordance with the current service configuration. The base station shall discard
- 22 any Reverse Traffic Channel frame which has a format that is not supported by the
- 23 base station. The base station may discard any type of Reverse Traffic Channel
- 24 traffic that is not signaling traffic and is not part of the current service
- 25 configuration.
- 26 • The base station shall not initiate service negotiation for a new service
- 27 configuration.
- 28 • If SERV_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
- 29 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 30 • If the base station receives one of the following service negotiation messages, the
- 31 base station shall process the message according to the specified requirements, if
- 32 any:
- 33 1. *Service Connect Completion Message, Handoff Completion Message, or Extended*
- 34 *Handoff Completion Message*: The base station shall activate the *Normal Service*
- 35 *Subfunction*.
- 36 2. *Service Option Control Message*: If the service option connection specified by the
- 37 message is part of the current service configuration, and the service option
- 38 specified by the message is the same as the service option associated with the
- 39 service option connection, the base station shall process the message in
- 40 accordance with the requirements for the service option.

1 3. *Service Request Message*

2 4. *Service Response Message*

3 • If the base station receives one of the following service option negotiation messages,
4 the base station shall process the message according to the specified requirements,
5 if any:

6 1. *Service Option Request Order*

7 2. *Service Option Response Order*

8 3. *Service Option Control Order*

9 3.6.4.1.2.2.6 SO Negotiation Subfunction

10 While this subfunction is active, the base station supports service option negotiation with
11 the mobile station.

12 Upon activating the *SO Negotiation Subfunction*, the base station shall set SO_REQ to NULL.
13 The base station shall delete from the current service configuration any service option
14 connection which does not use primary traffic on both the Forward and Reverse Traffic
15 Channels.

16 While the *SO Negotiation Subfunction* is active, the base station shall perform the following:

- 17 • If the current service configuration includes a service option connection, the base
18 station shall process the received primary traffic bits in accordance with the
19 requirements for the service option associated with the service option connection;
20 otherwise, the base station shall discard the received primary traffic bits.
- 21 • If the current service configuration includes a service option connection, the base
22 station shall transmit primary traffic bits in accordance with the requirements for
23 the service option associated with the service option connection; otherwise, the base
24 station shall transmit null traffic and power control bits on the Forward
25 Fundamental Channel, if the Fundamental channel is present to transmit power
26 control bits on the Forward Dedicated Control Channel, if only the Dedicated
27 Control Channel is present.
- 28 • If the current service configuration includes a service option connection, the base
29 station may send a *Service Option Control Order* to invoke a service option specific
30 function in accordance with the requirements for the service option associated with
31 the service option connection.
- 32 • To initiate service option negotiation, the base station shall set SO_REQ to the
33 number of the requested service option and shall send a *Service Option Request*
34 *Order* containing the requested service option number.
- 35 • If SERV_NEG changes from disabled to enabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and
36 3.6.6.2.2.11), the base station shall activate the *Normal Service Subfunction*.
- 37 • The base station shall process a service option request received in an *Origination*
38 *Message*, a *Page Response Message*, or a *Service Option Request Order* as follows:

- 1 – If the base station accepts the requested service option, the base station shall
2 set SO_REQ to NULL and shall send a *Service Option Response Order* accepting
3 the requested service option within T_{4b} seconds. The base station shall begin
4 using the service configuration implied by the requested service option in
5 accordance with the requirements for the requested service option. The implied
6 service configuration shall include the default Forward and Reverse Multiplex
7 Options and transmission radio configurations associated with the requested
8 service option. This implied service configuration shall include one service
9 option connection for which the service option connection reference is 1, for
10 which the service option is the requested service option, and for which the
11 Forward and Reverse Traffic Channel types are both primary traffic.
- 12 – If the base station does not accept the requested service option and has an
13 alternative service option to request, the base station shall set SO_REQ to the
14 alternative service option number and shall send a *Service Option Request Order*
15 requesting the alternative service option within T_{4b} seconds.
- 16 – If the base station does not accept the requested service option and does not
17 have an alternative service option to request, the base station shall set SO_REQ
18 to NULL and shall send a *Service Option Response Order* to reject the request
19 within T_{4b} seconds. The base station shall continue to use the current service
20 configuration.
- 21 • If the base station receives a *Service Option Response Order*, it shall process the
22 order as follows:
- 23 – If the service option number specified in the order is equal to SO_REQ, the base
24 station shall set SO_REQ to NULL and shall begin using the service
25 configuration implied by the specified service option in accordance with the
26 requirements for the service option. The implied service configuration shall
27 include the default Forward and Reverse Multiplex Options and radio
28 configurations associated with the requested service option. This implied
29 service configuration shall include one service option connection for which the
30 service option connection reference is 1, for which the service option is the
31 requested service option, and for which the Forward and Reverse Traffic
32 Channel types are both primary traffic.
- 33 – If the order indicates a service option rejection, the base station shall set
34 SO_REQ to NULL. The base station shall continue to use the current service
35 configuration.
- 36 – If the order does not indicate a service option rejection and the service option
37 specified in the order is not equal to SO_REQ, the base station shall set
38 SO_REQ to NULL, should send a *Release Order* (ORDQ = '00000010'), and
39 should enter the *Release Substate*.
- 40 • If the base station receives a *Service Option Control Order*, the base station shall
41 process the order as follows:

- 1 – If the current service configuration includes a service option connection, the
2 base station shall process the received *Service Option Control Order* in
3 accordance with the requirements for the service option associated with the
4 service option connection.
- 5 • If the base station receives one of the following service negotiation messages, the
6 base station shall process the message according to the specified requirements, if
7 any:
- 8 1. *Service Connect Completion Message*
- 9 2. *Service Option Control Message*
- 10 3. *Service Request Message*
- 11 4. *Service Response Message*

12 3.6.4.1.3 Ordering of Messages

13 The Layer 2 protocol does not guarantee delivery of messages in any order. If the base
14 station requires that the mobile station receive a set of messages in a certain order, the
15 base station shall send each message in assured mode requiring confirmation of delivery
16 and shall wait for the confirmation of delivery of each message before transmitting the next
17 message in the set.

18 3.6.4.1.4 Message Action Times

19 A Forward Traffic Channel message without a *USE_TIME* field or with a *USE_TIME* field set
20 to '0' has an implicit action time. A message that has its *USE_TIME* field set to '1' has an
21 explicit action time that is specified in the *ACTION_TIME* field of the message.

22 A message with an explicit action time is called a pending message.

23 Unless otherwise specified, a message having an implicit action time shall take effect no
24 later than the first 80 ms boundary (relative to System Time plus $\text{FRAME_OFFSET}_s \times 1.25$
25 ms) occurring at least 80 ms after the end of the frame containing the last bit of the
26 message. A message with an explicit action time, except for a *Power Up Function Message*,
27 shall take effect when System Time minus $\text{FRAME_OFFSET}_s \times 1.25$ ms (in 80 ms units)
28 modulo 64 becomes equal to the message's *ACTION_TIME* field. A *Power Up Function*
29 *Message* shall take effect *ACTION_TIME_FRAME* frames after the time when System Time
30 minus $\text{FRAME_OFFSET}_s \times 1.25$ ms (in 80 ms units) modulo 64 becomes equal to the
31 message's *ACTION_TIME* field. The difference in time between *ACTION_TIME* and the end
32 of the frame containing the last bit of the message shall be at least 80 ms.

33 The base station shall support two pending messages at any given time, not including
34 pending *Service Option Control Orders*, *Service Option Control Messages*, or *Power Up*
35 *Function Messages*. The number of pending *Service Option Control Orders* or *Service Option*
36 *Control Messages* that the base station is required to support is specific to the service
37 option (see the relevant service option descriptions). In addition, the base station shall
38 support one pending *Power Up Function Message*.

1 3.6.4.1.5 Long Code Transition Request Processing

2 If a request for voice privacy is specified in the *Origination Message* or *Page Response*
 3 *Message*, the base station may send a *Long Code Transition Request Order* (ORDQ =
 4 '00000001') requesting a transition to the private long code.

5 The base station shall process the *Long Code Transition Request Order* as follows:

- 6 • If the *Long Code Transition Request Order* requests a transition to the private long
 7 code and the base station accepts the request, the base station shall send a *Long*
 8 *Code Transition Request Order* (ORDQ = '00000001'). If the base station does not
 9 accept the private long code transition request, the base station shall send a *Long*
 10 *Code Transition Request Order* (ORDQ = '00000000').
- 11 • If the *Long Code Transition Request Order* requests a transition to the public long
 12 code and the base station accepts the request, the base station shall send a *Long*
 13 *Code Transition Request Order* (ORDQ = '00000000'). If the base station does not
 14 accept the public long code transition request, the base station shall send a *Long*
 15 *Code Transition Request Order* (ORDQ = '00000001').

16 The base station shall process the *Long Code Transition Response Order* as follows:

- 17 • If the *Long Code Transition Response Order* indicates that the mobile station accepts
 18 the long code transition requested in the *Long Code Transition Request Order* sent
 19 by the base station, the base station shall use the requested long code mask on
 20 both the Forward Traffic Channel and the Reverse Traffic Channel. The base
 21 station shall specify an explicit action time in the *Long Code Transition Request*
 22 *Order*. The base station shall begin using the requested long code mask using the
 23 explicit action time (see 3.6.4.1.4).

24 3.6.4.1.6 Processing Resource Request Messages

25 The base station shall process *Resource Request Message* and *Resource Request Mini*
 26 *Message*, as follows:

- 27 • The base station may send one of the messages that assign appropriate resources
 28 (e.g. *Extended Supplemental Channel Assignment Message*, *Resource Allocation*
 29 *Message*, *Resource Allocation Mini Message*, *Universal Handoff Direction Message*,
 30 *Retry Order*, etc) to the mobile station. If the base station sends one of these
 31 messages and a Forward Packet Data Channel is not assigned, the base station
 32 shall set PILOT_GATING_USE_RATE to '0' and start transmitting the Forward Power
 33 Control Subchannel with the maximum rate at the action time of the message.
- 34 • The base station may send a *Retry Order* to the mobile station.

35 3.6.4.1.7 Response to Enhanced Origination Message

36 If the base station receives an *Enhanced Origination Message*, the base station should
 37 perform the following:

- 38 • If the base station does not accept this call request from the mobile station, the
 39 base station should send one of the following messages:

- 1 + A *Call Assignment Message* to the mobile station, with the RESPONSE_IND field
2 set to '1', the ACCEPT_IND field set to '0', and the TAG field set to the value of
3 the TAG or ADD_TAG field of the *Enhanced Origination Message*.
- 4 + A *Retry Order* if the *Enhanced Origination Message* is for a packet data service
5 option.
- 6 • If the base station accepts this call request from the mobile station, the base station
7 should send a *Call Assignment Message*, *Service Connect Message*, or *Universal*
8 *Handoff Direction Message* (with the Service Configuration information record
9 included) to assign the call:
- 10 – If the GLOBAL_EMERGENCY_CALL indicator is set to '1' and the service
11 associated with this origination is a voice service, the base station shall
12 recognize this as an emergency call and should process the message using an
13 implementation-dependent procedure which may include ignoring the dialed
14 digits. If the base station receives an *Origination Message* and the
15 GLOBAL_EMERGENCY_CALL indicator is set to '1' and the service associated
16 with this origination is not a voice service, the base station may recognize this
17 as an emergency call and should process the message using an implementation-
18 dependent procedure which may include ignoring the dialed digits.
- 19 – If the *Enhanced Origination Message* includes a SYNC_ID field, then based on
20 the value of the SYNC_ID received, the base station may instruct the mobile
21 station to restore one or more of the service option connections from the stored
22 service configuration, and if so, the base station shall send a *Call Assignment*
23 *Message*, *Universal Handoff Direction Message*, or *Service Connect Message* to
24 the mobile station as follows:
- 25 + If the base station sends a *Call Assignment Message*, the base station shall
26 perform the following:
- 27 o The base station shall set the RESPONSE_IND field to '1', the
28 ACCEPT_IND field to '1', and the TAG field to the value of the TAG or
29 ADD_TAG field of the *Enhanced Origination Message*.
- 30 o The base station shall set the USE_OLD_SERV_CONFIG field to '1'.
- 31 + If the base station sends a *Service Connect Message*, the base station shall
32 perform the following:
- 33 o The base station shall set the USE_OLD_SERV_CONFIG field to '11'.
- 34 + If the mobile station is to restore all remaining service option connections
35 from the stored service configuration, the base station shall set the SR_ID
36 field to '111'; if the mobile station is to restore more than one but not all
37 remaining service option connections from the stored service configuration,
38 the base station shall set the SR_ID field to '000' and the
39 SR_ID_RESTORE_BITMAP field to the bitmap of service reference identifiers
40 corresponding to the service option connections to be restored; otherwise,
41 the base station shall set the SR_ID field to the service reference identifier
42 corresponding to the service option connection to be restored.

- 1 + At the action time corresponding to this message, the base station shall
2 restore the indicated service option connection(s) from the stored service
3 configuration; Layer 3 shall instantiate a Call Control instance (as specified
4 in 3.6.8) for each of the restored service option connections with a 'restore
5 indication' and Layer 3 shall identify each of these Call Control instances by
6 the value of the CON_REF field corresponding to the restored service option
7 connection.
- 8 – If the base station sends a *Call Assignment Message* to assign the call, the base
9 station shall perform the following:
- 10 + The base station shall set the RESPONSE_IND field to '1', the ACCEPT_IND
11 field to '1', and the TAG field to the value of the TAG or ADD_TAG field of the
12 *Enhanced Origination Message*. The base station shall set the
13 CON_REF_INCL field of the message to '1' and the CON_REF field of the
14 message to the value of the connection reference of the service option
15 connection corresponding to this call.
- 16 + A service option connection corresponding to this call (if not already
17 established) shall be established by performing service negotiation; the base
18 station should initiate service negotiation to establish the service option
19 connection, if permitted by the current service negotiation subfunction.
- 20 + At the action time corresponding to this message, the Layer 3 shall
21 instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall
22 identify this Call Control instance by the value of the CON_REF field
23 included in the *Call Assignment Message*.
- 24 – If the base station sends a *Service Connect Message* or a *Universal Handoff*
25 *Direction Message* (with the Service Configuration information record included),
26 to assign the call, the base station shall perform the following:
- 27 + The base station shall set the call control parameters corresponding to this
28 call included in the message as follows: The base station shall set the
29 RESPONSE_IND field to '1', and the TAG field to the value of the TAG or
30 ADD_TAG field of the *Enhanced Origination Message*.
- 31 + At the action time corresponding to this message, the Layer 3 shall
32 instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall
33 identify this Call Control instance by the value of the CON_REF assigned to
34 the service option connection corresponding to this call.

35 3.6.4.1.8 Processing Resource Release Request Message and Resource Release Request 36 Mini Message

37 The base station may perform the following in response to receiving a *Resource Release*
38 *Request Message* or a *Resource Release Request Mini Message* from the mobile station:

- 1 • If the mobile station requests to release a service option connection, the base
2 station may send a *Service Connect Message*, *General Handoff Direction Message*, or
3 a *Universal Handoff Direction Message* to release the service option connection.
- 4 • If the mobile station requests to commence reverse pilot gating operation, the base
5 station may send a *Extended Release Message*, *Extended Release Mini Message*, or a
6 *Universal Handoff Direction Message* to instruct the mobile station to commence the
7 reverse pilot gating operation.

8 3.6.4.1.9 Processing Base Station Status Request Message

9 If the requested RECORD_TYPE equals '00000000' (Pilot Information), the base station
10 should send a *Base Station Status Response Message* with a RECORD_TYPE of '00000000'
11 (Pilot Information) to the mobile station:

- 12 • For each pilot being requested by the mobile station, the base station shall include
13 the corresponding Base Station Identification number.
- 14 • If SID and NID information is being requested by the mobile station, the base
15 station shall include the SID and NID information corresponding to these pilots.
- 16 • If LAT and LONG information is being requested by the mobile station, the base
17 station should include the LAT and LONG information corresponding to these pilots.

18 3.6.4.1.10 Base Station assigned PLCM

19 If PLCM_TYPE field is included in *Extended Channel Assignment Message* or *Universal*
20 *Handoff Direction Message* and is set to '0001', the base station shall include PLCM_39 field
21 in the message and shall set it as follows:

22 P₃₈ P₃₇ are set as specified in the Table 3.6.4.1.10-1:

23 **Table 3.6.4.1.10-1. The Base Station Assigned Public Long Code Mask Type**

P₃₈ P₃₇ (binary)	Descriptions
00	Proprietary Approach
01	Latitude-Longitude Approach
10	Reserved
11	Reserved

24

25 If P₃₈ P₃₇ is equal to '01'; the base station shall set the fields as follows:

26 $P_{36}, P_{35}, P_{34}, P_{33}, P_{32}, P_{31}, P_{30}, P_{29}, P_{28}, P_{27}, P_{26} = ((\text{BASE_LONG} \gg 5) \times$
27 $\cos |\text{BASE_LAT}|) \bmod (2^{11}),$

28 $P_{25}, P_{24}, P_{23}, P_{22}, P_{21}, P_{20}, P_{19}, P_{18}, P_{17}, P_{16}, P_{15} = (\text{BASE_LAT} \gg 5) \bmod (2^{11}),$

29 $P_{14}, P_{13}, \dots, P_2, P_1, P_0 = \text{identifiers assigned by the base station},$

30 where:

1 BASE_LONG is the longitude of the base station in units of 0.25 seconds, expressed
2 as a two's complement signed number with positive numbers signifying East
3 longitude, and,

4 BASE_LAT is the latitude of the base station in units of 0.25 seconds, expressed as
5 a two's complement signed number with positive numbers signifying North
6 latitudes.

7

1 3.6.4.2 Traffic Channel Initialization Substate

2 In this substate, the base station begins transmitting on the Forward Traffic Channel and
3 acquires the Reverse Traffic Channel.

4 Upon entering the *Traffic Channel Initialization Substate*, the base station shall perform the
5 following:

- 6 • Layer 3 shall send an L2-Supervision.Request primitive to Layer 2 to reset the
7 message acknowledgment procedures as specified in [4].
- 8 • The base station shall set its Forward and Reverse Traffic Channel long code masks
9 to the public long code mask (see [2]).
- 10 • The base station shall set its Forward and Reverse Traffic Channel frame offsets (see
11 [2]) to the frame offset assigned to the mobile station.
- 12 • If the base station set the ASSIGN_MODE field of the *Channel Assignment Message*
13 to '000', the base station shall set SERV_NEG to disabled. If the base station set
14 the ASSIGN_MODE field of the *Channel Assignment Message* to '100', the base
15 station shall set SERV_NEG to enabled. For operation in band classes other than
16 Band Class 0, SERV_NEG is always equal to enabled.
- 17 • If the base station uses the *Extended Channel Assignment Message*, the base station
18 shall set the SERV_NEG to enabled.
- 19 • The base station shall determine the initial service configuration as follows:
 - 20 – If SERV_NEG is equal to disabled, the initial service configuration shall include
21 Multiplex Option 1 and Radio Configuration 1 for both the Forward and Reverse
22 Traffic Channels, and shall include no service option connections.
 - 23 – If SERV_NEG is equal to enabled and the base station sets the
24 GRANTED_MODE field of the *Channel Assignment Message* or the *Extended*
25 *Channel Assignment Message* to '00', the initial service configuration shall
26 include the multiplex option and radio configuration for the Forward and
27 Reverse Traffic Channels as specified by the DEFAULT_CONFIG field, and shall
28 include no service option connections.
 - 29 – If SERV_NEG is equal to enabled and the base station sets the
30 GRANTED_MODE field of the *Extended Channel Assignment Message* to '01' or
31 '10', the initial service configuration shall include the default Forward and
32 Reverse Traffic Channel multiplex options that are derived from the radio
33 configurations corresponding to Table 3.7.2.3.2.21-3 and shall include no
34 service option connections.

- 1 – If SERV_NEG is equal to enabled and the base station sets the
2 GRANTED_MODE field of the *Channel Assignment Message* to ‘01’ or ‘10’, the
3 initial service configuration shall include the default Forward and Reverse
4 Traffic Channel multiplex options and transmission rates corresponding to the
5 service option requested by the mobile station in the *Origination Message*, in the
6 case of a mobile station originated call, or the *Page Response Message*, in the
7 case of a mobile station terminated call, and shall include no service option
8 connections.
- 9 – If SERV_NEG is equal to enabled and the base station sets the
10 GRANTED_MODE field of the *Extended Channel Assignment Message* to ‘11’, the
11 base station shall begin to use the stored service configuration corresponding to
12 the SYNC_ID conveyed to the mobile station as the current service configuration
13 and shall begin to process Forward and Reverse Traffic Channel frames
14 accordingly. The set of service option connections to be restored are determined
15 as follows:
- 16 + If the base station sets the SR_ID_RESTORE field of the *Extended Channel*
17 *Assignment Message* to ‘111’, the base station shall restore all the service
18 option connections from the stored service configuration.
- 19 + If the base station sets the SR_ID_RESTORE field of the *Extended Channel*
20 *Assignment Message* to ‘000’, the base station shall restore the service
21 option connections indicated by the SR_ID_RESTORE_BITMAP field of the
22 *Extended Channel Assignment Message* from the stored service
23 configuration.
- 24 + Otherwise, the base station shall restore the service option connection
25 corresponding to the SR_ID field of the *Extended Channel Assignment*
26 *Message* from the stored service configuration.
- 27 • If SERV_NEG is equal to disabled, the base station shall activate the *SO Negotiation*
28 *Subfunction* (see 3.6.4.1.2.2.6); otherwise, the base station shall activate the *Normal*
29 *Service Subfunction* (see 3.6.4.1.2.2.1).
- 30 • The base station shall set PILOT_GATING_USE_RATE to ‘0’.

31 While in the *Traffic Channel Initialization Substate*, the base station shall perform the
32 following:

- 33 • If the Forward Fundamental Channel is assigned, the base station shall transmit
34 null Traffic Channel data on the Forward Fundamental Channel, except when
35 transmitting signaling traffic. The base station shall not use 0 bps frames.
- 36 • If F-CPCCH is assigned, the base station shall transmit power control bits on the F-
37 CPCCH; otherwise, if FPC_PRI_CHAN is set to ‘0’, the base station shall transmit
38 power control bits on the Forward Fundamental Channel. If FPC_PRI_CHAN is set
39 to ‘1’, the base station shall transmit power control bits on the Forward Dedicated
40 Control Channel.

- 1 • If the base station acquires the Reverse Traffic Channel, Layer 3 shall send a
2 reverse dedicated channel acquired indication to Layer 2 (see [4]). The base station
3 shall perform the following:
- 4 – If SERV_NEG is equal to enabled and the base station sets the
5 GRANTED_MODE field of the *Extended Channel Assignment Message* to ‘11’, the
6 base station shall perform the following:
- 7 + For each service option connection (with corresponding connection reference
8 CON_REF_i) in the stored service configuration record, Layer 3 shall
9 instantiate a Call Control instance (as specified in 3.6.8) with a ‘restore
10 indication’. The base station shall identify each of these Call Control
11 instances by the corresponding CON_REF_i. Furthermore, the base station
12 shall also identify the Call Control instance corresponding to the first service
13 option connection listed in this restored Service Configuration information
14 record by the NULL identifier.
- 15 – Otherwise, the base station shall perform the following:
- 16 + The Layer 3 shall instantiate a Call Control instance (as specified in 3.6.8).
17 The Layer 3 shall assign the default identifier of NULL to this Call Control
18 instance. The Layer 3 shall enter the *Traffic Channel Substate*.
- 19 • If the base station fails to acquire the Reverse Traffic Channel, the base station
20 should perform one of the following:
- 21 – retransmit the *Channel Assignment Message* or the *Extended Channel*
22 *Assignment Message* on the Paging Channel and remain in the *Traffic Channel*
23 *Initialization Substate*
- 24 – retransmit the *Extended Channel Assignment Message* on the Forward Common
25 Control Channel and remain in the *Traffic Channel Initialization Substate*, or
- 26 – disable transmission on the Forward Traffic Channel and discontinue the *Traffic*
27 *Channel Processing* for the mobile station.

28 3.6.4.3 Traffic Channel Substate

29 In this substate, the base station may exchange Traffic Channel frames with the mobile
30 station in accordance with the current service configuration.

31 Upon entering the *Traffic Channel Substate*, the base station shall perform the following:

- 32 • If SERV_NEG is equal to enabled and the base station sets the GRANTED_MODE
33 field of the *Extended Channel Assignment Message* to ‘11’, the base station should
34 not send a *Service Connect Message* to the mobile station.
- 35 • If the call is a mobile station terminated call and the base station set
36 BYPASS_ALERT_ANSWER to ‘0’, the base station shall perform the following:
- 37 – If SERV_NEG is equal to disabled, the base station shall process the service
38 option request specified in the *Page Response Message* in accordance with the
39 requirements for the active service subfunction (see 3.6.4.1.2.2).

- 1 – If SERV_NEG is equal to enabled and the base station sets the
2 GRANTED_MODE field of the *Channel Assignment Message* or the *Extended*
3 *Channel Assignment Message* to ‘00’ or ‘01’, the base station should initiate
4 service negotiation to request a service configuration in accordance with the
5 requirements for the active service subfunction (see 3.6.4.1.2.2).
- 6 – If SERV_NEG is equal to enabled and the base station sets the
7 GRANTED_MODE field of the *Channel Assignment Message* or the *Extended*
8 *Channel Assignment Message* to ‘10’, the base station should send a *Service*
9 *Connect Message* in accordance with the requirements for the active service
10 subfunction (see 3.6.4.1.2.2).
- 11 • Otherwise, the base station shall perform the following:
- 12 – If SERV_NEG equals enabled, the call is mobile-station-originated and the base
13 station sets the GRANTED_MODE field of the *Channel Assignment Message* or
14 the *Extended Channel Assignment Message* to ‘10’, the base station should send
15 a *Service Connect Message* in accordance with the requirements for the active
16 service subfunction (see 3.6.4.1.2.2).
- 17 – If SERV_NEG equals disabled and the call is mobile-station-originated, the base
18 station shall process the service option request specified in the *Origination*
19 *Message* in accordance with the requirements for the active service subfunction
20 (see 3.6.4.1.2.2).

21 While in the *Traffic Channel Substate*, the base station shall perform the following:

- 22 • The base station shall transmit the power control subchannel as specified in [2].
- 23 • The base station shall process Forward and Reverse Traffic Channel frames in
24 accordance with the requirements for the active service subfunction (see
25 3.6.4.1.2.2).
- 26 • When PILOT_GATING_USE_RATE is equal to ‘0’ and the base station is to establish
27 a Forward or Reverse Fundamental Channel or a Forward or Reverse Dedicated
28 Control Channel, or a Forward Packet Data Channel, the base station shall send a
29 *Universal Handoff Direction Message* to the mobile station.
- 30 • When a Forward Packet Data Channel is not assigned, PILOT_GATING_USE_RATE
31 is equal to ‘1’ and the base station has data to send, the base station may send a
32 *Resource Allocation Message*, *Resource Allocation Mini Message*, *Extended*
33 *Supplemental Channel Assignment Message*, *Forward Supplemental Channel*
34 *Assignment Mini Message*, *Reverse Supplemental Channel Assignment Mini Message*,
35 or *Universal Handoff Direction Message* and set PILOT_GATING_USE_RATE to ‘0’ to
36 start transmitting the Forward Power Control Subchannel with the maximum rate
37 at the action time of the message and start the exchange of user information.
- 38 • When a Forward Packet Data Channel is assigned, PILOT_GATING_USE_RATE is
39 equal to ‘1’, and the base station has data or signaling messages to send, the base
40 station may transition to the Active Mode. If the base station determines to
41 transition to the Active Mode, the base station shall perform the following:

- 1 – If a Forward Dedicated Control Channel is assigned, the base station shall
2 perform one of the following:
- 3 + The base station shall send a *Resource Allocation Message, Resource*
4 *Allocation Mini Message, Extended Supplemental Channel Assignment*
5 *Message, Forward Supplemental Channel Assignment Mini Message, Reverse*
6 *Supplemental Channel Assignment Mini Message, or Universal Handoff*
7 *Direction Message* and set PILOT_GATING_USE_RATE to ‘0’ at the action
8 time of the message, or
- 9 + The base station shall set PILOT_GATING_USE_RATE to ‘0’ (see [3]).
- 10 – Otherwise (i.e., Forward Dedicated Control Channel is not assigned), the base
11 station shall set PILOT_GATING_USE_RATE to ‘0’.
- 12 • When a Forward Packet Data Channel is assigned, PILOT_GATING_USE_RATE is
13 equal to ‘1’, and the base station has detected continuous reverse pilot channel or a
14 valid Reverse Fundicated Channel frame is received, the base station shall set
15 PILOT_GATING_USE_RATE to ‘0’.
- 16 • If the base station is to release any but not all traffic channels, the base station
17 shall send a *Universal Handoff Direction Message, Extended Release Message, or an*
18 *Extended Release Mini Message* to the mobile station.
- 19 • If the base station is to assign R-FCH, the base station may send a *Universal*
20 *Handoff Direction Message or Shared Channel Configuration Order* (ORDQ =
21 00000000) to the mobile station. If the base station is to release R-FCH, the base
22 station may send a *Universal Handoff Direction Message, Extended Release Message,*
23 *Extended Release Mini Message, or Shared Channel Configuration Order* (ORDQ =
24 00000001) to the mobile station.
- 25 • When PILOT_GATING_USE_RATE is equal to ‘0’, the base station does not have any
26 data to send, and the base station has determined that the mobile station does not
27 have any data to send, then the base station may send an *Extended Release*
28 *Message, Extended Release Mini Message or Universal Handoff Direction Message.* At
29 the action time of the message, the base station may perform the following:
- 30 Set PILOT_GATING_USE_RATE to ‘1’.
- 31 If the channel configuration in the message does not include a Forward Packet Data
32 Channel, start transmitting the Forward Power Control Subchannel with the
33 specified rate and stop the exchange of user information.
- 34 If the channel configuration in the message includes a Forward Packet Data
35 Channel, stop the exchange of user information and signaling messages.
- 36 • If the base station declares a loss of Reverse Traffic Channel continuity (see 3.4), the
37 base station should send a *Release Order* to the mobile station. If the base station
38 sends a *Release Order*, the Layer 3 shall send a “release indication” to all Call
39 Control instances, and shall enter the *Release Substate*.
- 40 • The base station may perform Forward Traffic Channel power control as specified in
41 3.6.4.1.1.

- 1 • The base station may request a new service configuration by initiating service
2 negotiation or service option negotiation in accordance with the requirements for
3 the active service subfunction (see 3.6.4.1.2.2).
- 4 • The base station may send a *Service Option Control Message* or *Service Option*
5 *Control Order* to invoke a service option specific function in accordance with the
6 requirements for the active service subfunction (see 3.6.4.1.2.2).
- 7 • The base station may request a long code transition, as specified in 3.6.4.1.5, either
8 autonomously or in response to a request for voice privacy specified in the
9 *Origination Message* or *Page Response Message*.
- 10 • The base station may perform authentication procedures as specified in 3.3.1.
- 11 • The base station may perform TMSI assignment procedures (see 2.3.15).
- 12 • For the first call, if the call is mobile-station-originated and the PACA_REORIG field
13 of the *Origination Message* is equal to '1', the Layer 3 shall send a "paca reorig
14 indication" to the Call Control instance.
- 15 • The base station may control operation of the Forward or Reverse Supplemental
16 Code Channels by including Supplemental Code Channel assignment information
17 in the *Supplemental Channel Assignment Message*, or the *General Handoff Direction*
18 *Message*.
- 19 • If neither a Forward Fundamental Channel, nor a Forward Dedicated Control
20 Channel is assigned, the base station shall not assign a Forward Supplemental
21 Channels to the mobile station.
- 22 • If a Reverse Packet Data Channel is assigned, the base station shall not assign a
23 Reverse Supplemental Channel to the mobile station.
- 24 • The base station may control operation of the Forward or Reverse Supplemental
25 Channels by including Supplemental Channel assignment information in the
26 *Extended Supplemental Channel Assignment Message*, the *Forward Supplemental*
27 *Channel Assignment Mini Message*, or the *Reverse Supplemental Channel Assignment*
28 *Mini Message*.
- 29 • The base station may assign a new call by sending a *Call Assignment Message*,
30 *Service Connect Message*, or *Universal Handoff Direction Message* (with the Service
31 Configuration information record included) to assign the call:
 - 32 – If the base station sends a *Call Assignment Message* to assign the call, the base
33 station shall perform the following:
 - 34 + The base station shall set the RESPONSE_IND field to '0'.
 - 35 + The base station shall set the CON_REF_INCL field of the message to '1' and
36 the CON_REF field of the message to the value of the connection reference of
37 the service option connection corresponding to this call.
 - 38 + A service option connection corresponding to this call (if not already
39 established) shall be established by performing service negotiation; the base

- 1 station should initiate service negotiation to establish the service option
2 connection, if permitted by the current service negotiation subfunction.
- 3 + At the action time corresponding to this message, the Layer 3 shall
4 instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall
5 identify this Call Control instance by the value of the CON_REF field
6 included in the *Call Assignment Message*.
- 7 – If the base station sends a *Service Connect Message* or *Universal Handoff*
8 *Direction Message* (with the Service Configuration information record included)
9 to assign the call, the base station shall perform the following:
- 10 + The base station shall set the call control parameters corresponding to this
11 call included in the message as follows: The base station shall set the
12 RESPONSE_IND field to ‘0’, and the BYPASS_ALERT_ANSWER field as
13 required.
- 14 + At the action time corresponding to this message, the Layer 3 shall
15 instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall
16 identify this Call Control instance by the value of the CON_REF assigned to
17 the service option connection corresponding to this call.
- 18 • The base station may instruct the mobile station to restore one or more of the
19 service option connection records from the stored service configuration by sending a
20 *Call Assignment Message* or *Service Connect Message* as follows:
- 21 – If the base station sends a *Call Assignment Message*, the base station shall
22 perform the following:
- 23 + The base station shall set the RESPONSE_IND field to ‘1’, the ACCEPT_IND
24 field to ‘1’, and the TAG field to the value of the TAG field of the *Enhanced*
25 *Origination Message*.
- 26 + The base station shall set the USE_OLD_SERV_CONFIG field to ‘1’.
- 27 – If the base station sends a *Service Connect Message*, the base station shall
28 perform the following:
- 29 + The base station shall set the USE_OLD_SERV_CONFIG field to ‘11’.
- 30 – If the mobile station is to restore all remaining service option connection records
31 from the stored service configuration, the base station shall set the SR_ID field
32 to ‘111’; otherwise, the base station shall set the SR_ID field to the service
33 reference identifier corresponding to the service option connection record to be
34 restored.

- 1 – At the action time corresponding to this message, the base station shall restore
2 the indicated service option connection record(s) from the stored service
3 configuration; Layer 3 shall instantiate a Call Control instance (as specified in
4 3.6.8) for each of the restored service option connections with a ‘restore
5 indication’ and Layer 3 shall identify each of these Call Control instances by the
6 value of the CON_REF field corresponding to the restored service option
7 connection.
- 8 • If the Layer 3 receives a ‘call release request’ from a Call Control instance, the Layer
9 3 shall perform the following:
- 10 – If the service option connection corresponding to this call is the only one
11 connected, the base station should send the mobile station a *Release Order* and
12 enter the *Release Substate*.
- 13 – If the service option connection corresponding to this call is not the only one
14 connected, the base station should release this service option connection. At the
15 action time of the message, the Layer 3 shall terminate this Call Control
16 instance.
- 17 • The base station may send the following messages. Some of these messages are
18 generated by the Call Control Instance. If the base station sends a message, the
19 base station shall comply with the specified requirements for sending the message,
20 if any:
- 21 1. *Alert With Information Message*;
- 22 2. *Reserved*
- 23 3. *Audit Order*
- 24 4. *Authentication Challenge Message*
- 25 5. *Base Station Challenge Confirmation Order*
- 26 6. *Base Station Status Response Message*
- 27 7. *Call Assignment Message*
- 28 8. *Candidate Frequency Search Request Message*
- 29 9. *Candidate Frequency Search Control Message*
- 30 10. *Continuous DTMF Tone Order*
- 31 11. *Data Burst Message*
- 32 12. *Extended Alert With Information Message*
- 33 13. *Extended Flash With Information Message*
- 34 14. *Extended Handoff Direction Message*
- 35 15. *Extended Neighbor List Update Message*
- 36 16. *Extended Release Message*: If the physical channels indicated in CH_IND field of
37 this message includes all the physical channels currently being processed by

- 1 the mobile station, the Layer 3 shall send a “release indication” to all Call
2 Control instances, and shall enter the *Release Substate*.
- 3 17. *Extended Release Mini Message*: If the physical channels indicated in CH_IND
4 field of this message includes all the physical channels currently being
5 processed by the mobile station, the Layer 3 shall send a “release indication” to
6 all Call Control instances, and shall enter the *Release Substate*.
- 7 18. *Extended Supplemental Channel Assignment Message*
- 8 19. *Forward Supplemental Channel Assignment Mini Message*
- 9 20. *General Handoff Direction Message*
- 10 21. *Flash With Information Message*
- 11 22. *In-Traffic System Parameters Message*¹⁰¹
- 12 23. *Local Control Order*
- 13 24. *Lock Until Power-Cycled Order*: The base station should send this order in
14 unassured mode.
- 15 25. *Long Code Transition Request Order*
- 16 26. *Maintenance Order*
- 17 27. *Maintenance Required Order*
- 18 28. *Message Encryption Mode Order*
- 19 29. *Mobile Assisted Burst Operation Parameters Message*
- 20 30. *Mobile Station Registered Message*
- 21 31. *Neighbor List Update Message*: The base station shall not send this message if
22 P_REV_IN_USE is greater than or equal to eight.
- 23 32. *Parameter Update Order* (see 2.3.12.1.3).
- 24 33. *Periodic Pilot Measurement Request Order*
- 25 34. *Pilot Measurement Request Order*
- 26 35. *Power Control Message*
- 27 36. *Power Control Parameters Message*
- 28 37. *Power Up Function Message*
- 29 38. *Power Up Function Completion Message*
- 30 39. *Resource Allocation Message*

¹⁰¹ If the base station determines that the current P_REV_IN_USE is less than or equal to three, the base station does not send an *In-Traffic System Parameters Message* to change the P_REV_IN_USE to greater than or equal to nine.

- 1 40. *Resource Allocation Mini Message*
- 2 41. *Release Order*: The Layer 3 shall send a “release indication” to all Call Control
- 3 instances, and shall enter the *Release Substate*.
- 4 42. *Retrieve Parameters Message*
- 5 43. *Retry Order*
- 6 44. *Reverse Supplemental Channel Assignment Mini Message*
- 7 45. *Security Mode Command Message*
- 8 46. *Send Burst DTMF Message*
- 9 47. *Service Connect Message*: The base station shall send the message in
- 10 accordance with the requirements for the active service subfunction (see
- 11 3.6.4.1.2.2).
- 12 48. *Service Option Control Message*: The base station shall send the message in
- 13 accordance with the requirements for the active service subfunction (see
- 14 3.6.4.1.2.2).
- 15 49. *Service Option Control Order*
- 16 50. *Service Option Request Order*
- 17 51. *Service Option Response Order*
- 18 52. *Service Redirection Message*: The Layer 3 shall send a “release indication” to all
- 19 Call Control instances, and shall enter the *Release Substate*.
- 20 53. *Service Request Message*: The base station shall send the message in
- 21 accordance with the requirements for the active service subfunction (see
- 22 3.6.4.1.2.2).
- 23 54. *Service Response Message*: The base station shall send the message in
- 24 accordance with the requirements for the active service subfunction (see
- 25 3.6.4.1.2.2).
- 26 55. *Set Parameters Message*
- 27 56. *SSD Update Message*
- 28 57. *Status Request Message*
- 29 58. *Status Request Order*: The base station shall not send this message if
- 30 P_REV_IN_USE is greater than or equal to eight.
- 31 59. *Supplemental Channel Assignment Message*
- 32 60. *TMSI Assignment Message*
- 33 61. *Universal Handoff Direction Message*
- 34 62. *User Zone Reject Message*
- 35 63. *User Zone Update Message*
- 36 64. *Radio Configuration Parameters Message*

- 1 65. *Handoff Supplementary Information Solicit Message*
- 2 66. *General Extension Message* : The base station may send this message in order to
3 extend the above messages with additional records.
- 4 67. *Alternative Technology Information Message*: The base station may send this
5 message to update the Radio Interface records.
- 6 • If the base station receives one of the following messages from the mobile station,
7 the base station shall process the message according to the specified requirements,
8 if any:
- 9 1. *Base Station Challenge Order*: The base station shall process the message as
10 described in 2.3.12.1.5.
- 11 2. *Base Station Status Request Message*: The base station shall process the
12 message as described in 3.6.4.1.9
- 13 3. *Call Cancel Message*
- 14 4. *Candidate Frequency Search Report Message*: The base station shall process the
15 message as described in 3.6.6.2.2.6.
- 16 5. *Candidate Frequency Search Response Message*: The base station shall process
17 the message as described in 3.6.6.2.2.4.
- 18 6. *CDMA Off Time Report Message*
- 19 7. *Connect Order*: If the CON_REF_INCL field is not included in this message or if
20 the CON_REF_INCL field equals '0', the Layer 3 shall deliver this message to the
21 Call Control instance identified by NULL; otherwise, the Layer 3 shall deliver
22 this message to the Call Control instance identified by CON_REF.
- 23 8. *Continuous DTMF Tone Order*: If the CON_REF_INCL field is not included in this
24 message or if the CON_REF_INCL field equals '0', the Layer 3 shall deliver this
25 message to the Call Control instance identified by NULL; otherwise, the Layer 3
26 shall deliver this message to the Call Control instance identified by CON_REF.
- 27 9. *Data Burst Message*: The base station may respond with a *Retry Order*.
- 28 10. *Enhanced Origination Message*: The base station shall process the message as
29 described in 3.6.4.1.7.
- 30 11. *Extended Flash With Information Message*: If CON_REF_INCL equals '0', the
31 Layer 3 shall deliver this message to the Call Control instance identified by
32 NULL; otherwise, the Layer 3 shall deliver this message to the Call Control
33 instance identified by CON_REF.
- 34 12. *Extended Handoff Completion Message*: The base station shall process the
35 message as described in 3.6.6.2.2.7.
- 36 13. *Extended Pilot Strength Measurement Message*: The base station shall process
37 the message as described in 3.6.6.2.2.1.
- 38 14. *Extended Release Response Message*.

- 1 15. *Extended Release Response Mini Message.*
- 2 16. *Flash With Information Message:* The Layer 3 shall deliver this message to the
3 Call Control instance identified by NULL.
- 4 17. *Handoff Completion Message:* The base station shall process the message as
5 described in 3.6.6.2.2.7.
- 6 18. *Local Control Response Order*
- 7 19. *Long Code Transition Request Order:* The base station shall process the message
8 as described in 3.6.4.1.5.
- 9 20. *Long Code Transition Response Order*
- 10 21. *Mobile Station Reject Order:* If the CON_REF_INCL field is included in this
11 message, Layer 3 shall perform the following: if the CON_REF_INCL field equals
12 '0', Layer 3 shall send a 'messages rejected indication' to the Call Control
13 instance identified by NULL; otherwise, Layer 3 shall send a 'messages rejected
14 indication' to the Call Control instance identified by CON_REF.
- 15 22. *Origination Continuation Message:* The Layer 3 shall deliver this message to the
16 Call Control instance identified by NULL.
- 17 23. *Outer Loop Report Message*
- 18 24. *Parameters Response Message*
- 19 25. *Parameter Update Confirmation Order*
- 20 26. *Periodic Pilot Strength Measurement Message*
- 21 27. *Pilot Strength Measurement Message:* The base station shall process the
22 message as described in 3.6.6.2.2.1.
- 23 28. *Pilot Strength Measurement Mini Message*
- 24 29. *Power Measurement Report Message:* The base station may process the message
25 as described in 3.6.4.1.1.
- 26 30. *Release Order:* The base station shall send the mobile station a *Release Order*
27 within T2b seconds, and the Layer 3 shall send a "release indication" to all Call
28 Control instances, and enter the *Release Substate*; otherwise, the Layer 3 shall
29 send a "send alert with info message indication" to all Call Control instances.
- 30 31. *Resource Release Request Message:* The base station shall process the message
31 as described in 3.6.4.1.8.
- 32 32. *Resource Release Request Mini Message:* The base station shall process the
33 message as described in 3.6.4.1.8.
- 34 33. *Resource Request Message:* The base station shall process the message as
35 described in 3.6.4.1.6.
- 36 34. *Resource Request Mini Message:* The base station shall process the message as
37 described in 3.6.4.1.6.

- 1 35. *Reserved.*
- 2 36. *Reserved.*
- 3 37. *Reserved.*
- 4 38. *Send Burst DTMF Message:* If the CON_REF_INCL field is not included in this
5 message or if the CON_REF_INCL field equals '0', the Layer 3 shall deliver this
6 message to the Call Control instance identified by NULL; otherwise, the Layer 3
7 shall deliver this message to the Call Control instance identified by CON_REF.
- 8 39. *Service Connect Completion Message:* The base station shall process the
9 message in accordance with the requirements for the active service subfunction
10 (see 3.6.4.1.2.2).
- 11 40. *Service Option Control Message:* The base station shall process the message in
12 accordance with the requirements for the active service subfunction (see
13 3.6.4.1.2.2).
- 14 41. *Service Option Control Order:* The base station shall process the message in
15 accordance with the requirements for the active service subfunction (see
16 3.6.4.1.2.2).
- 17 42. *Service Option Request Order:* The base station shall process the message in
18 accordance with the requirements for the active service subfunction (see
19 3.6.4.1.2.2).
- 20 43. *Service Option Response Order:* The base station shall process the message in
21 accordance with the requirements for the active service subfunction (see
22 3.6.4.1.2.2).
- 23 44. *Service Request Message:* The base station shall process the message in
24 accordance with the requirements for the active service subfunction (see
25 3.6.4.1.2.2).
- 26 45. *Service Response Message:* The base station shall process the message in
27 accordance with the requirements for the active service subfunction (see
28 3.6.4.1.2.2).
- 29 46. *SSD Update Confirmation Order*
- 30 47. *SSD Update Rejection Order*
- 31 48. *Status Response Message*
- 32 49. *Status Message*
- 33 50. *Supplemental Channel Request Message:* The base station may respond with a
34 *Supplemental Channel Assignment Message*, an *Extended Supplemental Channel*
35 *Assignment Message*, or a *Retry Order*.
- 36 51. *Supplemental Channel Request Mini Message:* The base station may respond
37 with a *Forward Supplemental Channel Assignment Mini Message* or a *Reverse*
38 *Supplemental Channel Assignment Mini Message*, or both. The base station may
39 also respond with a *Retry Order*.

1 52. *TMSI Assignment Completion Message*

2 53. *User Zone Update Request Message*: The base station shall process this message
3 as specified in 3.6.7.2.

4 54. *Handoff Supplementary Information Notification Message*: The base station shall
5 process this message as specified in 3.6.6.2.2.16.

6 55. *General Extension Message*: The base station shall store the records and process
7 the message included in the *General Extension Message*.

8 3.6.4.4 Release Substate

9 In this substate, the base station disconnects all calls and physical channels.

10 While in the *Release Substate*, the base station shall perform the following:

- 11 • The base station shall transmit the power control subchannel as specified in [2].
- 12 • The base station shall transmit on the Forward Traffic Channel for at least T_{3b}
13 seconds. The base station shall transmit null traffic and power control bits on the
14 Forward Fundamental Channel, except when transmitting signaling traffic, if the
15 Fundamental Channel is present or transmit power control bits on the Forward
16 Dedicated Control Channel, if only the dedicated Control Channel is present. After
17 T_{3b} seconds, the base station should stop transmitting on the Forward Traffic
18 Channel.
- 19 • When a Forward Packet Data Channel and a Forward Common Power Control
20 Channel subchannel are assigned to this mobile station, the base station shall
21 transmit on the Forward Common Power Control Channel subchannel for at least
22 T_{3b} seconds. After T_{3b} seconds, the base station should stop transmitting on the
23 Forward Common Power Control Channel subchannel. If no response is received to
24 the Layer 3 message sent to the mobile station to release the call, the base station
25 should wait T_{5b} before assigning this Forward Common Power Control Channel
26 subchannel to another mobile station.
- 27 • The base station shall process Reverse Traffic Channel signaling traffic and may
28 discard other types of Reverse Traffic Channel traffic.
- 29 • The base station may perform TMSI assignment procedures (see 2.3.15).
- 30 • The base station may perform Forward Traffic Channel power control as specified in
31 3.6.4.1.1.
- 32 • The base station may send a *Service Option Control Message* to invoke a service
33 option specific function in accordance with the requirements for the active service
34 subfunction (see 3.6.4.1.2.2).
- 35 • The base station may send the following messages. Some of these messages are
36 generated by the Call Control Instance. If the base station sends a message, the
37 base station shall comply with the specified requirements for sending the message,
38 if any.

39 1. *Alert With Information Message*

- 1 2. *Audit Order*
- 2 3. *Candidate Frequency Search Request Message*
- 3 4. *Candidate Frequency Search Control Message*
- 4 5. *Data Burst Message*
- 5 6. *Extended Alert With Information Message*
- 6 7. *Extended Handoff Direction Message*
- 7 8. *Extended Neighbor List Update Message*
- 8 9. *Extended Release Message*
- 9 10. *Extended Supplemental Channel Assignment Message*
- 10 11. *Forward Supplemental Channel Assignment Mini Message*
- 11 12. *General Handoff Direction Message*
- 12 13. *In-Traffic System Parameters Message*¹⁰²
- 13 14. *Local Control Order*
- 14 15. *Lock Until Power-Cycled Order*: The base station should send this order in
15 unassured mode.
- 16 16. *Maintenance Order*
- 17 17. *Maintenance Required Order*
- 18 18. *Mobile Assisted Burst Operation Parameters Message*
- 19 19. *Mobile Station Registered Message*
- 20 20. *Neighbor List Update Message*: The base station shall not send this message if
21 P_REV_IN_USE is greater than or equal to eight.
- 22 21. *Parameter Update Order* (see 2.3.12.1.3 or 3.7.4).
- 23 22. *Power Control Message*
- 24 23. *Power Control Parameters Message*
- 25 24. *Power Up Function Message*
- 26 25. *Power Up Function Completion Message*
- 27 26. *Release Order*
- 28 27. *Resource Allocation Message*
- 29 28. *Resource Allocation Mini Message*

¹⁰² If the base station determines that the current P_REV_IN_USE is less than or equal to three, the base station does not send an *In-Traffic System Parameters Message* to change the P_REV_IN_USE to greater than or equal to nine.

- 1 29. *Resource Release Request Message*
- 2 30. *Resource Release Request Mini Message*
- 3 31. *Resource Request Message*
- 4 32. *Resource Request Mini Message*
- 5 33. *Retrieve Parameters Message*
- 6 34. *Reverse Supplemental Channel Assignment Mini Message*
- 7 35. *Service Option Control Message*: The base station shall send the message in
8 accordance with the requirements for the active service subfunction (see
9 3.6.4.1.2.2).
- 10 36. *Service Option Control Order*
- 11 37. *Status Request Message*
- 12 38. *Status Request Order*: The base station shall not send this message if
13 P_REV_IN_USE is greater than or equal to eight.
- 14 39. *Supplemental Channel Assignment Message*
- 15 40. *TMSI Assignment Message*
- 16 41. *Universal Handoff Direction Message*
- 17 42. *User Zone Reject Message*
- 18 43. *User Zone Update Message*
- 19 44. *General Extension Message* : The base station may send this message in order to
20 extend the above messages with additional records.
- 21 45. *Alternative Technology Information Message*: The base station may send this
22 message to update the Radio Interface records.
- 23 • If the base station receives one of the following messages from the mobile station,
24 the base station shall process the message according to the specified requirements,
25 if any:
- 26 1. *Base Station Challenge Order*: The base station shall process the message as
27 described in 2.3.12.1.5.
- 28 2. *Call Cancel Message*
- 29 3. *Candidate Frequency Search Report Message*: The base station shall process the
30 message as described in 3.6.6.2.2.6.
- 31 4. *Candidate Frequency Search Response Message*: The base station shall process
32 the message as described in 3.6.6.2.2.4.
- 33 5. *Connect Order*: If the CON_REF_INCL field is not included in this message or if
34 the CON_REF_INCL field equals '0', the Layer 3 shall deliver this message to the
35 Call Control instance identified by NULL; otherwise, the Layer 3 shall deliver
36 this message to the Call Control instance identified by CON_REF.

- 1 6. *Continuous DTMF Tone Order*: If the CON_REF_INCL field is not included in this
2 message or if the CON_REF_INCL field equals '0', the Layer 3 shall deliver this
3 message to the Call Control instance identified by NULL; otherwise, the Layer 3
4 shall deliver this message to the Call Control instance identified by CON_REF.
- 5 7. *Data Burst Message*
- 6 8. *Enhanced Origination Message*
- 7 9. *Extended Flash With Information Message*: If CON_REF_INCL equals '0', the
8 Layer 3 shall deliver this message to the Call Control instance identified by
9 NULL; otherwise, the Layer 3 shall deliver this message to the Call Control
10 instance identified by CON_REF.
- 11 10. *Extended Handoff Completion Message*: The base station shall process the
12 message as described in 3.6.6.2.2.7.
- 13 11. *Extended Pilot Strength Measurement Message*: The base station shall process
14 the message as described in 3.6.6.2.2.1.
- 15 12. *Extended Release Response Message*:
- 16 13. *Flash With Information Message*: The Layer 3 shall deliver this message to the
17 Call Control instance identified by NULL.
- 18 14. *Handoff Completion Message*: The base station shall process the message as
19 described in 3.6.6.2.2.7.
- 20 15. *Local Control Response Order*
- 21 16. *Long Code Transition Request Order*
- 22 17. *Long Code Transition Response Order*
- 23 18. *Mobile Station Reject Order*: If the CON_REF_INCL field is included in this
24 message, Layer 3 shall perform the following: if the CON_REF_INCL field equals
25 '0', Layer 3 shall send a 'messages rejected indication' to the Call Control
26 instance identified by NULL; otherwise, Layer 3 shall send a 'messages rejected
27 indication' to the Call Control instance identified by CON_REF.
- 28 19. *Origination Continuation Message*: The Layer 3 shall deliver this message to the
29 Call Control instance identified by NULL.
- 30 20. *Parameter Update Confirmation Order*
- 31 21. *Parameters Response Message*
- 32 22. *Periodic Pilot Strength Measurement Message*
- 33 23. *Pilot Strength Measurement Message*: The base station shall process the
34 message as described in 3.6.6.2.2.1.
- 35 24. *Power Measurement Report Message*
- 36 25. *Release Order*
- 37 26. *Reserved*

- 1 27. *Reserved*
- 2 28. *Reserved*
- 3 29. *Send Burst DTMF Message*: If the CON_REF_INCL field is not included in this
4 message or if the CON_REF_INCL field equals '0', the Layer 3 shall deliver this
5 message to the Call Control instance identified by NULL; otherwise, the Layer 3
6 shall deliver this message to the Call Control instance identified by CON_REF.
- 7 30. *Service Connect Completion Message*
- 8 31. *Service Option Control Message*: The base station shall process the message in
9 accordance with the requirements for the active service subfunction (see
10 3.6.4.1.2.2).
- 11 32. *Service Option Control Order*
- 12 33. *Service Option Request Order*
- 13 34. *Service Option Response Order*
- 14 35. *Service Request Message*
- 15 36. *Service Response Message*:
- 16 37. *SSD Update Confirmation Order*
- 17 38. *SSD Update Rejection Order*
- 18 39. *Status Response Message*
- 19 40. *Status Message*
- 20 41. *TMSI Assignment Completion Message*
- 21 42. *User Zone Update Request Message*: The base station shall process this message
22 as specified in 3.6.7.2.
- 23 43. *General Extension Message*: The base station shall store the records and
24 process the message included in the *General Extension Message*.

25 3.6.5 Registration

26 Registration is the process by which a mobile station notifies the base station of its
27 location, status, identification, slot cycle, and other characteristics. The base station can
28 make use of location information to efficiently page the mobile station when establishing a
29 mobile station terminated call. Registration also provides the mobile station's
30 SLOT_CYCLE_INDEX parameter so that the base station can determine which Paging
31 Channel or Forward Common Control Channel slots a mobile station operating in the
32 slotted mode is monitoring. Registration also provides the protocol revision number so that
33 the base station knows the capabilities of the mobile station.

34 The CDMA system supports eleven different forms of registration:

- 35 1. Power-up registration. The mobile station registers when it powers on.
- 36 2. Power-down registration. The mobile station registers when it powers off if
37 previously registered in the current serving system.

- 1 3. Timer-based registration. The mobile station registers when a timer expires.
- 2 4. Distance-based registration. The mobile station registers when the distance
3 between the current base station and the base station in which it last registered
4 exceeds a threshold.
- 5 5. Zone-based registration. The mobile station registers when it enters a new zone.
- 6 6. Parameter-change registration. The mobile station registers when certain of its
7 stored parameters change or when it enters a new system.
- 8 7. Ordered registration. The mobile station registers when the base station requests
9 it.
- 10 8. Implicit registration. When a mobile station successfully sends an *Origination*
11 *Message*, *Reconnect Message*, *Call Recovery Request Message*, or *Page Response*
12 *Message*, the base station can infer the mobile station's location. This is
13 considered an implicit registration.
- 14 9. Traffic Channel registration. Whenever the base station has registration
15 information for a mobile station that has been assigned to a Traffic Channel, the
16 base station can notify the mobile station that it is registered.
- 17 10. User Zone Registration. The mobile station registers when it selects an active User
18 Zone (see 2.6.9.1.2).
- 19 11. Encryption/Message Integrity re-sync required registration. The mobile station
20 registers when extended encryption is turned on and the mobile station determines
21 that it can not decrypt any messages from the base station (see 2.3.12.4.1.3) or the
22 mobile station registers when message integrity is supported and the mobile
23 station determines that it can not validate the MACI of any messages from the base
24 station.

25 The first five forms of registration, User Zone Registration, and Encryption/Message
26 Integrity re-sync required registration, as a group, are called autonomous registration and
27 are conditioned, in part, by roaming status and by indicators contained in the *System*
28 *Parameters Message* and *ANSI-41 System Parameters Message* (see 2.6.5.3). The base
29 station may initiate ordered registration through the *Registration Request Order*.

30 The base station can obtain registration information by sending the *Status Request*
31 *Message* to the mobile station on the Paging Channel, the Forward Common Control
32 Channel, or the Forward Traffic Channel. If the base station is operating with the mobile
33 station in Band Class 0, the base station can also obtain registration information by
34 sending the *Status Request Order* to the mobile station on the Forward Traffic Channel.
35 The base station may notify the mobile station that it is registered through the *Mobile*
36 *Station Registered Message*.

37 3.6.5.1 Registration on the Common Channels

38 The base station shall specify the forms of registration that are enabled, the corresponding
39 registration parameters, and the roaming status conditions for which registration is
40 enabled in the *System Parameters Message* and *ANSI-41 System Parameters Message*. If

1 any of the autonomous registration forms are enabled, the base station should also enable
2 parameter-change registration.

3 The base station should process an *Origination Message*, *Reconnect Message*, *Call Recovery*
4 *Request Message*, or *Page Response Message* sent on the r-csch as an implicit registration
5 of the mobile station sending the message. The base station can obtain complete
6 registration information about the mobile station at any time by sending a *Registration*
7 *Request Order* to the mobile station.

8 3.6.5.2 Registration on the Traffic Channels

9 The base station can obtain registration information from a mobile station on the Traffic
10 Channel by means of the *Status Request Message* or the *Status Request Order*. When the
11 base station has registration information for a mobile station, the base station may send a
12 *Mobile Station Registered Message* to the mobile station, specifying the base station's
13 registration system, zone, and location information.

14 3.6.6 Handoff Procedures

15 3.6.6.1 Overview

16 3.6.6.1.1 Types of Handoff

17 The base station supports the following three handoff procedures:

- 18 • *Soft Handoff*: A handoff in which a new base station commences communications
19 with the mobile station without interrupting the communications with the old base
20 station. The base station¹⁰³ can direct the mobile station to perform a soft handoff
21 only when all Forward Traffic Channels assigned to the mobile station have
22 identical band classes, frequency assignments and frame offsets. Soft handoff
23 provides diversity of Forward Traffic Channels and Reverse Traffic Channel paths on
24 the boundaries between base stations.
- 25 • *CDMA-to-CDMA Hard Handoff*: A handoff in which the base station directs the
26 mobile station to transition between disjoint sets of base stations, different band
27 classes, different frequency assignments, or different frame offsets.

28 Base station support of CDMA-to-CDMA hard handoff between different band classes is
29 optional.

30 Section 2.6.6 describes the mobile station requirements during handoff.

31 3.6.6.1.2 Active Set

32 The Active Set contains the pilots (see 2.6.6.1.2) associated with the Forward Traffic
33 Channels assigned to the mobile station. Initially the base station informs the mobile
34 station of the contents of the Active Set using the *Channel Assignment Message* or the
35 *Extended Channel Assignment Message*; subsequent changes to the contents of the Active

¹⁰³In this section the term base station may imply multiple cells or sectors.

1 Set are provided using the *Extended Handoff Direction Message*, *General Handoff Direction*
2 *Message*, or *Universal Handoff Direction Message*.

3 3.6.6.2 Requirements

4 3.6.6.2.1 Overhead Information

5 The base station sends the following messages governing the pilot search procedures
6 performed by the mobile station:

- 7 • *System Parameters Message*
- 8 • *In-Traffic System Parameters Message*
- 9 • *Neighbor List Message*
- 10 • *Extended Neighbor List Message*
- 11 • *Neighbor List Update Message*
- 12 • *Extended Neighbor List Update Message*
- 13 • *General Neighbor List Message*
- 14 • *General Handoff Direction Message*
- 15 • *Extended Handoff Direction Message*
- 16 • *Candidate Frequency Search Request Message*
- 17 • *Candidate Frequency Search Control Message*
- 18 • *Universal Handoff Direction Message*
- 19 • *Universal Neighbor List Message*
- 20 • *MC-RR Parameters Message*

21 3.6.6.2.1.1 System Parameters

22 The base station sends handoff related parameters on the Paging Channel in the *System*
23 *Parameters Message* and the *Extended System Parameters Message*, and on the Primary
24 Broadcast Control Channel in the *MC-RR Parameters Message*.

25 The base station may revise handoff related parameters for a mobile station operating on
26 the Traffic Channel by sending the *In-Traffic System Parameters Message*.

27 The base station may modify the values of the parameters SRCH_WIN_A, T_ADD, T_DROP,
28 T_COMP, and T_TDROP through the *Extended Handoff Direction Message*, the *General*
29 *Handoff Direction Message*, or the *Universal Handoff Direction Message*. In addition, the
30 base station may also modify the values of the parameters SRCH_WIN_N, SRCH_WIN_R,
31 SOFT_SLOPE, ADD_INTERCEPT, DROP_INTERCEPT, and T_TDROP_RANGE through the
32 *General Handoff Direction Message* or the *Universal Handoff Direction Message*.

33 3.6.6.2.1.2 Neighbor List

34 The base station sends a Neighbor List on the Paging Channel in the *Neighbor List Message*,
35 the *Extended Neighbor List Message*, or the *General Neighbor List Message*. The base

1 station should list the pilots in the *Neighbor List Message* in descending priority order (see
2 2.6.6.2.6.3).

3 The base station may revise the Neighbor List for a mobile station operating on the Traffic
4 Channel by sending a *Neighbor List Update Message* or an *Extended Neighbor List Update*
5 *Message*.

6 The base station shall not include a pilot that is a member of the mobile station's Active Set
7 in a *Neighbor List Update Message* or an *Extended Neighbor List Update Message*. The base
8 station shall not specify more than N_{8m} pilots in the *Neighbor List Message*, *Extended*
9 *Neighbor List Message*, *General Neighbor List Message*, or in the *Extended Neighbor List*
10 *Update Message*. The base station shall not specify more than 20 pilots in the *Neighbor List*
11 *Update Message*. The base station should list the pilots in the *Neighbor List Update*
12 *Message* in descending priority order (see 2.6.6.2.6.3).

13 3.6.6.2.1.3 Candidate Frequency Neighbor List

14 The base station sends a Candidate Frequency Neighbor List and inter-frequency hard
15 handoff related parameters in the *Candidate Frequency Search Request Message*. The base
16 station shall not specify more than N_{8m} pilots in the *Candidate Frequency Search Request*
17 *Message*.

18 3.6.6.2.1.4 Candidate Frequency Search List

19 The base station designates a subset of the Candidate Frequency Neighbor List included in
20 the *Candidate Frequency Search Request Message* as the Candidate Frequency Search List.
21 For each pilot belonging to the Candidate Frequency Search List, the base station shall set
22 the corresponding SEARCH_SET field of the *Candidate Frequency Search Request Message*
23 to '1'.

24 3.6.6.2.2 Call Processing During Handoff

25 When a mobile station performs a handoff from a base station with a P_REV lower than the
26 mobile station's MOB_P_REV to a base station with a P_REV greater than the P_REV of the
27 previous base station, the base station should send the service configuration to the mobile
28 station.

29 3.6.6.2.2.1 Processing the Pilot Strength Measurement Message

30 The base station should use the pilot strength measurements in the *Pilot Strength*
31 *Measurement Message* or the *Extended Pilot Strength Measurement Message* to determine a
32 new Active Set.

33 The base station may also use the PN phase measurements in the *Pilot Strength*
34 *Measurement Message* or the *Extended Pilot Strength Measurement Message* to estimate the
35 propagation delay to the mobile station. This estimate can be used to reduce Reverse
36 Traffic Channel acquisition time.

1 If the base station receives a *Pilot Strength Measurement Message* or *Extended Pilot Strength*
2 *Measurement Message* that includes any pilots for which supplementary information is
3 needed for handoff, then the base station may send a *Handoff Supplementary Information*
4 *Solicit Message* to the mobile station¹⁰⁴.

5 The base station may respond to a *Pilot Strength Measurement Message* or an *Extended Pilot*
6 *Strength Measurement Message* received from the mobile station by sending the *Extended*
7 *Handoff Direction Message*, the *General Handoff Direction Message*, or the *Universal Handoff*
8 *Direction Message*.

9 3.6.6.2.2.2 Processing the Extended Handoff Direction Message

10 The base station shall maintain a handoff message sequence number. If the base station
11 specifies that the mobile station is to use service negotiation, the base station shall set the
12 SERV_NEG variable (see 3.6.4.1.2.1.4) to be enabled at the action time of the message.
13 The sequence number shall be initialized to zero prior to the transmission of the first
14 *Extended Handoff Direction Message*, *General Handoff Direction Message* (see 3.6.6.2.2.10),
15 or the *Universal Handoff Direction Message* to the mobile station. The base station shall
16 increment the sequence number modulo 4 each time the base station modifies the pilot list
17 (including the order in which pilots are specified within the list) or the code channels
18 (including a change in the ordering such that the first code channel occurrence for any
19 pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*, a
20 *General Handoff Direction Message*, or a *Universal Handoff Direction Message*.

21 Following a hard handoff, the base station should set the handoff message sequence
22 number to the value of the LAST_HDM_SEQ field of the *Handoff Completion Message* or
23 *Extended Handoff Completion Message* and should use the pilot order contained in the
24 *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the
25 contents of subsequent *Power Measurement Report Messages*.

26 The base station shall set the contents of an *Extended Handoff Direction Message* according
27 to the following rules:

- 28 • An *Extended Handoff Direction Message* shall list no more than N_{6m} pilots in the
29 new Active Set.
- 30 • An *Extended Handoff Direction Message* shall identify the identical power control
31 subchannels (i.e., those carrying identical power control bits).
- 32 • An *Extended Handoff Direction Message* may change the code channel associated
33 with an Active Set pilot that remains in the new Active Set.

¹⁰⁴ After receiving a *PSMM*, *PSMMM* or *EPSMM Message*, base station waits for an implementation specific duration for the arrival of *Handoff Supplementary Information Notification Message* before transmitting the *Handoff Supplementary Information Solicit Message*.

- 1 • The base station specifies the long code mask to be used on the new Forward Traffic
2 Channel by using the PRIVATE_LCM field of the *Extended Handoff Direction*
3 *Message*. The base station may change the long code mask to be used on the new
4 Forward Traffic Channel via the PRIVATE_LCM field of the *Extended Handoff*
5 *Direction Message* only for CDMA-to-CDMA hard handoffs. If a change of long code
6 mask is specified and the base station does not specify an explicit action time in the
7 *Extended Handoff Direction Message*, the base station shall begin using the new
8 long code mask on the first 80 ms boundary (relative to System Time) occurring at
9 least 80 ms after the end of the frame containing the last bit of the message.
- 10 • For CDMA-to-CDMA handoffs, the base station may require the mobile station to
11 perform a reset of the acknowledgment procedures by using the RESET_L2 field of
12 the *Extended Handoff Direction Message*. If the base station requires the mobile
13 station to reset the acknowledgment procedures, Layer 3 shall send an indication to
14 Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment
15 procedures shall be reset immediately after the action time of the *Extended Handoff*
16 *Direction Message*.
- 17 • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by
18 setting the FRAME_OFFSET field to a new value. If the base station specifies a new
19 frame offset and does not specify an explicit action time, the base station shall
20 change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms
21 boundary (relative to System Time) after the end of transmission of the *Extended*
22 *Handoff Direction Message*, unless the end of transmission of the message coincides
23 with an 80 ms boundary, in which case the change in frame offsets shall occur 80
24 ms after the end of transmission.
- 25 • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base
26 station may alter the nominal transmit power offset after handoff by setting the
27 NOM_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA
28 hard handoffs to band classes other than Band Class 0 and Band Class 3, the base
29 station may alter the nominal transmit power offset after handoff by setting both the
30 NOM_PWR and NOM_PWR_EXT fields to the new nominal transmit power offset.
- 31 • The base station may specify a different band class by setting the BAND_CLASS and
32 CDMA_FREQ fields to the band class and CDMA frequency assignment respectively.
33 The base station shall not specify a band class not supported by the mobile station.
34 If the reverse channel corresponding to forward channel included in this message is
35 separated by flexible channel spacing, the base station shall extend this message
36 using the General Extension Message and include a Reverse Channel Information
37 Record that specifies the reverse frequency to be used by the mobile station after
38 handoff.
- 39 • If the base station sends the *Extended Handoff Direction Message* in assured mode,
40 the base station should set the action time of the message such that there is
41 sufficient time for the mobile station to transmit a message containing the
42 acknowledgment prior to the action time.

- 1 • For CDMA-to-CDMA hard handoffs, the base station may specify whether the
2 mobile station is to use service negotiation or service option negotiation by setting
3 the SERV_NEG_TYPE field of the *Extended Handoff Direction Message*. If the base
4 station specifies that the mobile station is to use service negotiation, the base
5 station shall set the SERV_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action
6 time of message. If the base station specifies that the mobile station is to use
7 service option negotiation, the base station shall set SERV_NEG to disabled at the
8 action time of the message.

9 3.6.6.2.2.3 Processing the Candidate Frequency Search Request Message

10 The base station may send a *Candidate Frequency Search Request Message* to direct the
11 mobile station to perform a single or periodic search on the Candidate Frequency.

12 The base station may request the mobile station to perform an aligned search of the
13 Candidate Frequency Search Set (see 2.6.6.2.8.3). If the base station requests the mobile
14 station to perform an aligned search, the base station shall specify an explicit action time
15 for the *Candidate Frequency Search Request Message*.

16 The base station shall maintain a search message sequence number. The sequence
17 number shall be initialized to zero prior to the transmission of the first *Candidate*
18 *Frequency Search Request Message* to the mobile station. Each time the base station sends
19 a new *Candidate Frequency Search Request Message* to the mobile station, it shall set the
20 CFSRM_SEQ field to the current value of the sequence number, and increment the
21 sequence number modulo 4.

22 3.6.6.2.2.4 Processing the Candidate Frequency Search Response Message

23 The base station should use the mobile station's search capabilities as reported in the
24 *Candidate Frequency Search Response Message* to determine an appropriate period for the
25 mobile station's periodic search on the Candidate Frequency.

26 3.6.6.2.2.5 Processing the Candidate Frequency Search Control Message

27 The base station may send a *Candidate Frequency Search Control Message* to direct the
28 mobile station to perform a single search, or to start or stop a periodic search on the
29 Candidate Frequency.

30 The base station may request the mobile station to perform an aligned search of the
31 Candidate Frequency Search Set (see 2.6.6.2.8.3). If the base station requests the mobile
32 station to perform an aligned search, the base station shall specify an explicit action time
33 for the *Candidate Frequency Search Control Message*.

34 Each time the base station sends a new *Candidate Frequency Search Control Message* to the
35 mobile station, it shall set the CFSCM_SEQ field to the current value of the sequence
36 number, and increment the sequence number modulo 4.

1 3.6.6.2.2.6 Processing the Candidate Frequency Search Report Message

2 The base station should use the value of the LAST_SRCH_MSG field and of the
3 LAST_SRCH_MSG_SEQ field of the *Candidate Frequency Search Report Message* to interpret
4 the contents of the message.

5 If the SEARCH_MODE field of the *Candidate Frequency Search Report Message* is equal to
6 '0000', the base station should use the pilot strength measurements in the message to
7 determine whether to direct the mobile station to perform a CDMA-to-CDMA inter-
8 frequency handoff, and to determine the new Active Set.

9 3.6.6.2.2.7 Transmitting During Handoff

10 The base station shall continue transmission to the mobile station on the Fundamental
11 Channel or the Dedicated Control Channel of a Forward Traffic Channel removed from the
12 Active Set until it receives the *Handoff Completion Message* or *Extended Handoff Completion*
13 *Message* from the mobile station or determines that the call has been released.

14 The base station should discontinue transmission to the mobile station on the
15 Fundamental Channel or the Dedicated Control Channel of a Forward Traffic Channel
16 removed from the Active Set after it receives the *Handoff Completion Message* or *Extended*
17 *Handoff Completion Message*.

18 For Forward Multiplex Options 3 through 16, the base station should discontinue
19 transmission of Forward Supplemental Code Channels removed from the Code Channel
20 List according to the following rules:

- 21 • If a *General Handoff Direction Message* is used to remove one or more Forward
22 Supplemental Code Channels, the base station should discontinue transmission on
23 those code channels no later than the action time of the *General Handoff Direction*
24 *Message*.
- 25 • If a *Supplemental Channel Assignment Message* is used to remove one or more
26 Forward Supplemental Code Channels, the base station should discontinue
27 transmission on those Forward Supplemental Code Channels no later than the
28 implicit action time of the *Supplemental Channel Assignment Message*.

29 3.6.6.2.2.8 Ordering Pilot Measurements From the Mobile Station

30 The base station may direct the mobile station to send a *Pilot Strength Measurement*
31 *Message* by sending a *Pilot Measurement Request Order*.

32 The base station may send a *Periodic Pilot Measurement Request Order* to direct the mobile
33 station to send pilot strength measurements one time or periodically. In response to the
34 order, the mobile station reports the pilot strength measurements using the *Periodic Pilot*
35 *Strength Measurement Message*.

36 3.6.6.2.2.9 Processing the Supplemental Channel Assignment Message

37 The base station may use this message to specify Supplemental Code Channel assignment
38 parameters for the mobile station's Forward Traffic Channel, Reverse Traffic Channel, or
39 both. This information includes the parameters that control the timing of the
40 Supplemental Code Channel assignment (e.g., starting time and duration), and parameters

1 that control the number of Supplemental Code Channels which will be used during the
2 assignment (e.g., the number of Reverse Supplemental Code Channels on which the mobile
3 station may transmit and the set of Walsh codes on which the mobile station receives
4 Forward Supplemental Code Channels for each pilot in the mobile station's Active Set).
5 The *Supplemental Channel Assignment Message* shall be used only with Multiplex Options 3
6 through 16.

7 The base station shall set the content of a *Supplemental Channel Assignment Message*
8 according to the following rules:

- 9 • The base station may set USE_RETRY_DELAY to '1' and RETRY_DELAY to a delay in
10 320 ms units starting at the next 80 ms system time boundary during which the
11 mobile station is to refrain from sending subsequent *Supplemental Channel Request*
12 *Messages*. The base station may set RETRY_DELAY to '11111111' to indicate that
13 the mobile station is to refrain from transmitting *Supplemental Channel Request*
14 *Messages* indefinitely. Otherwise, the base station shall set USE_RETRY_DELAY to
15 '0' and omit RETRY_DELAY in which case the mobile station is to reset any
16 previously set RETRY_DELAY indication.
- 17 • The base station shall set REV_DTX_DURATION to the maximum duration of time
18 in units of 20 ms that the mobile station is allowed to stop transmission on a
19 Reverse Supplemental Code Channel before resuming transmission on the Reverse
20 Supplemental Code Channel within the reverse assignment duration. The base
21 station shall set this field to '0000' if the mobile station is to stop using a Reverse
22 Supplemental Code Channel once it has stopped transmitting on that Reverse
23 Supplemental Code Channel. The base station shall set this field to '1111' if the
24 mobile station is allowed to resume transmission on a Reverse Supplemental Code
25 Channel at any time within the reverse assignment duration.
- 26 • A *Supplemental Channel Assignment Message* may specify Reverse Supplemental
27 Code Channel assignments. If Reverse Supplemental Code Channel assignment
28 information is included, the base station shall set REV_INCLUDED to '1' and
29 include the appropriate Reverse Supplemental Code Channel assignment
30 information. Otherwise, the base station shall set REV_INCLUDED to '0'.
- 31 • The base station shall indicate the implicit, explicit, or linked start time for a
32 Reverse Supplemental Code Channel assignment as follows:
 - 33 – The base station may set EXPL_REV_START_TIME to '1' and set
34 REV_START_TIME to the System Time, in units of 80 ms (modulo 64), at which
35 the mobile station is to start transmitting on the Reverse Supplemental Code
36 Channels.
 - 37 – The base station may set USE_REV_HDM_SEQ to '1' and set
38 REV_LINKED_HDM_SEQ to the sequence number of the *General Handoff*
39 *Direction Message* (HDM_SEQ) with which this message is linked to indicate that
40 the mobile station is to start processing the Reverse Supplemental Code
41 Channels at the action time of the linked *General Handoff Direction Message*.

- 1 – The base station may set EXPL_REV_START_TIME to ‘0’ and
2 USE_REV_HDM_SEQ to ‘0’ to indicate that the mobile station is to start
3 processing Reverse Supplemental Code Channels at the implicit action time of
4 this message.
- 5 – The base station shall not set both EXPL_REV_START_TIME and
6 USE_REV_HDM_SEQ to ‘1’.
- 7 • The base station may set USE_REV_DURATION to ‘1’ and REV_DURATION to the
8 time interval, in units of 80 ms, after the implicit, explicit, or linked action time for
9 the message (as specified in 2.6.6.2.5.1), during which the mobile station is to
10 transmit on the specified Reverse Supplemental Code Channels. The base station
11 may set USE_REV_DURATION to ‘0’ to indicate an infinite duration for the
12 assignment of Reverse Supplemental Code Channels. If NUM_REV_CODES is ‘000’,
13 then the base station shall set USE_REV_DURATION to ‘0’.
- 14 • If Reverse Supplemental Code Channel assignment information is included, the
15 base station shall set NUM_REV_CODES to the number of Reverse Supplemental
16 Code Channels to be used in this Reverse Supplemental Code Channel assignment.
17 The base station shall not set NUM_REV_CODES to be greater than the number of
18 codes supported by the currently negotiated multiplex option.
- 19 • The base station may set USE_T_ADD_ABORT, the Reverse Supplemental Code
20 Channel assignment T_ADD abort indicator, to ‘1’ to indicate that the mobile station
21 is to abort Reverse Supplemental Code Channel assignments implicitly when a
22 T_ADD trigger occurs. Otherwise, the base station shall set USE_T_ADD_ABORT to
23 ‘0’. If NUM_REV_CODES is set to ‘000’, the base station shall set
24 USE_T_ADD_ABORT to ‘0’.
- 25 • If the base station is sending this message in response to a *Supplemental Channel*
26 *Request Message* which includes a *Supplemental Channel Request Message*
27 sequence number and the mobile station is to clear the IGNORE_SCAM field, the
28 base station shall set USE_SCRM_SEQ_NUM to ‘1’ and set SCRM_SEQ_NUM to the
29 sequence number corresponding to the SCRM_SEQ_NUM field in a *Supplemental*
30 *Channel Request Message* to which the mobile station is to match this message.
31 Otherwise, the base station shall set USE_SCRM_SEQ_NUM to ‘0’ and omit
32 SCRM_SEQ_NUM.
- 33 • A *Supplemental Channel Assignment Message* may specify Forward Supplemental
34 Code Channel assignments. If Forward Supplemental Code Channel assignment
35 information is included, the base station shall set FOR_INCLUDED to ‘1’ and
36 include the appropriate Forward Supplemental Code Channel assignment
37 information. Otherwise, the base station shall set FOR_INCLUDED to ‘0’.
- 38 • The base station shall set FOR_SUP_CONFIG to ‘00’ if the mobile station is to stop
39 processing the forward supplemental code after the action time of the *Supplemental*
40 *Channel Assignment Message*. The base station should not transmit to the mobile
41 station on the Forward Supplemental Code Channels after the message takes effect.

- 1 • The base station shall set FOR_SUP_CONFIG to '01' if the mobile station is to start
2 processing the Forward Supplemental Code Channels in the Code Channel List at
3 the implicit, explicit, or linked action time for the message as specified in
4 2.6.6.2.5.1.
- 5 • The base station shall set FOR_SUP_CONFIG to '10' if the Forward Supplemental
6 Code Channels associated with the pilots in the Active set are specified in the
7 *Supplemental Channel Assignment Message* and is to stop processing Forward
8 Supplemental Code Channels at the implicit action time of the message. The base
9 station should not transmit to the mobile station on the Forward Supplemental
10 Code Channels after the message takes effect.
- 11 • The base station shall set FOR_SUP_CONFIG to '11' if the Forward Supplemental
12 Code Channels associated with the pilots in the Active set are specified in the
13 *Supplemental Channel Assignment Message* and the mobile station is to start
14 processing the Forward Supplemental Code Channels at the implicit, explicit, or
15 linked action time for the message as specified in 2.6.6.2.5.1.
- 16 • The base station shall set FOR_DURATION to the time interval, in units of 80 ms,
17 after the implicit, explicit, or linked action time for the message (as specified in
18 2.6.6.2.5.1), during which the mobile station is to process the specified Forward
19 Supplemental Code Channels. The base station may set USE_FOR_DURATION to
20 '0' to indicate an infinite duration for the allocation of Forward Supplemental Code
21 Channels. The base station should not transmit to the mobile station on the
22 Forward Supplemental Code Channels outside the time interval specified by
23 FOR_DURATION.
- 24 • The base station may set EXPL_FOR_START_TIME to '1' and set FOR_START_TIME
25 to the System Time, in units of 80 ms (modulo 64), at which the mobile station is to
26 start processing the Forward Supplemental Code Channels.
- 27 • The base station may set USE_FOR_HDM_SEQ to '1' and set
28 FOR_LINKED_HDM_SEQ to the sequence number of the *General Handoff Direction*
29 *Message* (HDM_SEQ) with which this message is linked to indicate that the mobile
30 station is to start processing the Forward Supplemental Code Channels at the
31 action time of the linked *General Handoff Direction Message*.
- 32 • The base station shall not set both USE_FOR_HDM_SEQ and
33 EXPL_FOR_START_TIME within a *Supplemental Channel Assignment Message* to '1'.
- 34 • The number of Supplemental Code Channels assigned by *Supplemental Channel*
35 *Assignment Message* shall not exceed the maximum number of Supplemental Code
36 Channels for the negotiated Forward Multiplex Option.
- 37 • The base station may set EXPL_FOR_START_TIME to '0' and USE_FOR_HDM_SEQ
38 to '0' to indicate that the mobile station is to start processing Forward Supplemental
39 Code Channels at the implicit action time of this message.

1 3.6.6.2.2.10 Processing the General Handoff Direction Message

2 The base station shall maintain a handoff message sequence number. The sequence
3 number shall be initialized to zero prior to the transmission of the first *Extended Handoff*
4 *Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction*
5 *Message* (see 3.6.6.2.2.11) to the mobile station (see 2.6.6.2.2.2). The base station shall
6 increment the sequence number modulo 4 each time the base station modifies the pilot list
7 (including the order in which pilots are specified within the list) or the code channels
8 (including a change in the ordering such that the first code channel occurrence for any
9 pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*,
10 *General Handoff Direction Message*, or *Universal Handoff Direction Message*.

11 Following a hard handoff, the base station should set the handoff message sequence
12 number to the value of the LAST_HDM_SEQ field of the *Handoff Completion Message* or
13 *Extended Handoff Completion Message* and should use the pilot order contained in the
14 *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the
15 contents of subsequent *Power Measurement Report Messages*.

16 The base station shall set the contents of a *General Handoff Direction Message* according to
17 the following rules:

- 18 • A *General Handoff Direction Message* shall list no more than N_{6m} pilots in the new
19 Active Set.
- 20 • The base station may include a Service Configuration Information Record in the
21 *General Handoff Direction Message* to accept a service configuration proposed in a
22 *Service Request Message* or *Service Response Message*, and instruct the mobile
23 station to begin using the service configuration.
- 24 • A *General Handoff Direction Message* shall identify the identical power control
25 subchannels (i.e., those carrying identical power control bits).
- 26 • A *General Handoff Direction Message* shall identify the transmit power level of the
27 power control subchannels to the transmit power level of 20 ms frames at a 9600
28 bps or 14400 bps rate on their respective associated channels (Forward
29 Fundamental Channel or Forward Dedicated Control Channel).
- 30 • For CDMA-to-CDMA handoffs, the base station may specify Power Control
31 Subchannel Gain action time (PC_ACTION_TIME]. If PC_ACTION_TIME is included
32 in this message, the base station shall apply the new FPC_SUBCHAN_GAIN at the
33 time specified by PC_ACTION_TIME. If the PC_ACTION_TIME is not included in this
34 message but the explicit action time is included, the base station shall apply the
35 new FPC_SUBCHAN_GAIN at the action time of the *General Handoff Direction*
36 *Message*. If the implicit action time is used, the base station should gradually apply
37 any change in FPC_SUBCHAN_GAIN.
- 38 • A *General Handoff Direction Message* may change the code channel associated with
39 an Active Set pilot that remains in the new Active Set.

- 1 • The base station specifies the long code mask to be used on the new Forward Traffic
2 Channel by using the PRIVATE_LCM field of the *General Handoff Direction Message*.
3 The base station may change the long code mask to be used on the new Forward
4 Traffic Channel via the PRIVATE_LCM field of the *General Handoff Direction Message*
5 only for CDMA-to-CDMA hard handoffs. If a change of long code mask is specified
6 and the base station does not specify an explicit action time in the *General Handoff*
7 *Direction Message*, the base station shall begin using the new long code mask on the
8 first 80 ms boundary (relative to System Time) occurring at least 80 ms after the
9 end of the frame containing the last bit of the message.
- 10 • For CDMA-to-CDMA handoffs, the base station may require the mobile station to
11 perform a reset of the acknowledgment procedures by using the RESET_L2 field of
12 the *General Handoff Direction Message*. If the base station requires the mobile
13 station to reset the acknowledgment procedures, Layer 3 shall send an indication to
14 Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment
15 procedures of the base station that the mobile station is to handoff to shall be reset
16 immediately after the action time of the *General Handoff Direction Message*.
- 17 • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by
18 setting the FRAME_OFFSET field to a new value. If the base station specifies a new
19 frame offset and does not specify an explicit action time, the base station shall
20 change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms
21 boundary (relative to System Time) after the end of transmission of the *General*
22 *Handoff Direction Message*, unless the end of transmission of the message coincides
23 with an 80 ms boundary, in which case the change in frame offsets shall occur 80
24 ms after the end of transmission.
- 25 • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base
26 station may alter the nominal transmit power offset after handoff by setting the
27 NOM_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA
28 hard handoffs to band classes other than Band Class 0 and Band Class 3, the base
29 station may alter the nominal transmit power offset after handoff by setting both the
30 NOM_PWR and NOM_PWR_EXT fields to the new nominal transmit power offset.
- 31 • The base station may specify a different band class by setting the BAND_CLASS and
32 CDMA_FREQ fields to the band class and CDMA frequency assignment respectively.
33 The base station shall not specify a band class not supported by the mobile station.
34 If the reverse channel corresponding to forward channel included in this message is
35 separated by flexible channel spacing, the base station shall extend this message
36 using the General Extension Message and include a Reverse Channel Information
37 Record that specifies the reverse frequency to be used by the mobile station after
38 handoff.
- 39 • If the base station sends the *General Handoff Direction Message* in assured mode,
40 the base station should set the action time of the message such that there is
41 sufficient time for the mobile station to transmit a message containing the
42 acknowledgment prior to the action time.

- 1 • For CDMA-to-CDMA hard handoffs, the base station may specify whether the
2 mobile station is to use service negotiation or service option negotiation by setting
3 the SERV_NEG_TYPE field of the *General Handoff Direction Message*. If the base
4 station specifies that the mobile station is to use service negotiation, the base
5 station shall set the SERV_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action
6 time of message. If the base station specifies that the mobile station is to use
7 service option negotiation, the base station shall set SERV_NEG to disabled at the
8 action time of the message.
- 9 • The base station may specify whether the mobile station is to restore its
10 configuration to what it was before the handoff attempt, if it fails in the handoff
11 attempt using criteria specified in the *Candidate Frequency Search Request*
12 *Message*, by using the RETURN_IF_HANDOFF_FAIL field of the *General Handoff*
13 *Direction Message*. The base station may specify whether the mobile station is to
14 periodically search a CDMA Candidate Frequency for useable pilots, using criteria
15 specified in the *Candidate Frequency Search Request Message*, by using the
16 PERIODIC_SEARCH field of the *General Handoff Direction Message*.
- 17 • The base station may include Forward Supplemental Code Channel assignment
18 information in the *General Handoff Direction Message* if the Forward Multiplex
19 Option for the currently connected service option is 3, 4, 5, 6, 7, 8, 9, 10, 11, 12,
20 13, 14, 15, or 16. If Forward Supplemental Code Channel assignment information
21 is included, the base station shall include FOR_INCLUDED, set FOR_INCLUDED to
22 '1', and include the appropriate Forward Supplemental Code Channel assignment
23 information.
- 24 • The number of Forward Supplemental Code Channels assigned by the *General*
25 *Handoff Direction Message* shall not exceed the maximum number of Forward
26 Supplemental Code Channels for the negotiated Forward Multiplex Option.
- 27 • The base station shall set FOR_SUP_CONFIG to '00' if the mobile station is to stop
28 processing the Forward Supplemental Code Channel after the action time of *General*
29 *Handoff Direction Message*. The base station should not transmit to the mobile
30 station on the Forward Supplemental Code Channels after the message takes effect.
- 31 • The base station shall set FOR_SUP_CONFIG to '01' if the mobile station is to start
32 processing the Forward Supplemental Code Channels in the Code Channel List at
33 the action time of the message.
- 34 • The base station shall set FOR_SUP_CONFIG to '10' if the Forward Supplemental
35 Code Channels associated with the pilots in the Active set are specified in the
36 *General Handoff Direction Message* and the mobile station is to stop processing
37 Forward Supplemental Code Channels at the implicit action time of the message.
38 The base station should not transmit to the mobile station on the Forward
39 Supplemental Code Channels after the message takes effect.
- 40 • The base station shall set FOR_SUP_CONFIG to '11' if the Forward Supplemental
41 Code Channels associated with the pilots in the Active set are specified in the
42 *General Handoff Direction Message* and the mobile station is to start processing the
43 Forward Supplemental Code Channels at the action time of the message.

- 1 • The base station shall set FOR_DURATION to the time interval after the action time
2 of the message, in units of 80 ms, during which the mobile station is to process the
3 specified Forward Supplemental Code Channels. The base station may set
4 USE_FOR_DURATION to '0' to indicate an infinite duration for the allocation of
5 Forward Supplemental Code Channels. The base station should not transmit to the
6 mobile station on the Forward Supplemental Code Channels outside the time
7 interval specified by FOR_DURATION.
- 8 • If FOR_INCLUDED is included in the message, the base station shall include
9 EXPL_CODE_CHAN for each pilot included in the message. If EXPL_CODE_CHAN
10 is included and set to '1' for a pilot, the code channels associated with the pilot in
11 the *General Handoff Direction Message* shall be ordered such that the first code
12 channel occurrence is associated with the Forward Fundamental Channel and the
13 successive occurrences are associated with Forward Supplemental Code Channels.
14 If EXPL_CODE_CHAN is included and is set to '0', for each pilot in the new Active
15 Set, the base station shall include BASE_CODE_CHAN and set it to the base code
16 channel index in the range of 1 to (63 - NUM_FOR_SUP + 1), inclusive, that the
17 mobile station is to use as the first Forward Supplemental Code Channel associated
18 with this pilot. The mobile station is to use NUM_FOR_SUP adjacent code channels
19 beginning with index BASE_CODE_CHAN (i.e., BASE_CODE_CHAN through
20 BASE_CODE_CHAN + NUM_FOR_SUP - 1) for the Forward Supplemental Code
21 Channels associated with this pilot.
- 22 • The base station may include Reverse Supplemental Code Channel assignment
23 information in the *General Handoff Direction Message* if the Reverse Multiplex
24 Option is 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, or 16. If Reverse Supplemental
25 Code Channel assignment information is included, the base station shall include
26 REV_INCLUDED, set REV_INCLUDED to '1', and include the appropriate Reverse
27 Supplemental Code Channel assignment information in the additional fields.
- 28 • If Reverse Supplemental Code Channel assignment information is included, the
29 base station shall set NUM_REV_CODES to the number of Reverse Supplemental
30 Code Channels to be used by the mobile station. The base station shall not set
31 NUM_REV_CODES to be greater than the number of codes supported by the
32 currently negotiated multiplex option.
- 33 • The base station may set USE_T_ADD_ABORT, the Reverse Supplemental Code
34 Channel assignment T_ADD abort indicator, to '1' to indicate that the mobile station
35 is to abort Reverse Supplemental Code Channel assignments implicitly when a
36 T_ADD trigger occurs. Otherwise, the base station shall set USE_T_ADD_ABORT to
37 '0'. If NUM_REV_CODES is set to '000', the base station shall set
38 USE_T_ADD_ABORT to '0'.

- 1 • The base station shall set REV_DTX_DURATION to the maximum duration of time
2 in units of 20 ms that the mobile station is allowed to stop transmission on a
3 Reverse Supplemental Code Channel before resuming transmission on the Reverse
4 Supplemental Code Channel. The base station shall set this field to '0000' if the
5 mobile station is to stop using a Reverse Supplemental Code Channel once it has
6 stopped transmitting on that Reverse Supplemental Code Channel. The base
7 station shall set this field to '1111' if the mobile station is allowed to resume
8 transmission on a Reverse Supplemental Code Channel at any time within the
9 reverse assignment duration.
- 10 • The base station may set CLEAR_RETRY_DELAY to '1' to indicate that the mobile
11 station is to cancel any previously stored retry delay. Otherwise, the base station
12 shall set CLEAR_RETRY_DELAY to '0' to indicate that the mobile station is to
13 continue to honor any previously stored retry delay (see 2.6.6.2.5.1).
- 14 • The base station may indicate a duration for the Reverse Supplemental Code
15 Channel assignment (in 80 ms superframes) by setting USE_REV_DURATION to '1'
16 and indicating the desired duration in the REV_DURATION field. If
17 USE_REV_DURATION is set to '0', a duration of infinity is indicated, and the base
18 station shall set the REV_DURATION to '00000000'. If NUM_REV_CODES is '000',
19 then the base station shall set USE_REV_DURATION to '0' and shall set
20 REV_DURATION to '00000000'.
- 21 • The base station may set USE_REV_DURATION to '1' and REV_DURATION to the
22 time interval after the action time of the message, in units of 80 ms, during which
23 the mobile station may transmit on the assigned Reverse Supplemental Code
24 Channels. The base station may set USE_REV_DURATION to '0' to indicate an
25 infinite duration for the allocation of Forward Supplemental Code Channels.
- 26 • The base station may specify a closed loop power control step size by setting
27 USE_PWR_CNTL_STEP to '1' and indicating the desired power control step size in
28 the PWR_CNTL_STEP field (see 2.1.2.3.2). Otherwise, the base station shall set
29 USE_PWR_CNTL_STEP to '0'. The base station shall not specify a power control
30 step size not supported by the mobile station.

31 3.6.6.2.2.11 Processing the Universal Handoff Direction Message

32 The base station shall maintain a handoff message sequence number. The sequence
33 number shall be initialized to zero prior to the transmission of the first *Extended Handoff*
34 *Direction Message* (see 3.6.6.2.2.2), *General Handoff Direction Message* (see 3.6.6.2.2.10), or
35 *Universal Handoff Direction Message* to the mobile station. The base station shall
36 increment the sequence number modulo 4 each time the base station modifies the pilot list
37 (including the order in which pilots are specified within the list) or the code channels
38 (including a change in the ordering such that the first code channel occurrence for any
39 pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*, a
40 *General Handoff Direction Message*, or an *Universal Direction Message*.

41 Following a hard handoff, the base station should set the handoff message sequence
42 number to the value of the LAST_HDM_SEQ field of the *Handoff Completion Message* or
43 *Extended Handoff Completion Message* and should use the pilot order contained in the

1 *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the
2 contents of subsequent *Power Measurement Report Messages*.

3 The base station shall set the contents of a *Universal Handoff Direction Message* according
4 to the following rules:

- 5 • A *Universal Handoff Direction Message* shall list no more than N_{6m} pilots in the new
6 Active Set.
- 7 • The base station may include a Service Configuration Information Record in the
8 *Universal Handoff Direction Message* to accept a service configuration proposed in a
9 *Service Request Message* or *Service Response Message*, and instruct the mobile
10 station to begin using the service configuration.
- 11 • A *Universal Handoff Direction Message* shall identify the identical power control
12 subchannels (i.e., those carrying identical power control bits).
- 13 • A *Universal Handoff Direction Message* shall identify the transmit power level of the
14 power control subchannels to the transmit power level of 20 ms frames at a 9600
15 bps or 14400 bps rate on their respective associated channels (Forward
16 Fundamental Channel or Forward Dedicated Control Channel).
- 17 • For CDMA-to-CDMA handoffs, the base station may specify Power Control
18 Subchannel Gain action time (PC_ACTION_TIME]. If PC_ACTION_TIME is included
19 in this message, the base station shall apply the new FPC_SUBCHAN_GAIN at the
20 time specified by PC_ACTION_TIME. If the PC_ACTION_TIME is not included in this
21 message but the explicit action time is included, the base station shall apply the
22 new FPC_SUBCHAN_GAIN at the action time of the *Universal Handoff Direction*
23 *Message*. If the implicit action time is used, the base station should gradually apply
24 any change in FPC_SUBCHAN_GAIN.
- 25 • A *Universal Handoff Direction Message* may change the code channel associated
26 with an Active Set pilot that remains in the new Active Set.
- 27 • A *Universal Handoff Direction Message* may delete the code channel associated with
28 an Active Set pilot that remains in the new Active Set.
- 29 • A *Universal Handoff Direction Message* may add the code channel associated with an
30 Active Set pilot that remains in the new Active Set.
- 31 • The base station specifies the long code mask to be used on the new Forward Traffic
32 Channel by using the PRIVATE_LCM and PLCM_TYPE fields of the *Universal*
33 *Handoff Direction Message*. The base station may change the contents of the
34 PRIVATE_LCM field only for CDMA-to-CDMA hard handoffs. If a change of long
35 code mask is specified and the base station does not specify an explicit action time
36 in the *Universal Handoff Direction Message*, the base station shall begin using the
37 new long code mask on the first 80 ms boundary (relative to System Time) occurring
38 at least 80 ms after the end of the frame containing the last bit of the message.

- 1 • For CDMA-to-CDMA handoffs, the base station may require the mobile station to
2 perform a reset of the acknowledgment procedures by using the RESET_L2 field of
3 the *Universal Handoff Direction Message*. If the base station requires the mobile
4 station to reset the acknowledgment procedures, Layer 3 shall send an indication to
5 Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment
6 procedures of the base station that the mobile station is to handoff to shall be reset
7 immediately after the action time of the *General Handoff Direction Message*.
- 8 • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by
9 setting the FRAME_OFFSET field to a new value. If the base station specifies a new
10 frame offset and does not specify an explicit action time, the base station shall
11 change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms
12 boundary (relative to System Time) after the end of transmission of the *Universal*
13 *Handoff Direction Message*, unless the end of transmission of the message coincides
14 with an 80 ms boundary, in which case the change in frame offsets shall occur 80
15 ms after the end of transmission.
- 16 • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base
17 station may alter the nominal transmit power offset after handoff by setting the
18 NOM_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA
19 hard handoffs to band classes other than Band Class 0 and Band Class 3, the base
20 station may alter the nominal transmit power offset after handoff by setting both the
21 NOM_PWR and NOM_PWR_EXT fields to the new nominal transmit power offset.
- 22 • The base station may specify a different band class by setting the BAND_CLASS and
23 CDMA_FREQ fields to the band class and CDMA frequency assignment respectively.
24 The base station shall not specify a band class not supported by the mobile station.
25 If the reverse channel corresponding to forward channel included in this message is
26 separated by flexible channel spacing, the base station shall extend this message
27 using the General Extension Message and include a Reverse Channel Information
28 Record that specifies the reverse frequency to be used by the mobile station after
29 handoff¹⁰⁵.
- 30 • If the base station sends the *Universal Handoff Direction Message* in assured mode,
31 the base station should set the action time of the message such that there is
32 sufficient time for the mobile station to transmit a message containing the
33 acknowledgment prior to the action time.

¹⁰⁵ Similarly, *MEID Universal Handoff Direction Message* may be extended through General Extension Message.

- 1 • For CDMA-to-CDMA handoffs, the base station may specify whether the mobile
2 station is to use service negotiation or service option negotiation by setting the
3 SERV_NEG_TYPE field of the *Universal Handoff Direction Message*. If the base
4 station specifies that the mobile station is to use service negotiation, the base
5 station shall set the SERV_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action
6 time of message. If the base station specifies that the mobile station is to use
7 service option negotiation, the base station shall set SERV_NEG to disabled at the
8 action time of the message.
- 9 • The base station may specify whether the mobile station is to restore its
10 configuration to what it was before the handoff attempt, if it fails in the handoff
11 attempt using criteria specified in the *Candidate Frequency Search Request*
12 *Message*, by using the RETURN_IF_HANDOFF_FAIL field of the *Universal Handoff*
13 *Direction Message*. The base station may specify whether the mobile station is to
14 periodically search a CDMA Candidate Frequency for useable pilots, using criteria
15 specified in the *Candidate Frequency Search Request Message*, by using the
16 PERIODIC_SEARCH field of the *Universal Handoff Direction Message*.
- 17 • The base station specifies Active Set for the Fundamental Channel only, the
18 Dedicated Control Channel only, or both. The Active Set of the Dedicated Control
19 Channel shall be the same as the Active Set of the Fundamental Channel when
20 both the Fundamental Channel and Dedicated Control Channel are assigned.
- 21 • The base station may specify the Active Set of the Supplemental Channels. The
22 Active Set of the Supplemental Channels shall be a subset of the Active Set of the
23 Fundamental Channel or the Dedicated Control Channel.
- 24 • If a Reverse Packet Data Channel assignment is not included, a *Universal Handoff*
25 *Direction Message* may specify a Reverse Supplemental Channel assignment. If
26 Reverse Supplemental Channel assignment information is included, this message
27 contains information that specifies the start time, duration, and the data transfer
28 rate associated with this Reverse Supplemental Channel assignment.
- 29 • If a Reverse Packet Data Channel assignment is included, a *Universal Handoff*
30 *Direction Message* shall not specify a Reverse Supplemental Channel assignment.
- 31 • A *Universal Handoff Direction Message* may specify a Forward Supplemental
32 Channel assignment. If Forward Supplemental Channel assignment information is
33 included, this message contains the start time, duration, and SCCL_INDEX
34 associated with this Forward Supplemental Channel assignment.
- 35 • A *Universal Handoff Direction Message* may update the mapping between a
36 particular SCCL_INDEX and a set of fields that specifies the data transfer rate, QOF
37 index, Forward Supplemental Channel Walsh code for each PILOT_PN, and the
38 active set for the Forward Supplemental Channel associated with FOR_SCH_ID.
- 39 • A *Universal Handoff Direction Message* may update REV_WALSH_ID field which
40 specifies the Reverse Supplemental Walsh cover.
- 41 • The base station may set CLEAR_RETRY_DELAY to '1' to indicate that the mobile
42 station is to cancel any previously stored retry delay. Otherwise, the base station

1 shall set CLEAR_RETRY_DELAY to '0' to indicate that the mobile station is to
2 continue to honor any previously stored retry delay (see 2.6.6.2.5.1).

3 3.6.6.2.2.12 Processing of Extended Supplemental Channel Assignment Message

4 If the Reverse Packet Data Channel is not assigned, the base station may use this message
5 to carry Forward Supplemental Channel assignment information or Reverse Supplemental
6 Channel assignment information.

7 If the Reverse Packet Data Channel is assigned, the base station may use this message to
8 carry Forward Supplemental Channel assignment information, and the base station shall
9 not use this message to carry Reverse Supplemental Channel assignment information.

10 If Forward Supplemental Channel assignment information is included, this message
11 contains the start time, duration, and SCCL_INDEX associated with this Forward
12 Supplemental Channel assignment. If Reverse Supplemental Channel assignment
13 information is included, this message contains information that specifies the start time,
14 duration, and the number of information bits per frame (or set of number of bits per frame
15 if RSCH_VAR_TABLE_IDS[REV_SCH_ID_r] is not equal to '000') associated with this Reverse
16 Supplemental Channel assignment.

17 This message may specify the mapping between a particular SCCL_INDEX and a set of
18 fields that specifies the number of information bits per frame (or set of number of bits per
19 frame if FSCH_VAR_TABLE_IDS[FOR_SCH_ID_r] is not equal to '000'), QOF index, Forward
20 Supplemental Channel Walsh code for each PILOT_PN, and the active set for the Forward
21 Supplemental Channel associated with FOR_SCH_ID.

22 This message may also include REV_WALSH_ID field which specifies the Reverse
23 Supplemental Walsh cover.

24 The base station shall set the contents of an *Extended Supplemental Channel Assignment*
25 *Message* according to the following rules:

- 26 • An *Extended Supplemental Channel Assignment Message* may specify a Reverse
27 Supplemental Channel assignment. The base station shall set NUM_REV_SCH to
28 the number of Reverse Supplemental Channels to be assigned. If the Reverse Packet
29 Data Channel is assigned, the base station shall set NUM_REV_SCH to 0.
- 30 • An *Extended Supplemental Channel Assignment Message* may specify a Forward
31 Supplemental Channel assignment. The base station shall set NUM_FOR_SCH to
32 the number of Forward Supplemental Channels to be assigned.
- 33 • The base station shall set the START_TIME_UNIT field to indicate the unit of the
34 FOR_SCH_START_TIME included in this message, the *Forward Supplemental*
35 *Channel Assignment Mini Messages* and the *Universal Handoff Direction Message*
36 and REV_SCH_START_TIME included in this message, the *Reverse Supplemental*
37 *Channel Assignment Mini Messages* and the *Universal Handoff Direction Message*.
38 The base station shall set this field to one less than the number of 20 ms intervals
39 that is to be used by the mobile station for calculating the start time included in
40 Forward Supplemental Channel assignments or Reverse Supplemental Channel
41 assignments.

- 1 • An *Extended Supplemental Channel Assignment Message* may specify Forward
2 Supplemental Channel configuration information. The base station shall set
3 NUM_FOR_SCH_CFG to the number of Forward Supplemental Channel to be
4 configured.
- 5 • The base station shall set the NUM_REC field to the number of instances of the
6 following record minus one included in this message. The base station shall set the
7 fields within each record as follows:
- 8 – The base station shall set the SCCL_INDEX field to the index of the
9 Supplemental Channel Code Information Record in the Supplemental Channel
10 Code List Table.
- 11 – The base station shall set the FOR_SCH_NUM_BITS_IDX field to the Forward
12 Supplemental Channel number of information bits index associated with
13 SCCL_INDEX.
- 14 – The base station shall set the NUM_SUP_SHO field to the number of Forward
15 Supplemental Channels minus one, corresponding to the FOR_SCH_ID and the
16 SCCL_INDEX, for which the frames are to be soft-combined by the mobile
17 station. The base station shall set the fields within each record as follows:
- 18 + The base station shall set the PILOT_PN field to the pilot PN sequence offset
19 for this pilot in units of 64 PN chips.
- 20 + The base station shall set the QOF_MASK_ID_SCH field to the ID of the
21 Quasi Orthogonal Function mask ID corresponding to the Forward
22 Supplemental Channel Code index.
- 23 + The base station shall set the CODE_CHAN_SCH field to the code channel
24 on the Supplemental Channel corresponding to the PILOT_PN.
- 25 • REV_SCH_DTX_DURATION: The base station shall set REV_SCH_DTX_DURATION
26 to the maximum duration of time in units of 20 ms that the mobile station is
27 allowed to stop transmission on a Reverse Supplemental Channel before resuming
28 transmission on the Reverse Supplemental Channel within the reverse assignment
29 duration. The base station shall set this field to '0000' if the mobile station is to
30 stop using a Reverse Supplemental Channel once it has stopped transmitting on
31 that Reverse Supplemental Channel. The base station shall set this field to '1111' if
32 the mobile station is allowed to resume transmission on a Reverse Supplemental
33 Channel at any time within the reverse assignment duration.
- 34 • The base station may set USE_T_ADD_ABORT, the Reverse Supplemental Channel
35 assignment T_ADD abort indicator, to '1' to indicate that the mobile station is to
36 abort Reverse Supplemental Channel assignments when a T_ADD trigger occurs.
37 Otherwise, the base station shall set USE_T_ADD_ABORT to '0'.

- 1 • If the base station is sending this message in response to a *Supplemental Channel Request Message* which includes a *Supplemental Channel Request Message*
2 sequence number and the mobile station is to clear the IGNORE_ESCAM field, the
3 base station shall set USE_SCRM_SEQ_NUM to '1' and set SCRM_SEQ_NUM to the
4 sequence number corresponding to the SCRM_SEQ_NUM field in a *Supplemental*
5 *Channel Request Message* to which the mobile station is to match this message.
6 Otherwise, the base station shall set USE_SCRM_SEQ_NUM to '0' and omit
7 SCRM_SEQ_NUM.
8
- 9 • If Forward Supplemental Channel burst assignment is included, the base station
10 may include additional Forward Supplemental Channel configuration information
11 including radio configuration, multiplex option, coding type, frame length, and
12 maximum supplemental channel rate; if so, the base station shall set
13 FOR_SCH_CC_INCL to '1'.
- 14 • If Reverse Supplemental Channel burst assignment is included, the base station
15 may include additional Reverse Supplemental Channel configuration information
16 including radio configuration, multiplex option, coding type, frame length, and
17 maximum supplemental channel rate; if so, the base station shall set
18 REV_SCH_CC_INCL to '1'.

19 3.6.6.2.2.13 Processing of Forward Supplemental Channel Assignment Mini Message
20 The base station may use this message to specify Forward Supplemental Channel
21 assignment parameters for the mobile station's Forward Supplemental Channel. This
22 information includes the FOR_SCH_ID, duration, start time, and the index to the
23 previously specified Forward Supplemental Channel Code List, which determines number
24 of information bits per frame (or set of number of bits per frame if
25 FSCH_VAR_TABLE_ID_S[FOR_SCH_ID_r] is not equal to '000'), code channel index, and the
26 identifier of the Quasi Orthogonal Function corresponding to the assignment.

27 The base station shall set the content of a *Forward Supplemental Channel Assignment Mini*
28 *Message* according to the following rules:

- 29 • The base station shall set the FOR_SCH_ID to Forward Supplemental Channel
30 identifier of the burst assignment that this message carries.
- 31 • The base station shall set the FOR_SCH_DURATION field to '0000' to indicate that
32 the mobile station should stop processing the Forward Supplemental Channel
33 starting at the explicit start time of the message specified by
34 FOR_SCH_START_TIME. The base station shall set the FOR_SCH_DURATION field
35 to '1111' to indicate that the mobile station should process the Forward
36 Supplemental Channel, starting at the explicit start time of the message specified
37 by FOR_SCH_START_TIME, until a subsequent *Forward Supplemental Channel*
38 *Assignment Mini Message* or an *Extended Supplemental Channel Assignment*
39 *Message* with the same FOR_SCH_ID field is received. The base station shall set
40 the FOR_SCH_DURATION field to the duration in units of 20 ms (see Table
41 3.7.3.3.2.37-3), starting at the explicit start time of the message specified by
42 FOR_SCH_START_TIME, during which the mobile station is to process the Forward
43 Supplemental Channel.

- The base station shall set the FOR_SCH_START_TIME field to the System Time, in units of time specified by START_TIME_UNIT, (modulo 32) at which the mobile station is to start processing the Forward Supplemental Channel specified in this message. The explicit start time for processing Forward Supplemental Channels is the time for which:

$$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{FOR_SCH_START_TIME} \bmod 32 = 0,$$

where t is the System Time in units of 20 ms.

- The base station shall set the SCCL_INDEX field to the index of the record in the Forward Supplemental Channel Code list corresponding to the FOR_SCH_ID.
- If the PILOT_GATING_USE_RATE to equal to '1', the base station shall set PILOT_GATING_USE_RATE to '0' and start transmitting the Forward Power Control Subchannel with the maximum rate at the action time of the message.

3.6.6.2.2.14 Processing of Reverse Supplemental Channel Assignment Mini Message

If the Reverse Packet Data Channel is assigned, the base station shall not send this message.

If the Reverse Packet Data Channel is not assigned, the base station may use this message to specify Reverse Supplemental Channel assignment parameters for the mobile station Reverse Supplemental Channel. This information includes the reverse supplemental channel identifier (REV_SCH_ID), the duration of transmission on the Reverse Supplemental Channel, the start time for the burst assignment, and the number of information bits per frame that the mobile station may transmit.

The base station shall set the content of the *Reverse Supplemental Channel Assignment Mini Message* according to the following rules:

- The base station shall set the REV_SCH_DURATION field to '0000' to indicate that the mobile station should stop transmitting on the Reverse Supplemental Channel specified by REV_SCH_ID at the start time specified by REV_SCH_START_TIME. The base station shall set this field to '1111' to indicate that the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID, starting at the start time specified by REV_SCH_START_TIME. The base station shall set the REV_SCH_DURATION field to the allocated duration (see Table 3.7.3.3.2.37-3), starting at the start time specified by REV_SCH_START_TIME, during which the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID.
- The base station shall set the REV_SCH_START_TIME field to the System Time, in units of time specified by START_TIME_UNIT, (modulo 32) at which the mobile station may start transmitting on the Reverse Supplemental Channel specified in this message. The explicit start time for transmitting on the Reverse Supplemental Channel is the time for which:

$$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{REV_SCH_START_TIME} \bmod 32 = 0,$$

where t is the System Time in units of 20 ms.

- 1 • The base station shall set the REV_SCH_BITS_IDX (see Table 3.7.3.3.2.37-2) to
2 indicate the Reverse Supplemental Channel number of information bits per frame
3 index.
- 4 • If the PILOT_GATING_USE_RATE to equal to '1', the base station shall set
5 PILOT_GATING_USE_RATE to '0' and start transmitting the Forward Power Control
6 Subchannel with the maximum rate at the action time of the message.

7 3.6.6.2.2.15 Processing of the Mobile Assisted Burst Operation Parameters Message
8 The base station may use this message to specify the operating parameters in the mobile
9 station for Mobile Assisted Burst Operation procedures.

- 10 • A *Mobile Assisted Burst Operation Parameters Message* may specify pilot strength
11 order change reporting information. If order change reporting information is
12 included, the base station shall set ORDER_FLAG to '1' and include the appropriate
13 order change reporting fields. Otherwise, the base station shall set ORDER_FLAG
14 to '0'. If ORDER_FLAG is set to '1', the base station shall perform the following
15 procedures:
 - 16 – The base station shall set PS_MIN_DELTA to one less than the minimum pilot
17 strength measurement difference between any two pilots in the Active Set (in
18 units of 0.5 dB) that must be measured in order for the mobile station to send a
19 *Pilot Strength Measurement Mini Message*.
 - 20 – The base station shall set ORDER_INTERVAL to the minimum interval (in 20 ms
21 units) during which the indicated pilot strength measurement difference (greater
22 than or equal to PS_MIN_DELTA + 1, in units of 0.5 dB) must be measured by
23 the mobile station in order for the mobile station to send a *Pilot Strength*
24 *Measurement Mini Message*.
- 25 • A *Mobile Assisted Burst Operation Parameters Message* may specify periodic pilot
26 strength reporting. If periodic reporting information is included, the base station
27 shall set PERIODIC_FLAG to '1' and include the appropriate periodic reporting
28 fields. Otherwise, the base station shall set PERIODIC_FLAG to '0'. If
29 PERIODIC_FLAG is set to '1', the base station shall perform the following
30 procedures:
 - 31 – The base station shall set NUM_PILOTS to the number of pilots for which the
32 mobile station is to send *Pilot Strength Measurement Mini Messages*.
 - 33 – The base station shall set PERIODIC_INTERVAL to the interval (in 20 ms units)
34 between *Pilot Strength Measurement Mini Messages*.
- 35 • A *Mobile Assisted Burst Operation Parameters Message* may specify threshold based
36 pilot strength reporting. If threshold based reporting information is included, the
37 base station shall set THRESHOLD_FLAG to '1' and include the appropriate
38 threshold based reporting fields. Otherwise, the base station shall set
39 THRESHOLD_FLAG to '0'. If THRESHOLD_FLAG is set to '1', the base station shall
40 perform the following procedures:

- 1 – The base station shall set PS_FLOOR_HIGH to the high water mark for lower
2 limit threshold for which the mobile station is to send *Pilot Strength*
3 *Measurement Mini Messages*.
- 4 – The base station shall set PS_FLOOR_LOW to the low water mark for lower limit
5 threshold for which the mobile station is to send *Pilot Strength Measurement Mini*
6 *Messages*.
- 7 – The base station shall set PS_CEILING_HIGH to the high water mark for upper
8 limit threshold for which the mobile station is to send *Pilot Strength*
9 *Measurement Mini Messages*.
- 10 – The base station shall set PS_CEILING_LOW to the low water mark for upper
11 limit threshold for which the mobile station is to send *Pilot Strength*
12 *Measurement Mini Messages*.
- 13 – The base station shall set THRESHOLD_INTERVAL to the interval (in 20 ms
14 units) between *Pilot Strength Measurement Mini Messages*.

15 3.6.6.2.2.16 Processing of the Handoff Supplementary Information Notification Message
16 If the message contains any records with HO_SUP_REC_TYPE field set to '000', then the
17 base station should use the AP_ID, IOS_MSC_ID and IOS_CELL_ID corresponding to the
18 PN for this mobile¹⁰⁶.

19 3.6.6.2.3 Active Set Maintenance

20 The base station shall maintain an Active Set for each mobile station under its control as
21 follows:

- 22 • When the base station sends the *Channel Assignment Message*, it shall initialize the
23 Active Set to contain only the pilot associated with the assigned Forward Traffic
24 Channel.
- 25 • When the base station sends the *Extended Channel Assignment Message*, it shall
26 initialize the Active Set to contain all pilots included in the message.
- 27 • When the base station sends an *Extended Handoff Direction Message*, *General*
28 *Handoff Direction Message*, or *Universal Handoff Direction Message*, it shall add to
29 the Active Set, before the action time of the message, all pilots included in the
30 message, if they are not already in the Active Set.
- 31 • The base station shall delete the pilots that were not included in the most recent
32 *Extended Handoff Direction Message*, *General Handoff Direction Message*, or
33 *Universal Handoff Direction Message*, from the Active Set upon receipt of the
34 *Handoff Completion Message* or *Extended Handoff Completion Message*.

¹⁰⁶ The base station may use these for handoff related signaling as specified in [48].

1 3.6.6.2.4 Soft Handoff

2 The base station should use soft handoff when directing a mobile station from one Forward
3 Traffic Channel to another Forward Traffic Channel having the same frequency assignment.

4 3.6.6.2.4.1 Receiving During Soft Handoff

5 Each base station in the Active Set shall demodulate the Reverse Traffic Channel. The base
6 station should provide diversity combining of the demodulated signals obtained by each
7 base station in the Active Set.

8 3.6.6.2.4.2 Transmitting During Soft Handoff

9 The base station shall begin transmitting identical modulation symbols on all Forward
10 Traffic Channels specified in an *Extended Handoff Direction Message* or *General Handoff*
11 *Direction Message*, or *Universal Handoff Direction Message* (with the possible exception of
12 the power control subchannel) by the action time of the message.

13 The base station shall transmit identical power control bits on all identical power control
14 subchannels that were identified as such in the last *Extended Handoff Direction Message*,
15 or *General Handoff Direction Message*, or *Universal Handoff Direction Message*.

16 The base station shall use the same long code mask on all Forward Traffic Channels whose
17 associated pilots are in the Active Set.

18 3.6.6.2.4.3 Call Rescue Soft Handoff

19 The base station shall support the call rescue feature.

20 The call rescue feature can be enabled or disabled by the base station. If the call rescue
21 feature is enabled and the base station detects that a mobile station having MOB_P_REV
22 greater than seven has disabled its transmitters, then the base station shall initiate call
23 rescue procedures.

24 A base station that is configured with a Rescue Channel shall allocate a Walsh Code for the
25 Rescue Channel. If the base station is designated as a rescue cell candidate, then the base
26 station shall monitor the Reverse Traffic Channel in order to acquire a mobile station
27 attempting call rescue soft handoff. If the base station acquires the mobile station, then it
28 should begin immediately transmitting to the mobile station using the Rescue Channel
29 Walsh Code.

30 3.6.6.2.5 Reserved

31 3.6.6.2.6 Hard Handoff

32 When the base station performs a hard handoff by sending an *Extended Handoff Direction*
33 *Message*, or the *General Handoff Direction Message*, or the *Universal Handoff Direction*
34 *Message* and assigns RC11 or RC12 for the forward fundamental channel the base station
35 should perform the following:

- 1 - If the base station has set RETURN_IF_HANDOFF_FAIL to 0 then the base station
 2 should not transmit 0 bps frames on the forward fundamental channel unless the
 3 handoff is successful¹⁰⁷.
- 4 - If the base station has set RETURN_IF_HANDOFF_FAIL to 1 then the base station
 5 should not transmit 0 bps frames on the forward fundamental channel unless the
 6 handoff is successful or handoff is unsuccessful and the mobile station return to
 7 the base station¹⁰⁸.

8 3.6.7 CDMA Tiered Services

9 3.6.7.1 Overview

10 3.6.7.1.1 Definition

11 The base station may support Tiered Services to provide individual users or groups of users
 12 with custom services and special features based upon their location. The base station may
 13 also support Tiered Services to provide private network support. Important to the
 14 operation of CDMA Tiered Services is the concept of User Zones. It is via User Zones by
 15 which the base station offers custom services based upon the mobile station location.

16 User Zones are associated with a set of features and services, plus a geographic area in
 17 which the User Zone features/services are made available to the customers that have
 18 subscribed to that User Zone. The boundary of the User Zone Geographic area may be
 19 established based on the coverage area of a public or private base station, or it may be
 20 established independent of RF topology.

21 User Zones may be supported by the public system on the same frequency as the serving
 22 base station, or they may be supported on a private system operating on a different
 23 frequency.

24 3.6.7.1.2 Types of User Zones

25 User Zones may be of two basic types:

- 26 • *Broadcast User Zones*: Broadcast User Zones are identified to the mobile station
 27 using the Paging Channel or the Primary Broadcast Control Channel. In this case,
 28 the base station broadcasts messages on the Paging Channel or the Primary
 29 Broadcast Control Channel identifying the User Zones that fall within the coverage
 30 area of the particular cell/sector. A mobile station, as part of its monitoring of the
 31 Paging Channel or the Primary Broadcast Control Channel, will identify the
 32 presence of a particular User Zone.
- 33 • *Mobile Specific User Zones*: Mobile Specific User Zones are not broadcast by the base
 34 station. A mobile station may use other overhead message parameters and
 35 compare them with internally stored User Zone parameters to identify the presence
 36 of a particular User Zone. These parameters may include: SID, NID, BASE_ID,
 37 BASE_LAT, and BASE_LONG.

107 The base station receives *Handoff Completion Message*.

108 The base station receives a *Candidate Frequency Search Report Message*.

3.6.7.2 Requirements

If the base station supports CDMA Tiered Services, the base station sends the following messages to assist the mobile station in identifying the presence of User Zones and to validate the User Zone requested by a mobile station:

- *User Zone Identification Message*
- *Private Neighbor List Message*
- *User Zone Reject Message*
- *User Zone Update Message*

3.6.7.2.1 User Zone Identification Message

The base station identifies Broadcast User Zones supported by the base station by sending the *User Zone Identification Message* on the Paging Channel or the Primary Broadcast Control Channel. The base station should list the UZID of each Broadcast User Zone supported by the base station.

3.6.7.2.2 Private Neighbor List Message

The base station sends a Private Neighbor List and identifies the User Zones supported by its private neighbor base stations by sending the *Private Neighbor List Message* on the Paging Channel or the Primary Broadcast Control Channel. The *Private Neighbor List Message* shall list no more than N_{8m} private neighbors.

3.6.7.2.3 User Zone Update Message and User Zone Reject Message on f-dsch

For a mobile station operating in the *Traffic Channel Substate* or *Release Substate* of the *Mobile Station Control on the Traffic Channel State*, the base station may update the User Zone associated with the mobile station by sending a *User Zone Update Message*. The base station may also send a *User Zone Reject Message* to reject the User Zone requested by the mobile station in the *Origination Message*, *Page Response Message*, or *User Zone Update Request Message*. The base station may include the ASSIGN_UZID field in the *User Zone Reject Message* to assign a User Zone to the mobile station to replace the rejected User Zone.

3.6.7.2.4 User Zone Reject Message on f-csch

The base station may send the *User Zone Reject Message* on the Paging Channel or the Forward Common Control Channel to reject the User Zone requested by the mobile station in the *Registration Message*, *Origination Message*, or *Page Response Message*. The base station may include the ASSIGN_UZID field in the *User Zone Reject Message* record to assign a User Zone to the mobile station to replace the rejected User Zone.

3.6.8 Call Control Processing

The Call Control consists of the following states:

- *Waiting for Order Substate* - In this substate, the Call Control instance sends the *Alert With Information Message* or the *Extended Alert With Information Message* to the mobile station.

- 1 • *Waiting for Answer Substate* - In this substate, the Call Control instance waits for
2 the *Connect Order* from the mobile station.
- 3 • *Conversation Substate* - In this substate, the parties involved in this call exchanges
4 Traffic Channel frames in accordance with the current service configuration.
- 5 • *Call Release Substate* - In this substate, the Call Control instance waits for the call
6 to be disconnected.

7 The following messages are processed by the Call Control:

- 8 • *Alert With Information Message*
- 9 • *Extended Alert with Information Message:*
- 10 • *Flash With Information Message*
- 11 • *Extended Flash With Information Message*
- 12 • *Send Burst DTMF Message*
- 13 • *Origination Continuation Message*

14 The following orders are processed by the Call Control:

- 15 • *Continuous DTMF Tone Order*
- 16 • *Maintenance Order*
- 17 • *Connect Order*

18 Upon instantiation, the Call Control instance shall perform the following:

- 19 • If the call is a mobile station terminated call and the base station set
20 BYPASS_ALERT_ANSWER to '1', the Call Control instance shall enter the
21 *Conversation Substate* (see 3.6.8.2). If the call is a mobile station terminated call
22 and the base station set BYPASS_ALERT_ANSWER to '0', the Call Control instance
23 shall enter the *Waiting for Order Substate* (see 3.6.8.1.1).
- 24 • If the call is a mobile-station-originated call, the Call Control instance shall enter
25 the *Conversation Substate* (see 3.6.8.2).

26 3.6.8.1 Alerting

27 3.6.8.1.1 Waiting for Order Substate

28 In this substate, the Call Control instance sends an *Alert With Information Message* or an
29 *Extended Alert With Information Message* to the mobile station.

30 While in the *Waiting for Order Substate*, the Call Control instance shall perform the
31 following:

- 32 • If the Call Control instance receives a "release indication" from the Layer 3, the Call
33 Control instance shall enter the *Call Release Substate*.

- 1 • If the Call Control instance receives a “send alert with info message indication” from
2 the Layer 3, the Call Control instance shall send an *Alert with Information Message*
3 or an *Extended Alert With Information Message* to the mobile station within T2b
4 seconds, and enter the *Waiting for Answer Substate*.
- 5 • The Call Control instance may send the following messages:
 - 6 1. *Alert With Information Message*: The Call Control instance shall enter the
7 *Waiting for Answer Substate*.
 - 8 2. *Extended Alert With Information Message*: The Call Control instance shall enter
9 the *Waiting for Answer Substate*.
 - 10 3. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Answer*
11 *Substate*.

12 3.6.8.1.2 Waiting for Answer Substate

13 In this substate, the Call Control instance waits for a *Connect Order* from the mobile
14 station.

15 While in the *Waiting for Answer Substate*, the Call Control instance shall perform the
16 following:

- 17 • If the Call Control instance receives a “release indication” from the Layer 3, the Call
18 Control instance shall enter the *Call Release Substate*.
- 19 • If the Call Control instance receives a “send alert with info message indication” from
20 the Layer 3, the Call Control instance shall send an *Alert with Information Message*
21 or an *Extended Alert with Information Message* to the mobile station, within T2b
22 seconds, and enter the *Waiting for Answer Substate*.
- 23 • The Call Control instance may send the following messages:
 - 24 1. *Alert With Information Message*
 - 25 2. *Extended Alert With Information Message*
 - 26 3. *Maintenance Order*
- 27 • If the Call Control instance receives one of the following messages from the Layer 3,
28 the Call Control instance shall process the message according to the specified
29 requirements, if any:
 - 30 1. *Connect Order*: The Call Control instance shall enter the *Conversation Substate*.
 - 31 2. *Flash With Information Message*: If the message contains a Keypad Facility
32 record with feature codes indicating User Selective Call Forwarding with a pre-
33 registered number, a stored number, or voice mail, the Call Control instance
34 may send a ‘call release request’ to the Layer 3. If this message contains the
35 Global Emergency Call information record and the call associated with this Call
36 Control instance is a voice call, the base station shall recognize this as an

1 emergency call and should process the message using an implementation-
2 dependent procedure which may include ignoring the dialed digits. If this
3 message contains the Global Emergency Call information record and the call
4 associated with this Call Control instance is not a voice call, the base station
5 may recognize this as an emergency call and should process the message using
6 an implementation-dependent procedure which may include ignoring the dialed
7 digits.

- 8 3. *Extended Flash With Information Message*: If the message contains a Keypad
9 Facility record with feature codes indicating User Selective Call Forwarding with
10 a pre-registered number, a stored number, or voice mail, the Call Control
11 instance may send a 'call release request' to the Layer 3. If this message
12 contains the Global Emergency Call information record and the call associated
13 with this Call Control instance is a voice call, the base station shall recognize
14 this as an emergency call and should process the message using an
15 implementation-dependent procedure which may include ignoring the dialed
16 digits. If this message contains the Global Emergency Call information record
17 and the call associated with this Call Control instance is not a voice call, the
18 base station may recognize this as an emergency call and should process the
19 message using an implementation-dependent procedure which may include
20 ignoring the dialed digits.

21 4. *Origination Continuation Message*

22 3.6.8.2 Conversation Substate

23 While in the *Conversation Substate*, the Call Control instance shall perform the following:

- 24 • If the Call Control instance receives a "release indication" from the Layer 3, the Call
25 Control instance shall enter the *Call Release Substate*.
- 26 • If the Call Control instance receives a "paca reorig indication" from the Layer 3, the
27 Call Control instance should send either an *Alert With Information*
28 *Message/Extended Alert With Information Message* which contains a signal
29 information record with the SIGNAL_TYPE field set to '01' or '10', or an *Alert With*
30 *Information Message/Extended Alert With Information Message* which does not
31 contain a signal information record.
- 32 • If the Call Control instance receives a "send alert with info message indication" from
33 Layer 3, the Call Control instance shall send an *Alert with Information Message* or an
34 *Extended Alert With Information Message* to the mobile station within T2b seconds,
35 and enter the *Waiting for Answer Substate*.
- 36 • The Call Control instance may send the following messages:
 - 37 1. *Alert With Information Message*: If the message contains a signal information
38 record with the SIGNAL_TYPE field set to '01' or '10', or if the message does not
39 contain a signal information record, the Call Control instance shall enter the
40 *Waiting for Answer Substate*.

- 1 2. *Extended Alert With Information Message*: If the message contains a signal
2 information record with the SIGNAL_TYPE field set to '01' or '10', or if the
3 message does not contain a signal information record, the Call Control instance
4 shall enter the *Waiting for Answer Substate*.
- 5 3. *Continuous DTMF Tone Order*
- 6 4. *Flash With Information Message*
- 7 5. *Extended Flash With Information Message*
- 8 6. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Answer*
9 *Substate*.
- 10 7. *Send Burst DTMF Message*
- 11 • If the Call Control instance receives one of the following messages from Layer 3, the
12 Call Control instance shall process the message according to the specified
13 requirements, if any:
- 14 1. *Continuous DTMF Tone Order*
- 15 2. *Flash With Information Message*: If this message contains the Global Emergency
16 Call information record and the call associated with this Call Control instance is
17 a voice call, the base station shall recognize this as an emergency call and
18 should process the message using an implementation-dependent procedure
19 which may include ignoring the dialed digits. If this message contains the Global
20 Emergency Call information record and the call associated with this Call Control
21 instance is not a voice call, the base station may recognize this as an emergency
22 call and should process the message using an implementation-dependent
23 procedure which may include ignoring the dialed digits.
- 24 3. *Extended Flash With Information Message*: If this message contains the Global
25 Emergency Call information record and the call associated with this Call Control
26 instance is a voice call, the base station shall recognize this as an emergency
27 call and should process the message using an implementation-dependent
28 procedure which may include ignoring the dialed digits. If this message contains
29 the Global Emergency Call information record and the call associated with this
30 Call Control instance is not a voice call, the base station may recognize this as
31 an emergency call and should process the message using an implementation-
32 dependent procedure which may include ignoring the dialed digits.
- 33 4. *Origination Continuation Message*
- 34 5. *Send Burst DTMF Message*

3.6.8.3 Call Release Substate

- 36 • The Call Control instance may send the following messages:

- 1 1. *Alert With Information Message*: If the message contains a signal information
2 record with the SIGNAL_TYPE field set to '01' or '10', or if the message does not
3 contain a signal information record, the base station shall enter the *Waiting for*
4 *Answer Substate*.

- 5 2. *Extended Alert With Information Message*: If the message contains a signal
6 information record with the SIGNAL_TYPE field set to '01' or '10', or if the
7 message does not contain a signal information record, the base station shall
8 enter the *Waiting for Answer Substate*.

- 9 3. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Answer*
10 *Substate*.

- 11 • If the Call Control instance receives one of the following messages from Layer 3, the
12 Call Control instance shall process the message according to the specified
13 requirements, if any:
 - 14 1. *Connect Order*

 - 15 2. *Continuous DTMF Tone Order*

 - 16 3. *Flash With Information Message*: If this message contains the Global Emergency
17 Call information record and the call associated with this Call Control instance is
18 a voice call, the base station shall recognize this as an emergency call and
19 should process the message using an implementation-dependent procedure
20 which may include ignoring the dialed digits. If this message contains the Global
21 Emergency Call information record and the call associated with this Call Control
22 instance is not a voice call, the base station may recognize this as an emergency
23 call and should process the message using an implementation-dependent
24 procedure which may include ignoring the dialed digits.

 - 25 4. *Extended Flash With Information Message*: If this message contains the Global
26 Emergency Call information record and the call associated with this Call Control
27 instance is a voice call, the base station shall recognize this as an emergency
28 call and should process the message using an implementation-dependent
29 procedure which may include ignoring the dialed digits. If this message contains
30 the Global Emergency Call information record and the call associated with this
31 Call Control instance is not a voice call, the base station may recognize this as
32 an emergency call and should process the message using an implementation-
33 dependent procedure which may include ignoring the dialed digits.

 - 34 5. *Origination Continuation Message*

 - 35 6. *Send Burst DTMF Message*

1 3.6.9 MEID procedures when communicating with MOB_P_REV 6, 7, 8, 9, 10 Mobile
2 Stations

3 The base station shall conform to the requirements in [47] when communicating with a
4 MOB_P_REV 6, 7, 8, 9, or 10 mobile station equipped with an MEID.

5 3.6.10 Reverse Link RC8 and Forward Link RC11/RC12 Assignment

6 If the base station includes RC8 in the reverse fundamental channel assignment to a user
7 then it shall include either RC11 for all the forward channel assignments to this user or
8 RC12 for all the forward channels assignments to this user.

9 If the base station assigns RC8 in the reverse fundamental channel to a user then it shall
10 include RC8 for any reverse channel assignment.

11 If the base station includes RC11 or RC12 in the forward fundamental channel assignment
12 to a user then it shall include RC8 for all reverse channel assignments to this user.

13 If the base station assigns RC11 or RC12 in the forward fundamental channel to a user
14 then it shall include the same RC for any forward channel assignment.

15

1 **3.7 PDU Formats for Messages**

2 The following sections specify the requirements on the PDU formats transmitted on the f-
3 csch, and the f-dsch.

4 In any multi-bit field in the following messages, the most significant bit (MSB) shall be
5 transmitted first.

6 3.7.1 Reserved

7 3.7.2 f-csch

8 The f-csch is used to send control information to mobile stations that have not been
9 assigned to a Traffic Channel.

10 3.7.2.1 Reserved

11 3.7.2.2 Reserved

12

- 1 3.7.2.3 PDU Formats for Messages on the f-csch
 2 The messages sent on the f-csch are summarized in Table 3.7.2.3-1.
 3
 4

Table 3.7.2.3-1. f-csch Messages

Message Name	MSG_TAG	Section Number	Primary BCCH	F-CCCH	PCH	P_REV_IN_USE 109
<i>System Parameters Message</i>	SPM	3.7.2.3.2.1	N	N	Y	All
<i>Access Parameters Message</i>	APM	3.7.2.3.2.2	N	N	Y	All
<i>Neighbor List Message</i> (Band Class 0 only)	NLM	3.7.2.3.2.3	N	N	Y	All
<i>CDMA Channel List Message</i>	CCLM	3.7.2.3.2.4	N	N	Y	All
<i>Order Message</i>	ORDM	3.7.2.3.2.7	N	Y	Y	All

<i>General Page Message</i>	GPM	3.7.2.3.2.17	N	Y	Y	All

5

¹⁰⁹ P_REV_IN_USE in this context means P_REV for overhead messages (see 2.6.2.2).
 P_REV_IN_USE equal to "All" implies all values applicable to the Band Class.

¹¹⁰ When the *Data Burst Message* is used as a broadcast message, it can be sent on a Broadcast Control Channel other than the Primary Broadcast Control Channel, or on the Forward Common Control Channel when a secondary Broadcast Control Channel is not allocated, i.e., NUM_BCCH_BCAST_s equals 0 (see 2.6.2.1.1.3).

2

PILOT_PN - Pilot PN sequence offset index.

3

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

4

5

CONFIG_MSG_SEQ - Configuration message sequence number.

6

The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).

7

8

SID - System identification.

9

The base station shall set this field to the system identification number for this system (see 2.6.5.2).

10

11

NID - Network identification.

12

This field serves as a sub-identifier of a system as defined by the owner of the SID.

13

14

The base station shall set this field to the network identification number for this network (see 2.6.5.2).

15

16

REG_ZONE - Registration zone.

17

The base station shall set this field to its registration zone number (see 2.6.5.1.5).

18

19

TOTAL_ZONES - Number of registration zones to be retained.

20

The base station shall set this field to the number of registration zones the mobile station is to retain for purposes of zone-based registration (see 2.6.5.1.5).

22

23

If zone-based registration is to be disabled, the base station shall set this field to '000'.

24

1 ZONE_TIMER - Zone timer length.
 2 The base station shall set this field to the ZONE_TIMER value
 3 shown in Table 3.7.2.3.2.1-1 corresponding to the length of
 4 the zone registration timer to be used by mobile stations.

5
 6

Table 3.7.2.3.2.1-1. Value of Zone Timer

ZONE_TIMER Value (binary)	Timer Length (Minutes)
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

7

8 MULT_SIDS - Multiple SID storage indicator.
 9 If mobile stations may store entries of SID_NID_LIST
 10 containing different SIDs, the base station shall set this field
 11 to '1'; otherwise the base station shall set this field to '0'.

12 MULT_NIDS - Multiple NID storage indicator.
 13 If mobile stations may store multiple entries of SID_NID_LIST
 14 having the same SID (with different NIDs), the base station
 15 shall set this field to '1'; otherwise the base station shall set
 16 this field to '0'.

17 BASE_ID - Base station identification.
 18 The base station shall set this field to its identification
 19 number.

20 BASE_CLASS - Base station class.
 21 The base station shall set this field as follows:
 22 For Band Class 1 and 4, the base station shall set this field to
 23 '0001'; otherwise, the base station shall set this field to '0000'.

24 PAGE_CHAN - Number of Paging Channels.
 25 The base station shall set this field to the number of Paging
 26 Channels on this CDMA Channel. The base station shall not
 27 set this field to '000'.

1	MAX_SLOT_CYCLE_INDEX-	Maximum slot cycle index.
2		The base station shall set this field to the
3		SLOT_CYCLE_INDEX value corresponding to the maximum
4		slot cycle length permitted (see 2.6.2.1.1).
5	HOME_REG	- Home registration indicator.
6		If mobile stations that are not roaming (see 2.6.5.3) and have
7		MOB_TERM_HOME equal to '1' are to be enabled for
8		autonomous registrations, the base station shall set this field
9		to '1'. If such mobile stations are not to be enabled for
10		autonomous registration, the base station shall set this field
11		to '0'.
12	FOR_SID_REG	- SID roamer registration indicator.
13		If mobile stations that are foreign SID roamers (see 2.6.5.3)
14		and have MOB_TERM_FOR_SID equal to '1' are to be enabled for
15		autonomous registration, the base station shall set this
16		field to '1'. If such mobile stations are not to be enabled for
17		autonomous registration, the base station shall set this field
18		to '0'.
19	FOR_NID_REG	- NID roamer registration indicator.
20		If mobile stations that are foreign NID roamers (see 2.6.5.3)
21		and have MOB_TERM_FOR_NID equal to '1' are to be enabled for
22		autonomous registration, the base station shall set this
23		field to '1'. If such mobile stations are not to be enabled for
24		autonomous registration, the base station shall set this field
25		to '0'.
26	POWER_UP_REG	- Power-up registration indicator.
27		If mobile stations enabled for autonomous registration are to
28		register immediately after powering on and receiving the
29		system overhead messages, the base station shall set this
30		field to '1'; otherwise, the base station shall set this field to '0'.
31	POWER_DOWN_REG	- Power-down registration indicator.
32		If mobile stations enabled for autonomous registration are to
33		register immediately before powering down, the base station
34		shall set this field to '1'; otherwise, the base station shall set
35		this field to '0'.
36	PARAMETER_REG	- Parameter-change registration indicator.
37		If mobile stations are to register on parameter change events
38		as specified in 2.6.5.1.6, the base station shall set this field to
39		'1'. If not, the base station shall set this field to '0'.

- 1 NGHBR_MAX_AGE - Neighbor Set maximum AGE.
2 The base station shall set this field to the maximum AGE
3 value beyond which mobile stations are to drop members
4 from the Neighbor Set (see 2.6.6.2.6.3).
- 5 PWR_REP_THRESH - Power control reporting threshold.
6 The base station shall set this field to the number of bad
7 frames (see [2]) to be received in a measurement period on the
8 channel which carries the Power Control Subchannel before
9 mobile stations are to generate a *Power Measurement Report*
10 *Message* (see 2.6.4.1.1). If the base station sets
11 PWR_THRESH_ENABLE to '1', it shall not set this field to
12 '00000'.
- 13 PWR_REP_FRAMES - Power control reporting frame count.
14 The base station shall set this field to the value such that the
15 number given by
16
$$\lfloor 2(PWR_REP_FRAMES/2) \times 5 \rfloor$$
17 is the number of frames over which mobile stations are to
18 count frame errors.
- 19 PWR_THRESH_ENABLE - Threshold report mode indicator.
20 If mobile stations are to generate threshold *Power*
21 *Measurement Report Messages*, the base station shall set this
22 field to '1'. If mobile stations are not to generate threshold
23 *Power Measurement Report Messages*, the base station shall
24 set this field to '0'.
- 25 PWR_PERIOD_ENABLE - Periodic report mode indicator.
26 If mobile stations are to generate periodic *Power Measurement*
27 *Report Messages*, the base station shall set this field to '1'. If
28 mobile stations are not to generate periodic *Power*
29 *Measurement Report Messages*, the base station shall set this
30 field to '0'.
- 31 PWR_REP_DELAY - Power report delay.
32 The period that mobile stations wait following a *Power*
33 *Measurement Report Message* before restarting frame counting
34 for power control purposes.
35 The base station shall set this field to the power report delay
36 value, in units of 4 frames (see 2.6.4.1.1).
- 37 RESCAN - Rescan indicator.
38 If mobile stations are to re-initialize and re-acquire the system
39 upon receiving this message, the base station shall set this
40 field to '1'; otherwise, the base station shall set this field to '0'.
- 41 T_ADD - Pilot detection threshold.

- 1 This value is used by the mobile station to trigger the transfer
2 of a pilot from the Neighbor Set or Remaining Set to the
3 Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
4 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
5 *Measurement Message* initiating the handoff process (see
6 2.6.6.2.5.2).
- 7 The base station shall set this field to the pilot detection
8 threshold, expressed as an unsigned binary number equal to
9 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
- 10 T_DROP - Pilot drop threshold.
- 11 This value is used by mobile stations to start a handoff drop
12 timer for pilots in the Active Set and the Candidate Set (see
13 2.6.6.2.3).
- 14 The base station shall set this field to the pilot drop threshold,
15 expressed as an unsigned binary number equal to
16 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
- 17 T_COMP - Active Set versus Candidate Set comparison threshold.
- 18 Mobile stations transmit a *Pilot Strength Measurement*
19 *Message* or an *Extended Pilot Strength Measurement Message*
20 when the strength of a pilot in the Candidate Set exceeds that
21 of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
- 22 The base station shall set this field to the threshold Candidate
23 Set pilot to Active Set pilot ratio, in units of 0.5 dB.
- 24 T_TDROP - Drop timer value.
- 25 Timer value after which an action is taken by mobile stations
26 for a pilot that is a member of the Active Set or Candidate Set,
27 and whose strength has not become greater than T_DROP. If
28 the pilot is a member of the Active Set, a *Pilot Strength*
29 *Measurement Message* or an *Extended Pilot Strength*
30 *Measurement Message* is issued. If the pilot is a member of
31 the Candidate Set, it will be moved to the Neighbor Set.
- 32 The base station shall set this field to the T_TDROP value
33 shown in Table 2.6.6.2.3-1 corresponding to the drop timer
34 value to be used by mobile stations.
- 35 EXT_SYS_PARAMETER - *Extended System Parameters Message* indicator.
36 The base station shall set this field to '1'.
- 37 EXT_NGHBR_LST - *Extended Neighbor List Message* indicator.
- 38 The base station sets this field to '1' when it sends the
39 *Extended Neighbor List Message* on the Paging Channel;
40 otherwise the base station sets this field to '0'.
- 41 If the base station is operating in Band Class 1, Band Class 3,
42 or Band Class 4 with MIN_P_REV less than seven, it shall set
43 this field to '1'. If the base station is operating in Band Class
44 0, it shall set this field to '0'.
- 45 GEN_NGHBR_LST - *General Neighbor List Message* indicator.

- 1 If the base station is sending the *General Neighbor List*
 2 *Message* on the Paging Channel, it shall set this field to '1';
 3 otherwise, it shall set this field to '0'.
- 4 If the base station is operating in Band Class 1, Band Class 3,
 5 or Band Class 4 with MIN_P_REV greater than or equal to
 6 seven, and if EXT_NGHRBR_LST is set to '0', the base station
 7 shall set this field to '1'.
- 8 If the base station is operating in Band Class 0 with
 9 MIN_P_REV greater than or equal to seven and if the *Neighbor*
 10 *List Message* is not sent, the base station shall set this field to
 11 '1'.
- 12 If the base station is operating in a band class other than
 13 Band Class 1, Band Class 3, or Band Class 4, and if
 14 EXT_NGHRBR_LST is set to '0', the base station shall set this
 15 field to '1'.
- 16 GLOBAL_REDIRECT - *Global Service Redirection Message* indicator.
 17 If the base station is sending the *Global Service Redirection*
 18 *Message* on the Paging Channel, it shall set this field to '1';
 19 otherwise, it shall set this field to '0'.
- 20 PRI_NGHRBR_LST - *Private Neighbor List Message* indicator.
 21 If the base station is sending the *Private Neighbor List*
 22 *Message* on the Paging Channel, it shall set this field to '1';
 23 otherwise, it shall set this field to '0'.
- 24 USER_ZONE_ID - *User Zone Identification Message* indicator.
 25 If the base station is sending the *User Zone Identification*
 26 *Message* on the Paging Channel, it shall set this field to '1';
 27 otherwise, it shall set this field to '0'.
- 28 EXT_GLOBAL_REDIRECT - *Extended Global Service Redirection Message* indicator.
 29 If the base station is sending the *Extended Global Service*
 30 *Redirection Message* on the Paging Channel, it shall set this
 31 field to '1'; otherwise, the base station shall set this field to '0'.
- 32 EXT_CHAN_LST - *Extended CDMA Channel List Message* indicator.
 33 The base station shall set this field to '1', if the *Extended*
 34 *Channel List Message* is sent on the Paging Channel,
 35 otherwise, it shall set this field to '0'.
- 36 T_TDROP_RANGE_INCL - Drop timer range value included indicator.
 37 The base station shall set this field to '1' if the
 38 T_TDROP_RANGE field is included in this message; otherwise,
 39 the base station shall set this field to '0'.
- 40 T_TDROP_RANGE - Drop timer range value.
 41 Timer range value to use in association with the T_TDROP
 42 parameter when determining the drop timer expiration.

1 If T_TDROP_RANGE_INCL is set to '0', the base station shall
 2 omit this field; otherwise, the base station shall set this field
 3 to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
 4 corresponding to the timer expiration range value to be used
 5 by the mobile station.

6 NEG_SLOT_CYCLE_INDEX_SUP - Negative slot cycle index supported indicator.
 7 The base station shall set this field to '1' if it supports
 8 negative values of the preferred slot cycle index
 9 (SLOT_CYCLE_INDEX_p); otherwise, the base station shall set
 10 this field to '0'.

11 RC BITMAP CAPABILITY EXT ALLOWED

12 - RC bitmap and Capability Record Extension Indicator.

13 This bit indicates that the base station supports the following:

14 - Processing of Origination Message or Page Response
 15 Message or Status Response Message or Extended
 16 Status Response Message that contain FCH Type-
 17 specific Fields record, or DCCH Type-specific Fields
 18 record, or FOR SCH Type-Specific Fields record, or
 19 REV SCH Type-Specific Fields record with a value for
 20 FOR FCH LEN or FOR DCCH LEN or FOR SCH LEN
 21 greater than 3 and REV FCH LEN or REV DCCH LEN
 22 or REV SCH LEN greater than 2.

23 - Processing of any additional fields starting with the
 24 F SCH EARLY TERM SUPPORTED field in the
 25 Capability Information Record.

26 The base station shall include this field if any fields following
 27 this field are included. If included, the base station shall set
 28 this field to '1'.

29 CRRM_MSG_IND - *Call Recovery Request Message* supported indicator.

30 The base station shall omit this field if the base station does
 31 not need to include any fields following this field and does not
 32 support *Call Recovery Request Message*. Otherwise the base
 33 station shall include this field and set this field as follows:

34 The base station shall set this field to '0' if the mobile station
 35 is not allowed to send a *Call Recovery Request Message*;
 36 otherwise, the base station shall set this field to '1'.

37 NUM_OPT_MSG_BITS - Number of optional overhead messages transmission
 38 information bits.

39 The base station shall omit this field if the base station does
 40 not need to include any fields following this field. Otherwise
 41 the base station shall include this field and set this field as
 42 follows:

- 1 The base station shall set this field to the number of optional
2 overhead messages for which transmission information is
3 included in this message.
- 4 AP_PILOT_INFO - *Access Point Pilot Information Message* indicator.
5 If NUM_OPT_MSG_BITS is included and equal to or greater
6 than 1, the base station shall include the field
7 AP_PILOT_INFO and shall set this field as shown below;
8 otherwise, the base station shall omit this field.
9 If the base station is sending the *Access Point Pilot Information*
10 *Message* on the Paging Channel, it shall set this field to '1';
11 otherwise, the base station shall set this field to '0'.
- 12 AP_IDT - *Access Point Identification Message* indicator.
13 If NUM_OPT_MSG_BITS is included and equal to or greater
14 than 2, the base station shall include the field AP_IDT and
15 shall set this field as shown below; otherwise, the base station
16 shall omit this field.
17 If the base station is sending the *Access Point Identification*
18 *Message* on the Paging Channel, it shall set this field to '1';
19 otherwise, the base station shall set this field to '0'.
- 20 AP_ID_TEXT - *Access Point Identification Text Message* indicator.
21 If NUM_OPT_MSG_BITS is included and equal to or greater
22 than 3, the base station shall include the field AP_ID_TEXT
23 and shall set this field as shown below; otherwise, the base
24 station shall omit this field.
25 If the base station is sending the *Access Point Identification*
26 *Text Message* on the Paging Channel, it shall set this field to
27 '1'; otherwise, the base station shall set this field to '0'.
- 28 GEN_OVHD_INF_IND - *General Overhead Information Message* indicator.
29 If NUM_OPT_MSG_BITS is included and equal to or greater
30 than 4, the base station shall include the field
31 GEN_OVHD_INF_IND and shall set this field as shown below;
32 otherwise, the base station shall omit this field.
33 If the base station is sending the *General Overhead*
34 *Information Message* on the Paging Channel, it shall set this
35 field to '1'; otherwise, the base station shall set this field to '0'.
- 36 FD_CHAN_LST_IND - *Flex Duplex CDMA Channel List Message* indicator.
37 If NUM_OPT_MSG is included and equal to or greater than 5,
38 the base station shall include the field FD_CHAN_LST_IND
39 and shall set this field as shown below; otherwise, the base
40 station shall omit this field.
41 If the base station is sending the *Flex Duplex CDMA Channel*
42 *List Message* on the Paging Channel, it shall set this field to
43 '1'; otherwise, the base station shall set this field to '0'.
- 44 ATIM_IND - *Alternative Technologies Information Message* indicator.

1			If NUM_OPT_MSG_BITS is included and equal to or greater
2			than 6, the base station shall include the field ATIM_IND and
3			shall set this field as shown below; otherwise, the base station
4			shall omit this field.
5			If the base station is sending the <i>Alternative Technologies</i>
6			<i>Information Message</i> on the Paging Channel, it shall set this
7			field to '1'; otherwise, the base station shall set this field to '0'.
8	FREQ_GEN_OVHD_INF_IND	-	<i>Frequent General Overhead Information Message</i> indicator.
9			If NUM_OPT_MSG_BITS is included and equal to or greater
10			than 7, the base station shall include the field
11			FREQ_GEN_OVHD_INF_IND and shall set this field as shown
12			below; otherwise, the base station shall omit this field.
13			If the base station is sending the <i>Frequent General Overhead</i>
14			<i>Information Message</i> on the Paging Channel, it shall set this
15			field to '1'; otherwise, the base station shall set this field to '0'.
16	RESERVED	-	Reserved bits.
17			If NUM_OPT_MSG_BITS is included and greater than 7, the
18			base station shall include the field RESERVED and shall set
19			this field as shown below; otherwise, the base station shall
20			omit this field.
21			The base station shall add (NUM_OPT_MSG_BITS – 7)
22			reserved bits. The base station shall set these bits to '0'.
23	APPIM_PERIOD_INDEX	-	<i>Access Point Pilot Information Message</i> transmission frequency.
24			If the AP_PILOT_INFO is not included or is included and set to
25			0, the base station shall omit this field. Otherwise, the base
26			station shall include this field if there are any fields following
27			this field or if the base station needs to set this field to a value
28			other than '000'.
29			The base station shall set this field to the period index value
30			of <i>Access Point Pilot Information Message</i> . The base station
31			shall set this field value in the range '000' – '101', both
32			inclusive.
33	GEN_OVHD_CYCLE_INDEX	-	<i>General Overhead Information Message</i> transmission
34			frequency.
35			If the GEN_OVHD_INF_IND is not included or is included and
36			set to 0, the base station shall omit this field. Otherwise, the
37			base station shall include this field if there are any fields
38			following this field or if the base station needs to set this field
39			to a value other than '000'.
40			The base station shall set this field to the cycle index value of
41			<i>General Overhead Message</i> . The base station shall set this
42			field value in the range '000' – '101', both inclusive.
43	ATIM_CYCLE_INDEX	-	<i>Alternative Technologies Information Message</i> transmission
44			frequency.

- 1 If the ATIM_IND is not included or is included and set to 0,
 2 the base station shall omit this field. Otherwise, the base
 3 station shall include this field if there are any fields following
 4 this field or if the base station needs to set this field to a value
 5 other than '000'.
- 6 The base station shall set this field to the cycle index value of
 7 *Alternative Technologies Information Message*. The base station
 8 shall set this field vale in the range '000' – '101', both
 9 inclusive.
- 10 ADD_LOC_INFO_INCL – Location information included.
- 11 The base station shall omit this field if the base station does
 12 not need to include any fields following this field. Otherwise
 13 the base station shall include this field and set this field as
 14 follows:
- 15 The base station shall set this field to '1' to indicate that the
 16 LOC_UNC_H, HEIGHT, and LOC_UNC_V fields are included
 17 in this message, otherwise, the base station shall set this field
 18 to '0'.
- 19 LOC_UNC_H – Horizontal location uncertainty.
- 20 If ADD_LOC_INFO_INCL is included and set to '1', the base
 21 station shall include this field and set it as shown below;
 22 otherwise, the base station shall omit this field.
- 23 The base station shall set this field to the circular horizontal
 24 location uncertainty, as specified in Table 3.7.2.3.2.1-2. The
 25 value of this field indicates the radius of a circular 95%
 26 confidence coverage area.

27 **Table 3.7.2.3.2.1-2. Horizontal Position Uncertainty**

'0000'	LOC_UNC_H < 20 m
'0001'	20 m ≤ LOC_UNC_H < 40 m
'0010'	40 m ≤ LOC_UNC_H < 70 m
'0011'	70 m ≤ LOC_UNC_H < 100 m
'0100'	100 m ≤ LOC_UNC_H < 200 m
'0101'	200 m ≤ LOC_UNC_H < 400 m
'0110'	400 m ≤ LOC_UNC_H < 700 m
'0111'	700 m ≤ LOC_UNC_H < 1,000 m
'1000'	1,000 m ≤ LOC_UNC_H < 2,000 m
'1001'	2,000 m ≤ LOC_UNC_H < 4,000 m
'1010'	4,000 m ≤ LOC_UNC_H < 7,000 m
'1011'	7,000 m ≤ LOC_UNC_H < 10,000 m
'1100'	10,000 m ≤ LOC_UNC_H < 20,000 m

'1101'	$20,000 \text{ m} \leq \text{LOC_UNC_H} < 40,000 \text{ m}$
'1110'	$40,000 \text{ m} \leq \text{LOC_UNC_H} < 70,000 \text{ m}$
'1111'	$70,000 \text{ m} \leq \text{LOC_UNC_H}$

HEIGHT

– Height.

If ADD_LOC_INFO_INCL is included and set to '1', the base station shall include this field and set it as shown below; otherwise, the base station shall omit this field.

The base station shall set this field to the height, above the WGS-84 reference ellipsoid, in units of 1 meter, in the range from -500 m to 15,882 m, where the binary value of the field conveys the height plus 500 m.

The base station shall set this field to all ones if its height is not known.

LOC_UNC_V

– Vertical location uncertainty.

If ADD_LOC_INFO_INCL is included and set to '1', the base station shall include this field and set it as shown below; otherwise, the base station shall omit this field.

The base station set this field to the vertical location uncertainty, as specified in Table 3.7.2.3.2.1-3. The value of this field indicates the one-sigma uncertainty of HEIGHT within the corresponding horizontal coverage area.

The base station shall set this field to all ones if its height is not known.

Table 3.7.2.3.2.1-3. Vertical Position Uncertainty

'0000'	$0 < \text{LOC_UNC_V} < 1 \text{ m}$
'0001'	$1 \text{ m} \leq \text{LOC_UNC_V} < 2 \text{ m}$
'0010'	$2 \text{ m} \leq \text{LOC_UNC_V} < 4 \text{ m}$
'0011'	$4 \text{ m} \leq \text{LOC_UNC_V} < 7 \text{ m}$
'0100'	$7 \text{ m} \leq \text{LOC_UNC_V} < 10 \text{ m}$
'0101'	$10 \text{ m} \leq \text{LOC_UNC_V} < 20 \text{ m}$
'0110'	$20 \text{ m} \leq \text{LOC_UNC_V} < 40 \text{ m}$
'0111'	$40 \text{ m} \leq \text{LOC_UNC_V} < 70 \text{ m}$
'1000'	$70 \text{ m} \leq \text{LOC_UNC_V} < 100 \text{ m}$
'1001'	$100 \text{ m} \leq \text{LOC_UNC_V} < 200 \text{ m}$
'1010'	$200 \text{ m} \leq \text{LOC_UNC_V} < 400 \text{ m}$

'1011'	$400 \text{ m} \leq \text{LOC_UNC_V} < 700 \text{ m}$
'1100'	$700 \text{ m} \leq \text{LOC_UNC_V} < 1,000 \text{ m}$
'1101'	$1,000 \text{ m} \leq \text{LOC_UNC_V} < 2,000 \text{ m}$
'1110'	$2,000 \text{ m} \leq \text{LOC_UNC_V} < 4,000 \text{ m}$
'1111'	$4,000 \text{ m} \leq \text{LOC_UNC_V}$

- 1 ADD_LOC_GEM_ALLOWED – Additional Geo Location Info Record allowed in GEM.
- 2 The base station shall omit this field if the base station does
- 3 not support inclusion of Additional Geo Location Type
- 4 Information record in a *General Extension Message* with
- 5 *Origination* and *Registration* messages and the base station
- 6 does not need to include any field following this field.
- 7 Otherwise, the base station shall include this field and set it
- 8 as follows.
- 9 The base station shall set this field to '1' to indicate that the
- 10 Additional Geo Location Type Information records may be
- 11 included in a General Extension Message with Origination
- 12 and Registration messages. Otherwise, the base station shall
- 13 set this field to '0'.
- 14

ACCT_AOC_BITMAP2	0 or 5
ACCT_SO_GRP	5

} (NUM_ACCT_SO_GRP + 1)

2

3

PILOT_PN - Pilot PN sequence offset index.

4

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

5

6

ACC_MSG_SEQ - Access parameters message sequence number.

7

The base station shall set this field to ACC_CONFIG_SEQ (see 3.6.2.2).

8

9

ACC_CHAN - Number of Access Channels.

1			The base station shall set this field to one less than the
2			number of Access Channels associated with this Paging
3			Channel.
4	NOM_PWR	-	Nominal transmit power offset.
5			The base station shall set this field to the correction factor to
6			be used by mobile stations in the open loop power estimate,
7			expressed as a two's complement value in units of 1 dB
8			(see [2]).
9	INIT_PWR	-	Initial power offset for access.
10			The base station shall set this field to the correction factor to
11			be used by mobile stations in the open loop power estimate
12			for the initial transmission on an Access Channel, expressed
13			as a two's complement value in units of 1 dB (see [2]).
14	PWR_STEP	-	Power increment.
15			The base station shall set this field to the value by which
16			mobile stations are to increase their transmit power between
17			successive access probes in an access probe sequence, in
18			units of 1 dB.
19	NUM_STEP	-	Number of access probes.
20			The base station shall set this field to one less than the
21			maximum number of access probes mobile stations are to
22			transmit in a single access probe sequence.
23	MAX_CAP_SZ	-	Maximum Access Channel message capsule size.
24			The base station shall set this field to the value in the range 0
25			to 7, three less than the maximum number of Access Channel
26			frames in an Access Channel message capsule.
27	PAM_SZ	-	Access Channel preamble length.
28			The base station shall set this field to one less than the
29			number of Access Channel frames that mobile stations are to
30			transmit in each Access Channel preamble.
31	PSIST(0-9)	-	Persistence value for access overload classes 0 through 9.
32			If mobile stations in access overload classes 0 through 9 are
33			permitted to transmit requests on the Access Channel, the
34			base station shall set this field to the persistence value to be
35			used. If such mobile stations are not permitted to transmit
36			requests on the Access Channel, the base station shall set
37			this field to '111111'.
38	PSIST(10)	-	Persistence value for access overload class 10 (test mobile
39			stations).
40			If mobile stations in access overload class 10 are permitted to
41			transmit requests on the Access Channel, the base station
42			shall set this field to the persistence value to be used. If such
43			mobile stations are not permitted to transmit requests on the
44			Access Channel, the base station shall set this field to '111'.

- 1 PSIST(11) - Persistence value for access overload class 11 (emergency
2 mobile stations).
- 3 If mobile stations in access overload class 11 are permitted to
4 transmit requests on the Access Channel, the base station
5 shall set this field to the persistence value to be used. If such
6 mobile stations are not permitted to transmit requests on the
7 Access Channel, the base station shall set this field to '111'.
- 8 PSIST(12) - Persistence value for access overload class 12.
- 9 If mobile stations in access overload class 12 are permitted to
10 transmit requests on the Access Channel, the base station
11 shall set this field to the persistence value to be used. If such
12 mobile stations are not permitted to transmit requests on the
13 Access Channel, the base station shall set this field to '111'.
- 14 PSIST(13) - Persistence value for access overload class 13.
- 15 If mobile stations in access overload class 13 are permitted to
16 transmit requests on the Access Channel, the base station
17 shall set this field to the persistence value to be used. If such
18 mobile stations are not permitted to transmit requests on the
19 Access Channel, the base station shall set this field to '111'.
- 20 PSIST(14) - Persistence value for access overload class 14.
- 21 If mobile stations in access overload class 14 are permitted to
22 transmit requests on the Access Channel, the base station
23 shall set this field to the persistence value to be used. If such
24 mobile stations are not permitted to transmit requests on the
25 Access Channel, the base station shall set this field to '111'.
- 26 PSIST(15) - Persistence value for access overload class 15.
- 27 If mobile stations in access overload class 15 are permitted to
28 transmit requests on the Access Channel, the base station
29 shall set this field to the persistence value to be used. If such
30 mobile stations are not permitted to transmit requests on the
31 Access Channel, the base station shall set this field to '111'.
- 32 MSG_PSIST - Persistence modifier for Access Channel attempts for message
33 transmissions.
- 34 A mobile station multiplies its transmission probability by
35 $2^{-\text{MSG_PSIST}}$ for such attempts.
- 36 The base station shall set this field to the persistence modifier
37 for Access Channel attempts for message transmissions.
- 38 REG_PSIST - Persistence modifier for Access Channel attempts for
39 registrations which are not responses to the *Registration*
40 *Request Order*.
- 41 A mobile station multiplies its transmission probability by
42 $2^{-\text{REG_PSIST}}$ for such attempts.
- 43 The base station shall set this field to the persistence modifier
44 for Access Channel attempts for registrations which are not
45 responses to the *Registration Request Order*.

- 1 NOM_PWR_EXT - Extended nominal transmit power.
- 2 If the base station is operating in Band Class 0 or Band Class
- 3 3, it shall set this field to '0'; otherwise, it shall set this field
- 4 as follows:
- 5 If the correction factor to be used by mobile stations in the
- 6 open loop power estimate is between -24 dB and -9 dB
- 7 inclusive, the base station shall set this field to '1'; otherwise
- 8 (the correction factor is in the range -8 dB to 7 dB inclusive),
- 9 the base station shall set this field to '0'.
- 10 PSIST_EMG_INCL - Emergency persistence included indicator.
- 11 If PSIST_EMG is included in this message, the base station
- 12 shall set this field to '1'; otherwise, the base station shall set
- 13 this field to '0'. The base station shall not include PSIST_EMG
- 14 in this message if the base station supports the Enhanced
- 15 Access Channel.
- 16 PSIST_EMG - Persistence value for emergency call for access overload
- 17 classes 0 through 9.
- 18 If PSIST_EMG_INCL is set to '0', the base station shall omit
- 19 this field; otherwise, the base station shall set this field as
- 20 follows:
- 21 If a mobile station in access overload classes 0 through 9 is
- 22 permitted to transmit emergency requests on the Access
- 23 Channel, the base station shall set this field to the
- 24 persistence value to be used for the emergency calls. If such
- 25 a mobile station is not permitted to transmit emergency
- 26 requests on the Access Channel, the base station shall set
- 27 this field to '111'.
- 28 ACCT_INCL - Access Control based on Call Type (ACCT) information
- 29 included indicator.
- 30 If the base station enables ACCT for at least one service
- 31 option, the base station shall set this field to '1'; otherwise,
- 32 the base station shall set this field to '0'.
- 33 If the base station sets this field to '1', then the base station
- 34 shall also set at least one of ACCT_SO_INCL or
- 35 ACCT_SO_GRP_INCL to '1'.
- 36 ACCT_INCL_EMG - Access Control based on Call Type (ACCT) includes emergency
- 37 calls indicator.
- 38 If ACCT_INCL is set to '0', the base station shall omit this
- 39 field; otherwise, the base station shall include this field and
- 40 set it as follows:
- 41 The base station shall set this field to '0' if the mobile station
- 42 is not to apply ACCT to a call that is recognized by the mobile
- 43 station to be an emergency call; otherwise, the base station
- 44 shall set this field to '1'.
- 45 ACCT_AOC_BITMAP_INCL - Access Control based on Call Type (ACCT) access overload
- 46 class bitmap included indicator.

1 If ACCT_INCL is set to '0', the base station shall omit this
 2 field; otherwise, the base station shall include this field and
 3 set it as follows:

4 The base station shall set this field to '0' if all mobile stations
 5 are to apply ACCT regardless of their access overload classes;
 6 otherwise, the base station shall set this field to '1' to indicate
 7 that the mobile station is to apply ACCT according to its
 8 access overload class.

9 ACCT_SO_INCL - Access Control based on Call Type (ACCT) service option
 10 included indicator.

11 If ACCT_INCL is set to '0', the base station shall omit this
 12 field; otherwise, the base station shall include this field and
 13 set it as follows:

14 The base station shall set this field to '1' if at least one
 15 occurrence of the ACCT_SO field is included in this message;
 16 otherwise, the base station shall set this field to '0'.

17 NUM_ACCT_SO - Number of service options for Access Control based on Call
 18 Type (ACCT).

19 If ACCT_SO_INCL is not included, or is included and set to '0',
 20 then the base station shall omit this field; otherwise, the base
 21 station shall include this field and set it to one less than the
 22 number of occurrences of the ACCT_SO field included in this
 23 message.

24 If ACCT_SO_INCL is included and set to '1', then the base station shall include
 25 NUM_ACCT_SO + 1 occurrences of the following variable-field record:

26 ACCT_AOC_BITMAP1 - Access Control based on Call Type (ACCT) access overload
 27 class bitmap.

28 If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
 29 shall omit this field; otherwise, the base station shall include
 30 this field and set it as follows:

31 This field consists of the subfields defined in Table
 32 3.7.2.3.2.2-1.

33 **Table 3.7.2.3.2.2-1. ACCT Access Overload Class Bitmap Subfields.**

Subfield	Length (bits)	Subfield Description
ACCOLC_0_1	1	Access overload classes 0 and 1
ACCOLC_2_3	1	Access overload classes 2 and 3
ACCOLC_4_5	1	Access overload classes 4 and 5
ACCOLC_6_7	1	Access overload classes 6 and 7
ACCOLC_8_9	1	Access overload classes 8 and 9

34

- 1 The base station shall set a subfield to '1' to indicate that
 2 mobile stations having the corresponding access overload
 3 class are not permitted to perform access attempts using the
 4 associated service option ACCT_SO; otherwise, the base
 5 station shall set the subfield to '0'.
- 6 ACCT_SO - Access Control based on Call Type (ACCT) service option
 7 number.
- 8 The base station shall set this field to the value of the service
 9 option number (as specified in [30]) that has ACCT enabled.
- 10 ACCT_SO_GRP_INCL - Access Control based on Call Type (ACCT) service option
 11 group included indicator.
- 12 If ACCT_INCL is set to '0', the base station shall omit this
 13 field; otherwise, the base station shall include this field and
 14 set it as follows:
- 15 The base station shall set this field to '1' if at least one
 16 occurrence of the ACCT_SO_GRP field is included in this
 17 message; otherwise, the base station shall set this field to '0'.
- 18 NUM_ACCT_SO_GRP - Number of service option groups for Access Control based on
 19 Call Type (ACCT).
- 20 If ACCT_SO_GRP_INCL is not included, or is included and set
 21 to '0', then the base station shall omit this field; otherwise,
 22 the base station shall include this field and set it to one less
 23 than the number of occurrences of the ACCT_SO_GRP field
 24 included in this message.
- 25 If ACCT_SO_GRP_INCL is included and set to '1', then the base station shall include
 26 NUM_ACCT_SO_GRP + 1 occurrences of the following variable-field record:
- 27 ACCT_AOC_BITMAP2 - Access Control based on Call Type (ACCT) access overload
 28 class bitmap.
- 29 If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
 30 shall omit this field; otherwise, the base station shall include
 31 this field and set it as follows:
- 32 This field consists of the subfields defined in Table
 33 3.7.2.3.2.2-1. The base station shall set a subfield to '1' to
 34 indicate that mobile stations having the corresponding access
 35 overload class are not permitted to perform access attempts
 36 using a service option specified by the associated
 37 ACCT_SO_GRP field; otherwise, the base station shall set the
 38 subfield to '0'.
- 39 ACCT_SO_GRP - Access Control based on Call Type (ACCT) service option
 40 group number.
- 41 The base station shall set this field to the value of the service
 42 option group number (as specified in [30]) whose members all
 43 have ACCT enabled.
- 44
- 45

1 3.7.2.3.2.3 Neighbor List Message

2 MSG_TAG: NLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
PILOT_INC	4

Zero or more occurrences of the following record:

{

NGHBR_CONFIG	3
NGHBR_PN	9

}

3

4 PILOT_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence
6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG_SEQ
9 (see 3.6.2.2).

10 PILOT_INC - Pilot PN sequence offset index increment.

11 A mobile station searches for Remaining Set pilots at pilot PN
12 sequence index values that are multiples of this value.

13 The base station shall set this field to the pilot PN sequence
14 increment, in units of 64 PN chips, that mobile stations are to
15 use for searching the Remaining Set. The base station should
16 set this field to the largest increment such that the pilot PN
17 sequence offsets of all its neighbor base stations are integer
18 multiples of that increment.

19 The base station shall set this field to a value in the range 1 to
20 15 inclusive.

21

22 The base station shall include one occurrence of the following two-field record for each
23 member mobile stations are to place in their Neighbor Sets. The base station may include
24 zero or more occurrences of the following record.

25 NGHBR_CONFIG - Neighbor configuration.

26 The base station shall set this field to the value shown in
27 Table 3.7.2.3.2.3-1 corresponding to the configuration of this
28 neighbor.

29

1

Table 3.7.2.3.2.3-1. Neighbor Configuration Field

Value (binary)	Neighbor Configuration
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment that is same as this current CDMA frequency assignment and with the same number of Paging Channels.</p> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>
001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment that is same as this current CDMA frequency assignment but possibly with a different number of Paging Channels.</p> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>
010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>

Value (binary)	Neighbor Configuration
011	The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the CDMA frequency assignment that is same as this current CDMA frequency assignment.
100-111	Reserved.

1

2

NGHBR_PN - Neighbor pilot PN sequence offset index.

3

The base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips.

4

5

1 3.7.2.3.2.4 CDMA Channel List Message
 2 MSG_TAG: CCLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6

One or more occurrences of the following field:

{

CDMA_FREQ	11
-----------	----

}

3

4 PILOT_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG_SEQ
 9 (see 3.6.2.2).

10 CDMA_FREQ - CDMA Channel frequency assignment.

11 The order in which occurrences of this field are included gives
 12 the designations of the supported CDMA Channels as CDMA
 13 Channel 1 through CDMA Channel N.

14 Each occurrence of this field shall correspond to a CDMA
 15 Channel containing a Paging Channel that is supported by
 16 this base station. If the supported CDMA Channels are in the
 17 preferred set of CDMA frequency assignments (see [2]), the
 18 base station shall include their occurrences of this field first.

19 The base station shall set each occurrence of this field to the
 20 CDMA channel number corresponding to the CDMA
 21 frequency assignment for that CDMA Channel (see [2]).

- ORDER - Order code.
 The base station shall set this field to the ORDER code (see 3.7.4) for this type of order.
- ADD_RECORD_LEN - Additional record length.
 The base station shall set this field to the number of octets in the order-specific fields included in this order record.
- Order-specific fields - Order-specific fields.
 The base station shall include order-specific fields as specified in 3.7.4 for this type of order.

1 3.7.2.3.2.8 Channel Assignment Message

2 MSG_TAG: CAM

Field	Length (bits)
ASSIGN_MODE	3
ADD_RECORD_LEN	3
Additional record fields	8 × ADD_RECORD_LEN

3

4 If ASSIGN_MODE = '000', the additional record fields shall be:

5

FREQ_INCL	1
CODE_CHAN	8
CDMA_FREQ	0 or 11
FRAME_OFFSET	4
ENCRYPT_MODE	2
D_SIG_ENCRYPT_MODE	0 or 3
ENC_KEY_SIZE	0 or 3
C_SIG_ENCRYPT_MODE_INCL	1
C_SIG_ENCRYPT_MODE	0 or 3
RESERVED	0 - 7 (as needed)

6

7 If ASSIGN_MODE = '001', the additional record fields shall be:

8

RESPOND	1
FREQ_INCL	1
CDMA_FREQ	0 or 11

One or more occurrences of the following field:

{

PILOT_PN	9
----------	---

}

RESERVED	0 - 7 (as needed)
----------	-------------------

9

10

11

1 If ASSIGN_MODE = '100', the additional record fields shall be:

- ADD_RECORD_LEN** - Additional record length.
- The base station shall set this field to the number of octets in the additional record fields included in this assignment record.
- Additional record fields** - Additional record fields.
- The additional record fields are determined by the value of ASSIGN_MODE, as described below.
- If the ASSIGN_MODE field is set to '000', the base station shall include the following fields:
- FREQ_INCL** - Frequency included indicator.
- If the CDMA_FREQ field is included in this assignment record, the base station shall set this bit to '1'. If the CDMA_FREQ field is not included in this assignment record, the base station shall set this bit to '0'.
- CODE_CHAN** - Code channel.
- The base station shall set this field to the code channel index (see [2]) in the range 1 to 63 inclusive that the mobile station is to use on the Fundamental Channel of the Forward Traffic Channel.
- CDMA_FREQ** - Frequency assignment.
- If the FREQ_INCL bit is set to '1', the base station shall set this field to the CDMA Channel number corresponding to the CDMA frequency assignment for the CDMA Channel containing the Forward Traffic Channel the mobile station is to use. If the FREQ_INCL bit is set to '0', the base station shall omit this field.

- 1 FRAME_OFFSET - Frame offset.
 2 The Forward and Reverse Traffic Channel frames are delayed
 3 FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).
 4 The base station shall set this field to the Forward and
 5 Reverse Traffic Channel frame offset.
- 6 ENCRYPT_MODE - Message encryption mode.
 7 The base station shall set this field to the ENCRYPT_MODE
 8 value shown in Table 3.7.2.3.2.8-2 corresponding to the
 9 encrypting mode that is to be used for signaling messages, as
 10 specified in 2.3.12.2.

11
 12 **Table 3.7.2.3.2.8-2. Message Encryption Modes**

ENCRYPT_MODE Field (binary)	Encryption Mode Used
00	Encryption disabled
01	Basic encryption of call control messages
10	Enhanced encryption of call control messages
11	Extended encryption of call control messages

- 13
- 14 D_SIG_ENCRYPT_MODE - Dedicated channel signaling encryption mode indicator.
 15 If ENCRYPT_MODE is set to ‘11’, the base station shall include
 16 this field and shall set it to the dedicated channel signaling
 17 encryption mode, as shown in Table 3.7.4.5-1; otherwise the base
 18 station shall omit this field.
- 19 ENC_KEY_SIZE - Encryption key size indication.
 20 If ENCRYPT_MODE is set to ‘10’ or ‘11’, the base station shall
 21 include this field and shall set it to the encryption key size, as
 22 shown in Table 3.7.4.5-2; otherwise, the base station shall omit
 23 this field.
- 24 C_SIG_ENCRYPT_MODE_INCL - Common channel signaling encryption mode included
 25 indicator.
 26 If common channel signaling encryption information is
 27 included in this message, the base station shall set this field
 28 to ‘1’; otherwise, the base station shall set this field to ‘0’.
- 29 C_SIG_ENCRYPT_MODE - Common channel signaling encryption mode indicator.

1 If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
 2 shall include this field and shall set it to the common channel
 3 signaling encryption mode, as shown in Table 3.7.4.5-1;
 4 otherwise, the base station shall omit this field.

5 RESERVED - Reserved bits.

6 The base station shall add reserved bits as needed in order to
 7 make the total length of the fields after the preceding
 8 ADD_RECORD_LEN field through this RESERVED field equal
 9 to an integer number of octets. The base station shall set
 10 these bits to '0'.

11 If the ASSIGN_MODE field is set to '001', the base station shall include the following fields:

12 RESPOND - Respond on new Access Channel indicator.

13 If the mobile station is to retransmit an *Origination Message*
 14 or *Page Response Message* after processing this channel
 15 assignment, the base station shall set this field to '1'. The
 16 base station may set this field to '0' only in response to a *Page*
 17 *Response Message*.

18 FREQ_INCL - Frequency included indicator.

19 If the CDMA_FREQ field is included in this assignment
 20 record, the base station shall set this bit to '1'. If the
 21 CDMA_FREQ field is not included in this assignment record,
 22 the base station shall set this bit to '0'.

23 CDMA_FREQ - Frequency assignment.

24 If the FREQ_INCL bit is set to '1', the base station shall set
 25 this field to the CDMA Channel number corresponding to the
 26 CDMA frequency assignment for the CDMA Channel
 27 containing the Paging Channel the mobile station is to use. If
 28 the FREQ_INCL bit is set to '0', the base station shall omit
 29 this field.

30 PILOT_PN - Pilot PN sequence offset index.

31 The base station shall include one occurrence of this field for
 32 each base station whose Paging Channel may be monitored
 33 by the mobile station. For each occurrence, the base station
 34 shall set this field to the pilot PN sequence offset for a base
 35 station, in units of 64 PN chips. The base station having this
 36 pilot PN sequence offset should support a Primary Paging
 37 Channel with the same Paging Channel rate as the current
 38 base station.

39 RESERVED - Reserved bits.

40 The base station shall add reserved bits as needed in order to
 41 make the total length of the fields, after the preceding
 42 ADD_RECORD_LEN field through this RESERVED field, equal
 43 to an integer number of octets. The base station shall set
 44 these bits to '0'.

45 If the ASSIGN_MODE field is set to '100', the base station shall include the following fields:

1	FREQ_INCL	-	Frequency included indicator.
2			If the BAND_CLASS and CDMA_FREQ fields are included in
3			this assignment record, the base station shall set this bit to
4			'1'. If the BAND_CLASS and CDMA_FREQ fields are not
5			included in this assignment record, the base station shall set
6			this bit to '0'.
7	RESERVED	-	Reserved bits.
8			The base station shall set this field to '000'.
9	BYPASS_ALERT_ANSWER	-	Bypass alert indicator.
10			If the MOB_P_REV of the current band class of the mobile
11			station is less than or equal to three, the base station shall
12			set this field to '0'; otherwise, the base station shall set this
13			field as follows.
14			If the mobile station is to bypass the <i>Waiting for Order</i>
15			<i>Substate</i> and the <i>Waiting for Mobile Station Answer Substate</i> ,
16			the base station shall set this field to '1'; otherwise, the base
17			station shall set this field to '0'.
18	DEFAULT_CONFIG	-	Default Configuration.
19			If the GRANTED_MODE field is set to '00', the base station
20			shall set this field as specified in Table 3.7.2.3.2.8-3 to
21			indicate an initial multiplex option and radio configuration for
22			the Forward and Reverse Traffic Channels.

1

Table 3.7.2.3.2.8-3. Default Configuration

Value (binary)	Default Configuration
000	Multiplex Option 1 and Radio Configuration 1 for both the Forward Traffic Channel and the Reverse Traffic Channel
001	Multiplex Option 2 and Radio Configuration 2 for both the Forward Traffic Channel and the Reverse Traffic Channel
010	Multiplex Option 1 and Radio Configuration 1 for the Forward Traffic channel; Multiplex Option 2 and Radio Configuration 2 for the Reverse Traffic channel
011	Multiplex Option 2 and Radio Configuration 2 for the Forward Traffic channel; Multiplex Option 1 and Radio Configuration 1 for the Reverse Traffic channel
All other values are reserved.	

2

3

GRANTED_MODE - Granted mode.

4

5

6

7

8

9

10

The base station shall set this field to '00' to indicate that the mobile station is to use an initial service configuration consisting of the multiplex option and radio configuration defined by the DEFAULT_CONFIG field for the Forward and Reverse Traffic Channels, and to indicate that service negotiation is to take place before the base station sends the first *Service Connect Message*.

11

12

13

14

15

16

17

18

The base station shall set this field to '01' to indicate that the mobile station is to use an initial service configuration consisting of the default multiplex option and transmission rates corresponding to the service option requested by the mobile station either in the *Origination Message*, or *Page Response Message*, and to indicate that service negotiation is to take place before the base station sends the first *Service Connect Message*.

1			The base station shall set this field to '10' to indicate that the
2			mobile station is to use an initial service configuration
3			consisting of the default multiplex option and transmission
4			rates corresponding to the service option requested by the
5			mobile station either in the <i>Origination Message</i> , or <i>Page</i>
6			<i>Response Message</i> , and to indicate that service negotiation is
7			not to take place before the base station sends the first
8			<i>Service Connect Message</i> .
9	CODE_CHAN	-	Code channel.
10			The base station shall set this field to the code channel index
11			(see [2]) in the range 1 to 63 inclusive that the mobile station
12			is to use on the Fundamental Channel of the Forward Traffic
13			Channel.
14	FRAME_OFFSET	-	Frame offset.
15			The Forward and Reverse Traffic Channel frames are delayed
16			FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).
17			The base station shall set this field to the Forward and
18			Reverse Traffic Channel frame offset.
19	ENCRYPT_MODE	-	Message encryption mode.
20			The base station shall set this field to the ENCRYPT_MODE
21			value shown in Table 3.7.2.3.2.8-2 corresponding to the
22			encrypting mode that is to be used for signaling messages, as
23			specified in 2.3.12.2.
24	BAND_CLASS	-	Band class.
25			If the FREQ_INCL bit is set to '1', the base station shall set
26			this field to the CDMA band class, as specified in [30],
27			corresponding to the CDMA frequency assignment for the
28			CDMA Channel containing the Forward Traffic Channel the
29			mobile station is to use. If the FREQ_INCL bit is set to '0', the
30			base station shall omit this field.
31	CDMA_FREQ	-	Frequency assignment.
32			If the FREQ_INCL bit is set to '1', the base station shall set
33			this field to the CDMA Channel number, in the specified
34			CDMA band class, corresponding to the CDMA frequency
35			assignment for the CDMA Channel containing the Forward
36			Traffic Channel the mobile station is to use. If the
37			FREQ_INCL bit is set to '0', the base station shall omit this
38			field.
39	D_SIG_ENCRYPT_MODE	-	Dedicated channel signaling encryption mode indicator.
40			If ENCRYPT_MODE is set to '11', the base station shall include
41			this field and shall set it to the dedicated channel signaling
42			encryption mode, as shown in Table 3.7.4.5-1; otherwise the base
43			station shall omit this field.
44	ENC_KEY_SIZE	-	Encryption key size indication.

1 If ENCRYPT_MODE is set to '10' or '11', the base station shall
 2 include this field and shall set it to the encryption key size, as
 3 shown in Table 3.7.4.5-2; otherwise, the base station shall omit
 4 this field.

5 C_SIG_ENCRYPT_MODE_INCL - Common channel signaling encryption mode included
 6 indicator.

7 If common channel signaling encryption information is
 8 included in this message, the base station shall set this field
 9 to '1'; otherwise, the base station shall set this field to '0'.

10 C_SIG_ENCRYPT_MODE - Common channel signaling encryption mode indicator.

11 If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
 12 shall include this field and shall set it to the common channel
 13 signaling encryption mode, as shown in Table 3.7.4.5-1;
 14 otherwise, the base station shall omit this field.

15 RESERVED - Reserved bits.

16 The base station shall add reserved bits as needed in order to
 17 make the total length of the fields after the preceding
 18 ADD_RECORD_LEN field through this RESERVED field equal
 19 to an integer number of octets. The base station shall set
 20 these bits to '0'.

21 If the ASSIGN_MODE field is set to '101', the base station shall include the following fields:

22 RESPOND - Respond on new Access Channel indicator.

23 If the mobile station is to retransmit an *Origination Message*
 24 or *Page Response Message* after processing this channel
 25 assignment, the base station shall set this field to '1'. The
 26 base station may set this field to '0' only in response to a *Page*
 27 *Response Message*.

28 FREQ_INCL - Frequency included indicator.

29 If the BAND_CLASS and CDMA_FREQ fields are included in
 30 this assignment record, the base station shall set this bit to
 31 '1'. If the BAND_CLASS and CDMA_FREQ fields are not
 32 included in this assignment record, the base station shall set
 33 this bit to '0'.

34 BAND_CLASS - Band class.

35 If the FREQ_INCL bit is set to '1', the base station shall set
 36 this field to the CDMA band class, as specified in [30],
 37 corresponding to the CDMA frequency assignment for the
 38 CDMA Channel containing the Paging Channel the mobile
 39 station is to use. If the FREQ_INCL bit is set to '0', the base
 40 station shall omit this field.

41 CDMA_FREQ - Frequency assignment.

1			If the <code>FREQ_INCL</code> bit is set to '1', the base station shall set
2			this field to the CDMA Channel number, in the specified
3			CDMA band class, corresponding to the CDMA frequency
4			assignment for the CDMA Channel containing the Paging
5			Channel the mobile station is to use. If the <code>FREQ_INCL</code> bit is
6			set to '0', the base station shall omit this field.
7	<code>PILOT_PN</code>	-	Pilot PN sequence offset index.
8			The base station shall include one occurrence of this field for
9			each base station whose Paging Channel may be monitored
10			by the mobile station. For each occurrence, the base station
11			shall set this field to the pilot PN sequence offset for a base
12			station, in units of 64 PN chips. The base station having this
13			pilot PN sequence offset should support a Primary Paging
14			Channel with the same Paging Channel rate as the current
15			base station.
16	<code>RESERVED</code>	-	Reserved bits.
17			The base station shall add reserved bits as needed in order to
18			make the total length of the fields after the preceding
19			<code>ADD_RECORD_LEN</code> field through this <code>RESERVED</code> field equal
20			to an integer number of octets. The base station shall set
21			these bits to '0'.
22			

1 3.7.2.3.2.9 Data Burst Message
 2 MSG_TAG: DBM

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHARi	8
-------	---

} (NUM_FIELDS)

3

4 MSG_NUMBER - Message number.

5 The base station shall set this field to the number of this
 6 message within the data burst stream.

7 BURST_TYPE - Data burst type.

8 The base station shall set the value of this field for the type of
 9 this data burst as defined in [30]. If the mobile station sets
 10 this field equal to '111110', it shall set the first two CHARi
 11 fields of this message equal to
 12 EXTENDED_BURST_TYPE_INTERNATIONAL as described in
 13 the definition of CHARi below. If the base station sets this
 14 field equal to '111111', it shall set the first two CHARi fields of
 15 this message equal to the EXTENDED_BURST_TYPE as
 16 described in the definition of CHARi below.

17 NUM_MSGS - Number of messages in the data burst stream.

18 The base station shall set this field to the number of
 19 messages in this data burst stream.

20 NUM_FIELDS - Number of characters in this message.

21 The base station shall set this field to the number of
 22 occurrences of the CHARi field included in this message.

23 CHARi - Character.

24 The base station shall include NUM_FIELDS occurrences of
 25 this field. The base station shall set these fields to the
 26 corresponding octet of the data burst stream.

2
3
4
5
6
7
8
9
10
11
12
13
14
15

If the BURST_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED_BURST_TYPE_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED_BURST_TYPE_INTERNATIONAL field shall specify the COUNTRY_BURST_TYPE. The base station shall set the value of the COUNTRY_BURST_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	8 × (NUM_FIELDS - 2)

16
17
18
19
20
21
22

If the BURST_TYPE field of this message is equal to '111111', the first two CHARi octets shall represent a single, 16 bit, EXTENDED_BURST_TYPE field, as shown below. The base station shall set the value of the EXTENDED_BURST_TYPE according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	8 × (NUM_FIELDS - 2)

23

1 3.7.2.3.2.10 Authentication Challenge Message

2 MSG_TAG: AUCM

Field	Length (bits)
RANDU	24
GEN_CMEAKEY	1

3

4 RANDU - Random challenge data.

5 The base station shall set this field as specified in 2.3.12.1.4.

6 GEN_CMEAKEY - Generate CMEAKEY indicator.

7 The base station shall set this field to '1' if it wants the MS to
8 generate the CMEAKEY during the Unique Challenge-
9 Response procedure (see 2.3.12.1.4); otherwise, the base
10 station shall set this field to '0'.

11

12

13

1 3.7.2.3.2.11 SSD Update Message

2 MSG_TAG: SSDUM

Field	Length (bits)
RANDSSD	56

3

4 RANDSSD - Random data for the computation of SSD.

5 The base station shall set this field as specified in 2.3.12.1.5.

6

1 3.7.2.3.2.12 Feature Notification Message
 2 MSG_TAG: FNM

Field	Length (bits)
RELEASE	1

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

3

4 RELEASE - Origination completion indicator.

5 The base station shall set this field to '1' if this message is
 6 used to complete an origination request from the mobile
 7 station (see 2.6.3.5); otherwise, the base station shall set this
 8 field to '0'.

9

10 The base station shall include occurrences of the following three-field record as specified in
 11 3.7.5.

12 RECORD_TYPE - Information record type.

13 The base station shall set this field as specified in 3.7.5.

14 RECORD_LEN - Information record length.

15 The base station shall set this field to the number of octets in
 16 the type-specific fields included in this record.

17 Type-specific fields - Type-specific fields.

18 The base station shall include type-specific fields as specified
 19 in 3.7.5.

- PILOT_PN** - Pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.
- CONFIG_MSG_SEQ** - Configuration message sequence number.

The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).
- DELETE_FOR_TMSI** - Delete foreign TMSI.

The base station shall set this field to '1' to cause the mobile station to delete its TMSI if the TMSI was assigned in a different TMSI zone from that specified by the TMSI_ZONE field of this message; otherwise, the base station shall set this field to '0'.
- USE_TMSI** - Use TMSI indicator.

The base station shall set this field to the value shown in Table 3.7.2.3.2.13-1 corresponding to the type of MSID that the mobile station is to use on the Access Channel.
- PREF_MSID_TYPE** - Preferred Access Channel Mobile Station Identifier Type.

The base station shall set this field to the value shown in Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding to the type of MSID that the mobile station is to use on the Access Channel.

Table 3.7.2.3.2.13-1. Preferred MSID Types for P_REV_IN_USE < 11

USE_TMSI (binary)	PREF_MSID_ TYPE (binary)	EXT_PREF_ MSID_TYPE (binary)	Description

1	11	01	TMSI (valid TMSI is assigned); IMSI, ESN, and MEID (TMSI not assigned)	TMSI (valid TMSI is assigned); If valid TMSI is not assigned and the mobile station has a R-UIM which indicates that UIM ID is to be used (see [40]): IMSI and ESN; Otherwise: IMSI and MEID

USE_TMSI (binary)	PREF_MSID_ TYPE (binary)	EXT_PREF_ MSID_TYPE (binary)	Description	
			For Origination, Page Response and Registration messages when P_REV_IN_USE >= 11, MEID_REQD='1', mobile station has a R-UIM which indicates that UIM ID is to be used	All other cases with P_REV_IN_USE >= 11
0	00	11	N/A	If the mobile station has a R-UIM which indicates that UIM ID is to be used (see [40]): IMSI, ESN and MEID; Otherwise: IMSI and MEID
0	10	11	IMSI and MEID	IMSI
0	11	11	N/A	If the mobile station has a R-UIM which indicates that UIM ID is to be used (see [40]): IMSI, ESN and MEID; Otherwise: IMSI and MEID
1	10	11	TMSI (valid TMSI is assigned); IMSI and MEID (TMSI not assigned)	TMSI (valid TMSI is assigned); IMSI (TMSI not assigned)

USE_TMSI (binary)	PREF_MSID_ TYPE (binary)	EXT_PREF_ MSID_TYPE (binary)	Description	
			For Origination, Page Response and Registration messages when P_REV_IN_USE >= 11, MEID_REQD='1', mobile station has a R-UIM which indicates that UIM ID is to be used	All other cases with P_REV_IN_USE >= 11
1	11	11	N/A	If valid TMSI is assigned: TMSI. If valid TMSI is not assigned and the mobile station has a R-UIM which indicates that UIM ID is to be used (see [40]): IMSI, ESN and MEID; Otherwise: IMSI and MEID
All other values are reserved.

- MCC - Mobile Country Code.
The base station shall set this field to the MCC (see 2.3.1)
- IMSI_11_12 - 11th and 12th digits of the IMSI.
The base station shall set this field to the IMSI_11_12 (see 2.3.1).
- TMSI_ZONE_LEN - TMSI zone length.
The base station shall set this field to the number of octets included in the TMSI_ZONE. The base station shall set this field to a value in the range 1 to 8 inclusive.
- TMSI_ZONE - TMSI zone.

1			The base station shall set this field to the TMSI zone number
2			as specified in [27].
3	BCAST_INDEX	-	Broadcast slot cycle index.
4			To enable periodic broadcast paging, the base station shall set
5			this field to an unsigned 3-bit number in the range 1-7, equal
6			to the broadcast slot cycle index as defined in 2.6.2.1.1.3.3.
7			To disable periodic broadcast paging, the base station shall
8			set this field to '000'.
9	IMSI_T_SUPPORTED	-	IMSI_T support indicator.
10			The base station shall set this field to '1' to indicate support
11			for a 15-digit IMSI_T addressing according to [18].
12	P_REV	-	Protocol revision level.
13			The base station shall set this field to '00001100'.
14	MIN_P_REV	-	Minimum protocol revision level.
15			The base station sets this field to prevent mobile stations
16			which cannot be supported by the base station from
17			accessing the system.
18			The base station shall set this field to the minimum protocol
19			revision level that it supports.
20	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
21			Active Set, or dropping a pilot from the Active Set (see
22			2.6.6.2.3 and 2.6.6.2.5.2).
23			The base station shall set this field as an unsigned binary
24			number.
25	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
26			the Active Set (see 2.6.6.2.5.2).
27			The base station shall set this field as a two's complement
28			signed binary number, in units of 0.5 dB.
29	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
30			from the Active Set (see 2.6.6.2.3).
31			The base station shall set this field as a two's complement
32			signed binary number, in units of 0.5 dB.
33	PACKET_ZONE_ID	-	Packet data services zone identifier.
34			If the base station supports a packet data service zone, the
35			base station shall set this field to its non-zero packet data
36			services zone identifier.

- 1 If the base station does not support a packet data service
 2 zone, the base station shall set this field to '00000000'.
- 3 **MAX_NUM_ALT_SO** - Maximum number of alternative service options.
- 4 The base station shall set this field to the maximum number
 5 of alternative service option numbers that the mobile station
 6 is allowed to include in the *Origination Message* or the *Page*
 7 *Response Message*.
- 8 For mobile stations with MOB_P_REV_s less than seven, the
 9 alternative service options are those service options defined in
 10 [30] and related to SERVICE_OPTION in *Origination Message*
 11 and the *Page Response Message*.
- 12 For mobile stations with MOB_P_REV_s equal to or greater
 13 than seven, the alternative service options are those service
 14 options defined in [30] without service option group number
 15 assigned and related to SERVICE_OPTION in *Origination*
 16 *Message* and the *Page Response Message*.
- 17 If the base station sets this field to a value greater than zero,
 18 in addition, the base station shall allow the mobile station
 19 with MOB_P_REV equal to or greater than seven to include
- 20 • a 4 or 8-bit service option bitmap in the *Origination*
 21 *Message* and the *Page Response Message*;
 - 22 • alternate service option numbers, not limited to
 23 MAX_ALT_SO_NUM, in the *Enhanced Origination Message*.
- 24 **RESELECT_INCLUDED** - System reselection parameters included.
- 25 If the base station is including system reselection parameters,
 26 the base station shall set this field to '1'; otherwise, the base
 27 station shall set this field to '0'.
- 28 **EC_THRESH** - Pilot power threshold.
- 29 If RESELECT_INCLUDED is set to '1', the base station shall
 30 include the field EC_THRESH and set this field to:
- 31
$$\lceil (pilot_power_threshold + 115) \rceil$$
- 32 where *pilot_power_threshold* is the pilot power, E_C, in
 33 dBm/1.23 MHz, below which the mobile station is to perform
 34 system reselection; otherwise, the base station shall omit this
 35 field.
- 36 **EC_IO_THRESH** - Pilot E_C/ I₀ threshold.
- 37 If RESELECT_INCLUDED is set to '1', the base station shall
 38 include the field EC_IO_THRESH and set this field to:

- 1 $\lfloor -20 \times \log_{10} (pilot_threshold) \rfloor$
- 2 where *pilot_threshold* is the pilot E_c/I_0 below which the mobile
3 station is to perform system reselection; otherwise, the base
4 station shall omit this field.
- 5 **PILOT_REPORT** - Pilot reporting indicator.
- 6 The base station shall set this field to '1' if the mobile station
7 is to report the additional pilots which have pilot strengths
8 exceeding T_ADD in all Access Channel messages. The base
9 station shall set this field to '0' if the mobile station is to
10 report the additional pilots which have pilot strengths
11 exceeding T_ADD only in the *Origination Message*, the
12 *Reconnect Message*, and the *Page Response Message*.
- 13 **NGHBR_SET_ENTRY_INFO** - Neighbor Set access entry handoff information included
14 indicator.
- 15 If the base station is including information on the Neighbor
16 Set access entry handoff, the base station shall set this field
17 to '1'; otherwise, the base station shall set this field to '0'.
- 18 **ACC_ENT_HO_ORDER** - Access entry handoff permitted indicator.
- 19 If **NGHBR_SET_ENTRY_INFO** is set to '1', the base station
20 shall include this field and set it as described below;
21 otherwise, the base station shall omit this field.
- 22 The base station shall set this field to '1' if the mobile station
23 is permitted to perform an access entry handoff after receiving
24 a message while performing the *Mobile Station Order and*
25 *Message Processing Operation* in the *Mobile Station Idle State*
26 (see 2.6.2.4); otherwise, the base station shall set this field to
27 '0'.
- 28 **NGHBR_SET_ACCESS_INFO** - Neighbor Set access handoff included indicator.
- 29 If the base station is including information on the Neighbor
30 Set access handoff or access probe handoff, the base station
31 shall set this field to '1', otherwise, the base station shall set
32 this field to '0'.
- 33 **ACCESS_HO** - Access handoff permitted indicator.
- 34 If **NGHBR_SET_ACCESS_INFO** is set to '1', the base station
35 shall include this field and set it as described below;
36 otherwise, the base station shall omit this field.
- 37 The base station shall set this field to '1' if the mobile station
38 is permitted to perform an access handoff (see 2.6.3.1.3.2);
39 otherwise, the base station shall set this field to '0'.
- 40 **ACCESS_HO_MSG_RSP** - Access handoff permitted for message response indicator.

1 If ACCESS_HO is set to '1', the base station shall include this
 2 field and set it as described below; otherwise, the base station
 3 shall omit this field.

4 The base station shall set this field to '1' if the mobile station
 5 is permitted to perform an access handoff after receiving a
 6 message and before responding to that message in the *System*
 7 *Access State*; otherwise, the base station shall set this field to
 8 '0'.

9 ACCESS_PROBE_HO - Access probe handoff permitted indicator.

10 If NGHBR_SET_ACCESS_INFO is set to '1', the base station
 11 shall include this field and set it as described below;
 12 otherwise, the base station shall omit this field.

13 The base station shall set this field to '1' if the mobile station
 14 is permitted to perform an access probe handoff (see
 15 2.6.3.1.3.3); otherwise, the base station shall set this field to
 16 '0'.

17 ACC_HO_LIST_UPD - Access handoff list update permitted indicator.

18 If ACCESS_PROBE_HO is included and is set to '1', the base
 19 station shall include this field and set it as described below;
 20 otherwise, the base station shall omit this field.

21 The base station shall set this field to '1' if the mobile station
 22 is permitted to update the access handoff list during an
 23 access attempt (see 2.6.3.1.7.2); otherwise, the base station
 24 shall set this field to '0'.

25 ACC_PROBE_HO_OTHER_MSG - Access probe handoff permitted for messages other
 26 than the *Origination Message*, the *Reconnect Message*, and the
 27 *Page Response Message*.

28 If ACCESS_PROBE_HO is set to '1', the base station shall
 29 include this field and set it as described below; otherwise, the
 30 base station shall omit this field.

31 The base station shall set this field to '1' if the mobile station
 32 is permitted to perform an access probe handoff for messages
 33 other than the *Origination Message*, the *Reconnect Message*,
 34 and the *Page Response Message*. The base station shall set
 35 this field to '0' if the mobile station is permitted to perform an
 36 access probe handoff only for the *Origination Message*, the
 37 *Reconnect Message*, and the *Page Response Message*. See
 38 2.6.3.1.3.3.

39 MAX_NUM_PROBE_HO - Maximum number of times that the mobile station is
 40 permitted to perform an access probe handoff.

41 If ACCESS_PROBE_HO is set to '1', the base station shall
 42 include this field and set it as described below; otherwise, the
 43 base station shall omit this field.

1 The base station shall set this field to the maximum number
 2 of times the mobile station is allowed to perform an access
 3 probe handoff within an access attempt minus one.

4 NGHBR_SET_SIZE - Size of the Neighbor Set.

5 If NGHBR_SET_ENTRY_INFO or NGHBR_SET_ACCESS_INFO
 6 is equal to '1', the base station shall set this field to the
 7 number of pilots included in the *Neighbor List Message*,
 8 *Extended Neighbor List Message*, or *General Neighbor List*
 9 *Message*; otherwise, the base station shall omit this field.

10 If NGHBR_SET_ENTRY_INFO is equal to '1', the base station shall include
 11 NGHBR_SET_SIZE occurrences of the following field:

12 ACCESS_ENTRY_HO - Access entry handoff permitted when entering the System
 13 Access State.

14 The base station shall set this field to '1' if the mobile station
 15 is permitted to perform an access entry handoff to the base
 16 station associated with the corresponding pilot between the
 17 time it receives a message on the Paging Channel when in the
 18 *Mobile Station Idle State* and it enters the *System Access State*
 19 to respond to the message; otherwise, the base station shall
 20 set this field to '0'. The base station shall use the same order
 21 for the ACCESS_ENTRY_HO fields in this message as is used
 22 for pilots which are listed in the *Neighbor List Message*,
 23 *Extended Neighbor List Message*, or *General Neighbor List*
 24 *Message*. Specifically, the i^{th} occurrence of the
 25 ACCESS_ENTRY_HO field shall correspond the i^{th} pilot in the
 26 *Neighbor List Message*, *Extended Neighbor List Message*, or
 27 *General Neighbor List Message*.

28 If NGHBR_SET_ACCESS_INFO is equal to '1', the base station shall include
 29 NGHBR_SET_SIZE occurrences of the following field:

30 ACCESS_HO_ALLOWED - Access handoff and access probe handoff permitted for the
 31 corresponding pilot while in the *System Access State*.

32 The base station shall set this field to '1' if the mobile station
 33 is permitted to perform an access handoff or access probe
 34 handoff to the base station associated with the corresponding
 35 pilot when the mobile station is in the *System Access State*
 36 (see 2.6.3.1.8 and 2.6.3.1.9); otherwise, the base station shall
 37 set this field to '0'. The base station shall use the same order
 38 for the ACCESS_HO_ALLOWED fields in this message as is
 39 used for pilots which are listed in the *Neighbor List Message*,
 40 *Extended Neighbor List Message*, or *General Neighbor List*
 41 *Message*. Specifically, the i^{th} occurrence of the
 42 ACCESS_HO_ALLOWED field shall correspond the i^{th} pilot in
 43 the *Neighbor List Message*, *Extended Neighbor List Message*, or
 44 *General Neighbor List Message*.

- 1 The base station shall set this field to '0' if this pilot does not
 2 support a Reverse Access Channel (R-ACH).
- 3 BROADCAST_GPS_ASST - Broadcast GPS Assist Indicator.
 4 The base station shall set this field to '1' if it supports
 5 Broadcast GPS Assist capability; otherwise, the base station
 6 shall set this field to '0'.
- 7 QPCH_SUPPORTED - Quick Paging Channel Supported Indication.
 8 If the base station supports Quick Paging Channel operation,
 9 the base station shall set this field to '1'; otherwise the base
 10 station shall set this field to '0'.
- 11 NUM_QPCH - Number of Quick Paging Channels.
 12 If the base station sets QPCH_SUPPORTED to '1', the base
 13 station shall include this field and set it as described below;
 14 otherwise, the base station shall omit this field.
 15 The base station shall set this field to the number of Quick
 16 Paging Channels on this CDMA Channel. The base station
 17 shall not set this field to '00'.
- 18 QPCH_RATE - Quick Paging Channel indicator rate.
 19 If the base station sets QPCH_SUPPORTED to '1', the base
 20 station shall include this field and set it as described below;
 21 otherwise, the base station shall omit this field.
 22 The base station shall set this field to the QPCH_RATE field
 23 value shown in Table 3.7.2.3.2.13-2 corresponding to the
 24 indicator rate used by the Quick Paging Channel in the
 25 system.

26 **Table 3.7.2.3.2.13-2. QPCH Indicator Data Rate**

QPCH_RATE Field (binary)	QPCH indicator data rate
0	4800 bps
1	9600 bps

- 27 QPCH_POWER_LEVEL_PAGE - Quick Paging Channel paging indicator transmit power
 28 level.
 29 If the base station sets QPCH_SUPPORTED to '1', the base
 30 station shall include this field and set it as described below;
 31 otherwise, the base station shall omit this field.
 32 The base station shall set this field to the Quick Paging
 33 Channel paging indicator transmit power level relative to that
 34 of the Pilot Channel as specified in Table 3.7.2.3.2.13-3.

1 **Table 3.7.2.3.2.13-3 Quick Paging Channel Transmit Power Level**

2

QPCH_POWER_LEVEL_P AGE QPCH_POWER_LEVEL_C ONFIG (binary)	Transmit Power Level
000	5 dB below the Pilot Channel Transmit Power
001	4 dB below the Pilot Channel Transmit Power
010	3 dB below the Pilot Channel Transmit Power
011	2 dB below the Pilot Channel Transmit Power
100	1 dB below the Pilot Channel Transmit Power
101	Same as the Pilot Channel Transmit Power
110	1 dB above the Pilot Channel Transmit Power
111	2 dB above the Pilot Channel Transmit Power

- 1 QPCH_CCI_SUPPORTED - Quick Paging Channel configuration change indicator
2 supported.
- 3 If QPCH_SUPPORTED is set to '1', the base station shall
4 include this field and set it as described below; otherwise, the
5 base station shall omit this field.
- 6 If the base station supports configuration change indicators
7 on the Quick Paging Channel, the base station shall set this
8 field to '1'; otherwise the base station shall set this field to '0'.
- 9 QPCH_POWER_LEVEL_CONFIG - Quick Paging Channel configuration change indicator
10 transmit power level.
- 11 If the base station includes the QPCH_CCI_SUPPORTED field
12 and sets it to '1', the base station shall include this field and
13 set it as described below; otherwise, the base station shall
14 omit this field.
- 15 The base station shall set this field to the Quick Paging
16 Channel configuration change indicator transmit power level
17 relative to that of the Pilot Channel as specified in Table
18 3.7.2.3.2.13-3.
- 19 SDB_SUPPORTED - Short Data Burst supported indicator.
- 20 The base station shall set this field to '1' if the mobile station
21 is permitted to send a Short Data Burst; otherwise, the base
22 station shall set this field to '0'.
- 23 RLGAIN_TRAFFIC_PILOT - Gain adjustment of the Reverse Traffic Channel relative to the
24 Reverse Pilot Channel for Radio Configurations greater than
25 2.
- 26 The base station shall set this field to the correction factor to
27 be used by mobile stations in setting the power of a reverse
28 traffic channel, expressed as a two's complement value in
29 units of 0.125 dB (see [2]).
- 30 REV_PWR_CNTL_DELAY_INCL - Reverse Power Control Delay included indicator.
- 31 The base station shall set this field to '1' if the base station
32 includes the REV_PWR_CNTL_DELAY field in this message;
33 otherwise, the base station shall set this field to '0'.
- 34 REV_PWR_CNTL_DELAY - The reverse power control delay.
- 35 If REV_PWR_CNTL_DELAY_INCL is set to '0', the base station
36 shall omit this field; otherwise, the base station shall include
37 this field and set it as follows:
- 38 The base station shall set this field to the closed-loop reverse
39 power control delay minus one (the closed-loop reverse power
40 control delay is the time between the end of a gated-on
41 reverse PCG and the beginning of the reverse PCG where the
42 corresponding feedback is sent on the Forward Power Control
43 Subchannel, see [2]), in units of 1.25 ms.
- 44 AUTO_MSG_SUPPORTED - Autonomous message supported indicator.

1 If the base station allows the autonomous delivery of the
 2 *Device Information Message* on the r-csch, the base station
 3 shall set this field to '1'; otherwise, the base station shall set
 4 this field to '0'.

5 **AUTO_MSG_INTERVAL** - Autonomous message interval.

6 If **AUTO_MSG_SUPPORTED** is set to '0', the base station shall
 7 omit this field; otherwise, the base station shall include this
 8 field and shall set this field to the **AUTO_MSG_INTERVAL**
 9 value shown in Table 3.7.2.3.2.13-4 to indicate the minimum
 10 time interval between autonomous messages sent by a mobile
 11 station to the infrastructure. This parameter is intended to
 12 allow the infrastructure to limit the frequency of autonomous
 13 messages sent by a mobile station on the r-csch.

14 **Table 3.7.2.3.2.13-4. AUTO_MSG_INTERVAL Values**

AUTO_MSG_INTERVAL (binary)	Interval Length (milliseconds)
000	200
001	500
010	1000
011	1500
100	2000
101	5000
110	10000
111	15000

15

16 **MOB_QOS** - Indicator granting permission to the mobile station to request
 17 QoS parameter settings in the *Origination Message*, *Origination*
 18 *Continuation Message*, or *Enhanced Origination Message*.

19 The base station shall set this field to '1', if the mobile station
 20 is allowed to include a QoS record in the *Origination Message*,
 21 *Origination Continuation Message*, or *Enhanced Origination*
 22 *Message*; otherwise, the base station shall set this field to '0'.

23 **ENC_SUPPORTED** - Encryption fields included.

24 The base station shall set this field to '1' if the encryption
 25 related fields are included; otherwise the base station shall
 26 set this field to '0'.

27 **SIG_ENCRYPT_SUP** - Signaling encryption supported indicator.

28 If **ENC_SUPPORTED** is equal to '1', the base station shall
 29 include this field; otherwise, the base station shall omit this
 30 field. If this field is included, this field indicates which
 31 signaling encryption algorithms are supported by the base
 32 station.

- 1 This field consists of the subfields shown in Table 2.7.1.3.2.1-
2 5.
- 3 If this field is included, the base station shall set the subfields
4 as follows:
- 5 The base station shall set the CMEA subfield to '1'.
- 6 The base station shall set each other subfield to '1' if the
7 corresponding signaling encryption algorithm is supported by
8 the base station; otherwise, the base station shall set the
9 subfield to '0'.
- 10 The base station shall set the RESERVED subfield to '00000'.
- 11 **UI_ENCRYPT_SUP** - User information encryption supported indicator.
- 12 If ENC_SUPPORTED is equal to '1', the base station shall
13 include this field; otherwise, the base station shall omit this
14 field. If this field is included, the base station shall set this
15 field to indicate the supported user information encryption
16 algorithms.
- 17 This field consists of the subfields shown in Table 2.7.1.3.2.4-
18 9.
- 19 The base station shall set each subfield to '1' if the
20 corresponding user information encryption algorithm is
21 supported by the base station; otherwise, the base station
22 shall set the subfield to '0'.
- 23 **USE_SYNC_ID** - Sync ID supported indicator.
- 24 The base station shall set this field to '1' to indicate that the
25 mobile station is permitted to include the SYNC_ID field in the
26 *Page Response Message*, the *Reconnect Message*, the
27 *Origination Message*, and the *Enhanced Origination Message*;
28 otherwise, the base station shall set this field to '0'.
- 29 **CS_SUPPORTED** - Concurrent Services supported indicator.
- 30 If the base station supports concurrent services, the base
31 station shall set this field to '1'; otherwise, the base station
32 shall set this field to '0'.
- 33 **BCCH_SUPPORTED** - Primary Broadcast Control Channel Supported Indicator.
- 34 If the base station supports Primary Broadcast Control
35 Channel, the base station shall set this field to '1'; otherwise,
36 the base station shall set this field to '0'.
- 37 **MS_INIT_POS_LOC_SUP_IND**- Mobile station initiated position location determination
38 supported indicator.
- 39 If the base station supports mobile station initiated position
40 determination, the base station shall set this field to '1';
41 otherwise, the base station shall set this field to '0'.
- 42 **PILOT_INFO_REQ_SUPPORTED** - Pilot information request supported indicator.

- 1 If the base station supports mobile station request for pilot
2 information using the “Pilot Information” record in the *Base*
3 *Station Status Request Message*, the base station shall set this
4 field to ‘1’; otherwise, the base station shall set this field to ‘0’.
- 5 QPCH_BI_SUPPORTED – Quick Paging Channel broadcast indicator supported.
- 6 If QPCH_SUPPORTED is included and set to ‘1’, the base
7 station shall include this field and set it as described below;
8 otherwise, the base station shall omit this field.
- 9 If the base station supports broadcast indicators on the Quick
10 Paging Channel, the base station shall set this field to ‘1’;
11 otherwise the base station shall set this field to ‘0’.
- 12 QPCH_POWER_LEVEL_BCAST – Quick Paging Channel broadcast indicator transmit
13 power level.
- 14 If QPCH_BI_SUPPORTED is included and set to ‘1’, the base
15 station shall include this field and set it as described below;
16 otherwise, the base station shall omit this field.
- 17 The base station shall set this field to the Quick Paging
18 Channel broadcast indicator transmit power level relative to
19 that of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.
- 20 BAND_CLASS_INFO_REQ – Band class information request indicator.
- 21 The base station shall set this field to ‘1’ if the
22 ALT_BAND_CLASS field is included in this message;
23 otherwise, the base station shall set this field to ‘0’.
- 24 ALT_BAND_CLASS – Alternate band class.
- 25 If BAND_CLASS_INFO_REQ is set to ‘0’, then the base station
26 shall omit this field; otherwise, the base station shall include
27 this field and set it as follows:
- 28 The base station shall set this field to an alternate CDMA
29 band class (see [30]) supported by the base station. The
30 mobile station is to indicate its capability to support the
31 alternate band class in the *Origination Message* and *Page*
32 *Response Message*.
- 33 CDMA_OFF_TIME_REP_SUP_IND – CDMA off time report supported indicator.
- 34 If the base station supports mobile station report for CDMA
35 off time information using the *CDMA Off Time Report Message*,
36 the base station shall set this field to ‘1’; otherwise, the base
37 station shall set this field to ‘0’.
- 38 CDMA_OFF_TIME_REP_THRESHOLD_UNIT – CDMA off time report threshold unit
- 39 If CDMA_OFF_TIME_REP_SUP_IND is set to ‘0’, the base
40 station shall omit this field; otherwise, the base station shall
41 include this field and set it as follows:
- 42 The base station shall set this field to the time unit used in
43 CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
44 3.7.2.3.2.13-5

Table 3.7.2.3.2.13-5. CDMA Off Time Report Threshold Unit

CDMA_OFF_TIME_REP_UNIT (binary)	Time Unit (decimal)
0	80 ms
1	0.5 sec

CDMA_OFF_TIME_REP_THRESHOLD – CDMA off time report threshold

If **CDMA_OFF_TIME_REP_SUP_IND** is set to ‘0’, the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the time in units of **CDMA_OFF_TIME_REP_THRESHOLD_UNIT** such that if the mobile station goes away from the CDMA traffic channel longer than this value, the mobile station is to send a *CDMA Off Time Report Message*.

CHM_SUPPORTED – Control Hold Mode supported indicator.

The base station shall set this field to ‘1’ to indicate that the base station supports the Control Hold Mode; otherwise, the base station shall set this field to ‘0’.

RELEASE_TO_IDLE_IND - Release to Idle State allowed indicator.

If the mobile station is allowed to return to the *Mobile Station Idle State* upon call release, the base station shall set this field to ‘1’; otherwise, the base station shall set this field to ‘0’.

RECONNECT_MSG_IND - *Reconnect Message* supported indicator.

The base station shall set this field to ‘0’ if the mobile station is not allowed to send a *Reconnect Message* instead of an *Origination Message* or a *Page Response Message*; otherwise, the base station shall set this field to ‘1’.

MSG_INTEGRITY_SUP - Message integrity supported indicator.

If the base station supports message integrity, the base station shall set this field to ‘1’; otherwise, the base station shall set this field to ‘0’.

1	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included indicator.
2			
3			If MSG_INTEGRITY_SUP is set to '1', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field.
4			
5			
6			If the base station supports other integrity algorithm(s) in addition to the default integrity algorithm, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
7			
8			
9			
10	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the base station.
11			If SIG_INTEGRITY_SUP_INCL is included and set to '1', the base station shall set this field as follows; otherwise, the base station shall omit this field.
12			
13			
14			The base station shall set this field to indicate the supported message integrity algorithms in addition to the default integrity algorithm.
15			
16			
17			This field consists of the subfields shown in Table 2.7.1.3.2.1-6.
18			
19			The base station shall set each subfield to '1' if the corresponding message integrity algorithm is supported by the base station; otherwise, the base station shall set the subfield to '0'.
20			
21			
22			
23			The base station shall set the RESERVED subfield to '00000000'.
24			
25	FOR_PDCH_SUPPORTED	-	Forward Packet Data Channel supported indicator.
26			If the base station supports the Forward Packet Data Channel (F-PDCH), the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
27			
28			
29	PDCH_CHM_SUPPORTED	-	PDCH Control Hold Mode supported indicator.
30			If FOR_PDCH_SUPPORTED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
31			
32			
33			The base station shall set this field to '1' to indicate that the base station supports the PDCH Control Hold Mode; otherwise, the base station shall set this field to '0'.
34			
35			
36	PDCH_PARMS_INCL	-	Forward Packet Data Channel related parameters included indicator.
37			
38			If FOR_PDCH_SUPPORTED is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
39			
40			
41			The base station shall set this field to '1' if the following F-PDCH related fields are included in this message; otherwise, the base station shall set this field to '0'.
42			
43			
44	FOR_PDCH_RLGAIN_INCL	-	Forward Packet Data Channel parameters related to reverse link adjustment gains included indicator.
45			

1 If PDCH_PARAMS_INCL is omitted, or if it is included and set
2 to '0', the base station shall omit this field; otherwise, the
3 base station shall include this field, and set it as follows.

4 The base station shall set this field to '1' if the following F-
5 PDCH gain related fields are included in this message;
6 otherwise, the base station shall set this field to '0'.

7 **RLGAIN_ACKCH_PILOT** - Reverse Acknowledgment Channel to pilot adjustment gain.

8 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
9 set to '0', the base station shall omit this field; otherwise, the
10 base station shall include this field, and set it as follows.

11 The base station shall set this field to the Reverse
12 Acknowledgment Channel to pilot adjustment gain expressed
13 as a two's complement value in units of 0.125 dB (see [2]).

14 **RLGAIN_CQICH_PILOT** - Reverse Channel Quality Indicator Channel to pilot
15 adjustment gain.

16 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
17 set to '0', the base station shall omit this field; otherwise, the
18 base station shall include this field, and set it as follows.

19 The base station shall set this field to the Reverse Channel
20 Quality Indicator Channel to pilot adjustment gain expressed
21 as a two's complement value in units of 0.125 dB (see [2]).

22 **NUM_SOFT_SWITCHING_FRAMES** - Number of frames for R-CQICH soft switching.

23 If PDCH_PARAMS_INCL is not included, or is included and set
24 to '0', the base station shall omit this field; otherwise, the
25 base station shall include this field and set it as follows:

26 The base station shall set this field to the duration of the cell
27 switching period, in units of 20 ms, minus one, during which
28 the mobile station is to transmit the cell switch sequence on
29 the R-CQICH when it switches between two pilots which are
30 in different groups (see [3]).

31 **NUM_SOFTER_SWITCHING_FRAMES** - Number of frames for R-CQICH softer
32 switching.

33 If PDCH_PARAMS_INCL is not included, or is included and set
34 to '0', the base station shall omit this field; otherwise, the
35 base station shall include this field and set it as follows:

36 The base station shall set this field to the duration of the cell
37 switching period, in units of 20 ms, minus one, during which
38 the mobile station is to transmit the cell switch sequence on
39 the R-CQICH when it switches between two pilots which are
40 in the same group (see [3]).

41 **NUM_SOFT_SWITCHING_SLOTS** - Number of slots per frame for R-CQICH soft switching.

42 If PDCH_PARAMS_INCL is not included, or is included and set
43 to '0', the base station shall omit this field; otherwise, the
44 base station shall include this field and set it as follows:

1 The base station shall set this field to the duration of the cell
 2 switching slots within a switching frame, in units of 1.25 ms
 3 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 4 station is to transmit the cell switch indication by using
 5 Walsh cover of target on the R-CQICH when it switches
 6 between two pilots which are in different groups.

7 NUM_SOFTEN_SWITCHING_SLOTS - Number of slots per frame for R-CQICH softer
 8 switching.

9 If PDCH_PARAMS_INCL is not included, or is included and set
 10 to '0', the base station shall omit this field; otherwise, the
 11 base station shall include this field and set it as follows:

12 The base station shall set this field to the duration of the cell
 13 switching slots within a switching frame, in units of 1.25 ms
 14 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 15 station is to transmit the cell switch indication by using
 16 Walsh cover of target on the R-CQICH when it switches
 17 between two pilots which are in the same group.

18 PDCH_SOFT_SWITCHING_DELAY - F-PDCH soft switching delay.

19 If PDCH_PARAMS_INCL is not included, or is included and set
 20 to '0', the base station shall omit this field; otherwise, the
 21 base station shall include this field and set it as follows:

22 The base station shall set this field to the minimum
 23 interruption seen by the mobile station, in units of 10 ms,
 24 minus one, when the mobile station is to transmit the cell
 25 switch sequence on the R-CQICH channel when it switches
 26 between two pilots which are in different groups (see [3]).

27 PDCH_SOFTEN_SWITCHING_DELAY - F-PDCH softer switching delay.

28 If PDCH_PARAMS_INCL is not included, or is included and set
 29 to '0', the base station shall omit this field; otherwise, the
 30 base station shall include this field and set it as follows:

31 The base station shall set this field to the minimum
 32 interruption seen by the mobile station, in units of 10 ms,
 33 minus one, when the mobile station is to transmit the cell
 34 switch sequence on the R-CQICH channel when it switches
 35 between two pilots which are in the same group (see [3]).

36 WALSH_TABLE_ID - The index of the Walsh Table used.

37 If PDCH_PARAMS_INCL is not included, or is included and set
 38 to '0', the base station shall omit this field; otherwise, the
 39 base station shall set this field as follows:

40 The base station shall set this field to the index of the Walsh
 41 Table being used by the Packet Data Channel. (See [3]).

42 NUM_PDCCH - The number of Packet Data Control Channels supported.

43 If PDCH_PARAMS_INCL is not included, or is included and set
 44 to '0', the base station shall omit this field; otherwise, the
 45 base station shall include this field and set it as follows:

1	TKZ_ID	-	Tracking zone identifier.
2			If TKZ_MODE_SUPPORTED is set to '1', the base station shall
3			set this field to its tracking zone identifier; otherwise, the base
4			station shall omit this field.
5	PZ_HYST_ENABLED	-	Packet zone hysteresis enabled.
6			If the PACKET_ZONE_ID field is set to '00000000', the base
7			station shall omit this field; otherwise, the base station shall
8			include this field and set it as follows:
9			If the packet zone hysteresis feature is to be enabled at the
10			mobile station, the base station shall set this field to '1';
11			otherwise, the base station shall set this field to '0'.
12	PZ_HYST_INFO_INCL	-	Packet zone hysteresis information included indicator.
13			If the PZ_HYST_ENABLED field is included and is set to '1',
14			the base station shall include this field and set it as follows;
15			otherwise, the base station shall omit this field.
16			If the base includes the PZ_HYST_LIST_LEN,
17			PZ_HYST_ACT_TIMER and PZ_HYST_TIMER fields, the base
18			station shall set this field to '1'; otherwise, the base station
19			shall set this field to '0'.
20	PZ_HYST_LIST_LEN	-	Packet zone hysteresis list length.
21			If the PZ_HYST_INFO_INCL field is included and is set to '1',
22			the base station shall include this field and set it as follows;
23			otherwise, the base station shall omit this field.
24			The base station shall set this field to the length of the packet
25			zone hysteresis list. This field shall be within the range '0001'
26			through '1111', inclusive.
27	PZ_HYST_ACT_TIMER	-	Packet zone hysteresis activation timer.
28			If the PZ_HYST_INFO_INCL field is included and is set to '1',
29			the base station shall include this field and set it as follows;
30			otherwise, the base station shall omit this field.
31			The base station shall set to the value of the packet zone
32			hysteresis activation timer (in units of seconds). This field
33			shall be within the range '00000001' through '11111111',
34			inclusive.
35	PZ_HYST_TIMER_MUL	-	Packet zone hysteresis timer multiplier.
36			If the PZ_HYST_INFO_INCL field is included and is set to '1',
37			the base station shall include this field and set it as follows;
38			otherwise, the base station shall omit this field.
39			The base station shall set the field to x, where $x \times 8^y$ seconds
40			is the value of the hysteresis timer and y is the value
41			indicated in the PZ_HYST_TIMER_EXP field. The base station
42			shall set this field to a value that is between 1 and 7
43			inclusive. The value 0 is reserved.
44	PZ_HYST_TIMER_EXP	-	Packet zone hysteresis timer exponent.

1 If the PZ_HYST_INFO_INCL field is included and is set to '1',
2 the base station shall include this field and set it as follows;
3 otherwise, the base station shall omit this field.

4 The base station shall set the field to y, where $x \times 8^y$ seconds
5 is the value of the hysteresis timer and x is the value
6 indicated in the PZ_HYST_TIMER_MUL field. The base station
7 shall set this field to a value that is between 0 and 4
8 inclusive. All the other values are reserved.

9 EXT_PREF_MSID_TYPE - Extended Preferred Access Channel Mobile Station Identifier
10 Type.

11 The base station shall set this field to the value shown in
12 Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
13 to the type of MSID that the mobile station is to use on the
14 Access Channel.

15 MEID_REQD - MEID Required Indicator.

16 If EXT_PREF_MSID_TYPE is set to '11' and PREF_MSID_TYPE
17 is set to either '00' or '11', the base station shall omit this
18 field; otherwise, the base station shall include this field and
19 set it as follows:

20 The base station shall set this field to '1' to indicate that
21 network requires MEID (of mobile stations having R-UIM) in
22 registrations; otherwise the base station shall set this field to
23 '0'.

24 AUTO_FCSO_ALLOWED - Autonomous *Fast Call Setup Order* allowed indicator.

25 The base station shall set this field to '1' if the mobile station
26 is allowed to send an autonomous *Fast Call Setup Order*;
27 otherwise, the base station shall set this field to '0'.

28 REV_PDCH_SUPPORTED - Reverse Packet Data Channel supported indicator.

29 If FOR_PDCH_SUPPORTED is set to '0', the base station shall
30 omit this field; otherwise, the base station shall include this
31 field and set it as follows:

32 If the base station supports the Reverse Packet Data Channel
33 (R-PDCH), the base station shall set this field to '1'; otherwise,
34 the base station shall set this field to '0'.

35 REV_PDCH_PARAMS_INCL - Reverse Packet Data Channel related parameters included
36 indicator.

37 If REV_PDCH_SUPPORTED is omitted, or if it is included and
38 set to '0', the base station shall omit this field; otherwise, the
39 base station shall include this field and set it as follows:

40 The base station shall set this field to '1' if the R-PDCH
41 parameters are included in this message; otherwise, the base
42 station shall set this field to '0'.

43 REV_PDCH_RLGAIN_INCL - Reverse Packet Data Channel parameters related to
44 reverse link adjustment gains included indicator.

- 1 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
 2 set to '0', the base station shall omit this field; otherwise, the
 3 base station shall include this field, and set it as follows.
- 4 The base station shall set this field to '1' if the following R-
 5 PDCH gain related fields are included in this message;
 6 otherwise, the base station shall set this field to '0'.
- 7 **RLGAIN_SPICH_PILOT** - Reverse Secondary Pilot Channel to pilot adjustment gain.
- 8 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 9 set to '0', the base station shall omit this field; otherwise, the
 10 base station shall include this field, and set it as follows.
- 11 The base station shall set this field to the Reverse Secondary
 12 Pilot Channel to pilot adjustment gain expressed as a two's
 13 complement value in units of 0.125 dB (see [2]).
- 14 **RLGAIN_REQCH_PILOT** - Reverse Request Channel to pilot adjustment gain.
- 15 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 16 set to '0', the base station shall omit this field; otherwise, the
 17 base station shall include this field, and set it as follows.
- 18 The base station shall set this field to the Reverse Request
 19 Channel to pilot adjustment gain expressed as a two's
 20 complement value in units of 0.125 dB (see [2]).
- 21 **RLGAIN_PDCCH_PILOT** - Reverse Packet Data Control Channel to pilot adjustment
 22 gain.
- 23 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 24 set to '0', the base station shall omit this field; otherwise, the
 25 base station shall include this field, and set it as follows.
- 26 The base station shall set this field to the Reverse Packet Data
 27 Channel to pilot adjustment gain expressed as a two's
 28 complement value in units of 0.125 dB (see [2]).
- 29 **REV_PDCH_PARAMS_1_INCL** - Reverse Packet Data Channel parameters subset included
 30 indicator.
- 31 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
 32 set to '0', the base station shall omit this field; otherwise, the
 33 base station shall include this field, and set it as follows.
- 34 The base station shall set this field to '1' if the following R-
 35 PDCH parameters are included in this message; otherwise,
 36 the base station shall set this field to '0'.
- 37 **REV_PDCH_TABLE_SEL** - Reverse Packet Data Channel Table selector.
- 38 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
 39 and set to '0', the base station shall omit this field; otherwise,
 40 the base station shall include this field, and set it as follows.
- 41 The base station shall set this field to the Reverse Packet Data
 42 Channel Table selector (see [2]).
- 43 **REV_PDCH_MAX_AUTO_TPR** - Reverse Packet Data Channel maximum traffic to pilot
 44 ratio for autonomous transmission.

1 If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
2 and set to '0', the base station shall omit this field; otherwise,
3 the base station shall include this field and set it as follows.

4 The base station shall set this field to the maximum traffic to
5 pilot ratio for autonomous transmission on the Reverse
6 Packet Data Channel (see [2] and [3]).

7 The base station shall set this field to a value in the range 0 to
8 18 dB inclusive in units of 0.125 dB.

9 REV_PDCH_NUM_ARQ_ROUNDS_NORMAL - Maximum number of allowed ARQ rounds on
10 the Reverse PDCH in the non-boosted mode.

11 If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
12 and set to '0', the base station shall omit this field; otherwise,
13 the base station shall include this field and set it as follows:

14 The base station shall set this field to one less the maximum
15 number of allowed ARQ rounds on the Reverse PDCH in the
16 non-boosted mode. The base station shall set this field to 0, 1,
17 or 2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

18 REV_PDCH_OPER_PARMS_INCL- Reverse Packet Data Channel operational parameters
19 included indicator.

20 If REV_PDCH_PARMS_INCL is omitted, or if it is included and
21 set to '0', the base station shall omit this field; otherwise, the
22 base station shall include this field, and set it as follows.

23 The base station shall set this field to '1' if the following R-
24 PDCH operational parameters are included in this message;
25 otherwise, the base station shall set this field to '0'.

26 REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET - Maximum Allowed Reverse
27 PDCH encoder packet size.

28 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
29 included and set to '0', the base station shall omit this field;
30 otherwise, the base station shall include this field and set it
31 as follows.

32 The base station shall set this field to the maximum size
33 encoder packet that the mobile station is allowed to use. (see
34 [2] and [3]).

35 The base station shall set this field to a value in the range 0 to
36 10 inclusive, corresponding to the encoder packet sizes 192,
37 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, and
38 18456 bits respectively.

39 REV_PDCH_DEFAULT_PERSISTENCE - Reverse Packet Data Channel default initial
40 persistence.

41 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
42 included and set to '0', the base station shall omit this field;
43 otherwise, the base station shall include this field and set it
44 as follows:

1 The base station shall set this field to '1' if the mobile station
2 is to be persistent at the call setup; otherwise, the base
3 station shall set this field to '0' (See [3]).

4 REV_PDCH_RESET_PERSISTENCE - Reverse Packet Data Channel reset persistence
5 indicator.

6 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
7 included and set to '0', the base station shall omit this field;
8 otherwise, the base station shall include this field and set it
9 as follows:

10 The base station shall set this field to '1' if, at the end of a
11 persistent grant, the mobile station shall reset its persistent
12 indicator to persistent; otherwise, the base station shall set
13 this field to '0' if the mobile station shall reset its persistent
14 indicator to non-persistent (See [3]).

15 REV_PDCH_GRANT_PRECEDENCE - Reverse Packet Data Channel Grant Precedence
16 Indicator.

17 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
18 included and set to '0', the base station shall omit this field;
19 otherwise, the base station shall include this field and set it
20 as follows:

21 The base station shall set this field to '1' if unicast Forward
22 Grant Channel messages have precedence over Rate Control
23 commands; otherwise, the base station shall set this field to
24 '0' to indicate that Rate Control down commands from non-
25 serving sectors have precedence over Forward Grant Channel
26 messages (see [3]).

27 REV_PDCH_MSIB_SUPPORTED - Reverse PDCH MSIB usage indicator.

28 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
29 included and set to '0', the base station shall omit this field;
30 otherwise, the base station shall include this field and set it
31 as follows:

32 The base station shall set this field to '1' if the mobile station
33 is to use the MSIB bit on the Reverse Packet Data Control
34 Channel; otherwise, the base station shall set this field to '0'
35 (see [3]).

36 REV_PDCH_SOFT_SWITCHING_RESET_IND - Reverse Packet Data Channel soft
37 switching reset indicator.

38 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
39 included and set to '0', the base station shall omit this field;
40 otherwise, the base station shall include this field and set it
41 as follows:

42 The base station shall set this field to '1' if the mobile station
43 is to initialize RPDCHCF when soft selection occurs in the
44 FPDCHCF; otherwise, the base station shall set this field to '0'
45 (see [3]).

46 SDB_IN_RCNM_IND - Short Data Burst allowed in *Reconnect Message* indicator.

- 1 If RECONNECT_MSG_IND is set to '0' or SDB_SUPPORTED is
 2 set to '0', the base station shall omit this field; otherwise, the
 3 base station shall include this field and set it as follows:
- 4 The base station shall set this field to '1' if the mobile station
 5 is allowed to include a Short Data Burst (see [30]) in the
 6 *Reconnect Message*; otherwise, the base station shall set this
 7 field to '0'.
- 8 SENDING_BSPM - *BCMC Service Parameters Message* indicator.
 9
 10 If the base station is sending the *BCMC Service Parameters*
 11 *Message* on the Paging Channel, it shall set this field to '1';
 otherwise, it shall set this field to '0'.
- 12 BSPM_PERIOD_INDEX - BSPM Transmission Periodicity Index.
 13
 14 If the SENDING_BSPM field is set to '0', the base station shall
 15 omit this field; otherwise, the base station shall include this
 16 field and set it as follows:
 17
 18 The base station shall set this field to the BSPM transmission
 19 periodicity index corresponding to the periodicity with which
 the BSPM with DIFF_BSPM equal to '0' is transmitted on the
 paging channel.
- 20 CAND_BAND_INFO_REQ - Candidate band class information request indicator
 21
 22 The base station shall set this field to '1' when requesting
 23 mobiles to report whether various candidate band class and
 24 band subclass (if applicable) combinations are supported;
 otherwise, the base station shall set this field to '0'.
 25
 26 The base station shall not include more than 16 band class-
 band subclass queries in this message.
- 27 NUM_CAND_BAND_CLASS - Number of candidate band classes
 28
 29 If CAND_BAND_INFO_REQ is set to '0', the base station shall
 30 omit this field; otherwise, the base station shall include this
 31 field and set it as follows:
 32
 33 The base station shall set this field to the number of
 candidate band classes included in the record minus one.
- 33 If CAND_BAND_INFO_REQ is set to '1', the base station shall include
 34 NUM_CAND_BAND_CLASS + 1 occurrences of the following record:
- 35 CAND_BAND_CLASS - Candidate band class
 36
 37 The base station shall set this field (see [30]) to a band class
 38 for which the mobile is to report it's capabilities upon system
 39 access. It may be used in conjunction with the
 40 BAND_SUBCLASS_IND fields to specify band subclass(es) for
 41 which the mobile is to report it's capabilities upon system
 access.
- 42 SUBCLASS_INFO_INCL - Band subclass information included

- 1 The base station shall set this field to '0' when no band
2 subclasses are associated with CAND_BAND_CLASS or if the
3 base station requires only the band class capabilities of the
4 mobile station. Otherwise, the base station shall set this field
5 to '1'.
- 6 SUBCLASS_REC_LEN - Band subclass subrecord length
- 7 If SUBCLASS_INFO_INCL is set to '0', the base station shall
8 omit this field; otherwise, the base station shall set this field
9 as follows:
- 10 The base station shall set this field to the number of band
11 subclass indicator fields included in the subrecord minus
12 one. The number of subclass indicator fields included
13 depends on the highest band subclass being queried for
14 mobile support for the associated CAND_BAND_CLASS (i.e. if
15 the highest band subclass being queried is K, then
16 SUBCLASS_REC_LEN = K).
- 17 If the SUBCLASS_REC_LEN field is included, the base station shall include
18 SUBCLASS_REC_LEN +1 occurrences of the following subrecord. The first field included
19 corresponds to band subclass '0' and the Nth field included corresponds to band subclass
20 'N-1'.
- 21 BAND_SUBCLASS_IND - Band subclass indicator
- 22 The base station shall set this field to '1' if it requires the
23 mobile to report whether it supports this band subclass for
24 the associated CAND_BAND_CLASS; otherwise, the base
25 station shall set this field to '0'.
- 26 The mobile station is to indicate its capability to support the
27 candidate band class and band subclass (if applicable)
28 combination in the *Registration Message*, *Origination Message*,
29 and *Page Response Message*.
- 30 TX_PWR_LIMIT_INCL - Transmit Power Limit Inclusion for the current base station
- 31 If the transmit power limit field is included in this message,
32 the base station shall set this field to '1'; otherwise, the base
33 station shall set this field to '0'.
- 34 TX_PWR_LIMIT - Transmit Power Limit for the current base station
- 35 If TX_PWR_LIMIT_INCL is set to '0', the base station shall omit
36 this field; otherwise, the base station shall include this field
37 and set to as follows.
- 38 The base station shall set this field to thirty dB more than
39 transmit power limit in dBm EIRP, in steps of 1 dB. This field
40 can take the values 30 to 53 corresponding to maximum
41 transmit power values 0 dBm to 23 dBm.
- 42 BYPASS_REG_IND - Indication to bypass the power up registration upon the
43 change of bands, serving systems and frequency blocks.
- 44 The base station shall set this field to '00' if the mobile station
45 is to perform a power up registration upon band, frequency
46 block or serving system change.

1 The base station shall set this field to '01' if the mobile station
 2 is to bypass the power up registration requirement upon
 3 band, frequency block or serving system changes due to
 4 processing the *Extended CDMA Channel List Message*.

5 The base station shall set this field to '10' if the mobile station
 6 is to bypass the power up registration requirement upon
 7 band, frequency block or serving system change when the SID
 8 remains the same.

9 The base station shall set this field to '11' if the mobile station
 10 is to bypass the power up registration requirement upon
 11 band, frequency block or serving system change.

12 3.7.2.3.2.14 Extended Neighbor List Message

13 MSG_TAG: ENLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
PILOT_INC	4

Zero or more occurrences of the following record:

{

NGHBR_CONFIG	3
NGHBR_PN	9
SEARCH_PRIORITY	2
FREQ_INCL	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11

}

14

15 PILOT_PN - Pilot PN sequence offset index.

16 The base station shall set this field to the pilot PN sequence
 17 offset for this base station, in units of 64 PN chips.

18 CONFIG_MSG_SEQ - Configuration message sequence number.

19 The base station shall set this field to CONFIG_SEQ
 20 (see 3.6.2.2).

21 PILOT_INC - Pilot PN sequence offset index increment.

22 A mobile station searches for Remaining Set pilots at pilot PN
 23 sequence index values that are multiples of this value.

1 The base station shall set this field to the pilot PN sequence
2 increment, in units of 64 PN chips, that mobile stations are to
3 use for searching the Remaining Set. The base station should
4 set this field to the largest increment such that the pilot PN
5 sequence offsets of all its neighbor base stations are integer
6 multiples of that increment.

7 The base station shall set this field to a value in the range 1 to
8 15 inclusive.

1 The base station shall include one occurrence of the following record for each pilot that a
 2 mobile station is to place in its Neighbor Set.

3 NGHBR_CONFIG - Neighbor configuration.

4 The base station shall set this field to the value shown in
 5 Table 3.7.2.3.2.14-1 corresponding to the configuration of this
 6 neighbor.

7

8 **Table 3.7.2.3.2.14-1. Neighbor Configuration Field**

Value (binary)	Neighbor Configuration
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with the same number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>

001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with a different number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>
010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the following CDMA frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station. • If <code>FREQ_INCL</code> equals '1' for this record, the neighbor base station has a Primary Paging Channel on the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.

011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel. • If <code>FREQ_INCL</code> equals '1' for this record, the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code> has a Pilot Channel.
100-111	Reserved.

9
10

- `NGHBR_PN` - Neighbor pilot PN sequence offset index.
 The base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips.
- `SEARCH_PRIORITY` - Pilot Channel search priority.
 The base station shall set this field to the search priority for the Pilot Channel corresponding to `NGHBR_PN`. The base station shall set the search priority as shown in Table 3.7.2.3.2.14-2.

Table 3.7.2.3.2.14-2. Search Priority Field

- `FREQ_INCL` - Frequency included indicator.
 If the `NGHBR_BAND` and `NGHBR_FREQ` fields are included for this neighbor base station, the base station shall set this bit to '1'. If the `NGHBR_BAND` and `NGHBR_FREQ` fields are not included for this neighbor base station, the base station shall set this bit to '0'.
- `NGHBR_BAND` - Neighbor band class.
 If the `FREQ_INCL` bit is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search. If the `FREQ_INCL` bit is set to '0', the base station shall omit this field.
- `NGHBR_FREQ` - Neighbor frequency assignment.

1 If the `FREQ_INCL` bit is set to '1', the base station shall set
2 this field to the CDMA Channel number, in the specified
3 CDMA band class, corresponding to the CDMA frequency
4 assignment for the CDMA Channel containing the Paging
5 Channel the mobile station is to search. If the `FREQ_INCL` bit
6 is set to '0', the base station shall omit this field.

BAND_CLASS - Band class.

The base station shall set this field as defined in [30] to specify the band class qualification information.

OP_MODE - Operating mode.

The base station shall set this field as shown in Table 3.7.2.3.2.15-2 to specify the operating mode qualification information if MOB_P_REV of the current band class is less than or equal to three. The base station shall set this field as shown in Table 3.7.2.3.2.15-3 to specify the operating mode qualification information if MOB_P_REV of the current band class is greater than three.

1 **Table 3.7.2.3.2.15-2. Operating Mode for MOB_P_REV Less Than or Equal to Three**

Description	Value (binary)
CDMA mode in Band Class 1 or Band Class 4	00000000
CDMA mode in Band Class 0 or Band Class 3	00000001
Reserved (Previously: analog mode)	00000010
Reserved (Previously: wide analog mode)	00000011
Reserved (Previously: Narrow analog mode)	00000100
All other values are reserved.	

2

3 **Table 3.7.2.3.2.15-3. Operating Mode for MOB_P_REV Greater Than Three**

Description	Standards	Value (binary)
CDMA mode		00000000 or 00000001
Reserved (Previously: Analog mode)		00000010
Reserved (Previously: Wide analog mode)		00000011
Reserved (Previously: Narrow analog mode)		00000100
DS-41 mode	[32]	00000101
MC-MAP mode	[31]	00000110
All other values are reserved.		

4

5 **NUM_FIELDS** - Number of requested fields in this message.

6 The base station shall set this field to the number of
7 occurrences of RECORD_TYPE in this message.

8 The base station shall only request the status information records qualified by the included
9 qualification information (see Table 2.7.4-1) in this message. The base station shall include
10 one occurrence of the following field for each information record that is requested:

11 **RECORD_TYPE** - Information record type.

1
2
3
4
5
6
7
8

The base station shall set this field to the record type value shown in Table 2.7.4-1 corresponding to the information record requested.

If MOB_P_REV is equal to or greater than seven, the base station shall not request the Call Mode information record (record type '00000111' in Table2.7.4-1).

1 3.7.2.3.2.16 Service Redirection Message
 2 MSG_TAG: SRDM

Field	Length (bits)
RETURN_IF_FAIL	1
DELETE_TMSI	1
REDIRECT_TYPE	1
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

3

4 RETURN_IF_FAIL - Return if fail indicator.
 5 The base station shall set this field to '1' if the mobile station
 6 is required to return to the system from which it is being
 7 redirected upon failure to obtain service using the redirection
 8 criteria specified in this message; otherwise, the base station
 9 shall set this field to '0'.

10 DELETE_TMSI - Delete TMSI indicator.
 11 The base station shall set this field to '1' if the mobile station
 12 is required to delete the TMSI assigned to the mobile station;
 13 otherwise, the base station shall set this field to '0'.

14 REDIRECT_TYPE - Redirect indicator.
 15 The base station shall set this field to the REDIRECT_TYPE
 16 value shown in table 3.7.2.3.2.16-1 corresponding to the
 17 redirection type.

18 **Table 3.7.2.3.2.16-1. Redirection Types**

Description	REDIRECT_TYPE (binary)
Normal redirection	0
NDSS redirection	1

19

20 RECORD_TYPE - Redirection record type.
 21 The base station shall set this field to the RECORD_TYPE
 22 value shown in Table 3.7.2.3.2.16-2 corresponding to the type
 23 of redirection specified by this record.

24

1

Table 3.7.2.3.2.16-2. Redirection Record Types

Description	RECORD_TYPE E (binary)
NDSS off indication	00000000
Reserved (Previously: Redirection to an analog system)	00000001
Redirection to a CDMA system as defined in [24] and [2]	00000010
Reserved (Previously: Redirection to a TACS analog system as defined in Department of Trade and Industry's TACS Mobile Station-Land Station Compatibility Specification, Issue 4, Amendment 1.)	00000011
Reserved (Previously: Redirection to a JTACS analog system as defined in ARIB's RCR STD-36.)	00000100
Redirection to a DS-41 system as defined in [32].	00000101
All other RECORD_TYPE values are reserved	

2

3

RECORD_LEN - Redirection record length.

4

5

6

7

If RECORD_TYPE equals to '00000000', the base station shall set this field to '00000000'; otherwise, the base station shall set this field to the number of octets in the type-specific fields of this redirection record.

8

Type-specific fields - Redirection record type-specific fields.

9

10

The base station shall include type-specific fields based on the RECORD_TYPE of this redirection record.

11

12

If RECORD_TYPE is equal to '00000000', the base station shall not include the type-specific fields.

13

If RECORD_TYPE is equal to '00000010', the base station shall include the following fields:

14

1

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM_CHANS occurrences of the following field:

{ (NUM_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

2

3

BAND_CLASS - Band class.

4

The base station shall set this field to the CDMA band class, as specified in [30].

5

6

EXPECTED_SID - Expected SID.

7

If the base station is redirecting the mobile station to a specific system, the base station shall set this field to the SID of that system; otherwise, the base station shall set this field to 0.

8

9

10

11

EXPECTED_NID - Expected NID.

12

If the base station is redirecting the mobile station to a specific network, the base station shall set this field to the NID of that network; otherwise, the base station shall set this field to 65535.

13

14

15

16

RESERVED - Reserved bits.

17

The base station shall set this field to '0000'.

18

NUM_CHANS - Number of CDMA Channels.

19

The base station shall set this field to the number of occurrences of the CDMA_CHAN field in this record.

20

21

CDMA_CHAN - CDMA Channel number.

22

For each CDMA Channel on which the mobile station is to attempt to acquire a CDMA system, the base station shall include one occurrence of this field specifying the associated CDMA Channel number.

23

24

25

26

RESERVED - Reserved bits.

1
2
3
4

The base station shall add reserved bits as needed in order to make the length of the record equal to an integer number of octets. The base station shall set these bits to '0'.

1 3.7.2.3.2.17 General Page Message

2 MSG_TAG: GPM

3 When Layer 3 at the base station sends a PDU corresponding to the *General Page Message*
 4 to Layer 2, it also sends the GPM Common fields to Layer 2. These GPM Common fields
 5 and PDUs are used by Layer 2 to assemble a Layer 2 PDU corresponding to the *General*
 6 *Page Message* (see [4]).

7 GPM Common Fields:

8

Field	Length (bits)
CONFIG_MSG_SEQ	6
ACC_MSG_SEQ	6
CLASS_0_DONE	1
CLASS_1_DONE	1
TMSI_DONE	1
ORDERED_TMSIS	1
BROADCAST_DONE	1
RESERVED	4
ADD_LENGTH	3
ADD_PFIELD	8 × ADD_LENGTH

9

10 PDU Format for a mobile station-addressed page:

11

Field	Length (bits)
SERVICE_OPTION	0 or 16

12

13 PDU Format for a broadcast page: There are no Layer 3 fields associated with this record.

14

15 PDU Format for an enhanced broadcast page:

16

Field	Length (bits)
BCN	3
TIME_OFFSET	10
REPEAT_TIME_OFFSET	0 or 5
ADD_BCAST_RECORD	0 or 8 × EXT_BCAST_ SDU_LENGTH (see [4])

- CONFIG_MSG_SEQ - Configuration message sequence number.
The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).
- ACC_MSG_SEQ - Access parameters message sequence number.
The base station shall set this field to ACC_CONFIG_SEQ (see 3.6.2.2).
- CLASS_0_DONE - Class 0 pages are done.
If all messages and records directed to mobile stations operating in the slotted mode, active in this slot, and having an assigned class 0 IMSI have been sent by the end of this *General Page Message*, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- CLASS_1_DONE - Class 1 pages are done.
If all messages and records directed to mobile stations operating in the slotted mode, active in this slot, and having an assigned class 1 IMSI have been sent by the end of this *General Page Message*, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- TMSI_DONE - TMSI pages are done.
If all the page records having PAGE_CLASS equal to '10' or other directed messages for mobile stations operating in the slotted mode, active in this slot, and having an assigned TMSI have been sent by the end of this *General Page Message*, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- ORDERED_TMSIS - TMSIs sent in numerical order.
If all the page records of PAGE_CLASS equal to '10' are sent such that the TMSI code values of the TMSI_CODE_ADDR fields for the mobile stations operating in the slotted mode are in ascending numerical order in all the *General Page Messages* sent within this slot, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- BROADCAST_DONE - Broadcast pages are done.

1			If all broadcast page records (PAGE_CLASS equal to '11') have
2			been sent by the end of this <i>General Page Message</i> , the base
3			station shall set this field to '1'; otherwise, the base station
4			shall set this field to '0'.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0000'.
7	ADD_LENGTH	-	Number of octets in the page message specific fields.
8			If there are no additional page message specific fields, the
9			base station shall set this field to '000'.
10	ADD_PFIELD	-	Additional page message specific fields.
11			The base station shall not include any additional page
12			message specific fields, if ADD_LENGTH is '000'.
13	SERVICE_OPTION	-	Service option.
14			If the base station requests a special service option (i.e., the
15			SDU_INCLUDED field, see [4], is set to '1'), the base station
16			shall set this field to the service option code shown in [30],
17			corresponding to the requested service option; otherwise, the
18			base station shall omit this field.
19	BCN	-	Broadcast Control Channel Number.
20			If NUM_BCCH_BCAST is equal to '000', base station shall set
21			this field to '000' and this field is to be ignored by the mobile
22			station.
23			Otherwise, the base station shall set this field to the
24			Broadcast Control Channel number of the F-BCCH to which
25			the mobile station is being redirected. The base station shall
26			not set this field to '000' (reserved) or '001'.
27	TIME_OFFSET	-	BCCH time offset.
28			If NUM_BCCH_BCAST is equal to '000', base station shall set
29			this field to one less than the time offset, in units of 40 ms,
30			from the beginning of the slot in which this message began to
31			the beginning of the Forward Common Control Channel slot to
32			which the mobile station is being directed.
33			Otherwise,,the base station shall set this field to one less than
34			the time offset, in units of 40 ms, from the beginning of the
35			slot in which this message began to the beginning of the
36			Broadcast Control Channel slot to which the mobile station is
37			being directed.
38	REPEAT_TIME_OFFSET	-	BCCH offset of repeat.
39			If EXT_BCAST_SDU_LENGTH_IND (see [4]) is set to '01' or
40			'11', the base station shall set this field as follows:

1 3.7.2.3.2.18 Global Service Redirection Message

2 MSG_TAG: GSRDM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
REDIRECT_ACCOLC	16
RETURN_IF_FAIL	1
DELETE_TMSI	1
EXCL_P_REV_MS	1
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

3

4 PILOT_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence
6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG_SEQ
9 (see 3.6.2.2).

10

1 REDIRECT_ACCOLC - Redirected access overload classes.

2 This field consists of the following subfields:

Subfield	Length (bits)	Subfield Description
ACCOLC_0	1	Access overload class 0
ACCOLC_1	1	Access overload class 1
ACCOLC_2	1	Access overload class 2
ACCOLC_3	1	Access overload class 3
ACCOLC_4	1	Access overload class 4
ACCOLC_5	1	Access overload class 5
ACCOLC_6	1	Access overload class 6
ACCOLC_7	1	Access overload class 7
ACCOLC_8	1	Access overload class 8
ACCOLC_9	1	Access overload class 9
ACCOLC_10	1	Access overload class 10
ACCOLC_11	1	Access overload class 11
ACCOLC_12	1	Access overload class 12
ACCOLC_13	1	Access overload class 13
ACCOLC_14	1	Access overload class 14
ACCOLC_15	1	Access overload class 15

3

4 The base station shall set the subfields corresponding to the
5 access overload classes of mobile stations which are to be
6 redirected to '1', and shall set the remaining subfields to '0'.

7 RETURN_IF_FAIL - Return if fail indicator.

8 The base station shall set this field to '1' if the mobile station
9 is required to return to the system from which it is being
10 redirected upon failure to obtain service using the redirection
11 criteria specified in this message; otherwise, the base station
12 shall set this field to '0'.

13 DELETE_TMSI - Delete TMSI indicator.

14 The base station shall set this field to '1' if the mobile station,
15 which the corresponding REDIRECT_ACCOLC subfield is set
16 to '1', is required to delete the TMSI assigned to the mobile
17 station; otherwise, the base station shall set this field to '0'.

18 EXCL_P_REV_MS - Exclude redirection indicator.

- 1 If this message does not apply to mobile stations with
 2 MOB_P_REV greater than or equal to six, the base station
 3 shall set this field to '1'; otherwise, the base station shall set
 4 this field to '0'.
- 5 RECORD_TYPE - Redirection record type.
 6 The base station shall set this field to the RECORD_TYPE
 7 value shown in Table 3.7.2.3.2.16-2 corresponding to the type
 8 of redirection specified by this record.
- 9 RECORD_LEN - Redirection record length.
 10 The base station shall set this field to the number of octets in
 11 the type-specific fields of this redirection record.
- 12 Type-specific fields - Redirection record type-specific fields.
 13 The base station shall include type-specific fields based on
 14 the RECORD_TYPE of this redirection record.

15

16 If RECORD_TYPE is equal to '00000010', the base station shall include the following fields:
 17

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM_CHANS occurrences of the following field:

{ (NUM_CHANS)

CDMA_CHAN	11
-----------	----

}(NUM_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

- 18
- 19 BAND_CLASS - Band class.
 20 The base station shall set this field to the CDMA band class,
 21 as specified in [30].
- 22 EXPECTED_SID - Expected SID.
 23 If the base station is redirecting the mobile station to a
 24 specific system, the base station shall set this field to the SID
 25 of that system; otherwise, the base station shall set this field
 26 to 0.
- 27 EXPECTED_NID - Expected NID.

1			If the base station is redirecting the mobile station to a
2			specific network, the base station shall set this field to the
3			NID of that network; otherwise, the base station shall set this
4			field to 65535.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0000'.
7	NUM_CHANS	-	Number of CDMA Channels.
8			The base station shall set this field to the number of
9			occurrences of the CDMA_CHAN field in this record.
10	CDMA_CHAN	-	CDMA Channel number.
11			For each CDMA Channel on which the mobile station is to
12			attempt to acquire a CDMA system, the base station shall
13			include one occurrence of this field specifying the associated
14			CDMA Channel number.
15	RESERVED	-	Reserved bits.
16			The base station shall add reserved bits as needed in order to
17			make the length of the record equal to an integer number of
18			octets. The base station shall set these bits to '0'.
19			

1 3.7.2.3.2.19 TMSI Assignment Message

2 MSG_TAG: TASM

Field	Length (bits)
RESERVED	5
TMSI_ZONE_LEN	4
TMSI_ZONE	8 × TMSI_ZONE_LEN
TMSI_CODE	32
TMSI_EXP_TIME	24

3

4 RESERVED - Reserved bits.

5 The base station shall set this field to '00000'.

6 TMSI_ZONE_LEN - TMSI zone length.

7 The base station shall set this field to the number of octets
8 included in the TMSI_ZONE. The base station shall set this
9 field to a value in the range 1 to 8 inclusive.

10 TMSI_ZONE - TMSI zone.

11 The base station shall set this field to the TMSI zone number,
12 as specified in [27].

13 TMSI_CODE - Temporary mobile station identity code.

14 The base station shall set this field to the 32-bit TMSI code
15 assigned to the mobile station.

16 If the base station is to deassign the TMSI, the base station
17 shall set all the bits in this field to '1'.

18 TMSI_EXP_TIME - TMSI expiration time.

19 The base station shall set this field to the System Time in the
20 units of $80 \text{ ms} \times 2^{12}$ when the TMSI is to expire.

21

1 3.7.2.3.2.20 PACA Message
2 MSG_TAG: PACAM

Field	Length (bits)
RESERVED	7
PURPOSE	4
Q_POS	8
PACA_TIMEOUT	3

3

4

RESERVED - Reserved bits.

5

The base station shall set this field to '0000000'.

6

PURPOSE - Purpose of the *PACA Message*.

7

The base station shall set this field to the appropriate

8

PURPOSE code from Table 3.7.2.3.2.20-1 to indicate the purpose of the message.

9

10

11

Table 3.7.2.3.2.20-1. Purpose of PACA Message

PURPOSE (binary)	Meaning
0000	Indicates that the purpose of the message is to respond to an <i>Origination Message</i> .
0001	Indicates that the purpose of the message is to provide the queue position of the PACA call.
0010	Indicates that the purpose of the message is to instruct the mobile station to re-originate the PACA call.
0011	Indicates that the purpose of the message is to cancel the PACA call.
0100 – 1111	Reserved

12

13

Q_POS - PACA queue position.

14

If the PURPOSE field of this message is set to '0000' or '0001', the base station shall set this field to the queue position of the PACA call. If the queue position exceeds 255, the base station shall set this field to '1111111'. If the queue position is unknown or the PURPOSE field of this message is set to '0010' or '0011', the base station shall set this field to '00000000'.

15

16

17

18

19

20

1 PACA_TIMEOUT - PACA state timer duration.
 2 The base station shall set this field to the PACA_TIMEOUT
 3 value shown in Table 3.7.2.3.2.20-2 corresponding to the
 4 length of the PACA state timer to be used by the mobile
 5 stations.

6 **Table 3.7.2.3.2.20-2. Value of PACA State Timer**

PACA_TIMEOUT Value (binary)	Timer Length (Minutes)
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

7

- 1 3.7.2.3.2.21 Extended Channel Assignment Message
2 MSG_TAG: ECAM

ASSIGN_MODE - Assignment mode.

The base station shall set this field to the value shown in Table 3.7.2.3.2.21-1 corresponding to the assignment mode for this assignment.

Table 3.7.2.3.2.21-1. Assignment Mode

Value (binary)	Assignment Mode
000	Traffic Channel Assignment
001	Paging Channel Assignment
010	Reserved (Previously: Acquire Analog System)
011	Reserved (Previously: Analog Voice Channel Assignment)
100	Enhanced Traffic Channel Assignment
101	Packet Data Traffic Channel Assignment
All other values are reserved.	

DIRECT_CH_ASSIGN_IND - Direct Channel Assignment Indicator.

If ASSIGN_MODE is set to a value other than '100' or '101', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

If any channel assigned by this message is to use Radio Configuration 1 or 2 (see [2]), then the base station shall set this field to '0'. Otherwise, base station shall set this field as follows:

- If this message is for a mobile station terminated call using direct channel assignment, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

If this field is set to '1', the base station should send this message in unassured mode.

RESERVED_2 - Reserved bits.

If ASSIGN_MODE is set to '100' or '101', the base station shall set this field to '0000'; otherwise, the base station shall set this field to '00000'.

Additional record fields - Additional record fields.

The additional record fields are determined by the value of ASSIGN_MODE, as described below.

If the ASSIGN_MODE field is set to '000', the base station shall include the following fields:

- 1 FREQ_INCL - Frequency included indicator.
- 2 If the BAND_CLASS and CDMA_FREQ fields are included in
- 3 this assignment record, the base station shall set this bit to
- 4 '1'. If the BAND_CLASS and CDMA_FREQ fields are not
- 5 included in this assignment record, the base station shall set
- 6 this bit to '0'.
- 7 DEFAULT_CONFIG - Default Configuration.
- 8 If the GRANTED_MODE field is set to '00', the base station
- 9 shall set this field as specified in Table 3.7.2.3.2.21-2 to
- 10 indicate an initial multiplex option and radio configuration for
- 11 the Forward and Reverse Traffic Channels.
- 12 If MOB_P_REV is less than six, the base station shall not set
- 13 this field to '100'.

14 **Table 3.7.2.3.2.21-2. Default Configuration**

Value (binary)	Default Configuration
000	Multiplex Option 1 and Radio Configuration 1 for both the Forward Traffic Channel and the Reverse Traffic Channel
001	Multiplex Option 2 and Radio Configuration 2 for both the Forward Traffic Channel and the Reverse Traffic Channel
010	Multiplex Option 1 and Radio Configuration 1 for the Forward Traffic channel; Multiplex Option 2 and Radio Configuration 2 for the Reverse Traffic channel
011	Multiplex Option 2 and Radio Configuration 2 for the Forward Traffic channel; Multiplex Option 1 and Radio Configuration 1 for the Reverse Traffic channel
100	FOR_FCH_RC or FOR_RC included in this message for the Forward Fundamental Channel or the Forward Dedicated Control Channel and REV_FCH_RC or REV_RC included in this message for the Reverse Fundamental or the Reverse Dedicated Control Channel. Use 20ms frames. Use Multiplex Option 1 for radio configurations that include the bit rate of 9600 bps; Use Multiplex Option 2 for radio configurations that include the bit rate of 14400 bps.
All other values are reserved.	

1

2 BYPASS_ALERT_ANSWER - Bypass alert indicator.

3 If the mobile station is to bypass the *Waiting for Order*
 4 *Substate* and the *Waiting for Mobile Station Answer Substate*,
 5 the base station shall set this field to '1'; otherwise, the base
 6 station shall set this field to '0'.

7 RESERVED - Reserved bit.

8 The base station shall set this field to '0'.

9 NUM_PILOTS - Number of pilots in the Active Set.

10 The base station shall set this field to number of pilots that
 11 are to be in the mobile station's Active Set on the Traffic
 12 Channel minus one. The base station shall set this field to
 13 the value in the range 0 to $N_{6m}-1$ inclusive.

14 GRANTED_MODE - Granted mode.

15 The base station shall set this field to '00' to indicate that the
 16 mobile station is to use an initial service configuration
 17 consisting of the multiplex option and radio configuration
 18 defined by the DEFAULT_CONFIG field for the Forward and
 19 Reverse Traffic Channels, and to indicate that service
 20 negotiation may take place before the base station sends one
 21 of the following messages: *Service Connect Message*, *General*
 22 *Handoff Direction Message* (with SCR) or *Universal Handoff*
 23 *Direction Message* (with SCR).

24 The base station shall set this field to '01' to indicate that the
 25 mobile station is to use an initial service configuration
 26 consisting of the default multiplex option that is derived from
 27 the radio configuration corresponding to Table 3.7.2.3.2.21-3,
 28 and to indicate that service negotiation may take place before
 29 the base station sends one of the following messages: *Service*
 30 *Connect Message*, *General Handoff Direction Message* (with
 31 SCR) or *Universal Handoff Direction Message* (with SCR).

32 The base station shall set this field to '10' to indicate that the
 33 mobile station is to use an initial service configuration
 34 consisting of the default multiplex option that is derived from
 35 the radio configuration corresponding to Table 3.7.2.3.2.21-3,
 36 and to indicate that service negotiation is not to take place
 37 before the base station sends one of the following messages:
 38 *Service Connect Message*, *General Handoff Direction Message*
 39 (with SCR) or *Universal Handoff Direction Message* (with SCR).

1 **Table 3.7.2.3.2.21-3. Mapping between Multiplex Options and Radio Configurations**

Multiplex Option	Radio Configuration
Multiplex Option 1	Forward link: RC1, RC3, RC4, RC6, RC7, RC11, or RC12 Reverse Link: RC1, RC3, RC5, or RC8
Multiplex Option2	Forward link: RC2, RC5, RC 8, or RC9 Reverse Link: RC2, RC4 or RC 6
Multiplex Option 0xf00	Forward link: RC10
Multiplex Option 0xf00 is used for the Reverse Packet Data Channel Multiplex Option for Higher Data Rates and Multiplex Option 1 is used for the Reverse Packet Data Channel Multiplex Option for Lower Data Rate (see [3])	Reverse Link: RC7

- FRAME_OFFSET - Frame offset.
The Forward and Reverse Traffic Channel frames are delayed $\text{FRAME_OFFSET} \times 1.25$ ms relative to system timing (see [2]).
The base station shall set this field to the Forward and Reverse Traffic Channel frame offset.
- ENCRYPT_MODE - Message encryption mode.
The base station shall set this field to the ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2 corresponding to the encrypting mode that is to be used for signaling messages, as specified in 2.3.12.2.
- BAND_CLASS - Band class.
If the `FREQ_INCL` bit is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Forward Traffic Channel the mobile station is to use. If the `FREQ_INCL` bit is set to '0', the base station shall omit this field.

- 1 CDMA_FREQ - Frequency assignment.
- 2 If the FREQ_INCL bit is set to '1', the base station shall set
- 3 this field to the CDMA Channel number, in the specified
- 4 CDMA band class, corresponding to the CDMA frequency
- 5 assignment for the CDMA Channel containing the Forward
- 6 Traffic Channel the mobile station is to use. If the
- 7 FREQ_INCL bit is set to '0', the base station shall omit this
- 8 field.
- 9 The base station shall include NUM_PILOTS plus one occurrences of the following three-
- 10 field record, one for each member of the mobile station's Active Set on the Traffic Channel.
- 11 PILOT_PN - Pilot PN sequence offset index.
- 12 The base station shall set this field to the pilot PN sequence
- 13 offset for this pilot in units of 64 PN chips.
- 14 PWR_COMB_IND - Power control symbol combining indicator.
- 15 If the Forward Traffic Channel associated with this pilot will
- 16 carry the same closed-loop power control subchannel bits as
- 17 that of the previous pilot in this message, the base station
- 18 shall set this field to '1'; otherwise, the base station shall set
- 19 this field to '0'. For the first occurrence of this record in the
- 20 message, the base station shall set this field to '0'.
- 21 CODE_CHAN - Code channel index.
- 22 The base station shall set this field to the code channel index
- 23 (see [2]) that the mobile station is to use on the Forward
- 24 Traffic Channel associated with this pilot. If Radio
- 25 Configuration 1, 2, 3, or 5 (see [2]) is used, the base station
- 26 shall set this field in the range 1 to 63 inclusive. If Radio
- 27 Configuration 4, 6, 8, 11 or 12 is used, the base station shall
- 28 set this field in the range 1 to 127 inclusive. If Radio
- 29 Configuration 7 or 9 is used, the base station shall set this
- 30 field in the range 1 to 255 inclusive.
- 31 FOR_FCH_RC - Forward Fundamental Channel radio configuration
- 32 The base station shall set this field to the radio configuration
- 33 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
- 34 the Forward Fundamental Channel before the first *Service*
- 35 *Connect Message* is sent to the mobile station.
- 36 If GRANTED_MODE is set to '00', and DEFAULT_CONFIG is
- 37 not set to '100' (see Table 3.7.2.3.2.21-2), the base station
- 38 shall set this field to either '00001' or '00010' (see Table
- 39 3.7.2.3.2.21-4).
- 40 REV_FCH_RC - Reverse Fundamental Channel radio configuration
- 41 The base station shall set this field to the radio configuration
- 42 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
- 43 the Reverse Fundamental Channel before the first *Service*
- 44 *Connect Message* is sent to the mobile station.

23

- FPC_FCH_INIT_SETPT - Initial Fundamental Channel outer loop E_b/N_t setpoint.
The base station shall set this field to initial Fundamental Channel outer loop E_b/N_t setpoint, in units of 0.125 dB.
- FPC_SUBCHAN_GAIN - Forward power control subchannel relative gain.
The base station shall set FPC_SUBCHAN_GAIN equal to the power level of the forward link power control subchannel relative to the power level of 20 ms frames at a 9600 bps or 14400 bps rate of the Forward Fundamental Channel that the Forward Power Control Subchannel is punctured on. The base station shall set the value in units of 0.25 dB.
- RLGAIN_ADJ - Reverse Traffic Channel power relative to access power.
The base station shall set this field to adjust the initial Traffic Channel transmission power relative to the Access Channel or Enhanced Access Channel transmission power. The base station shall set this field as a two's complement signed binary number, in units of 1 dB.
- FPC_FCH_FER - Fundamental Channel target Frame Error Rate.

- 1 The base station shall set this field to the target Frame Error
2 Rate on the Forward Fundamental Channel, as specified in
3 Table 3.7.3.3.2.25-2.
- 4 FPC_FCH_MIN_SETPT - Minimum Fundamental Channel Outer Loop E_b/N_t setpoint.
5 The base station shall set this field to minimum Fundamental
6 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 7 FPC_FCH_MAX_SETPT - Maximum Fundamental Channel Outer Loop E_b/N_t setpoint.
8 The base station shall set this field to maximum Fundamental
9 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 10 REV_FCH_GATING_MODE - Reverse eighth gating mode indicator.
11 The base station shall set this field to '1' if the mobile station
12 is allowed to perform the reverse eighth gating mode where
13 the 1/8th rate frames on the Reverse Fundamental Channel
14 are gated off for 10 ms per frame (see [2]); otherwise, the base
15 station shall set this field to '0'.
16 The base station shall not set this field to '1' if
17 REV_FCH_GATING_REQ included in the *Origination Message*
18 or *Page Response Message* is set to '0'.
- 19 REV_PWR_CNTL_DELAY_INCL - Reverse power control delay included indicator.
20 If REV_FCH_GATING_MODE is set to '0', the base station
21 shall omit this field; otherwise, the base station shall include
22 this field and set it as follows.
23 The base station shall set this field to '1' if
24 REV_PWR_CNTL_DELAY is included in this message;
25 otherwise, the base station shall set this field to '0'.
26 If the REV_FCH_GATING_MODE field in this message is set to
27 '1' and the REV_PWR_CNTL_DELAY_INCL field in the
28 *Extended System Parameters Message* or *MC-RR Parameters*
29 *Message* is set to '0', the base station shall set this field to '1'.
- 30 REV_PWR_CNTL_DELAY - The reverse power control delay.
31 If REV_PWR_CNTL_DELAY_INCL is set to '0', the base station
32 shall omit this field; otherwise, the base station shall include
33 this field and set it as follows:
34 The base station shall set this field to the closed-loop reverse
35 power control delay minus one (the closed-loop reverse power
36 control delay is the time between the end of a gated-on
37 reverse PCG and the beginning of the reverse PCG where the
38 corresponding feedback is sent on the Forward Power Control
39 Subchannel, see [2]) in units of 1.25 ms.
- 40 D_SIG_ENCRYPT_MODE - Dedicated channel signaling encryption mode indicator.
41 If ENCRYPT_MODE is set to '11', the base station shall include
42 this field and shall set it to the dedicated channel signaling
43 encryption mode, as shown in Table 3.7.4.5-1; otherwise the base
44 station shall omit this field.
- 45 ENC_KEY_SIZE - Encryption key size indication.

1 If ENCRYPT_MODE is set to '10' or '11', the base station shall
2 include this field and shall set it to the encryption key size, as
3 shown in Table 3.7.4.5-2; otherwise, the base station shall omit
4 this field.

5 C_SIG_ENCRYPT_MODE_INCL - Common channel signaling encryption mode included
6 indicator.

7 If common channel signaling encryption information is
8 included in this message, the base station shall set this field
9 to '1'; otherwise, the base station shall set this field to '0'.

10 C_SIG_ENCRYPT_MODE - Common channel signaling encryption mode indicator.

11 If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
12 shall include this field and shall set it to the common channel
13 signaling encryption mode, as shown in Table 3.7.4.5-1;
14 otherwise, the base station shall omit this field.

15 MSG_INT_INFO_INCL - Message integrity information included indicator

16 The base station shall set this field to '1' if the base station
17 supports message integrity; otherwise, the base station shall
18 set this field to '0'. If this field is set to '1', the base station
19 shall require the LAC Layer to include a MACI in this
20 message; otherwise, the base station shall require the LAC
21 Layer not to include a MACI in this message.

22 CHANGE_KEYS - Change keys indicator

23 If MSG_INT_INFO_INCL is set to '0', the base station shall
24 omit this field; otherwise, the base station shall include this
25 field and set it as follows:

26 The base station shall set this field to '0' to command the
27 mobile station not to update the encryption key and integrity
28 key. The base station shall set this field to '1' to command the
29 mobile station to update the encryption key and integrity key
30 to the latest being generated.

31 USE_UAK - Use UAK indicator

32 If MSG_INT_INFO_INCL is set to '0', the base station shall
33 omit this field; otherwise, the base station shall include this
34 field and set it as follows:

35 If the base station receives an authentication vector with a
36 UAK, the base station shall set this field to '1' to indicate that
37 the mobile station is to use UMAC; otherwise, the base station
38 shall set this field to '0' to indicate that the mobile station is
39 to use MAC-I.

40 PLCM_TYPE_INCL - The Public Long Code Mask type included indicator.

41 The base station shall set this field to '1' if the base station
42 include PLCM_TYPE in the message; otherwise, the base
43 station shall set this field to '0'.

44 PLCM_TYPE - The Public Long Code Mask type indicator.

If `PLCM_TYPE_INCL` is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the corresponding Public Long Code Mask type as specified in Table 3.7.2.3.2.21-5.

`PLCM_TYPE` '0010' shall not be used when the mobile station is not in its home country (i.e., the MCC of the mobile station is different from the MCC of this base station).

`PLCM_TYPE` '0011' shall not be used when the mobile station is not in its home network (i.e., the MCC or MNC of the mobile station is different from the MCC or MNC of this base station).

Table 3.7.2.3.2.21-5. The Public Long Code Mask Type

PLCM_TYPE (binary)	Descriptions
0000	PLCM derived from ESN
0001	PLCM specified by the base station
0010	PLCM derived from <code>IMSI_O_S</code> when <code>IMSI_O</code> is derived from <code>IMSI_M</code>
0011	PLCM derived from <code>IMSI_O_S</code> when <code>IMSI_O</code> is derived from <code>IMSI_T</code>
0100	PLCM derived from MEID
All other values	Reserved

`PLCM_39` - The 39 LSBs bits of the Public Long Code Mask.

If `PLCM_TYPE` is not set to '0001', the base station shall omit this field; otherwise, the base station shall include this field and set it to the 39 least significant bits of the public long code mask as defined in 3.6.4.1.10.

`RESERVED` - Reserved bits.

The base station shall add reserved bits as needed in order to make the total length of the fields after the preceding `ADD_RECORD_LEN` field through this `RESERVED` field equal to an integer number of octets. The base station shall set these bits to '0'.

If the `ASSIGN_MODE` field is set to '001', the base station shall include the following fields:

1 The base station shall add reserved bits as needed in order to
 2 make the total length of the fields after the preceding
 3 ADD_RECORD_LEN field through this RESERVED field equal
 4 to an integer number of octets. The base station shall set
 5 these bits to '0'.

6 If the ASSIGN_MODE field is set to '100', the base station shall include the following fields:

7 FREQ_INCL - Frequency included indicator.

8 If the BAND_CLASS and CDMA_FREQ fields are included in
 9 this assignment record, the base station shall set this bit to
 10 '1'. If the BAND_CLASS and CDMA_FREQ fields are not
 11 included in this assignment record, the base station shall set
 12 this bit to '0'.

13 BAND_CLASS - Band class.

14 If the FREQ_INCL bit is set to '1', the base station shall set
 15 this field to the CDMA band class, as specified in [30],
 16 corresponding to the CDMA frequency assignment for the
 17 CDMA Channel containing the Forward Traffic Channel(s) the
 18 mobile station is to use. If the FREQ_INCL bit is set to '0', the
 19 base station shall omit this field.

20 CDMA_FREQ - Frequency assignment.

21 If the FREQ_INCL bit is set to '0', the base station shall omit
 22 this field; otherwise, the base station shall include this field
 23 and set it as follows:

24 If FOR_RC is set to a Radio Configuration associated with
 25 Spreading Rate 1, the FREQ_INCL bit is set to '1', the base
 26 station shall set this field to the CDMA Channel number, in
 27 the specified CDMA band class, corresponding to the CDMA
 28 frequency assignment for the CDMA Channel containing the
 29 Forward Traffic Channel(s) the mobile station is to use. If
 30 FOR_RC is set to a Radio Configuration associated with
 31 Spreading Rate 3, the base station shall set this field to the
 32 center SR3 frequency assignment containing the Forward
 33 Traffic Channel(s) the mobile station is to use.

34 BYPASS_ALERT_ANSWER - Bypass alert indicator.

35 If the mobile station is to bypass the *Waiting for Order*
 36 *Substate* and the *Waiting for Mobile Station Answer Substate*,
 37 the base station shall set this field to '1'; otherwise, the base
 38 station shall set this field to '0'.

- 1 GRANTED_MODE - Granted mode.
- 2 The base station shall set this field to '00' to indicate that the
3 mobile station is to use an initial service configuration
4 consisting of the multiplex option and Radio Configuration
5 defined by the DEFAULT_CONFIG field for the Forward and
6 Reverse Traffic channels, and to indicate that service
7 negotiation may take place before the base station sends one
8 of the following messages: *Service Connect Message*, *General*
9 *Handoff Direction Message* (with SCR) or *Universal Handoff*
10 *Direction Message* (with SCR).
- 11 The base station shall set this field to '01' to indicate that the
12 mobile station is to use an initial service configuration
13 consisting of the default multiplex option that is derived from
14 the radio configuration corresponding to Table 3.7.2.3.2.21-3,
15 and to indicate that service negotiation may take place before
16 the base station sends one of the following messages: *Service*
17 *Connect Message*, *General Handoff Direction Message* (with
18 SCR) or *Universal Handoff Direction Message* (with SCR).
- 19 The base station shall set this field to '10' to indicate that the
20 mobile station is to use an initial service configuration
21 consisting of the default multiplex option that is derived from
22 the radio configuration corresponding to Table 3.7.2.3.2.21-3,
23 and to indicate that service negotiation is not to take place
24 before the base station sends one of the following messages:
25 *Service Connect Message*, *General Handoff Direction Message*
26 (with SCR) or *Universal Handoff Direction Message* (with SCR).
- 27 The base station shall set this field to '11' to instruct the
28 mobile station to use the stored service configuration (that is,
29 both the Service Configuration information record and the
30 Non-negotiable Service Configuration information record).
- 31 SR_ID_RESTORE - Service reference identifier to be restored.
- 32 If the GRANTED_MODE field is not set to '11', the base
33 station shall omit this field; otherwise, the base station shall
34 include this field and set it as follows:
- 35 o If the mobile station is to restore all the service option
36 connections from the stored service configuration, the
37 base station shall set this field to '111'.
- 38 o If the mobile station is to restore more than one but not
39 all the service option connections from the stored service
40 configuration, the base station shall set this field to '000'.
- 41 o Otherwise, the base station shall set this field to the
42 service reference identifier corresponding to the service
43 option connection to be restored.

1 SR_ID_RESTORE_BITMAP – Bitmap of service reference identifiers to be restored.

2 If the SR_ID_RESTORE field is included and set to '000', the
3 base station shall include this field and set it as follows;
4 otherwise, the base station shall omit this field.

5 This field consists of the subfields defined in Table
6 3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
7 indicate that the mobile station is to restore the service option
8 connection of the corresponding service reference identifier;
9 otherwise, the base station shall set the subfield to '0'.

10 **Table 3.7.2.3.2.21-6. SR_ID_RESTORE_BITMAP Subfields.**

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	sr_id 1 to be restored
SR_ID_2	1	sr_id 2 to be restored
SR_ID_3	1	sr_id 3 to be restored
SR_ID_4	1	sr_id 4 to be restored
SR_ID_5	1	sr_id 5 to be restored
SR_ID_6	1	sr_id 6 to be restored

11
12 DEFAULT_CONFIG – Default Configuration.

13 If the GRANTED_MODE field is set to '00', the base station
14 shall set this field as specified in Table 3.7.2.3.2.21-2 to
15 indicate an initial multiplex option and Radio Configuration
16 for the Forward and Reverse Traffic Channels.

17 FOR_RC – Forward Traffic Channel radio configuration.

18 The base station shall set this field to the radio configuration
19 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
20 the Forward Traffic (Fundamental and Dedicated Control)
21 Channel before the first *Service Connect Message* is sent to
22 the mobile station.

23 If GRANTED_MODE is set to '00', and DEFAULT_CONFIG is
24 not set to '100' (see Table 3.7.2.3.2.21-2), the base station
25 shall set this field to either '00001' or '00010' (see Table
26 3.7.2.3.2.21-4).

27 REV_RC – Reverse Traffic Channel radio configuration.

28 The base station shall set this field to the radio configuration
29 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
30 the Reverse Traffic (Fundamental and Dedicated Control)
31 Channel before the first *Service Connect Message* is sent to
32 the mobile station.

1			If GRANTED_MODE is set to '00', and DEFAULT_CONFIG is
2			not set to '100' (see Table 3.7.2.3.2.21-2), the base station
3			shall set this field to either '0001' or '0010' (see Table
4			3.7.2.3.21-3).
5	FRAME_OFFSET	-	Frame offset.
6			The Forward and Reverse Traffic Channel frames are delayed
7			FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).
8			The base station shall set this field to the Forward and
9			Reverse Traffic Channel frame offset.
10	ENCRYPT_MODE	-	Message encryption mode.
11			The base station shall set this field to the ENCRYPT_MODE
12			value shown in Table 3.7.2.3.2.8-2 corresponding to the
13			encrypting mode that is to be used for signaling messages, as
14			specified in 2.3.12.2.
15	FPC_SUBCHAN_GAIN	-	Forward Power Control Subchannel relative gain.
16			The base station shall set FPC_SUBCHAN_GAIN equal to the
17			power level of the forward link power control subchannel
18			relative to the power level of 20 ms frames at a 9600 bps or
19			14400 bps rate on the Forward Fundamental Channel or the
20			Forward Dedicated Control Channel indicated by
21			FPC_PRI_CHAN _s . The base station shall set the value in units
22			of 0.25 dB.
23	RLGAIN_ADJ	-	Reverse Traffic Channel power.
24			If DIRECT_CH_ASSIGN_IND field is set to '0', the base station
25			shall set this field to adjust the initial Traffic Channel
26			transmission power relative to the Access Channel or
27			Enhanced Access Channel transmission power. The base
28			station shall set this field as a two's complement signed
29			binary number, in units of 1 dB.
30			If DIRECT_CH_ASSIGN_IND field is set to '1', the base station
31			shall set this field to adjust the initial Traffic Channel
32			transmission power as specified 2.6.4.2. The base station
33			shall set this field as a two's complement signed binary
34			number, in units of 1 dB.
35	NUM_PILOTS	-	Number of pilots in the Active Set.
36			The base station shall set this field to number of pilots that
37			are to be in the mobile station's Active Set on the Traffic
38			Channel minus one. The base station shall set this field to
39			the value in the range 0 to N _{6m} -1 inclusive.
40	CH_IND	-	Channel indicator.
41			The base station shall set this field as shown in Table
42			3.7.2.3.2.21-7.

Table 3.7.2.3.2.21-7. Channel Indicator

- CH_RECORD_LEN - Channel record length.
The base station shall set this field to the number of octets in the CH_RECORD_FIELDS included in this channel record.
- CH_RECORD_FIELDS - Channel record fields.
The channel record fields are determined by the value of CH_IND, as described below.
- REV_FCH_GATING_MODE - Reverse eighth gating mode indicator.
The base station shall set this field to '1' if the mobile station is allowed to perform the reverse eighth gating mode where the 1/8th rate frames on the Reverse Fundamental Channel are gated off for 10 ms per frame (see [2]); otherwise, the base station shall set this field to '0'.
The base station shall not set this field to '1' if REV_FCH_GATING_REQ included in the *Origination Message* or *Page Response Message* is set to '0'.
- REV_PWR_CNTL_DELAY_INCL - Reverse power control delay included indicator.
If REV_FCH_GATING_MODE is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.
The base station shall set this field to '1' if REV_PWR_CNTL_DELAY is included in this message; otherwise, the base station shall set this field to '0'.
If the REV_FCH_GATING_MODE field in this message is set to '1' and the REV_PWR_CNTL_INCL field in the *Extended System Parameters Message* is set to '0', the base station shall set this field to '1'.
- REV_PWR_CNTL_DELAY - The reverse power control delay.
If REV_PWR_CNTL_DELAY_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

Table 3.7.2.3.2.21-8. 1X Reverse Link Frequency Offset

1XRL_FREQ_OFFSET (Binary)	1X Reverse Link frequency offset
00	The Reverse Link is on the lowest SR3 frequency
01	The Reverse Link is on the center SR3 frequency
10	The Reverse Link is on the highest SR3 frequency
11	Reserved

- MSG_INT_INFO_INCL – Message integrity information included indicator
- The base station shall set this field to '1' if the base station supports message integrity; otherwise, the base station shall set this field to '0'. If this message is to include a MACI in the LAC Layer, the base station shall set this field to '1'.
- CHANGE_KEYS – Change keys indicator
- If MSG_INT_INFO_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
- The base station shall set this field to '0' to command the mobile station not to update the encryption key and integrity key. The base station shall set this field to '1' to command the mobile station to update the encryption key and integrity key to the latest being generated.
- USE_UAK – Use UAK indicator
- If MSG_INT_INFO_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
- If the base station receives an authentication vector with a UAK, the base station shall set this field to '1' to indicate that the mobile station is to use UMAC; otherwise, the base station shall set this field to '0' to indicate that the mobile station is to use MAC-I.
- PLCM_TYPE_INCL – The Public Long Code Mask type included indicator.
- The base station shall set this field to '1' if the base station include PLCM_TYPE in the message; otherwise, the base station shall set this field to '0'.
- PLCM_TYPE – The Public Long Code Mask type indicator.

- 1 If PLCM_TYPE_INCL is set to '0', the base station shall omit
2 this field; otherwise, the base station shall include this field
3 and set it as follows.
- 4 The base station shall set this field to the corresponding
5 Public Long Code Mask type as specified in Table
6 3.7.2.3.2.21-5.
- 7 PLCM_TYPE '0010' shall not be used when the mobile station
8 is not in its home country (i.e., the MCC of the mobile station
9 is different from the MCC of this base station).
- 10 PLCM_TYPE '0011' shall not be used when the mobile station
11 is not in its home network (i.e., the MCC or MNC of the mobile
12 station is different from the MCC or MNC of this base station).
- 13 PLCM_39 - The 39 LSB bits of the Public Long Code Mask.
- 14 If PLCM_TYPE is not set to '0001', the base station shall omit
15 this field; otherwise, the base station shall include this field
16 and set it to the 39 least significant bits of the public long
17 code mask as defined in 3.6.4.1.10.
- 18 SYNC_ID_INCL - Service Configuration synchronization identifier included
19 indicator.
- 20 The base station shall omit this field if the GRANTED_MODE
21 field is not set to '11'; otherwise, the base station shall include
22 this field and set it as follows:
- 23 If the mobile station is to use a stored service configuration
24 corresponding to SYNC_ID field included in this message, the
25 base station shall set this field to '1', otherwise, the base
26 station shall set this field to '0'.
- 27 SYNC_ID_LEN - Service Configuration synchronization identifier length
28 indicator.
- 29 If the SYNC_ID_INCL field is not included or is included and
30 is set to '0', the base station shall omit this field; otherwise
31 the base station shall include this field and set it as follows:
- 32 The base station shall set this field to the length of the
33 SYNC_ID field included in this message.
- 34 SYNC_ID - Service Configuration synchronization identifier.
- 35 If the SYNC_ID_INCL field is not included or is included and
36 is set to '0', the base station shall omit this field; otherwise,
37 the base station shall include this field and set it as follows:
- 38 The base station shall set this field to the Service
39 Configuration synchronization identifier corresponding to the
40 stored service configuration that the mobile station is to use.
- 41 CONFIG_MSG_SEQ - Configuration message sequence number.
- 42 If the DIRECT_CH_ASSIGN_IND is to '0', the base station
43 shall omit this field; otherwise the base station shall include
44 this field and set it as follows:

1		The base station shall set this field to CONFIG_SEQ
2		(see 3.6.2.2).
3	RTC_NOM_PWR	- Reverse Traffic Channel Nominal Power.
4		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
5		omit this field; otherwise, the base station shall include this
6		field and set it as follows:
7		The base station shall set this field to the value of the nominal
8		power correction to be used by the mobile station when
9		transmitting on the Reverse Traffic Channel after the Direct
10		Channel Assignment call setup procedure as specified in
11		2.6.4.2. The base station shall set this field as a two's
12		complement signed binary number, in units of 1 dB.
13	RESPOND_IND	- Response requested indicator.
14		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
15		omit this field; otherwise, the base station shall include this
16		field and set it as follows:
17		The base station shall set this field to '1' if the mobile station
18		is to respond to the <i>Extended Channel Assignment Message</i>
19		with a <i>Page Response Message</i> or <i>Reconnect Message</i> in
20		unassured mode on the r-csch; otherwise, the base station
21		shall set this field to '0' to indicate that the mobile station is
22		not to respond on the r-csch.
23	DIRECT_CH_ASSIGN_RECOVER_IND	- Direct Channel Assignment Recover Indicator
24		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
25		omit this field; otherwise, the base station shall include this
26		field and set it as follows:
27		The base station shall set this field to '1' if the mobile station
28		is to transmit a <i>Page Response Message</i> or a <i>Reconnect</i>
29		<i>Message</i> after failing to acquire the forward traffic channel
30		assigned in this message; otherwise, the base station shall set
31		this field to '0'.
32	FIXED_PREAMBLE_TRANSMIT_IND	- Fixed Preamble Length Transmission Indicator.
33		If GRANTED_MODE is not set to '11', the base station shall
34		omit this field; otherwise, the base station shall include this
35		field and set it as follows:
36		The base station shall set this field to '1' to indicate if the
37		mobile station is allowed to enter the <i>Traffic Channel Substate</i>
38		of the <i>Mobile Station Control on the Traffic Channel State</i> after
39		sending the number of preambles specified in this message;
40		otherwise the base station shall set this field to '0'.
41		If any channel assigned by this message is to use Radio
42		Configuration 1 or 2 (see [2]), then the base station shall set
43		this field to '0'.
44	FIXED_NUM_PREAMBLE	- Traffic Channel preamble length.

1 If FIXED_PREAMBLE_TRANSMIT_IND is not included, or is
 2 included and set to '0', the base station shall omit this field;
 3 otherwise, the base station shall include this field and set it to
 4 the minimum length of Traffic Channel preamble that the
 5 mobile station is to transmit, before entering the *Traffic*
 6 *Channel Substate* of the *Mobile Station Control on the Traffic*
 7 *Channel State* without having received a *forward dedicated*
 8 *channel acquired* indication from Layer 2 (see [4]).

9 The base station shall set FIXED_NUM_PREAMBLE to the
 10 value shown in Table 3.7.2.3.2.21-8a corresponding to the
 11 Traffic Channel preamble length in ms.

12 **Table 3.7.2.3.2.21-8a Traffic Channel Preamble Length**

FIXED_NUM_PREAMBLE (binary)	Preamble Length in ms
000	0
001	20
010	40
011	60
100	80
101	100
110	200
111	300

13 EARLY_RL_TRANSMIT_IND - Early Reverse Link Transmission indicator.
 14 The base station shall set this field to '1' if, upon channel
 15 assignment, the mobile station is to enable the transmitter
 16 prior to receiving sufficient signal quality on the forward link;
 17 otherwise, the base station shall set this field to '0'.

18 TX_PWR_LIMIT_INCL - Transmit Power Limit Inclusion for the current base station
 19 If the transmit power limit field is included in this message,
 20 the base station shall set this field to '1'; otherwise, the base
 21 station shall set this field to '0'.

22 TX_PWR_LIMIT - Transmit Power Limit for the current base station
 23 If TX_PWR_LIMIT_INCL is set to '0', the base station shall omit
 24 this field; otherwise, the base station shall include this field
 25 and set to as follows.
 26 The base station shall set this field to thirty dB more than
 27 transmit power limit in dBm EIRP, in steps of 1 dB. This field
 28 can take the values 30 to 53 corresponding to maximum
 29 transmit power values 0 dBm to 23 dBm.

30 RESERVED - Reserved bits.

1

Table 3.7.2.3.2.21-9. Pilot Record Types

Description	PILOT_REC_TYPE (binary)
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other PILOT_REC_TYPE values are reserved	

2

3

RECORD_LEN - Pilot record length.
If ADD_PILOT_REC_INCL is set to '1', the base station shall set this field to the number of octets in the type-specific fields of this pilot record.

4

5

6

7

8

9

Type-specific fields - Pilot record type-specific fields.
If ADD_PILOT_REC_INCL is set to '1', the base station shall include type-specific fields based on the PILOT_REC_TYPE of this pilot record as described in 3.7.6.1.

10

11

12

13

14

15

PWR_COMB_IND - Power control symbol combining indicator.
If the Forward Fundamental Traffic Channel associated with this pilot will carry the same closed-loop power control subchannel bits as that of the previous pilot in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'. For the first occurrence of this record in the message, the base station shall set this field to '0'.

16

17

18

19

20

21

22

23

CODE_CHAN_FCH - Code channel index for the Fundamental Channel.

24

25

26

27

28

29

30

31

If FOR_RC is set to a Radio Configuration associated with Spreading Rate 1, the base station shall set this field to the code channel index (see [2]) that the mobile station is to use on the Forward Fundamental Channel associated with this pilot. If FOR_RC is set to a Radio Configuration associated with Spreading Rate 3, the base station shall set this field to the code channel index that the mobile station is to use on the Forward Fundamental on the center SR3 frequency.

- 1 If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
 2 station shall set this field in the range 1 to 63 inclusive. If
 3 Radio Configuration 4, 6, 8, 11, or 12 is used, the base
 4 station shall set this field in the range 1 to 127 inclusive. If
 5 Radio Configuration 7 or 9 is used, the base station shall set
 6 this field in the range 1 to 255 inclusive.
- 7 QOF_MASK_ID_FCH - Quasi-Orthogonal Function Mask Identifier for the
 8 Fundamental Channel.
- 9 If FOR_RC is set to a Radio Configuration associated with
 10 Spreading Rate 1, the base station shall set this field to the
 11 quasi-orthogonal function mask identifier (see [2]) that the
 12 mobile station is to use on the Forward Fundamental Channel
 13 associated with this pilot. If FOR_RC is set to a Radio
 14 Configuration associated with Spreading Rate 3, the base
 15 station shall set this field to the quasi-orthogonal function
 16 mask identifier that the mobile station is to use on the
 17 Forward Fundamental Channel on the center SR3 frequency.
- 18 3X_FCH_INFO_INCL - 3X Fundamental Channel information included indicator.
 19 If the 3X Fundamental Channel information is included, the
 20 base station shall set this field to '1'; otherwise, the base
 21 station shall set this field to '0'.
- 22 The base station shall include NUM_PILOTS plus one occurrences of the following record if
 23 3X_FCH_INFO_INCL is set to '1'. The base station shall use the same order for the
 24 following fields as is used for the PILOT_PN fields listed in this message.
- 25 3X_FCH_LOW_INCL - FCH code channel on the lowest SR3 frequency included
 26 indicator.
- 27 If the Fundamental Channel on the lowest SR3 frequency has
 28 a different code channel than the Fundamental Channel on
 29 the center SR3 frequency, the base station shall set this field
 30 to '1'; otherwise, the base station shall set this field to '0'.
- 31 QOF_MASK_ID_FCH_LOW - QOF index for the Fundamental Channel on the lowest
 32 SR3 frequency.
- 33 If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
 34 this field; otherwise, the base station shall set this field as
 35 follows:
- 36 The base station shall set this field to the index of the Quasi-
 37 orthogonal function (see [2]) corresponding to the QOF index
 38 for the Fundamental Channel on the lowest SR3 frequency.
- 39 CODE_CHAN_FCH_LOW - Code channel for the Fundamental Channel on the lowest
 40 SR3 frequency.
- 41 If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
 42 this field; otherwise, the base station shall set this field as
 43 follows:

- 1 PWR_COMB_IND - Power control symbol combining indicator.
2
3 If this pilot will carry the same closed-loop power control
4 subchannel bits as that of the previous pilot in this message,
5 the base station shall set this field to '1'; otherwise, the base
6 station shall set this field to '0'. The base station shall set
7 this field to '0' in the first record in the pilot list.
- 8 CODE_CHAN_DCCH - Code channel index for the Dedicated Control Channel.
9
10 If FOR_RC is set to a Radio Configuration associated with
11 Spreading Rate 1, the base station shall set this field to the
12 code channel index (see [2]), in the range of 1 to 127
13 inclusive, that the mobile station is to use on the Forward
14 Dedicated Control Channel associated with this pilot. If
15 FOR_RC is set to a Radio Configuration associated with
16 Spreading Rate 3, the base station shall set this field to the
17 code channel index in the range of 1 to 255 inclusive, that the
18 mobile station is to use on the Forward Dedicated Control
19 Channel on the center SR3 frequency.
20
21 If Radio Configuration 3 or 5 (see [2]) is used, the base station
22 shall set this field in the range 1 to 63 inclusive. If Radio
23 Configuration 4, 6 or 8 is used, the base station shall set this
24 field in the range 1 to 127 inclusive. If Radio Configuration 7
25 or 9 is used, the base station shall set this field in the range 1
26 to 255 inclusive.
- 27 QOF_MASK_ID_DCCH - Quasi-Orthogonal Function Mask Identifier for the Dedicated
28 Control Channel.
29
30 If FOR_RC is set to a Radio Configuration associated with
31 Spreading Rate 1, the base station shall set this field to the
32 quasi-orthogonal function mask identifier (see [2]) that the
33 mobile station is to use on the Forward Dedicated Control
34 Channel associated with this pilot. If FOR_RC is set to a
35 Radio Configuration associated with Spreading Rate 3, the
36 base station shall set this field to the quasi-orthogonal
37 function mask identifier (see [2]) that the mobile station is to
38 use on the Forward Dedicated Control Channel on the center
39 SR3 frequency.
- 40 3X_DCCH_INFO_INCL - 3X Dedicated Control Channel information included indicator.
41
42 If the 3X Dedicated Control Channel information is included,
43 the base station shall set this field to '1'; otherwise, the base
44 station shall set this field to '0'.
45
46 The base station shall include NUM_PILOTS plus one occurrences of the following record if
47 3X_DCCH_INFO_INCL is set to '1'. The base station shall use the same order for the
48 following fields as is used for the PILOT_PN fields listed in this message.
- 49 3X_DCCH_LOW_INCL - DCCH code channel on the lowest SR3 frequency included
50 indicator.

1 If the Dedicated Control Channel on the lowest SR3
2 frequencies has a different code channel than the Dedicated
3 Control Channel on the center SR3 frequency, the base
4 station shall set this field to '1'; otherwise, the base station
5 shall set this field to '0'.

6 QOF_MASK_ID_DCCH_LOW – QOF index for the Dedicated Control Channel on the
7 lowest SR3 frequency.

8 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
9 omit this field; otherwise, the base station shall set this field
10 as follows:

11 The base station shall set this field to the index of the Quasi-
12 orthogonal function (see [2]) corresponding to the QOF index
13 for the Dedicated Control Channel on the lowest SR3
14 frequency.

15 CODE_CHAN_DCCH_LOW - Code channel for the Dedicated Control Channel on the
16 lowest SR3 frequency.

17 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
18 omit this field; otherwise, the base station shall set this field
19 as follows:

20 The base station shall set this field to the code channel index
21 (see [2]) that the mobile station is to use on the Dedicated
22 Control Channel on the lowest SR3 frequency. If Radio
23 Configuration 6 or 8 is used, the base station shall set this
24 field in the range 1 to 127 inclusive. If Radio Configuration 7
25 or 9 is used, the base station shall set this field in the range 1
26 to 255 inclusive.

27 3X_DCCH_HIGH_INCL – DCCH code channel on the highest SR3 frequency included
28 indicator.

29 If the Dedicated Control Channel on the highest SR3
30 frequencies has a different code channel than the Dedicated
31 Control Channel on the center SR3 frequency, the base
32 station shall set this field to '1'; otherwise, the base station
33 shall set this field to '0'.

34 QOF_MASK_ID_DCCH_HIGH – QOF index for the Dedicated Control Channel on the
35 highest SR3 frequency.

36 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
37 omit this field; otherwise, the base station shall set this field
38 as follows:

39 The base station shall set this field to the index of the Quasi-
40 orthogonal function (see [2]) corresponding to the QOF index
41 for the Dedicated Control Channel on the highest SR3
42 frequency.

43 CODE_CHAN_DCCH_HIGH – Code channel for the Dedicated Control Channel on the
44 highest SR3 frequency.

45 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
46 omit this field; otherwise, the base station shall set this field
47 as follows:

1 The base station shall set this field to the code channel index
2 (see [2]) that the mobile station is to use on the Dedicated
3 Control Channel on the highest SR3 frequency. If Radio
4 Configuration 6 or 8 is used, the base station shall set this
5 field in the range 1 to 127 inclusive. If Radio Configuration 7
6 or 9 is used, the base station shall set this field in the range 1
7 to 255 inclusive.

8 FUNDICATED_BCNC_IND - BCNC on fundicated channel Indicator.

9 If the channel assignment in this message contains a Forward
10 Fundicated Channel used for BCNC transmission, the base
11 station shall set this field to '1'; otherwise, the base station
12 shall set this field to '0'.

13 If FUNDICATED_BCNC_IND is set to '1', the base station shall include NUM_PILOT plus 1
14 occurrences of the following record:

15 FOR_CPCCH_WALSH - The Forward Common Power Control Channel Walsh code
16 assignment.
17 The base station shall set this field to the Walsh code
18 assignment for the Forward Common Power Control Channel.

19 FOR_CPCSCH - The Forward Common Power Control Channel Subchannel.
20 The base station shall set this field to the Forward Common
21 Power Control Channel Subchannel associated with this base
22 station.

23 RESERVED - Reserved bits.
24 The base station shall add reserved bits as needed in order to
25 make the total length of the fields after the preceding
26 CH_RECORD_LEN field through this RESERVED field equal
27 to an integer number of octets. The base station shall set
28 these bits to '0'.

29 If the CH_IND field is set to '11', the base station shall include the following fields:

30 FPC_FCH_INIT_SETPT - Initial Fundamental Channel outer loop E_b/N_t setpoint.
31 The base station shall set this field to initial Fundamental
32 Channel outer loop E_b/N_t setpoint, in units of 0.125 dB.

33 FPC_DCCH_INIT_SETPT - Initial Dedicated Control Channel outer loop E_b/N_t setpoint.
34 The base station shall set this field to initial Dedicated
35 Control Channel outer loop E_b/N_t setpoint, in units of 0.125
36 dB.

37 FPC_PRI_CHAN - Power Control Subchannel indicator.
38 The base station shall set this field to '0' if the mobile station
39 is to perform the primary inner loop estimation on the
40 received Forward Fundamental Channel. The base station
41 shall set this field to '1' if the mobile station is to perform the
42 primary inner loop estimation on the received Forward
43 Dedicated Control Channel.

- 1 If the F-CPCCH is assigned, the base station shall multiplex
2 the Power Control Subchannel on the F-CPCCH; otherwise:
- 3 If this field is set to '0', the base station shall multiplex the
4 Power Control Subchannel on the Forward Fundamental
5 Channel; otherwise, the base station shall multiplex the
6 Power Control Subchannel on the Forward Dedicated Control
7 Channel.
- 8 FPC_FCH_FER - Fundamental Channel target Frame Error Rate.
9 The base station shall set this field to the target Frame Error
10 Rate on the Forward Fundamental Channel.
- 11 FPC_FCH_MIN_SETPT - Minimum Fundamental Channel Outer Loop E_b/N_t setpoint.
12 The base station shall set this field to minimum Fundamental
13 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 14 FPC_FCH_MAX_SETPT - Maximum Fundamental Channel Outer Loop E_b/N_t setpoint.
15 The base station shall set this field to maximum Fundamental
16 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 17 FPC_DCCH_FER - Dedicated Control Channel target Frame Error Rate.
18 The base station shall set this field to the target Frame Error
19 Rate on the Dedicated Control Channel.
- 20 FPC_DCCH_MIN_SETPT - Minimum Dedicated Control Channel Outer Loop E_b/N_t
21 setpoint.
22 The base station shall set this field to minimum Dedicated
23 Control Channel Outer Loop E_b/N_t setpoint, in units of 0.125
24 dB.
- 25 FPC_DCCH_MAX_SETPT - Maximum Dedicated Control Channel Outer Loop E_b/N_t
26 setpoint.
27 The base station shall set this field to maximum Dedicated Control Channel Outer Loop
28 E_b/N_t setpoint, in units of 0.125 dB.
- 29 The base station shall include NUM_PILOTS plus one occurrences of the following three-
30 field record, one for each member of the mobile station's Active Set on the Traffic Channel.
- 31 PILOT_PN - Pilot PN sequence offset index.
32 The base station shall set this field to the pilot PN sequence
33 offset for this pilot in units of 64 PN chips.
- 34 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
35 The base station shall set this field to '1' if additional pilot
36 information listed in PILOT_REC_TYPE and RECORD_LEN
37 fields are included. The base station shall set this field to '0'
38 if the corresponding pilot is the common pilot and there is no
39 additional pilot information included.
- 40 PILOT_REC_TYPE - Pilot record type.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the PILOT_REC_TYPE value shown in Table
3			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
4			specified by this record.
5			If ADD_PILOT_REC_INCL is set to '0', the base station shall
6			omit this field.
7	RECORD_LEN	-	Pilot record length.
8			If ADD_PILOT_REC_INCL is set to '1', the base station shall
9			set this field to the number of octets in the type-specific fields
10			of this pilot record.
11			If ADD_PILOT_REC_INCL is set to '0', the base station shall
12			omit this field.
13	Type-specific fields	-	Pilot record type-specific fields.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			include type-specific fields based on the PILOT_REC_TYPE of
16			this pilot record as described in 3.7.6.1.
17			If ADD_PILOT_REC_INCL is set to '0', the base station shall
18			omit this field.
19	PWR_COMB_IND	-	Power control symbol combining indicator.
20			If this pilot will carry the same closed-loop power control
21			subchannel bits as that of the previous pilot in this message,
22			the base station shall set this field to '1'; otherwise, the base
23			station shall set this field to '0'. The base station shall set
24			this field to '0' in the first record in the pilot list.
25	CODE_CHAN_FCH	-	Code channel index for the Fundamental Channel.
26			If FOR_RC is set to a Radio Configuration associated with
27			Spreading Rate 1, the base station shall set this field to the
28			code channel index (see [2]) that the mobile station is to use
29			on the Forward Channel associated with this pilot. If FOR_RC
30			is set to a Radio Configuration associated with Spreading Rate
31			3, the base station shall set this field to the code channel
32			index that the mobile station is to use on the Forward
33			Channel on the center SR3 frequency.
34			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
35			station shall set this field in the range 1 to 63 inclusive. If
36			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
37			station shall set this field in the range 1 to 127 inclusive. If
38			Radio Configuration 7 or 9 is used, the base station shall set
39			this field in the range 1 to 255 inclusive.
40	QOF_MASK_ID_FCH	-	Quasi-Orthogonal Function Mask Identifier for the
41			Fundamental Channel.

- 1 If FOR_RC is set to a Radio Configuration associated with
 2 Spreading Rate 1, the base station shall set this field to the
 3 quasi-orthogonal function mask identifier (see [2]) that the
 4 mobile station is to use on the Forward Fundamental Channel
 5 associated with this pilot. If FOR_RC is set to a Radio
 6 Configuration associated with Spreading Rate 3, the base
 7 station shall set this field to the quasi-orthogonal function
 8 mask identifier that the mobile station is to use on the
 9 Forward Fundamental Channel on the center SR3 frequency.
- 10 **CODE_CHAN_DCCH** - Code channel index for the Dedicated Control Channel.
- 11 If FOR_RC is set to a Radio Configuration associated with
 12 Spreading Rate 1, the base station shall set this field to the
 13 code channel index (see [2]), in the range of 1 to 127
 14 inclusive, that the mobile station is to use on the Dedicated
 15 Control Channel associated with this pilot. If FOR_RC is set to
 16 a Radio Configuration associated with Spreading Rate 3, the
 17 base station shall set this field to the code channel index in
 18 the range of 1 to 255 inclusive, that the mobile station is to
 19 use on the Dedicated Control Channel on the center SR3
 20 frequency.
- 21 If Radio Configuration 3 or 5 (see [2]) is used, the base station
 22 shall set this field in the range 1 to 63 inclusive. If Radio
 23 Configuration 4, 6 or 8 is used, the base station shall set this
 24 field in the range 1 to 127 inclusive. If Radio Configuration 7
 25 or 9 is used, the base station shall set this field in the range 1
 26 to 255 inclusive.
- 27 **QOF_MASK_ID_DCCH** - Quasi-Orthogonal Function Mask Identifier for the Dedicated
 28 Control Channel.
- 29 If FOR_RC is set to a Radio Configuration associated with
 30 Spreading Rate 1, the base station shall set this field to the
 31 quasi-orthogonal function mask identifier (see [2]) that the
 32 mobile station is to use on the Forward Dedicated Control
 33 Channel associated with this pilot. If FOR_RC is set to a
 34 Radio Configuration associated with Spreading Rate 1, the
 35 base station shall set this field to the quasi-orthogonal
 36 function mask identifier that the mobile station is to use on
 37 the Forward Dedicated Control Channel on the center SR3
 38 frequency.
- 39 **3X_FCH_INFO_INCL** - 3X Fundamental Channel information included indicator.
- 40 If the 3X Fundamental Channel information is included, the
 41 base station shall set this field to '1'; otherwise, the base
 42 station shall set this field to '0'.
- 43 The base station shall include NUM_PILOTS plus one occurrences of the following record if
 44 3X_FCH_INFO_INCL is set to '1'. The base station shall use the same order for the
 45 following fields as is used for the PILOT_PN fields listed in this message.
- 46 **3X_FCH_LOW_INCL** - FCH code channel on the lowest SR3 frequency included
 47 indicator.

1 If the Fundamental Channel on the lowest SR3 frequencies
2 has a different code channel than the Fundamental Channel
3 on the center SR3 frequency, the base station shall set this
4 field to '1'; otherwise, the base station shall set this field to '0'.

5 QOF_MASK_ID_FCH_LOW - QOF index for the Fundamental Channel on the lowest
6 SR3 frequency.

7 If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
8 this field; otherwise, the base station shall set this field as
9 follows:

10 The base station shall set this field to the index of the Quasi-
11 orthogonal function (see [2]) corresponding to the QOF index
12 for the Fundamental Channel on the lowest SR3 frequency.

13 CODE_CHAN_FCH_LOW - Code channel for the Fundamental Channel on the lowest
14 SR3 frequency.

15 If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
16 this field; otherwise, the base station shall set this field as
17 follows:

18 The base station shall set this field to the code channel index
19 (see [2]) that the mobile station is to use on the Fundamental
20 Channel on the lowest SR3 frequency. If Radio Configuration
21 6 or 8 is used, the base station shall set this field in the range
22 1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
23 base station shall set this field in the range 1 to 255 inclusive.

24 3X_FCH_HIGH_INCL - FCH code channel on the highest SR3 frequency included
25 indicator.

26 If the Fundamental Channel on the highest SR3 frequencies
27 has a different code channel than the Fundamental Channel
28 on the center SR3 frequency, the base station shall set this
29 field to '1'; otherwise, the base station shall set this field to '0'.

30 QOF_MASK_ID_FCH_HIGH - QOF index for the Fundamental Channel on the highest
31 SR3 frequency.

32 If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
33 this field; otherwise, the base station shall set this field as
34 follows:

35 The base station shall set this field to the index of the Quasi-
36 orthogonal function (see [2]) corresponding to the QOF index
37 for the Fundamental Channel on the highest SR3 frequency.

38 CODE_CHAN_FCH_HIGH - Code channel for the Fundamental Channel on the highest
39 SR3 frequency.

40 If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
41 this field; otherwise, the base station shall set this field as
42 follows:

- 1 The base station shall set this field to the code channel index
2 (see [2]) that the mobile station is to use on the Fundamental
3 Channel on the highest SR3 frequency. If Radio
4 Configuration 6 or 8 is used, the base station shall set this
5 field in the range 1 to 127 inclusive. If Radio Configuration 7
6 or 9 is used, the base station shall set this field in the range 1
7 to 255 inclusive.
- 8 3X_DCCH_INFO_INCL - 3X Dedicated Control Channel information included indicator.
9 If the 3X Dedicated Control Channel information is included,
10 the base station shall set this field to '1'; otherwise, the base
11 station shall set this field to '0'.
- 12 The base station shall include NUM_PILOTS plus one occurrences of the following record if
13 3X_DCCH_INFO_INCL is set to '1'. The base station shall use the same order for the
14 following fields as is used for the PILOT_PN fields listed in this message.
- 15 3X_DCCH_LOW_INCL - DCCH code channel on the lowest SR3 frequency included
16 indicator.
17 If the Dedicated Control Channel on the lowest SR3
18 frequencies has a different code channel than the Dedicated
19 Control Channel on the center SR3 frequency, the base
20 station shall set this field to '1'; otherwise, the base station
21 shall set this field to '0'.
- 22 QOF_MASK_ID_DCCH_LOW - QOF index for the Dedicated Control Channel on the
23 lowest SR3 frequency.
24 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
25 omit this field; otherwise, the base station shall set this field
26 as follows:
27 The base station shall set this field to the index of the Quasi-
28 orthogonal function (see [2]) corresponding to the QOF index
29 for the Dedicated Control Channel on the lowest SR3
30 frequency.
- 31 CODE_CHAN_DCCH_LOW - Code channel for the Dedicated Control Channel on the
32 lowest SR3 frequency.
33 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
34 omit this field; otherwise, the base station shall set this field
35 as follows:
36 The base station shall set this field to the code channel index
37 (see [2]) that the mobile station is to use on the Dedicated
38 Control Channel on the lowest SR3 frequency. If Radio
39 Configuration 6 or 8 is used, the base station shall set this
40 field in the range 1 to 127 inclusive. If Radio Configuration 7
41 or 9 is used, the base station shall set this field in the range 1
42 to 255 inclusive.
- 43 3X_DCCH_HIGH_INCL - DCCH code channel on the highest SR3 frequency included
44 indicator.

1 If the Dedicated Control Channel on the highest SR3
2 frequencies has a different code channel than the Dedicated
3 Control Channel on the center SR3 frequency, the base
4 station shall set this field to '1'; otherwise, the base station
5 shall set this field to '0'.

6 QOF_MASK_ID_DCCH_HIGH – QOF index for the Dedicated Control Channel on the
7 highest SR3 frequency.

8 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
9 omit this field; otherwise, the base station shall set this field
10 as follows:

11 The base station shall set this field to the index of the Quasi-
12 orthogonal function (see [2]) corresponding to the QOF index
13 for the Dedicated Control Channel on the highest SR3
14 frequency.

15 CODE_CHAN_DCCH_HIGH – Code channel for the Dedicated Control Channel on the
16 highest SR3 frequency.

17 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
18 omit this field; otherwise, the base station shall set this field
19 as follows:

20 The base station shall set this field to the code channel index
21 (see [2]) that the mobile station is to use on the Dedicated
22 Control Channel on the highest SR3 frequency. If Radio
23 Configuration 6 or 8 is used, the base station shall set this
24 field in the range 1 to 127 inclusive. If Radio Configuration 7
25 or 9 is used, the base station shall set this field in the range 1
26 to 255 inclusive.

27 FUNDICATED_BCMC_IND – BCMC on fundicated channel Indicator.

28 If the channel assignment in this message contains a Forward
29 Fundicated Channel used for BCMC transmission, the base
30 station shall set this field to '1'; otherwise, the base station
31 shall set this field to '0'.

32 REV_FCH_ASSIGNED – Reverse FCH channel assigned indicator.

33 If the FUNDICATED_BCMC_IND field is set to '0', the base
34 station shall omit this field; otherwise, the base station shall
35 include this field and set it as follows:

36 If the reverse FCH is assigned in this message, the base
37 station shall set this field to '1'; otherwise, the base station
38 shall set this field to '0'.

39 ADD_PLCM_FOR_FCH_INCL – Additional PLCM for forward FCH included indicator.

40 If the FUNDICATED_BCMC_IND field is set to '0', the base
41 station shall omit this field; otherwise, the base station shall
42 include this field and set it as follows:

43 If the additional PLCM for forward FCH is included in this
44 message, the base station shall set this field to '1'; otherwise,
45 the base station shall set this field to '0'.

- 1 ADD_PLCM_FOR_FCH_TYPE - The Additional Public Long Code Mask for forward FCH
2 type indicator.
- 3 If ADD_PLCM_FOR_FCH_INCL is not included or is included
4 and is set to '0', the base station shall omit this field;
5 otherwise, the base station shall include this field and set it
6 as follows.
- 7 The base station shall set this field to '1' to indicate PLCM
8 specified by the base station. The field value '0' is reserved.
- 9 ADD_PLCM_FOR_FCH_39 - The 39 LSB bits of the additional Public Long Code Mask
10 for forward FCH.
- 11 If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
12 '1', the base station shall include this field and set it to the 39
13 least significant bits of the public long code mask used by the
14 mobile station; otherwise, the base station shall omit this
15 field.
- 16 FOR_CPCCH_INFO_INCL - CPCCH information included indicator.
- 17 If the FUNDICATED_BCNC_IND field is set to '0', the base
18 station shall omit this field; otherwise, the base station shall
19 include this field and set it as follows:
- 20 If the F-CPCCH information is included in this message, the
21 base station shall set this field to '1'; otherwise, the base
22 station shall set this field to '0'.
- 23 If FOR_CPCCH_INFO_INCL field is included and is set to '1', the base station shall include
24 NUM_PILOT plus one occurrences of the following record:
- 25 FOR_CPCCH_WALSH - The Forward Common Power Control Channel Walsh code
26 assignment.
- 27 The base station shall set this field to the Walsh code
28 assignment for the Forward Common Power Control Channel.
- 29 FOR_CPCSCH - The Forward Common Power Control Channel Subchannel.
- 30 The base station shall set this field to the Forward Common
31 Power Control Channel Subchannel associated with this base
32 station.
- 33 RESERVED - Reserved bits.
- 34 The base station shall add reserved bits as needed in order to
35 make the total length of the fields after the preceding
36 CH_RECORD_LEN field through this RESERVED field equal
37 to an integer number of octets. The base station shall set
38 these bits to '0'.
- 39 If the ASSIGN_MODE field is set to '101', the base station shall include the following fields:
- 40 FREQ_INCL - Frequency included indicator.
- 41 If the BAND_CLASS and CDMA_FREQ fields are included in
42 this assignment record, the base station shall set this bit to
43 '1'. If the BAND_CLASS and CDMA_FREQ fields are not
44 included in this assignment record, the base station shall set
45 this bit to '0'.

1	BAND_CLASS	-	Band class.
2			If the <code>FREQ_INCL</code> bit is set to '1', the base station shall set
3			this field to the CDMA band class, as specified in [30],
4			corresponding to the CDMA frequency assignment for the
5			CDMA Channel containing the Forward Traffic Channel(s) the
6			mobile station is to use. If the <code>FREQ_INCL</code> bit is set to '0', the
7			base station shall omit this field.
8	CDMA_FREQ	-	Frequency assignment.
9			If the <code>FREQ_INCL</code> bit is set to '0', the base station shall omit
10			this field; otherwise, the base station shall set this field as
11			follows:
12			If the <code>FREQ_INCL</code> bit is set to '1', the base station shall set
13			this field to the CDMA Channel number, in the specified
14			CDMA band class, corresponding to the CDMA frequency
15			assignment for the CDMA Channel containing the Forward
16			Traffic Channel(s) the mobile station is to use.
17	BYPASS_ALERT_ANSWER	-	Bypass alert indicator.
18			If the mobile station is to bypass the <i>Waiting for Order</i>
19			<i>Substate</i> and the <i>Waiting for Mobile Station Answer Substate</i> ,
20			the base station shall set this field to '1'; otherwise, the base
21			station shall set this field to '0'.
22	GRANTED_MODE	-	Granted mode.
23			The base station shall set this field to '01' to indicate that the
24			mobile station is to use an initial service configuration
25			consisting of the default multiplex option that is derived from
26			the radio configuration corresponding to Table 3.7.2.3.2.21-3,
27			and to indicate that service negotiation may take place before
28			the base station sends one of the following messages: <i>Service</i>
29			<i>Connect Message</i> , <i>General Handoff Direction Message</i> (with
30			SCR) or <i>Universal Handoff Direction Message</i> (with SCR).
31			The base station shall set this field to '10' to indicate that the
32			mobile station is to use an initial service configuration
33			consisting of the default multiplex option that is derived from
34			the radio configuration corresponding to Table 3.7.2.3.2.21-3,
35			and to indicate that service negotiation is not to take place
36			before the base station sends one of the following messages:
37			<i>Service Connect Message</i> , <i>General Handoff Direction Message</i>
38			(with SCR) or <i>Universal Handoff Direction Message</i> (with
39			SCR).
40			The base station shall set this field to '11' to instruct the
41			mobile station to use the stored service configuration (that is,
42			both the <i>Service Configuration information record</i> and the
43			<i>Non-negotiable Service Configuration information record</i>)
44			The base station shall not set this field to '00'.

- 1 SR_ID_RESTORE - Service reference identifier to be restored.
2
3 If the GRANTED_MODE field is not set to '11', the base
4 station shall omit this field; otherwise, the base station shall
5 include this field and set it as follows:
6
7 o If the mobile station is to restore all the service option
8 connections from the stored service configuration, the
9 base station shall set this field to '111'.
10
11 o If the mobile station is to restore more than one but not
12 all the service option connections from the stored service
13 configuration, the base station shall set this field to '000'.
14
15 o Otherwise, the base station shall set this field to the
16 service reference identifier corresponding to the service
17 option connection to be restored.
- 14 SR_ID_RESTORE_BITMAP - Bitmap of service reference identifiers to be restored.
15
16 If the SR_ID_RESTORE field is included and set to '000', the
17 base station shall include this field and set it as follows;
18 otherwise, the base station shall omit this field.
19
20 This field consists of the subfields defined in Table
21 3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
22 indicate that the mobile station is to restore the service option
23 connection of the corresponding service reference identifier;
24 otherwise, the base station shall set the subfield to '0'.
- 23 FRAME_OFFSET - Frame offset.
24
25 The Forward and Reverse Traffic Channel frames are delayed
26 FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).
27
28 The base station shall set this field to the Forward and
29 Reverse Traffic Channel frame offset (the frame offset does not
30 apply to the F-PDCH).
- 29 ENCRYPT_MODE - Message encryption mode.
30
31 The base station shall set this field to the ENCRYPT_MODE
32 value shown in Table 3.7.2.3.2.8-2 corresponding to the
33 encrypting mode that is to be used for signaling messages, as
34 specified in 2.3.12.2.
- 34 D_SIG_ENCRYPT_MODE - Dedicated channel encryption mode indicator.
35
36 If ENCRYPT_MODE is set to '11', the base station shall include
37 this field and shall set it to the dedicated channel signaling
38 message mode, as shown in Table 3.7.4.5-1; otherwise the base
39 station shall omit this field.
- 39 ENC_KEY_SIZE - Encryption key size indication.
40
41 If ENCRYPT_MODE is set to '10' or '11', the base station shall
42 include this field and shall set it to the encryption key size, as
43 shown in Table 3.7.4.5-2; otherwise, the base station shall omit
44 this field.

1	C_SIG_ENCRYPT_MODE_INCL	-	Common channel signaling encryption mode included
2			indicator.
3			If common channel signaling encryption information is
4			included in this message, the base station shall set this field
5			to '1'; otherwise, the base station shall set this field to '0'.
6	C_SIG_ENCRYPT_MODE	-	Common channel signaling encryption mode indicator.
7			If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
8			shall include this field and shall set it to the common channel
9			signaling encryption mode, as shown in Table 3.7.4.5-1;
10			otherwise, the base station shall omit this field.
11	MSG_INT_INFO_INCL	-	Message integrity information included indicator
12			The base station shall set this field to '1' if the base station
13			supports message integrity; otherwise, the base station shall
14			set this field to '0'. If this message is to include a MACI in the
15			LAC Layer, the base station shall set this field to '1'.
16	CHANGE_KEYS	-	Change keys indicator
17			If MSG_INT_INFO_INCL is set to '0', the base station shall
18			omit this field; otherwise, the base station shall include this
19			field and set it as follows:
20			The base station shall set this field to '0' to command the
21			mobile station not to update the encryption key and integrity
22			key. The base station shall set this field to '1' to command the
23			mobile station to update the encryption key and integrity key
24			to the latest being generated.
25	USE_UAK	-	Use UAK indicator
26			If MSG_INT_INFO_INCL is set to '0', the base station shall
27			omit this field; otherwise, the base station shall include this
28			field and set it as follows:
29			If the base station receives an authentication vector with a
30			UAK, the base station shall set this field to '1' to indicate that
31			the mobile station is to use UMAC; otherwise, the base station
32			shall set this field to '0' to indicate that the mobile station is
33			to use MAC-I.
34	PLCM_TYPE_INCL	-	The Public Long Code Mask type included indicator.
35			The base station shall set this field to '1' if the base station
36			include PLCM_TYPE in the message; otherwise, the base
37			station shall set this field to '0'.
38	PLCM_TYPE	-	The Public Long Code Mask type indicator.
39			If PLCM_TYPE_INCL is set to '0', the base station shall omit
40			this field; otherwise, the base station shall include this field
41			and set it as follows.
42			The base station shall set this field to the corresponding
43			Public Long Code Mask type as specified in Table
44			3.7.2.3.2.21-5.

- 1 PLCM_TYPE '0010' shall not be used when the mobile station
2 is not in its home country (i.e., the MCC of the mobile station
3 is different from the MCC of this base station).
- 4 PLCM_TYPE '0011' shall not be used when the mobile station
5 is not in its home network (i.e., the MCC or MNC of the mobile
6 station is different from the MCC or MNC of this base station).
- 7 PLCM_39 - The 39 LSB bits of the Public Long Code Mask.
- 8 If PLCLM_TYPE is not set to '0001', the base station shall omit
9 this field; otherwise, the base station shall include this field
10 and set it to the 39 least significant bits of the public long
11 code mask as defined in 3.6.4.1.10.
- 12 RLGAIN_ADJ - Reverse Traffic Channel power .
- 13 If DIRECT_CH_ASSIGN_IND field is set to '0', the base station
14 shall set this field to adjust the initial Traffic Channel
15 transmission power relative to the Access Channel or
16 Enhanced Access Channel transmission power. The base
17 station shall set this field as a two's complement signed
18 binary number, in units of 1 dB.
- 19 If DIRECT_CH_ASSIGN_IND field is set to '1', the base station
20 shall set this field to adjust the initial Traffic Channel
21 transmission power. The base station shall set this field as a
22 two's complement signed binary number, in units of 1 dB.
- 23 NUM_PILOTS - Number of pilots in the Active Set.
- 24 The base station shall set this field to number of pilots that
25 are to be in the mobile station's Active Set on the Traffic
26 Channel minus one. The base station shall set this field to
27 the value in the range 0 to $N_{6m}-1$ inclusive.
- 28 EXT_CH_IND - Extended Channel Indicator.
- 29 The base station shall set this field as shown in
30 Table 2.7.1.3.2.4-11.
- 31 FPC_SUBCHAN_GAIN - Forward Power Control Subchannel relative gain.
- 32 If EXT_CH_IND signals the allocation of a F-FCH, or a F-
33 DCCH, the base station shall include this field and shall set it
34 as follows; otherwise, the base station shall omit this field.
- 35 The base station shall set this field to the power level of the
36 forward link power control subchannel relative to the power
37 level of 20 ms frames at a 9600 bps or 14400 bps rate on the
38 Forward Fundamental Channel or the Forward Dedicated
39 Control Channel indicated by FPC_PRI_CHAN_S.
- 40 The base station shall set the value in units of 0.25 dB.
- 41 REV_FCH_GATING_MODE - Reverse eighth gating mode indicator.
- 42 If EXT_CH_IND signals the allocation of R-FCH, the base
43 station shall include this field and shall set it as follows;
44 otherwise, the base station shall omit this field.

1 The base station shall set this field to '1' if the mobile station
2 is allowed to perform the reverse eighth gating mode where
3 the 1/8th rate frames on the Reverse Fundamental Channel
4 are gated off for 10 ms per frame (see [2]); otherwise, the base
5 station shall set this field to '0'.

6 The base station shall not set this field to '1' if
7 REV_FCH_GATING_REQ included in the *Origination Message*
8 or *Page Response Message* is set to '0'.

9 REV_PWR_CNTL_DELAY_INCL - Reverse power control delay included indicator.

10 If REV_FCH_GATING_MODE is not included, or is included
11 and set to '0', then the base station shall omit this field;
12 otherwise, the base station shall include this field and set it
13 as follows.

14 The base station shall set this field to '1' if
15 REV_PWR_CNTL_DELAY is included in this message;
16 otherwise, the base station shall set this field to '0'.

17 If the REV_FCH_GATING_MODE field in this message is set to
18 '1' and the REV_PWR_CNTL_INCL field in the *Extended*
19 *System Parameters Message* is set to '0', the base station shall
20 set this field to '1'.

21 REV_PWR_CNTL_DELAY - The reverse power control delay.

22 If REV_PWR_CNTL_DELAY_INCL is not included, or is
23 included and set to '0', then the base station shall omit this
24 field; otherwise, the base station shall include this field and
25 set it as follows:

26 The base station shall set this field to the closed-loop reverse
27 power control delay minus one (the closed-loop reverse power
28 control delay is the time between the end of a gated-on
29 reverse PCG and the beginning of the reverse PCG where the
30 corresponding feedback is sent on the Forward Power Control
31 Subchannel, see [2]), in units of 1.25 ms.

32 FULL_CI_FEEDBACK_IND - Full C/I feedback rate indicator.

33 If the mobile station is to send full C/I feedback every 1.25
34 ms, the base station shall set this field to '1'. If the mobile
35 station is to transmit full C/I feedback every 20 ms, the base
36 station shall set this field to '0'.

37 FOR_CPCCH_RATE - The Forward Common Power Control Channel Rate.

38 If EXT_CH_IND equals '01000', the base station shall include
39 this field and shall set it as follows; otherwise, the base
40 station shall omit this field.

41 The base station shall set this field to the rate of the Forward
42 Common Power Control Channel as specified in Table
43 3.7.2.3.2.21-12.

Table 3.7.2.3.2.21-12 Rate of the Forward Common Power Control Channel.

FOR_CPCCH_RATE (binary)	Rate of the F-CPCCH (Hz)
00	800
01	400
10	200
11	Reserved

FOR_CPCCH_UPDATE_RATE - Forward Common Power Control update rate.

If EXT_CH_IND equals '01000', the base station shall include this field and shall set it as follows; otherwise, the base station shall omit this field.

The base station shall set this field to the update rate of the Forward Common Power Control as specified in Table 3.7.2.3.2.21-13 (see [2]).

Table 3.7.2.3.2.21-13 CPCCH/RCCH Update rate.

Encoded update rate (binary)	CPCCH/RCCH Update rate (Hz)
00	800
01	400
10	200
11	Reserved

REV_CQICH_FRAME_OFFSET - Reverse Channel Quality Indicator Channel Frame Offset.

The C/I feedback reports on the Reverse Channel Quality Indicator Channel are delayed REV_CQICH_FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).

The base station shall set this field to the Reverse Channel Quality Indicator Channel frame offset.

REV_CQICH_REPS - Reverse Channel Quality Indicator Channel repetition factor.

The base station shall set this field according to Table 3.7.3.3.2.49-1.

REV_ACKCH_REPS - Reverse Acknowledgment Channel repetition factor.

The base station shall set this field according to Table 3.7.3.3.2.49-2.

FOR_PDCH_RC - Forward Packet Data Channel radio configuration.

The base station shall set this field to the radio configuration (see Table 3.7.2.3.2.21-4) to be used by the mobile station on the Forward Packet Data Channel.

REV_PDCH_RC - Reverse Packet Data Channel radio configuration.

- 1 If EXT_CH_IND signals the allocation of a R-PDCH, the base
 2 station shall include this field and shall set it as follows;
 3 otherwise, the base station shall omit this field.
- 4 The base station shall set this field to the radio configuration
 5 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
 6 the Reverse Packet Data Channel.
- 7 FOR_FCH_DCCH_RC - Forward Fundamental Channel or Forward Dedicated Control
 8 Channel radio configuration.
- 9 If EXT_CH_IND signals the allocation of a F-FCH, or a F-
 10 DCCH, the base station shall include this field and shall set it
 11 as follows; otherwise, the base station shall omit this field.
- 12 The base station shall set this field to the radio configuration
 13 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
 14 the Forward Fundamental Channel, or on the Forward
 15 Dedicated Control Channel, or on both.
- 16 The initial service configuration consisting of the default
 17 multiplex option that is to be used by the mobile station is
 18 derived from the radio configuration corresponding to Table
 19 3.7.2.3.2.21-3.
- 20 REV_FCH_DCCH_RC - Reverse Fundamental Channel or Reverse Dedicated Control
 21 Channel radio configuration.
- 22 If EXT_CH_IND signals the allocation of a R-FCH, or a R-
 23 DCCH, the base station shall include this field and shall set it
 24 as follows; otherwise, the base station shall omit this field.
- 25 The base station shall set this field to the radio configuration
 26 (see Table 3.7.2.3.2.21-4) to be used by the mobile station on
 27 the Reverse Fundamental Channel, or on the Reverse
 28 Dedicated Control Channel, or on both.
- 29 The initial service configuration consisting of the default
 30 multiplex option that is to be used by the mobile station is
 31 derived from the radio configuration corresponding to Table
 32 3.7.2.3.2.21-3.
- 33 FPC_PRI_CHAN - Power Control Subchannel indicator.
- 34 If EXT_CH_IND signals the allocation of a F-FCH and a F-
 35 DCCH, the base station shall set this field as follows;
 36 otherwise, the base station shall omit this field.
- 37 The base station shall set this field to '0' if the mobile station
 38 is to perform the primary inner loop estimation on the
 39 received Forward Fundamental Channel. The base station
 40 shall set this field to '1' if the mobile station is to perform the
 41 primary inner loop estimation on the received Forward
 42 Dedicated Control Channel.
- 43 If the F-CPCCH is assigned, the base station shall multiplex
 44 the Power Control Subchannel on the F-CPCCH; otherwise:

- 1 If this field is set to '0', the base station shall multiplex the
 2 Power Control Subchannel on the Forward Fundamental
 3 Channel; otherwise, the base station shall multiplex the
 4 Power Control Subchannel on the Forward Dedicated Control
 5 Channel.
- 6 FPC_FCH_INIT_SETPT - Initial Fundamental Channel outer loop E_b/N_t setpoint.
 7 If EXT_CH_IND signals the allocation of a F-FCH, the base
 8 station shall include this field and shall set it as follows;
 9 otherwise, the base station shall omit this field.
 10 The base station shall set this field to initial Fundamental
 11 Channel outer loop E_b/N_t setpoint, in units of 0.125 dB.
- 12 FPC_FCH_FER - Fundamental Channel target Frame Error Rate.
 13 If EXT_CH_IND signals the allocation of a F-FCH, the base
 14 station shall include this field and shall set it as follows;
 15 otherwise it shall be omitted.
 16 The base station shall set this field to the target Frame Error
 17 Rate on the Forward Fundamental Channel, as specified in
 18 Table 3.7.3.3.2.25-2.
- 19 FPC_FCH_MIN_SETPT - Minimum Fundamental Channel Outer Loop E_b/N_t setpoint.
 20 If EXT_CH_IND signals the allocation of a F-FCH, the base
 21 station shall include this field and shall set it as follows;
 22 otherwise it shall be omitted.
 23 The base station shall set this field to minimum Fundamental
 24 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 25 FPC_FCH_MAX_SETPT - Maximum Fundamental Channel Outer Loop E_b/N_t setpoint.
 26 If EXT_CH_IND signals the allocation of a F-FCH, the base
 27 station shall include this field and shall set it as follows;
 28 otherwise it shall be omitted.
 29 The base station shall set this field to maximum Fundamental
 30 Channel Outer Loop E_b/N_t setpoint, in units of 0.125 dB.
- 31 FPC_DCCH_INIT_SETPT - Initial Dedicated Control Channel outer loop E_b/N_t setpoint.
 32 If EXT_CH_IND signals the allocation of a F-DCCH, the base
 33 station shall include this field and shall set it as follows;
 34 otherwise it shall be omitted.
 35 The base station shall set this field to initial Dedicated
 36 Control Channel outer loop E_b/N_t setpoint, in units of 0.125
 37 dB.
- 38 FPC_DCCH_FER - Dedicated Control Channel target Frame Error Rate.
 39 If EXT_CH_IND signals the allocation of a F-DCCH, the base
 40 station shall include this field and shall set it as follows;
 41 otherwise it shall be omitted.
 42 The base station shall set this field to the target Frame Error
 43 Rate on the Dedicated Control Channel, as specified in Table
 44 3.7.3.3.2.25-2.

- 1 FPC_DCCH_MIN_SETPT - Minimum Dedicated Control Channel Outer Loop E_b/N_t
2 setpoint.
3 If EXT_CH_IND signals the allocation of a F-DCCH, the base
4 station shall include this field and shall set it as follows;
5 otherwise it shall be omitted.
6 The base station shall set this field to minimum Dedicated
7 Control Channel Outer Loop E_b/N_t setpoint, in units of 0.125
8 dB.
- 9 FPC_DCCH_MAX_SETPT - Maximum Dedicated Control Channel Outer Loop E_b/N_t
10 setpoint.
11 If EXT_CH_IND signals the allocation of a F-DCCH, the base
12 station shall include this field and shall set it as follows;
13 otherwise it shall be omitted.
14 The base station shall set this field to maximum Dedicated
15 Control Channel Outer Loop E_b/N_t setpoint, in units of 0.125
16 dB.
- 17 PDCH_GROUP_IND_INCL- Packet Data Channel Group Indicator included flag.
18 The base station shall set this field to '1' if the
19 PDCH_GROUP_IND fields are included; otherwise, the base
20 station shall set this field to '0'.
21 If this field is set to '0', the mobile station is to use
22 PWR_COMB_IND to determine whether the softer or soft
23 reselection parameters are used when re-pointing between
24 pilots in its Active Set (see [3]).
- 25 FOR_PDCH_PARAMS_INCL - Indicator of the inclusion of Forward Packet Data Channel
26 configuration fields.
27 The base station shall set this field to '1' if the Forward Packet
28 Data Channel configuration fields are included; otherwise, the
29 base station shall set this field to '0'.
- 30 FOR_PDCH_RLGAIN_INCL - Forward Packet Data Channel parameters related to
31 reverse link adjustment gains included indicator.
32 If FOR_PDCH_PARAMS_INCL is omitted, or if it is included and
33 set to '0', the base station shall omit this field; otherwise, the
34 base station shall include this field, and set it as follows.
35 The base station shall set this field to '1' if the following F-
36 PDCH gain related fields are included in this message;
37 otherwise, the base station shall set this field to '0'.
- 38 RLGAIN_ACKCH_PILOT - Reverse Acknowledgment Channel to pilot adjustment gain.
39 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
40 set to '0', the base station shall omit this field; otherwise, the
41 base station shall include this field, and set it as follows.
42 The base station shall set this field to the Reverse
43 Acknowledgment Channel to pilot adjustment gain expressed
44 as a two's complement value in units of 0.125 dB (see [2]).

- 1 RLGAIN_CQICH_PILOT - Reverse Channel Quality Indicator Channel to pilot
2 adjustment gain.
- 3 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
4 set to '0', the base station shall omit this field; otherwise, the
5 base station shall include this field, and set it as follows.
- 6 The base station shall set this field to the Reverse Channel
7 Quality Indicator Channel to pilot adjustment gain expressed
8 as a two's complement value in units of 0.125 dB (see [2]).
- 9 NUM_SOFT_SWITCHING_FRAMES - Number of frames for R-CQICH soft switching.
- 10 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
11 shall omit this field; otherwise, the base station shall include
12 this field and set it as follows:
- 13 The base station shall set this field to the duration of the cell
14 switching period, in units of 20 ms, minus one, during which
15 the mobile station is to transmit the cell switch sequence on
16 the R-CQICH channel when it switches between two pilots
17 which are in different groups.
- 18 If PDCH_GROUP_IND_INCL is set to '1', these groups are
19 indicated by PDCH_GROUP_IND; otherwise, they are
20 indicated by PWR_COMB_IND.
- 21 NUM_SOFTER_SWITCHING_FRAMES - Number of frames for R-CQICH softer
22 switching.
- 23 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
24 shall omit this field; otherwise, the base station shall include
25 this field and set it as follows:
- 26 The base station shall set this field to the duration of the cell
27 switching period, in units of 20 ms, minus one, during which
28 the mobile station is to transmit the cell switch sequence on
29 the R-CQICH channel when it switches between two pilots
30 which are in the same group.
- 31 If PDCH_GROUP_IND_INCL is set to '1', these groups are
32 indicated by PDCH_GROUP_IND; otherwise, they are
33 indicated by PWR_COMB_IND.
- 34 NUM_SOFT_SWITCHING_SLOTS - Number of slots per frame for R-CQICH soft switching.
- 35 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
36 shall omit this field; otherwise, the base station shall include
37 this field and set it as follows:
- 38 The base station shall set this field to the duration of the cell
39 switching slots within a switching frame, in units of 1.25 ms
40 as specified in Table 3.7.2.3.2.21-10, during which the mobile
41 station is to transmit the cell switch indication by using
42 Walsh cover of target on the R-CQICH when it switches
43 between two pilots which are in different groups.

1 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 2 indicated by PDCH_GROUP_IND; otherwise, they are
 3 indicated by PWR_COMB_IND.

4
 5

Table 3.7.2.3.2.21-10 Number of slots per frame for R-CQICH switching.

NUM_SOFT/SOFTER _SWITCHING_SLOTS (binary)	Number of slots per frame for R-CQICH switching.
00	2
01	4
10	7
11	Reserved

6

7 NUM_SOFTER_SWITCHING_SLOTS - Number of slots per frame for R-CQICH softer
 8 switching.

9 If FOR_PDCH_PARMS_INCL is equal to '0', the base station
 10 shall omit this field; otherwise, the base station shall include
 11 this field and set it as follows:

12 The base station shall set this field to the duration of the cell
 13 switching slots within a switching frame, in units of 1.25 ms
 14 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 15 station is to transmit the cell switch indication by using
 16 Walsh cover of target on the R-CQICH when it switches
 17 between two pilots which are in the same group.

18 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 19 indicated by PDCH_GROUP_IND; otherwise, they are
 20 indicated by PWR_COMB_IND.

21 CHM_SWITCHING_PARMS_INCL - Control Hold Mode fields included indicator.

22 If FOR_PDCH_PARMS_INCL is equal to '0', the base station
 23 shall omit this field; otherwise, the base station shall include
 24 this field and set it as follows.

25 The base station shall set this field to '1' if the switching
 26 parameters for Control Hold Mode are included; otherwise,
 27 the base station shall set this field to '0'.

28 NUM_SOFT_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH soft
 29 switching while in Control Hold.

30 If CHM_SWITCHING_PARMS_INCL is omitted or equal to '0',
 31 the base station shall omit this field; otherwise, the base
 32 station shall include this field and set it as follows:

1 The base station shall set this field to the duration of the cell
 2 switching period, in units of 20 ms, minus one, during which
 3 the mobile station, while in Control Hold, is to transmit the
 4 cell switch sequence on the R-CQICH when it switches
 5 between two pilots which are in different groups.

6 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 7 indicated by PDCH_GROUP_IND; otherwise, they are
 8 indicated by PWR_COMB_IND.

9 NUM_SOFTEN_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH softer
 10 switching while in Control Hold.

11 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',
 12 the base station shall omit this field; otherwise, the base
 13 station shall include this field and set it as follows:

14 The base station shall set this field to the duration of the cell
 15 switching period, in units of 20 ms, minus one, during which
 16 the mobile station, while in Control Hold, is to transmit the
 17 cell switch sequence on the R-CQICH when it switches
 18 between two pilots which are in the same group.

19 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 20 indicated by PDCH_GROUP_IND; otherwise, they are
 21 indicated by PWR_COMB_IND.

22 NUM_SOFT_SWITCHING_SLOTS_CHM - Number of slots per frame for R-CQICH soft
 23 switching while in Control Hold.

24 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',
 25 the base station shall omit this field; otherwise, the base
 26 station shall include this field and set it as follows:

27 The base station shall set this field to the duration of the cell
 28 switching slots within a switching frame, in units of 1.25 ms
 29 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 30 station, while in Control Hold, is to transmit the cell switch
 31 indication by using Walsh cover of target on the R-CQICH
 32 when it switches between two pilots which are in different
 33 groups.

34 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 35 indicated by PDCH_GROUP_IND; otherwise, they are
 36 indicated by PWR_COMB_IND.

37 NUM_SOFTEN_SWITCHING_SLOTS_CHM - Number of slots per frame for R-CQICH
 38 softer switching while in Control Hold.

39 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',
 40 the base station shall omit this field; otherwise, the base
 41 station shall include this field and set it as follows:

1 The base station shall set this field to the duration of the cell
 2 switching slots within a switching frame, in units of 1.25 ms
 3 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 4 station, while in Control Hold, is to transmit the cell switch
 5 indication by using Walsh cover of target on the R-CQICH
 6 when it switches between two pilots which are in the same
 7 group.

8 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 9 indicated by PDCH_GROUP_IND; otherwise, they are
 10 indicated by PWR_COMB_IND.

11 PDCH_SOFT_SWITCHING_DELAY - F-PDCH Soft Switching Delay.

12 If FOR_PDCH_PARMS_INCL is equal to '0', the base station
 13 shall omit this field; otherwise, the base station shall include
 14 this field and set it as follows:

15 The base station shall set this field to the minimum
 16 interruption seen by the mobile station, in units of 10 ms,
 17 minus one, when the mobile station is to transmit the cell
 18 switch sequence on the R-CQICH when it switches between
 19 two pilots which are in different groups.

20 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 21 indicated by PDCH_GROUP_IND; otherwise, they are
 22 indicated by PWR_COMB_IND.

23 PDCH_SOFTER_SWITCHING_DELAY - F-PDCH Soft Switching Delay.

24 If FOR_PDCH_PARMS_INCL is equal to '0', the base station
 25 shall omit this field; otherwise, the base station shall include
 26 this field and set it as follows:

27 The base station shall set this field to the minimum
 28 interruption seen by the mobile station, in units of 10 ms,
 29 minus one, when the mobile station is to transmit the cell
 30 switch sequence on the R-CQICH when it switches between
 31 two pilots which are in the same group.

32 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 33 indicated by PDCH_GROUP_IND; otherwise, they are
 34 indicated by PWR_COMB_IND.

35 TX_DISABLED_TIMER_INCL - Transmitter disabled timer included flag.

36 The base station shall set this field to '1' if the following
 37 TX_DISABLED_TIMER field is included; otherwise, the base
 38 station shall set this field to '0'.

39 TX_DISABLED_TIMER - Transmitter disabled timer.

40 If TX_DISABLED_TIMER_INCL is equal to '0', the base station
 41 shall omit this field; otherwise, the base station shall include
 42 this field and set it as follows:

- 1 The base station shall set this field to the maximum time, in
 2 units of 20ms, the mobile station's transmitter can be
 3 disabled before the MAC Layer is to perform Forward Packet
 4 Data Channel initialization.(See [3])
- 5 **FOR_GCH_ASSIGNED** - Forward Grant Channel assignment indicator.
 6 If EXT_CH_IND signals the allocation of a R-PDCH, the base
 7 station shall include this field and shall set it as follows;
 8 otherwise, the base station shall omit this field.
 9 The base station shall set this field to '1' if the mobile station
 10 is to listen to grants on the Forward Grant Channel;
 11 otherwise, the base station shall set this field to '0' (see [3]).
- 12 **FOR_RCCH_ASSIGNED** - Forward Rate Control Channel assignment indicator.
 13 If EXT_CH_IND signals the allocation of a R-PDCH, the base
 14 station shall include this field and shall set it as follows;
 15 otherwise, the base station shall omit this field.
 16 The base station shall set this field to '1' if the mobile station
 17 is to follow rate control indicators on the Forward Rate
 18 Control Channel; otherwise, the base station shall set this
 19 field to '0' (see [3]).
- 20 **FOR_RCCH_DRC_MODE** - Forward Rate Control Channel Dedicated Rate Control
 21 Mode Indicator.
 22 If FOR_RCCH_ASSIGNED is omitted, or if it is included and
 23 set to '0', the base station shall omit this field; otherwise, the
 24 base station shall include this field and set it as follows.
 25 The base station shall set this field to '1' if the dedicated rate
 26 control mode is being used on the Forward Rate Control
 27 Channel; otherwise, the base station shall set this field to '0' if
 28 the common rate control mode is being used (see [3]).
- 29 **FOR_RCCH_REPETITION** - Forward Rate Control Subchannel repetition factor.
 30 If FOR_RCCH_ASSIGNED is omitted, or if it is included and
 31 set to '0', the base station shall omit this field; otherwise, the
 32 base station shall include this field and set it as follows.
 33 The base station shall set this field to the subchannel
 34 repetition factor of the Rate Control Subchannel on all pilots.
 35 as specified in Table 3.7.2.3.2.21-11. See [2].

10	8
11	Reserved

FOR_RCCH_UPDATE_RATE - Forward Rate Control Subchannel update rate.

If **FOR_RCCH_ASSIGNED** is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the update rate of the Rate Control Subchannel on all pilots as specified in Table 3.7.2.3.2.21-13. See [2].

FOR_ACKCH_ASSIGNED - Forward Acknowledgment Channel assignment indicator.

If **EXT_CH_IND** signals the allocation of a R-PDCH, the base station shall include this field and shall set it as follows; otherwise, the base station shall omit this field.

The base station shall set this field to '1' if the mobile station is to listen to acknowledgments on the Forward Acknowledgment Channel; otherwise, the base station shall set this field to '0' (see [2] and [3]).

FOR_ACKCH_MODE - Forward Acknowledgment Channel Mode.

If **FOR_ACKCH_ASSIGNED** is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the Acknowledgment Channel operation mode identifier that governs how the Acknowledgment channel is demodulated. See [2] and [3] for the details.

The base station shall set this field to '00' if the mobile station is to attempt the reception of the Forward Acknowledgment Channel from all members of the reduced active set of the Forward Packet Data Channel, and is not to softer combine acknowledgments.

The base station shall set this field to '01' if the mobile station is to attempt reception of the Forward Acknowledgment Channel from all members of the reduced active set, and is to combine the acknowledgments from all sectors in the same combining indicator set.

The base station shall set this field to '10' if the mobile station is to attempt reception of the Forward Acknowledgment Channel from the serving sector only.

1		The base station shall set this field to '11' if the mobile station
2		is to combine the Forward Acknowledgment Channel from all
3		sectors in the same combining indicator set as the serving
4		sector.
5	FOR_ACKCH_COMB_SEL-	Forward Acknowledgment Channel Combining method
6		selector.
7		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
8		set to '0', or if FOR_ACKCH_MODE is omitted, or if it is
9		included and set to '00' or '10', or if PDCH_GROUP_IND_INCL
10		is set to '0', the base station shall omit this field; otherwise, it
11		shall include it and set it as follows.
12		The base station shall set this field to '0' if the mobile station
13		is to use PWR_COMB_IND as a combining indicator when
14		receiving the Forward Acknowledgment Channel; otherwise, it
15		shall set it to '1' if the mobile station is to use
16		PDCH_GROUP_IND as the indicator for combining sectors.
17	REV_PDCH_PARMS_INCL	- Reverse Packet Data Channel related parameters included
18		indicator.
19		If EXT_CH_IND signals the allocation of a R-PDCH, the base
20		station shall include this field and shall set it as follows;
21		otherwise, the base station shall omit this field.
22		The base station shall set this field to '1' if the following R-
23		PDCH parameters are included in this message; otherwise,
24		the base station shall set this field to '0'.
25	REV_PDCH_RLGAIN_INCL	- Reverse Packet Data Channel parameters related to
26		reverse link adjustment gains included indicator.
27		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
28		set to '0', the base station shall omit this field; otherwise, the
29		base station shall include this field, and set it as follows.
30		The base station shall set this field to '1' if the following R-
31		PDCH gain related fields are included in this message;
32		otherwise, the base station shall set this field to '0'.
33	RLGAIN_SPICH_PILOT	- Reverse Secondary Pilot Channel to pilot adjustment gain.
34		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
35		set to '0', the base station shall omit this field; otherwise, the
36		base station shall include this field, and set it as follows.
37		The base station shall set this field to the Reverse Secondary
38		Pilot Channel to pilot adjustment gain expressed as a two's
39		complement value in units of 0.125 dB (see [2]).
40	RLGAIN_REQCH_PILOT	- Reverse Request Channel to pilot adjustment gain.
41		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
42		set to '0', the base station shall omit this field; otherwise, the
43		base station shall include this field, and set it as follows.
44		The base station shall set this field to the Reverse Request
45		Channel to pilot adjustment gain expressed as a two's
46		complement value in units of 0.125 dB (see [2]).

- 1 RLGAIN_PDCCH_PILOT - Reverse Packet Data Control Channel to pilot adjustment
2 gain.
- 3 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
4 set to '0', the base station shall omit this field; otherwise, the
5 base station shall include this field, and set it as follows.
- 6 The base station shall set this field to the Reverse Packet Data
7 Channel to pilot adjustment gain expressed as a two's
8 complement value in units of 0.125 dB (see [2]).
- 9 REV_PDCH_PARAMS_1_INCL - Reverse Packet Data Channel parameters subset included
10 indicator.
- 11 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
12 set to '0', the base station shall omit this field; otherwise, the
13 base station shall include this field, and set it as follows.
- 14 The base station shall set this field to '1' if the following R-
15 PDCH parameters are included in this message; otherwise,
16 the base station shall set this field to '0'.
- 17 REV_PDCH_TABLE_SEL - Reverse Packet Data Channel Table selector.
- 18 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
19 and set to '0', the base station shall omit this field; otherwise,
20 the base station shall include this field, and set it as follows.
- 21 The base station shall set this field to the Reverse Packet Data
22 Channel Table selector (see [2]).
- 23 REV_PDCH_MAX_AUTO_TPR - Reverse Packet Data Channel maximum traffic to pilot
24 ratio for autonomous transmission.
- 25 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
26 and set to '0', the base station shall omit this field; otherwise,
27 the base station shall include this field and set it as follows.
- 28 The base station shall set this field to the maximum traffic to
29 pilot ratio for autonomous transmission on the Reverse
30 Packet Data Channel (see [2] and [3]).
- 31 The base station shall set this field to a value in the range 0 to
32 18 dB inclusive in units of 0.125 dB.
- 33 The base station shall include NUM_PILOTS plus one occurrences of the following record,
34 one for each member of the mobile station's Active Set on the Traffic Channel.
- 35 PILOT_PN - Pilot PN sequence offset index.
- 36 The base station shall set this field to the pilot PN sequence
37 offset for this pilot in units of 64 PN chips.
- 38 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
- 39 The base station shall set this field to '1' if additional pilot
40 information listed in PILOT_REC_TYPE and RECORD_LEN
41 fields are included. The base station shall set this field to '0'
42 if the corresponding pilot is the common pilot and there is no
43 additional pilot information included.
- 44 PILOT_REC_TYPE - Pilot record type.

- 1 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 2 set this field to the PILOT_REC_TYPE value shown in Table
 3 3.7.2.3.2.21-9 corresponding to the type of Pilot Record
 4 specified by this record.
- 5 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 6 omit this field.
- 7 RECORD_LEN - Pilot record length.
- 8 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 9 set this field to the number of octets in the type-specific fields
 10 of this pilot record.
- 11 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 12 omit this field.
- 13 Type-specific fields - Pilot record type-specific fields.
- 14 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 15 include type-specific fields based on the PILOT_REC_TYPE of
 16 this pilot record as described in 3.7.6.1.
- 17 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 18 omit this field.
- 19 FOR_PDCH_INCL - Forward Packet Data Channel assignment included indicator.
- 20 The base station shall set this field to '1' if the MS is assigned
 21 resources on the F-PDCH channel; otherwise, the base station
 22 shall set this field to '0'. This field shall be set to '1' for at least
 23 one of the pilots included in this message.
- 24 WALSH_TABLE_ID - The index of the Walsh Table used.
- 25 If FOR_PDCH_PARAMS_INCL is set to '1', and
 26 FOR_PDCH_INCL is set to '1', the base station shall include
 27 this field and set it as follows; otherwise, the base station
 28 shall omit this field.
- 29 The base station shall set this field to the index of the Walsh
 30 Table being used by the Packet Data Channel. (See [3]).
- 31 NUM_PDCCH - The number of Packet Data Control Channels supported.
- 32 If FOR_PDCH_PARAMS_INCL is set to '1', and
 33 FOR_PDCH_INCL is set to '1', the base station shall include
 34 this field and set it as follows; otherwise, the base station
 35 shall omit this field.
- 36 The base station shall set this field to '000' if the pilot
 37 supports one Packet Data Control Channel. The base station
 38 shall set this field to '001' if the pilot supports two Packet
 39 Data Control Channels. The base station shall not set this
 40 field to any other value.
- 41 The base station shall include *NUM_PDCCH+1* occurrences of the following one-field record:

1	FOR_PDCCH_WALSH	-	Forward Packet Data Control Channel Walsh code
2			assignment.
3			If FOR_PDCH_PARAMS_INCL is set to '1', and
4			FOR_PDCH_INCL is set to '1', the base station shall include
5			this field and set it as follows; otherwise, the base station
6			shall omit this field.
7			The base station shall set this field to the Walsh code
8			assignment for the Forward Packet Data Control Channel.
9			If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
10			shall be included first, followed by the Walsh code for
11			PDCCH1
12	MAC_ID	-	Medium Access Control index.
13			If FOR_PDCH_INCL is set to '0', the base station shall omit
14			this field; otherwise, the base station shall include this field
15			and set it as follows:
16			The base station shall set this field to the MAC index assigned
17			to the mobile station by this pilot.
18			The base station shall set this field to an integer value larger
19			than 63.
20	REV_CQICH_COVER	-	Reverse Channel Quality Indicator Channel cover.
21			If FOR_PDCH_INCL is set to '0', the base station shall omit
22			this field; otherwise, the base station shall include this field
23			and set it as follows:
24			The base station shall set this field to the index of the R-
25			CQICH cover associated with this pilot (See [2]).
26	FOR_CPCCH_WALSH	-	The Forward Common Power Control Channel Walsh code
27			assignment.
28			If EXT_CH_IND signals the allocation of a F-CPCCH, and
29			either of the following conditions is true:
30		-	EXT_CH_IND signals the allocation of a F-FCH or a F-
31			DCCH
32		-	all of the following conditions are true:
33		+	FOR_PDCH_INCL is set to '1'
34		+	EXT_CH_IND does not signal allocation of a F-FCH
35		+	EXT_CH_IND does not signal allocation of a F-DCCH
36			the base station shall include this field and shall set it as
37			follows; otherwise, the base station shall omit this field
38			The base station shall set this field to the Walsh code
39			assignment for the Forward Common Power Control Channel.

- 1 FOR_CPCSCH - The Forward Common Power Control Channel Subchannel.
 2 If EXT_CH_IND signals the allocation of a F-CPCCH, and
 3 either of the following conditions is true:
 4 - EXT_CH_IND signals the allocation of a F-FCH or a F-
 5 DCCH
 6 - all of the following conditions are true:
 7 + FOR_PDCH_INCL is set to '1'
 8 + EXT_CH_IND does not signal allocation of a F-FCH
 9 + EXT_CH_IND does not signal allocation of a F-DCCH
 10 the base station shall include this field and shall set it as
 11 follows; otherwise, the base station shall omit this field.
 12 The base station shall set this field to the Forward Common
 13 Power Control Channel Subchannel associated with this base
 14 station.
 15 If FOR_CPCCH_RATE is omitted, or if it is included and set to
 16 '00', the base station shall set this field to a value in the range
 17 0 to 23 inclusive. If FOR_CPCCH_RATE is included and set
 18 set to '01', the base station shall set this field to a value in the
 19 range 0 to 47 inclusive. If FOR_CPCCH_RATE is included and
 20 set set to '10', the base station shall set this field to a value in
 21 the range 0 to 95 inclusive.
- 22 PWR_COMB_IND - Power control symbol combining indicator.
 23 If this pilot will carry the same closed-loop power control
 24 subchannel bits as that of the previous pilot in this message,
 25 the base station shall set this field to '1'; otherwise, the base
 26 station shall set this field to '0'. The base station shall set
 27 this field to '0' in the first record in the pilot list.
- 28 PDCH_GROUP_IND - Packet Data Channel Group Indicator.
 29 If PDCH_GROUP_IND_INCL is set to '0', the base station shall
 30 omit this field; otherwise, the base station shall include this
 31 field and set it as follows.
 32 If the mobile station is to use the softer reselection
 33 parameters when re-pointing between this pilot and the
 34 previous pilot that has a F-PDCH assigned to this mobile
 35 station in this message (i.e. FOR_PDCH_INCL is set to '1'), the
 36 base station shall set this field to '1' (see [3]).
 37 If the mobile station is to use the soft reselection parameters
 38 when re-pointing between this pilot and the previous pilot in
 39 this message that has a F-PDCH assigned to this mobile
 40 station (i.e. FOR_PDCH_INCL is set to '1'), the base station
 41 shall set this field to '0' (see [3]).
 42 The base station shall set this field to '0' in the first record in
 43 the pilot list that has a F-PDCH assigned to this mobile
 44 station (i.e. FOR_PDCH_INCL is set to '1').

1	FOR_ACKSCH_INDEX	-	Forward Acknowledgment Subchannel Index.
2			If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
3			set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
4			does not signal the allocation of a R-PDCH, the base station
5			shall omit this field; otherwise, it shall include it and set it as
6			follows.
7			The base station shall set this field to the subchannel index of
8			the Forward Acknowledgment Channel (see [2]). The base
9			station should not use FOR_ACKSCH_INDEX = 0, 1, 2, 96,
10			97, or 98.
11	FOR_RCCH_INCL	-	Forward Rate Control Subchannel included flag.
12			If FOR_PDCH_INCL is set to '0', or if FOR_RCCH_ASSIGNED
13			is omitted, or if it is included and set to '0', the base station
14			shall omit this field; otherwise, the base station shall include
15			this field and set it as follows.
16			The base station shall set this field to '1' if a Forward Rate
17			Control Channel Subchannel is allocated on this pilot (see
18			[2]); otherwise, the base station shall set this field to '0'.
19			The base station shall set this field to a non zero value for at
20			least one pilot in this message.
21	FOR_RCCH_WALSH_INDEX	-	Walsh Code for the Forward Rate Control Channel
22			Subchannel.
23			If FOR_RCCH_INCL is omitted, or if it is included and set to
24			'0', the base station shall omit this field; otherwise, the base
25			station shall include this field and set it as follows.
26			The base station shall set this field to the Walsh code of the
27			Forward Rate Control Channel Subchannel (see [2]).
28	FOR_RCSCH_INDEX	-	Forward Rate Control Subchannel.
29			If FOR_RCCH_INCL is omitted, or if it is included and set to
30			'0', the base station shall omit this field; otherwise, the base
31			station shall include this field and set it as follows.
32			The base station shall set this field to the subchannel index of
33			the Rate Control Subchannel on this pilot (see [2]).
34			If FOR_RCCH_REPETITION is set to '00', the base station
35			shall set this field to a value in the range 0 to 95 inclusive. If
36			FOR_RCCH_REPETITION is set to '01', the base station shall
37			set this field to a value in the range 0 to 47 inclusive. If
38			FOR_RCCH_REPETITION is set to '10', the base station shall
39			set this field to a value in the range 0 to 23 inclusive.
40			The base station shall set this field to the subchannel offset of
41			the Rate Control Subchannel on this pilot.
42	NUM_FOR_GCH	-	Number of Forward Grant Channels
43			If FOR_PDCH_INCL is set to '0', or if FOR_GCH_ASSIGNED is
44			omitted, or if it is included and set to '0', the base station
45			shall omit this field; otherwise, the base station shall include
46			this field and set it as follows.

- 1 The base station shall set this field to the value of the nominal
2 power correction to be used by the mobile station when
3 transmitting on the Reverse Traffic Channel after the Direct
4 Channel Assignment call setup procedure. The base station
5 shall set this field as a two's complement signed binary
6 number, in units of 1 dB.
- 7 RESPOND_IND - Response requested indicator.
- 8 If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
9 omit this field; otherwise, the base station shall include this
10 field and set it as follows:
- 11 The base station shall set this field to '1' if the mobile station
12 is to respond to the *Extended Channel Assignment Message*
13 with a *Page Response Message* or *Reconnect Message* in
14 unassured mode on the r-csch; otherwise, the base station
15 shall set this field to '0' to indicate that the mobile station is
16 not to respond on the r-csch.
- 17 DIRECT_CH_ASSIGN_RECOVER_IND - Direct Channel Assignment Recover Indicator.
- 18 If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
19 omit this field; otherwise, the base station shall include this
20 field and set it as follows:
- 21 The base station shall set this field to '1' if the mobile station
22 is to transmit a *Page Response Message* or a *Reconnect*
23 *Message* after failing to acquire the forward traffic channel
24 assigned in this message; otherwise, the base station shall set
25 this field to '0'.
- 26 EARLY_RL_TRANSMIT_IND - Early Reverse Link Transmission indicator.
- 27 If FOR_CPCCH_RATE is included and not set to '00', the base
28 station shall omit this field; otherwise, the base station shall
29 include this field and set it as follows.
- 30 The base station shall set this field to '1' if, upon channel
31 assignment, the mobile station is to enable the transmitter
32 prior to receiving sufficient signal quality on the forward link;
33 otherwise, the base station shall set this field to '0'.
- 34 FUNDICATED_BCNC_IND - BCMC on fundicated channel Indicator.
- 35 If the channel assignment in this message contains a Forward
36 Fundicated Channel used for BCNC transmission, the base
37 station shall set this field to '1'; otherwise, the base station
38 shall set this field to '0'.
- 39 ADD_PLCM_FOR_FCH_INCL - Additional PLCM for forward FCH included indicator.
- 40 If the FUNDICATED_BCNC_IND field is set to '0', the base
41 station shall omit this field; otherwise, the base station shall
42 include this field and set it as follows:
- 43 If the additional PLCM for forward FCH is included in this
44 message, the base station shall set this field to '1'; otherwise,
45 the base station shall set this field to '0'.

- 1 ADD_PLCM_FOR_FCH_TYPE - The Additional Public Long Code Mask for forward FCH
 2 type indicator.
- 3 If ADD_PLCM_FOR_FCH_INCL is not included or is included
 4 and is set to '0', the base station shall omit this field;
 5 otherwise, the base station shall include this field and set it
 6 as follows.
- 7 The base station shall set this field to '1' to indicate PLCM
 8 specified by the base station. The field value '0' is reserved.
- 9 ADD_PLCM_FOR_FCH_39 - The 39 LSB bits of the additional Public Long Code Mask
 10 for forward FCH.
- 11 If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
 12 '1', the base station shall include this field and set it to the 39
 13 least significant bits of the public long code mask used by the
 14 mobile station; otherwise, the base station shall omit this
 15 field.
- 16 FIXED_PREAMBLE_TRANSMIT_IND - Fixed Number of Preambles Transmission
 17 Indicator.
- 18 If GRANTED_MODE is not set to '11', the base station shall
 19 omit this field; otherwise, the base station shall include this
 20 field and set it as follows:
- 21 The base station shall set this field to '1' to indicate if the
 22 mobile station is allowed to enter *Traffic Channel Substate* of
 23 the *Mobile Station Control on the Traffic Channel State* after
 24 sending the number of preambles specified in this message;
 25 otherwise the base station shall set this field to '0'.
- 26 If any channel assigned by this message is to use Radio
 27 Configuration 1 or 2 (see [2]), then the base station shall set
 28 this field to '0'.
- 29 FIXED_NUM_PREAMBLE - Traffic Channel preamble length.
- 30 If FIXED_PREAMBLE_TRANSMIT_IND is not included, or is
 31 included and set to '0', the base station shall omit this field;
 32 otherwise, the base station shall include this field and set it to
 33 the minimum length of Traffic Channel preamble that the
 34 mobile station is to transmit, before entering the *Traffic*
 35 *Channel Substate* of the *Mobile Station Control on the Traffic*
 36 *Channel State* without having received a *forward dedicated*
 37 *channel acquired* indication from Layer 2 (see [4]).
- 38 The base station shall set FIXED_NUM_PREAMBLE to the
 39 value shown in Table 3.7.2.3.2.21-13 corresponding to the
 40 Traffic Channel preamble length in ms.
- 41 TX_PWR_LIMIT_INCL - Transmit Power Limit inclusion for the current base station
- 42 If the transmit power limit field is included in this message,
 43 the base station shall set this field to '1'; otherwise, the base
 44 station shall set this field to '0'.
- 45 TX_PWR_LIMIT - Transmit Power Limit for the current base station

1 If TX_PWR_LIMIT_INCL is set to '0', the base station shall omit
2 this field; otherwise, the base station shall include this field
3 and set to as follows.

4 The base station shall set this field to thirty dB more than
5 transmit power limit in dBm EIRP, in steps of 1 dB. This field
6 can take the values 30 to 53 corresponding to maximum
7 transmit power values 0 dBm to 23 dBm.

- PILOT_PN - Pilot PN sequence offset index.
The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.
- CONFIG_MSG_SEQ - Configuration message sequence number.
The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).
- PILOT_INC - Pilot PN sequence offset index increment.
A mobile station searches for Remaining Set pilots at pilot PN sequence index values that are multiples of this value.

1 The base station shall set this field to the pilot PN sequence
 2 increment, in units of 64 PN chips, that mobile stations are to
 3 use for searching the Remaining Set. The base station should
 4 set this field to the largest increment such that the pilot PN
 5 sequence offsets of all its neighbor base stations are integer
 6 multiples of that increment.

7 The base station shall set this field to a value in the range 1 to
 8 15 inclusive.

9 NGHBR_SRCH_MODE - Search mode.

10 The base station shall set this field to the value shown in
 11 Table 3.7.2.3.2.22-1 corresponding to the search mode.

12 **Table 3.7.2.3.2.22-1. Search Mode Field**

Value (binary)	Description
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

13

14 NGHBR_CONFIG_PN_INCL - Neighbor configuration and PN offset included.

15 If neighbor configuration and PN offset fields are included in
 16 this message, the base station shall set this field to '1';
 17 otherwise, the base station shall set this field to '0'.

18 FREQ_FIELDS_INCL - Frequency fields included.

19 If frequency fields are included in this message, the base
 20 station shall set this field to '1'; otherwise, the base station
 21 shall set this field to '0'.

22 USE_TIMING - Use timing indicator.

23 If base station timing information is included for neighbor
 24 base stations, the base station shall set this field to '1';
 25 otherwise, the base station shall set this field to '0'.

26 GLOBAL_TIMING_INCL - Global timing included.

27 If USE_TIMING is set to '1', the base station shall include the
 28 field GLOBAL_TIMING_INCL and set this field as described
 29 below; otherwise, the base station shall omit this field.

30 If base station timing information is included globally for all
 31 neighbor base stations with TIMING_INCL equal to '1', the
 32 base station shall set this field to '1'; otherwise, the base
 33 station shall set this field to '0'.

34 GLOBAL_TX_DURATION - Global neighbor transmit time duration.

1 If GLOBAL_TIMING_INCL is included and is set to '1', the
 2 base station shall include the field GLOBAL_TX_DURATION
 3 and shall set this field as described below; otherwise, the base
 4 station shall omit this field.

5 The base station shall set this field to the duration of the base
 6 station transmit window, during each period, in units of 80
 7 ms. The base station should set this field to a value of 3 or
 8 greater.

9 GLOBAL_TX_PERIOD - Global neighbor transmit time period.

10 If GLOBAL_TIMING_INCL is included and is set to '1', the
 11 base station shall include the field GLOBAL_TX_PERIOD and
 12 shall set this field as described below; otherwise, the base
 13 station shall omit this field.

14 The base station shall set this field to duration of the period,
 15 in units of 80 ms.

16 NUM_NGHBR - Number of neighbor pilot PN sequences.

17 The base station shall set this field to the number of
 18 neighbors included in the message.

19 The base station shall include one occurrence of the following record for each pilot that a
 20 mobile station is to place in its Neighbor Set. The base station shall use the same order for
 21 the following record in this message as is used for pilots which are listed in the *Neighbor*
 22 *List Message* or *Extended Neighbor List Message*. Specifically, the i^{th} occurrence of the
 23 following record shall correspond the i^{th} pilot in the *Neighbor List Message* or in the
 24 *Extended Neighbor List Message*.

25

26 NGHBR_CONFIG - Neighbor configuration.

27 If NGHBR_CONFIG_PN_INCL = '1', the base station shall set
 28 this field to the value shown in Table 3.7.2.3.2.22-2
 29 corresponding to the configuration of this neighbor;
 30 otherwise, the base station shall omit this field.

31

1

Table 3.7.2.3.2.22-2. Neighbor Configuration Field

Value (binary)	Neighbor Configuration
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this current CDMA frequency assignment with the same number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>
001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this current CDMA frequency assignment but possibly with a different number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>

010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the following CDMA frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station. • If <code>FREQ_INCL</code> equals '1' for this record, the neighbor base station has a Primary Paging Channel on the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.
011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel. • If <code>FREQ_INCL</code> equals '1' for this record, the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code> has a Pilot Channel.
100-111	Reserved.

`NGHBR_PN` - Neighbor pilot PN sequence offset index.

If `NGHBR_CONFIG_PN_INCL` = '1', the base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips; otherwise, the base station shall omit this field.

`SEARCH_PRIORITY` - Pilot Channel search priority.

If `NGHBR_SRCH_MODE` = '01' or `NGHBR_SRCH_MODE` = '11', then the base station shall set this field to the search priority for the Pilot Channel corresponding to `NGHBR_PN`. The base station shall set the search priority as shown in Table 3.7.2.3.2.22-3. If `NGHBR_SRCH_MODE` is set to any other value, the base station shall omit this field.

- SRCH_WIN_NGHR - Neighbor pilot channel search window size.
If NGHR_SRCH_MODE = '10' or '11', then the base station shall set this field to the value shown in Table 2.6.6.2.1-1 corresponding to the search window size to be used by mobile stations for this neighbor. If NGHR_SRCH_MODE is set to any other value, the base station shall omit this field.
- FREQ_INCL - Frequency included indicator.
If FREQ_FIELDS_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
If the NGHR_BAND and NGHR_FREQ fields are included for this neighbor base station, the base station shall set this bit to '1'. If the NGHR_BAND and NGHR_FREQ fields are not included in this assignment record, the base station shall set this bit to '0'.
- NGHR_BAND - Neighbor band class.
If the FREQ_INCL bit is included and is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search. If the FREQ_INCL bit is omitted or is set to '0', the base station shall omit this field.
- NGHR_FREQ - Neighbor frequency assignment.
If the FREQ_INCL bit is omitted or is set to '0', the base station shall omit this field.
If the FREQ_INCL bit is included and is set to '1' and the corresponding neighbor has a 1X neighbor pilot record type, the base station shall set this field to the CDMA Channel number, in the specified CDMA band class, corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search.
If the FREQ_INCL bit is included and is set to '1' and the corresponding neighbor has a 3X neighbor pilot record type, the base station shall set this field to the CDMA Channel number, in the specified CDMA band class, corresponding to the center SR3 frequency assignment containing the Paging Channel the mobile station is to search.

- 1 TIMING_INCL - Timing included indicator.
- 2 If USE_TIMING is set to '1', the base station shall include the
- 3 field TIMING_INCL and set this field as described below;
- 4 otherwise, the base station shall omit this field.
- 5 If base station timing information is included for this neighbor
- 6 base station, the base station shall set this field to '1';
- 7 otherwise, the base station shall set this field to '0'.
- 8 NGHBR_TX_OFFSET - Neighbor transmit time offset.
- 9 If TIMING_INCL is included and is set to '1', the base station
- 10 shall include the field NGHBR_TX_OFFSET and set this field
- 11 as described below; otherwise, the base station shall omit this
- 12 field.
- 13 The base station shall set this field to the time offset, in units
- 14 of 80 ms, from the beginning of the neighbor timing period to
- 15 the beginning of the first base station transmit window within
- 16 the period. The beginning of the neighbor timing period
- 17 occurs when $\lfloor t/4 \rfloor \bmod (16384) = 0$.
- 18 NGHBR_TX_DURATION - Neighbor transmit time duration.
- 19 If TIMING_INCL is included and is set to '1' and
- 20 GLOBAL_TIMING_INCL is set to '0', the base station shall
- 21 include the field NGHBR_TX_DURATION and set this field as
- 22 described below; otherwise, the base station shall omit this
- 23 field.
- 24 The base station shall set this field to duration of the base
- 25 station transmit window, during each period, in units of
- 26 80 ms. The base station should set this field to a value of 3 or
- 27 greater.
- 28 NGHBR_TX_PERIOD - Neighbor transmit time period.
- 29 If TIMING_INCL is included and is set to '1' and
- 30 GLOBAL_TIMING_INCL is set to '0', the base station shall
- 31 include the field NGHBR_TX_PERIOD and set this field as
- 32 described below; otherwise, the base station shall omit this
- 33 field.
- 34 The base station shall set this field to duration of the period,
- 35 in units of 80 ms.
- 36 NUM_ANALOG_NGHBR - Number of neighboring analog systems.
- 37 The base station shall set this field to the number of
- 38 neighboring analog systems included in the message. The
- 39 base station shall set this field to '000'.
- 40
- 41 The base station shall include one occurrence of the following record for each neighboring
- 42 analog system included in the message:
- 43 BAND_CLASS - Band class.
- 44 The base station shall set this field to the CDMA band class,
- 45 as specified in [30].

1 SYS_A_B - System A/B.

2 If BAND_CLASS is set to '00000' or to '00011', the base
3 station shall set this field to the value shown in Table
4 3.7.2.3.2.22-4 corresponding to the availability of neighboring
5 analog systems; otherwise, the base station shall set this field
6 to '00'.

7 **Table 3.7.2.3.2.22-4. Cellular System A/B**

Cellular System A/B	Value
RESERVED	00
System A	01
System B	10
System A and B	11

8
9 SRCH_OFFSET_INCL - Neighbor pilot channel search window offset included.

10 If NGHBR_SRCH_MODE = '10' or '11' and if the
11 SRCH_OFFSET_NGHBR field is included in the following
12 records, the base station shall set this bit to '1'; otherwise, the
13 base station shall set this bit to '0'.

14 The base station shall include one occurrence of the following record for each pilot that a
15 mobile station is to place in its Neighbor Set. The base station shall use the same order for
16 the following record in this message as is used for pilots which are listed in the *Neighbor*
17 *List Message* or *Extended Neighbor List Message*. Specifically, the i^{th} occurrence of the
18 following record shall correspond the i^{th} pilot in the *Neighbor List Message* or in the
19 *Extended Neighbor List Message*.

20 ADD_PILOT_REC_INCL - Additional pilot information included indicator.

21 The base station shall set this field to '1' if additional pilot
22 information listed in the NGHBR_PILOT_REC_TYPE and
23 RECORD_LEN fields are included. The base station shall set
24 this field to '0' if the corresponding pilot is the common pilot
25 and there is no additional pilot information included.

26 NGHBR_PILOT_REC_TYPE - Neighbor Pilot record type

27 If ADD_PILOT_REC_INCL is set to '1', the base station shall
28 set this field to the NGHBR_PILOT_REC_TYPE value shown in
29 Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record
30 specified by this record.

31

1

Table 3.7.2.3.2.22-5. Neighbor Pilot Record Types

Description	NGHBR_PILOT_REC_TYP E (binary)
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other NGHBR_PILOT_REC_TYPE values are reserved	

2

3

4

If ADD_PILOT_REC_INCL is set to '0', the base station shall omit this field.

5

RECORD_LEN - Pilot record length.

6

If ADD_PILOT_REC_INCL is set to '1', the base station shall set this field to the number of octets in the type-specific fields of this pilot record.

7

8

9

If ADD_PILOT_REC_INCL is set to '0', the base station shall omit this field.

10

11

Type-specific fields - Pilot record type-specific fields.

12

If ADD_PILOT_REC_INCL is set to '1', the base station shall include type-specific fields based on the NGHBR_PILOT_REC_TYPE of this pilot record.

13

14

15

If ADD_PILOT_REC_INCL is set to '0', the base station shall omit this field.

16

17

18

If NGHBR_PILOT_REC_TYPE is equal to '000', the base station shall include the following fields:

19

20

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

21

22

TD_POWER_LEVEL - TD Transmit Power Level.

1 The base station shall set this field to the TD transmit power
 2 level relative to that of the Forward Pilot Channel as specified
 3 in Table 3.7.2.3.2.26-4.

4 TD_MODE - Transmit Diversity mode.

5 The base station shall set this field to the Transmit Diversity
 6 mode, as specified in Table 3.7.2.3.2.26-3.

7 RESERVED - Reserved bits.

8 The base station shall set this field to '0000'.

9 If NGHBR_PILOT_REC_TYPE is equal to '001', the base station shall include the following
 10 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

11

12 QOF - Quasi-orthogonal function index.

13 The base station shall set this field to the index of the Quasi-
 14 orthogonal function (see [2]).

15 WALSH_LENGTH - Length of the Walsh Code.

16 The base station shall set this field to the WALSH_LENGTH
 17 value shown in Table 3.7.2.3.2.22-6 corresponding to the
 18 length of the Walsh code for the pilot that is used in as the
 19 Auxiliary pilot.

20 **Table 3.7.2.3.2.22-6. Walsh Code Length**

WALSH_LENGTH (binary)	Length of the Walsh Code
'000'	64
'001'	128
'010'	256
'011'	512
'100' – '111'	Reserved

21

22 AUX_PILOT_WALSH - Walsh Code for the Auxiliary Pilot.

23 The base station shall set this field to the Walsh code
 24 corresponding to the Auxiliary pilot.

25 RESERVED - Reserved bits.

1 The base station shall set all the bits of this field to '0' to
 2 make the entire record octet-aligned.

3 If NGHBR_PILOT_REC_TYPE is equal to '010', the base station shall include the following
 4 fields:

5

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

6

7 QOF - Quasi-orthogonal function index for the Auxiliary Transmit
 8 Diversity Pilot.
 9 The base station shall set this field to the index of the Quasi-
 10 orthogonal function (see [2]).

11 WALSH_LENGTH - Length of the Walsh Code.
 12 The base station shall set this field to the WALSH_LENGTH
 13 value shown in 3.7.2.3.2.22-6 corresponding to the length of
 14 the Walsh code for the pilots that are used as Auxiliary pilot
 15 in the transmit diversity mode.

16 AUX_WALSH - Walsh Code for the Auxiliary Pilot.
 17 The base station shall set this field to the Walsh code
 18 corresponding to the Auxiliary Pilot.

19 AUX_TD_POWER_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.
 20 The base station shall set this field to the Auxiliary Transmit
 21 Diversity Pilot transmit power level relative to that of the
 22 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.

Table 3.7.2.3.2.22-7. Auxiliary Transmit Diversity Pilot Transmit Power Level

AUX_TD_POWER_LEVEL	Transmit Power Level
00	9 dB below the Auxiliary Pilot Channel transmit power
01	6 dB below the Auxiliary Pilot Channel transmit power
10	3 dB below the Auxiliary Pilot Channel transmit power
11	Same as the Auxiliary Pilot Channel transmit power

TD_MODE - Transmit Diversity mode.

The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.

RESERVED - Reserved bits.

The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If NGHBR_PILOT_REC_TYPE is equal to '011', the base station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

SR3_PRIMARY_PILOT - Primary SR3 pilot.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-5 corresponding to the position of the primary SR3 pilot.

SR3_PILOT_POWER1 - The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.

SR3_PILOT_POWER2 - The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

1 If NGHBR_PILOT_REC_TYPE is equal to '100', the base station shall include the following
 2 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

- 3 SR3_PRIMARY_PILOT – Primary SR3 pilot.
 4 The base station shall set this field to the value shown in
 5 Table 3.7.2.3.2.26-5 corresponding to the position of the
 6 primary SR3 pilot.
- 7 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
 8 on the lower frequency of the two remaining SR3 frequencies.
 9 The base station shall set this field to the value shown in
 10 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 11 primary pilot with respect to the pilot on the lower frequency
 12 of the two remaining SR3 frequencies.
- 13 SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot
 14 on the higher frequency of the two remaining SR3
 15 frequencies.
 16 The base station shall set this field to the value shown in
 17 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 18 primary pilot with respect to the pilot on the higher frequency
 19 of the two remaining SR3 frequencies.
- 20 QOF – Quasi-orthogonal function index.

1			The base station shall set this field to the index of the Quasi-orthogonal function (see [2] on the frequency of the primary pilot.
2			
3			
4	WALSH_LENGTH	-	Length of the Walsh Code.
5			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the frequency of the primary pilot.
6			
7			
8			
9	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
10			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the frequency of the primary pilot.
11			
12			
13	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower frequency of the two remaining SR3 frequencies.
14			
15			If the additional information for the pilot on the lower frequencies of the two remaining SR3 frequencies is the same as pilot on the primary frequency, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
16			
17			
18			
19			
20		QOF1	- Quasi-orthogonal function index for the pilot on the lower frequency of the two remaining SR3 frequencies.
21			
22			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
23			
24			
25			The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the lower frequency of the two remaining SR3 frequencies.
26			
27			
28	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency of the two remaining SR3 frequencies.
29			
30			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
31			
32			
33			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the lower frequency of the two remaining SR3 frequencies.
34			
35			
36			
37			
38	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of the two remaining SR3 frequencies.
39			
40			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
41			
42			
43			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the lower frequency of the two remaining SR3 frequencies.
44			
45			

1	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher frequency of the two remaining SR3 frequencies.
2			
3			If the additional information for the pilot on the higher frequencies of the two remaining SR3 frequencies is the same as pilot on the primary frequency, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
4			
5			
6			
7			
8	QOF2	-	Quasi-orthogonal function index for the pilot on the higher frequency of the two remaining SR3 frequencies.
9			
10			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
11			
12			
13			The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the higher frequency of the two remaining SR3 frequencies.
14			
15			
16	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher frequency of the two remaining SR3 frequencies.
17			
18			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
19			
20			
21			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the higher frequency of the two remaining SR3 frequencies.
22			
23			
24			
25			
26	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of the two remaining SR3 frequencies.
27			
28			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
29			
30			
31			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the higher frequency of the two remaining SR3 frequencies.
32			
33			
34	RESERVED	-	Reserved bits.
35			The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.
36			
37	SRCH_OFFSET_NGHBR	-	Neighbor pilot channel search window size offset.
38			If SRCH_OFFSET_INCL equals to '1', then the base station shall set this field to the value shown in Table 2.6.6.2.1-2 corresponding to the search window offset to be used by mobile stations for this neighbor; otherwise, the base station shall omit this field.
39			
40			
41			
42			
43	BCCH_IND_INCL	-	BCCH support included indicator.
44			If the BCCH_SUPPORT field is included in the following records, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
45			
46			

1 If BCCH_IND_INCL is set to '1', the base station shall include one occurrence of the
 2 following field for each pilot that a mobile station is to place in its Neighbor Set. The base
 3 station shall use the same order for the following record in this message as is used for
 4 pilots which are listed in the *Neighbor List Message* or *Extended Neighbor List Message*.
 5 Specifically, the i^{th} occurrence of the following record shall correspond the i^{th} pilot in the
 6 *Neighbor List Message* or in the *Extended Neighbor List Message*.

- 7 BCCH_SUPPORT - BCCH support indicator.
- 8 If this neighbor base station supports Broadcast Control
 9 Channel, the base station shall set this field to '1'; otherwise,
 10 the base station shall set this field to '0'.
- 11 RESQ_ENABLED - Call rescue feature enabled indicator.
- 12 The base station shall set this field to '1' if the call rescue
 13 feature is enabled and there is at least one occurrence of
 14 NGHBR_RESQ_CONFIGURED set to '1' in this message;
 15 otherwise, the base station shall set this field to '0'.
- 16 RESQ_DELAY_TIME - Call rescue delay timer value.
- 17 If RESQ_ENABLED is set to '0', the base station shall omit
 18 this field; otherwise, the base station shall include this field
 19 and set it as follows:
- 20 The base station shall set this field to the value of the call
 21 rescue delay timer to be used by the mobile station, in units
 22 of 80 ms.
- 23 RESQ_ALLOWED_TIME - Call rescue allowed timer value.
- 24 If RESQ_ENABLED is set to '0', the base station shall omit
 25 this field; otherwise, the base station shall include this field
 26 and set it as follows:
- 27 The base station shall set this field to the value of the call
 28 rescue allowed timer to be used by the mobile station, in
 29 units of 80 ms.
- 30 RESQ_ATTEMPT_TIME - Call rescue attempt timer value.
- 31 If RESQ_ENABLED is set to '0', the base station shall omit
 32 this field; otherwise, the base station shall include this field
 33 and set it as follows:
- 34 The base station shall set this field to the value of the call
 35 rescue attempt timer to be used by the mobile station, in
 36 units of 40 ms.
- 37 RESQ_CODE_CHAN - Code channel index for the Rescue Channel.
- 38 If RESQ_ENABLED is set to '0', the base station shall omit
 39 this field; otherwise, the base station shall include this field
 40 and set it as follows:

1		The base station shall set this field to the code channel index
2		(see [2]) that the mobile station is to use on the Forward
3		Fundamental Channel when attempting Call Rescue Soft
4		Handoff with the associated neighbor pilot.
5		If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
6		station shall set this field in the range 1 to 63 inclusive. If
7		Radio Configuration 4, 6, 8, 11, or 12 is used, the base
8		station shall set this field in the range 1 to 127 inclusive. If
9		Radio Configuration 7 or 9 is used, the base station shall set
10		this field in the range 1 to 255 inclusive.
11	RESQ_QOF	– Quasi-Orthogonal Function mask identifier for the Rescue
12		Channel.
13		If RESQ_ENABLED is set to '0', the base station shall omit
14		this field; otherwise, the base station shall include this field
15		and set it as follows:
16		The base station shall set this field to the quasi-orthogonal
17		function mask identifier (see [2]) that the mobile station is to
18		use on the Forward Fundamental Channel when attempting
19		Call Rescue Soft Handoff with the associated neighbor pilot.
20	RESQ_MIN_PERIOD_INCL	– Minimum time between consecutive rescues included
21		indicator.
22		If RESQ_ENABLED is set to '0', the base station shall omit
23		this field; otherwise, the base station shall include this field
24		and set it as follows:
25		The base station shall set this field to '1' if the
26		RESQ_MIN_PERIOD field is included in this message;
27		otherwise, the base station shall set this field to '0'.
28		This field is set to '0' if there is no minimum time restriction
29		between consecutive rescues.
30	RESQ_MIN_PERIOD	– Minimum time between consecutive rescues.
31		If RESQ_MIN_PERIOD_INCL is not included, or is included
32		and set to '0', the base station shall omit this field; otherwise,
33		the base station shall include this field and set it as follows:
34		The base station shall set this field to one less than the
35		minimum time after a successful call rescue (i.e. receipt of
36		N_{3m} good frames by the mobile station after the rescue
37		attempt timer is enabled) before any subsequent call rescue
38		attempts can be initiated, in units of 2 seconds.
39	RESQ_NUM_TOT_TRANS_INCL	– The required number of transmissions before declaring
40		L2 Acknowledgment Failure when Call Rescue is enabled
41		included indicator.
42		If RESQ_ENABLED is set to '0', the base station shall omit
43		this field; otherwise, the base station shall include this field
44		and set it as follows:

1 If the required number of transmissions of a regular PDU and
2 mini PDU before declaring L2 Acknowledgment Failure when
3 Call Rescue is enabled is included in this message, the base
4 station shall set this field to '1'; otherwise, the base station
5 shall set this field to '0'.

6 RESQ_NUM_TOT_TRANS_20MS – The required number of transmissions of a regular
7 PDU before declaring L2 Acknowledgment Failure when Call
8 Rescue is enabled.

9 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
10 included and is set to '0', the base station shall omit this field;
11 otherwise, the base station shall include this field and set it
12 as follows:

13 The base station shall set this field to the required number of
14 transmissions of a regular PDU before declaring L2
15 Acknowledgment Failure when Call Rescue is enabled.

16 The base station shall not set this field to a value greater than
17 N_{1m} .

18 RESQ_NUM_TOT_TRANS_5MS – The required number of transmissions of a mini PDU
19 before declaring L2 Acknowledgment Failure when Call
20 Rescue is enabled.

21 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
22 included and is set to '0', the base station shall omit this field;
23 otherwise, the base station shall include this field and set it
24 as follows:

25 The base station shall set this field to the required number of
26 transmissions of a mini PDU before declaring L2
27 Acknowledgment Failure when Call Rescue is enabled.

28 The base station shall not set this field to a value greater than
29 N_{15m} .

30 RESQ_NUM_PREAMBLE_RC1_RC2 – The Traffic Channel preamble length for Call
31 Rescue Soft Handoff when operating in Radio Configuration 1
32 or 2.

33 If RESQ_ENABLED is set to '0', the base station shall omit
34 this field; otherwise, the base station shall include this field
35 and set it to the length of Traffic Channel preamble, in 20 ms
36 units, that the mobile station is to send when performing a
37 call rescue soft handoff.

38 RESQ_NUM_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft
39 Handoff when operating in Radio Configuration greater than
40 2.

41 If RESQ_ENABLED is set to '0', the base station shall omit
42 this field; otherwise, the base station shall include this field
43 and set it to the length of Traffic Channel preamble that the
44 mobile station is to send when performing a call rescue soft
45 handoff, as follows:

- 1 The base station shall set this field to the value shown in
 2 Table 3.7.3.3.2.17-1 corresponding to the Traffic Channel
 3 preamble length in 1.25 ms units.
- 4 RESQ_POWER_DELTA - The power level adjustment to be applied to the last closed-
 5 loop power level when re-enabling the transmitter for call
 6 rescue soft handoff.
- 7 If RESQ_ENABLED is set to '0', the base station shall omit
 8 this field; otherwise, the base station shall set this field to a
 9 value by which mobile stations are to adjust the last closed-
 10 loop power level when re-enabling the transmitter for call
 11 rescue, expressed as a two's complement value in units of
 12 1 dB.
- 13 The base station shall include NUM_NGHBR occurrences of the following one-field record if
 14 RESQ_ENABLED is set to '1'. The base station shall use the same order for the following
 15 field as is used for the NGHBR_PN fields listed in this message.
- 16 NGHBR_RESQ_CONFIGURED - Neighbor Rescue Channel configured indicator.
- 17 The base station shall set this field to '1' if a Rescue Channel
 18 is configured for this neighbor pilot; otherwise, the base
 19 station shall set this field to '0'.
- 20 The base station shall include NUM_NGHBR occurrences of the following variable length
 21 record. The base station shall use the same order for the following field as is used for the
 22 NGHBR_PN fields listed in this message.
- 23 NGHBR_PDCH_SUPPORTED - Neighbor PDCH supported indicator.
- 24 The base station shall set this field to '1' if PDCH is
 25 configured for this neighbor pilot; otherwise, the base station
 26 shall set this field to '0'.
- 27 HRPD_NGHBR_INCL - HRPD neighbor information included indicator.
- 28 If this message contains information on HRPD neighbors, the
 29 base station shall set this field to '1'; otherwise, the base
 30 station shall set this field to '0'.
- 31 NUM_HRPD_NGHBR - Number of HRPD neighbor pilot PN sequences.
- 32 If the HRPD_NGHBR_INCL field is set to '0', the base station
 33 shall omit this field; otherwise, the base station shall include
 34 this field and set it to the number of HRPD neighbors
 35 included in the message.
- 36 The base station shall include one occurrence of the following subrecord for each pilot that
 37 a mobile station is to place in its HRPD Neighbor Set.
- 38 HRPD_NGHBR_REC_LEN - HRPD neighbor record length
- 39 The base station shall set this field to one less than the
 40 number of octets included in this HRPD neighbor record
 41 including this field.
- 42 NGHBR_PN - Neighbor pilot PN sequence offset index.
- 43 The base station shall set this field to the pilot PN sequence
 44 offset for this neighbor, in units of 64 PN chips.
- 45 NGHBR_FREQ_INCL - Neighbor frequency information included indicator.

1 The base station shall set this field to '1' if the neighbor
2 frequency information is included in this message; otherwise,
3 the base station shall set this field to '0'.

4 NGHBR_BAND - Neighbor band class.

5 If the NGHBR_FREQ_INCL field is set to '0', the base station
6 shall omit this field; otherwise, the base station shall include
7 this field and set it as follows:

8 The base station shall set this field to the CDMA band class,
9 as specified in [30], corresponding to the CDMA frequency
10 assignment for the CDMA Channel containing this neighbor.

11 NGHBR_FREQ - Neighbor frequency assignment.

12 If the NGHBR_FREQ_INCL field is set to '0', the base station
13 shall omit this field; otherwise, the base station shall include
14 this field and set it as follows:

15 The base station shall set this field to the CDMA Channel
16 number, in the specified CDMA band class, corresponding to
17 the CDMA frequency assignment for this neighbor.

18 PN_ASSOCIATION_IND - Neighbor PN association indicator.

19 The base station shall set this field to '1' if the system identified by
20 this system record has the same PN assignment as the MC system to
21 which this BS belongs; otherwise, the base station shall set this field
22 to '0'.

23 DATA_ASSOCIATION_IND - Neighbor data association indicator.

24 The base station shall set this field to '1' if the system identified by
25 this system record can reach the same set of PDSNs as the MC
26 system to which this BS belongs; otherwise, the base station shall
27 set this field to '0'.

28 HRPD_NGHBR_REC_RESERVED - HRPD neighbor record reserved bits.

29 The base station shall add reserved bits as needed in order to make
30 the length of this record equal to an integer number of octets. The
31 base station shall set these bits to '0'.

32

1 3.7.2.3.2.23 User Zone Identification Message

2 MSG_TAG: UZIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
UZ_EXIT	4
NUM_UZID	4

NUM_UZID occurrences of the following record:

{ (NUM_UZID)

UZID	16
UZ_REV	4
TEMP_SUB	1

} (NUM_UZID)

3

- 4 PILOT_PN - Pilot PN sequence offset index.
 5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.
- 7 CONFIG_MSG_SEQ - Configuration message sequence number.
 8 The base station shall set this field to CONFIG_SEQ
 9 (see 3.6.2.2).
- 10 UZ_EXIT - User Zone Exit parameter.
 11 The base station shall set this field to the User Zone exit
 12 parameter (see 2.6.9.2.1). The base station shall set this field
 13 to a value (in dB) in the range 0 to 15.
- 14 NUM_UZID - Number of User Zone identifiers.
 15 The base station shall set this field to the number of user
 16 zone identifiers included in this message.

17 The base station shall include NUM_UZID occurrences of the following record.

- 18 UZID - User Zone identifier.
 19 The base station shall set this field to the User Zone identifier
 20 (see 3.6.7) supported by the base station.
- 21 UZ_REV - User Zone update revision number.
 22 The base station shall set this field to the User Zone update
 23 revision number.
- 24 TEMP_SUB - Temporary subscription flag.
 25 If the corresponding User Zone allows for temporary
 26 subscription, the base station shall set this field to '1';
 27 otherwise, the base station shall set this field to '0'.

28

1 3.7.2.3.2.24 Private Neighbor List Message
 2 MSG_TAG: PNLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM_RADIO_INTERFACE occurrences of the following record:

{ (NUM_RADIO_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	8
Radio Interface Type-specific fields	8× RADIO_INTERFACE_LEN

} (NUM_RADIO_INTERFACE)

3

4 PILOT_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG_SEQ
 9 (see 3.6.2.2).

10 NUM_RADIO_INTERFACE - Number of interface types.

11 The base station shall set this field to the number of radio
 12 interface types for which private neighbors are included in
 13 this message.

14 The base station shall include NUM_RADIO_INTERFACE occurrences of the following
 15 record, one occurrence for each radio interface for which private neighbors are included in
 16 this message.

17 RADIO_INTERFACE_TYPE - The radio interface type.

18 The base station shall set this field to the radio interface type
 19 of this record as specified in Table 3.7.2.3.2.24-1.

20

Table 3.7.2.3.2.24-1. Radio Interface Type

RADIO_INTERFACE_TYPE (binary)	Descriptions
0000	MC system
0001-1111	Reserved

1

Field	Length (bits)
COMMON_INCL	1
COMMON_BAND_CLASS	0 or 5
COMMON_NGHBR_FREQ	0 or 11
SRCH_WIN_PN	4
NUM_PRI_NGHBR	6

NUM_PRI_NGHBR occurrences of the following record:

{ (NUM_PRI_NGHBR)

SID	15
NID	16
PRI_NGHBR_PN	9
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8× RECORD_LEN
BAND_CLASS	0 or 5
NGHBR_FREQ	0 or 11
UZID_INCL	1
NUM_UZID	0 or 4

(continues on next page)

3

1

Field	Length (bits)
NUM_UZID occurrences of the following subrecord:	
<i>{ (NUM_UZID or 0)</i>	
UZID	0 or 16
UZ_REV	0 or 4
TEMP_SUB	0 or 1
<i>} (NUM_UZID or 0)</i>	
<i>} (NUM_PRI_NGHBR)</i>	
RESERVED	0 - 7 (as needed)

2

3 COMMON_INCL - Common configuration included indicator.
 4
 5 If all private neighbor base stations included in this message
 6 are on the same CDMA band class and CDMA Channel
 7 number as specified in the COMMON_BAND_CLASS and
 8 COMMON_NGHBR_FREQ fields, the base station shall set
 9 this field to '1'; otherwise, the base station shall set this field
 10 to '0'.

11 COMMON_BAND_CLASS - Neighbor band class.
 12 If COMMON_INCL is set to '1', the base station shall set this
 13 field to the CDMA band class as specified in [30]
 14 corresponding to the CDMA frequency assignment for the
 15 CDMA Channel containing the Paging Channel or the Forward
 16 Common Control Channel for all private neighbors; otherwise,
 17 the base station shall omit this field.

18 COMMON_NGHBR_FREQ - Neighbor frequency assignment.
 19 If the COMMON_INCL bit is set to '1', the base station shall
 20 set this field to the CDMA Channel number, in the specified
 21 CDMA band class, corresponding to the CDMA frequency
 22 assignment for the CDMA Channel containing the Paging
 23 Channel or the Forward Common Control Channel for all
 24 private neighbor base station; otherwise, the base station
 25 shall omit this field.

26 SRCH_WIN_N - Search window size for the Private Neighbor Set.
 27 The base station shall set this field to the value shown in
 28 Table 2.6.6.2.1-1 corresponding to the search window size to
 29 be used by mobile stations for the Private Neighbor Set.

30 NUM_PRI_NGHBR - Number of private neighbor pilot PN sequences.
 31 The base station shall set this field to the number of private
 32 neighbors included in the message.

32

- 1 The base station shall include NUM_PRI_NGHBR occurrences of the following record.
- 2 SID - System Identification.
- 3 The base station shall set this field to the system
4 identification number for this private neighbor system (see
5 2.6.5.2).
- 6 NID - Network Identification.
- 7 This field serves as a sub-identifier of a system as defined by
8 the owner of the SID.
- 9 The base station shall set this field to the system
10 identification number for this private neighbor network (see
11 2.6.5.2).
- 12 PRI_NGHBR_PN - Private neighbor pilot PN sequence offset index.
- 13 The base station shall set this field to the pilot PN sequence
14 offset for this private neighbor, in units of 64 PN chips.
- 15 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
- 16 The base station shall set this field to '1' if additional pilot
17 information listed in the NGHBR_PILOT_REC_TYPE and
18 RECORD_LEN fields are included. The base station shall set
19 this field to '0' if the corresponding pilot is the common pilot
20 and there is no additional pilot information included.
- 21 NGHBR_PILOT_REC_TYPE - Neighbor Pilot record type
- 22 If ADD_PILOT_REC_INCL is set to '1', the base station shall
23 set this field to the NGHBR_PILOT_REC_TYPE value shown in
24 Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record
25 specified by this record.
- 26 If ADD_PILOT_REC_INCL is set to '0', the base station shall
27 omit this field.
- 28 RECORD_LEN - Pilot record length.
- 29 If ADD_PILOT_REC_INCL is set to '1', the base station shall
30 set this field to the number of octets in the type-specific fields
31 of this pilot record.
- 32 If ADD_PILOT_REC_INCL is set to '0', the base station shall
33 omit this field.
- 34 Type-specific fields - Pilot record type-specific fields.
- 35 If ADD_PILOT_REC_INCL is set to '1', the base station shall
36 include type-specific fields based on the
37 NGHBR_PILOT_REC_TYPE of this pilot record.
- 38 If ADD_PILOT_REC_INCL is set to '0', the base station shall
39 omit this field.
- 40 If NGHBR_PILOT_REC_TYPE is equal to '000', the base station shall include the following
41 fields:
- 42

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

1
2
3
4
5
6
7
8
9
10
11
12

- TD_POWER_LEVEL - TD Transmit Power Level.
The base station shall set this field to the TD transmit power level relative to that of the Forward Pilot Channel as specified in Table 3.7.2.3.2.26-4.
- TD_MODE - Transmit Diversity mode.
The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.
- RESERVED - Reserved bits.
The base station shall set this field to '0000'.

If NGHBR_PILOT_REC_TYPE is equal to '001', the base station shall include the following fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

13
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28
29

- QOF - Quasi-orthogonal function index.
The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- WALSH_LENGTH - Length of the Walsh Code.
The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used in as the Auxiliary pilot.
- AUX_PILOT_WALSH - Walsh Code for the Auxiliary Pilot.
The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot.
- RESERVED - Reserved bits.
The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If NGHBR_PILOT_REC_TYPE is equal to '010', the base station shall include the following fields:

1

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

2

3

4

QOF - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.

5

6

The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).

7

WALSH_LENGTH - Length of the Walsh Code.

8

9

10

11

The base station shall set this field to the WALSH_LENGTH value shown in 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilots that are used as Auxiliary pilot in the transmit diversity mode.

12

AUX_WALSH - Walsh Code for the Auxiliary Pilot.

13

14

The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.

15

AUX_TD_POWER_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.

16

17

18

The base station shall set this field to the Auxiliary Transmit Diversity Pilot transmit power level relative to that of the Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.

19

TD_MODE - Transmit Diversity mode.

20

21

The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.

22

RESERVED - Reserved bits.

23

24

The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

25

26

If NGHBR_PILOT_REC_TYPE is equal to '011', the base station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

27

28

SR3_PRIMARY_PILOT - Primary SR3 pilot.

- 1 The base station shall set this field to the value shown in
 2 Table 3.7.2.3.2.26-5 corresponding to the position of the
 3 primary SR3 pilot.
- 4 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
 5 on the lower frequency of the two remaining SR3 frequencies.
- 6 The base station shall set this field to the value shown in
 7 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 8 primary pilot with respect to the pilot on the lower frequency
 9 of the two remaining SR3 frequencies.
- 10 SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot
 11 on the higher frequency of the two remaining SR3
 12 frequencies.
- 13 The base station shall set this field to the value shown in
 14 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 15 primary pilot with respect to the pilot on the higher frequency
 16 of the two remaining SR3 frequencies.

17

18 If NGHBR_PILOT_REC_TYPE is equal to ‘100’, the base station shall include the following
 19 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

20

21

1	SR3_PRIMARY_PILOT	-	Primary SR3 pilot.
2			The base station shall set this field to the value shown in
3			Table 3.7.2.3.2.26-5 corresponding to the position of the
4			primary SR3 pilot.
5	SR3_PILOT_POWER1	-	The primary SR3 pilot power level relative to that of the pilot
6			on the lower frequency of the two remaining SR3 frequencies.
7			The base station shall set this field to the value shown in
8			Table 3.7.2.3.2.26-6 corresponding to the power level of the
9			primary pilot with respect to the pilot on the lower frequency
10			of the two remaining SR3 frequencies.
11	SR3_PILOT_POWER2	-	The primary SR3 pilot power level relative to that of the pilot
12			on the higher frequency of the two remaining SR3
13			frequencies.
14			The base station shall set this field to the value shown in
15			Table 3.7.2.3.2.26-6 corresponding to the power level of the
16			primary pilot with respect to the pilot on the higher frequency
17			of the two remaining SR3 frequencies.
18	QOF	-	Quasi-orthogonal function index.
19			The base station shall set this field to the index of the Quasi-
20			orthogonal function (see [2]) on the frequency of the primary
21			pilot.
22	WALSH_LENGTH	-	Length of the Walsh Code.
23			The base station shall set this field to the WALSH_LENGTH
24			value shown in Table 3.7.2.3.2.22-6 corresponding to the
25			length of the Walsh code for the pilot that is used as the
26			Auxiliary pilot on the frequency of the primary pilot.
27	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
28			The base station shall set this field to the Walsh code
29			corresponding to the Auxiliary pilot on the frequency of the
30			primary pilot.
31	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
32			frequency of the two remaining SR3 frequencies.
33			If the additional information for the pilot on the lower
34			frequencies of the two remaining SR3 frequencies is the same
35			as pilot on the primary frequency, the base station shall set
36			this field to '0'; otherwise, the base station shall set this field
37			to '1'.
38	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
39			frequency of the two remaining SR3 frequencies.
40			If ADD_INFO_INCL1 is set to '0', the base station shall omit
41			this field; otherwise, the base station shall set this field as
42			follows:
43			The base station shall set this field to the index of the Quasi-
44			orthogonal function (see [2]) on the lower frequency of the two
45			remaining SR3 frequencies.

1			If ADD_INFO_INCL2 is set to '0', the base station shall omit
2			this field; otherwise, the base station shall set this field as
3			follows:
4			The base station shall set this field to the Walsh code
5			corresponding to the Auxiliary pilot on the higher frequency of
6			the two remaining SR3 frequencies.
7	RESERVED	-	Reserved bits.
8			The base station shall set all the bits of this field to '0' to
9			make the entire record octet-aligned.
10	BAND_CLASS	-	Neighbor band class.
11			If COMMON_INCL is set to '0', the base station shall set this
12			field to the CDMA band class as specified in [30]
13			corresponding to the CDMA frequency assignment for the
14			CDMA Channel containing the Paging Channel for the private
15			neighbor; otherwise, the base station shall omit this field.
16	NGHBR_FREQ	-	Neighbor frequency assignment.
17			If the COMMON_INCL bit is set to '0', the base station shall
18			set this field to the CDMA Channel number, in the specified
19			CDMA band class, corresponding to the CDMA frequency
20			assignment for the CDMA Channel containing the Paging
21			Channel for the private neighbor base station; otherwise, the
22			base station shall omit this field.
23	UZID_INCL	-	User Zone identifier included indicator.
24			If the UZID information is included, the base station shall set
25			this field to '1'; otherwise, the base station shall set this field
26			to '0'.
27	NUM_UZID	-	Number of User Zone identifiers.
28			If UZID_INCL is set to '1', the base station shall set this field
29			to the number of occurrences of UZID supported by the
30			private neighbor base station; otherwise, the base station
31			shall omit this field.
32			If UZID_INCL is set to '1', the base station shall include NUM_UZID occurrences of the
33			following three-field subrecord; otherwise, the base station shall omit this subrecord.
34	UZID	-	User Zone identifiers.
35			The base station shall set this field to the User Zone identifier
36			supported by the private neighbor base station.
37	UZ_REV	-	User Zone update revision number.
38			The base station shall set this field to the User Zone update
39			revision number.
40	TEMP_SUB	-	Temporary subscription flag.
41			If the corresponding User Zone allows for temporary
42			subscription, the base station shall set this field to '1';
43			otherwise, the base station shall set this field to '0'.
44	RESERVED	-	Reserved bits.

1
2
3
4
5

The base station shall add reserved bits as needed in order to make the length of the entire record equal to an integer number of octets. The base station shall set these bits to '0'.

1

2

P_REV - Protocol revision level.

3

The base station shall set this field to '00001100'.

4

MIN_P_REV - Minimum protocol revision level.

5

The base station sets this field to prevent mobile stations which cannot be supported by the base station from accessing the system.

6

7

8

The base station shall set this field to the minimum protocol revision level that it supports.

9

10

SID - System identification.

11

The base station shall set this field to the system identification number for this system (see 2.6.5.2).

12

13

NID - Network identification.

14

This field serves as a sub-identifier of a system as defined by the owner of the SID.

15

16

The base station shall set this field to the network identification number for this network (see 2.6.5.2).

17

18

PILOT_PN - Pilot PN sequence offset index.

19

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

20

21

LC_STATE - Long code state.

22

The base station shall set this field to the long code state at the time given by the SYS_TIME field of this message.

23

24

SYS_TIME - System time.

- 1 The base station shall set this field to the System Time as of
 2 four Sync Channel superframes (320 ms) after the end of the
 3 last superframe containing any part of this *Sync Channel*
 4 *Message*, minus the pilot PN sequence offset, in units of 80
 5 ms (see [2]).
- 6 LP_SEC - The number of leap seconds that have occurred since the
 7 start of System Time.
- 8 The base station shall set this field to the number of leap
 9 seconds that have occurred since the start of System Time, as
 10 of the time given by the SYS_TIME field of this message.
- 11 LTM_OFF - Offset of local time from System Time.
- 12 The base station shall set this field to the two's complement
 13 offset of local time from System Time, in units of 30 minutes.
- 14 The local time of day, in units of 80 ms, as of four Sync
 15 Channel superframes (320 ms) after the end of the last
 16 superframe containing any part of this *Sync Channel*
 17 *Message*, minus the pilot PN sequence offset, is equal to
 18 $SYS_TIME - (LP_SEC \times 12.5) + (LTM_OFF \times 22500)$.
- 19 DAYLT - Daylight savings time indicator.
- 20 If daylight savings time is in effect, the base station shall set
 21 this field to '1'; otherwise, the base station shall set this field
 22 to '0'.
- 23 PRAT - Paging Channel data rate.
- 24 The base station shall set this field to the PRAT field value
 25 shown in Table 3.7.2.3.2.26-1 corresponding to the data rate
 26 used by the Paging Channels in the system.

27 **Table 3.7.2.3.2.26-1. Paging Channel Data Rate**

PRAT Field (binary)	Paging Channel data rate
00	9600 bps
01	4800 bps
10	Reserved
11	Reserved

- 28
- 29 CDMA_FREQ - Frequency assignment.
- 30 The base station shall set this field to the CDMA Channel
 31 number corresponding to the CDMA frequency assignment for
 32 the CDMA Channel containing a Primary Paging Channel.¹¹²

¹¹² If compatibility with IS-95-A mobile stations is desired in a Band Class 0 system, the CDMA_FREQ field is set to the CDMA frequency assignment containing this Sync Channel.

1	EXT_CDMA_FREQ	-	Extended frequency assignment.
2			The base station shall set this field to the CDMA Channel
3			number corresponding to the CDMA frequency assignment for
4			the CDMA Channel containing a Primary Paging Channel that
5			a mobile station capable of Radio Configurations greater than
6			2 or capable of supporting Quick Paging Channel will use.
7	SR1_BCCH_NON_TD_INCL	-	Common Channel in non TD mode on Spreading Rate 1
8			information included indicator.
9			The base station shall set this field to '1' if the base station
10			includes common channels (BCCH/F-CCCH/EACH)
11			information in non TD mode; otherwise, the base station shall
12			set this field to '0'.
13	SR1_NON_TD_FREQ_INCL	-	Non Transmit Diversity frequency included indicator.
14			If SR1_BCCH_NON_TD_INCL is set to '0', the base station
15			shall omit this field; otherwise, the base station shall set this
16			field as follows:
17			The base station shall set this field to '1' if
18			SR1_CDMA_FREQ_NON_TD is included in the message. The
19			base station shall set this field to '0' if the frequency specified
20			by the EXT_CDMA_FREQ field is used for BCCH frequency
21			assignment.
22	SR1_CDMA_FREQ_NON_TD	-	Frequency assignment for non-transmit diversity
23			operation.
24			If SR1_NON_TD_FREQ_INCL is not included, or is included
25			and set to '0', the base station shall omit this field; otherwise,
26			the base station shall set this field as follows:
27			The base station shall set this field to the CDMA Channel
28			number corresponding to the CDMA frequency assignment for
29			the CDMA Channel containing a Broadcast Control Channel
30			that does not support the TD operation.
31	SR1_BRAT_NON_TD	-	BCCH data rate in non-TD mode for Spreading Rate 1.
32			If SR1_BCCH_NON_TD_INCL is set to '0', the base station
33			shall omit this field; otherwise, the base station shall set this
34			field as follows:
35			The base station shall set this field to the BRAT field value
36			shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
37			used by the Primary Broadcast Control Channel in the
38			system.

Table 3.7.2.3.2.26-2. Broadcast Control Channel Data Rate

BRAT Field (binary)	Broadcast Control Channel data rate
00	4800 bps
01	9600 bps
10	19200bps

SR1_CRAT_NON_TD - BCCH code rate in non Transmit Diversity mode for Spreading Rate 1.
 If SR1_BCCH_NON_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
 The base station shall set this field to '0' if the BCCH Code Rate is 1/4 (see [2]). The base station shall set this field to '1' if the BCCH code rate is 1/2 (see [2]).

SR1_BCCH_CODE_CHAN_NON_TD - Walsh code for the Spreading Rate 1 BCCH in non Transmit Diversity mode.
 If SR1_BCCH_NON_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
 The base station shall set this field to the Walsh code corresponding to the Spreading Rate 1 BCCH in non Transmit Diversity mode.

SR1_TD_INCL - Spreading Rate 1 Transmit Diversity frequency information included indicator.
 The base station shall set this field to '1' if SR1_CDMA_FREQ_TD, SR1_BRAT_TD, SR1_CRAT_TD, SR1_TD_MODE, and SR1_TD_POWER_LEVEL are included in the message; otherwise, the base station shall set this field to '0'.

SR1_CDMA_FREQ_TD - Spreading Rate 1 frequency assignment for Transmit Diversity operation.
 If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
 The base station shall set this field to the CDMA Channel number corresponding to the CDMA frequency assignment for the CDMA Channel containing a BCCH Channel that supports the TD operation.

SR1_BRAT_TD - BCCH data rate in Transmit Diversity mode for Spreading Rate 1.
 If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

1 The base station shall set this field to the BRAT field value
 2 shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
 3 used by the Primary Broadcast Control Channel in the
 4 system.

5 SR1_CRAT_TD - BCCH code rate in Transmit Diversity mode for Spreading
 6 Rate 1.

7 If SR1_TD_INCL is set to '0', the base station shall omit this
 8 field; otherwise, the base station shall set this field as follows:

9 The base station shall set this field to '0' if the BCCH Code
 10 Rate is 1/4 (see [2]). The base station shall set this field to '1'
 11 if the BCCH Code Rate is 1/2 (see [2]).

12 SR1_BCCH_CODE_CHAN_TD - Walsh code for the Spreading Rate 1 BCCH in
 13 Transmit Diversity mode.

14 If SR1_TD_INCL is set to '0', the base station shall omit this
 15 field; otherwise, the base station shall set this field as follows:

16 The base station shall set this field to the Walsh code
 17 corresponding to the Spreading Rate 1 BCCH in Transmit
 18 Diversity mode.

19 SR1_TD_MODE - Spreading Rate 1 Transmit Diversity Mode.

20 If SR1_TD_INCL is set to '0', the base station shall omit this
 21 field; otherwise, the base station shall set this field as follows:

22 The base station shall set this field corresponding to Table
 23 3.7.2.3.2.26-3.

24 **Table 3.7.2.3.2.26-3. TD Mode**

TD_MODE	Descriptions
00	OTD (Orthogonal Transmit Diversity) mode
01	STS (Space Time Spreading) mode
10-11	Reserved

25
 26 SR1_TD_POWER_LEVEL - Spreading Rate 1 TD transmit power level.

27 If SR1_TD_INCL is set to '0', the base station shall omit this
 28 field; otherwise, the base station shall set this field as follows:

29 The base station shall set this field to the TD transmit power
 30 level relative to that of the Forward Pilot Channel, as specified
 31 in Table 3.7.2.3.2.26-4.

01	6 dB below the Forward Pilot Channel transmit power
10	3 dB below the Forward Pilot Channel transmit power
11	Same as the Forward Pilot Channel transmit power

SR3_INCL - Spreading Rate 3 information included indicator.
The base station shall set this field to '1' if the Spreading Rate 3 information is included in this message; otherwise, the base station shall set this field to '0'.

SR3_CENTER_FREQ_INCL - Center SR3 frequency assignment included.
If SR3_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
The base station shall set this field to '1', if the CDMA Channel number corresponding to the SR3 center frequency assignment for the CDMA Channel containing a Broadcast Control Channel is different to EXT_CDMA_FREQ. Otherwise, the base station shall set this field to '0'.

SR3_CENTER_FREQ - Center SR3 frequency assignment.
If SR3_CENTER_FREQ_INCL is not included or is included but is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
The base station shall set this field to the CDMA Channel number corresponding to the SR3 center frequency assignment for the CDMA Channel containing a Broadcast Control Channel.

SR3_BRAT - Spreading Rate 3 BCCH data rate.
If SR3_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
The base station shall set this field to the BCCH rate field value shown in Table 3.7.2.3.2.26-2 corresponding to the data rate used by the Primary Broadcast Control Channel in the system.

SR3_BCCH_CODE_CHAN - Spreading Rate 3 BCCH Walsh code.
If SR3_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

1 The base station shall set this field to the Walsh code
2 corresponding to the Spreading Rate 3 BCCH.

3 SR3_PRIMARY_PILOT – Primary SR3 pilot.

4 If SR3_INCL is set to '0', the base station shall omit this field;
5 otherwise, the base station shall set this field as follows:

6 The base station shall set this field to the value shown in
7 Table 3.7.2.3.2.26-5 corresponding to the position of the
8 primary SR3 pilot.

9 **Table 3.7.2.3.2.26-5. The Position of the Primary SR3 Pilot**

SR3_PRIMARY_PILOT (Binary)	Position
00	The primary pilot is on the lowest SR3 frequency
01	The primary pilot is on the center SR3 frequency
10	The primary pilot is on the highest SR3 frequency
11	Reserved

10

11 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
12 on the lower frequency of the two remaining SR3 frequencies.

13 If SR3_INCL is set to '0', the base station shall omit this field;
14 otherwise, the base station shall set this field to the value
15 shown in Table 3.7.2.3.2.26-6 corresponding to the power
16 level of the primary pilot with respect to the pilot on the lower
17 frequency of the two remaining SR3 frequencies.

18

1

Table 3.7.2.3.2.26-6. Pilot Transmission Power

SR3_PILOT_POWER2

- The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

If SR3_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

DS_INCL

- Direct Spread (DS) System and Information Available.

If the base station is a pilot beacon and includes the DS_BLOB field (containing information on how to access a DS system, see [32]), the base station shall set this field to '1'; otherwise the base shall set this field to '0'.

DS_BLOB

- Access Information about a Direct Spread (DS) System.

If DS_INCL is set to '1', the base station shall include this field and set it as described in [32].

If DS_INCL is set to '0', the base station shall omit this field.

4

5

PILOT_PN - Pilot PN sequence offset index.

- 1 RETURN_IF_FAIL - Return if fail indicator.
- 2 The base station shall set this field to '1' if the mobile station
- 3 is required to return to the system from which it is being
- 4 redirected upon failure to obtain service after attempting all
- 5 qualified redirection records in this message; otherwise, the
- 6 base station shall set this field to '0'.
- 7 DELETE_TMSI - Delete TMSI indicator.
- 8 The base station shall set this field to '1' if the mobile station
- 9 is required to delete the TMSI assigned to the mobile station;
- 10 otherwise, the base station shall set this field to '0'.
- 11 REDIRECT_P_REV_INCL - Redirection mobile protocol revision included.
- 12 If the redirection specified in this message applies to the
- 13 mobile stations of some specific protocol revisions, the base
- 14 station shall set this field to '1'; otherwise, if this redirection
- 15 applies to all mobile stations, the base station shall set this
- 16 field to '0'.
- 17 EXCL_P_REV_IND - Excluding mobile protocol revision indicator.
- 18 If the REDIRECT_P_REV_INCL is set to '1', the base station
- 19 shall include this field and set this field as described below;
- 20 otherwise, the base station shall omit this field.
- 21 If mobile stations with MOB_P_REV in the range between
- 22 REDIRECT_P_MIN and REDIRECT_P_MAX inclusive are
- 23 excluded from this Global Service Redirection, the base
- 24 station shall set this field to '1'. Otherwise, if the mobile
- 25 stations with MOB_P_REV in the protocol revision range
- 26 specified in REDIRECT_P_MIN and REDIRECT_P_MAX are
- 27 subjected to the redirection, the base station shall set this
- 28 field to '0'.
- 29 REDIRECT_P_MIN - Minimum redirection protocol revision.
- 30 If REDIRECT_P_REV_INCL is set to '0', the base station shall
- 31 omit this field; otherwise, the base station shall include this
- 32 field and set it as follows.
- 33 The base station shall set this field to the minimum protocol
- 34 revision of which mobile stations are subjected to as specified
- 35 by the action contained in EXCL_P_REV_IND (i.e., to be
- 36 redirected or excluded from redirection). The base station
- 37 shall set this field to a protocol revision equal to or greater
- 38 than six.
- 39 REDIRECT_P_MAX - Maximum redirection protocol revision.
- 40 If REDIRECT_P_REV_INCL is set to '0', the base station shall
- 41 omit this field; otherwise, the base station shall include this
- 42 field and set it as follows.

- 1 ADD_EXCL_P_REV_IND - Additional excluding mobile protocol revision indicator.
2
3 If the ADD_REDIRECT_P_REV_INCL is set to '1', the base
4 station shall include this field and set this field as described
5 below; otherwise, the base station shall omit this field.
6
7 If mobile stations with MOB_P_REV in the range between
8 ADD_REDIRECT_P_MIN and ADD_REDIRECT_P_MAX
9 inclusive are excluded from this global service redirection, the
10 base station shall set this field to '1'. Otherwise, if the mobile
11 stations with MOB_P_REV in the protocol revision range
12 specified in ADD_REDIRECT_P_MIN and
13 ADD_REDIRECT_P_MAX are subjected to the redirection, the
14 base station shall set this field to '0'.
- 13 ADD_REDIRECT_P_MIN - Additional minimum redirection protocol revision.
14
15 If ADD_REDIRECT_P_REV_INCL is set to '0', the base station
16 shall omit this field; otherwise, the base station shall include
17 this field and set it as follows.
18
19 The base station shall set this field to the minimum protocol
20 revision of which mobile stations are subjected to as specified
21 by the action contained in ADD_EXCL_P_REV_IND (i.e., to be
22 redirected or excluded from redirection). The base station
23 shall set this field to a protocol revision equal to or greater
24 than six.
- 23 ADD_REDIRECT_P_MAX - Additional maximum redirection protocol revision.
24
25 If ADD_REDIRECT_P_REV_INCL is set to '0', the base station
26 shall omit this field; otherwise, the base station shall include
27 this field and set it as follows.
28
29 The base station shall set this field to the maximum protocol
30 revision of which mobile stations are subjected to as specified
31 by the action contained in ADD_EXCL_P_REV_IND (i.e., to be
32 redirected or excluded from redirection). The base station
33 shall set this field to a protocol revision equal to or greater
34 than six.
- 33 ADD_RECORD_TYPE - Additional redirection record type.
34
35 The base station shall set this field to the RECORD_TYPE
36 value shown in Table 3.7.2.3.2.16-2 corresponding to the type
37 of redirection specified by this record.
- 37 ADD_RECORD_LEN - Additional redirection record length.
38
39 The base station shall set this field to the number of octets in
40 the type-specific fields of this redirection record.
- 40 Type-specific fields - Redirection record type-specific fields.
41
42 The base station shall include type-specific fields based on
43 the ADD_RECORD_TYPE of this redirection record, as
44 specified below.

1 ADD_LAST_SEARCH_RECORD_IND - Additional last search record indicator.
 2 The base station shall set this field to '0' if the mobile station
 3 is to attempt redirection per the next qualified redirection
 4 record in the message following failure to acquire the target
 5 system for the current redirection record; otherwise, the base
 6 station shall set this field to '1'.
 7
 8 If RECORD_TYPE or ADD_RECORD_TYPE is equal to '00000010', the base station shall
 9 include the following type specific fields:

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM_CHANS occurrences of the following field:

{ (NUM_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM_CHANS)

CLASS_INFO_INCL	
CLASS_REC_LEN	

SUBCLASS_REC_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS_REC_LEN + 1)

REDIRECT_SUBCLASS	1
-------------------	---

} (SUBCLASS_REC_LEN + 1)

RESERVED	0 - 7 (as needed)
----------	-------------------

11
 12 BAND_CLASS - Band class.
 13 The base station shall set this field to the CDMA band class,
 14 as specified in [30].
 15 EXPECTED_SID - Expected SID.
 16 If the base station is redirecting the mobile station to a
 17 specific system, the base station shall set this field to the SID
 18 of that system; otherwise, the base station shall set this field
 19 to '0'.
 20 EXPECTED_NID - Expected NID.

1			If the base station is redirecting the mobile station to a
2			specific network, the base station shall set this field to the
3			NID of that network; otherwise, the base station shall set this
4			field to 65535.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0'
7	NUM_CHANS	-	Number of CDMA Channels.
8			The base station shall set this field to the number of
9			occurrences of the CDMA_CHAN field in this record.
10	CDMA_CHAN	-	CDMA Channel number.
11			For each CDMA Channel on which the mobile station is to
12			attempt to acquire a CDMA system, the base station shall
13			include one occurrence of this field specifying the associated
14			CDMA Channel number.
15	SUBCLASS_INFO_INCL	-	Band subclass information included
16			The base station shall set this field to '0' when band subclass
17			information is not included for the redirection record;
18			otherwise, the base station shall set this field to '1'.
19	SUBCLASS_REC_LEN	-	Band subclass subrecord length
20			If SUBCLASS_INFO_INCL is set to '0', the base station shall
21			omit this field; otherwise, the base station shall set this field
22			as follows:
23			The base station shall set this field to the number of
24			redirection band subclass indicator fields included in the
25			subrecord minus one. The number of redirection band
26			subclass indicator fields included is limited to the highest
27			band subclass associated with this redirection record (i.e. if
28			the highest band subclass is K, then SUBCLASS_REC_LEN =
29			K).
30			If the SUBCLASS_REC_LEN field is included, the base station shall include
31			SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included
32			corresponds to band subclass '0' and the N th field included corresponds to band subclass
33			'N-1'.
34	REDIRECT_SUBCLASS	-	Redirection band subclass indicator
35			The base station shall set this field to '1' if the corresponding
36			band subclass is associated with this redirection record;
37			otherwise, the base station shall set this field to '0'.
38	RESERVED	-	Reserved bits.
39			The base station shall add reserved bits as needed in order to
40			make the length of the entire record equal to an integer
41			number of octets. The base station shall set these bits to '0'.
42			
43			

1 3.7.2.3.2.28 Extended CDMA Channel List Message
 2 MSG_TAG: ECCLM

3

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_FREQ	4

NUM_FREQ occurrences of the following field:

{ (NUM_FREQ)

CDMA_FREQ	11
-----------	----

} (NUM_FREQ)

RC_QPCH_SEL_INCL	1
------------------	---

If RC_QPCH_SEL_INCL is equal to '1', include NUM_FREQ occurrences of the following field:

{ (NUM_FREQ)

RC_QPCH_HASH_IND	1
------------------	---

} (NUM_FREQ)

TD_SEL_INCL	1
-------------	---

TD_MODE	0 or 2
---------	--------

If TD_SEL_INCL is equal to '1', include NUM_FREQ occurrences of the following fields:

{ (NUM_FREQ)

TD_HASH_IND	1
-------------	---

TD_POWER_LEVEL	0 or 2
----------------	--------

} (NUM_FREQ)

CDMA_BAND	5
-----------	---

SUBCLASS_INFO_INCL	1
--------------------	---

SUBCLASS_REC_LEN	0 or 5
------------------	--------

SUBCLASS_REC_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS_REC_LEN + 1)

CDMA_SUBCLASS	1
---------------	---

} (SUBCLASS_REC_LEN + 1)

CDMA_FREQ_WEIGHT_INCL	1
-----------------------	---

4

1

If CDMA_FREQ_WEIGHT_INCL is equal to '1', include NUM_FREQ occurrences of the following field:

{ (NUM_FREQ)

CDMA_FREQ_WEIGHT	3
------------------	---

} (NUM_FREQ)

NUM_BAND	3
----------	---

{ (NUM_BAND)

ADD_CDMA_BAND	5
---------------	---

ADD_SUBCLASS_INFO_INCL	1
------------------------	---

--------------------	--------

ADD_CDMA_FREQ_WEIGHT	0 or 3
----------------------	--------

} (NUM_ADD_FREQ)

} (NUM_BAND)

2

3

PILOT_PN - Pilot PN sequence offset index.

4

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

5

6

CONFIG_MSG_SEQ - Configuration message sequence number.

7

The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).

8

9

NUM_FREQ - Number of CDMA Frequencies

1 The base station shall set this field to the number of
 2 occurrences of the CDMA_FREQ field included in this
 3 message.

4 The base station shall not set this field to '0000'.

5 The base station shall include NUM_FREQ occurrences of the following one-field record:

6 CDMA_FREQ - CDMA Channel frequency assignment.

7 If this message is sent on the Paging Channel:

8 The base station shall set this field to the CDMA channel
 9 number corresponding to the CDMA frequency
 10 assignment for a CDMA Channel containing a Paging
 11 Channel (see [2]).

12 This CDMA channel shall reside in the same band class as
 13 the band class where this message is being transmitted. If
 14 SUBCLASS_INFO_INCL is equal to '1', this CDMA channel
 15 shall also reside in at least one supported
 16 CDMA_SUBCLASS included in the message.

17 If this message is sent on the Primary Broadcast Control
 18 Channel:

19 The base station shall set this field to the CDMA Channel
 20 number corresponding to the CDMA frequency
 21 assignment for a CDMA Channel containing a Primary
 22 Broadcast Control Channel and Forward Common Control
 23 Channel (see [2]).

24 This CDMA channel shall reside in the same band class as
 25 the band class where this message is being transmitted. If
 26 SUBCLASS_INFO_INCL is equal to '1', this CDMA channel
 27 shall also reside in at least one supported
 28 CDMA_SUBCLASS included in the message.

29 If the base station supports a CDMA frequency
 30 assignment without transmit diversity, the base station
 31 should not set the first occurrence of this field to a CDMA
 32 channel number corresponding to a transmit diversity
 33 frequency assignment.

34 RC_QPCH_SEL_INCL - RC and QPCH Selection included indicator

35 The base station shall set this field to '1', if NUM_FREQ
 36 occurrences of RC_QPCH_HASH_IND are included; otherwise,
 37 it shall set this field to '0'.

38 If the base station sets this field to '1', the base station shall set the RC_QPCH_HASH_IND
 39 field to '1' in at least one of the following one-field records:

40 RC_QPCH_HASH_IND - RC_QPCH channel hashing indicator

41 If RC_QPCH_SEL_INCL is set to '1', the base station shall
 42 include NUM_FREQ occurrences of this field and set this field
 43 as follow; otherwise, the base station shall omit this field.

- 1 The base station shall set this field to '1', if the corresponding
2 CDMA channel is to be selected for channel hashing by
3 mobile stations capable of Radio Configurations greater than
4 two or capable of supporting Quick Paging Channel.
- 5 TD_SEL_INCL - Transmit diversity selection indicator included.
- 6 The base station shall set this field to '1', if the base station
7 includes transmit diversity selection information in this
8 message; otherwise, the base station shall set this field to '0'.
- 9 When the *Extended CDMA Channel List Message* is sent on
10 the Paging Channel, the base station shall set this field to '0'.
- 11 TD_MODE - Transmit diversity mode.
- 12 If TD_SEL_INCL is set to '0', the base station shall omit this
13 field; otherwise, the base station shall include this field and
14 set it as follows:
- 15 The base station shall set this field to the Transmit Diversity
16 mode used on the band class where this message is being
17 transmitted, as specified in Table 3.7.2.3.2.26-3.
- 18 If TD_SEL_INCL is set to '1', the base station shall include NUM_FREQ occurrences of the
19 following two-field record, and shall set the TD_HASH_IND field to '1' in at least one of the
20 records:
- 21 TD_HASH_IND - Transmit diversity hash indicator.
- 22 If the associated CDMA_FREQ is to be selected for CDMA
23 channel hashing by mobile stations capable of supporting
24 transmit diversity [TD_MODE], the base station shall set the
25 field to '1'; otherwise, the base station shall set this field to '0'.
- 26 TD_POWER_LEVEL - Transmit diversity power level.
- 27 If TD_HASH_IND is set to '0', the base station shall omit this
28 field; otherwise, the base station shall include this field and
29 set it to the transmit diversity transmission power level
30 relative to that of the Forward Pilot Channel, as specified in
31 Table 3.7.2.3.2.26-4.
- 32 CDMA_BAND - Current band class.
- 33 The base station shall set this field to the CDMA band class
34 (see [30]) corresponding to the CDMA frequency assignment
35 for the CDMA Channel where this message is being
36 transmitted.
- 37 SUBCLASS_INFO_INCL - Band subclass information included
- 38 The base station shall set this field to '0' when no band
39 subclasses are associated with the listed CDMA_FREQ
40 channels or when band subclasses are not to be factored into
41 the mobile station's hashing algorithm; otherwise, the base
42 station shall set this field to '1'.
- 43 SUBCLASS_REC_LEN - Band subclass subrecord length

1 If SUBCLASS_INFO_INCL is set to '0', the base station shall
 2 omit this field; otherwise, the base station shall set this field
 3 as follows:

4 The base station shall set this field to the number of band
 5 subclass indicator fields included in the subrecord minus
 6 one. The number of band subclass indicator fields included
 7 is limited to the highest band subclass supported on any of
 8 the CDMA_FREQ channels listed above for the current band
 9 (i.e. if the highest band subclass is K, then
 10 SUBCLASS_REC_LEN = K).

11 If the SUBCLASS_REC_LEN field is included, the base station shall include
 12 SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included
 13 corresponds to band subclass '0' and the Nth field included corresponds to band subclass
 14 'N-1'.

15 CDMA_SUBCLASS - Band subclass indicator

16 The base station shall set this field to '1' if the corresponding
 17 band subclass is supported on any of the CDMA_FREQ
 18 channels listed above; otherwise, the base station shall set
 19 this field to '0'.

20 CDMA_FREQ_WEIGHT_INCL - CDMA frequency weight included indicator

21 The base station shall set this field to '1' if the
 22 CDMA_FREQ_WEIGHT fields are included in this message;
 23 otherwise, it shall set this field to '0'.

24 If CDMA_FREQ_WEIGHT_INCL is included and set to '1', the base station shall include
 25 NUM_FREQ occurrences of the following one-field record:

26 CDMA_FREQ_WEIGHT - CDMA frequency weight

27 The base station shall set this field to one less than the weight
 28 for this CDMA channel to be used in channel hashing by the
 29 mobile station.

30 NUM_BAND - Number of CDMA Bands

31 The base station shall set this field to the number of
 32 additional bands listed in this message.

33 The base station shall include NUM_BAND occurrences of the following record:

34 ADD_CDMA_BAND - Band class.

35 The base station shall set this field to the CDMA band class,
 36 as specified in [30], corresponding to the additional CDMA
 37 frequencies (ADD_CDMA_FREQ) included in this record.

38 ADD_SUBCLASS_INFO_INCL - Band subclass information included

39 The base station shall set this field to '0' when no band
 40 subclasses are associated with the listed band or when band
 41 subclasses are not to be factored into the mobile station's
 42 hashing algorithm; otherwise, the base station shall set this
 43 field to '1'.

44 ADD_SUBCLASS_REC_LEN - Band subclass subrecord length

1 If ADD_SUBCLASS_INFO_INCL is set to '0', the base station
 2 shall omit this field; otherwise, the base station shall set this
 3 field as follows:

4 The base station shall set this field to the number of band
 5 subclass indicator fields included in the subrecord minus
 6 one. The number of band subclass indicator fields included
 7 is limited to the highest band subclass supported on the band
 8 listed above (i.e. if the highest band subclass is K, then
 9 ADD_SUBCLASS_REC_LEN = K).

10 If the ADD_SUBCLASS_REC_LEN field is included, the base station shall include
 11 ADD_SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field
 12 included corresponds to band subclass '0' and the Nth field included corresponds to band
 13 subclass 'N-1'.

14 ADD_CDMA_SUBCLASS - Band subclass indicator

15 The base station shall set this field to '1' if the corresponding
 16 band subclass is supported on the band listed above;
 17 otherwise, the base station shall set this field to '0'.

18 ADD_TD_MODE - Transmit diversity mode.

19 If TD_SEL_INCL is set to '0', the base station shall omit this
 20 field; otherwise, the base station shall include this field and
 21 set it as follows:

22 The base station shall set this field to the Transmit Diversity
 23 mode on the ADD_CDMA_BAND listed above, as specified in
 24 Table 3.7.2.3.2.26-3.

25 BYPASS_SYS_DET_IND - Direct to idle allowed indicator.

26 The base station shall set this field to '1' if the mobile station
 27 is allowed to go directly to idle state on any CDMA channel
 28 belonging to the ADD_CDMA_BAND listed above.

29 NUM_ADD_FREQ - Number of additional CDMA Frequencies

30 The base station shall set this field to the number of
 31 occurrences of the ADD_CDMA_FREQ field included hereafter.

32 The mobile station shall include NUM_ADD_FREQ occurrences of the following record:

33 ADD_CDMA_FREQ - CDMA Channel frequency assignment.

34 If this message is sent on the Paging Channel:

35 The base station shall set this field to the CDMA channel
 36 number corresponding to the CDMA frequency
 37 assignment for a CDMA Channel containing a Paging
 38 Channel (see [2]).

39 This CDMA channel resides in the band class listed in this
 40 ADD_CDMA_BAND record. If
 41 ADD_SUBCLASS_INFO_INCL is equal to '1', this CDMA
 42 channel shall also reside in at least one supported
 43 ADD_CDMA_SUBCLASS included in this
 44 ADD_CDMA_BAND record.

1 If this message is sent on the Primary Broadcast Control
2 Channel:

3 The base station shall set this field to the CDMA Channel
4 number corresponding to the CDMA frequency
5 assignment for a CDMA Channel containing a Primary
6 Broadcast Control Channel and Forward Common Control
7 Channel (see [2]).

8 This CDMA channel resides in the band class listed in this
9 ADD_CDMA_BAND record. If
10 ADD_SUBCLASS_INFO_INCL is equal to '1', this CDMA
11 channel shall also reside in at least one supported
12 ADD_CDMA_SUBCLASS included in this
13 ADD_CDMA_BAND record.

14 If the base station supports a CDMA frequency
15 assignment without transmit diversity, the base station
16 should not set the first occurrence of this field to a CDMA
17 channel number corresponding to a transmit diversity
18 frequency assignment.

19 ADD_RC_QPCH_HASH_IND - RC QPCH channel hashing indicator

20 If RC_QPCH_SEL_INCL is set to '0', the base station shall omit
21 this field; otherwise, the base station shall include this field
22 and set it as follows:

23 The base station shall set this field to '1', if the corresponding
24 CDMA channel is to be selected for channel hashing by
25 mobile stations capable of Radio Configurations greater than
26 two or capable of supporting Quick Paging Channel.

27 ADD_TD_HASH_IND - Transmit diversity hash indicator.

28 If TD_SEL_INCL is set to '0', the base station shall omit this
29 field; otherwise, the base station shall include this field and
30 set it as follows:

31 If the associated ADD_CDMA_FREQ is to be selected for
32 CDMA channel hashing by mobile stations capable of
33 supporting transmit diversity [TD_MODE], the base station
34 shall set the field to '1'; otherwise, the base station shall set
35 this field to '0'.

36 ADD_TD_POWER_LEVEL - Transmit diversity power level.

37 If ADD_TD_HASH_IND is not included or is included and set
38 to '0', the base station shall omit this field; otherwise, the
39 base station shall include this field and set it to the transmit
40 diversity transmission power level relative to that of the
41 Forward Pilot Channel, as specified in Table 3.7.2.3.2.26-4.

42 ADD_CDMA_FREQ_WEIGHT - CDMA frequency weight

43 If CDMA_FREQ_WEIGHT_INCL is set to '0', the base station
44 shall omit this field; otherwise, the base station shall include
45 this field and set it as follows:

1
2
3
4

The base station shall set this field to one less than the weight for this CDMA channel to be used in channel hashing by the mobile station.

1 3.7.2.3.2.29 User Zone Reject Message
 2 MSG_TAG: UZRM

Field	Length (bits)
REJECT_UZID	16
REJECT_ACTION_INDI	3
UZID_ASSIGN_INCL	1
ASSIGN_UZID	0 or 16

- 3 REJECT_UZID - Rejected User Zone identifier.
 4 The base station shall set this field to the User Zone identifier
 5 of the User Zone rejected by the base station.
- 6 REJECT_ACTION_INDI - Rejection action indicator.
 7 The base station shall set this field to the value shown in
 8 Table 3.7.2.3.2.29-1 corresponding to the User Zone rejection
 9 action field to identify the mobile station action.

10 **Table 3.7.2.3.2.29-1. Rejection Action Indicators**

Description	REJECT_ACTION_INDI (binary)
Disable UZID until Next Update	000
Disable UZID until next power cycle	001
Disable UZID until new SID	010
Disable UZID until new SID/NID	011
Disable UZID until next BASE_ID	100
All other REJECT_ACTION_INDI values are reserved	

- 11
- 12 UZID_ASSIGN_INCL - User Zone identifier assignment included indicator.
 13 If assigned UZID information is included, the base station
 14 shall set this field to '1'; otherwise, the base station shall set
 15 this field to '0'.
- 16 ASSIGN_UZID - Assigned User Zone identifiers.

1
2
3

The base station shall set this field to the User Zone identifier of the User Zone assigned to the mobile station.

3

1	PILOT_PN	-	Pilot PN sequence offset index.
2			The base station shall set this field to the pilot PN sequence
3			offset for this base station, in units of 64 PN chips.
4	CONFIG_MSG_SEQ	-	Configuration message sequence number.
5			The base station shall set this field to CONFIG_SEQ
6			(see 3.6.2.2).
7	SID	-	System identification.
8			The base station shall set this field to the system
9			identification number for this system (see 2.6.5.2).
10	NID	-	Network identification.
11			This field serves as a sub-identifier of a system as defined by
12			the owner of the SID.
13			The base station shall set this field to the network
14			identification number for this network (see 2.6.5.2).
15	PACKET_ZONE_ID	-	Packet data services zone identifier.
16			If the base station supports a packet data service zone, the
17			base station shall set this field to its non-zero packet data
18			services zone identifier.
19			If the base station does not support a packet data service
20			zone, the base station shall set this field to '00000000'.
21	REG_ZONE	-	Registration zone.
22			The base station shall set this field to its registration zone
23			number (see 2.6.5.1.5).
24	TOTAL_ZONES	-	Number of registration zones to be retained.
25			The base station shall set this field to the number of
26			registration zones the mobile station is to retain for purposes
27			of zone-based registration (see 2.6.5.1.5).
28			If zone-based registration is to be disabled, the base station
29			shall set this field to '000'.
30	ZONE_TIMER	-	Zone timer length.
31			The base station shall set this field to the ZONE_TIMER value
32			shown in Table 3.7.2.3.2.30-1 corresponding to the length of
33			the zone registration timer to be used by mobile stations.

34

1

Table 3.7.2.3.2.30-1. Value of Zone Timer

ZONE_TIMER Value (binary)	Timer Length (Minutes)
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

2

3

MULT_SIDS - Multiple SID storage indicator.

4

If mobile stations may store entries of SID_NID_LIST containing different SIDs, the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

5

6

7

MULT_NIDS - Multiple NID storage indicator.

8

If mobile stations may store multiple entries of SID_NID_LIST having the same SID (with different NIDs), the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

9

10

11

HOME_REG - Home registration indicator.

12

13

If mobile stations that are not roaming (see 2.6.5.3) and have MOB_TERM_HOME equal to '1' are to be enabled for autonomous registrations, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

14

15

16

17

18

FOR_SID_REG - SID roamer registration indicator.

19

If mobile stations that are foreign SID roamers (see 2.6.5.3) and have MOB_TERM_FOR_SID equal to '1' are to be enabled for autonomous registration, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

20

21

22

23

24

25

FOR_NID_REG - NID roamer registration indicator.

26

If mobile stations that are foreign NID roamers (see 2.6.5.3) and have MOB_TERM_FOR_NID equal to '1' are to be enabled for autonomous registration, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

27

28

29

30

31

32

1	POWER_UP_REG	-	Power-up registration indicator.
2			If mobile stations enabled for autonomous registration are to
3			register immediately after powering on and receiving the
4			system overhead messages, the base station shall set this
5			field to '1'; otherwise, the base station shall set this field to '0'.
6	POWER_DOWN_REG	-	Power-down registration indicator.
7			If mobile stations enabled for autonomous registration are to
8			register immediately before powering down, the base station
9			shall set this field to '1'; otherwise, the base station shall set
10			this field to '0'.
11	PARAMETER_REG	-	Parameter-change registration indicator.
12			If mobile stations are to register on parameter change events
13			as specified in 2.6.5.1.6, the base station shall set this field to
14			'1'. If not, the base station shall set this field to '0'.
15	REG_PRD	-	Registration period.
16			If mobile stations are not to perform timer-based registration,
17			the base station shall set this field to '0000000'. If mobile
18			stations are to perform timer-based registration, the base
19			station shall set this field to the value in the range 29 to 85
20			inclusive, such that the desired timer value is
21			$\lfloor 2\text{REG_PRD}/4 \rfloor \times 0.08 \text{ seconds.}$
22	DIST_REG_INCL	-	Distance-Based Registration Information Included.
23			The base station shall set this field to '1' if it includes
24			distance-based registration information in the message and
25			mobile stations are to perform distance-based registration;
26			otherwise the base station shall set this field to '0'.
27	REG_DIST	-	Registration distance.
28			If DIST_REG_INCL is set to '1', the base station shall include
29			the field REG_DIST and shall set this field as shown below;
30			otherwise, the base station shall omit this field.
31			The base station shall set this field to the non-zero "distance"
32			beyond which the mobile station is to re-register (see
33			2.6.5.1.4).
34	DELETE_FOR_TMSI	-	Delete foreign TMSI.
35			The base station shall set this field to '1' to cause the mobile
36			station to delete its TMSI if the TMSI was assigned in a
37			different TMSI zone from that specified by the TMSI_ZONE
38			field of this message; otherwise, the base station shall set this
39			field to '0'.
40	USE_TMSI	-	Use TMSI indicator.
41			The base station shall set this field to the value shown in
42			Table 3.7.2.3.2.13-1 corresponding to the type of MSID that
43			the mobile station is to use on the Enhanced Access Channel.

1	PREF_MSID_TYPE	- Preferred Enhanced Access Channel Mobile Station Identifier
2		Type.
3		The base station shall set this field to the value shown in
4		Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
5		to the type of MSID that the mobile station is to use on the
6		Enhanced Access Channel.
7	TMSI_ZONE_LEN	- TMSI zone length.
8		The base station shall set this field to the number of octets
9		included in the TMSI_ZONE. The base station shall set this
10		field to a value in the range 1 to 8 inclusive.
11	TMSI_ZONE	- TMSI zone.
12		The base station shall set this field to the TMSI zone number
13		as specified in [27].
14	IMSI_T_SUPPORTED	- IMSI_T support indicator.
15		The base station shall set this field to '1' to indicate support
16		for a 15-digit IMSI_T addressing according to [18].
17	MAX_NUM_ALT_SO	- Maximum number of alternative service options.
18		The base station shall set this field to the maximum number
19		of service option numbers defined in [30], corresponding to
20		alternative service options with no service option group
21		number assigned, that the mobile station is allowed to include
22		in the <i>Origination Message</i> , and the <i>Page Response</i> .
23		If the base station sets this field to a value greater than zero,
24		in addition, the base station shall allow the mobile station to
25		include
26		• a 4-bit or 8-bit service option bitmap in the <i>Origination</i>
27		<i>Message</i> and the <i>Page Response Message</i> ;
28		• alternate service option numbers, not limited to
29		MAX_ALT_SO_NUM, in the <i>Enhanced Origination Message</i> .
30	AUTO_MSG_SUPPORTED	- Autonomous message supported indicator.
31		If the base station allows the autonomous delivery of the
32		<i>Device Information Message</i> on the r-csch, the base station
33		shall set this field to '1'; otherwise, the base station shall set
34		this field to '0'.
35	AUTO_MSG_INTERVAL	- Autonomous message interval.

1 If AUTO_MSG_SUPPORTED is set to '0', the base station shall
2 omit this field; otherwise, the base station shall include this
3 field and shall set this field to the AUTO_MSG_INTERVAL
4 value shown in Table 3.7.2.3.2.13-4 to indicate the minimum
5 time interval between autonomous messages sent by a mobile
6 station to the infrastructure. This parameter is intended to
7 allow the infrastructure to limit the frequency of autonomous
8 messages sent by a mobile station on the r-csch.

9 OTHER_INFO_INCL - Other information included indicator.
10 The base station shall set this field to '1' if the MC-RR
11 Parameters Message is not sent (see [32]); otherwise, the base
12 station shall set this field to '0'.

13 BASE_ID - Base station identification.
14 If OTHER_INFO_INCL is set to '1', the base station shall
15 include this field and set it as follows; otherwise, the base
16 station shall omit this field.
17 The base station shall set this field to its identification
18 number.

19 MCC - Mobile Country Code.
20 If OTHER_INFO_INCL is set to '1', the base station shall
21 include this field and set it as follows; otherwise, the base
22 station shall omit this field.
23 The base station shall set this field to the MCC (see 2.3.1)

24 IMSI_11_12 - 11th and 12th digits of the IMSI.
25 If OTHER_INFO_INCL is set to '1', the base station shall
26 include this field and set it as follows; otherwise, the base
27 station shall omit this field.
28 The base station shall set this field to the IMSI_11_12 (see
29 2.3.1).

30 BROADCAST_GPS_ASST - Broadcast GPS Assist Indicator.
31 If OTHER_INFO_INCL is set to '1', the base station shall
32 include this field and set it as follows; otherwise, the base
33 station shall omit this field.
34 The base station shall set this field to '1' if it supports
35 Broadcast GPS Assist capability; otherwise, the base station
36 shall set this field to '0'.

37 SIG_ENCRYPT_SUP - Signaling encryption supported indicator.
38 If OTHER_INFO_INCL is set to '1', the base station shall
39 include this field and set it as follows; otherwise, the base
40 station shall omit this field.

1		This field consists of the subfields shown in Table 2.7.1.3.2.1-
2		5.
3		If this field is included, the base station shall set the subfields
4		as follows:
5		The base station shall set the CMEA subfield to '1'.
6		The base station shall set each other subfield to '1' if the
7		corresponding signaling encryption algorithm is supported by
8		the base station; otherwise, the base station shall set the
9		subfield to '0'.
10		The base station shall set the RESERVED subfield to '00000'.
11	CS_SUPPORTED	- Concurrent Services supported indicator.
12		If the base station supports concurrent services, the base
13		station shall set this field to '1'; otherwise, the base station
14		shall set this field to '0'.
15	MS_INIT_POS_LOC_SUP_IND	- Mobile station initiated position location determination
16		supported indicator.
17		If the base station supports mobile station initiated position
18		determination, the base station shall set this field to '1';
19		otherwise, the base station shall set this field to '0'.
20	MSG_INTEGRITY_SUP	- Message integrity supported indicator.
21		If the base station supports message integrity the base station
22		shall set this field to '1'; otherwise, the base station shall set
23		this field to '0'.
24	SIG_INTEGRITY_SUP_INCL	- Signaling message integrity information included
25		indicator.
26		If MSG_INTEGRITY_SUP is set to '1', the base station shall
27		include this field and set it as follows; otherwise, the base
28		station shall omit this field.
29		If the base station supports other integrity algorithm(s) in
30		addition to the default integrity algorithm, the base station
31		shall set this field to '1'; otherwise, the base station shall set
32		this field to '0'.
33	SIG_INTEGRITY_SUP	- Signaling integrity algorithm supported by the base station.
34		If SIG_INTEGRITY_SUP_INCL is included and is set to '1',
35		the base station shall set this field as follows; otherwise, the
36		base station shall omit this field.
37		The base station shall set this field to indicate the supported
38		message integrity algorithms in addition to the default
39		integrity algorithm.

1 This field consists of the subfields shown in Table 2.7.1.3.2.1-
2 6.

3 The base station shall set each subfield to '1' if the
4 corresponding message integrity algorithm is supported by
5 the base station; otherwise, the base station shall set the
6 subfield to '0'.

7 The base station shall set the RESERVED subfield to
8 '00000000'.

9 IMSI_10_INCL - IMSI_10 included.

10 If the MNC is a 3-digit number and the base station wants to
11 convey the third digit of the MNC to the mobile station, the
12 base station shall set this field to '1'; otherwise, the base
13 station shall set this field to '0'.

14 IMSI_10 - The least significant digit of MNC when the MNC is a 3-digit
15 number.

16 If IMSI_10_INCL is set to '0', the base station shall omit this
17 field; otherwise, the base station shall set this field to the least
18 significant digit of MNC converted to binary by the standard
19 decimal-to-binary conversion as shown in Table 2.3.1.1-1.

20 MAX_ADD_SERV_INSTANCE - Maximum number of additional service reference
21 identifiers allowed in origination

22 If the CS_SUPPORTED field is set to '0', the base station shall
23 omit this field; otherwise, the base station shall include this
24 field and set it as follows:

25 The base station shall set this field to the maximum number
26 of additional service reference identifiers that can be included
27 in the *Origination Message* or *Enhanced Origination Message*.

28 TKZ_MODE_SUPPORTED- Tracking zone mode supported indicator.

29 The base station shall set this field to '1' if tracking zone mode
30 is supported; otherwise, the base station shall set this field to
31 '0'.

32 TKZ_ID - Tracking zone identifier.

33 If TKZ_MODE_SUPPORTED is set to '1', the base station shall
34 set this field to its tracking zone identifier; otherwise, the base
35 station shall omit this field.

36 PZ_HYST_ENABLED - Packet zone hysteresis enabled.

37 If the PACKET_ZONE_ID field is set to '00000000', the base
38 station shall omit this field; otherwise, the base station shall
39 include this field and set it as follows:

40 If the packet zone hysteresis feature is to be enabled at the
41 mobile station, the base station shall set this field to '1';
42 otherwise, the base station shall set this field to '0'.

43 PZ_HYST_INFO_INCL - Packet zone hysteresis information included indicator.

- 1 If the PZ_HYST_ENABLED field is included and is set to '1',
 2 the base station shall include this field and set it as follows;
 3 otherwise, the base station shall omit this field.
- 4 If the base includes the PZ_HYST_LIST_LEN,
 5 PZ_HYST_ACT_TIMER and packet zone hysteresis timer
 6 related fields, the base station shall set this field to '1';
 7 otherwise, the base station shall set this field to '0'.
- 8 **PZ_HYST_LIST_LEN** - Packet zone hysteresis list length.
- 9 If the PZ_HYST_INFO_INCL field is included and is set to '1',
 10 the base station shall include this field and set it as follows;
 11 otherwise, the base station shall omit this field.
- 12 The base station shall set this field to the length of the packet
 13 zone hysteresis list. This field shall be within the range '0001'
 14 through '1111', inclusive.
- 15 **PZ_HYST_ACT_TIMER** - Packet zone hysteresis activation timer.
- 16 If the PZ_HYST_INFO_INCL field is included and is set to '1',
 17 the base station shall include this field and set it as follows;
 18 otherwise, the base station shall omit this field.
- 19 The base station shall set to the value of the packet zone
 20 hysteresis activation timer (in units of seconds). This field
 21 shall be within the range '00000001' through '11111111',
 22 inclusive.
- 23 **PZ_HYST_TIMER_MUL** - Packet zone hysteresis timer multiplier.
- 24 If the PZ_HYST_INFO_INCL field is included and is set to '1',
 25 the base station shall include this field and set it as follows;
 26 otherwise, the base station shall omit this field.
- 27 The base station shall set the field to x , where $x \times 8^y$ seconds
 28 is the value of the hysteresis timer and y is the value
 29 indicated in the PZ_HYST_TIMER_EXP field. The base station
 30 shall set this field to a value that is between 1 and 7
 31 inclusive. The value 0 is reserved.
- 32 **PZ_HYST_TIMER_EXP** - Packet zone hysteresis timer exponent.
- 33 If the PZ_HYST_INFO_INCL field is included and is set to '1',
 34 the base station shall include this field and set it as follows;
 35 otherwise, the base station shall omit this field.
- 36 The base station shall set the field to y , where $x \times 8^y$ seconds
 37 is the value of the hysteresis timer and x is the value
 38 indicated in the PZ_HYST_TIMER_MUL field. The base station
 39 shall set this field to a value that is between 0 and 4
 40 inclusive. All the other values are reserved.
- 41 **EXT_PREF_MSID_TYPE** - Extended Preferred Enhanced Access Channel Mobile Station
 42 Identifier Type.
- 43 The base station shall set this field to the value shown in
 44 Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
 45 to the type of MSID that the mobile station is to use on the
 46 Enhanced Access Channel.

1 MEID_REQD - MEID Required Indicator.

2 If EXT_PREF_MSID_TYPE is set to '11' and PREF_MSID_TYPE

3 is set to either '00' or '11', the base station shall omit this

4 field; otherwise, the base station shall include this field and

5 set it as follows:

6 The base station shall set this field to '1' to indicate that

7 network requires MEID (of mobile stations having R-UIM) in

8 registrations; otherwise the base station shall set this field to

9 '0'.

2

PILOT_PN - Pilot PN sequence offset index.

1		If SR3_INCL is set to '0', the base station shall omit this field;
2		otherwise, the base station shall set this field as follows:
3		The base station shall set this field to the BCCH rate field
4		value shown in Table 3.7.2.3.2.26-2 corresponding to the data
5		rate used by the Primary Broadcast Control Channel in the
6		system.
7	SR3_BCCH_CODE_CHAN	- Spreading Rate 3 BCCH Walsh code index.
8		If SR3_INCL is set to '0', the base station shall omit this field;
9		otherwise, the base station shall set this field as follows:
10		The base station shall set this field to the Walsh code index
11		corresponding to the Spreading Rate 3 BCCH.
12	SR3_PRIMARY_PILOT	- Primary SR3 pilot.
13		If SR3_INCL is set to '0', the base station shall omit this field;
14		otherwise, the base station shall set this field as follows:
15		The base station shall set this field to the value shown in
16		Table 3.7.2.3.2.26-5 corresponding to the position of the
17		primary SR3 pilot.
18	SR3_PILOT_POWER1	- The primary SR3 pilot power level relative to that of the pilot
19		on the lower frequency of the two remaining SR3 frequencies.
20		If SR3_INCL is set to '0', the base station shall omit this field;
21		otherwise, the base station shall set this field to the value
22		shown in Table 3.7.2.3.2.26-6 corresponding to the power
23		level of the primary pilot with respect to the pilot on the lower
24		frequency of the two remaining SR3 frequencies.
25	SR3_PILOT_POWER2	- The primary SR3 pilot power level relative to that of the pilot
26		on the higher frequency of the two remaining SR3
27		frequencies.
28		If SR3_INCL is set to '0', the base station shall omit this field;
29		otherwise, the base station shall set this field to the value
30		shown in Table 3.7.2.3.2.26-6 corresponding to the power
31		level of the primary pilot with respect to the pilot on the
32		higher frequency of the two remaining SR3 frequencies.
33	SRCH_WIN_A	- Search window size for the Active Set and Candidate Set.
34		The base station shall set this field to the value shown in
35		Table 2.6.6.2.1-1 corresponding to the search window size to
36		be used by mobile stations for the Active Set and Candidate
37		Set.
38	SRCH_WIN_R	- Search window size for the Remaining Set.
39		The base station shall set this field to the value shown in
40		Table 2.6.6.2.1-1 corresponding to the search window size to
41		be used by mobile stations for the Remaining Set.
42	T_ADD	- Pilot detection threshold.

- 1 This value is used by the mobile station to trigger the transfer
2 of a pilot from the Neighbor Set or Remaining Set to the
3 Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
4 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
5 *Measurement Message* initiating the handoff process (see
6 2.6.6.2.5.2).
- 7 The base station shall set this field to the pilot detection
8 threshold, expressed as an unsigned binary number equal to
9 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
- 10 T_DROP - Pilot drop threshold.
- 11 This value is used by mobile stations to start a handoff drop
12 timer for pilots in the Active Set and the Candidate Set (see
13 2.6.6.2.3).
- 14 The base station shall set this field to the pilot drop threshold,
15 expressed as an unsigned binary number equal to
16 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
- 17 T_COMP - Active Set versus Candidate Set comparison threshold.
- 18 Mobile stations transmit a *Pilot Strength Measurement*
19 *Message* or *Extended Pilot Strength Measurement Message*
20 when the strength of a pilot in the Candidate Set exceeds that
21 of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
- 22 The base station shall set this field to the threshold Candidate
23 Set pilot to Active Set pilot ratio, in units of 0.5 dB.
- 24 T_TDROP - Drop timer value.
- 25 Timer value after which an action is taken by mobile stations
26 for a pilot that is a member of the Active Set or Candidate Set,
27 and whose strength has not become greater than T_DROP. If
28 the pilot is a member of the Active Set, a *Pilot Strength*
29 *Measurement Message* or *Extended Pilot Strength Measurement*
30 *Message* is issued. If the pilot is a member of the Candidate
31 Set, it will be moved to the Neighbor Set.
- 32 The base station shall set this field to the T_TDROP value
33 shown in Table 2.6.6.2.3-1 corresponding to the drop timer
34 value to be used by mobile stations.
- 35 NGHBR_MAX_AGE - Neighbor Set maximum AGE.
- 36 The base station shall set this field to the maximum AGE
37 value beyond which mobile stations are to drop members
38 from the Neighbor Set (see 2.6.6.2.6.3).
- 39 SOFT_SLOPE - The slope in the inequality criterion for adding a pilot to the
40 Active Set, or dropping a pilot from the Active Set (see
41 2.6.6.2.3 and 2.6.6.2.5.2).
- 42 The base station shall set this field as an unsigned binary
43 number.

1	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to the Active Set (see 2.6.6.2.5.2).
2			
3			The base station shall set this field as a two's complement signed binary number, in units of 0.5 dB.
4			
5	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot from the Active Set (see 2.6.6.2.3).
6			
7			The base station shall set this field as a two's complement signed binary number, in units of 0.5 dB.
8			
9	ENC_SUPPORTED	-	Encryption fields included.
10			The base station shall set this field to '1' if the encryption related fields are included; otherwise the base station shall set this field to '0'.
11			
12			
13	SIG_ENCRYPT_SUP	-	Signaling encryption supported indicator.
14			If ENC_SUPPORTED is equal to '1', the base station shall include this field; otherwise, the base station shall omit this field. If this field is included, this field indicates which signaling encryption algorithms are supported by the base station.
15			
16			
17			
18			
19			This field consists of the subfields shown in Table 2.7.1.3.2.1-5.
20			
21			If this field is included, the base station shall set the subfields as follows:
22			
23			The base station shall set the CMEA subfield to '1'.
24			The base station shall set each other subfield to '1' if the corresponding signaling encryption algorithm is supported by the base station; otherwise, the base station shall set the subfield to '0'.
25			
26			
27			
28			The base station shall set the RESERVED subfield to '00000'.
29	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
30			If ENC_SUPPORTED is equal to '1', the base station shall include this field; otherwise, the base station shall omit this field. If this field is included, the base station shall set this field to indicate the supported user information encryption algorithms.
31			
32			
33			
34			

1 This field consists of the subfields shown in Table 2.7.1.3.2.4-
2 9.

3 The base station shall set each subfield to '1' if the
4 corresponding user information encryption algorithm is
5 supported by the base station; otherwise, the base station
6 shall set the subfield to '0'.

7 ADD_FIELDS_LEN - Additional fields length.

8 The base station shall set this field to the number of octets
9 included in the ADD_FIELDS.

10 ADD_FIELDS - Additional fields.

11 If the ADD_FIELDS_LEN field is not equal to '00000000', the
12 base station shall include the following fields as additional
13 fields.

14

Field	Length (bits)
RESERVED	0 – 7 (as needed)

15 CCH_INFO_INCL - Common Channel information included indicator.

16 If the message is sent on the f-csch and additional
17 information is included, the base station shall set this field to
18 '1'; otherwise, the base station shall set this field to '0'.

19 The base station shall set this field to '1'.

20 MCC - Mobile Country Code.

21 If CCH_INFO_INCL is set to '1', the base station shall include
22 this field and set it as follows; otherwise, the base station
23 shall omit this field.

24 The base station shall set this field to the MCC (see 2.3.1)

25 IMSI_11_12 - 11th and 12th digits of the IMSI.

26 If CCH_INFO_INCL is set to '1', the base station shall include
27 this field and set it as follows; otherwise, the base station
28 shall omit this field.

29 The base station shall set this field to the IMSI_11_12 (see
30 2.3.1).

31 MAX_SLOT_CYCLE_INDEX - Maximum slot cycle index.

32 If CCH_INFO_INCL is set to '1', the base station shall include
33 the field MAX_SLOT_CYCLE_INDEX and shall set this field as
34 shown below; otherwise, the base station shall omit this field.

35 The base station shall set this field to the
36 SLOT_CYCLE_INDEX value corresponding to the maximum
37 slot cycle length permitted (see 2.6.2.1.1).

38 PWR_REP_THRESH - Power control reporting threshold.

- 1 If CCH_INFO_INCL is set to '1', the base station shall include
 2 the field PWR_REP_THRESH and shall set this field as shown
 3 below; otherwise, the base station shall omit this field.
- 4 The base station shall set this field to the number of bad
 5 frames (see [2]) to be received in a measurement period on the
 6 channel which carries the Power Control Subchannel before
 7 mobile stations are to generate a *Power Measurement Report*
 8 *Message* (see 2.6.4.1.1). If the base station sets
 9 PWR_THRESH_ENABLE to '1', it shall not set this field to
 10 '00000'.
- 11 **PWR_REP_FRAMES** - Power control reporting frame count.
- 12 If CCH_INFO_INCL is set to '1', the base station shall include
 13 the field PWR_REP_FRAMES and shall set this field as shown
 14 below; otherwise, the base station shall omit this field.
- 15 The base station shall set this field to the value such that the
 16 number given by
- 17
$$\lfloor 2^{(PWR_REP_FRAMES/2)} \times 5 \rfloor \text{ frames}$$
- 18 is the number of frames over which mobile stations are to
 19 count frame errors.
- 20 **PWR_THRESH_ENABLE** - Threshold report mode indicator.
- 21 If CCH_INFO_INCL is set to '1', the base station shall include
 22 the field PWR_THRESH_ENABLE and shall set this field as
 23 shown below; otherwise, the base station shall omit this field.
- 24 If mobile stations are to generate threshold *Power*
 25 *Measurement Report Messages*, the base station shall set this
 26 field to '1'. If mobile stations are not to generate threshold
 27 *Power Measurement Report Messages*, the base station shall
 28 set this field to '0'.
- 29 **PWR_PERIOD_ENABLE** - Periodic report mode indicator.
- 30 If CCH_INFO_INCL is set to '1', the base station shall include
 31 the field PWR_PERIOD_ENABLE and shall set this field as
 32 shown below; otherwise, the base station shall omit this field.
- 33 If mobile stations are to generate periodic *Power Measurement*
 34 *Report Messages*, the base station shall set this field to '1'. If
 35 mobile stations are not to generate periodic *Power*
 36 *Measurement Report Messages*, the base station shall set this
 37 field to '0'.
- 38 **PWR_REP_DELAY** - Power report delay.
- 39 The period that mobile stations wait following a *Power*
 40 *Measurement Report Message* before restarting frame counting
 41 for power control purposes.
- 42 If CCH_INFO_INCL is set to '1', the base station shall include
 43 the field PWR_REP_DELAY and shall set this field as shown
 44 below; otherwise, the base station shall omit this field.

- 1 If CCH_INFO_INCL is set to '1', the base station shall include
 2 this field and set it as shown below; otherwise, the base
 3 station shall omit this field.
- 4 The base station shall set this field to its longitude in units of
 5 0.25 second, expressed as a two's complement signed number
 6 with positive numbers signifying East longitude. The base
 7 station shall set this field to a value in the range -2592000 to
 8 2592000 inclusive (corresponding to a range of -180° to
 9 +180°).
- 10 The base station shall set this field to all zeros if its longitude
 11 is not known.
- 12 **PILOT_REPORT** - Pilot reporting indicator.
- 13 If CCH_INFO_INCL is set to '1', the base station shall include
 14 the field PILOT_REPORT and shall set this field as shown
 15 below; otherwise, the base station shall omit this field.
- 16 The base station shall set this field to '1' if the mobile station
 17 is to report the additional pilots which have pilot strengths
 18 exceeding T_ADD in all Enhanced Access Channel messages.
 19 The base station shall set this field to '0' if the mobile station
 20 is to report the additional pilots which have pilot strengths
 21 exceeding T_ADD only in the *Origination Message*, *Reconnect*
 22 *Message*, and the *Page Response Message*.
- 23 **ACC_ENT_HO_ORDER** - Access entry handoff permitted indicator.
- 24 If CCH_INFO_INCL is set to '1', the base station shall include
 25 this field and set it as described below; otherwise, the base
 26 station shall omit this field.
- 27 The base station shall set this field to '1' if the mobile station
 28 is permitted to perform an access entry handoff after receiving
 29 a message while performing the *Mobile Station Order and*
 30 *Message Processing Operation* in the *Mobile Station Idle State*
 31 (see 2.6.2.4); otherwise, the base station shall set this field to
 32 '0'.
- 33 **ACCESS_HO** - Access handoff permitted indicator.
- 34 If CCH_INFO_INCL is set to '1', the base station shall include
 35 this field and set it as described below; otherwise, the base
 36 station shall omit this field.
- 37 The base station shall set this field to '1' if the mobile station
 38 is permitted to perform an access handoff (see 2.6.3.1.3.2);
 39 otherwise, the base station shall set this field to '0'.
- 40 **ACCESS_HO_MSG_RSP** - Access handoff permitted for message response indicator.
- 41 If ACCESS_HO is included and set to '1', the base station
 42 shall include this field and set it as described below;
 43 otherwise, the base station shall omit this field.

1 The base station shall set this field to '1' if the mobile station
2 is permitted to perform an access handoff after receiving a
3 message and before responding to that message in the *System*
4 *Access State*; otherwise, the base station shall set this field to
5 '0'.

6 ACCESS_PROBE_HO - Access probe handoff permitted indicator.

7 If CCH_INFO_INCL is set to '1', the base station shall include
8 this field and set it as described below; otherwise, the base
9 station shall omit this field.

10 The base station shall set this field to '1' if the mobile station
11 is permitted to perform an access probe handoff (see
12 2.6.3.1.3.3); otherwise, the base station shall set this field to
13 '0'.

14 ACC_HO_LIST_UPD - Access handoff list update permitted indicator.

15 If ACCESS_PROBE_HO is included and is set to '1', the base
16 station shall include this field and set it as described below;
17 otherwise, the base station shall omit this field.

18 The base station shall set this field to '1' if the mobile station
19 is permitted to update the access handoff list during an
20 access attempt (see 2.6.3.1.7.2); otherwise, the base station
21 shall set this field to '0'.

22 ACC_PROBE_HO_OTHER_MSG - Access probe handoff permitted for messages other
23 than the *Origination Message*, *Reconnect Message*, and the
24 *Page Response Message*.

25 If ACCESS_PROBE_HO is included and set to '1', the base
26 station shall include this field and set it as described below;
27 otherwise, the base station shall omit this field.

28 The base station shall set this field to '1' if the mobile station
29 is permitted to perform an access probe handoff for messages
30 other than the *Origination Message*, *Reconnect Message*, and
31 the *Page Response Message*. The base station shall set this
32 field to '0' if the mobile station is permitted to perform an
33 access probe handoff only for the *Origination Message*,
34 *Reconnect Message*, and the *Page Response Message*. See
35 2.6.3.1.3.3.

36 MAX_NUM_PROBE_HO - Maximum number of times that the mobile station is
37 permitted to perform an access probe handoff.

38 If ACCESS_PROBE_HO is included and set to '1', the base
39 station shall include this field and set it as described below;
40 otherwise, the base station shall omit this field.

41 The base station shall set this field to the maximum number
42 of times the mobile station is allowed to perform an access
43 probe handoff within an access attempt minus one.

- 1 FCCCH_CODE_CHAN - Code channel index for the Forward Common Control
 2 Channel.
 3 The base station shall set this field to the code channel index
 4 (see [2]) in the range 1 to 255 inclusive that the mobile station
 5 is to use on the Forward Common Control Channel.
- 6 BCAST_INDEX - Broadcast index.
 7 If CCH_INFO_INCL is set to '1', the base station shall include
 8 the field BCAST_INDEX and shall set this field as shown
 9 below; otherwise, the base station shall omit this field.
 10 If Periodic Enhanced Broadcast Paging is disabled, the base
 11 station shall set this field to '000'; otherwise, the base station
 12 shall set this field to the Broadcast Index (see 2.6.2.1.1.3.3.2).
- 13 NUM_BCCH_BCAST - The number of Broadcast Control Channels used for
 14 transmitting broadcast messages.
 15 If CCH_INFO_INCL is set to '1', the base station shall include
 16 this field and set it as shown below; otherwise, the base
 17 station shall omit this field.
 18 The base station shall set this field to the number of
 19 Broadcast Control Channels used for transmitting broadcast
 20 messages.
- 21 If the NUM_BCCH_BCAST field is included, the base station shall set NUM_BCCH_BCAST
 22 occurrences of the following three-field record, where the ith occurrence corresponds to a
 23 BCCH indexed by BCN of i+1:
- 24 BCCH_CODE_CHAN - The Walsh Code index for the Broadcast Control Channel.
 25 The base station shall set this field to the Walsh code
 26 corresponding to the Broadcast Control Channel.
- 27 BRAT - BCCH data rate.
 28 The base station shall set this field to the BRAT field value
 29 shown in Table 3.7.2.3.2.31-2 corresponding to the data rate
 30 used by the Broadcast Control Channel to which the mobile
 31 station is being directed.

Table 3.7.2.3.2.31-2. Broadcast Control Channel Data Rate

BRAT Field (binary)	Broadcast Control Channel data rate
00	4800 bps
01	9600 bps
10	19200 bps
11	Reserved

- 33
 34 BCCH_CODE_RATE - BCCH code rate.

- 1 For spreading rate 1, the base station shall set this field to '0'
 2 if the BCCH Code Rate is 1/4 (see [2]). For spreading rate 1,
 3 the base station shall set this field to '1' if the BCCH code rate
 4 is 1/2 (see [2]). For spreading rate 3, the base station shall
 5 set this field to '0'.
- 6 QPCH_SUPPORTED - Quick Paging Channel Supported Indication.
 7 If CCH_INFO_INCL is set to '1', the base station shall include
 8 the field QPCH_SUPPORTED and shall set this field as shown
 9 below; otherwise, the base station shall omit this field.
 10 If the base station supports Quick Paging Channel operation,
 11 the base station shall set this field to '1'; otherwise the base
 12 station shall set this field to '0'.
- 13 NUM_QPCH - Number of Quick Paging Channels.
 14 If QPCH_SUPPORTED is included and set to '1', the base
 15 station shall include this field and set it as described below;
 16 otherwise, the base station shall omit this field.
 17 The base station shall set this field to the number of Quick
 18 Paging Channels on this CDMA Channel. The base station
 19 shall not set this field to '00'.
- 20 QPCH_RATE - Quick Paging Channel indicator rate.
 21 If QPCH_SUPPORTED is included and set to '1', the base
 22 station shall include this field and set it as described below;
 23 otherwise, the base station shall omit this field.
 24 The base station shall set this field to the QPCH_RATE field
 25 value shown in Table 3.7.2.3.2.13-2 corresponding to the
 26 indicator rate used by the Quick Paging Channel in the
 27 system.
- 28 QPCH_POWER_LEVEL_PAGE - Quick Paging Channel paging indicator transmit power
 29 level.
 30 If QPCH_SUPPORTED is included and set to '1', the base
 31 station shall include this field and set it as described below;
 32 otherwise, the base station shall omit this field.
 33 The base station shall set this field to the Quick Paging
 34 Channel paging indicator transmit power level relative to that
 35 of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.

1

Table 3.7.2.3.2.31-3. Quick Paging Channel Transmit Power Level

QPCH_POWER_LEVEL_PAGE QPCH_POWER_LEVEL_CONFIG QPCH_POWER_LEVEL_BCAST (binary)	Transmit Power Level
000	5 dB below the Pilot Channel Transmit Power
001	4 dB below the Pilot Channel Transmit Power
010	3 dB below the Pilot Channel Transmit Power
011	2 dB below the Pilot Channel Transmit Power
100	1 dB below the Pilot Channel Transmit Power
101	Same as the Pilot Channel Transmit Power
110	1 dB above the Pilot Channel Transmit Power
111	2 dB above the Pilot Channel Transmit Power

2

3 QPCH_CCI_SUPPORTED - Quick Paging Channel configuration change indicator
4 supported.

5 If QPCH_SUPPORTED is included and set to '1', the base
6 station shall include this field and set it as described below;
7 otherwise, the base station shall omit this field.

8 If the base station supports configuration change indicators
9 on the Quick Paging Channel, the base station shall set this
10 field to '1'; otherwise the base station shall set this field to '0'.

11 QPCH_POWER_LEVEL_CONFIG - Quick Paging Channel configuration change indicator
12 transmit power level.

13 If QPCH_CCI_SUPPORTED is included and set to '1', the base
14 station shall include this field and set it as described below;
15 otherwise, the base station shall omit this field.

16 The base station shall set this field to the Quick Paging
17 Channel configuration change indicator transmit power level
18 relative to that of the Pilot Channel as specified in Table
19 3.7.2.3.2.31-3.

- 1 If SR3_INCL is set to '1' and QPCH_SUPPORTED is included
 2 and set to '1', the base station shall include NUM_QPCH
 3 occurrences of the following one field record:
- 4 QPCH_CODE_CHAN - Code channel index of the Quick Paging Channel for
 5 Spreading Rate 3.
- 6 The base station shall set this field to the code channel index
 7 (see [2]) in the range 1 to 255 inclusive that the mobile station
 8 is to use on the Quick Paging Channel for Spreading Rate 3.
- 9 QPCH_BI_SUPPORTED - Quick Paging Channel broadcast indicator supported.
- 10 If QPCH_SUPPORTED is included and set to '1', the base
 11 station shall include this field and set it as described below;
 12 otherwise, the base station shall omit this field.
- 13 If the base station supports broadcast indicators on the Quick
 14 Paging Channel, the base station shall set this field to '1';
 15 otherwise the base station shall set this field to '0'.
- 16 QPCH_POWER_LEVEL_BCAST - Quick Paging Channel broadcast indicator transmit
 17 power level.
- 18 If QPCH_BI_SUPPORTED is included and set to '1', the base
 19 station shall include this field and set it as described below;
 20 otherwise, the base station shall omit this field.
- 21 The base station shall set this field to the Quick Paging
 22 Channel broadcast indicator transmit power level relative to
 23 that of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.
- 24 SDB_SUPPORTED - Short Data Burst supported indicator.
- 25 If CCH_INFO_INCL is set to '1', the base station shall include
 26 the field SDB_SUPPORTED and shall set this field as shown
 27 below; otherwise, the base station shall omit this field.
- 28 The base station shall set this field to '1' if the mobile station
 29 is permitted to send a Short Data Burst; otherwise, the base
 30 station shall set this field to '0'.
- 31 BROADCAST_GPS_ASST - Broadcast GPS Assist Indicator.
- 32 If CCH_INFO_INCL is set to '1', the base station shall include
 33 the field BROADCAST_GPS_ASST and shall set this field as
 34 shown below; otherwise, the base station shall omit this field.
- 35 The base station shall set this field to '1' if it supports
 36 Broadcast GPS Assist capability; otherwise, the base station
 37 shall set this field to '0'.
- 38 RLGAIN_TRAFFIC_PILOT - Gain adjustment of the Reverse Traffic Channel relative to the
 39 Reverse Pilot Channel for Radio Configurations greater than
 40 2.
- 41 If CCH_INFO_INCL is set to '1', the base station shall include
 42 the field RLGAIN_TRAFFIC_PILOT and shall set this field as
 43 shown below; otherwise, the base station shall omit this field.

- 1 SENDING_RAND - *ANSI-41 RAND Message* indicator.
- 2 If NUM_OPT_MSG_BITS is included and is equal to or greater
3 than 1, the base station shall include the field
4 SENDING_RAND and shall set this field as shown below;
5 otherwise, the base station shall omit this field.
- 6 If the base station is sending the *ANSI-41 RAND Message* on
7 the Primary Broadcast Control Channel, it shall set this field
8 to '1'; otherwise, it shall set this field to '0'.
- 9 PRI_NGHBR_LST - *Private Neighbor List Message* indicator.
- 10 If NUM_OPT_MSG_BITS is included and is equal to or greater
11 than 2, the base station shall include the field
12 PRI_NGHBR_LST and shall set this field as shown below;
13 otherwise, the base station shall omit this field.
- 14 If the base station is sending the *Private Neighbor List*
15 *Message* on the Primary Broadcast Control Channel, it shall
16 set this field to '1'; otherwise, it shall set this field to '0'.
- 17 USER_ZONE_ID - *User Zone Identification Message* indicator.
- 18 If NUM_OPT_MSG_BITS is included and is equal to or greater
19 than 3, the base station shall include the field
20 USER_ZONE_ID and shall set this field as shown below;
21 otherwise, the base station shall omit this field.
- 22 If the base station is sending the *User Zone Identification*
23 *Message* on the Primary Broadcast Control Channel, it shall
24 set this field to '1'; otherwise, it shall set this field to '0'.
- 25 EXT_GLOBAL_REDIRECT - *Extended Global Service Redirection Message* indicator.
- 26 If NUM_OPT_MSG_BITS is included and is equal to or greater
27 than 4, the base station shall include the field
28 EXT_GLOBAL_REDIRECT and shall set this field as shown
29 below; otherwise, the base station shall omit this field.
- 30 If the base station is sending the *Extended Global Service*
31 *Redirection Message* on the Primary Broadcast Control
32 Channel, it shall set this field to '1'; otherwise, the base
33 station shall set this field to '0'.
- 34 AP_PILOT_INFO - *Access Point Pilot Information Message* indicator.
- 35 If NUM_OPT_MSG_BITS is included and is equal to or greater
36 than 5, the base station shall include the field
37 AP_PILOT_INFO and shall set this field as shown below;
38 otherwise, the base station shall omit this field.
- 39 If the base station is sending the *Access Point Pilot Information*
40 *Message* on the Primary Broadcast Control Channel, it shall
41 set this field to '1'; otherwise, the base station shall set this
42 field to '0'.
- 43 AP_IDT - *Access Point Identification Message* indicator.

- 1 If NUM_OPT_MSG_BITS is included and is equal to or greater
2 than 6, the base station shall include the field AP_IDT and
3 shall set this field as shown below; otherwise, the base station
4 shall omit this field.
- 5 If the base station is sending the *Access Point Identification*
6 *Message* on the Primary Broadcast Control Channel, it shall
7 set this field to '1'; otherwise, the base station shall set this
8 field to '0'.
- 9 AP_ID_TEXT - *Access Point Identification Text Message* indicator.
- 10 If NUM_OPT_MSG_BITS is included and is equal to or greater
11 than 7, the base station shall include the field AP_ID_TEXT
12 and shall set this field as shown below; otherwise, the base
13 station shall omit this field.
- 14 If the base station is sending the *Access Point Identification*
15 *Text Message* on the Primary Broadcast Control Channel, it
16 shall set this field to '1'; otherwise, the base station shall set
17 this field to '0'.
- 18 GEN_OVHD_INF_IND - *General Overhead Information Message* indicator.
- 19 If NUM_OPT_MSG is equal to or greater than 8, the base
20 station shall include the field GEN_OVHD_INF_IND and shall
21 set this field as shown below; otherwise, the base station shall
22 omit this field.
- 23 If the base station is sending the *General Overhead*
24 *Information Message* on the Paging Channel, it shall set this
25 field to '1'; otherwise, the base station shall set this field to '0'.
- 26 FD_CHAN_LST_IND - *Flex Duplex CDMA Channel List Message* indicator.
- 27 If NUM_OPT_MSG is equal to or greater than 9, the base
28 station shall include the field FD_CHAN_LST_IND and shall
29 set this field as shown below; otherwise, the base station shall
30 omit this field.
- 31 If the base station is sending the *Flex Duplex CDMA Channel*
32 *List Message* on the Primary Broadcast Control Channel, it
33 shall set this field to '1'; otherwise, the base station shall set
34 this field to '0'.
- 35 ATIM_IND - *Alternative Technologies Information Message* indicator.
- 36 If NUM_OPT_MSG is equal to or greater than 10, the base
37 station shall include the field ATIM_IND and shall set this
38 field as shown below; otherwise, the base station shall omit
39 this field.
- 40 If the base station is sending the *Alternative Technologies*
41 *Information Message* on the Paging Channel, it shall set this
42 field to '1'; otherwise, the base station shall set this field to '0'.
- 43 FREQ_GEN_OVHD_INF_IND - *Frequent General Overhead Information Message* indicator.

1 If NUM_OPT_MSG is equal to or greater than 11, the base
 2 station shall include the field `FREQ_GEN_OVHD_INF_IND` and
 3 shall set this field as shown below; otherwise, the base station
 4 shall omit this field.

5 If the base station is sending the *Frequent General Overhead*
 6 *Information Message* on the Paging Channel, it shall set this
 7 field to '1'; otherwise, the base station shall set this field to '0'.

8

9 `RESERVED` - Reserved bits.

10 If NUM_OPT_MSG_BITS is included and is equal to or greater
 11 than 12, the base station shall include the field `RESERVED`
 12 and shall set this field as shown below; otherwise, the base
 13 station shall omit this field.

14 The base station shall add (NUM_OPT_MSG_BITS – 11)
 15 reserved bits. The base station shall set these bits to '0'.

16 `PILOT_INFO_REQ_SUPPORTED` - Pilot information request supported indicator.

17 If `CCH_INFO_INCL` is set to '1', the base station shall include
 18 this field and set it as shown below; otherwise, the base
 19 station shall omit this field.

20 If the base station supports mobile station request for pilot
 21 information using the "Pilot Information" record in the *Base*
 22 *Station Status Request Message*, the base station shall set this
 23 field to '1'; otherwise, the base station shall set this field to '0'.

24 `BAND_CLASS_INFO_REQ` - Band class information request indicator.

25 If `CCH_INFO_INCL` is set to '1', the base station shall include
 26 this field and set it as shown below; otherwise, the base
 27 station shall omit this field.

28 The base station shall set this field to '1' if the
 29 `ALT_BAND_CLASS` field is included in this message;
 30 otherwise, the base station shall set this field to '0'.

31 `ALT_BAND_CLASS` - Alternate band class.

32 If `BAND_CLASS_INFO_REQ` is not included, or is included
 33 and set to '0', then the base station shall omit this field;
 34 otherwise, the base station shall include this field and set it
 35 as follows:

36 The base station shall set this field to an alternate CDMA
 37 band class (see [30]) supported by the base station. The
 38 mobile station is to indicate its capability to support the
 39 alternate band class in the *Origination Message* and *Page*
 40 *Response Message*.

41 `CDMA_OFF_TIME_REP_SUP_IND` - CDMA off time report supported indicator.

42 If the base station supports mobile station report for CDMA
 43 off time information using the *CDMA Off Time Report Message*,
 44 the base station shall set this field to '1'; otherwise, the base
 45 station shall set this field to '0'.

- 1 CDMA_OFF_TIME_REP_THRESHOLD_UNIT – CDMA off time report threshold unit
 2 If CDMA_OFF_TIME_REP_SUP_IND is set to ‘0’, the base
 3 station shall omit this field; otherwise, the base station shall
 4 include this field and set it as follows:
 5 The base station shall set this field to the time unit used in
 6 CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
 7 3.7.2.3.2.13-5
- 8 CDMA_OFF_TIME_REP_THRESHOLD – CDMA off time report threshold
 9 If CDMA_OFF_TIME_REP_SUP_IND is set to ‘0’, the base
 10 station shall omit this field; otherwise, the base station shall
 11 include this field and set it as follows:
 12 The base station shall set this field to the time in units of
 13 CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
 14 mobile station goes away from the CDMA traffic channel
 15 longer than this value, the mobile station is to send a *CDMA*
 16 *Off Time Report Message*.
- 17 CHM_SUPPORTED – Control Hold Mode supported indicator.
 18 The base station shall set this field to ‘1’ to indicate that the
 19 base station supports the Control Hold Mode; otherwise, the
 20 base station shall set this field to ‘0’.
- 21 RELEASE_TO_IDLE_IND - Release to Idle State allowed indicator.
 22 If the mobile station is allowed to return to the *Mobile Station*
 23 *Idle State* upon call release, the base station shall set this field
 24 to ‘1’; otherwise, the base station shall set this field to ‘0’.
- 25 RECONNECT_MSG_IND - *Reconnect Message* supported indicator.
 26 The base station shall set this field to ‘0’ if the mobile station
 27 is not allowed to send a *Reconnect Message* instead of an
 28 *Origination Message* or a *Page Response Message*; otherwise,
 29 the base station shall set this field to ‘1’.
- 30 T_TDROP_RANGE_INCL - Drop timer range value included indicator.
 31 The base station shall set this field to '1' if the
 32 T_TDROP_RANGE field is included in this message; otherwise,
 33 the base station shall set this field to '0'.
- 34 T_TDROP_RANGE - Drop timer range value.
 35 Timer range value to use in association with the T_TDROP
 36 parameter when determining the drop timer expiration.
 37 If T_TDROP_RANGE_INCL is set to '0', the base station shall
 38 omit this field; otherwise, the base station shall set this field
 39 to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
 40 corresponding to the timer expiration range value to be used
 41 by the mobile station.
- 42 FOR_PDCH_SUPPORTED - Forward Packet Data Channel supported indicator.
 43 If the base station supports the Forward Packet Data Channel
 44 (F-PDCH), the base station shall set this field to ‘1’; otherwise,
 45 the base station shall set this field to ‘0’.

- 1 PDCH_CHM_SUPPORTED - PDCH Control Hold Mode supported indicator.
 2 If FOR_PDCH_SUPPORTED is set to '0', the base station shall
 3 omit this field; otherwise, the base station shall include this
 4 field and set it as follows:
 5 The base station shall set this field to '1' to indicate that the
 6 base station supports the PDCH Control Hold Mode;
 7 otherwise, the base station shall set this field to '0'
- 8 PDCH_PARAMS_INCL - Forward Packet Data Channel related parameters included
 9 indicator.
 10 If FOR_PDCH_SUPPORTED is set to '0', the base station shall
 11 omit this field; otherwise, the base station shall set this field
 12 as follows:
 13 The base station shall set this field to '1' if the following F-
 14 PDCH related fields are included in this message; otherwise,
 15 the base station shall set this field to '0'.
- 16 FOR_PDCH_RLGAIN_INCL - Forward Packet Data Channel parameters related to
 17 reverse link adjustment gains included indicator.
 18 If PDCH_PARAMS_INCL is omitted, or if it is included and set
 19 to '0', the base station shall omit this field; otherwise, the
 20 base station shall include this field, and set it as follows.
 21 The base station shall set this field to '1' if the following F-
 22 PDCH gain related fields are included in this message;
 23 otherwise, the base station shall set this field to '0'.
- 24 RLGAIN_ACKCH_PILOT - Reverse Acknowledgment Channel to pilot adjustment gain.
 25 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
 26 set to '0', the base station shall omit this field; otherwise, the
 27 base station shall include this field, and set it as follows.
 28 The base station shall set this field to the Reverse
 29 Acknowledgment Channel to pilot adjustment gain expressed
 30 as a two's complement value in units of 0.125 dB (see [2]).
- 31 RLGAIN_CQICH_PILOT - Reverse Channel Quality Indicator Channel to pilot
 32 adjustment gain.
 33 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
 34 set to '0', the base station shall omit this field; otherwise, the
 35 base station shall include this field, and set it as follows.
 36 The base station shall set this field to the Reverse Channel
 37 Quality Indicator Channel to pilot adjustment gain expressed
 38 as a two's complement value in units of 0.125 dB (see [2]).
- 39 NUM_SOFT_SWITCHING_FRAMES - Number of frames for R-CQICH soft switching.
 40 If PDCH_PARAMS_INCL is not included, or is included and set
 41 to '0', the base station shall omit this field; otherwise, the
 42 base station shall include this field and set it as follows:

1 The base station shall set this field to the duration of the cell
2 switching period, in units of 20 ms, minus one, during which
3 the mobile station is to transmit the cell switch sequence on
4 the R-CQICH when it switches between two pilots which are
5 in different groups (see [3]).

6 NUM_SOFTER_SWITCHING_FRAMES - Number of frames for R-CQICH softer
7 switching.

8 If PDCH_PARMS_INCL is not included, or is included and set
9 to '0', the base station shall omit this field; otherwise, the
10 base station shall include this field and set it as follows:

11 The base station shall set this field to the duration of the cell
12 switching period, in units of 20 ms, minus one, during which
13 the mobile station is to transmit the cell switch sequence on
14 the R-CQICH when it switches between two pilots which are
15 in the same group (see [3]).

16 NUM_SOFT_SWITCHING_SLOTS - Number of slots per frame for R-CQICH soft switching.

17 If PDCH_PARMS_INCL is not included, or is included and set
18 to '0', the base station shall omit this field; otherwise, the
19 base station shall include this field and set it as follows:

20 The base station shall set this field to the duration of the cell
21 switching slots within a switching frame, in units of 1.25 ms
22 as specified in Table 3.7.2.3.2.21-10, during which the mobile
23 station is to transmit the cell switch indication by using
24 Walsh cover of target on the R-CQICH when it switches
25 between two pilots which are in different groups.

26 NUM_SOFTER_SWITCHING_SLOTS - Number of slots per frame for R-CQICH softer
27 switching.

28 If PDCH_PARMS_INCL is not included, or is included and set
29 to '0', the base station shall omit this field; otherwise, the
30 base station shall include this field and set it as follows:

31 The base station shall set this field to the duration of the cell
32 switching slots within a switching frame, in units of 1.25 ms
33 as specified in Table 3.7.2.3.2.21-10, during which the mobile
34 station is to transmit the cell switch indication by using
35 Walsh cover of target on the R-CQICH when it switches
36 between two pilots which are in the same group.

37 PDCH_SOFT_SWITCHING_DELAY - F-PDCH soft switching delay.

38 If PDCH_PARMS_INCL is not included, or is included and set
39 to '0', the base station shall omit this field; otherwise, the
40 base station shall include this field and set it as follows:

41 The base station shall set this field to the minimum
42 interruption seen by the mobile station, in units of 10 ms,
43 minus one, when the mobile station is to transmit the cell
44 switch sequence on the R-CQICH channel when it switches
45 between two pilots which are in different groups (see [3]).

46 PDCH_SOFTER_SWITCHING_DELAY - F-PDCH softer switching delay.

- 1 If PDCH_PARAMS_INCL is not included, or is included and set
 2 to '0', the base station shall omit this field; otherwise, the
 3 base station shall include this field and set it as follows:
- 4 The base station shall set this field to the minimum
 5 interruption seen by the mobile station, in units of 10 ms,
 6 minus one, when the mobile station is to transmit the cell
 7 switch sequence on the R-CQICH channel when it switches
 8 between two pilots which are in the same group (see [3]).
- 9 WALSH_TABLE_ID - The index of the Walsh Table used.
- 10 If PDCH_PARAMS_INCL is not included, or is included and set
 11 to '0', the base station shall omit this field; otherwise, the
 12 base station shall set this field as follows:
- 13 The base station shall set this field to the index of the Walsh
 14 Table being used by the Packet Data Channel. (See [3]).
- 15 NUM_PDCCH - The number of Packet Data Control Channels supported.
- 16 If PDCH_PARAMS_INCL is not included, or is included and set
 17 to '0', the base station shall omit this field; otherwise, the
 18 base station shall include this field and set it as follows:
- 19 The base station shall set this field to '000' if the pilot
 20 supports one Packet Data Control Channel. The base station
 21 shall set this field to '001' if the pilot supports two Packet
 22 Data Control Channels. The base station shall not set this
 23 field to any other value.
- 24 The base station shall include *NUM_PDCCH+1* occurrences of the following one-field record:
- 25 FOR_PDCCH_WALSH - Forward Packet Data Control Channel Walsh code
 26 assignment.
- 27 If PDCH_PARAMS_INCL is not included, or is included and set
 28 to '0', the base station shall omit this field; otherwise, the
 29 base station shall include this field and set it as follows:
- 30 The base station shall set this field to the Walsh code
 31 assignment for the Forward Packet Data Control Channel.
- 32 If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
 33 shall be included first, followed by the Walsh code for
 34 PDCCH1.
- 35 IMSI_10_INCL - IMSI_10 included.
- 36 If CCH_INFO_INCL is set to '1', the base station shall include
 37 this field and set it as follows; otherwise, the base station
 38 shall omit this field.
- 39 If the MNC is a 3-digit number, the base station shall set this
 40 field to '1'; otherwise, the base station shall set this field to '0'.
- 41 IMSI_10 - The least significant digit of MNC when the MNC is a 3-digit
 42 number.

1		If IMSI_10_INCL is not included, or is included and set to '0',
2		the base station shall omit this field; otherwise, the base
3		station shall set this field to the least significant digit of MNC
4		converted to binary by the standard decimal-to-binary
5		conversion as shown in Table 2.3.1.1-1.
6	NEG_SLOT_CYCLE_INDEX_SUP	- Negative slot cycle index supported indicator.
7		The base station shall set this field to '1' if it supports
8		negative values of the preferred slot cycle index
9		(SLOT_CYCLE_INDEX _p); otherwise, the base station shall set
10		this field to '0'.
11	RER_MODE_SUPPORTED	- Radio environment reporting mode supported indicator.
12		If the base station supports radio environment reporting
13		mode, the base station shall set this field to '1'; otherwise, the
14		base station shall set this field to '0'.
15	AUTO_FCSO_ALLOWED	- Autonomous <i>Fast Call Setup Order</i> allowed indicator.
16		The base station shall set this field to '1' if the mobile station
17		is allowed to send an autonomous <i>Fast Call Setup Order</i> ;
18		otherwise, the base station shall set this field to '0'.
19	SENDING_BSPM	- <i>BCMC Service Parameters Message</i> indicator.
20		If the base station is sending the <i>BCMC Service Parameters</i>
21		<i>Message</i> on the Primary Broadcast Control Channel, it shall
22		set this field to '1'; otherwise, it shall set this field to '0'.
23	BSPM_PERIOD_INDEX	- BSPM Transmission Periodicity Index.
24		If the SENDING_BSPM field is set to '0', the base station shall
25		omit this field; otherwise, the base station shall include this
26		field and set it as follows:
27		The base station shall set this field to the BSPM transmission
28		periodicity index corresponding to the periodicity with which
29		the BSPM with DIFF_BSPM equal to '0' is transmitted on the
30		Primary Broadcast Control Channel.
31	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
32		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
33		omit this field; otherwise, the base station shall include this
34		field and set it as follows:
35		If the base station supports the Reverse Packet Data Channel
36		(R-PDCH), the base station shall set this field to '1'; otherwise,
37		the base station shall set this field to '0'.
38	REV_PDCH_PARAMS_INCL	- Reverse Packet Data Channel related parameters included
39		indicator.
40		If REV_PDCH_SUPPORTED is omitted, or if it is included and
41		set to '0', the base station shall omit this field; otherwise, the
42		base station shall include this field and set it as follows:

- 1 The base station shall set this field to '1' if the R-PDCH
2 parameters are included in this message; otherwise, the base
3 station shall set this field to '0'.
- 4 REV_PDCH_RLGAIN_INCL - Reverse Packet Data Channel parameters related to
5 reverse link adjustment gains included indicator.
- 6 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
7 set to '0', the base station shall omit this field; otherwise, the
8 base station shall include this field, and set it as follows.
- 9 The base station shall set this field to '1' if the following R-
10 PDCH gain related fields are included in this message;
11 otherwise, the base station shall set this field to '0'.
- 12 RLGAIN_SPICH_PILOT - Reverse Secondary Pilot Channel to pilot adjustment gain.
- 13 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
14 set to '0', the base station shall omit this field; otherwise, the
15 base station shall include this field, and set it as follows.
- 16 The base station shall set this field to the Reverse Secondary
17 Pilot Channel to pilot adjustment gain expressed as a two's
18 complement value in units of 0.125 dB (see [2]).
- 19 RLGAIN_REQCH_PILOT - Reverse Request Channel to pilot adjustment gain.
- 20 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
21 set to '0', the base station shall omit this field; otherwise, the
22 base station shall include this field, and set it as follows.
- 23 The base station shall set this field to the Reverse Request
24 Channel to pilot adjustment gain expressed as a two's
25 complement value in units of 0.125 dB (see [2]).
- 26 RLGAIN_PDCCH_PILOT - Reverse Packet Data Control Channel to pilot adjustment
27 gain.
- 28 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
29 set to '0', the base station shall omit this field; otherwise, the
30 base station shall include this field, and set it as follows.
- 31 The base station shall set this field to the Reverse Packet Data
32 Channel to pilot adjustment gain expressed as a two's
33 complement value in units of 0.125 dB (see [2]).
- 34 REV_PDCH_PARAMS_1_INCL - Reverse Packet Data Channel parameters subset included
35 indicator.
- 36 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
37 set to '0', the base station shall omit this field; otherwise, the
38 base station shall include this field, and set it as follows.
- 39 The base station shall set this field to '1' if the following R-
40 PDCH parameters are included in this message; otherwise,
41 the base station shall set this field to '0'.
- 42 REV_PDCH_TABLE_SEL - Reverse Packet Data Channel Table selector.
- 43 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
44 and set to '0', the base station shall omit this field; otherwise,
45 the base station shall include this field, and set it as follows.

1 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
2 included and set to '0', the base station shall omit this field;
3 otherwise, the base station shall include this field and set it
4 as follows:

5 The base station shall set this field to '1' if the mobile station
6 is to be persistent at the call setup; otherwise, the base
7 station shall set this field to '0' (See [3]).

8 REV_PDCH_RESET_PERSISTENCE - Reverse Packet Data Channel reset persistence
9 indicator.

10 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
11 included and set to '0', the base station shall omit this field;
12 otherwise, the base station shall include this field and set it
13 as follows:

14 The base station shall set this field to '1' if, at the end of a
15 persistent grant, the mobile station shall reset its persistent
16 indicator to persistent; otherwise, the base station shall set
17 this field to '0' if the mobile station shall reset its persistent
18 indicator to non-persistent (See [3]).

19 REV_PDCH_GRANT_PRECEDENCE - Reverse Packet Data Channel Grant Precedence
20 Indicator.

21 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
22 included and set to '0', the base station shall omit this field;
23 otherwise, the base station shall include this field and set it
24 as follows:

25 The base station shall set this field to '1' if unicast Forward
26 Grant Channel messages have precedence over Rate Control
27 commands; otherwise, the base station shall set this field to
28 '0' to indicate that Rate Control down commands from non-
29 serving sectors have precedence over Forward Grant Channel
30 messages (see [3]).

31 REV_PDCH_MSIB_SUPPORTED - Reverse PDCH MSIB usage indicator.

32 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
33 included and set to '0', the base station shall omit this field;
34 otherwise, the base station shall include this field and set it
35 as follows:

36 The base station shall set this field to '1' if the mobile station
37 is to use the MSIB bit on the Reverse Packet Data Control
38 Channel; otherwise, the base station shall set this field to '0'
39 (see [3]).

40 REV_PDCH_SOFT_SWITCHING_RESET_IND - Reverse Packet Data Channel soft
41 switching reset indicator.

42 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
43 included and set to '0', the base station shall omit this field;
44 otherwise, the base station shall include this field and set it
45 as follows:

- 1 The base station shall set this field to '1' if the mobile station
 2 is to initialize RPDCHCF when soft selection occurs in the
 3 FPDCHCF; otherwise, the base station shall set this field to '0'
 4 (see [3]).
- 5 SDB_IN_RCNM_IND - Short Data Burst allowed in *Reconnect Message* indicator.
 6 If RECONNECT_MSG_IND is set to '0' or SDB_SUPPORTED is
 7 set to '0', the base station shall omit this field; otherwise, the
 8 base station shall include this field and set it as follows:
 9 The base station shall set this field to '1' if the mobile station
 10 is allowed to include a Short Data Burst (see [30]) in the
 11 *Reconnect Message*; otherwise, the base station shall set this
 12 field to '0'.
- 13 CAND_BAND_INFO_REQ - Candidate band class information request indicator
 14 If CCH_INFO_INCL is set to '1', the base station shall include
 15 this field and set it as shown below; otherwise, the base
 16 station shall omit this field.
 17 The base station shall set this field to '1' when requesting
 18 mobiles to report whether various candidate band class and
 19 band subclass (if applicable) combinations are supported;
 20 otherwise, the base station shall set this field to '0'.
 21 The base station shall not include more than 16 band class-
 22 band subclass queries in this message.
- 23 NUM_CAND_BAND_CLASS - Number of candidate band classes
 24 If CAND_BAND_INFO_REQ is not included, or is included and
 25 set to '0', the base station shall omit this field; otherwise, the
 26 base station shall include this field and set it as follows:
 27 The base station shall set this field to the number of
 28 candidate band classes included in the record minus one.
 29 If CAND_BAND_INFO_REQ is included and set to '1', the base station shall include
 30 NUM_CAND_BAND_CLASS + 1 occurrences of the following record:
- 31 CAND_BAND_CLASS - Candidate band class
 32 The base station shall set this field to a band class (see [30])
 33 for which the mobile is to report it's capabilities upon system
 34 access. It may be used in conjunction with the
 35 BAND_SUBCLASS_IND fields to specify band subclass(es) for
 36 which the mobile is to report it's capabilities upon system
 37 access.
- 38 SUBCLASS_INFO_INCL - Band subclass information included
 39 The base station shall set this field to '0' when no band
 40 subclasses are associated with CAND_BAND_CLASS or if the
 41 base station requires only the band class capabilities of the
 42 mobile station. Otherwise, the base station shall set this field
 43 to '1'.

- 1 SUBCLASS_REC_LEN - Band subclass subrecord length
 2 If SUBCLASS_INFO_INCL is set to '0', the base station shall
 3 omit this field; otherwise, the base station shall set this field
 4 as follows:
 5 The base station shall set this field to the number of band
 6 subclass indicator fields included in the subrecord minus
 7 one. The number of subclass indicator fields included
 8 depends on the highest band subclass being queried for
 9 mobile support for the associated CAND_BAND_CLASS (i.e. if
 10 the highest band subclass being queried is K, then
 11 SUBCLASS_REC_LEN = K).
- 12 If the SUBCLASS_REC_LEN field is included, the base station shall include
 13 SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included
 14 corresponds to band subclass '0' and the Nth field included corresponds to band subclass
 15 'N-1'.
- 16 BAND_SUBCLASS_IND - Band subclass indicator
 17 The base station shall set this field to '1' if it requires the
 18 mobile to report whether it supports this band subclass for
 19 the associated CAND_BAND_CLASS; otherwise, the base
 20 station shall set this field to '0'.
 21 The mobile station is to indicate its capability to support the
 22 candidate band class and band subclass (if applicable)
 23 combination in the *Registration Message*, *Origination Message*,
 24 and *Page Response Message*.
- 25 RESCAN - Rescan indicator.
 26 If mobile stations are to re-initialize and re-acquire the system
 27 upon receiving this message, the base station shall set this
 28 field to '1'; otherwise, the base station shall set this field to '0'.
- 29 TX_PWR_LIMIT_INCL - Transmit Power Limit inclusion for the current base station
 30 If the transmit power limit field is included in this message,
 31 the base station shall set this field to '1'; otherwise, the base
 32 station shall set this field to '0'.
- 33 TX_PWR_LIMIT - Transmit Power Limit for the current base station
 34 If TX_PWR_LIMIT_INCL is set to '0', the base station shall omit
 35 this field; otherwise, the base station shall include this field
 36 and set to as follows.
 37 The base station shall set this field to thirty dB more than
 38 transmit power limit in dBm EIRP, in steps of 1 dB. This field
 39 can take the values 30 to 53 corresponding to maximum
 40 transmit power values 0 dBm to 23 dBm.
- 41 BYPASS_REG_IND - Indication to bypass the power up registration upon the
 42 change of bands, serving systems, and frequency blocks.
 43 The base station shall set this field to '00' if the mobile station
 44 is to perform a power up registration upon band, frequency
 45 block or serving system change.

1 The base station shall set this field to '01' if the mobile station
 2 is to bypass the power up registration requirement upon
 3 band, frequency block or serving system changes due to
 4 processing the *Extended CDMA Channel List Message*.
 5 The base station shall set this field to '10' if the mobile station
 6 is to bypass the power up registration requirement upon
 7 band, frequency block or serving system change when the SID
 8 remains the same.
 9 The base station shall set this field to '11' if the mobile station
 10 is to bypass the power up registration requirement upon
 11 band, frequency block or serving system change.

12 RC_BITMAP_CAPABILITY_EXT_ALLOWED -

13 RC bitmap and Capability Record Extension Indicator.

14 This bit indicates that the base station supports the following:

15 - Processing of Origination Message or Page Response
 16 Message or Status Response Message or Extended Status
 17 Response Message that contain FCH Type-specific Fields
 18 record, or DCCH Type-specific Fields record, or FOR_SCH
 19 Type-Specific Fields record, or REV_SCH Type-Specific
 20 Fields record with a value for FOR_FCH_LEN or
 21 FOR_DCCH_LEN or FOR_SCH_LEN greater than 3 and
 22 REV_FCH_LEN or REV_DCCH_LEN or REV_SCH_LEN
 23 greater than 2.

24 - Processing of any additional fields starting with the
 25 F_SCH_EARLY_TERM_SUPPORTED field in the Capability
 26 Information Record.

27 The base station shall include this field if any fields following
 28 this field are included. If included, the base station shall set
 29 this field to '1'.

30 CRRM_MSG_IND - *Call Recovery Request Message* supported indicator.

31 The base station shall omit this field if the base station does
 32 not need to include any fields following this field and does not
 33 support *Call Recovery Request Message*. Otherwise the base
 34 station shall include this field and set this field as follows:

35 The base station shall set this field to '0' if the mobile station
 36 is not allowed to send a *Call Recovery Request Message*;
 37 otherwise, the base station shall set this field to '1'.

38 APPIM_PERIOD_INDEX - *Access Point Pilot Information Message* transmission frequency.

39 If the AP_PILOT_INFO is not included or is included and set to
 40 0, the base station shall omit this field. Otherwise, the base
 41 station shall include this field if there are any fields following
 42 this field or if the base station needs to set this field to a value
 43 other than '000'.

1		The base station shall set this field to the period index value
2		of <i>Access Point Pilot Information Message</i> . The base station
3		shall set this field value in the range '000' – '101', both
4		inclusive.
5	GEN_OVHD_CYCLE_INDEX	– <i>General Overhead Information Message</i> transmission
6		frequency.
7		If the GEN_OVHD_INF_IND is not included or is included and
8		set to 0, the base station shall omit this field. Otherwise, the
9		base station shall include this field if there are any fields
10		following this field or if the base station needs to set this field
11		to a value other than '000'.
12		The base station shall set this field to the cycle index value of
13		<i>General Overhead Message</i> . The base station shall set this
14		field value in the range '000' – '101', both inclusive.
15	ATIM_CYCLE_INDEX	- <i>Alternative Technologies Information Message</i> transmission
16		frequency.
17		If the ATIM_IND is not included or is included and set to 0,
18		the base station shall omit this field. Otherwise, the base
19		station shall include this field if there are any fields following
20		this field or if the base station needs to set this field to a value
21		other than '000'.
22		The base station shall set this field to the cycle index value of
23		<i>Alternative Technologies Information Message</i> . The base station
24		shall set this field vale in the range '000' – '101', both
25		inclusive.
26	ADD_LOC_INFO_INCL	– Location information included.
27		The base station shall omit this field if the base station does
28		not need to include any fields following this field. Otherwise
29		the base station shall include this field and set this field as
30		follows:
31		The base station shall set this field to '1' to indicate if the
32		LOC_UNC_H, HEIGHT, and LOC_UNC_V fields are included in
33		this message and to indicate if the BASE_LAT and
34		BASE_LONG contain legitimate values, otherwise, the base
35		station shall set this field to '0'.
36	LOC_UNC_H	– Horizontal location uncertainty.
37		If ADD_LOC_INFO_INCL is included and set to '1', the base
38		station shall include this field and set it as shown below;
39		otherwise, the base station shall omit this field.
40		The base station shall set this field to the circular horizontal
41		location uncertainty, as specified in Table 3.7.2.3.2.1-2. The
42		value of this field indicates the radius of a circular 95%
43		confidence coverage area.
44	HEIGHT	– Height.
45		If ADD_LOC_INFO_INCL is included and set to '1', the base
46		station shall include this field and set it as shown below;
47		otherwise, the base station shall omit this field.

PILOT_PN	9
ACC_MSG_SEQ	6
RAND	32

5

6 PILOT_PN - Pilot PN sequence offset index.

7 The base station shall set this field to the pilot PN sequence
8 offset for this base station, in units of 64 PN chips.

9 ACC_MSG_SEQ - Enhanced Access Parameters Message sequence number.

10 The base station shall set this field to ACC_CONFIG_SEQ
11 (see 3.6.2.2).

12 RAND - Random challenge value.

13 The base station shall set this field to the random challenge
14 value to be used by mobile stations for authentication.

4

PILOT_PN - Pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

- 1 ACC_MSG_SEQ - Enhanced Access Parameters Message sequence number.
2 The base station shall set this field to ACC_CONFIG_SEQ
3 (see 2.6.2.2.15).
- 4 PSIST_PARAMS_INCL - Persistence parameters included indicator.
5 If persistence parameters are included in this message, the
6 base station shall set this field to '1'; otherwise, the base
7 station shall set this field to '0'.
- 8 PSIST_PARAMS_LEN - Length of persistence parameters record.
9 If PSIST_PARAMS_INCL is set to '0', the base station shall omit
10 this field; otherwise, the base station shall set this field to the
11 total length, in octets, of persistence parameters included in
12 the message, including the PSIST_PARAMS_LEN and
13 RESERVED fields.
- 14 PSIST(0-9)_EACH - Persistence value for access overload classes 0 through 9.
15 If PSIST_PARAMS_INCL is set to '0', the base station shall omit
16 this field; otherwise, the base station shall set this field as
17 follows:
18 If a mobile station in access overload classes 0 through 9 is
19 permitted to transmit requests on the Enhanced Access
20 Channel, the base station shall set this field to the
21 persistence value to be used. If such a mobile stations is not
22 permitted to transmit requests on the Enhanced Access
23 Channel, the base station shall set this field to '111111'.
- 24 PSIST(10)_EACH - Persistence value for access overload class 10 (test mobile
25 stations).
26 If PSIST_PARAMS_INCL is set to '0', the base station shall omit
27 this field; otherwise, the base station shall set this field as
28 follows:
29 If a mobile station in access overload class 10 is permitted to
30 transmit requests on the Enhanced Access Channel, the base
31 station shall set this field to the persistence value to be used.
32 If such a mobile station is not permitted to transmit requests
33 on the Enhanced Access Channel, the base station shall set
34 this field to '111'.
- 35 PSIST(11)_EACH - Persistence value for access overload class 11 (emergency
36 mobile stations).
37 If PSIST_PARAMS_INCL is set to '0', the base station shall omit
38 this field; otherwise, the base station shall set this field as
39 follows:
40 If a mobile station in access overload class 11 is permitted to
41 transmit requests on the Enhanced Access Channel, the base
42 station shall set this field to the persistence value to be used.
43 If such a mobile station is not permitted to transmit requests
44 on the Enhanced Access Channel, the base station shall set
45 this field to '111'.
- 46 PSIST(12)_EACH - Persistence value for access overload class 12.

- 1 If PSIST_PARMS_INCL is set to '0', the base station shall omit
2 this field; otherwise, the base station shall set this field as
3 follows:
- 4 If a mobile station in access overload class 12 is permitted to
5 transmit requests on the Enhanced Access Channel, the base
6 station shall set this field to the persistence value to be used.
7 If such a mobile station is not permitted to transmit requests
8 on the Enhanced Access Channel, the base station shall set
9 this field to '111'.
- 10 PSIST(13)_EACH - Persistence value for access overload class 13.
- 11 If PSIST_PARMS_INCL is set to '0', the base station shall omit
12 this field; otherwise, the base station shall set this field as
13 follows:
- 14 If a mobile station in access overload class 13 is permitted to
15 transmit requests on the Enhanced Access Channel, the base
16 station shall set this field to the persistence value to be used.
17 If such a mobile station is not permitted to transmit requests
18 on the Enhanced Access Channel, the base station shall set
19 this field to '111'.
- 20 PSIST(14)_EACH - Persistence value for access overload class 14.
- 21 If PSIST_PARMS_INCL is set to '0', the base station shall omit
22 this field; otherwise, the base station shall set this field as
23 follows:
- 24 If a mobile station in access overload class 14 is permitted to
25 transmit requests on the Enhanced Access Channel, the base
26 station shall set this field to the persistence value to be used.
27 If such a mobile station is not permitted to transmit requests
28 on the Enhanced Access Channel, the base station shall set
29 this field to '111'.
- 30 PSIST(15)_EACH - Persistence value for access overload class 15.
- 31 If PSIST_PARMS_INCL is set to '0', the base station shall omit
32 this field; otherwise, the base station shall set this field as
33 follows:
- 34 If a mobile station in access overload class 15 is permitted to
35 transmit requests on the Enhanced Access Channel, the base
36 station shall set this field to the persistence value to be used.
37 If such a mobile stations is not permitted to transmit requests
38 on the Enhanced Access Channel, the base station shall set
39 this field to '111'.
- 40 PSIST_EMG - Persistence value for emergency call for access overload
41 classes 0 through 9.
- 42 If PSIST_PARMS_INCL is set to '0', the base station shall omit
43 this field; otherwise, the base station shall set this field as
44 follows:

1			If a mobile station in access overload classes 0 through 9 is
2			permitted to transmit emergency requests on the Enhanced
3			Access Channel, the base station shall set this field to the
4			persistence value to be used for the emergency calls. If such
5			a mobile station is not permitted to transmit emergency
6			requests on the Enhanced Access Channel, the base station
7			shall set this field to '111'.
8	MSG_PSIST_EACH	-	Persistence modifier for Enhanced Access Channel attempts
9			for message transmissions.
10			If PSIST_PARAMS_INCL is set to '0', the base station shall omit
11			this field; otherwise, the base station shall set this field to the
12			persistence modifier for Enhanced Access Channel attempts
13			for message transmissions.
14	REG_PSIST_EACH	-	Persistence modifier for Enhanced Access Channel attempts
15			for registrations which are not responses to the <i>Registration</i>
16			<i>Request Order</i> .
17			If PSIST_PARAMS_INCL is set to '0', the base station shall omit
18			this field; otherwise, the base station shall set this field to the
19			persistence modifier for Enhanced Access Channel attempts
20			for registrations which are not responses to the <i>Registration</i>
21			<i>Request Order</i> .
22	RESERVED	-	Reserved bits.
23			If PSIST_PARAMS_INCL is set to '0', the base station shall omit
24			this field; otherwise, the base station shall include as many
25			bits as required to make the length of the persistence
26			parameters record an integral number of octets. If this field is
27			included, the base station shall set each of these bits to '0'.
28	LAC_PARAMS_LEN	-	Length of Link Access Control parameter fields.
29			The base station shall set this field to the total length, in
30			octets, of Link Access Control parameters included in the
31			message, including the LAC_PARAMS_LEN and RESERVED
32			fields.
33	ACC_TMO	-	Acknowledgment timeout.
34			The base station shall set this field to one less than the length
35			of time, in units of 20 ms, that a mobile station is to wait to
36			receive a Layer 2 acknowledgment after the end of an
37			Enhanced Access Channel transmission.
38	RESERVED_1	-	The reserved bits
39			The base station shall set this field to '0000'
40	MAX_REQ_SEQ	-	Maximum number of access probe sequences for an
41			Enhanced Access Channel request.
42			The base station shall set this field to the maximum number
43			of access probe sequences a mobile station is to transmit for
44			an Enhanced Access Channel request. The base station shall
45			set this field to a value greater than 0.

1			If EACH_PREAMBLE_ENABLED is set to '1', the base station shall set this field to the additional preamble duration on an Enhanced Access Channel, in units of 1.25 ms; otherwise, the base station shall omit this field.
2			
3			
4			
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '000000'.
7	EACH_PROBE_BKOFF	-	Enhanced Access Channel probe backoff range.
8			The base station shall set this field to one less than the maximum number of slots a mobile station is to delay due to random backoff between consecutive enhanced access probes.
9			
10			
11			
12	EACH_BKOFF	-	Enhanced Access Channel probe sequence backoff range.
13			The base station shall set this field to one less than the maximum number of slots a mobile station is to delay due to random backoff between successive enhanced access probe sequences.
14			
15			
16			
17	EACH_SLOT	-	Slot duration for the Enhanced Access Channels.
18			The base station shall set this field to N where the slot duration of the Enhanced Access Channel is $(N+1) \times 1.25$ ms.
19			The base station shall set this field to a value between 0 and 63.
20			
21			
22	EACH_SLOT_OFFSET1	-	First slot offset for the Enhanced Access Channels.
23			The base station shall set this field so that the Enhanced Access Channel has a slot offset equal to $(EACH_ID \times EACH_SLOT_OFFSET2 + EACH_SLOT_OFFSET1) \bmod (EACH_SLOT+1)$, where EACH_ID is the Enhanced Access Channel Index. The base station shall set this field to a value between 0 and 63, in units of 1.25 ms.
24			
25			
26			
27			
28			
29	EACH_SLOT_OFFSET2	-	Relative slot offset for the Enhanced Access Channels.
30			The base station shall set this field so that the Enhanced Access Channel has a slot offset equal to $(EACH_ID \times EACH_SLOT_OFFSET2 + EACH_SLOT_OFFSET1) \bmod (EACH_SLOT+1)$, where EACH_ID is the Enhanced Access Channel Index. The base station shall set this field to a value between 0 and 63, in units of 1.25 ms.
31			
32			
33			
34			
35			
36	RESERVED	-	Reserved bits.
37			The base station shall include as many bits as required to make the length of the mode-specific parameters record an integral number of octets. The base station shall set each of these bits to '0'.
38			
39			
40			
41	BA_PARMS_LEN	-	Length of Basic Access Mode parameter record.

1 The base station shall set this field to the total length, in
 2 octets, of Basic Access Mode parameters record included in
 3 the message, excluding the BA_PARMS_LEN but including the
 4 RESERVED fields. If there are no fields other than the
 5 BA_PARMS_LEN in this record, the base station shall set this
 6 field to '000'.

7 NUM_EACH_BA - Number of Enhanced Access Channels used for the Basic
 8 Access Mode.

9 If BA_PARMS_LEN is equal to '000', the base station shall
 10 omit this field; otherwise, the base station shall include this
 11 field and set it to the number of Enhanced Access Channels
 12 used for the Basic Access mode minus one.

13 EACH_BA_RATES_SUPPORTED - Supported rate words for the Basic Access mode on
 14 the Enhanced Access Channels.

15 If BA_PARMS_LEN is equal to '000', the base station shall
 16 omit this field; otherwise, the base station shall include this
 17 field and set each subfield of the
 18 EACH_BA_RATES_SUPPORTED field as follows: the base
 19 station shall set the subfield to '1' if the corresponding mode
 20 in Table 3.7.2.3.2.33-3 is allowed; otherwise the base station
 21 shall set the subfield to '0'.

22

23

Table 3.7.2.3.2.33-3. EACH and RCCCH Data Rate and Frame Size

Subfield	Length (bits)	Subfield Description
RATE_SIZE_1	1	9600 bps, 20 ms frame size
RATE_SIZE_2	1	19200 bps, 20 ms frame size
RATE_SIZE_3	1	19200 bps, 10 ms frame size
RATE_SIZE_4	1	38400 bps, 20 ms frame size
RATE_SIZE_5	1	38400 bps, 10 ms frame size
RATE_SIZE_6	1	38400 bps, 5 ms frame size
RESERVED	2	Reserved

24

25 RESERVED - Reserved bits.

26 If BA_PARMS_LEN is equal to '000', the base station shall
 27 omit this field; otherwise, the base station shall include as
 28 many bits as required to make the length of the Basic Access
 29 Mode record (excluding the BA_PARMS_LEN field but
 30 including the RESERVED field) an integral number of octets.
 31 The base station shall set each of these bits to '0'.

32 RA_PARMS_LEN - Length of Reservation Access Mode parameters record.

1 The base station shall set this field to the total length, in
2 octets, of Reservation Access Mode parameters record
3 included in the message, excluding the RA_PARMS_LEN but
4 including the RESERVED field.

5 NUM_EACH_RA - Number of Enhanced Access Channels used for the
6 Reservation Access Mode.

7 If RA_PARMS_LEN is equal to '00000', the base station shall
8 omit this field; otherwise, the base station shall include this
9 field and set it to the number of Enhanced Access Channels
10 used for the Reservation Access mode minus one.

11 NUM_CACH - Number of Common Assignment Channels.

12 If RA_PARMS_LEN is equal to '00000', the base station shall
13 omit this field; otherwise, the base station shall include this
14 field and set it to the number of Common Assignment
15 Channels supported by the system minus one.

16 CACH_CODE_RATE - Code Rate for the Common Assignment Channels.

17 If RA_PARMS_LEN is equal to '00000', the base station shall
18 omit this field; otherwise, the base station shall include this
19 field and set it as follows:

20 If the CACH is operating in Spreading Rate 1, the base station
21 shall set this field to '0' if the CACH Code Rate is 1/4 (see [2]).
22 The base station shall set this field to '1' if the CACH Code
23 Rate is 1/2 (see [2]).

24 If the CACH is operating in Spreading Rate 3, the base station
25 shall set this field to '0'.

26 If RA_PARMS_LEN is not equal to '00000', the base station shall include (NUM_CACH + 1)
27 occurrences of the following one field record:

28 CACH_CODE_CHAN - Code channel index for the Common Assignment Channel.

29 The base station shall set this field to the code channel index
30 (see [2]) in the range 1 to 255 inclusive that the mobile station
31 is to use on the Common Assignment Channel.

32 NUM_RCCCH - Number of Reverse Common Control Channels used for the
33 Reservation Mode.

34 If RA_PARMS_LEN is equal to '00000', the base station shall
35 omit this field; otherwise, the base station shall include this
36 field and set it to the number of Reverse Common Control
37 Channels used for the Reservation mode minus one.

38 RCCCH_RATES_SUPPORTED - Supported rate words on the Reverse Common Control
39 Channels.

40 If RA_PARMS_LEN is equal to '00000', the base station shall
41 omit this field; otherwise, the base station shall include this
42 field and set each bit of the RCCCH_RATES_SUPPORTED field
43 as follows: the base station shall set the bit to '1' if the
44 corresponding mode in Table 3.7.2.3.2.33-3 is allowed;
45 otherwise the base station shall set the bit to '0'.

- 1 If RA_PARMS_LEN is equal to '00000', the base station shall
 2 omit this field; otherwise, the base station shall include this
 3 field and set it so that Reverse Common Control Channel has
 4 a slot offset equal to $(RCCCH_ID \times RCCCH_SLOT_OFFSET2 +$
 5 $RCCCH_SLOT_OFFSET1) \bmod (RCCCH_SLOT+1)$, where
 6 RCCCH_ID is the Reverse Common Control Channel Index.
 7 The base station shall set this field to a value between 0 and
 8 63, in units of 1.25 ms.
- 9 RCCCH_SLOT_OFFSET2 - Second slot offset for the Reverse Common Control Channels.
- 10 If RA_PARMS_LEN is equal to '00000', the base station shall
 11 omit this field; otherwise, the base station shall include this
 12 field and set it so that Reverse Common Control Channel has
 13 a slot offset equal to $(RCCCH_ID \times RCCCH_SLOT_OFFSET2 +$
 14 $RCCCH_SLOT_OFFSET1) \bmod (RCCCH_SLOT+1)$, where
 15 RCCCH_ID is the Reverse Common Control Channel Index.
 16 The base station shall set this field to a value between 0 and
 17 63, in units of 1.25 ms.
- 18 RCCCH_NOM_PWR - Nominal transmit power offset for the Reverse Common
 19 Control Channels.
- 20 If RA_PARMS_LEN is equal to '00000', the base station shall
 21 omit this field; otherwise, the base station shall include this
 22 field and set it to the correction factor to be used by a mobile
 23 station in the open loop power estimate, expressed as a two's
 24 complement value in units of 1 dB (see [2]).
- 25 RCCCH_INIT_PWR - Initial power offset for the Reverse Common Control
 26 Channels.
- 27 If RA_PARMS_LEN is equal to '00000', the base station shall
 28 omit this field; otherwise, the base station shall include this
 29 field and set it to the correction factor to be used by a mobile
 30 station in the open loop power estimate for the initial
 31 transmission on a Reverse Common Control Channel,
 32 expressed as a two's complement value in units of 1 dB (see
 33 [2]).
- 34 RA_PC_DELAY - Power control delay for the Reverse Common Control
 35 Channel.
- 36 If RA_PARMS_LEN is equal to '00000', the base station shall
 37 omit this field; otherwise, the base station shall include this
 38 field and set it to the number of power control bits the mobile
 39 is to disregard after initiating transmission on a Reverse
 40 Common Control Channel.
- 41 EACAM_CACH_DELAY - Maximum time after an Enhanced Access Channel header
 42 transmission for receiving a response on the Common
 43 Assignment Channel when Reverse Common Control Channel
 44 soft handoff has not been requested.

- 1 If RA_PARMS_LEN is equal to '00000', the base station shall
 2 omit this field; otherwise, the base station shall include this
 3 field and set it to the number of complete Common
 4 Assignment Channel frames minus one, from the end of the
 5 *R-EACH Header*, for which a mobile station is to wait for the
 6 *Early Acknowledgment Channel Assignment Message* if the
 7 mobile station has not requested Reverse Common Control
 8 Channel soft handoff.
- 9 RCCCH_HO_SUPPORTED - Reverse Common Control Channel handoff supported
 10 indicator.
- 11 If RA_PARMS_LEN is equal to '00000', the base station shall
 12 omit this field; otherwise, the base station shall include this
 13 field and set it as follows:
- 14 The base station shall set this field to '1' if Reverse Common
 15 Control Channel handoff is supported by the base station;
 16 otherwise, the base station shall set this field to '0'.
- 17 RCCCH_HO_THRESH - Reverse Common Control Channel soft handoff threshold.
- 18 If RCCCH_HO_SUPPORTED is included and is set to '1', the base station shall include this
 19 field; otherwise the base station shall omit this field.
 20 If included, the base station shall set this field to:
- 21
$$\lfloor -20 \times \log_{10} \textit{pilot_threshold} \rfloor$$
- 22 where *pilot_threshold* is the pilot E_c/I_0 threshold used to determine whether the mobile
 23 station requests Reverse Common Control Channel in soft handoff.
 24 This is a positive value in units of 0.5 dB.
- 25 EACAM_PCCAM_DELAY - Maximum time after an Enhanced Access Channel header
 26 transmission for receiving a response on the Common
 27 Assignment Channel when Reverse Common Control Channel
 28 soft handoff has been requested.
- 29 If RCCCH_HO_SUPPORTED is included and is set to '1', the
 30 base station shall include this field; otherwise the base
 31 station shall omit this field.
- 32 If included, the base station shall set this field to the number
 33 of complete Common Assignment Channel frames minus one,
 34 from the end of the *R-EACH Header*, for which a mobile
 35 station is to wait for the *Early Acknowledgment Channel*
 36 *Assignment Message* and *Power Control Channel Assignment*
 37 *Message* if the mobile station has requested Reverse Common
 38 Control Channel soft handoff (see [3]).
- 39 NUM_CPCCH - Number of Common Power Control Channels.
- 40 If RA_PARMS_LEN is equal to '00000', the base station shall
 41 omit this field; otherwise, the base station shall include this
 42 field and set it to the number of Common Power Control
 43 Channels supported minus one.
- 44 CPCCH_RATE - Power control rate for the Common Power Control Channels.

1 If RA_PARMS_LEN is equal to '00000', the base station shall
 2 omit this field; otherwise, the base station shall include this
 3 field and set it to the value shown in Table 3.7.2.3.2.33-4
 4 corresponding to the power control rate for the Common
 5 Power Control Channels.

6
 7

Table 3.7.2.3.2.33-4. CPCCH Power Control Rate

CPCCH_RATE (Binary)	Power Control Rate
00	200 bps
01	400 bps
10	800 bps
11	Reserved

8

9 If RA_PARMS_LEN is not equal to '00000', the base station shall include (NUM_CPCCH + 1)
 10 occurrences of the following one field record:

- 11 CPCCH_CODE_CHAN - Code channel index for the Common Power Control Channel.
 12 The base station shall set this field to the code channel index
 13 (see [2]) in the range 1 to 127 inclusive that the mobile station
 14 is to use on the Common Power Control Channel.
- 15 NUM_PCSCH_RA - Number of Power Control Subchannels used for the
 16 Reservation Access Mode.
 17 If RA_PARMS_LEN is equal to '00000', the base station shall
 18 omit this field; otherwise, the base station shall include this
 19 field and set it to the number of Power Control Subchannels
 20 used for the Reservation Access Mode minus one.
- 21 RESERVED - Reserved bits.
 22 If RA_PARMS_LEN is equal to '00000', the base station shall
 23 omit this field; otherwise, the base station shall include as
 24 many bits as required to make the length of the Reservation
 25 Access Mode record (excluding the RA_PARMS_LEN but
 26 including the RESERVED field) an integral number of octets.
 27 The base station shall set each of these bits to '0'.
- 28 ACCT_INCL - Access Control based on Call Type (ACCT) information
 29 included indicator.
 30 If the base station enables ACCT for at least one service
 31 option, the base station shall set this field to '1'; otherwise,
 32 the base station shall set this field to '0'.
 33 If the base station sets this field to '1', then the base station
 34 shall also set at least one of ACCT_SO_INCL or
 35 ACCT_SO_GRP_INCL to '1'.
- 36 ACCT_INCL_EMG - Access Control based on Call Type (ACCT) includes emergency
 37 calls indicator.

1 If ACCT_INCL is set to '0', the base station shall omit this
2 field; otherwise, the base station shall include this field and
3 set it as follows:

4 The base station shall set this field to '0' if the mobile station
5 is not to apply ACCT to a call that is recognized by the mobile
6 station to be an emergency call; otherwise, the base station
7 shall set this field to '1'.

8 ACCT_AOC_BITMAP_INCL - Access Control based on Call Type (ACCT) access overload
9 class bitmap included indicator.

10 If ACCT_INCL is set to '0', the base station shall omit this
11 field; otherwise, the base station shall include this field and
12 set it as follows:

13 The base station shall set this field to '0' if all mobile stations
14 are to apply ACCT regardless of their access overload classes;
15 otherwise, the base station shall set this field to '1' to indicate
16 that the mobile station is to apply ACCT according to its
17 access overload class.

18 ACCT_SO_INCL - Access Control based on Call Type (ACCT) service option
19 included indicator.

20 If ACCT_INCL is set to '0', the base station shall omit this
21 field; otherwise, the base station shall include this field and
22 set it as follows:

23 The base station shall set this field to '1' if at least one
24 occurrence of the ACCT_SO field is included in this message;
25 otherwise, the base station shall set this field to '0'.

26 NUM_ACCT_SO - Number of service options for Access Control based on Call
27 Type (ACCT).

28 If ACCT_SO_INCL is not included, or is included and set to '0',
29 then the base station shall omit this field; otherwise, the base
30 station shall include this field and set it to one less than the
31 number of occurrences of the ACCT_SO field included in this
32 message.

33 If ACCT_SO_INCL is included and set to '1', then the base station shall include
34 NUM_ACCT_SO + 1 occurrences of the following variable-field record:

35 ACCT_AOC_BITMAP1 - Access Control based on Call Type (ACCT) access overload
36 class bitmap.

37 If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
38 shall omit this field; otherwise, the base station shall include
39 this field and set it as follows:

40 This field consists of the subfields defined in Table
41 3.7.2.3.2.2-1.

42 The base station shall set a subfield to '1' to indicate that
43 mobile stations having the corresponding access overload
44 class are not permitted to perform access attempts using the
45 associated service option ACCT_SO; otherwise, the base
46 station shall set the subfield to '0'.

1 3.7.2.3.2.34 Universal Neighbor List Message
 2 MSG_TAG: UNLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM_RADIO_INTERFACE occurrences of the following record:

{ (NUM_RADIO_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	8
Radio Interface Type-specific fields	8 × RADIO_INTERFACE_LEN

} (NUM_RADIO_INTERFACE)

3

4 PILOT_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG_SEQ (see
 9 3.6.2.2).

10 NUM_RADIO_INTERFACE - Number of interface types.

11 The base station shall set this field to the number of radio
 12 interface types for which neighbors are included in this
 13 message.

14 The base station shall include NUM_RADIO_INTERFACE occurrences of the following
 15 record, one occurrence for each radio interface for which neighbors are included in this
 16 message.

17 RADIO_INTERFACE_TYPE - The radio interface type.

18 The base station shall set this field to the radio interface type
 19 of this record as specified in Table 3.7.2.3.2.34-1.

20

21

22

23

24

1

Table 3.7.2.3.2.34-1. Radio Interface Type

RADIO_INTERFACE_TYP E (binary)	Descriptions
0000	MC system
0001	Reserved (Previously: Analog system)
0010	HRPD System
0011-1111	Reserved

2 RADIO_INTERFACE_LEN -

The length of the Radio Interface Type-specific fields.

3

The base station shall set this field to the number of octets in the Radio Interface Type-specific fields of this record.

4

5 If RADIO_INTERFACE_TYPE is equal to '0000', the base station shall include the following
6 fields:

Field	Length (bits)
PILOT_INC	4
NGHBR_SRCH_MODE	2
SRCH_WIN_N	0 or 4
SRCH_OFFSET_INCL	1
FREQ_FIELDS_INCL	1
USE_TIMING	1
GLOBAL_TIMING_INCL	0 or 1
GLOBAL_TX_DURATION	0 or 4
GLOBAL_TX_PERIOD	0 or 7
NGHBR_SET_ENTRY_INFO	1
NGHBR_SET_ACCESS_INFO	1
NUM_NGHBR	6

NUM_NGHBR occurrences of the following subrecord:

{ (NUM_NGHBR)

NGHBR_CONFIG	3
NGHBR_PN	9
BCCH_SUPPORT	0 or 1

(continues on next page)

7

Field	Length (bits)
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN
SEARCH_PRIORITY	0 or 2
SRCH_WIN_NGHR	0 or 4
SRCH_OFFSET_NGHR	0 or 3
FREQ_INCL	0 or 1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
TIMING_INCL	0 or 1
NGHBR_TX_OFFSET	0 or 7
NGHBR_TX_DURATION	0 or 4
NGHBR_TX_PERIOD	0 or 7
ACCESS_ENTRY_HO	0 or 1
ACCESS_HO_ALLOWED	0 or 1

} (*NUM_NGHR*)

RESQ_ENABLED	1
RESQ_DELAY_TIME	0 or 6
RESQ_ALLOWED_TIME	0 or 6
RESQ_ATTEMPT_TIME	0 or 6
RESQ_CODE_CHAN	0 or 11
RESQ_QOF	0 or 2
RESQ_MIN_PERIOD_INCL	0 or 1
RESQ_MIN_PERIOD	0 or 5
RESQ_NUM_TOT_TRANS_INCL	0 or 1
RESQ_NUM_TOT_TRANS_20MS	0 or 4
RESQ_NUM_TOT_TRANS_5MS	0 or 4
RESQ_NUM_PREAMBLE_RC1_RC2	0 or 3
RESQ_NUM_PREAMBLE	0 or 3

(continues on next page)

Field	Length (bits)
RESQ_POWER_DELTA	0 or 3

NUM_NGHR occurrences of the following one-field record if RESQ_ENABLED is set to '1':

{ (NUM_NGHR)

NGHR_RESQ_CONFIGURED	1
----------------------	---

} (NUM_NGHR)

{ (NUM_NGHR)

NGHR_PDCH_SUPPORTED	1

PILOT_INC - Pilot PN sequence offset index increment.

A mobile station searches for Remaining-Set pilots at pilot PN sequence index values that are multiples of this value.

The base station shall set this field to the pilot PN sequence increment, in units of 64 PN chips, that mobile stations are to use for searching the Remaining Set. The base station should set this field to the largest increment such that the pilot PN sequence offsets of all its neighbor base stations are integer multiples of that increment.

The base station shall set this field to a value in the range 1 to 15 inclusive.

NGHR_SRCH_MODE - Search mode.

The base station shall set this field to the value shown in Table 3.7.2.3.2.34-2 corresponding to the search mode.

Table 3.7.2.3.2.34-2. Search Mode Field

Value (binary)	Description
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

18
19

SRCH_WIN_N - Search window size for the Neighbor Set.

1			If NGHBR_SRCH_MODE = '00' or NGHBR_SRCH_MODE =
2			'01', the base station shall include the field SRCH_WIN_N and
3			shall set this field as described below; otherwise, the base
4			station shall omit this field.
5			The base station shall set this field to the value shown in
6			Table 2.6.6.2.1-1 corresponding to the search window size to
7			be used by mobile stations for the Neighbor Set.
8	SRCH_OFFSET_INCL	-	Neighbor pilot channel search window offset included.
9			If NGHBR_SRCH_MODE = '10' or '11' and if the
10			SRCH_OFFSET_NGHBR field is included in the following
11			records, the base station shall set this bit to '1'; otherwise, the
12			base station shall set this bit to '0'.
13	FREQ_FIELDS_INCL	-	Frequency fields included.
14			If frequency fields are included in this message, the base
15			station shall set this field to '1'; otherwise, the base station
16			shall set this field to '0'.
17	USE_TIMING	-	Use timing indicator.
18			If base station timing information is included for neighbor
19			base stations, the base station shall set this field to '1';
20			otherwise, the base station shall set this field to '0'.
21	GLOBAL_TIMING_INCL	-	Global timing included.
22			If USE_TIMING is set to '1', the base station shall include the
23			field GLOBAL_TIMING_INCL and shall set this field as
24			described below; otherwise, the base station shall omit this
25			field.
26			If base station timing information is included globally for all
27			neighbor base stations with TIMING_INCL equal to '1', the
28			base station shall set this field to '1'; otherwise, the base
29			station shall set this field to '0'.
30	GLOBAL_TX_DURATION	-	Global neighbor transmit time duration.
31			If GLOBAL_TIMING_INCL is included and is set to '1', the
32			base station shall include the field GLOBAL_TX_DURATION
33			and shall set this field as described below; otherwise, the base
34			station shall omit this field.
35			The base station shall set this field to the duration of the base
36			station transmit window, during each period, in units of 80
37			ms. The base station should set this field to a value of 3 or
38			greater.
39	GLOBAL_TX_PERIOD	-	Global neighbor transmit time period.
40			If GLOBAL_TIMING_INCL is included and is set to '1', the
41			base station shall include the field GLOBAL_TX_PERIOD and
42			shall set this field as described below; otherwise, the base
43			station shall omit this field.
44			The base station shall set this field to duration of the period,
45			in units of 80 ms.

- 1 NGHBR_SET_ENTRY_INFO - Neighbor Set access entry handoff information included
2 indicator.
- 3 If the base station is including information on the Neighbor
4 Set access entry handoff, the base station shall set this field
5 to '1'; otherwise, the base station shall set this field to '0'.
- 6 NGHBR_SET_ACCESS_INFO - Neighbor Set access handoff included indicator.
- 7 If the base station is including information on the Neighbor
8 Set access handoff or access probe handoff, the base station
9 shall set this field to '1', otherwise, the base station shall set
10 this field to '0'.
- 11 NUM_NGHBR - Number of neighbor pilot PN sequences.
- 12 The base station shall set this field to the number of
13 neighbors included in the message.
- 14

1 The base station shall include one occurrence of the following subrecord for each pilot that
 2 a mobile station is to place in its Neighbor Set.

3 NGHBR_CONFIG - Neighbor configuration.

4 The base station shall set this field to the value shown in
 5 Table 3.7.2.3.2.34-3 corresponding to the configuration of this
 6 neighbor.

7 **Table 3.7.2.3.2.34-3. Neighbor Configuration Field**

Value (binary)	Neighbor Configuration
000	<p>The neighbor base station has the same number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with the same number of Forward Common Control Channels, and the neighbor frequency is given as follows:</p> <ul style="list-style-type: none"> • If FREQ_INCL equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If FREQ_INCL equals '1' for this record, this corresponding CDMA frequency assignment is given by NGHBR_BAND and NGHBR_FREQ. <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>The rate, code rate, and code channel of the corresponding Forward Common Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If NGHBR_PILOT_REC_TYPE is included in this message, then neighbor pilot type is as specified in NGHBR_PILOT_REC_TYPE; otherwise, the neighbor pilot is a 1X common pilot.</p>

Value (binary)	Neighbor Configuration
001	<p>The neighbor base station does not have any frequencies with Primary Broadcast Control Channel/Forward Common Control Channel.</p> <p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station has frequencies having Primary Broadcast Control Channel/Forward Common Control Channel.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment but possibly with a different number of Paging Channels, and the neighbor frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel, at 9600 bps.</p>

Value (binary)	Neighbor Configuration
010	<p>The neighbor base station may have a different number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channel as the current base station.</p> <p>The neighbor base station has a Primary Broadcast Control Channel on the following frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor base station has a Primary Broadcast Control Channel on the first CDMA Channel listed in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station. • If <code>FREQ_INCL</code> equals '1' for this record, the neighbor base station has a Primary Broadcast Control Channel on the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If <code>NGHBR_PILOT_REC_TYPE</code> is included in this message, then neighbor pilot type is as specified in <code>NGHBR_PILOT_REC_TYPE</code>; otherwise, the neighbor pilot is a 1X common pilot.</p>
011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel. • If <code>FREQ_INCL</code> equals '1' for this record, the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code> has a Pilot Channel.

Value (binary)	Neighbor Configuration
100	<p>The neighbor base station has the same number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channel as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with a Primary Broadcast Control Channel, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> • If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment. • If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>. <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If <code>NGHBR_PILOT_REC_TYPE</code> is included in this message, then neighbor pilot type is as specified in <code>NGHBR_PILOT_REC_TYPE</code>; otherwise, the neighbor pilot is a 1X common pilot.</p>

- `NGHBR_PN` - Neighbor pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips.
- `BCCH_SUPPORT` - BCCH support indicator.

If the `NGHBR_CONFIG` field is not set to '011', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

If this neighbor base station supports Broadcast Control Channel, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- `ADD_PILOT_REC_INCL` - Additional pilot information included indicator.

1 The base station shall set this field to '1' if additional pilot
 2 information listed in the NGHBR_PILOT_REC_TYPE and
 3 RECORD_LEN fields are included. The base station shall set
 4 this field to '0' if the corresponding pilot is the common pilot
 5 and there is no additional pilot information included.

6 NGHBR_PILOT_REC_TYPE - Neighbor Pilot record type

7 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 8 set this field to the NGHBR_PILOT_REC_TYPE value shown in
 9 Table 3.7.2.3.2.34-4 corresponding to the type of Pilot Record
 10 specified by this record.

11

12

Table 3.7.2.3.2.34-4. Neighbor Pilot Record Types

Description	NGHBR_PILOT_REC_TYP E (binary)
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other NGHBR_PILOT_REC_TYPE values are reserved	

13

14 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 15 omit this field.

16 RECORD_LEN - Pilot record length.

17 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 18 set this field to the number of octets in the type-specific fields
 19 of this pilot record.

20 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 21 omit this field.

22 Type-specific fields - Pilot record type-specific fields.

23 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 24 include type-specific fields based on the
 25 NGHBR_PILOT_REC_TYPE of this pilot record.

26 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 27 omit this field.

28

29 If NGHBR_PILOT_REC_TYPE is equal to '000', the base station shall include the following
 30 fields:

1

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

2

3

TD_POWER_LEVEL - TD Transmit Power Level.

4

The base station shall set this field to the TD transmit power level relative to that of the Forward Pilot Channel as specified in Table 3.7.2.3.2.26-4.

5

6

7

TD_MODE - Transmit Diversity mode.

8

The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.

9

10

RESERVED - Reserved bits.

11

The base station shall set this field to '0000'.

12

If NGHBR_PILOT_REC_TYPE is equal to '001', the base station shall include the following fields:

13

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

14

15

QOF - Quasi-orthogonal function index.

16

The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).

17

18

WALSH_LENGTH - Length of the Walsh Code.

19

The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used in as the Auxiliary pilot.

20

21

22

23

AUX_PILOT_WALSH - Walsh Code for the Auxiliary Pilot.

24

The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot.

25

26

RESERVED - Reserved bits.

27

The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

28

29

1 If NGHBR_PILOT_REC_TYPE is equal to '010', the base station shall include the following
2 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

- 4
- 5 QOF - Quasi-orthogonal function index for the Auxiliary Transmit
6 Diversity Pilot.
7 The base station shall set this field to the index of the Quasi-
8 orthogonal function (see [2]).
- 9 WALSH_LENGTH - Length of the Walsh Code.
10 The base station shall set this field to the WALSH_LENGTH
11 value shown in 3.7.2.3.2.22-6 corresponding to the length of
12 the Walsh code for the pilots that are used as Auxiliary pilot
13 in the transmit diversity mode.
- 14 AUX_WALSH - Walsh Code for the Auxiliary Pilot.
15 The base station shall set this field to the Walsh code
16 corresponding to the Auxiliary Pilot.
- 17 AUX_TD_POWER_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.
18 The base station shall set this field to the Auxiliary Transmit
19 Diversity Pilot transmit power level relative to that of the
20 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.
- 21 TD_MODE - Transmit Diversity mode.
22 The base station shall set this field to the Transmit Diversity
23 mode, as specified in Table 3.7.2.3.2.26-3.
- 24 RESERVED - Reserved bits.
25 The base station shall set all the bits of this field to '0' to
26 make the entire record octet-aligned.

27 If NGHBR_PILOT_REC_TYPE is equal to '011', the base station shall include the following
28 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- SR3_PRIMARY_PILOT – Primary SR3 pilot.
The base station shall set this field to the value shown in Table 3.7.2.3.2.26-5 corresponding to the position of the primary SR3 pilot.
- SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.
The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.
- SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.
The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

If NGHBR_PILOT_REC_TYPE is equal to '100', the base station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

- 1 SR3_PRIMARY_PILOT – Primary SR3 pilot.
2
3 The base station shall set this field to the value shown in
4 Table 3.7.2.3.2.26-5 corresponding to the position of the
5 primary SR3 pilot.
- 6 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
7 on the lower frequency of the two remaining SR3 frequencies.
8 The base station shall set this field to the value shown in
9 Table 3.7.2.3.2.26-6 corresponding to the power level of the
10 primary pilot with respect to the pilot on the lower frequency
11 of the two remaining SR3 frequencies.
- 12 SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot
13 on the higher frequency of the two remaining SR3
14 frequencies.
15 The base station shall set this field to the value shown in
16 Table 3.7.2.3.2.26-6 corresponding to the power level of the
17 primary pilot with respect to the pilot on the higher frequency
18 of the two remaining SR3 frequencies.
- 19 QOF – Quasi-orthogonal function index.
20 The base station shall set this field to the index of the Quasi-
21 orthogonal function (see [2]) on the frequency of the primary
22 pilot.
- WALSH_LENGTH – Length of the Walsh Code.

1			The base station shall set this field to the WALSH_LENGTH
2			value shown in Table 3.7.2.3.2.22–6 corresponding to the
3			length of the Walsh code for the pilot that is used as the
4			Auxiliary pilot on the frequency of the primary pilot.
5	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
6			The base station shall set this field to the Walsh code
7			corresponding to the Auxiliary pilot on the frequency of the
8			primary pilot.
9	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
10			frequency of the two remaining SR3 frequencies.
11			If the additional information for the pilot on the lower
12			frequencies of the two remaining SR3 frequencies is the same
13			as pilot on the primary frequency, the base station shall set
14			this field to '0'; otherwise, the base station shall set this field
15			to '1'.
16		QOF1	- Quasi-orthogonal function index for the pilot on the lower
17			frequency of the two remaining SR3 frequencies.
18			If ADD_INFO_INCL1 is set to '0', the base station shall omit
19			this field; otherwise, the base station shall set this field as
20			follows:
21			The base station shall set this field to the index of the Quasi-
22			orthogonal function (see [2]) on the lower frequency of the two
23			remaining SR3 frequencies.
24	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
25			of the two remaining SR3 frequencies.
26			If ADD_INFO_INCL1 is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			The base station shall set this field to the WALSH_LENGTH
30			value shown in Table 3.7.2.3.2.22–6 corresponding to the
31			length of the Walsh code for the pilot that is used as the
32			Auxiliary pilot on the lower frequency of the two remaining
33			SR3 frequencies.
34	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
35			the two remaining SR3 frequencies.
36			If ADD_INFO_INCL1 is set to '0', the base station shall omit
37			this field; otherwise, the base station shall set this field as
38			follows:
39			The base station shall set this field to the Walsh code
40			corresponding to the Auxiliary pilot on the lower frequency of
41			the two remaining SR3 frequencies.
42	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
43			frequency of the two remaining SR3 frequencies.

1			If the additional information for the pilot on the higher
2			frequencies of the two remaining SR3 frequencies is the same
3			as pilot on the primary frequency, the base station shall set
4			this field to '0'; otherwise, the base station shall set this field
5			to '1'.
6	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
7			frequency of the two remaining SR3 frequencies.
8			If ADD_INFO_INCL2 is set to '0', the base station shall omit
9			this field; otherwise, the base station shall set this field as
10			follows:
11			The base station shall set this field to the index of the Quasi-
12			orthogonal function (see [2]) on the higher frequency of the
13			two remaining SR3 frequencies.
14	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher frequency
15			of the two remaining SR3 frequencies.
16			If ADD_INFO_INCL2 is set to '0', the base station shall omit
17			this field; otherwise, the base station shall set this field as
18			follows:
19			The base station shall set this field to the WALSH_LENGTH
20			value shown in Table 3.7.2.3.2.22-6 corresponding to the
21			length of the Walsh code for the pilot that is used as the
22			Auxiliary pilot on the higher frequency of the two remaining
23			SR3 frequencies.
24	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
25			the two remaining SR3 frequencies.
26			If ADD_INFO_INCL2 is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			The base station shall set this field to the Walsh code
30			corresponding to the Auxiliary pilot on the higher frequency of
31			the two remaining SR3 frequencies.
32	RESERVED	-	Reserved bits.
33			The base station shall set all the bits of this field to '0' to
34			make the entire record octet-aligned.
35	SEARCH_PRIORITY	-	Pilot Channel search priority.
36			If NGHBR_SRCH_MODE = '01' or NGHBR_SRCH_MODE =
37			'11', the base station shall include the field
38			SEARCH_PRIORITY and shall set this field as described
39			below; otherwise, the base station shall omit this field.
40			The base station shall set this field to the search priority for
41			the Pilot Channel corresponding to NGHBR_PN. The base
42			station shall set the search priority as shown in Table
43			3.7.2.3.2.34-5.
44			

1

Table 3.7.2.3.2.34-5. Search Priority Field

Value (binary)	Search Priority
00	Low
01	Medium
10	High
11	Very High

2

3

SRCH_WIN_NGHBR - Neighbor pilot channel search window size.

4

5

6

7

If NGHBR_SRCH_MODE = '10' or NGHBR_SRCH_MODE = '11', the base station shall include the field SRCH_WIN_NGHBR and shall set this field as described below; otherwise, the base station shall omit this field.

8

9

10

The base station shall set this field to the value shown in Table 2.6.6.2.1-1 corresponding to the search window size to be used by mobile stations for this neighbor.

11

SRCH_OFFSET_NGHBR - Neighbor pilot channel search window size offset.

12

13

14

15

If SRCH_OFFSET_INCL equals to '1', then the base station shall include the field SRCH_OFFSET_NGHBR and shall set this field as described below; otherwise, the base station shall omit this field.

16

17

18

The base station shall set this field to the value shown in Table 2.6.6.2.1-2 corresponding to the search window offset to be used by mobile stations for this neighbor.

19

FREQ_INCL - Frequency included indicator.

20

21

22

23

If FREQ_FIELDS_INCL is set to '1', the base station shall include the field FREQ_INCL and shall set this field as described below; otherwise, the base station shall omit this field.

24

25

26

27

28

If the NGHBR_BAND and NGHBR_FREQ fields are included for this neighbor base station, the base station shall set this bit to '1'. If the NGHBR_BAND and NGHBR_FREQ fields are not included in this assignment record, the base station shall set this bit to '0'.

29

NGHBR_BAND - Neighbor band class.

30

31

32

33

If the FREQ_INCL field is included and is set to '1', the base station shall include the field NGHBR_BAND and shall set this field as described below; otherwise, the base station shall omit this field.

34

35

36

37

38

The base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Broadcast Control Channel/Forward Common Control Channel the mobile station is to search.

- 1 NGHBR_FREQ - Neighbor frequency assignment.
- 2 If the FREQ_INCL field is omitted or is set to '0', the base
- 3 station shall omit this field.
- 4 If the FREQ_INCL field is included and is set to '1' and the
- 5 corresponding neighbor has a 1X neighbor pilot record type,
- 6 the base station shall set this field to the CDMA Channel
- 7 number, in the specified CDMA band class, corresponding to
- 8 the CDMA frequency assignment for the CDMA Channel
- 9 containing the Broadcast Control Channel/Forward Common
- 10 Control Channel the mobile station is to search.
- 11 If the FREQ_INCL field is included and is set to '1' and the
- 12 corresponding neighbor has a 3X neighbor pilot record type,
- 13 the base station shall set this field to the CDMA Channel
- 14 number, in the specified CDMA band class, corresponding to
- 15 the center SR3 frequency assignment containing the
- 16 Broadcast Control Channel/Forward Common Control
- 17 Channel the mobile station is to search.
- 18 TIMING_INCL - Timing included indicator.
- 19 If USE_TIMING is set to '1', the base station shall include the
- 20 field TIMING_INCL and set this field as described below;
- 21 otherwise, the base station shall omit this field.
- 22 If base station timing information is included for this neighbor
- 23 base station, the base station shall set this field to '1';
- 24 otherwise, the base station shall set this field to '0'.
- 25 NGHBR_TX_OFFSET - Neighbor transmit time offset.
- 26 If TIMING_INCL is included and is set to '1', the base station
- 27 shall include the field NGHBR_TX_OFFSET and shall set this
- 28 field as described below; otherwise, the base station shall
- 29 omit this field.
- 30 The base station shall set this field to the time offset, in units
- 31 of 80 ms, from the beginning of the neighbor timing period to
- 32 the beginning of the first base station transmit window within
- 33 the period. The beginning of the neighbor timing period
- 34 occurs when $\lfloor t/4 \rfloor \bmod (16384) = 0$.
- 35 NGHBR_TX_DURATION - Neighbor transmit time duration.
- 36 If TIMING_INCL is included and is set to '1' and
- 37 GLOBAL_TIMING_INCL is set to '0', the base station shall
- 38 include the field NGHBR_TX_DURATION and shall set this
- 39 field as described below; otherwise, the base station shall
- 40 omit this field.
- 41 The base station shall set this field to duration of the base
- 42 station transmit window, during each period, in units of
- 43 80 ms. The base station should set this field to a value of 3 or
- 44 greater.
- 45 NGHBR_TX_PERIOD - Neighbor transmit time period.

1 If TIMING_INCL is included and is set to '1' and
 2 GLOBAL_TIMING_INCL is set to '0', the base station shall
 3 include the field NGHBR_TX_PERIOD and shall set this field
 4 as described below; otherwise, the base station shall omit this
 5 field.

6 The base station shall set this field to duration of the period,
 7 in units of 80 ms.

8 ACCESS_ENTRY_HO - Access entry handoff permitted when entering the System
 9 Access State.

10 If NGHBR_SET_ENTRY_INFO is equal to '1', the base station
 11 shall include the field ACCESS_ENTRY_HO and shall set this
 12 field as described below; otherwise, the base station shall
 13 omit this field.

14 The base station shall set this field to '1' if the mobile station
 15 is permitted to perform an access entry handoff to the base
 16 station associated with the corresponding pilot between the
 17 time it receives a message on the Paging Channel when in the
 18 *Mobile Station Idle State* and it enters the *System Access State*
 19 to respond to the message; otherwise, the base station shall
 20 set this field to '0'.

21 ACCESS_HO_ALLOWED - Access handoff and access probe handoff permitted for the
 22 corresponding pilot while in the *System Access State*.

23 If NGHBR_SET_ACCESS_INFO is equal to '1', the base station
 24 shall include the field ACCESS_HO_ALLOWED and shall set
 25 this field as described below; otherwise, the base station shall
 26 omit this field.

27 The base station shall set this field to '1' if the mobile station
 28 is permitted to perform an access handoff or access probe
 29 handoff to the base station associated with the corresponding
 30 pilot when the mobile station is in the *System Access State*
 31 (see 2.6.3.1.8 and 2.6.3.1.9); otherwise, the base station shall
 32 set this field to '0'.

33 The base station shall set this field to '0' if this pilot does not
 34 support a Reverse Enhanced Access Channel (R-EACH).

35 RESQ_ENABLED - Call rescue feature enabled indicator.

36 The base station shall set this field to '1' if the call rescue
 37 feature is enabled and there is at least one occurrence of
 38 NGHBR_RESQ_CONFIGURED set to '1' in this message;
 39 otherwise, the base station shall set this field to '0'.

40 RESQ_DELAY_TIME - Call rescue delay timer value.

41 If RESQ_ENABLED is set to '0', the base station shall omit
 42 this field; otherwise, the base station shall include this field
 43 and set it as follows:

- 1 The base station shall set this field to the value of the call
2 rescue delay timer to be used by the mobile station, in units
3 of 80 ms.
- 4 RESQ_ALLOWED_TIME – Call rescue allowed timer value.
5 If RESQ_ENABLED is set to '0', the base station shall omit
6 this field; otherwise, the base station shall include this field
7 and set it as follows:
8 The base station shall set this field to the value of the call
9 rescue allowed timer to be used by the mobile station, in
10 units of 80 ms.
- 11 RESQ_ATTEMPT_TIME – Call rescue attempt timer value.
12 If RESQ_ENABLED is set to '0', the base station shall omit
13 this field; otherwise, the base station shall include this field
14 and set it as follows:
15 The base station shall set this field to the value of the call
16 rescue attempt timer to be used by the mobile station, in
17 units of 40 ms.
- 18 RESQ_CODE_CHAN – Code channel index for the Rescue Channel.
19 If RESQ_ENABLED is set to '0', the base station shall omit
20 this field; otherwise, the base station shall include this field
21 and set it as follows:
22 The base station shall set this field to the code channel index
23 (see [2]) that the mobile station is to use on the Forward
24 Fundamental Channel when attempting Call Rescue Soft
25 Handoff with the associated neighbor pilot.
26 If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
27 station shall set this field in the range 1 to 63 inclusive. If
28 Radio Configuration 4, 6, 8, 11, or 12 is used, the base
29 station shall set this field in the range 1 to 127 inclusive. If
30 Radio Configuration 7 or 9 is used, the base station shall set
31 this field in the range 1 to 255 inclusive.
- 32 RESQ_QOF – Quasi-Orthogonal Function mask identifier for the Rescue
33 Channel.
34 If RESQ_ENABLED is set to '0', the base station shall omit
35 this field; otherwise, the base station shall include this field
36 and set it as follows:
37 The base station shall set this field to the quasi-orthogonal
38 function mask identifier (see [2]) that the mobile station is to
39 use on the Forward Fundamental Channel when attempting
40 Call Rescue Soft Handoff with the associated neighbor pilot.
- 41 RESQ_MIN_PERIOD_INCL – Minimum time between consecutive rescues included
42 indicator.
43 If RESQ_ENABLED is set to '0', the base station shall omit
44 this field; otherwise, the base station shall include this field
45 and set it as follows:

1 The base station shall set this field to '1' if the
2 RESQ_MIN_PERIOD field is included in this message;
3 otherwise, the base station shall set this field to '0'.

4 This field is set to '0' if there is no minimum time restriction
5 between consecutive rescues.

6 RESQ_MIN_PERIOD – Minimum time between consecutive rescues.

7 If RESQ_MIN_PERIOD_INCL is not included, or is included
8 and set to '0', the base station shall omit this field; otherwise,
9 the base station shall include this field and set it as follows:

10 The base station shall set this field to one less than the
11 minimum time after a successful call rescue (i.e. receipt of
12 N_{3m} good frames by the mobile station after the rescue
13 attempt timer is enabled) before any subsequent call rescue
14 attempts can be initiated, in units of 2 seconds.

15 RESQ_NUM_TOT_TRANS_INCL – The required number of transmissions before declaring
16 L2 Acknowledgment Failure when Call Rescue is enabled
17 included indicator.

18 If RESQ_ENABLED is set to '0', the base station shall omit
19 this field; otherwise, the base station shall include this field
20 and set it as follows:

21 If the required number of transmissions of a regular PDU and
22 mini PDU before declaring L2 Acknowledgment Failure when
23 Call Rescue is enabled is included in this message, the base
24 station shall set this field to '1'; otherwise, the base station
25 shall set this field to '0'.

26 RESQ_NUM_TOT_TRANS_20MS – The required number of transmissions of a regular
27 PDU before declaring L2 Acknowledgment Failure when Call
28 Rescue is enabled.

29 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
30 included and is set to '0', the base station shall omit this field;
31 otherwise, the base station shall include this field and set it
32 as follows:

33 The base station shall set this field to the required number of
34 transmissions of a regular PDU before declaring L2
35 Acknowledgment Failure when Call Rescue is enabled.

36 The base station shall not set this field to a value greater than
37 N_{1m}.

38 RESQ_NUM_TOT_TRANS_5MS – The required number of transmissions of a mini PDU
39 before declaring L2 Acknowledgment Failure when Call
40 Rescue is enabled.

41 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
42 included and is set to '0', the base station shall omit this field;
43 otherwise, the base station shall include this field and set it
44 as follows:

- 1 The base station shall set this field to the required number of
2 transmissions of a mini PDU before declaring L2
3 Acknowledgment Failure when Call Rescue is enabled.
- 4 The base station shall not set this field to a value greater than
5 N_{15m} .
- 6 RESQ_NUM_PREAMBLE_RC1_RC2 – The Traffic Channel preamble length for Call
7 Rescue Soft Handoff when operating in Radio Configuration 1
8 or 2.
- 9 If RESQ_ENABLED is set to '0', the base station shall omit
10 this field; otherwise, the base station shall include this field
11 and set it to the length of Traffic Channel preamble, in 20 ms
12 units, that the mobile station is to send when performing a
13 call rescue soft handoff.
- 14 RESQ_NUM_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft
15 Handoff when operating in Radio Configuration greater than
16 2.
- 17 If RESQ_ENABLED is set to '0', the base station shall omit
18 this field; otherwise, the base station shall include this field
19 and set it to the length of Traffic Channel preamble that the
20 mobile station is to send when performing a call rescue soft
21 handoff, as follows:
- 22 The base station shall set this field to the value shown in
23 Table 3.7.3.3.2.17-1 corresponding to the Traffic Channel
24 preamble length in 1.25 ms units.
- 25 RESQ_POWER_DELTA – The power level adjustment to be applied to the last closed-
26 loop power level when re-enabling the transmitter for call
27 rescue soft handoff.
- 28 If RESQ_ENABLED is set to '0', the base station shall omit
29 this field; otherwise, the base station shall set this field to a
30 value by which mobile stations are to adjust the last closed-
31 loop power level when re-enabling the transmitter for call
32 rescue, expressed as a two's complement value in units of
33 1 dB.
- 34 The base station shall include NUM_NGHBR occurrences of the following one-field record if
35 RESQ_ENABLED is set to '1'. The base station shall use the same order for the following
36 field as is used for the NGHBR_PN fields listed in this message.
- 37 NGHBR_RESQ_CONFIGURED – Neighbor Rescue Channel configured indicator.
- 38 The base station shall set this field to '1' if a Rescue Channel
39 is configured for this neighbor pilot; otherwise, the base
40 station shall set this field to '0'.
- 41 The base station shall include NUM_NGHBR occurrences of the following variable length
42 record. The base station shall use the same order for the following field as is used for the
43 NGHBR_PN fields listed in this message.
- 44 NGHBR_PDCH_SUPPORTED – Neighbor PDCH supported indicator.

1 The base station shall set this field to '1' if PDCH is
 2 configured for this neighbor pilot; otherwise, the base station
 3 shall set this field to '0'.

4 RESERVED - Reserved bits.

5 The base station shall add reserved bits as needed in order to
 6 make the length of the entire RADIO_INTERFACE_TYPE
 7 record equal to an integer number of octets. The base station
 8 shall set these bits to '0'.

9

10 If RADIO_INTERFACE_TYPE is equal to '0010', the base station shall include the following
 11 fields:

Field	Length (bits)
NUM_HRPD_NGHBR	6

NUM_HRPD_NGHBR occurrences of the following subrecord:

{ (NUM_HRPD_NGHBR)

HRPD_NGHBR_REC_LEN	8
NGHBR_PN	9
NGHBR_FREQ_INCL	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
PN_ASSOCIATION_IND	1
DATA_ASSOCIATION_IND	1
HRPD_NGHBR_REC_RESERVED	0-7 (as needed)

} (NUM_HRPD_NGHBR)

12 NUM_HRPD_NGHBR - Number of neighbor pilot PN sequences.

13 The base station shall set this field to the number of HRPD
 14 neighbors included in the message.

15 The base station shall include one occurrence of the following subrecord for each pilot that
 16 a mobile station is to place in its HRPD Neighbor Set.

17 HRPD_NGHBR_REC_LEN - HRPD neighbor record length

18 The base station shall set this field to one less than the
 19 number of octets included in this HRPD neighbor record
 20 including this field.

21 NGHBR_PN - Neighbor pilot PN sequence offset index.

22 The base station shall set this field to the pilot PN sequence
 23 offset for this neighbor, in units of 64 PN chips.

24 NGHBR_FREQ_INCL - Neighbor frequency information included indicator.

1 The base station shall set this field to '1' if the neighbor
2 frequency information is included in this message; otherwise,
3 the base station shall set this field to '0'.

4 NGHBR_BAND - Neighbor band class.

5 If the NGHBR_FREQ_INCL field is set to '0', the base station
6 shall omit this field; otherwise, the base station shall include
7 this field and set it as follows:

8 The base station shall set this field to the CDMA band class,
9 as specified in [30], corresponding to the CDMA frequency
10 assignment for the CDMA Channel containing this neighbor.

11 NGHBR_FREQ - Neighbor frequency assignment.

12 If the NGHBR_FREQ_INCL field is set to '0', the base station
13 shall omit this field; otherwise, the base station shall include
14 this field and set it as follows:

15 The base station shall set this field to the CDMA Channel
16 number, in the specified CDMA band class, corresponding to
17 the CDMA frequency assignment for this neighbor.

18 PN_ASSOCIATION_IND - Neighbor PN association indicator.

19 The base station shall set this field to '1' if the system identified by
20 this system record has the same PN assignment as the 1x system to
21 which this BS belongs; otherwise, the base station shall set this field
22 to '0'.

23 DATA_ASSOCIATION_IND - Neighbor data association indicator.

24 The base station shall set this field to '1' if the system identified by
25 this system record can reach the same set of PDSNs as the 1x
26 system to which this BS belongs; otherwise, the base station shall
27 set this field to '0'.

28 HRPD_NGHBR_REC_RESERVED - HRPD neighbor record reserved bits.

29 The base station shall add reserved bits as needed in order to make
30 the length of this record equal to an integer number of octets. The
31 base station shall set these bits to '0'.

- C_SIG_ENCRYPT_MODE - Common channel encryption mode indicator.
 The base station shall set this field to the common channel signaling encryption mode, as shown in Table 3.7.4.5-1.
- ENC_KEY_SIZE - Key size used for user information and signaling encryption
 If C_SIG_ENCRYPT_MODE is equal to '001', or '010', the base station shall include this field and set this field to the encryption key_size as shown in Table 3.7.4.5-2; otherwise, the base station shall omit this field.
- MSG_INT_INFO_INCL - Message integrity information included indicator
 The base station shall set this field to '1' if the base station supports message integrity; otherwise, the base station shall set this field to '0'.
- CHANGE_KEYS - Change keys indicator
 If MSG_INT_INFO_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
 The base station shall set this field to '0' to command the mobile station not to update the encryption key and integrity key. The base station shall set this field to '1' to command the mobile station to update the encryption key and integrity key to the latest being generated.
- USE_UAK - Use UAK indicator
 If MSG_INT_INFO_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
 If the base station receives an authentication vector with a UAK, the base station shall set this field to '1' to indicate that the mobile station is to use UMAC; otherwise, the base station shall set this field to '0' to indicate that the mobile station is to use MAC-I.

1 3.7.2.3.2.36 Universal Page Message

2 MSG_TAG: UPM

3 When Layer 3 at the base station sends a PDU corresponding to the *Universal Page*
 4 *Message* to Layer 2, it also sends the UPM Common fields to Layer 2. These UPM Common
 5 fields and PDUs are used by Layer 2 to assemble the Layer 2 PDU or PDUs corresponding
 6 to the *Universal Page Message* (see [4]).

7 UPM Common Fields:

8

Field	Length (bits)
CONFIG_MSG_SEQ	6
ACC_MSG_SEQ	6
READ_NEXT_SLOT	1
READ_NEXT_SLOT_BCAST	1

9

10 PDU Format for a mobile station-addressed page:

11

Field	Length (bits)
SERVICE_OPTION	16
ADD_MS_RECORD	0 or 8 × EXT_MS_SDU- _LENGTH (see [4])

12

13 PDU Format for a mobile station-directed message announcement: There are no Layer 3
 14 fields associated with this record.

15

16 PDU Format for an enhanced broadcast page:

17

Field	Length (bits)
BCN	3
TIME_OFFSET	10
REPEAT_TIME_OFFSET	0 or 5
ADD_BCAST_RECORD	0 or 8 × EXT_BCAST_ SDU_LENGTH (see [4])

- CONFIG_MSG_SEQ** - Configuration message sequence number.

The base station shall set this field to CONFIG_SEQ (see 3.6.2.2).
- ACC_MSG_SEQ** - Access parameters message sequence number.

The base station shall set this field to ACC_CONFIG_SEQ (see 3.6.2.2).
- READ_NEXT_SLOT** - Pages carried into next slot indicator.

If all messages and records directed to mobile stations operating in the slotted mode and active in this slot, are included in this slot, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
- READ_NEXT_SLOT_BCAST** - Enhanced Broadcast Pages carried into next slot indicator.

If all enhanced broadcast pages directed to mobile stations operating in the slotted mode and active in this slot to receive enhanced broadcast pages are included in this slot, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
- SERVICE_OPTION** - Service option.

The base station shall set this field to the service option code shown in [30], corresponding to the requested service option.
- ADD_MS_RECORD** - Additional mobile station-addressed information record.

The base station shall omit this field if EXT_MS_SDU_LENGTH_INCL (see [4]) is set to '0'; otherwise, the base station shall include EXT_MS_SDU_LENGTH (see [4]) octets in this field.
- BCN** - Broadcast Control Channel Number.

If NUM_BCCH_BCAST is equal to '000', base station shall set this field to '000' and this field is to be ignored by the mobile station.

1 3.7.2.3.2.37 Authentication Request Message

2 MSG_TAG: AUREQM

3

Field	Length (bits)
RANDA	128
CON_SQN	48
AMF	16
MAC_A	64

4

5 RANDA – The Random Challenge Number.

6 The base station shall set this field to the value of the
7 Random Challenge Number in the authentication vector.

8 CON_SQN – Concealed Sequence Number.

9 The base station shall set this field to $SQN \oplus AK$ (Concealed
10 Sequence Number), where SQN and AK are the sequence
11 number and the anonymity key in the authentication vector,
12 respectively.

13 AMF – Authentication Management Field.

14 The base station shall set this field to the value of the
15 Authentication Management Field in the authentication
16 vector.

17 MAC_A – Message Authentication Code.

18 The base station shall set this field to the value of the
19 Message Authentication Code in the authentication vector.

2

3

PILOT_PN - Pilot PN sequence offset index.

4

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

5

6

BSPM_MSG_SEQ - BSPM sequence number.

7

The base station shall set this field to the BCMC Service Parameters Message sequence number.

8

9

BSPM_COMMON_RECORD_LEN - BSPM common part record length.

1 **Table 3.7.2.3.2.38-1. Value of Frequency change registration timer**

FREQ_CHG_REG_TIMER Value (binary)	Timer Length (Minutes)
000	Reserved
001	1
010	2
011	5
100	10
101	20
110	30
111	60

2
3 **REGISTRATION_REQ_FLAG_INCL** - Registration Required Flag Included.

4 The base station shall set this field to '1' if the registration is
5 required for at least one BCMC flow listed in this
6 message; otherwise the base station shall set this field to '0'.

7 **REGISTRATION_REQ_TIMER_PERIOD** - Registration Required Timer Period.

8 If REGISTRATION_REQ_FLAG_INCL is set to '0', the base
9 station shall omit this field; otherwise, the base station shall
10 include this field and set it to log (base 2) of the maximum
11 value of the BCMC registration required timer divided by 80
12 msec.

13 **BCMC_ON_TRAFFIC_SUP** - BCMC on traffic channel supported indicator.

14 The base station shall set this field to '1' to indicate that the
15 BCMC feature is supported on traffic channel; otherwise, the
16 base station shall set this field to '0'.

17 **AUTH_SIGNATURE_REQUIRED** - Authorization signature required indication.

18 The base station shall set this field to '1' to indicate that the
19 mobile station is to include the authorization signature in the
20 Registration Message, Origination Message, or Page Response
21 Message for at least one of the BCMC flows included in this
22 message; otherwise, the base station shall set this field to '0'.

23 **NON_DEFAULT_VALUE_INCLUDED** - Non-default values for Authorization signature
24 included indicator.

25 If the AUTH_SIGNATURE_REQUIRED field is set to '0', the
26 base station shall omit this field; otherwise, the base station
27 shall include this field and set it as follows:

1 **Table 3.7.2.3.2.38-2. Forward Supplemental Channel PLCM scheme used**

FSCH_PLCM_SCHEME_IND (binary)	PLCM scheme used
00	PLCM autonomously generated from BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow on each Forward Supplemental Channel
01	PLCM generated from FSCH_PLCM_INDEX signaled for each Forward Supplemental Channel
10	PLCM scheme individually specified for each Forward Supplemental Channel
11	Reserved

2
3 NUM_BCMC_PROGRAMS- Number of BCMC Programs.

4 The base station shall set this field to the number of BCMC
5 programs available in this base station in any one of the
6 frequencies minus one.

7 USE_TIME - Use action time indicator.

8 If an explicit action time is specified in this message, the base
9 station shall set this field to '1'; otherwise, the base station
10 shall set this field to '0'.

11 ACTION_TIME - Action time.

12 If the USE_TIME field is set to '0', the base station shall omit
13 this field; otherwise, the base station shall include this field
14 and shall set it to the System Time in units of 80 ms (modulo
15 64) at which this message takes effect.

16 FRAMING_TYPE - Framing type.

17 The base station shall set this field as specified in Table
18 3.7.2.3.2.38-7 to indicate the framing type used.

1

Table 3.7.2.3.2.38-7. FRAMING_TYPE values

FRAMING_TYPE (binary)	Framing type used
00	HDLC-like
01	Segment-based
10	Reserved
11	Reserved

2

FCS_LENGTH - FCS Length.

3

The base station shall omit this field if the FRAMING_TYPE field is set to '00'; otherwise, the base station shall include this field and set it as follows:

4

5

6

The base station shall set this field as specified in Table 3.7.2.3.2.38-8 to indicate the length of FCS included in BCMC payload.

7

8

9

Table 3.7.2.3.2.38-8. FCS_LENGTH values

FCS_LENGTH (binary)	Length of FCS (bits)
00	0
01	16
10	Reserved
11	Reserved

10

BSPM_COMMON_RECORD_RESERVED- BSPM common part record reserved bits.

11

The base station shall add reserved bits as needed in order to make the length of this BSPM common part record equal to an integer number of octets. The base station shall set these bits to '0'.

12

13

14

15

The base station shall include NUM_FSCH occurrences of the following variable length record:

16

17

FSCH_RECORD_LEN - Forward Supplemental Channel record length.

18

The base station shall set this field to one less the number of octets included in this Forward Supplemental Channel record including this field.

19

20

21

FSCH_BAND_CLASS_INCL - Forward Supplemental Channel band class included indicator.

22

1			If this Forward Supplemental Channel resides in the same
2			band class as where this message is being transmitted, the
3			base station shall set this field to '0'; otherwise, the base
4			station shall set this field to '1'.
5	FSCH_BAND_CLASS	-	Band class of the Forward Supplemental Channel.
6			If the FSCH_BAND_CLASS_INCL field is set to '0', the base
7			station shall omit this field; otherwise, the base station shall
8			include this field and set it as follows:
9			The base station shall set this field to the CDMA band class,
10			as specified in [30], corresponding to the CDMA frequency
11			assignment containing this Forward Supplemental Channel.
12	FSCH_CDMA_FREQ_INCL	-	Forward Supplemental Channel Frequency included
13			indicator.
14			If this Forward Supplemental Channel resides in the same
15			frequency as where this message is being transmitted, the
16			base station shall set this field to '0'; otherwise, the base
17			station shall set this field to '1'.
18	FSCH_CDMA_FREQ	-	Frequency assignment of the Forward Supplemental Channel.
19			If the FSCH_CDMA_FREQ_INCL field is set to '0', the base
20			station shall omit this field; otherwise, the base station shall
21			include this field and set it as follows:
22			The base station shall set this field to the CDMA Channel
23			number corresponding to the CDMA frequency assignment for
24			the CDMA Channel containing this Forward Supplemental
25			Channel.
26	FSCH_CODE_CHAN	-	Code channel index of the Forward Supplemental Channel.
27			The base station shall set this field to the code channel index
28			of this Forward Supplemental Channel as specified in [2].
29	FSCH_PLCM_IND	-	Forward Supplemental Channel Public Long Code Mask
30			Scheme Indicator.
31			If the FSCH_PLCM_SCHEME_IND field is not set to '10', the
32			base station shall omit this field; otherwise, the base stations
33			shall include this field and set it as follows:
34			If the index to generate PLCM for this Forward Supplemental
35			Channel is signaled in this message, the base station shall set
36			this field to '1'; otherwise if the PLCM for this Forward
37			Supplemental Channel is autonomously generated from
38			BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow
39			on this Forward Supplemental Channel as specified in
40			2.6.13.10.1, the base station shall set this field to '0'.
41	FSCH_PLCM_INDEX	-	Index to generate the Forward Supplemental Channel public
42			long code mask.
43			If the FSCH_PLCM_SCHEME_IND field is set to '01', or the
44			FSCH_PLCM_IND field is included and is set to '1', the base
45			station shall include this field and set it as follows; otherwise,
46			the base station shall omit this field.

- 1 The base station shall set this field to the index from which
 2 the public long code mask for this Forward Supplemental
 3 Channel is generated as specified in 2.6.13.10.2.
- 4 **FSCH_MUX_OPTION** - Multiplex Option of the Forward Supplemental Channel.
 5 The base station shall set this field to the multiplex option of
 6 this Forward Supplemental Channel as specified in [3].
- 7 **FSCH_RC** - Radio configuration of the Forward Supplemental Channel.
 8 The base station shall set this field to the radio configuration
 9 of this Forward Supplemental Channel as specified in [2].
- 10 **FSCH_CODING** - Coding type of the Forward Supplemental Channel.
 11 The base station shall set this field to '1' if Convolutional
 12 Coding will be used when the number of channel bits per
 13 frame is less than 360 and Turbo Coding when the number of
 14 channel bits per frame is equal to or greater than 360. The
 15 base station shall set this field to '0' if Convolution Coding will
 16 be used for all block sizes.
- 17 **FSCH_OUTERCODE_INCL** - Forward Supplemental Channel Outer Code included
 18 indicator.
 19 The base station shall set this field to '1' if the Forward
 20 Supplemental Channel outer code information is included in
 21 this message; otherwise, the base station shall set this field to
 22 '0'.
- 23 **FSCH_OUTERCODE_RATE** - Outer Code Rate of the Forward Supplemental Channel.
 24 If the **FSCH_OUTERCODE_INCL** field is set to '0', the base
 25 station shall omit this field; otherwise, the base station shall
 26 include this field and set it as follows:
 27 The base station shall set this field to specify the outer code
 28 rate of the Forward Supplemental Channel as specified in
 29 Table 3.7.2.3.2.38-3

30 **Table 3.7.2.3.2.38-3. Forward Supplemental Channel Outer Code Rate**

FSCH_OUTERCODE_RATE (binary)	FORWARD SUPPLEMENTAL CHANNEL Outer Code Rate	Length of TDM_SUPER_PE RIOD_MASK (bits)
000	11/16	11
001	12/16	12
010	13/16	13
011	14/16	14
100-111	Reserved	Reserved

- 1 FSCH_OUTERCODE_OFFSET - Outer Coding Buffer Offset of the Forward
2 Supplemental Channel.
- 3 If the FSCH_OUTERCODE_INCL field is set to '0', the base
4 station shall omit this field; otherwise, the base station shall
5 include this field and set it as follows:
- 6 The base station shall set this field to specify the outer coding
7 buffer offset of the Forward Supplemental Channel in units of
8 20ms as specified in [2]. The base station shall set this field to
9 a value between 0 and 63 inclusive.
- 10 FSCH_NUM_BITS_INDX - Number of information bits index of the Forward
11 Supplemental Channel.
- 12 The base station shall set this field according to Table
13 3.7.3.3.2.37-4 to indicate the number of information bits per
14 frame and the length of the CRC field for this Forward
15 Supplemental Channel.
- 16 FSCH_FRAME_40_USED - Forward Supplemental Channel 40ms frame used indicator.
- 17 The base station shall set this field to '1' if 40ms frame is
18 used on this Forward Supplemental Channel; otherwise, the
19 base station shall set this field to '0'.
- 20 The base station shall not set both FSCH_FRAME_40_USED
21 and FSCH_FRAME_80_USED fields to '1'.
- 22 FSCH_FRAME_80_USED - Forward Supplemental Channel 80ms frame used indicator.
- 23 The base station shall set this field to '1' if 80ms frame is
24 used on this Forward Supplemental Channel; otherwise, the
25 base station shall set this field to '0'.
- 26 The base station shall not set both FSCH_FRAME_40_USED
27 and FSCH_FRAME_80_USED fields to '1'.
- 28 TDM_STRUCTURE_IND - TDM structure used indicator.
- 29 The base station shall set this field to '1' if a time-division
30 multiplexing structure (i.e. BCMC TDM Mode) is used on this
31 Forward Supplemental Channel; otherwise, the base station
32 shall set this field to '0'.
- 33 TDM_SLOT_LENGTH - TDM slot length.
- 34 If the TDM_STRUCTURE_IND field is set to '0' or if
35 FSCH_OUTERCODE_INCL field in this record is set to '1', the
36 base station shall omit this field; otherwise, the base station
37 shall include this field and shall set it as follows:
- 38 The base station shall set this field to the length of the TDM
39 slot as specified in Table 3.7.2.3.2.38-4.

1

Table 3.7.2.3.2.38-4. TDM_SLOT_LENGTH values

TDM_SLOT_LENGTH (binary)	Length of the TDM slot
00	20 ms
01	40 ms
10	80 ms
11	Reserved

2

3

TDM_SUPER_PERIOD_MASK_LEN - TDM super period mask length indicator.

4

5

6

7

8

If the TDM_STRUCTURE_IND field is set to '0' or if FSCH_OUTERCODE_INCL field corresponding to FSCH_ID field included in this record is set to '1', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

9

10

The base station shall set this field to the TDM super period mask length as specified in Table 3.7.2.3.2.38-5.

11

Table 3.7.2.3.2.38-5. TDM_SUPER PERIOD_MASK_LEN and TDM_MEGA_PERIOD_MASK_LEN values

12

TDM_SUPER_PERIOD_MASK_LEN or TDM_MEGA_PERIOD_MASK_LEN (binary)	Bits in TDM_SUPER_PERIOD_MASK or TDM_MEGA_PERIOD_MASK
00	4 bits
01	8 bits
10	16 bits
11	Reserved

13

TDM_MEGA_PERIOD_MASK_LEN - TDM mega period mask length indicator.

14

15

16

17

18

If the TDM_STRUCTURE_IND field is set to '0' or if FSCH_OUTERCODE_INCL field corresponding to FSCH_ID field included in this record is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

19

20

The base station shall set this field to the TDM mega period mask length as specified in Table 3.7.2.3.2.38-5.

21

FSCH_RECORD RESERVED - Forward Supplemental Channel record reserved bits.

1 The base station shall add reserved bits as needed in order to
2 make the length of this Forward Supplemental Channel
3 record equal to an integer number of octets. The base station
4 shall set these bits to '0'.

5 The base station shall include NUM_BCMC_PROGRAMS plus one occurrences of the
6 following variable length record:

7 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field.

8 The base station shall set this field to one less than the length
9 in bits of the BCMC_PROGRAM_ID of this program.

10 BCMC_PROGRAM_ID - BCMC program Identifier.

11 The length of this field shall be one more than the value of
12 BCMC_PROGRAM_ID_LEN bits.

13 The base station shall set this field to the BCMC program
14 identifier of this program.

15 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field.

16 The base station shall set this field to the length in bits of the
17 BCMC_FLOW_DISCRIMINATOR of this program.

18 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators.

19 The length of this field shall be determined by the value of the
20 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
21 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
22 is omitted; otherwise, the length of this field shall be
23 BCMC_FLOW_DISCRIMINATOR_LEN bits.

24 The base station shall set this field to the number of flow
25 discriminators included for this program minus one.

26 If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include
27 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
28 otherwise, the base station shall include 1 occurrence of the following variable length
29 record:

30 BCMC_FLOW_DISCRIMINATOR_HEADER_RECORD_LEN - BCMC flow discriminator
31 header record length.

32 The base station shall set this field to one less the number of
33 octets included in this BCMC flow discriminator header
34 record including this field.

35 BCMC_FLOW_DISCRIMINATOR - BCMC flow discriminator.

36 The length of this field shall be determined by the value of the
37 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
38 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
39 is omitted; otherwise, the length of this field shall be
40 BCMC_FLOW_DISCRIMINATOR_LEN bits.

41 The base station shall set this field to the BCMC flow
42 discriminator of this flow.

1 FLOW_INFO_ON_OTHER_FREQ - BCMC flow information on another frequency
2 indicator.

3 The base station shall set this field to '1' if the information on
4 this BCMC flow is available on another frequency; otherwise,
5 the base station shall set this field to '0'.

6 BSPM_CDMA_FREQ_SAME_AS_PREV - BSPM CDMA Frequency same as previous
7 indicator.

8 If the FLOW_INFO_ON_OTHER_FREQ field is set to '0', the
9 base station shall omit this field; otherwise, the base station
10 shall include this field and set it as follows:

11 The base station shall set this field to '1' if the CDMA channel
12 number and band class where the BCMC Service Parameters
13 Message containing information on this BCMC flow is
14 transmitted is the same as the one for the previous BCMC
15 flow listed in this message.

16 BSPM_BAND_CLASS - BSPM band class.

17 If the BSPM_CDMA_FREQ_SAME_AS_PREV field is not
18 included or included and set to '1', the base station shall omit
19 this field; otherwise, the base station shall include this field
20 and set it as follows:

21 The base station shall set this field to the CDMA band class
22 where the BCMC Service Parameters Message containing
23 information on this BCMC flow is transmitted.

24 BSPM_CDMA_FREQ - BSPM Frequency.

25 If the BSPM_CDMA_FREQ_SAME_AS_PREV field is not
26 included or included and set to '1', the base station shall omit
27 this field; otherwise, the base station shall include this field
28 and set it as follows:

29 The base station shall set this field to the CDMA channel
30 number where the BCMC Service Parameters Message
31 containing information on this BCMC flow is transmitted.

32 REGISTRATION_REQ_FLAG - Registration Required Flag.

33 If FLOW_INFO_ON_OTHER_FREQ is set to '1' or
34 REGISTRATION_REQ_FLAG_INCL is set to '0', the base
35 station shall omit this field; otherwise, the base station shall
36 include this field and set it as follows:

37 The base station shall set this field to '1' if registration is
38 required for this BCMC flow. Otherwise, the base station shall
39 set this field to '0'.

40 AUTH_SIGNATURE_REQ_IND - Authorization signature required indicator.

41 If FLOW_INFO_ON_OTHER_FREQ is set to '1' or the
42 AUTH_SIGNATURE_REQUIRED field is set to '0', the base
43 station shall omit this field; otherwise, the base station shall
44 include this field and set it as follows:

1 The base station shall set this field to '1' if the mobile station
 2 is to include the authorization signature in the Registration
 3 Message, Origination Message, or Page Response Message for
 4 this BCMC flow; otherwise, the base station shall set this field
 5 to '0'.

6 BCMC_FLOW_ON_TRAFFIC_IND - BCMC flow on traffic channel supported indicator.

7 If FLOW_INFO_ON_OTHER_FREQ is set to '1' or
 8 BCMC_ON_TRAFFIC_SUP is set to '0', the base station shall
 9 omit this field; otherwise, the base station shall include this
 10 field and set it as follows:

11 The base station shall set this field to '1' if this BCMC flow is
 12 available on traffic channel; otherwise, the base station shall
 13 set this field to '0'.

14 NUM_LPM_ENTRIES - Number of Logical-to-Physical Mapping Entries.

15 If the FLOW_INFO_ON_OTHER_FREQ field is set to '1', the
 16 base station shall omit this field; otherwise, the base station
 17 shall include this field and set it as follows:

18 The base station shall set this field to the number of logical to
 19 physical mapping included for this BCMC flow.

20 BCMC_FLOW_DISCRIMINATOR_HEADER_RECORD_RESERVED - BCMC flow
 21 discriminator header record reserved bits.

22 The base station shall add reserved bits as needed in order to
 23 make the length of this BCMC flow discriminator header
 24 record equal to an integer number of octets. The base station
 25 shall set these bits to '0'.

26 The base station shall include NUM_LPM_ENTRIES occurrences of the following variable-
 27 length record:

28 FSCH_ID - Forward Supplemental Channel Identifier. The base station
 29 shall set this field to the identifier corresponding to the
 30 Forward Supplemental Channel on which the above BCMC
 31 flow is being transmitted. The Forward Supplemental Channel
 32 included first in this message is given the FSCH_ID of
 33 '0000000', the second one listed is given the FSCH_ID of
 34 '0000001', and so on.

35 TDM_USED_IND - TDM used indicator.

36 If the TDM_STRUCTURE_IND field for the Forward
 37 Supplemental Channel specified by this FSCH_ID is set to '0',
 38 the base station shall omit this field; otherwise, the base
 39 station shall include this field and set it as follows:

40 The base station shall set this field to '1' if a time-division
 41 multiplexing structure (i.e. BCMC TDM Mode) is used on the
 42 Forward Supplemental Channel for this flow; otherwise, the
 43 base station shall set this field to '0'.

44 TDM_MASK - TDM mask.

1 If the TDM_USED_IND field is not included or is included and
 2 is set to '0', the base station shall omit this field; otherwise,
 3 the base station shall include this field and set it as follows:

4 If FSCH_OUTERCODE_INCL field corresponding to FSCH_ID
 5 field included in this record is set to '1', the duration of a slot
 6 is 20 ms; otherwise, duration of a slot is indicated by
 7 TDM_SLOT_LENGTH. For each bit of this field, the base
 8 station set it to '1' if this flow is assigned to the corresponding
 9 slot. For each bit of this field, the base station shall set it to '0'
 10 if this flow is not assigned to the corresponding slot.

11 TDM_SUPER_PERIOD_MASK_INCL - TDM super period mask included indicator.

12 If the TDM_USED_IND field is not included or is included and
 13 is set to '0', the base station shall omit this field; otherwise,
 14 the base station shall include this field and set it as follows:

15 The base station set it to '1' if TDM_SUPER_PERIOD_MASK
 16 field is included in this message; otherwise, the base station
 17 shall set it to '0'.

18 TDM_SUPER_PERIOD_MASK - TDM super period mask.

19 If the TDM_SUPER_PERIOD_MASK_INCL field is not included
 20 or is included and is set to '0', the base station shall omit this
 21 field; otherwise, the base station shall include this field and
 22 set it as follows:

23 If FSCH_OUTERCODE_INCL field corresponding to FSCH_ID
 24 field included in this record is set to '0', then number of bits
 25 included in this field is indicated by
 26 TDM_SUPER_PERIOD_MASK_LEN field. Otherwise, number
 27 of bits included in this field is set as specified in Table
 28 3.7.2.3.2.38-3, based on FSCH_OUTERCODE_RATE field
 29 corresponding to FSCH_ID field included in this record.

30 Duration of super slot is 4 slots. For each bit of this field, the
 31 base station set it to '1' if the TDM_MASK specified above
 32 applies to the corresponding super slot. For each bit of this
 33 field, the base station shall set it to '0' if the TDM_MASK
 34 specified above does not apply to the corresponding super
 35 slot.

36 If FSCH_OUTERCODE_INCL field corresponding to FSCH_ID
 37 field included in this record is set to '1', the super period
 38 mask bits for parity frames (16 – bits included in this field)
 39 are not specified.

40 If TDM_SUPER_PERIOD_MASK is not included in this
 41 message, then it is considered equivalent to
 42 TDM_SUPER_PERIOD_MASK being implicitly included with
 43 all bits set to '1'.

44 TDM_MEGA_PERIOD_MASK_INCL - TDM mega period mask included indicator.

45 If the TDM_USED_IND field is not included or is included and
 46 is set to '0', the base station shall omit this field; otherwise,
 47 the base station shall include this field and set it as follows:

1 The base station set it to '1' if TDM_MEGA_PERIOD_MASK
 2 field is included in this message; otherwise, the base station
 3 shall set it to '0'.

4 TDM_MEGA_PERIOD_MASK - TDM mega period mask.

5 If the TDM_MEGA_PERIOD_MASK_INCL field is not included
 6 or is included and is set to '0', the base station shall omit this
 7 field; otherwise, the base station shall include this field and
 8 set it as follows:

9 If FSCH_OUTERCODE_INCL field corresponding to FSCH_ID
 10 field included in this record is set to '1', then number of bits
 11 included in this field is indicated by
 12 TDM_MEGA_PERIOD_MASK_LEN field. Otherwise, number of
 13 bits included in this field is set as specified in Table
 14 3.7.2.3.2.38-6.

15 **Table 3.7.2.3.2.38-6. Length of TDM_MEGA_PERIOD_MASK**

TDM_SUPER_PERIOD_MASK_INCL (binary)	Length of TDM_MEGA_PERIOD_MASK (bits)
0	8
1	4

16
 17 If FSCH_OUTERCODE_INCL field corresponding to FSCH_ID
 18 field included in this record is set to '1', duration of mega slot
 19 is 16 super slots. Otherwise, duration of mega slot is number
 20 of bits in TDM_SUPER_PERIOD_MASK times duration of
 21 super slot.

22 For each bit of this field, the base station set it to '1' if the
 23 TDM_SUPER_PERIOD_MASK specified above applies to the
 24 corresponding mega slot. For each bit of this field, the base
 25 station shall set it to '0' if the TDM_SUPER_PERIOD_MASK
 26 specified above does not apply to the corresponding mega
 27 slot.

28
 29 BSR_ID - BCMC Service Reference Identifier.

30 The base station shall set this field to the BCMC Service
 31 Reference identifier corresponding to this BCMC flow on this
 32 Forward Supplemental Channel.

33 The base station shall not set this field to a value of 0.

34 NUM_NGHR - Number of neighbor base stations.

35 The base station shall set this field to the number of neighbor
 36 base stations included in this message for this logical-to-
 37 physical mapping entry.

- 1 The base station shall include NUM_NGHR occurrences of the following variable length
 2 record.
- 3 NGHR_RECORD_LEN - Neighbor record length.
 4 The base station shall set this field to one less the number of
 5 octets included in this neighbor record including this field.
- 6 NGHR_PN - Neighbor pilot PN sequence offset index.
 7 The base station shall set this field to the pilot PN sequence
 8 offset for this neighbor base station, in units of 64 PN chips.
- 9 NGHR_BCMC_CONFIG - Neighbor BCMC Configuration.
 10 The base station shall set this field as specified in Table
 11 3.7.2.3.2.38-6a to indicate the configuration of this BCMC
 12 flow in this neighbor base station.

13 **Table 3.7.2.3.2.38-6a. Neighbor BCMC Configuration Field**

Value (binary)	Neighbor BCMC Configuration
000	The neighbor base station configuration with respect to this BCMC flow is not known or the neighbor base station is not configured to transmit this BCMC flow.
001	The neighbor base station is transmitting this BCMC flow on idle state. Autonomous soft-handoff of the Forward Supplemental Channel carrying this BCMC flow is not possible with this neighbor base station.
010	The neighbor base station is transmitting this BCMC flow on idle state. Autonomous soft-handoff of the Forward Supplemental Channel carrying this BCMC flow is possible with this neighbor base station.
011	The neighbor base station supports this BCMC flow on traffic channel.
100-111	Reserved.

- 14
- 15 NGHR_BSR_ID - Neighbor BCMC Service Reference Identifier.
 16 If the NGHR_BCMC_CONFIG field is set to '000', '010', or
 17 '011', the base station shall omit this field; otherwise, the
 18 base station shall include this field and set it as follows.
- 19 The base station shall set this field to the BCMC Service
 20 Reference identifier corresponding to this BCMC flow in the
 21 neighbor base station.

1 The base station shall not set this field to a value of 0.

2 NGHBR_FSCH_BAND_CLASS_INCL - Neighbor Forward Supplemental Channel band
3 class included indicator.

4 If the NGHBR_BCMC_CONFIG field is set to '000' '010', or
5 '011', the base station shall omit this field; otherwise, the
6 base station shall include this field and set it as follows.

7 If this F-SCH in the neighbor base station resides in the same
8 band class as in this base station, the base station shall set
9 this field to '0'; otherwise, the base station shall set this field
10 to '1'.

11 NGHBR_FSCH_BAND_CLASS - Band class of the Forward Supplemental Channel in
12 the neighbor base station.

13 If the NGHBR_FSCH_BAND_CLASS_INCL field is not included
14 in this message or is included and is set to '0', the base
15 station shall omit this field; otherwise, the base station shall
16 include this field and set it as follows:

17 The base station shall set this field to the CDMA band class,
18 as specified in [30], corresponding to the CDMA frequency
19 assignment containing this Forward Supplemental Channel in
20 the neighbor base station.

21 NGHBR_FSCH_CDMA_FREQ_INCL - Neighbor frequency included indicator.

22 If the NGHBR_BCMC_CONFIG field is set to '000', '010', or
23 '011', the base station shall omit this field; otherwise, the
24 base station shall include this field and set it as follows.

25 If this F-SCH in the neighbor base station resides in the same
26 frequency as in this base station, the base station shall set
27 this field to '0'; otherwise, the base station shall set this field
28 to '1'.

29 NGHBR_FSCH_CDMA_FREQ - Frequency assignment of the Forward Supplemental
30 Channel in the neighbor base station.

31 If the NGHBR_FSCH_CDMA_FREQ_INCL field is not included
32 in this message or is included and is set to '0', the base
33 station shall omit this field; otherwise, the base station shall
34 include this field and set it as follows.

35 The base station shall set this field to the CDMA Channel
36 number corresponding to the CDMA frequency assignment for
37 the CDMA Channel containing this Forward Supplemental
38 Channel in this neighbor base station.

39 NGHBR_FSCH_CODE_CHAN_INCL - Neighbor pilot Forward Supplemental Channel
40 Code Channel Index Included Indicator.

41 If the NGHBR_BCMC_CONFIG field is set to '000' or '011' the
42 base station shall omit this field; otherwise, the base station
43 shall include this field and set it as follows.

44 If this F-SCH in the neighbor base station uses the same code
45 channel as in this base station, the base station shall set this
46 field to '0'; otherwise, the base station shall set this field to '1'.

1 NGHBR_FSCH_CODE_CHAN - Neighbor pilot Forward Supplemental Channel Code
2 Channel Index.

3 If the NGHBR_FSCH_CODE_CHAN_INCL field is not included
4 in this message or is included and is set to '0', the base
5 station shall omit this field; otherwise, the base station shall
6 include this field and set it as follows.

7 The base station shall set this field to the code channel index
8 that the mobile station is to use for this Forward
9 Supplemental Channel on this neighbor base station.

10 NGHBR_FSCH_PARAMS_INCL - Neighbor Forward Supplemental Channel Parameters
11 Included Indicator.

12 If the NGHBR_BCMC_CONFIG field is set to '000', '010', or
13 '011', the base station shall omit this field; otherwise, the
14 base station shall include this field and set it as follows.

15 If this F-SCH in the neighbor base station uses the same
16 physical layer parameters as in this base station, the base
17 station shall set this field to '0'; otherwise, the base station
18 shall set this field to '1'.

19 NGHBR_FSCH_PLCM_IND - Neighbor Forward Supplemental Channel Public Long
20 Code Mask Scheme Indicator.

21 If the NGHBR_FSCH_PARAMS_INCL field is not included in this
22 message, or is included and is set to '0', the base station shall
23 omit this field; otherwise, the base station shall include this
24 field and set it as follows.

25 If the index to generate PLCM for this Forward Supplemental
26 Channel is signaled in this message, the base station shall set
27 this field to '1'; otherwise if the PLCM for this Forward
28 Supplemental Channel is autonomously generated from
29 BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow
30 on this Forward Supplemental Channel as specified in
31 2.6.13.10.1, the base station shall set this field to '0'.

32 NGHBR_FSCH_PLCM_INDEX - Index to generate the Forward Supplemental Channel
33 public long code mask.

34 If the NGHBR_FSCH_PLCM_IND field is not included or is
35 included and is set to '0', the base station shall omit this field;
36 otherwise, the base station shall include and set it as follows.

37 The base station shall set this field to the index from which
38 the public long code mask for this Forward Supplemental
39 Channel is generated as specified in 2.6.13.10.2.

40 NGHBR_FSCH_MUX_OPTION - Multiplex Option of the Forward Supplemental
41 Channel in the neighbor base station.

42 If the NGHBR_FSCH_PARAMS_INCL field is not included in this
43 message or is included and is set to '0', the base station shall
44 omit this field; otherwise, the base station shall include this
45 field and set it as follows.

1 If the FSCH_OUTERCODE_INCL field is not included or is
2 included and is set to '0', the base station shall omit this field;
3 otherwise, the base station shall include this field and set it
4 as follows:

5 The base station shall set this field to specify the outer coding
6 buffer offset of the Forward Supplemental Channel in units of
7 20ms as specified in [2]. The base station shall set this field to
8 a value between 0 and 63 inclusive.

9 NGHBR_FSCH_NUM_BITS_IDX - Number of Information bits index of the Forward
10 Supplemental Channel in the Neighbor Base Station.

11 If the NGHBR_FSCH_PARAMS_INCL field is not included in this
12 message or is included and is set to '0', the base station shall
13 omit this field; otherwise, the base station shall include this
14 field and set it as follows.

15 The base station shall set this field according to Table
16 3.7.3.3.2.37-4 to indicate the number of information bits per
17 frame and the length of the CRC field for this Forward
18 Supplemental Channel in this neighbor base station.

19 NGHBR_FSCH_FRAME_40_USED - Forward Supplemental Channel 40ms frame used
20 indicator in the Neighbor Base Station.

21 If the NGHBR_FSCH_PARAMS_INCL field is not included in this
22 message or is included and is set to '0', the base station shall
23 omit this field; otherwise, the base station shall include this
24 field and set it as follows.

25 The base station shall set this field to '1' if 40ms frame is
26 used on this Forward Supplemental Channel in this neighbor
27 base station; otherwise, the base station shall set this field to
28 '0'.

29 The base station shall not set both
30 NGHBR_FSCH_FRAME_40_USED and
31 NGHBR_FSCH_FRAME_80_USED fields to '1'.

32 NGHBR_FSCH_FRAME_80_USED - Forward Supplemental Channel 80ms frame used
33 indicator in the Neighbor Base Station.

34 If the NGHBR_FSCH_PARAMS_INCL field is not included in this
35 message or is included and is set to '0', the base station shall
36 omit this field; otherwise, the base station shall include this
37 field and set it as follows.

38 The base station shall set this field to '1' if 80ms frame is
39 used on this Forward Supplemental Channel in this neighbor
40 base station; otherwise, the base station shall set this field to
41 '0'.

42 The base station shall not set both
43 NGHBR_FSCH_FRAME_40_USED and
44 NGHBR_FSCH_FRAME_80_USED fields to '1'.

45 NGHBR_RECORD_RESERVED - Neighbor record reserved bits.

- 1 The base station shall add reserved bits as needed in order to
2 make the length of this neighbor record equal to an integer
3 number of octets. The base station shall set these bits to '0'.
- 4 BCMC_NUM_BCCH_NGHBR - Number of neighbor base stations that support
5 Broadcast Control Channel.
- 6 The base station shall set this field to the number of neighbor
7 base stations included in this message that support Primary
8 Broadcast Control Channel and support BCMC on idle state.
- 9 BCMC_BCCH_NGHBR_PN - Neighbor Pilot PN sequence offset index.
- 10 The base station shall set this field to the pilot PN sequence
11 offset for this neighbor base station, in units of 64 PN chips.
- 12 BCMC_SR1_BCCH_NON_TD_INCL - Common Channel in non TD mode on Spreading
13 Rate 1 information included indicator.
- 14 The base station shall set this field to '1' if the base station
15 includes common channels (BCCH/F-CCCH/EACH)
16 information in non TD mode; otherwise, the base station shall
17 set this field to '0'.
- 18 BCMC_SR1_NON_TD_FREQ_INCL - Non Transmit Diversity frequency included
19 indicator.
- 20 If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
21 included and set to '0', the base station shall omit this field;
22 otherwise, the base station shall set this field as follows:
- 23 The base station shall set this field to '1' if
24 BCMC_SR1_CDMA_FREQ_NON_TD is included in the
25 message. Otherwise, base station shall set this field to '0'.
- 26 BCMC_SR1_CDMA_FREQ_NON_TD - Frequency assignment for non-transmit diversity
27 operation.
- 28 If BCMC_SR1_NON_TD_FREQ_INCL is not included, or is
29 included and set to '0', the base station shall omit this field;
30 otherwise, the base station shall set this field as follows:
- 31 The base station shall set this field to the CDMA Channel
32 number corresponding to the CDMA frequency assignment for
33 the CDMA Channel containing a Broadcast Control Channel
34 that does not support the TD operation.
- 35 BCMC_SR1_BRAT_NON_TD - BCCH data rate in non-TD mode for Spreading Rate 1.
- 36 If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
37 included and set to '0', the base station shall omit this field;
38 otherwise, the base station shall set this field as follows:
- 39 The base station shall set this field to the BRAT field value
40 shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
41 used by the Primary Broadcast Control Channel in the
42 system.
- 43 BCMC_SR1_CRAT_NON_TD - BCCH code rate in non Transmit Diversity mode for
44 Spreading Rate 1.

1 If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
2 included and set to '0', the base station shall omit this field;
3 otherwise, the base station shall set this field as follows:

4 The base station shall set this field to '0' if the BCCH Code
5 Rate is 1/4 (see [2]). The base station shall set this field to '1'
6 if the BCCH code rate is 1/2 (see [2]).

7 BCMC_SR1_BCCH_CODE_CHAN_NON_TD - Walsh code for the Spreading Rate 1 BCCH
8 in non Transmit Diversity mode.

9 If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
10 included and set to '0', the base station shall omit this field;
11 otherwise, the base station shall set this field as follows:

12 The base station shall set this field to the Walsh code
13 corresponding to the Spreading Rate 1 BCCH in non Transmit
14 Diversity mode.

15 BCMC_SR1_TD_INCL - Spreading Rate 1 Transmit Diversity frequency information
16 included indicator.

17 The base station shall set this field to '1' if
18 BCMC_SR1_CDMA_FREQ_TD, BCMC_SR1_BRAT_TD,
19 BCMC_SR1_CRAT_TD, BCMC_SR1_TD_MODE, and
20 BCMC_SR1_TD_POWER_LEVEL are included in the message;
21 otherwise, the base station shall set this field to '0'.

22 BCMC_SR1_CDMA_FREQ_TD - Spreading Rate 1 frequency assignment for Transmit
23 Diversity operation.

24 If BCMC_SR1_TD_INCL is not included, or is included and set
25 to '0', the base station shall omit this field; otherwise, the
26 base station shall set this field as follows:

27 The base station shall set this field to the CDMA Channel
28 number corresponding to the CDMA frequency assignment for
29 the CDMA Channel containing a BCCH Channel that
30 supports the TD operation.

31 BCMC_SR1_BRAT_TD - BCCH data rate in Transmit Diversity mode for Spreading
32 Rate 1.

33 If BCMC_SR1_TD_INCL is not included, or is included and set
34 to '0', the base station shall omit this field; otherwise, the
35 base station shall set this field as follows:

36 The base station shall set this field to the BRAT field value
37 shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
38 used by the Primary Broadcast Control Channel in the
39 system.

40 BCMC_SR1_CRAT_TD - BCCH code rate in Transmit Diversity mode for Spreading
41 Rate 1.

42 If BCMC_SR1_TD_INCL is not included, or is included and set
43 to '0', the base station shall omit this field; otherwise, the
44 base station shall set this field as follows:

1 The base station shall set this field to '0' if the BCCH Code
2 Rate is 1/4 (see [2]). The base station shall set this field to '1'
3 if the BCCH Code Rate is 1/2 (see [2]).

4 BMC SR1 BCCH CODE CHAN TD - Walsh code for the Spreading Rate 1 BCCH in
5 Transmit Diversity mode.

6 If BMC SR1 TD INCL is not included, or is included and set
7 to '0', the base station shall omit this field; otherwise, the
8 base station shall set this field as follows:

9 The base station shall set this field to the Walsh code
10 corresponding to the Spreading Rate 1 BCCH in Transmit
11 Diversity mode.

12 BMC SR1 TD MODE - Spreading Rate 1 Transmit Diversity Mode.

13 If BMC SR1 TD INCL is not included, or is included and set
14 to '0', the base station shall omit this field; otherwise, the
15 base station shall set this field as follows:

16 The base station shall set this field corresponding to Table
17 3.7.2.3.2.26-3.

18 BMC SR1 TD POWER LEVEL - Spreading Rate 1 TD transmit power level.

19 If BMC SR1 TD INCL is not included, or is included and set
20 to '0', the base station shall omit this field; otherwise, the
21 base station shall set this field as follows:

22 The base station shall set this field to the TD transmit power
23 level relative to that of the Forward Pilot Channel, as specified
24 in Table 3.7.2.3.2.26-4.

~~One occurrence~~ HO_INFO_COUNT occurrences of the ~~TEXT~~ following field

HO_INFO_RECORD	Variable
----------------	----------

- 1 PILOT_PN - Pilot PN sequence offset index.
 2 The base station shall set this field to the pilot PN sequence
 3 offset for this base station, in units of 64 PN chips.
- 4 CONFIG_MSG_SEQ - Configuration message sequence number.
 5 The base station shall set this field to CONFIG_SEQ
 6 (see 3.6.2.2).
- 7 ASSTN_TYPE - Association Type.
 8 The base station shall set this field to the value shown in
 9 Table 3.7.2.3.2.39-1 corresponding to the configuration of the
 10 base station.

Table 3.7.2.3.2.39-1. Association Type Field

Value (binary)	Association Type
000	The base station allows any mobile stations to register and receive any services available at the base station.
001	The base station only allows any mobile stations to register and receive page on the base station.
010	The base station only allows selected mobile stations to register and only provides services to the selected mobile stations.
011-111	Reserved.

- 12
- 13 SID - System identification.
 14 The base station shall set this field to the system
 15 identification number for this system (see 2.6.5.2).
- 16 NID - Network identification.
 17 This field serves as a sub-identifier of a system as defined by
 18 the owner of the SID.
 19 The base station shall set this field to the network
 20 identification number for this network (see 2.6.5.2).
- 21 AP_ID_LEN - Access Point identification length.
 22 The base station shall set this field to the length of the access
 23 point identification in units of 16 bits.
- 24 AP_ID - Access Point identification.
 25 The base station shall set this field to its access point
 26 identification number.
- 27 AP_ID_MASK - Access Point identification mask.
 28 The base station shall set this field to the number of
 29 consecutive bits (starting from the most significant bit) of
 30 AP_ID which identifies the group of access points.

- HRPD_ACQ_REC_INCL - HRPD Acquisition Record Included.
The base station shall set this field to '1' if the message includes HRPD acquisition information. Otherwise, this field shall be set to '0'.
 - HRPD_PN - HRPD pilot PN sequence offset index.
If the HRPD_ACQ_REC_INCL field is set to '1', then this field is set to the pilot PN sequence offset corresponding to the HRPD pilot at this access point, in units of 64 PN chips. Otherwise, this field shall be omitted.
 - HRPD_BAND_CLASS - HRPD Band Class.
If the HRPD_ACQ_REC_INCL field is set to '1', then this field is set to the Band Class number corresponding to the frequency assignment of the channel allocated to the HRPD pilot at this access point. Otherwise, this field shall be omitted.
 - HRPD_CHANNEL - HRPD Channel.
If the HRPD_ACQ_REC_INCL field is set to '1', then this field is set to the channel number corresponding to the Band Class of the HRPD pilot at this access point. Otherwise, this field shall be omitted.
 - LOC_REC_TYPE - Location record type.
The base station shall set this field based on the type of the LOC_REC field included in this message.
 - LOC_REC_LEN - Location record length.
The base station shall set this field to the number of octets in the fields included in LOC_REC field. If LOC_REC_TYPE field is set to '000', then this field shall be set to zero.
 - LOC_REC - Location record.
The Location record fields are determined by the value of LOC_REC_TYPE, as described below.
- If LOC_REC_TYPE = '000', the LOC_REC field shall be omitted.
- If LOC_REC_TYPE = '001', the LOC_REC field shall be:

BASE_LAT	22
BASE_LONG	23
LOC_UNC_H	4
BASE_HEIGHT	14
LOC_UNC_V	4
Reserved	0-7

1 If LOC_REC_TYPE field is set to '001', the base station shall include the following
 2 sub-fields in LOC_REC field:

3 BASE_LAT - Base station latitude.
 4 The base station shall set this field to its latitude in units of
 5 0.25 second, expressed as a two's complement signed number
 6 with positive numbers signifying North latitudes. The base
 7 station shall set this field to a value in the range -1296000 to
 8 1296000 inclusive (corresponding to a range of -90° to +90°).
 9 The base station shall set this field to all zeros if its latitude
 10 is not known.

11 BASE_LONG - Base station longitude.
 12 The base station shall set this field to its longitude in units of
 13 0.25 second, expressed as a two's complement signed number
 14 with positive numbers signifying East longitude. The base
 15 station shall set this field to a value in the range -2592000 to
 16 2592000 inclusive (corresponding to a range of -180° to
 17 +180°). The base station shall set this field to all zeros if its
 18 longitude is not known.

19 LOC_UNC_H - Horizontal location uncertainty.
 20 The base station shall set this field to the circular horizontal
 21 location uncertainty, as specified in Table 3.7.2.3.2.39-2. The
 22 value of this field indicates the radius of a circular 95%
 23 confidence coverage area.

24 **Table 3.7.2.3.2.39-2. Horizontal Position Uncertainty**

'0000'	LOC_UNC_H < 20 m
'0001'	20 m ≤ LOC_UNC_H < 40 m
'0010'	40 m ≤ LOC_UNC_H < 70 m
'0011'	70 m ≤ LOC_UNC_H < 100 m
'0100'	100 m ≤ LOC_UNC_H < 200 m
'0101'	200 m ≤ LOC_UNC_H < 400 m
'0110'	400 m ≤ LOC_UNC_H < 700 m
'0111'	700 m ≤ LOC_UNC_H < 1,000 m
'1000'	1,000 m ≤ LOC_UNC_H < 2,000 m
'1001'	2,000 m ≤ LOC_UNC_H < 4,000 m
'1010'	4,000 m ≤ LOC_UNC_H < 7,000 m
'1011'	7,000 m ≤ LOC_UNC_H < 10,000 m
'1100'	10,000 m ≤ LOC_UNC_H < 20,000 m

BASE_HEIGHT - Base station height.
 The base station shall set this field to the height, above the WGS-84 reference ellipsoid, in units of 1 meter, in the range from -500 m to 15,882 m, where the binary value of the field conveys the height plus 500 m. The base station shall set this field to all ones if its height is not known.

LOC_UNC_V - Vertical location uncertainty.
 The base station set this field to the vertical location uncertainty, as specified in Table 3.7.2.3.2.39-3. The value of this field indicates the one-sigma uncertainty of HEIGHT within the corresponding horizontal coverage area.

Table 3.7.2.3.2.39-3. Vertical Position Uncertainty

'0000'	$0 < \text{LOC_UNC_V} < 1 \text{ m}$
'0001'	$1 \text{ m} \leq \text{LOC_UNC_V} < 2 \text{ m}$
'0010'	$2 \text{ m} \leq \text{LOC_UNC_V} < 4 \text{ m}$
'0011'	$4 \text{ m} \leq \text{LOC_UNC_V} < 7 \text{ m}$
'0100'	$7 \text{ m} \leq \text{LOC_UNC_V} < 10 \text{ m}$
'0101'	$10 \text{ m} \leq \text{LOC_UNC_V} < 20 \text{ m}$
'0110'	$20 \text{ m} \leq \text{LOC_UNC_V} < 40 \text{ m}$
'0111'	$40 \text{ m} \leq \text{LOC_UNC_V} < 70 \text{ m}$
'1000'	$70 \text{ m} \leq \text{LOC_UNC_V} < 100 \text{ m}$
'1001'	$100 \text{ m} \leq \text{LOC_UNC_V} < 200 \text{ m}$
'1010'	$200 \text{ m} \leq \text{LOC_UNC_V} < 400 \text{ m}$
'1011'	$400 \text{ m} \leq \text{LOC_UNC_V} < 700 \text{ m}$
'1100'	$700 \text{ m} \leq \text{LOC_UNC_V} < 1,000 \text{ m}$
'1101'	$1,000 \text{ m} \leq \text{LOC_UNC_V} < 2,000 \text{ m}$
'1110'	$2,000 \text{ m} \leq \text{LOC_UNC_V} < 4,000 \text{ m}$
'1111'	$4,000 \text{ m} \leq \text{LOC_UNC_V}$

RESERVED - Reserved bits.
 This field shall contain the number of bits required to make the entire LOC_REC field an integer number of octets in length. All bits of this field shall be set to zeros.

- 1 INTRA_FREQ_HO_HYS_INCL - Intra-frequency idle handoff hysteresis included.
 2 The base station shall set this field to '1' if the message
 3 includes intra-frequency idle handoff hysteresis information.
 4 Otherwise, this field shall be set to '0'.
- 5 INTRA_FREQ_HO_HYS - Intra-frequency idle handoff hysteresis.
 6 If the INTRA_FREQ_HO_HYS_INCL field is set to '1', then the
 7 base station shall set this field to the intra-frequency idle
 8 handoff hysteresis value in units of dB (see 2.6.2.1.4.1),
 9 expressed as an unsigned binary number.
 10 If the INTRA_FREQ_HO_HYS_INCL field is set to '0', then this
 11 field shall be omitted.
- 12 INTRA_FREQ_HO_SLOPE_INCL - Intra-frequency idle handoff slope included.
 13 The base station shall set this field to '1' if the message
 14 includes intra-frequency idle handoff slope information.
 15 Otherwise, this field shall be set to '0'. This field shall not be
 16 set to '1' if INTRA_FREQ_HO_HYS_INCL field is not set to '1'.
- 17 INTRA_FREQ_HO_SLOPE - Intra-frequency idle handoff slope.
 18 If the INTRA_FREQ_HO_SLOPE_INCL field is set to '1', then
 19 the base station shall set this field to the slope in the intra-
 20 frequency idle handoff inequality criterion (see 2.6.2.1.4.1).
 21 The base station shall set this field as an unsigned binary
 22 number.
 23 If the INTRA_FREQ_HO_SLOPE_INCL field is set to '0', then
 24 this field shall be omitted.
- 25 INTER_FREQ_HO_HYS_INCL - Inter-frequency idle handoff hysteresis included.
 26 The base station shall set this field to '1' if the message
 27 includes inter-frequency idle handoff hysteresis information.
 28 Otherwise, this field shall be set to '0'.
- 29 INTER_FREQ_HO_HYS - Inter-frequency idle handoff hysteresis.
 30 If the INTER_FREQ_HO_HYS_INCL field is set to '1', then the
 31 base station shall set this field to the inter-frequency idle
 32 handoff hysteresis value in units of dB (see 2.6.2.1.4.1),
 33 expressed as an unsigned binary number.
 34 If the INTER_FREQ_HO_HYS_INCL field is set to '0', then this
 35 field shall be omitted.
- 36 INTER_FREQ_HO_SLOPE_INCL - Inter-frequency idle handoff slope included.
 37 The base station shall set this field to '1' if the message
 38 includes inter-frequency idle handoff slope information.
 39 Otherwise, this field shall be set to '0'. This field shall not be
 40 set to '1' if INTER_FREQ_HO_HYS_INCL field is not set to '1'.
- 41 INTER_FREQ_HO_SLOPE - Inter-frequency idle handoff slope.

1 If the INTER_FREQ_HO_SLOPE_INCL field is set to '1', then
 2 the base station shall set this field to the slope in the inter-
 3 frequency idle handoff inequality criterion (see 2.6.2.1.4.1).
 4 The base station shall set this field as an unsigned binary
 5 number.

6 If the INTER_FREQ_HO_SLOPE_INCL field is set to '0', then
 7 this field shall be omitted.

8 INTER_FREQ_SRCH_TH_INCL - Inter-frequency idle search threshold included.

9 The base station shall set this field to '1' if the message
 10 includes inter-frequency idle search threshold information.
 11 Otherwise, this field shall be set to '0'.

12 INTER_FREQ_SRCH_TH - Inter-frequency idle search threshold.

13 If the INTER_FREQ_SRCH_TH_INCL field is set to '1', then the
 14 base station shall set this field to the inter-frequency idle
 15 search threshold value (see 2.6.2.1.4.1) in 0.5 dB decrements
 16 as specified in Table 3.7.2.3.2.39-4.

17 **Table 3.7.2.3.2.39-4. Inter-frequency Search Threshold**

INTER_FREQ_SRCH_TH	Inter-frequency search threshold
'00000'	0 dB
'00001'	- 0.5 dB
'00010'	- 1 dB
...	...
'11110'	- 15 dB
'11111'	- 15.5dB

18 If the INTER_FREQ_SRCH_TH_INCL field is set to '0', then
 19 this field shall be omitted.

20 HO_INFO_COUNT - The base station shall set this field to the number of handoff
 21 information record following this field.

22 The base station shall include HO_INFO_COUNT occurrences
 23 of the following HO_INFO_RECORD.

24 HO_INFO_RECORD - The base station shall set this record as shown in Table
 25 3.7.2.3.2.39-5 corresponding to the information to assist
 26 handoff into the access point.

27 **Table 3.7.2.3.2.39-5. Handoff Information Record**

Field	Length (bits)
HO_INFO_TYPE	3
HO_INFO_LEN	8
HO_INFO_VALUE	HO_INFO_LEN

28 HO_INFO_TYPE - The base station shall set this field according to the
 29 HO_INFO_VALUE field in this record.

1 HO_INFO_LEN - The base station shall set this field to the length of the
 2 following HO_INFO_VALUE field.
 3 HO_INFO_VALUE - The access network shall set this field as follows:
 4 If the HO_INFO_TYPE field is set to '000', then this field shall
 5 be set as
 6

IOS_MSC_ID	24
IOS_CELL_ID	16

7 ~~IOSMSCID~~IOS_MSC_ID - MSC ID of the base station.
 8 The base station shall set this field to the MSC ID value that
 9 the other base station uses in the network (see [48]) for
 10 handoff into the base station.

11 ~~IOSCELLID~~IOS_CELL_ID - CELL ID of the base station.
 12 The base station shall set this field to the CELL ID value that
 13 the other base station uses in the network (see [48]) for
 14 handoff into the base station.
 15 If the HO_INFO_TYPE field is set to '001', then this field shall
 16 be set as
 17

PSMM_SIG_COUNT	3
----------------	---

PSMM_SIG_COUNT occurrences of the following field:

PSMM_SIGNATURE	21
----------------	----

18 PSMM_SIG_COUNT - The base station shall set this field to the number of
 19 occurrences of the PSMM_SIGNATURE field in this
 20 HO_INFO_RECORD.

21 PSMM_SIGNATURE - The base station shall set this field to the signature of the
 22 base station to be included in Pilot Strength Measurement
 23 Message during handoff. The 15 MSBs are used in
 24 PILOT_PN_PHASE field and the 6 LSBs are used in
 25 PILOT_STRENGTH field.
 26 If the HO_INFO_TYPE field is set to '010', then this field shall
 27 be set as
 28

RUP_SIG_COUNT	3
---------------	---

RUP_SIG_COUNT ~~occurrences~~occurrences of the following field:

RUP_SIGNATURE	21
---------------	----

29 RUP_SIG_COUNT - The base station shall set this field to the number of
 30 occurrences of the RUP_SIGNATURE field in this
 31 HO_INFO_RECORD.

1 RUP_SIGNATURE - The base station shall set this field to the signature to be
2 included in the Route Update message during handoff from
3 another HRPD access network to the HRPD access network
4 associated with the base station. The 15 MSBs are used in
5 PilotPNPhase field and the 6 LSBs are used in PilotStrength
6 field.
7

1 3.7.2.3.2.40 Access Point Identification Text Message
 2 MSG_TAG: APTIDM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
AP_ID_TEXT_LEN	8

One occurrence of the following AP_ID_TEXT field

AP_ID_TEXT	8 x AP_ID_TEXT_LEN
------------	--------------------

3

4 PILOT_PN - Pilot PN sequence offset index.
 5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.

7 CONFIG_MSG_SEQ - Configuration message sequence number.
 8 The base station shall set this field to CONFIG_SEQ
 9 (see 3.6.2.2).

10 AP_ID_TEXT_LEN - Access Point Identification Text length.
 11 The base station shall set this field to the number of octets in
 12 the AP_ID_TEXT field following the AP_ID_TEXT_LEN field.

13 AP_ID_TEXT - Access Point Identification Text.
 14 The AP_ID_TEXT field shall include the following sub-fields:

15

MSG_ENCODING	5
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field

{

CHAR _i	Variable – see [30]
-------------------	---------------------

}

Reserved	0-7
----------	-----

16

17 MSG_ENCODING - Message encoding.
 18 See [30].

1			Support of an encoding method does not imply that the entire
2			encodable character set needs to be supported. In general,
3			once the supported character set is determined, various
4			subsets of the character set can be supported. If a message is
5			comprised entirely of characters from a supported subset of a
6			character set, it can be displayed. If a message contains an
7			unsupported character of a character set, it can be discarded.
8			The base station shall not set this field to either '01001' or
9			'01010'.
10	NUM_FIELDS	-	Number of fields.
11			If the MSG_ENCODING field is set to '00101' (Shift-JIS) or
12			'00110' (Korean), this field indicates the total length in bytes
13			of the CHARi field; otherwise this field shall be set to the
14			number of characters included in this occurrence of the
15			encoding-specific-fields.
16	CHARi	-	Character.
17			NUM_FIELDS occurrences of this field shall be included. The
18			base station shall set each occurrence of this field to
19			represent the character string that identifies this base station.
20			The character string shall be included in the order of
21			appearance.
22	RESERVED	-	Reserved bits.
23			This field shall contain the number of bits required to make
24			the entire AP_ID_TEXT field an integer number of octets in
25			length. All bits of this field shall be set to zeros.
26			

1 3.7.2.3.2.41 Access Point Pilot Information Message
 2 MSG_TAG: APPIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
LIFETIME	16
NUM_APPI_REC	9

NUM_APPI_REC occurrences of the following record:

APPI_REC	Variable
----------	----------

3

- 4 PILOT_PN - Pilot PN sequence offset index.
 5 The base station shall set this field to the pilot PN sequence
 6 offset for this base station, in units of 64 PN chips.
- 7 CONFIG_MSG_SEQ - Configuration message sequence number.
 8 The base station shall set this field to CONFIG_SEQ
 9 (see 3.6.2.2).
- 10 LIFETIME - Lifetime of the access point pilot information
 11 The base station shall set this field to the duration (in
 12 minutes) that the information in this message remains valid
 13 at the mobile station if the mobile station does not receive
 14 another Access Point Pilot Information message. The duration
 15 is set to $2^{\text{LifeTime}} - 1$ minutes. If the field is set to the maximum
 16 value, the information in this message does not expire.
- 17 NUM_APPI_REC - Number of access point pilot information record.
 18 The base station shall set this field based on the number of
 19 access point pilot information record included in this
 20 message.

1 The base station shall include NUM_APPI_REC occurrences of the following APPI_REC
 2 record.

3

AP_ASSN_TYPE	3
AP_SID_SAME_AS_PREVIOUS	1
AP_NID_SAME_AS_PREVIOUS	1
AP_BAND_SAME_AS_PREVIOUS	1

AP_PN_REC_SAME_AS_PREVIOUS	1
AP_SID	0 or 15
AP_NID	0 or 16
AP_BAND	0 or 5
AP_FREQ	0 or 11
AP_PN_REC_TYPE	0 or 3
AP_PN_REC_LEN	0 or 8
AP_PN_REC	0 or 8 x AP_PN_REC_LEN
RESERVED	0 – 7 (as needed)

4

5 AP_ASSN_TYPE - Access point association type.

6 The base station shall set this field to association type of the
 7 access points listed in APPI_REC according to Table
 8 3.7.2.3.2.41-1.

9

Table 3.7.2.3.2.41-1. Access Point Association Type Field

Value (binary)	Access Point Association Type
000	The base station allows any mobile stations to register and receive any services available at the base station.
001	The base station only allows any mobile stations to register and receive page on the base station.
010	The base station only allows selected mobile stations to register and only provides services to the selected mobile stations.
011-110	Reserved.
111	There is no designated association type corresponding to access points in this APPI_REC record.

10

- 1 AP_SID_SAME_AS_PREVIOUS - The base station shall set this field to '1' if the system
 2 identification value associated with this record is identical to
 3 the system identification value in the previous record.
 4 Otherwise, the base station shall set this field to '0'.
- 5 AP_NID_SAME_AS_PREVIOUS - The base station shall set this field to '1' if the network
 6 identification value associated with this record is identical to
 7 the system identification value in the previous record.
 8 Otherwise, the base station shall set this field to '0'.
- 9 AP_BAND_SAME_AS_PREVIOUS -
 10 The base station shall set this field to '1' if the band class
 11 value associated with this record is identical to the band class
 12 value in the previous record. Otherwise, the base station shall
 13 set this field to '0'.
- 14 AP_FREQ_SAME_AS_PREVIOUS -
 15 The base station shall set this field to '1' if the CDMA Channel
 16 number associated with this record is identical to the CDMA
 17 Channel number in the previous record. Otherwise, the base
 18 station shall set this field to '0'.
- 19 AP_PN_SAME_AS_PREVIOUS -
 20 The base station shall set this field to '1' if the list of PN
 21 Offsets associated with this record is identical to the list of PN
 22 Offsets associated with the previous record. Otherwise, the
 23 base station shall set this field to '0'.
- 24 AP_SID - Access Point System identification.
 25 The base station shall omit this field if the
 26 AP_SID_SAME_AS_PREVIOUS field is set to '1'. Otherwise, the
 27 base station shall set this field to the system identification
 28 number (see 2.6.5.2) that the following pilot information
 29 applies to.
- 30 AP_NID - Access Point Network identification.
 31 This field serves as a sub-identifier of a system as defined by
 32 the owner of the SID.
 33 The base station shall omit this field if the
 34 AP_NID_SAME_AS_PREVIOUS field is set to '1'. Otherwise,
 35 the base station shall set this field to the network
 36 identification number (see 2.6.5.2) that the following pilot
 37 information applies to.
- 38 AP_BAND - Access Point Band class.
 39 The base station shall omit this field if the
 40 AP_BAND_SAME_AS_PREVIOUS field is set to '1'. Otherwise,
 41 the base station shall set this field according to the band
 42 class, as defined in [38], of access points listed in this record.
- 43 AP_FREQ - Access Point Frequency assignment.

1 The base station shall omit this field if the
 2 AP_FREQ_SAME_AS_PREVIOUS field is set to '1'. Otherwise,
 3 the base station shall set this field to the CDMA Channel
 4 number corresponding to the CDMA frequency assignment
 5 corresponding to the access points listed in this record.

6 AP_PN_REC_TYPE - Access Point PN Record Type¹¹³.

7 The base station shall omit this field if the
 8 AP_PN_REC_SAME_AS_PREVIOUS field is set to '1'.
 9 Otherwise, the base station shall set this field according to
 10 the AP_PN_REC field including in this record.

11 AP_PN_REC_LEN - Access Point PN Record Length.

12 The base station shall omit this field if the
 13 AP_PN_REC_SAME_AS_PREVIOUS field is set to '1'.
 14 Otherwise, the base station shall set this field to the number
 15 of octets in the AP_PN_REC field following this field.

16 AP_PN_REC - Access Point PN Record.

17 The base station shall omit this field if the
 18 AP_PN_REC_SAME_AS_PREVIOUS field is set to '1'.
 19 Otherwise, the base station shall set this field as follow.

20
 21 If the AP_PN_REC_TYPE field is set to '000', then this field
 22 shall be set as

23

AP_PN_COUNT	7
-------------	---

AP_PN_COUNT occurrences of the following field:

AP_PN	9
-------	---

24 AP_PN_COUNT - Access Point PN Count.

25 The base station shall set this field to the number of AP_PN
 26 fields in this record following this field.

27 AP_PN - Access point pilot PN sequence offset index.

28 The base station shall set this field to the pilot PN sequence
 29 offset allocated for access points in this area, in units of 64
 30 PN chips.

31

32 If the AP_PN_REC_TYPE field is set to '001', then this field
 33 shall be set as

¹¹³ If there are only a few PN offsets assigned to the femto base stations in the system, then the AP_PN_REC_TYPE field can be set to 000. If there are many PN offsets assigned to the femto base stations in the system, then the AP_PN_REC_TYPE field can be set to 001 to reduce the size of the message.

1

AP_PN_COUNT	8
AP_PN_START	9
AP_PN_INC	4

2

AP_PN_COUNT - Access Point PN Count.

3

The base station shall set this field to the number of pilot PN sequence offset in the series listed in this record.

4

5

AP_PN_START - Access point pilot PN sequence offset index.

6

The base station shall set this field to the smallest pilot PN sequence offset, in units of 64 PN chips, in the series listed in this record allocated for access points in this area.

7

8

9

AP_PN_INC - Access Point Pilot PN sequence offset index increment.

10

The base station shall set this field to the pilot PN sequence increment, in units of 64 PN chips, that such that the pilot PN sequence offsets in the series allocated to the access points in this area are: $AP_PN_START + (k \times PILOT_INC)$ where $k = 0, \dots, AP_PN_COUNT - 1$.

11

12

13

14

15

16

RESERVED - Reserved bits.

17

The base station shall add reserved bits as needed in order to make the total length of the APPI_REC through this RESERVED field equal to an integer number of octets. The base station shall set these bits to '0'.

18

19

20

21

1 3.7.2.3.2.42 General Overhead Information Message
 2 MSG_TAG: GOIM

3 The support for General Overhead Information Message and the individual General
 4 Overhead Information Record Types is optional at the base station.

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_GOI_REC	4

NUM_GOI_REC occurrences of the following fields

{

GOI_REC_TYPE	8
GOI_REC_LEN	8
GOI_REC	8 x GOI_REC_LEN

}

- 5 PILOT_PN - Pilot PN sequence offset index.
 6 The base station shall set this field to the pilot PN sequence
 7 offset for this base station, in units of 64 PN chips.
- 8 CONFIG_MSG_SEQ - Configuration message sequence number.
 9 The base station shall set this field to CONFIG_SEQ
 10 (see 3.6.2.2).
- 11 NUM_GOI_REC - Number of GOI records included in this message.
 12 The base station shall set this field to the number of *General*
 13 *Overhead Information Message* records included in this
 14 message. The base station shall include atleast one General
 15 Overhead Information record in this message.
- 16 GOI_REC_TYPE - GOI record type.
 17 The base station shall set this field to the type of the *General*
 18 *Overhead Information Message* record according to table
 19 3.7.2.3.2.42-1 and [30]¹¹⁴.

¹¹⁴ Further record types may be defined in [30].

Table 3.7.2.3.2.42-1. General Overhead Information Record Type Field

Value (binary)	Record Type Description	Transmission Allowed on GOIM	Transmission Allowed on FGOIM
0000000 0	Operator Name.	Y	N
0000000 1	Cell ID ¹¹⁵ .	Y	N
0000001 0	Other networks available ¹¹⁶ .	N	Y
0000001 1- 1111111 1	Reserved.	NA	NA

GOI_REC_LEN - The length of the GOI record length.
The base station shall set this field to the number of octets in the GOI_REC field following the GOI_REC_LEN.

GOI_REC - General Overhead Information record.
If the GOI_REC_TYPE is set to '00000000' or '00000001', the GOI_REC field shall include the following fields¹¹⁷:

TEXT_ENCODING	5
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field

{

CHARi	Variable – see [30]
-------	---------------------

}

Reserved	0-7
----------	-----

TEXT_ENCODING - Text encoding.
See [30].

¹¹⁵ For example, the base station may include a text string identifying the region.

¹¹⁶ Mobile station may use the information included in this record to scan for preferred networks.

¹¹⁷ Future GOI records may be defined in [30].

- 1 Support of an encoding method does not imply that the entire
 2 encodable character set needs to be supported. In general,
 3 once the supported character set is determined, various
 4 subsets of the character set can be supported. If the text is
 5 comprised entirely of characters from a supported subset of a
 6 character set, it can be displayed. If the text contains an
 7 unsupported character of a character set, it can be discarded.
 8 The base station shall not set this field to either '01001' or
 9 '01010'.
- 10 NUM_FIELDS - Number of fields.
 11 If the TEXT_ENCODING field is set to '00101' (Shift-JIS) or
 12 '00110' (Korean), this field indicates the total length in bytes
 13 of the CHARi field; otherwise this field shall be set to the
 14 number of characters included in this occurrence of the
 15 encoding-specific-fields.
- 16 CHARi - Character.
 17 NUM_FIELDS occurrences of this field shall be included. The
 18 base station shall set each occurrence of this field to
 19 represent the character string as per GOI_REC_TYPE. The
 20 character string shall be included in the order of appearance.
- 21 RESERVED - Reserved bits.
 22 This field shall contain the number of bits required to make
 23 the entire GOI_REC field an integer number of octets in
 24 length. All bits of this field shall be set to zeros.
- 25 If the GOI_REC_TYPE is set to '00000010' the GOI_REC field shall include the following
 26 fields:

Field	Length (bits)
NUM_NETWORKS	3

NUM_NETWORKS occurrences of the following field:

{ (NUM_NETWORKS)

SID_INCL	1
SID	0 or 15
NID_INCL	1
NID	0 or 16
MCC_MNC_INCL	1
MCC	0 or 10
IMSI_11_12	0 or 7
IMSI_10_INCL	0 or 1
IMSI_10	0 or 4
BAND_CHANNEL_INFO_INCL	1
BAND_CLASS	0 or 5
CDMA_CHAN	0 or 11

}(NUM_NETWORKS)

RESERVED	0-7 (as needed)
----------	-----------------

1

2 NUM_NETWORKS - Number of Networks.

3 The base station shall set this field to the number of networks for which
4 information is included in this General Overhead Information record. The
5 base station shall set this to a value greater than zero.

6 SID_INCL - SID indicator.

7 The base station shall set this field to '1' if the SID is included for this
8 record; Otherwise the base station shall set this field to '0'.

9 SID - SID for the network.

10 The base station shall include this field if SID_INCL is set to '1'; Otherwise
11 the base station shall omit this field.

12 The base station shall set this field to the SID [18] of the network for which
13 information is carried in this record.

14 NID_INCL - NID indicator.

15 The base station shall set this field to '1' if the NID is included for this
16 record; Otherwise the base station shall set this field to '0'.

17 NID - NID for the network.

1 The base station shall include this field if NID_INCL is set to '1'; Otherwise
2 the base station shall omit this field.

3 The base station shall set this field to the NID of the network for which
4 information is carried in this record.

5 MCC_MNC_INCL - MCC and MNC indicator

6 The base station shall set this field to '1' if the MCC and MNC fields are to be
7 included for this record; Otherwise, the base station shall set this field to '0'.

8 MCC - MCC of the network.

9 The base station shall include this field if MCC_MNC_INCL is set to '1';
10 Otherwise, the base station shall omit this field.

11 The base station shall set this field to the MCC (see 2.3.1) of the network for
12 which information is carried in this record.

13 IMSI_11_12 - 11th and 12th digit of the IMSI.

14 The base station shall include this field if MCC_MNC_INCL is set to '1';
15 Otherwise, the base station shall omit this field.

16 The base station shall set this field to the IMSI_11_12 (see section 2.3.1) of
17 the network for which information is carried in this record.

18 IMSI_10_INCL - IMSI_10 included.

19 The base station shall include this field if MCC_MNC_INCL is set to '1';
20 Otherwise, the base station shall omit this field.

21 If the MNC for the network for which information is carried in this record is
22 a 3-digit number the base station shall set this field to '1'. Otherwise, the
23 base station shall set this field to '0'.

24 IMSI_10 - The least significant digit of the MNC when the MNC is a 3-digit number.

25 The base station shall omit this field if IMSI_10_INCL is not included or is
26 included and is set to '0'; Otherwise, the base station shall set this field to
27 the least significant digit of MNC converted to binary by the standard
28 decimal-to-binary conversion as shown in Table 2.3.1.1-1.

29 ~~OPERATOR_NAME_INCL - Operator Name Inclusion Indicator.~~

30 ~~The base station shall set this field to '1' if the operator name for the~~
31 ~~network is included in this record; otherwise, the base station shall set this~~
32 ~~field to '0'.~~

33 BAND_CHANNEL_INFO_INCL - Band and Channel indicator.

34 The base station shall set this field to '1' if the BAND_CLASS and
35 NUM_CHAN fields are to be included for this record; Otherwise, the base
36 station shall set this field to '0'.

37 BAND_CLASS - Band class.

1 The base station shall include this field if BAND_CHANNEL_INFO_INCL is set to
2 '1'; Otherwise the base station shall omit this field.

3 The base station shall set this field to the CDMA band class [30] of the network
4 for which information is being carried in this record.

5 CDMA_CHAN - CDMA Channel number.

6 The base station shall include this field if BAND_CHANNEL_INFO_INCL is set to
7 '1'; Otherwise the base station shall omit this field.

8 The base station shall specify the associated CDMA Channel number on which a
9 roaming mobile station may attempt to acquire a CDMA system.

10 RESERVED - Reserved bits.

11 This field shall contain the number of bits required to make the entire GOI_REC
12 field an integer number of octets in length. All bits of this field shall be set to
13 zeros.

14

- 1 3.7.2.3.2.43 Flex Duplex CDMA Channel List Message
- 2 MSG_TAG: FDCCLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
CAND_BAND_INFO_REQ	1
RC_QPCH_SEL_INCL	1
TD_SEL_INCL	1
CDMA_FREQ_WEIGHT_INCL	1
NUM_CAND_BAND_CLASS	3

{ (NUM_CAND_BAND_CLASS + 1)

CAND_BAND_CLASS	5
SUBCLASS_INFO_INCL	0 or 1
SUBCLASS_REC_LEN	0 or 5

SUBCLASS_REC_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS_REC_LEN + 1)

BAND_SUBCLASS_IND	1
-------------------	---

} (SUBCLASS_REC_LEN + 1)

TD_MODE	0 or 2
BYPASS_SYS_DET_IND	1
NUM_FREQ	4

NUM_FREQ occurrences of the following field:

{ (NUM_FREQ)

CDMA_FREQ	11
REMAINING_FIELD_INCL	1
REV_CDMA_FREQ	0 or 11
RC_QPCH_HASH_IND	0 or 1
TD_HASH_IND	0 or 1
TD_POWER_LEVEL	0 or 2
CDMA_FREQ_WEIGHT	0 or 3

} (NUM_FREQ)

} (NUM_CAND_BAND_CLASS + 1)

3

4

PILOT_PN - Pilot PN sequence offset index.

- 1 The base station shall omit this field if
 2 CAND_BAND_INFO_REQ is set to '0'. Otherwise the base
 3 station shall set this field as follows:
- 4 The base station shall set this field to '0' when no band
 5 subclasses are associated with CAND_BAND_CLASS or if the
 6 base station requires only the band class capabilities of the
 7 mobile station. Otherwise, the base station shall set this field
 8 to '1'.
- 9 SUBCLASS_REC_LEN - Band subclass subrecord length
- 10 If SUBCLASS_INFO_INCL field is not included or is included
 11 but is set to '0', the base station shall omit this field;
 12 otherwise, the base station shall set this field as follows:
- 13 The base station shall set this field to the number of band
 14 subclass indicator fields included in the subrecord minus
 15 one. The number of subclass indicator fields included
 16 depends on the highest band subclass being queried for
 17 mobile support for the associated CAND_BAND_CLASS (i.e. if
 18 the highest band subclass being queried is K, then
 19 SUBCLASS_REC_LEN = K).
- 20 If the SUBCLASS_REC_LEN field is included, the base station shall include
 21 SUBCLASS_REC_LEN +1 occurrences of the following subrecord. The first field included
 22 corresponds to band subclass '0' and the Nth field included corresponds to band subclass
 23 'N-1'.
- 24 BAND_SUBCLASS_IND - Band subclass indicator
- 25 The base station shall set this field to '1' if it requires the
 26 mobile to report whether it supports this band subclass for
 27 the associated CAND_BAND_CLASS; otherwise, the base
 28 station shall set this field to '0'.
- 29 The mobile station is to indicate its capability to support the
 30 candidate band class and band subclass (if applicable)
 31 combination in the General Extension Message that carries a
 32 *Registration Message, Origination Message, or a Page*
 33 *Response Message* and a Supported Band Class - Subclass
 34 record.
- 35 TD_MODE - Transmit Diversity Mode.
- 36 If TD_SEL_INCL is set to '0', the base station shall omit this
 37 field; otherwise, the base station shall include this field and
 38 set it as follows:
- 39 The base station shall set this field to the Transmit Diversity
 40 mode on the CAND_BAND_CLASS, as specified in Table
 41 3.7.2.3.2.26-3.
- 42 BYPASS_SYS_DET_IND - Direct to idle allowed indicator.
- 43 The base station shall set this field to '1' if the mobile station
 44 is allowed to go directly to idle state on any CDMA channel
 45 belonging to the CAND_BAND_CLASS included in this record.
- 46 NUM_FREQ - Number of additional CDMA Frequencies

1 The base station shall set this field to the number of
 2 occurrences of the CDMA_FREQ field included hereafter in this
 3 record.

4 The base station shall include NUM_FREQ occurrences of the following record:

5 CDMA_FREQ - CDMA Channel frequency assignment.

6 Each occurrence of this field shall correspond to a CDMA
 7 Channel containing a Paging Channel that is supported by
 8 this base station.

9 If this message is sent on the Paging Channel:

10 The base station shall set this field to the CDMA channel
 11 number corresponding to the CDMA frequency
 12 assignment for a CDMA Channel containing a Paging
 13 Channel (see [2]).

14 This CDMA channel shall reside in the band class listed in
 15 this CAND_BAND_CLASS record. If
 16 SUBCLASS_INFO_INCL is equal to '1', this CDMA channel
 17 shall also reside in at least one supported
 18 CDMA_SUBCLASS included in this CAND_BAND_CLASS
 19 record.

20 If this message is sent on the Primary Broadcast Control
 21 Channel:

22 The base station shall set this field to the CDMA Channel
 23 number corresponding to the CDMA frequency
 24 assignment for a CDMA Channel containing a Primary
 25 Broadcast Control Channel and Forward Common Control
 26 Channel (see [2]).

27 This CDMA channel resides in the band class listed in this
 28 CAND_BAND_CLASS record. If SUBCLASS_INFO_INCL is
 29 equal to '1', this CDMA channel shall also reside in at
 30 least one supported CDMA_SUBCLASS included in this
 31 CAND_BAND_CLASS record.

32 If the base station supports a CDMA frequency
 33 assignment without transmit diversity, the base station
 34 should not set the first occurrence of this field to a CDMA
 35 channel number corresponding to a transmit diversity
 36 frequency assignment.

37 REMAINING_FIELD_INCL - Remaining fields included.

38 If the base station is sending *Extended CDMA Channel List*
 39 *Message* that includes this CDMA_FREQ and
 40 CAND_BAND_CLASS, the base station shall set this bit to '0'.
 41 Otherwise, the base station shall set bit to '1'

42 REV_CDMA_FREQ - If REMAINING_FIELD_INCL is set to '0', the base station shall
 43 omit this field. Otherwise, the base station shall set this field
 44 to the CDMA channel number corresponding to the CDMA
 45 frequency assignment for the Reverse CDMA Channel (see [2])
 46 that is paired with the CDMA_FREQ contained in this record.

1 This Reverse CDMA channel resides in the band class listed
2 in this CAND_BAND_CLASS record. If SUBCLASS_INFO_INCL
3 is equal to '1', this CDMA channel shall also reside in at least
4 one supported CDMA_SUBCLASS included in this
5 CAND_BAND_CLASS record.

6 RC_QPCH_HASH_IND - RC QPCH channel hashing indicator

7 If REMAINING_FIELD_INCL is set to '0' or if
8 RC_QPCH_SEL_INCL is set to '0', the base station shall omit
9 this field; otherwise, the base station shall include this field
10 and set it as follows:

11 The base station shall set this field to '1', if the corresponding
12 CDMA channel is to be selected for channel hashing by
13 mobile stations capable of Radio Configurations greater than
14 two or capable of supporting Quick Paging Channel.

15 TD_HASH_IND - Transmit diversity hash indicator.

16 If REMAINING_FIELD_INCL is set to '0' or if TD_SEL_INCL is
17 set to '0', the base station shall omit this field; otherwise, the
18 base station shall include this field and set it as follows:

19 If the associated CDMA_FREQ is to be selected for CDMA
20 channel hashing by mobile stations capable of supporting
21 transmit diversity [TD_MODE], the base station shall set the
22 field to '1'; otherwise, the base station shall set this field to '0'.

23 TD_POWER_LEVEL - Transmit diversity power level.

24 If REMAINING_FIELD_INCL is set to '0', or if TD_HASH_IND is
25 set to '0', the base station shall omit this field; otherwise, the
26 base station shall include this field and set it to the transmit
27 diversity transmission power level relative to that of the
28 Forward Pilot Channel, as specified in Table 3.7.2.3.2.26-4.

29 CDMA_FREQ_WEIGHT - CDMA frequency weight

30 If REMAINING_FIELD_INCL is set to '0' or if
31 CDMA_FREQ_WEIGHT_INCL is set to '0', the base station
32 shall omit this field; otherwise, the base station shall include
33 this field and set it as follows:

34 The base station shall set this field to one less than the weight
35 for this CDMA channel to be used in channel hashing by the
36 mobile station.

37

1 3.7.2.3.2.44 General Extension Message

2 MSG_TAG: GEM

Field	Length (bits)
NUM_GE_REC	8

NUM_GE_REC occurrences of the following record:

{ (NUM_GE_REC)

GE_REC_TYPE	8
GE_REC_LEN	8
GE_REC	8 x GE_REC_LEN

} (NUM_GE_REC)

MESSAGE_TYPE	8
MESSAGE_REC	Variable

- 3 NUM_GE_REC - Number of General Extension Records included in this message.
4
5 The base station shall set this field to the number of general
6 extension records included in this message. Base station shall set
7 this field to a value greater than 0.
- 7 GE_REC_TYPE - Type of General Extension Record.
8
9 The base station shall set this field based on the type of record as
specified in Table 3.7.2.3.2.44-1.

1

Table 3.7.2.3.2.44-1. General Extension Record Type values

GE_REC_TYPE (binary)	Description
00000000	Reverse Channel Information.
00000001	Radio Configuration Parameters Record ¹¹⁸
00000010	Delayed ARQ Record ¹¹⁹
00000011-11111111	Reserved

2

GE_REC_LEN - Length of the General Extension Record.

3

The base station shall set this field to the length in octets of the general extension record following the GE_REC_LEN field.

4

5

GE_REC - General Extension Record.

6

The base station shall set this field according to the previous occurrence of the GE_REC_TYPE in this message.

7

8

If the GE_REC_TYPE is set to '00000000' then the base station shall set the GE_REC to the following:

9

10

BAND_CLASS	5
REV_CHAN	11

11

BAND_CLASS - Band Class of the Reverse Channel.

12

The base station shall set this this field to the Band Class of the Reverse CDMA channel as specified in [30].

13

14

REV_CHAN - Channel number of the reverse link frequency.

15

The base station shall set this this field to the CDMA channel number corresponding to the CDMA frequency assignment for the reverse CDMA channel (see [2]) that is paired with the forward CDMA channel included in message carried in the General Extension Message.

16

17

18

19

¹¹⁸ Base station may use this record to extend CAM/ECAM/MECAM or UHDM/GHDM/EHDM/MUHDM/ESCAM messages instead of sending a RCPM message separately to the mobile station.

¹¹⁹ Base station may use this record to extend the ESCAM or CAM/ECAM/MECAM in order to enable delayed ARQ on the supplementary channel.

1 If the GE_REC_TYPE is set to '00000001' then the base station shall set the GE_REC to the
 2 fields of the Radio Configuration Parameters Message defined in
 3 3.7.3.3.2.51; followed by a variable length RESERVED field to make
 4 length of the entire GE_REC record an integer number of octets, with
 5 all bits of the RESERVED field set to 0.

6 If the GE_REC_TYPE is set to '00000010' then the base station shall set the GE_REC to the
 7 following:

8

FOR_SCH_DELAYED_ACK_MASK_INCL	1
FOR_SCH_DELAYED_ACK_MASK	3
REV_SCH_DELAYED_ACK_MASK_INCL	1
REV_SCH_DELAYED_ACK_MASK	3
RESERVED	0-7 (as needed)

9 FOR_SCH_DELAYED_ACK_MASK_INCL - Delayed ACK Mask for the Forward
 10 Supplemental Channel Inclusion indicator.

11 The base station shall set this field to '1' if
 12 FOR_SCH_DELAYED_ACK_MASK field is to be included in this record.
 13 Otherwise, the base station shall set this field to '0'.

14 FOR_SCH_DELAYED_ACK_MASK - Delayed ACK Mask for the Forward Supplemental
 15 Channel.

16 The base station shall omit this field if
 17 FOR_SCH_DELAYED_ACK_MASK_INCL is set to '0'. Otherwise the
 18 base station shall include this field and set it as follows:

19 This field consists of the subfields shown in Table 3.7.3.3.2.44-2. The
 20 base station shall set the subfields corresponding to the PCGs of
 21 frame n+1 where delayed Ack for frame n can be sent to '1', and shall
 22 set the remaining subfields to '0'.

23

24

Table 3.7.2.3.2.44-2. Delayed Ack Mask For F-SCH

Subfield	Length(bits)	Subfield Description
DELAYED_ACK_MASK_0	1	Delayed Ack allowed in PCG 3
DELAYED_ACK_MASK_1	1	Delayed Ack allowed in PCG 4
DELAYED_ACK_MASK_2	1	Delayed Ack allowed in Delayed PCG 5

REV_SCH_DELAYED_ACK_MASK_INCL - Delayed ACK Mask for the Reverse Supplemental Channel Inclusion indicator.

The base station shall set this field to '1' if REV_SCH_DELAYED_ACK_MASK field is to be included in this record. Otherwise, the base station shall set this field to '0'.

REV_SCH_DELAYED_ACK_MASK - Delayed ACK Mask for the Reverse Supplemental Channel.

The base station shall omit this field if REV_SCH_DELAYED_ACK_MASK_INCL is set to '0'. Otherwise the base station shall include this field and set it as follows:

This field consists of the subfields shown in Table 3.7.3.3.2.44-3. The base station shall set the subfields corresponding to the PCGs of frame n+1 where delayed Ack for frame n can be sent to '1', and shall set the remaining subfields to '0'.

Table 3.7.2.3.2.44-3. Delayed Ack Mask for R-SCH

Subfield	Length (bits)	Subfield Description
DELAYED_ACK_MASK_0	1	Delayed Ack allowed in PCG 1
DELAYED_ACK_MASK_1	1	Delayed Ack allowed in PCG 2
DELAYED_ACK_MASK_2	1	Delayed Ack allowed in PCG 3

RESERVED - Reserved bits.

The base station shall add reserved bits as needed in order to make the length of the entire GE_REC record equal to an integer number of octets. The mobile station shall set these bits to '0'.

MESSAGE_TYPE - Message type of the message included in the General Extension Message.

This field shall contain the message type value for the message following this field. When transmitting the general

1 extension message over f-csch, then base station shall set the
2 first 2 MSB of this field to '00'. The base station shall set this
3 field according to [4].

4 MESSAGE_REC - Message extended through the General Extension message.
5 The base station shall set this field to the message that is
6 being extended using the *General Extension Message*.
7

1 3.7.2.3.2.45 Alternative Technologies Information Message
 2 MSG_TAG: ATIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM_RADIO_INTERFACE occurrences of the following Radio Interface record:

{ (NUM_RADIO_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	10
Radio Interface Type-specific fields	8 x RADIO_INTERFACE_LEN

} (NUM_RADIO_INTERFACE)

- 3 PILOT_PN - Pilot PN sequence offset index.
 4 The base station shall set this field to the pilot PN sequence
 5 offset for this base station, in units of 64 PN chips.
- 6 CONFIG_MSG_SEQ - Configuration message sequence number.
 7 The base station shall set this field to CONFIG_SEQ
 8 (see 3.6.2.2 of [2]).
- 9 NUM_RADIO_INTERFACE - Number of radio interface types.
 10 The base station shall set this field to the number of radio
 11 interface type records included in this message.
- 12 The base station shall include NUM_RADIO_INTERFACE occurrences of the following
 13 record, one occurrence for each radio interface type is included in this message.
- 14 RADIO_INTERFACE_TYPE - The radio interface type.
 15 The base station shall set this field to the radio interface type
 16 of this record as specified in Table 3.5-1¹²⁰.

¹²⁰ New RADIO_INTERFACE_TYPE values may be defined in [30].

Table 3.5-1. Radio Interface Type

RADIO_INTERFACE_TYPE (binary)	Descriptions
0010	HRPD
0011	E-UTRAN
0100	WiMAX
Other	Reserved

RADIO_INTERFACE_LEN - The length of the Radio Interface Type-specific fields.

The base station shall set this field to the number of octets in the Radio Interface Type-specific fields of this record.

If RADIO_INTERFACE_TYPE is equal to '0010', the base station may include the following radio interface type-specific fields:

{ (COMMON RECORD)

COMMON_RECORD_LEN	4
SUBNET_COLOR_CODE_INCL	1
SUBNET_COLOR_CODE	0 or 8
COMMON_RECORD_RESERVED	0 ~ 7 (as needed)

} (COMMON RECORD)

NUM_HRPD_NGHBR	6
----------------	---

NUM_HRPD_NGHBR occurrences of the following subrecord:

{ (NUM_HRPD_NGHBR)

HRPD_NGHBR_REC_LEN	5
NGHBR_PN	9
NGHBR_FREQ_SAME_AS_PREV	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
PN_ASSOCIATION_IND	1
DATA_ASSOCIATION_IND	1
NGHBR_SUBNET_COLOR_CODE_IND	2
NGHBR_SUBNET_COLOR_CODE	0 or 8
HRPD_NGHBR_REC_RESERVED	0-7 (as needed)

} (NUM_HRPD_NGHBR)

COMMON_RECORD_LEN - Length of the common record part.

The base station shall set this field to the length of the common record in octets, including this field.

SUBNET_COLOR_CODE_INCL - HRPD Subnet Color Code Included Indicator.

1 If the Subnet Color Code (see [1]) associated with the HRPD
2 sector corresponding to this pilot is included in this message,
3 the base station shall set this field to '1'; otherwise, the base
4 station shall set this field to '0'.

5 SUBNET_COLOR_CODE - HRPD Subnet Color Code.

6 If the SUBNET_COLOR_CODE_INCL field is set to '0', the base
7 station shall omit this field; otherwise, the base station shall
8 include this field and set it as follows:

9 The base station shall set this field to Subnet Color Code (see
10 [1]) associated with the HRPD sector corresponding to this
11 pilot.

12 COMMON_RECORD_RESERVED - Common record part reserved bits.

13 The base station shall add reserved bits as needed in order to
14 make the length of the common record equal to an integer
15 number of octets. The base station shall set these bits to '0'.

16 NUM_HRPD_NGHRBR - Number of HRPD neighbor pilot PN sequences.

17 The base station shall set this field to the number of HRPD
18 neighbors included in the message.

19 HRPD_NGHRBR_REC_LEN - HRPD neighbor record length

20 The base station shall set this field to one less than the
21 number of octets included in ~~each~~this HRPD neighbor
22 ~~records~~record including this field.

23 The base station shall include one occurrence of the following
24 subrecord for each pilot that a mobile station is to place in its
25 HRPD Neighbor Set.

26 NGHRBR_PN - Neighbor pilot PN sequence offset index.

27 The base station shall set this field to the pilot PN sequence
28 offset for this neighbor, in units of 64 PN chips.

29 NGHRBR_FREQ_SAME_AS_PREV - Neighbor frequency information is same as previous
30 indicator.

31 The base station shall set this field to '1' if the neighbor
32 frequency information for this record is the same as the
33 neighbor frequency information for the previous record
34 included in this message; otherwise, the base station shall set
35 this field to '0'.

36 NGHRBR_BAND - Neighbor band class.

37 If the NGHRBR_FREQ_SAME_AS_PREV field is set to '1', the
38 base station shall omit this field; otherwise, the base station
39 shall include this field and set it as follows:

40 The base station shall set this field to the CDMA band class,
41 as specified in [5], corresponding to the CDMA frequency
42 assignment for the CDMA Channel containing this neighbor.

43 NGHRBR_FREQ - Neighbor frequency assignment.

1 If the NGHBR_FREQ_SAME_AS_PREV field is set to '1', the
2 base station shall omit this field; otherwise, the base station
3 shall include this field and set it as follows:

4 The base station shall set this field to the CDMA Channel
5 number, in the specified CDMA band class, corresponding to
6 the CDMA frequency assignment for this neighbor.

7 **PN_ASSOCIATION_IND** - Neighbor PN association indicator.

8 The base station shall set this field to '1' if the system
9 identified by this system record has the same PN assignment
10 as the MC system to which this base station belongs;
11 otherwise, the base station shall set this field to '0'.

12 **DATA_ASSOCIATION_IND** - Neighbor data association indicator.

13 The base station shall set this field to '1' if the system
14 identified by this system record can reach the same set of
15 PDSNs as the MC system to which this base station belongs;
16 otherwise, the base station shall set this field to '0'.

17 **NGHBR_SUBNET_COLOR_CODE_IND** - Neighbor HRPD Subnet Color Code Indicator.

18 If the Subnet Color Code (see [1]) information for this
19 neighbor is not included, the base station shall set this field
20 to '00'.

21 If the Subnet Color Code information for this neighbor is
22 included and is the same value as included in the
23 **SUBNET_COLOR_CODE** field above, the base station shall set
24 this field to '01'.

25 If the Subnet Color Code (see [1]) information for this
26 neighbor is included below, the base station shall set this field
27 to '10'.

28 **NGHBR_SUBNET_COLOR_CODE** - Neighbor HRPD Subnet Color Code.

29 If the **NGHBR_SUBNET_COLOR_CODE_IND** field is not set to
30 '10', the base station shall omit this field; otherwise, the base
31 station shall include this field and set it as follows:

32 The base station shall set this field to the Subnet Color Code
33 (see [1]) for this neighbor.

34 **HRPD_NGHBR_REC_RESERVED** - HRPD neighbor record reserved bits.

35 The base station shall add reserved bits as needed in order to
36 make the length of this record equal to an integer number of
37 octets. The base station shall set these bits to '0'.

38 If **RADIO_INTERFACE_TYPE** is equal to '0011', the base
39 station may include the radio interface type-specific fields
40 specified in [49].

41 If **RADIO_INTERFACE_TYPE** is equal to '0100', the base
42 station may include the radio interface type-specific fields
43 specified in [50].

44

1 3.7.2.3.2.46 Frequent General Overhead Information Message
 2 MSG_TAG: FGOIM

3 The support for Frequent General Overhead Information Message and the individual
 4 General Overhead Information Record Types is optional at the
 5 base station.

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_GOI_REC	4

NUM_GOI_REC occurrences of the following fields

{

GOI_REC_TYPE	8
GOI_REC_LEN	8
GOI_REC	8 x GOI_REC_LE N

}

- 6 PILOT_PN - Pilot PN sequence offset index.
 7 The base station shall set this field to the pilot PN sequence
 8 offset for this base station, in units of 64 PN chips.
- 9 CONFIG_MSG_SEQ - Configuration message sequence number.
 10 The base station shall set this field to CONFIG_SEQ
 11 (see 3.6.2.2).
- 12 NUM_GOI_REC - Number of GOI records included in this message.
 13 The base station shall set this field to the number of *General*
 14 *Overhead Information Message* records included in this
 15 message. The base station shall include atleast one General
 16 Overhead Information record in this message.
- 17 GOI_REC_TYPE - GOI record type.
 18 The base station shall set this field to the type of the *General*
 19 *Overhead Information Message* record allowed for
 20 transmission in the *Frequent General Overhead Message*
 21 according to table 3.7.2.3.2.42-1 and [30]¹²¹.
- 22 GOI_REC_LEN - The length of the GOI record length.
 23 The base station shall set this field to the number of octets in
 24 the GOI_REC field following the GOI_REC_LEN.

¹²¹ Further record types may be defined in [30].

1	GOI_REC	-	General Overhead Information record.
2			The base station shall set this record based on the record
3			types defined in table 3.7.2.3.2.42-1.
4	RESERVED	-	Reserved bits.
5			This field shall contain the number of bits required to make
6			the entire GOI_REC field an integer number of octets in
7			length. All bits of this field shall be set to zeros.
8			

1 3.7.3 f-dsch

2 During Traffic Channel operation, the base station sends signaling messages to the mobile
3 station using the f-dsch.

4

1 3.7.3.1 Reserved

2

1 3.7.3.2 Reserved

2

1 3.7.3.3 PDU Formats on the f-dsch

2 The signaling messages sent over the f-dsch are summarized in Table 3.7.3.3-1.

3

1 3.7.3.3.1 Reserved

2 3.7.3.3.2 Message Body Contents

3 The following sections specify the contents of the message body for each message that may
4 be sent on the f-dsch.

5

1 3.7.3.3.2.1 Order Message
2 MSG_TAG: ORDRM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	8 × ADD_RECORD_LEN
CON_REF_INCL	0 or 1
CON_REF	0 or 8

4

5 USE_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is specified
7 in this order.

8 If an explicit action time can be specified for this order code,
9 as shown in Table 3.7.4-1, the base station may set this field
10 to '1'; otherwise, the base station shall set this field to '0'.

11 ACTION_TIME - Action time.

12 If the USE_TIME field is set to '1', the base station shall set
13 this field to the System Time minus $FRAME_OFFSET_S \times 1.25$
14 ms, in units of 80 ms (modulo 64), at which the order is to
15 take effect. If the USE_TIME field is set to '0', the base station
16 shall set this field to '000000'.

17 ORDER - Order code.

18 The base station shall set this field to the ORDER code for
19 this type of *Order Message* (see 3.7.4).

20 ADD_RECORD_LEN - Additional record length.

21 The base station shall set this field to the number of octets in
22 the order-specific fields included in this message.

23 Order-specific fields - Order-specific fields.

24 The base station shall include order-specific fields as specified
25 in 3.7.4.

26 CON_REF_INCL - Connection reference included indicator.

1

3
4
5
6
7
8
9
10
11
12
13

If the order carried by this message is not a Call Control order (see 3.6.8), the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to '1' if the connection reference field is included in this message; otherwise, it shall set this field to '0'.

CON_REF – Connection reference.

If the CON_REF_INCL field is not included or is included but is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and shall set it to the value of the connection reference assigned to the service option connection of the call, to which this message corresponds.

1 3.7.3.3.2.2 Authentication Challenge Message
2 MSG_TAG: AUCM

3

Field	Length (bits)
RANDU	24
GEN_CMEAKEY	1

4

5 RANDU - Random challenge data.

6 The base station shall set this field as specified in 2.3.12.1.4.

7 GEN_CMEAKEY - Generate CMEAKEY indicator.

8 The base station shall set this field to '1' if it wants the MS to
9 generate the CMEAKEY during the Unique Challenge-
10 Response procedure (see 2.3.12.1.4); otherwise, the base
11 station shall set this field to '0'.

12

14

1 3.7.3.3.2.3 Alert With Information Message
 2 MSG_TAG: AWIM

3

Field	Length (bits)
-------	---------------

Zero or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

4

5 The base station shall include occurrences of the following three-field record as specified in
 6 3.7.5.

7 RECORD_TYPE - Information record type.

8 The base station shall set this field as specified in 3.7.5.

9 RECORD_LEN - Information record length.

10 The base station shall set this field to the number of octets in
 11 the type-specific fields included in this record.

12 Type-specific fields - Type-specific fields.

13 The base station shall include type-specific fields as specified
 14 in 3.7.5.

15

1 3.7.3.3.2.4 Data Burst Message
 2 MSG_TAG: DBM

3

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHAR _i	8
-------------------	---

} (NUM_FIELDS)

4

5 MSG_NUMBER - Message number.

6 The base station shall set this field to the number of this
 7 message within the data burst stream.

8 BURST_TYPE - Data burst type.

9 The base station shall set the value of this field for the type of
 10 this data burst as defined in [30]. If the base station sets this
 11 field equal to '111110', it shall set the first two CHAR_i fields of
 12 this message equal to the
 13 EXTENDED_BURST_TYPE_INTERNATIONAL field as
 14 described in the definition of CHAR_i below. If the base
 15 station sets this field equal to '111111', it shall set the first
 16 two CHAR_i fields of this message equal to the
 17 EXTENDED_BURST_TYPE as described in the definition of
 18 CHAR_i below.

19 NUM_MSGS - Number of messages in the data burst stream.

20 The base station shall set this field to the number of
 21 messages in this data burst stream.

22 NUM_FIELDS - Number of characters in this message.

23 The base station shall set this field to the number of
 24 occurrences of the CHAR_i field included in this message.

25 CHAR_i - Character.

26 The base station shall include NUM_FIELDS occurrences of
 27 this field. The base station shall set these fields to the
 28 corresponding octet of the data burst stream.

9
10
11
12
13
14
15

If the BURST_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED_BURST_TYPE_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED_BURST_TYPE_INTERNATIONAL field shall specify the COUNTRY_BURST_TYPE. The base station shall set the value of the COUNTRY_BURST_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	8 × (NUM_FIELDS – 2)

1

2

SID - System identification.

3

The base station shall set this field to the system identification number for this wireless system (see 2.6.5.2).

4

5

NID - Network identification.

6

This field serves as a sub-identifier of a system as defined by the owner of the SID.

7

1			The base station shall set this field to the network
2			identification number for this network (see 2.6.5.2).
3	SRCH_WIN_A	-	Search window size for the Active Set and Candidate Set.
4			The base station shall set this field to the window size
5			parameter shown in Table 2.6.6.2.1-1 corresponding to the
6			number of PN chips that the mobile station is to search for
7			pilots in the Active Set and Candidate Set.
8	SRCH_WIN_N	-	Search window size for the Neighbor Set.
9			The base station shall set this field to the window size
10			parameter shown in Table 2.6.6.2.1-1 corresponding to the
11			number of PN chips that the mobile station is to search for
12			pilots in the Neighbor Set.
13	SRCH_WIN_R	-	Search window size for the Remaining Set.
14			The base station shall set this field to the window size
15			parameter shown in Table 2.6.6.2.1-1 corresponding to the
16			number of PN chips that the mobile station is to search for
17			pilots in the Remaining Set.
18	T_ADD	-	Pilot detection threshold.
19			This value is used by the mobile station to trigger the transfer
20			of a pilot from the Neighbor Set or Remaining Set to the
21			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
22			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot Strength</i>
23			<i>Measurement Message</i> initiating the handoff process (see
24			2.6.6.2.5.2).
25			The base station shall set this field to the pilot detection
26			threshold, expressed as an unsigned binary number equal to
27			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
28	T_DROP	-	Pilot drop threshold.
29			This value is used by the mobile station to start a handoff
30			drop timer for pilots in the Active Set and the Candidate Set
31			(see 2.6.6.2.3).
32			The base station shall set this field to the pilot drop threshold,
33			expressed as an unsigned binary number equal to
34			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
35	T_COMP	-	Active Set versus Candidate Set comparison threshold.
36			The mobile station transmits a <i>Pilot Strength Measurement</i>
37			<i>Message</i> or an <i>Extended Pilot Strength Measurement Message</i>
38			when the strength of a pilot in the Candidate Set exceeds that
39			of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
40			The base station shall set this field to the threshold Candidate
41			Set pilot to Active Set pilot ratio, in units of 0.5 dB.
42	T_TDROP	-	Drop timer value.

1			Timer value after which an action is taken by the mobile
2			station for a pilot that is a member of the Active Set or
3			Candidate Set, and whose strength has not become greater
4			than T_DROP. If the pilot is a member of the Active Set, a
5			<i>Pilot Strength Measurement Message</i> or an <i>Extended Pilot</i>
6			<i>Strength Measurement Message</i> is issued. If the pilot is a
7			member of the Candidate Set, it will be moved to the Neighbor
8			Set.
9			The base station shall set this field to the T_TDROD value
10			shown in Table 2.6.6.2.3-1 corresponding to the drop timer
11			value to be used by the mobile station.
12	NGHBR_MAX_AGE	-	Maximum age for retention of Neighbor Set members.
13			The mobile station drops neighbor set members whose AGE
14			count exceeds this field.
15			The base station shall set this field to the Neighbor Set
16			maximum age retention value (see 2.6.6.2.6.3).
17	P_REV	-	Protocol revision level.
18			The base station shall set this field to the base station
19			protocol revision level.
20	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
21			Active Set, or dropping a pilot from the Active Set (see
22			2.6.6.2.3 and 2.6.6.2.5.2).
23			The base station shall set this field as an unsigned binary
24			number.
25	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
26			the Active Set (see 2.6.6.2.5.2).
27			The base station shall set this field as a two's complement
28			signed binary number, in units of 0.5 dB.
29	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
30			from the Active Set (see 2.6.6.2.3).
31			The base station shall set this field as a two's complement
32			signed binary number, in units of 0.5 dB.
33	PACKET_ZONE_ID	-	Packet data services zone identifier.
34			If the base station supports a packet data service zone, the
35			base station shall set this field to its non-zero packet data
36			services zone identifier.
37			If the base station does not support a packet data service
38			zone, the base station shall set this field to '00000000'.
39	EXTENSION	-	Indicator that extension fields are present.
40			If Reverse Supplemental Code Channel or Reverse Supple-
41			mental Channel system parameters are included in this
42			message, the base station shall set this field to '1'; otherwise,
43			the base station shall set this field to '0'.
44	T_MULCHAN	-	<i>Supplemental Channel Request Message</i> pilot strength
45			reporting offset.

1			If EXTENSION is set to '1', the base station shall include this
2			field and set this field to the threshold offset that the mobile
3			station is to use when reporting neighbor pilot strength
4			measurements in a <i>Supplemental Channel Request Message</i> .
5			The mobile station is to interpret this field as an offset to
6			T_ADD ranging from 0.5 dB (corresponding to T_MULCHAN =
7			'000') to 4.0 dB (corresponding to T_MULCHAN = '111') in 0.5
8			dB increments.
9	BEGIN_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
10			Channels at the beginning of transmission on Reverse
11			Supplemental Code Channel.
12			If EXTENSION is set to '1', the base station shall include this
13			field and set this field to the number of Reverse Supplemental
14			Code Channel preamble frames that the mobile station is to
15			send when beginning transmission on Reverse Supplemental
16			Code Channels.
17	RESUME_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
18			Channels at the resumption of transmission.
19			If EXTENSION is set to '1', the base station shall include this
20			field and set this field to the number of Reverse Supplemental
21			Code Channel preamble frames that the mobile station is to
22			send when resuming transmission on a Reverse Supplemental
23			Code Channel following an autonomous suspension of
24			transmission on an allocated Supplemental Code Channel.
25	T_SLOTTED_INCL	-	Slotted timer value included indicator.
26			The base station shall set this field to '1' if the slotted timer
27			value is included; otherwise, the base station shall set this
28			field to '0'.
29	T_SLOTTED	-	Slotted timer value
30			If T_SLOTTED_INCL is set to '1', the base station shall include
31			this field and set this field to the value of the T _{MS_Slotted}
32			timer to be used by the mobile station in units of 80 ms;
33			otherwise, the base station shall omit this field.
34	ENC_SUPPORTED	-	Encryption fields included.
35			The base station shall set this field to '1' in the encryption
36			related fields are included; otherwise the base station shall
37			set this field to '0'.
38	SIG_ENCRYPT_SUP	-	Signaling Encryption supported indicator.
39			If ENC_SUPPORTED is equal to '1', the base station shall
40			include this field; otherwise, the base station shall omit this
41			field. If this field is included, this field indicates which
42			signaling encryption algorithms are supported by the base
43			station.

1 This field consists of the subfields shown in Table 2.7.1.3.2.1-
2 5.

3 If this field is included, the base station shall set the subfields
4 as follows:

5 The base station shall set the CMEA subfield to '1'.

6 The base station shall set each other subfield to '1' if the
7 corresponding signaling algorithm is supported by the base
8 station; otherwise, the base station shall set the subfield to
9 '0'.

10 The base station shall set the RESERVED subfield to '00000'.

11 **UI_ENCRYPT_SUP** – User information Encryption supported indicator.

12 If ENC_SUPPORTED is equal to '1', the base station shall
13 include this field; otherwise, the base station shall omit this
14 field. If this field is included, the base station shall set this
15 field to indicate the supported user information encryption
16 algorithms.

17 This field consists of the subfields shown in Table 2.7.1.3.2.4-
18 9.

19 The base station shall set each subfield to '1' if the
20 corresponding user information encryption algorithm is
21 supported by the base station; otherwise, the base station
22 shall set the subfield to '0'.

23 **CS_SUPPORTED** - Concurrent Services supported indicator.

24 If the base station supports concurrent services, the base
25 station shall set this field to '1'; otherwise, the base station
26 shall set this field to '0'.

27 **CHM_SUPPORTED** – Control Hold Mode supported indicator.

28 The base station shall set this field to '1' to indicate that the
29 base station supports the Control Hold Mode; otherwise, the
30 base station shall set this field to '0'.

31 **CDMA_OFF_TIME_REP_SUP_IND** – CDMA off time report supported indicator.

32 If the base station supports mobile station report for CDMA
33 off time information using the *CDMA Off Time Report Message*,
34 the base station shall set this field to '1'; otherwise, the base
35 station shall set this field to '0'.

36 **CDMA_OFF_TIME_REP_THRESHOLD_UNIT**– CDMA off time report threshold unit

37 If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
38 station shall omit this field; otherwise, the base station shall
39 include this field and set it as follows:

40 The base station shall set this field to the time unit used in
41 CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
42 3.7.2.3.2.13-5

43 **CDMA_OFF_TIME_REP_THRESHOLD** – CDMA off time report threshold

1			If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
2			station shall omit this field; otherwise, the base station shall
3			include this field and set it as follows:
4			The base station shall set this field to the time in units of
5			CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
6			mobile station goes away from the CDMA traffic channel
7			longer than this value, the mobile station is to send a <i>CDMA</i>
8			<i>Off Time Report Message</i> .
9	T_TDROP_RANGE_INCL	-	Drop timer range value included indicator.
10			The base station shall set this field to '1' if the
11			T_TDROP_RANGE field is included in this message; otherwise,
12			the base station shall set this field to '0'.
13	T_TDROP_RANGE	-	Drop timer range value.
14			Timer range value to use in association with the T_TDROP
15			parameter when determining the drop timer expiration.
16			If T_TDROP_RANGE_INCL is set to '0', the base station shall
17			omit this field; otherwise, the base station shall set this field
18			to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
19			corresponding to the timer expiration range value to be used
20			by the mobile station.
21	FOR_PDCH_SUPPORTED	-	Forward Packet Data Channel supported indicator.
22			If the base station supports Forward Packet Data Channel, the
23			base station shall set this field to '1'; otherwise, the base station
24			shall set this field to '0'.
25	PDCH_CHM_SUPPORTED	-	PDCH Control Hold Mode supported indicator.
26			If FOR_PDCH_SUPPORTED is set to '0', the base station shall
27			omit this field; otherwise, the base station shall include this
28			field and set it as follows:
29			The base station shall set this field to '1' to indicate that the
30			base station supports the PDCH Control Hold Mode; otherwise,
31			the base station shall set this field to '0'.
32	SDB_SUPPORTED	-	Short Data Burst supported indicator.
33			The base station shall set this field to '1' if the mobile station
34			is permitted to send a Short Data Burst; otherwise, the base
35			station shall set this field to '0'.
36	MOB_QOS	-	Indicator granting permission to the mobile station to request
37			QoS parameter settings in the <i>Origination Message</i> ,
38			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
39			<i>Message</i> .
40			If CS_SUPPORTED is equal to '0', the base station shall omit
41			this field; otherwise the base station shall include this field
42			and shall set it as follows:
43			The base station shall set this field to '1', if the mobile station
44			is allowed to include a QoS record in the <i>Origination Message</i> ,
45			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
46			<i>Message</i> ; otherwise, the base station shall set this field to '0'.

- 1 MS_INIT_POS_LOC_SUP_IND- Mobile station initiated position location determination
2 supported indicator.
- 3 If the base station supports mobile station initiated position
4 determination, the base station shall set this field to '1';
5 otherwise, the base station shall set this field to '0'.
- 6 PZ_HYST_ENABLED - Packet zone hysteresis enabled.
- 7 If the PACKET_ZONE_ID field is set to '00000000', the base
8 station shall omit this field; otherwise, the base station shall
9 include this field and set it as follows:
- 10 If the packet zone hysteresis feature is to be enabled at the
11 mobile station, the base station shall set this field to '1';
12 otherwise, the base station shall set this field to '0'.
- 13 PZ_HYST_INFO_INCL - Packet zone hysteresis information included indicator.
- 14 If the PZ_HYST_ENABLED field is included and is set to '1',
15 the base station shall include this field and set it as follows;
16 otherwise, the base station shall omit this field.
- 17 If the base includes the PZ_HYST_LIST_LEN,
18 PZ_HYST_ACT_TIMER and packet zone hysteresis timer
19 related fields, the base station shall set this field to '1';
20 otherwise, the base station shall set this field to '0'.
- 21 PZ_HYST_LIST_LEN - Packet zone hysteresis list length.
- 22 If the PZ_HYST_INFO_INCL field is included and is set to '1',
23 the base station shall include this field and set it as follows;
24 otherwise, the base station shall omit this field.
- 25 The base station shall set this field to the length of the packet
26 zone hysteresis list. This field shall be within the range '0001'
27 through '1111', inclusive.
- 28 PZ_HYST_ACT_TIMER - Packet zone hysteresis activation timer.
- 29 If the PZ_HYST_INFO_INCL field is included and is set to '1',
30 the base station shall include this field and set it as follows;
31 otherwise, the base station shall omit this field.
- 32 The base station shall set to the value of the packet zone
33 hysteresis activation timer (in units of seconds). This field
34 shall be within the range '00000001' through '11111111',
35 inclusive.
- 36 PZ_HYST_TIMER_MUL - Packet zone hysteresis timer multiplier.
- 37 If the PZ_HYST_INFO_INCL field is included and is set to '1',
38 the base station shall include this field and set it as follows;
39 otherwise, the base station shall omit this field.
- 40 The base station shall set the field to x , where $x \times 8^y$ seconds
41 is the value of the hysteresis timer and y is the value
42 indicated in the PZ_HYST_TIMER_EXP field. The base station
43 shall set this field to a value that is between 1 and 7
44 inclusive. The value 0 is reserved.
- 45 PZ_HYST_TIMER_EXP - Packet zone hysteresis timer exponent.

1		If the PZ_HYST_INFO_INCL field is included and is set to '1',
2		the base station shall include this field and set it as follows;
3		otherwise, the base station shall omit this field.
4		The base station shall set the field to y, where $x \times 8^y$ seconds
5		is the value of the hysteresis timer and x is the value
6		indicated in the PZ_HYST_TIMER_MUL field. The base station
7		shall set this field to a value that is between 0 and 4
8		inclusive. All the other values are reserved.
9	BCMC_ON_TRAFFIC_SUP	- BCMC on traffic channel supported indicator.
10		The base station shall set this field to '1' to indicate that the
11		BCMC feature is supported on traffic channel; otherwise, the
12		base station shall set this field to '0'.
13	AUTO_REQ_TRAF_ALLOWED_IND	- Autonomous BCMC request on traffic channel
14		allowed indicator.
15		If the BCMC_ON_TRAFFIC_SUP field is set to '0', the base
16		station shall omit this field; otherwise, the base station shall
17		include this field and set it as follows:
18		The base station shall set this field to '1' to indicate that the
19		mobile station is allowed to request for a BCMC flow
20		autonomously on traffic; otherwise, the base station shall set
21		this field to '0'.
22	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
23		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
24		omit this field; otherwise, the base station shall include this
25		field and set it as follows.
26		If the base station supports the Reverse Packet Data Channel
27		(R-PDCH), the base station shall set this field to '1'; otherwise,
28		the base station shall set this field to '0'.
29	MAX_ADD_SERV_INSTANCE	- Maximum number of additional service reference
30		identifiers allowed in origination
31		If the CS_SUPPORTED field is set to '0', the base station shall
32		omit this field; otherwise, the base station shall include this
33		field and set it as follows:
34		The base station shall set this field to the maximum number
35		of additional service reference identifiers that can be included
36		in the <i>Origination Message</i> or <i>Enhanced Origination Message</i> .
37	USE_CH_CFG_RRM	- Channel configuration request allowed indicator.
38		The base station shall set this field to '1' to indicate that the
39		mobile station is permitted to include the CH_IND and
40		EXT_CH_IND fields in the <i>Resource Request Message</i> , and the
41		<i>Resource Request Mini Message</i> ; otherwise, the base station
42		shall set this field to '0'.
43		
44		

1 3.7.3.3.2.8 Neighbor List Update Message
 2 MSG_TAG: NLUM

3

Field	Length (bits)
PILOT_INC	4

One or more occurrences of the following field:

{

NGHBR_PN	9
----------	---

}

4

5 PILOT_INC - Pilot PN sequence offset index increment.

6 The mobile station searches for Remaining Set pilots at pilot
 7 PN sequence offset index values that are multiples of this
 8 value.

9 The base station shall set this field to the pilot PN sequence
 10 increment, in units of 64 PN chips, that the mobile station is
 11 to use for searching the Remaining Set. The base station
 12 should set this field to the largest increment such that the
 13 pilot PN sequence offsets of all its neighbor base stations are
 14 integer multiples of that increment.

15 NGHBR_PN - Neighbor pilot PN sequence offset index.

16 The base station shall include one occurrence of this field for
 17 each pilot in its neighbor list. The base station shall set this
 18 field to the pilot's PN sequence offset, in units of 64 PN chips.
 19 The base station shall include no more than 20 occurrences
 20 of this field.

21

1 3.7.3.3.2.9 Send Burst DTMF Message
 2 MSG_TAG: BDTMFM

3

Field	Length (bits)
NUM_DIGITS	8
DTMF_ON_LENGTH	3
DTMF_OFF_LENGTH	3

NUM_DIGITS occurrences of the following field:

{ (NUM_DIGITS)

DIGIT _i	4
--------------------	---

} (NUM_DIGITS)

CON_REF_INCL	1
CON_REF	0 or 8

4

5

NUM_DIGITS - Number of DTMF digits.

6

The base station shall set this field to the number of DTMF digits included in this message.

7

8

DTMF_ON_LENGTH - DTMF pulse width code.

9

The base station shall set this field to the DTMF_ON_LENGTH value shown in Table 2.7.2.3.2.7-1 corresponding to the requested pulse width of the DTMF pulse to be generated by the mobile station.

10

11

12

13

DTMF_OFF_LENGTH - DTMF interdigit interval code.

14

The base station shall set this field to the DTMF_OFF_LENGTH value shown in Table 2.7.2.3.2.7-2 corresponding to the requested minimum interdigit interval between DTMF pulses to be generated by the mobile station.

15

16

17

18

DIGIT_i - DTMF digit.

19

The base station shall include one occurrence of this field for each DTMF digit to be generated by the mobile station. The base station shall set each occurrence of this field to the code value shown in Table 2.7.1.3.2.4-4 corresponding to the dialed digit.

20

21

22

23

24

CON_REF_INCL - Connection reference included indicator.

25

The base station shall set this field to '1' if the connection reference field is included in this message; otherwise, it shall set this field to '0'.

26

27

28

CON_REF - Connection reference.

1
2
3
4
5
6

If the CON_REF_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and shall set it to the value of the connection reference assigned to the service option connection of the call, to which this message corresponds.

1 3.7.3.3.2.10 Power Control Parameters Message
 2 MSG_TAG: PCNPM

3

Field	Length (bits)
PWR_REP_THRESH	5
PWR_REP_FRAMES	4
PWR_THRESH_ENABLE	1
PWR_PERIOD_ENABLE	1
PWR_REP_DELAY	5

4

5 PWR_REP_THRESH - Power control reporting threshold.
 6 The base station shall set this field to the number of bad
 7 frames (see [2]) to be received in a measurement period on the
 8 channel which carries the Power Control Subchannel before
 9 the mobile station is to generate a *Power Measurement Report*
 10 *Message* (see 2.6.4.1.1). If the base station sets
 11 PWR_THRESH_ENABLE to '1', it shall not set this field to
 12 '00000'.

13 PWR_REP_FRAMES - Power control reporting frame count.
 14 The base station shall set this field to the value such that the
 15 number given by
 16
$$\lfloor 2^{(PWR_REP_FRAMES/2)} \times 5 \rfloor$$
 frames
 17 is the number of frames over which the mobile station is to
 18 count frame errors.

19 PWR_THRESH_ENABLE - Threshold report mode indicator.
 20 If the mobile station is to generate threshold *Power*
 21 *Measurement Report Messages*, the base station shall set this
 22 field to '1'. If the mobile station is not to generate threshold
 23 *Power Measurement Report Messages*, the base station shall
 24 set this field to '0'.

25 PWR_PERIOD_ENABLE - Periodic report mode indicator.
 26 If the mobile station is to generate periodic *Power*
 27 *Measurement Report Messages*, the base station shall set this
 28 field to '1'. If the mobile station is not to generate periodic
 29 *Power Measurement Report Messages*, the base station shall
 30 set this field to '0'.

31 PWR_REP_DELAY - Power report delay.
 32 The period that the mobile station waits following a *Power*
 33 *Measurement Report Message* before restarting frame counting
 34 for power control purposes.

1
2
3

The base station shall set this field to the power report delay value, in units of 4 frames (see 2.6.4.1.1).

1 3.7.3.3.2.11 Retrieve Parameters Message
 2 MSG_TAG: RTPM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following field:

{

PARAMETER_ID	16
--------------	----

}

4

5 PARAMETER_ID - Parameter identification.

6 The base station can request the mobile station to report any
 7 parameter specified in Table E-1.

8 The base station shall include one occurrence of this field for
 9 each parameter requested. The base station shall set this
 10 field to the parameter identification number specified in
 11 Table E-1 corresponding to the parameter requested.

12

1 3.7.3.3.2.12 Set Parameters Message
 2 MSG_TAG: STPM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following record:

{

PARAMETER_ID	16
PARAMETER_LEN	10
PARAMETER	PARAMETER_LEN + 1

}

4

5 The base station shall include one occurrence of the following three-field record for each
 6 parameter to be set.

7 PARAMETER_ID - Parameter identification.

8 The base station shall set this field to the identification shown
 9 in Table E-1 corresponding to the settable parameter to be
 10 set.

11 PARAMETER_LEN - Parameter length.

12 The base station shall set this field to the length shown in
 13 Table E-1 corresponding to the parameter to be set.

14 PARAMETER - Parameter value.

15 The base station shall set this field to the value of the
 16 parameter specified by the PARAMETER_ID field.

17

1 3.7.3.3.2.14 Flash With Information Message
 2 MSG_TAG: FWIM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

4

5 The base station shall include occurrences of the following three-field record as specified in
 6 3.7.5.

7 RECORD_TYPE - Information record type.

8 The base station shall set this field as specified in 3.7.5.

9 RECORD_LEN - Information record length.

10 The base station shall set this field to the number of octets in
 11 the type-specific fields included in this record.

12 Type-specific fields - Type-specific fields.

13 The base station shall include type-specific fields as specified
 14 in 3.7.5.

15

1 3.7.3.3.2.15 Mobile Station Registered Message
 2 MSG_TAG: MSRM

3

Field	Length (bits)
SID	15
NID	16
REG_ZONE	12
TOTAL_ZONES	3
ZONE_TIMER	3
MULT_SIDS	1
MULT_NIDS	1
BASE_LAT	22
BASE_LONG	23
REG_DIST	11

4

5

SID - System identification.

6

The base station shall set this field to the system identification number for this system.

7

8

NID - Network identification.

9

This field serves as a sub-identifier of a system as defined by the owner of the SID.

10

11

The base station shall set this field to the network identification number for this network. The NID value of 65,535 is reserved.

12

13

14

REG_ZONE - Registration zone.

15

The base station shall set this field to its registration zone number (see 2.6.5.1.5).

16

17

TOTAL_ZONES - Number of registration zones to be retained.

18

The base station shall set this field to the number of registration zones the mobile station is to retain for purposes of zone-based registration (see 2.6.5.1.5).

19

20

21

If zone-based registration is to be disabled, the base station shall set this field to '000'.

22

23

ZONE_TIMER - Zone timer length.

24

The base station shall set this field to the ZONE_TIMER value shown in Table 3.7.2.3.2.1-1 corresponding to the length of the zone registration timer to be used by mobile stations.

25

26

1	MULT_SIDS	-	Multiple SID storage indicator.
2			If mobile stations may store entries of SID_NID_LIST
3			containing different SIDs, the base station shall set this field
4			to '1'; otherwise the base station shall set this field to '0'.
5	MULT_NIDS	-	Multiple NID storage indicator.
6			If mobile stations may store multiple entries of SID_NID_LIST
7			having the same SID (with different NIDs), the base station
8			shall set this field to '1'; otherwise the base station shall set
9			this field to '0'.
10	BASE_LAT	-	Base station latitude.
11			The base station shall set this field to its latitude in units of
12			0.25 second, expressed as a two's complement signed number
13			with positive numbers signifying North latitudes. The base
14			station shall set this field to a value in the range -1296000 to
15			1296000 inclusive (corresponding to a range of -90° to +90°).
16	BASE_LONG	-	Base station longitude.
17			The base station shall set this field to its longitude in units of
18			0.25 second, expressed as a two's complement signed number
19			with positive numbers signifying East longitude. The base
20			station shall set this field to a value in the range -2592000 to
21			2592000 inclusive (corresponding to a range of -180° to
22			+180°).
23	REG_DIST	-	Registration distance.
24			If mobile stations are to perform distance-based registration,
25			the base station shall set this field to the non-zero "distance"
26			beyond which the mobile station is to re-register (see
27			2.6.5.1.4). If mobile stations are not to perform distance-
28			based registration, the base station shall set this field to 0.
29			

1 3.7.3.3.2.16 Status Request Message
 2 MSG_TAG: STRQM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	8 × QUAL_INFO_LEN
NUM_FIELDS	4

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

RECORD_TYPE	8
-------------	---

} (NUM_FIELDS)

4

5 QUAL_INFO_TYPE - Qualification information type.

6 The base station shall set this field to the value shown in
 7 Table 3.7.2.3.2.15-1 to show the inclusion of qualification
 8 information in the type-specific fields.

9 QUAL_INFO_LEN - Qualification information length.

10 The base station shall set this field to the number of octets
 11 included in the type-specific fields of the qualification
 12 information.

13 Type-specific fields - Type-specific fields.

14 The base station shall set these fields to the qualification
 15 information according to the QUAL_INFO_TYPE field.

16 If QUAL_INFO_TYPE is equal to '00000000', the type-specific
 17 fields are omitted.

18 If QUAL_INFO_TYPE is equal to '00000001', the base station
 19 shall use the following fixed-length format for the type-specific
 20 fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
RESERVED	3

21

22 If QUAL_INFO_TYPE is equal to '00000010', the base station
 23 shall use the following fixed-length format for the type-specific
 24 fields:

Type-specific Field	Length (bits)

20
21

BAND_CLASS - Band class.
The base station shall set this field to the CDMA band class, as specified in [30].

OP_MODE - Operating mode.
The base station shall set this field as shown in Table 3.7.2.3.2.15-3 to specify the operating mode qualification information.

RESERVED - Reserved bits.
The base station shall set this field to '000'.

NUM_FIELDS - Number of requested record fields in this message.
The base station shall set this field to the number of occurrences of RECORD_TYPE in this message.

The base station shall only request the status information records qualified by the included qualification information (see Table 2.7.4-1) in this message. The base station shall include one occurrence of the following field for each information record that is requested:

RECORD_TYPE - Information record type.
The base station shall set this field to the record type value shown in Table 2.7.4-1 corresponding to the information record requested.

5

1

Field	Length (bits)
ADD_LENGTH	3
Additional fields	8 × ADD_LENGTH

One or more occurrences of the following record:

{

PILOT_PN	9
PWR_COMB_IND	1
CODE_CHAN	8

}

2

3

USE_TIME - Use action time indicator.

4

This field indicates whether an explicit action time is specified in this message.

5

6

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

7

8

9

ACTION_TIME - Action time.

10

If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $FRAME_OFFSET_s \times 1.25$ ms, in units of 80 ms (modulo 64), at which the handoff is to take effect. If the USE_TIME field is set to '0', the base station shall set this field to '000000'.

11

12

13

14

15

HDM_SEQ - *Extended Handoff Direction Message* sequence number.

16

This field is used by the mobile station in the *Power Measurement Report Message* to identify the order in which the reported pilot strengths are sent.

17

18

19

The base station shall set this field as specified in 2.6.6.2.2.2.

20

SEARCH_INCLUDED - Pilot search parameters included.

21

If the mobile station is to change its pilot search parameters, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

22

23

24

SRCH_WIN_A - Search window size for the Active Set and Candidate Set.

25

If SEARCH_INCLUDED is set to '1', the base station shall include the field SRCH_WIN_A and set this field to the window size parameter shown in Table 2.6.6.2.1-1 corresponding to the number of PN chips that the mobile station is to search for pilots in the Active Set and Candidate Set; otherwise, the base station shall omit this field.

26

27

28

29

30

31

T_ADD - Pilot detection threshold.

- 1 This value is used by the mobile station to trigger the transfer
 2 of a pilot from the Neighbor Set or Remaining Set to the
 3 Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
 4 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
 5 *Measurement Message* initiating the handoff process (see
 6 2.6.6.2.5.2).
- 7 If SEARCH_INCLUDED is set to '1', the base station shall
 8 include the field T_ADD and set this field to the pilot detection
 9 threshold, expressed as an unsigned binary number equal to
 10 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 11 this field.
- 12 T_DROP - Pilot drop threshold.
- 13 This value is used by mobile stations to start a handoff drop
 14 timer for pilots in the Active Set and the Candidate Set (see
 15 2.6.6.2.3).
- 16 If SEARCH_INCLUDED is set to '1', the base station shall
 17 include the field T_DROP and set this field to the pilot drop
 18 threshold, expressed as an unsigned binary number equal to
 19 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 20 this field.
- 21 T_COMP - Active Set versus Candidate Set comparison threshold.
- 22 The mobile station transmits a *Pilot Strength Measurement*
 23 *Message* or an *Extended Pilot Strength Measurement Message*
 24 when the strength of a pilot in the Candidate Set exceeds that
 25 of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
- 26 If SEARCH_INCLUDED is set to '1', the base station shall
 27 include the field T_COMP and set this field to the threshold
 28 Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
 29 otherwise, the base station shall omit this field.
- 30 T_TDROP - Drop timer value.
- 31 Timer value after which an action is taken by the mobile
 32 station for a pilot that is a member of the Active Set or
 33 Candidate Set, and whose strength has not become greater
 34 than T_DROP. If the pilot is a member of the Active Set, a
 35 *Pilot Strength Measurement Message* or an *Extended Pilot*
 36 *Strength Measurement Message* is issued. If the pilot is a
 37 member of the Candidate Set, it will be moved to the Neighbor
 38 Set.
- 39 If SEARCH_INCLUDED is set to '1', the base station shall
 40 include the field T_TDROP and set this field to the T_TDROP
 41 value shown in Table 2.6.6.2.3-1 corresponding to the drop
 42 timer value to be used by the mobile station; otherwise, the
 43 base station shall omit this field.
- 44 HARD_INCLUDED - Hard handoff parameters included.

1 If the mobile station is to change FRAME_OFFSET,
 2 PRIVATE_LCM, ENCRYPT_MODE, SERV_NEG_TYPE,
 3 NOM_PWR_EXT, NUM_PREAMBLE, NOM_PWR,
 4 BAND_CLASS, or CDMA_FREQ, or the mobile station is to
 5 perform a reset of the acknowledgment procedures, or the
 6 mobile station is to reset Forward Traffic Channel power
 7 control counters, the base station shall set this field to '1';
 8 otherwise, the base station shall set this field to '0'.

9 FRAME_OFFSET - Frame offset.

10 The Forward and Reverse Traffic Channel frames are delayed
 11 $FRAME_OFFSET \times 1.25$ ms relative to system timing (see [2]).

12 If HARD_INCLUDED is set to '1', the base station shall
 13 include the field FRAME_OFFSET and set it to the Forward
 14 and Reverse Traffic Channel frame offset; otherwise, the base
 15 station shall omit this field.

16 PRIVATE_LCM - Private long code mask indicator.

17 This field is used to change the long code mask after a hard
 18 handoff.

19 If HARD_INCLUDED is set to '1', the base station shall
 20 include the field PRIVATE_LCM and set it as described below;
 21 otherwise, the base station shall omit this field.

22 If the private long code mask is to be used after the handoff,
 23 the base station shall set this field to '1'; otherwise, the base
 24 station shall set this field to '0'.

25 RESET_L2 - Reset acknowledgment procedures command.

26 This field is used to reset acknowledgment processing in the
 27 mobile station.

28 If HARD_INCLUDED is set to '1', the base station shall
 29 include the field RESET_L2 and set it as described below;
 30 otherwise, the base station shall omit this field.

31 If the field is included and the mobile station is to reset its
 32 acknowledgment procedures, the base station shall set this
 33 field to '1'; otherwise, the base station shall set this field to '0'.

34 RESET_FPC - Reset Forward Traffic Channel power control.

35 This field is used to reset the Forward Traffic Channel power
 36 control counters.

37 If HARD_INCLUDED is set to '1', the base station shall
 38 include the field RESET_FPC and set it as described below;
 39 otherwise, the base station shall omit this field.

40 The base station shall set this field to '0' if the Forward Traffic
 41 Channel power control counters are to be maintained after
 42 completion of the handoff. If the counters are to be initialized
 43 as specified in 2.6.4.1.1.1, then the base station shall set this
 44 field to '1'.

- 1 SERV_NEG_TYPE - Service negotiation type.
- 2 If HARD_INCLUDED is set to '1', the base station shall
- 3 include the field SERV_NEG_TYPE and set it as described
- 4 below; otherwise, the base station shall omit this field.
- 5 If the mobile station is to use service negotiation, the base
- 6 station shall set this field to '1'. If the mobile station is to use
- 7 service option negotiation, the base station shall set this field
- 8 to '0'.
- 9 ENCRYPT_MODE - Message encryption mode.
- 10 If HARD_INCLUDED is set to '1', the base station shall
- 11 include the field ENCRYPT_MODE and set it to the
- 12 ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2
- 13 corresponding to the encrypting mode that is to be used for
- 14 messages sent on the Forward and Reverse Traffic Channels,
- 15 as specified in 2.3.12.2; otherwise, the base station shall omit
- 16 this field.
- 17 NOM_PWR_EXT - Extended nominal transmit power.
- 18 If HARD_INCLUDED is set to '1', the base station shall
- 19 include this field and set it as described below; otherwise, the
- 20 base station shall omit this field.
- 21 If the mobile station is being handed off to a base station
- 22 operating in Band Class 0 or Band Class 3, the base station
- 23 shall set this field to '0'; otherwise, it shall set this field as
- 24 follows:
- 25 If the correction factor to be used by the mobile station in the
- 26 open loop power estimate is between -24 dB and -9 dB
- 27 inclusive, the base station shall set this field to '1'; otherwise
- 28 (the correction factor is in the range -8 dB to 7 dB inclusive),
- 29 the base station shall set this field to '0'.
- 30 NOM_PWR - Nominal transmit power offset.
- 31 If HARD_INCLUDED is set to '1', the base station shall
- 32 include the field NOM_PWR and set it to the correction factor
- 33 to be used by the mobile station in the open loop power
- 34 estimate, expressed as a two's complement value in units of 1
- 35 dB (see [2]); otherwise, the base station shall omit this field.
- 36 NUM_PREAMBLE - Traffic Channel preamble length.
- 37 If HARD_INCLUDED is set to '0', the base station shall omit
- 38 the NUM_PREAMBLE field; otherwise, the base station shall
- 39 include this field and set it to the length of Traffic Channel
- 40 preamble that the mobile station is to send when performing
- 41 a handoff; as follows:

1

111	16

- BAND_CLASS - Band class.
If HARD_INCLUDED is set to '1', the base station shall include the field BAND_CLASS and set it to the CDMA band class corresponding to the CDMA frequency assignment for the CDMA Channel as specified in [30]; otherwise, the base station shall omit this field.
- CDMA_FREQ - Frequency assignment.
If HARD_INCLUDED is set to '1', the base station shall include the field CDMA_FREQ and set it to the CDMA Channel number, in the specified CDMA band class, corresponding to the CDMA frequency assignment for the CDMA Channel as specified in [2]; otherwise, the base station shall omit this field.
- ADD_LENGTH - Number of octets in the additional fields.
The base station shall set this field to the number of octets included in the Additional fields. If Additional fields are not included in this message, the base station shall set this field to '000'.
- Additional fields - Additional fields.
If the ADD_LENGTH field is not equal to '000', the base station shall include the following fields as additional fields.

29

P_REV - Protocol revision level.

The base station shall set this field to the base station protocol revision level that the mobile station is to use after completion of the handoff.

The base station shall include one occurrence of the following three-field record for each member of the mobile station's new Active Set.

PILOT_PN - Pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this pilot in units of 64 PN chips.

PWR_COMB_IND - Power control symbol combining indicator.

If the Forward Traffic Channel associated with this pilot will carry the same closed-loop power control subchannel bits as that of the previous pilot in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'. For the first occurrence of this record in the message, the base station shall set this field to '0'.

CODE_CHAN - Code channel index.

The base station shall set this field to the code channel index (see [2]) that the mobile station is to use as the Forward Fundamental Channel associated with this pilot. If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base station shall set this field in the range 1 to 63 inclusive. If Radio Configuration 4, 6, 8, 11, or 12 is used, the base station shall set this field in the range 1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the base station shall set this field in the range 1 to 255 inclusive.

ACTION_TIME - Action time.

9

If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $\text{FRAME_OFFSET}_s \times 1.25$ ms, in units of 80 ms (modulo 64), at which the specified service configuration is to take effect. If the USE_TIME field is set to '0', the base station shall set this field to '000000'.

10

11

12

13

14

SERV_CON_SEQ - Connect sequence number.

15

The base station shall set this field to the connect sequence number pertaining to this connect message as specified in 3.6.4.1.2.1.2.

16

17

18

RESERVED - Reserved bits.

19

The base station shall set this field to '00'.

1 USE_OLD_SERV_CONFIG - Use stored service configuration indicator.
2
3 This field may be used by the base station to instruct the
4 mobile station to use the stored service configuration (that is,
5 both the Service Configuration information record and the
6 Non-negotiable Service Configuration information record).
7
8 If MOB_P_REV is less than seven, the base station shall set
9 this field to '00'.
10
11 If the base station had sent an *Extended Channel Assignment*
12 *Message* with GRANTED_MODE set to '11' or a service
13 configuration has been sent successfully to the mobile station
14 upon entering the *Traffic Channel Substate*, the base station
shall not set this field to '01' or '10'; otherwise, the base
station shall set this field according to Table 3.7.3.3.2.20-1.

1

Table 3.7.3.3.2.20-1. USE_OLD_SERV_CONFIG values

USE_OLD_SERV_CONFIG Field (binary)	Description
00	Mobile Station is to use the SCR and NNSCR included in this message
01	Mobile Station is to use the stored service configuration, where all service option connections are to be restored.
10	Mobile Station is to use the stored service configuration but with the modifications specified by the SCR and NNSCR included in this message
11	Mobile Station is to restore the service option connection record(s) indicated via the SR_ID or SR_ID_RESTORE_BITMAP field and release the service option connection record(s) indicated via the SR_ID_RELEASE_BITMAP.

2

3

SR_ID – Service reference identifier.

4

5

6

If the USE_OLD_SERV_CONFIG field is not set to '11', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

1			If the mobile station is to restore all remaining service option
2			connections from the stored service configuration, the base
3			station shall set this field to '111'; if the mobile station is to
4			restore more than one but not all remaining service option
5			connections from the stored service configuration, the base
6			station shall set this field to '000'; otherwise, the base station
7			shall set this field to the service reference identifier
8			corresponding to the service option connection to be restored.
9	SR_ID_RESTORE_BITMAP	-	Bitmap of service reference identifiers to be restored.
10			If the SR_ID field is included and set to '000', the base station
11			shall include this field and set it as follows; otherwise, the
12			base station shall omit this field.
13			This field consists of the subfields defined in Table
14			3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
15			indicate that the mobile station is to restore the service option
16			connection of the corresponding service reference identifier;
17			otherwise, the base station shall set the subfield to '0' to
18			indicated that the service option connection of the
19			corresponding service reference identifier is not affected.
20	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
21			indicator.
22			The base station shall set this field to '1' if the SYNC_ID field
23			is included in this message; otherwise, the base station shall
24			set this field to '0'.
25			If MOB_P_REV is less than seven or if MOB_P_REV is less
26			than 11 and USE_OLD_SERV_CONFIG field is set to '01' or
27			'11', the base station shall set this field to '0'.
28	SYNC_ID_LEN	-	Service Configuration synchronization identifier length.
29			If the SYNC_ID_INCL field is set to '0', the base station shall
30			omit this field; otherwise, the base station shall include this
31			field and set it as follows:
32			The base station shall set this field to the length (in octets) of
33			the SYNC_ID field included in this message. The base station
34			shall set this field to a value larger than zero.
35	SYNC_ID	-	Service Configuration synchronization identifier.
36			If the SYNC_ID_INCL field is set to '0', the base station shall
37			omit this field; otherwise, the base station shall include this
38			field and set it as follows:
39			The base station shall set this field to the synchronization
40			identifier corresponding to the service configuration conveyed
41			by this message.
42	RECORD_TYPE	-	Information record type.

1			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
2			
3			
4			The base station shall set this field to the record type value shown in Table 3.7.5-1 corresponding to the Service Configuration information record.
5			
6			
7	RECORD_LEN	-	Information record length.
8			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
9			
10			
11			The base station shall set this field to the number of octets included in the type-specific fields of the Service Configuration information record.
12			
13			
14	Type-specific fields	-	Type-specific fields.
15			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
16			
17			
18			The base station shall set these fields as specified in 3.7.5.7 for the Service Configuration information record.
19			
20	RECORD_TYPE	-	Information record type.
21			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
22			
23			
24			The base station shall set this field to the record type value shown in Table 3.7.5-1 corresponding to the Non-Negotiable Service Configuration information record.
25			
26			
27	RECORD_LEN	-	Information record length.
28			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
29			
30			
31			The base station shall set this field to the number of octets included in the type-specific fields of the Non-Negotiable Service Configuration information record.
32			
33			
34	Type-specific fields	-	Type-specific fields.
35			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base station shall omit this field; otherwise the base station shall include this field and set it as follows.
36			
37			
38			The base station shall set these fields as specified in 3.7.5.20 for the Non-Negotiable Service Configuration information record.
39			
40			
41	CC_INFO_INCL	-	Call Control information included indicator.
42			If the USE_OLD_SERV_CONFIG field is set to '01', '10', or '11', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
43			
44			

1 The base station shall set this field to '1' if Call Control related
2 parameters (to assign new call(s)) are included in this
3 message; otherwise, the base station shall set this field to '0'.

4 NUM_CALLS_ASSIGN - Number of call assignments.
5 If the CC_INFO_INCL field is not included or is included but is
6 set to '0', the base station shall omit this field; otherwise, the
7 base station shall include this field and set it as follows:
8 The base station shall set this field to the number of new call
9 assignments included in this message.

10 The base station shall include NUM_CALLS_ASSIGN occurrences of the following variable
11 length record.

12 CON_REF - Connection reference.
13 The base station shall set this field to the connection
14 reference of the service option connection corresponding to
15 this call.

16 RESPONSE_IND - Response indicator.
17 The base station shall set this field to '1' if this call
18 assignment is a response to an *Enhanced Origination Message*
19 from the mobile station; otherwise, the base station shall set
20 this field to '0'.

21 TAG - Transaction identifier.
22 If the RESPONSE_IND field is set to '0', the base station shall
23 omit this field; otherwise, the base station shall include this
24 field and set it as follows:
25 The base station shall set this field to the value of the TAG
26 field received in the *Enhanced Origination Message* to which
27 this call assignment is the response.

28 BYPASS_ALERT_ANSWER - Bypass alert indicator.
29 If the RESPONSE_IND field is set to '1', the base station shall
30 omit this field; otherwise, the base station shall include this
31 field and set it as follows:
32 If the mobile station is to bypass the Waiting for Order
33 Substate and the Waiting for Mobile Station Answer Substate
34 for this call, the base station shall set this field to '1';
35 otherwise, the base station shall set this field to '0'.

36 USE_TYPE0_PLCM - Use TYPE0 PLCM indicator.
37 If the mobile station is to start using the PLCM defined by
38 PLCM_TYPE of '0000' when P_REV_IN_USE is less than 11 or
39 '0100' when P_REV_IN_USE is greater than or equal to 11 (see
40 Table 3.7.2.3.2.21-5), the base station shall set this field to
41 '1'. If the mobile station is to continue using the current long
42 code mask, the base station shall set this field to '0'.

1 SYNC_ID_BS_INITIATED_IND - SYNC_ID base station initiated indicator.

2 If the SYNC_ID_INCL field is set to '1' and the
3 USE_OLD_SERV_CONFIG field is included and is set to '10',
4 then the base station shall include this field and set it as
5 follows; otherwise, the base station shall omit this field.

6 If the SYNC_ID included in this message is initiated by the
7 base station and is to be used by mobile station to restore the
8 stored configuration, then the base station shall set this field
9 to '1'; otherwise the base station shall set this field to '0'.

10 SR_ID_RELEASE_BITMAP_INCL - SR_ID release bitamp included indicator.

11 If the USE_OLD_SERV_CONFIG field is not set to '11', the
12 base station shall omit this field; otherwise, the base station
13 shall include this field and set it as follows:

14 If SR_ID_RELEASE_BITMAP is included, base station shall set
15 this field to '1'; otherwise, base station shall set this field to
16 '0'.

17 SR_ID_RELEASE_BITMAP - SR_ID release bitmap.

18 If the SR_ID_RELEASE_BITMAP_INCL field is not included or
19 is included and is set to '0', the base station shall omit this
20 field; otherwise, the base station shall include this field and
21 set it as follows:

22 This field consists of the subfields defined in Table
23 3.7.3.3.2.20-2. The base station shall set a subfield to '1' to
24 indicate that the mobile station is to release the service option
25 connection of the corresponding service reference identifier;
26 otherwise, the base station shall set the subfield to '0' to
27 indicated that the service option connection of the
28 corresponding service reference identifier is not affected.

29 The base station shall not indicate the mobile station to
30 restore and release the same SR_ID using this message.

31 **Table 3.7.3.3.2.20-2. SR_ID_RELEASE_BITMAP Subfields.**

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	sr_id 1 to be released
SR_ID_2	1	sr_id 2 to be released
SR_ID_3	1	sr_id 3 to be released
SR_ID_4	1	sr_id 4 to be released
SR_ID_5	1	sr_id 5 to be released
SR_ID_6	1	sr_id 6 to be released

32

33

1 3.7.3.3.2.21 Service Option Control Message
 2 MSG_TAG: SOCM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
CON_REF	8
SERVICE_OPTION	16
CTL_REC_LEN	8
Type-specific fields	8 × CTL_REC_LEN

4

5 USE_TIME - Use action time indicator.
 6 This field indicates whether an explicit action time is specified
 7 in this message.
 8 If an explicit action time is specified in this message, the base
 9 station shall set this field to '1'; otherwise, the base station
 10 shall set this field to '0'.

11 ACTION_TIME - Action time.
 12 If the USE_TIME field is set to '1', the base station shall set
 13 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 14 ms, in units of 80 ms (modulo 64), at which the message is to
 15 take effect. If the USE_TIME field is set to '0', the base station
 16 shall set this field to '000000'.

17 CON_REF - Service option connection reference.
 18 The base station shall set this field to the reference for the
 19 service option connection.

20 SERVICE_OPTION - Service option.
 21 The base station shall set this field to the service option in
 22 use with the service option connection.

23 CTL_REC_LEN - Service option control record length.
 24 The base station shall set this field to the number of octets
 25 included in the type-specific fields of this service option
 26 control record.

27 Type-specific fields - Type-specific fields.
 28 The base station shall set these fields as specified by the
 29 requirements for the service option, which are defined
 30 external to this specification. See relevant service option
 31 specification.

32

1 3.7.3.3.2.22 TMSI Assignment Message
 2 MSG_TAG: TASM

3

Field	Length (bits)
TMSI_ZONE_LEN	4
TMSI_ZONE	8 × TMSI_ZONE_LEN
TMSI_CODE	32
TMSI_EXP_TIME	24

4

- 5 TMSI_ZONE_LEN - TMSI zone length.
 6 The base station shall set this field to the number of octets
 7 included in the TMSI_ZONE. The base station shall set this
 8 field to a value in the range 1 to 8 inclusive.
- 9 TMSI_ZONE - TMSI zone.
 10 The base station shall set this field to the TMSI zone number,
 11 as specified in [27].
- 12 TMSI_CODE - Temporary mobile station identity code.
 13 The base station shall set this field to the 32-bit TMSI code
 14 assigned to the mobile station.
 15 If the base station is to deassign the TMSI, the base station
 16 shall set all the bits in this field to '1'.
- 17 TMSI_EXP_TIME - TMSI expiration time.
 18 The base station shall set this field to the System Time in the
 19 units of $80 \text{ ms} \times 2^{12}$ when the TMSI is to expire.
 20

1 3.7.3.3.2.23 Service Redirection Message
 2 MSG_TAG: SRDM

3

Field	Length (bits)
RETURN_IF_FAIL	1
DELETE_TMSI	1
REDIRECT_TYPE	1

One or more occurrences of the following field:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

4

5 RETURN_IF_FAIL - Return if fail indicator.

6 The base station shall set this field to '1' if the mobile station
 7 is required to return to the system from which it is being
 8 redirected upon failure to obtain service using the redirection
 9 criteria specified in this message; otherwise, the base station
 10 shall set this field to '0'.

11 DELETE_TMSI - Delete TMSI indicator.

12 The base station shall set this field to '1' if the mobile station
 13 is required to delete the TMSI assigned to the mobile station;
 14 otherwise, the base station shall set this field to '0'.

15 REDIRECT_TYPE - Redirect indicator.

16 The base station shall set this field to the REDIRECT_TYPE value
 17 shown in Table 3.7.2.3.2.16-1 corresponding to the redirection
 18 type.

19 The base station shall include one occurrence of the following record:

20 RECORD_TYPE - Redirection record type.

21 The base station shall set this field to the RECORD_TYPE value
 22 shown in Table 3.7.2.3.2.16-2 corresponding to the type of
 23 redirection specified by this record.

24 RECORD_LEN - Redirection record length.

25 If RECORD_TYPE equals to '00000000', the base station shall
 26 set this field to '00000000'; otherwise, the base station shall
 27 set this field to the number of octets in the type-specific fields
 28 of this redirection record.

1 Type-specific fields - Redirection record type-specific fields.
 2 The base station shall include type-specific fields based on
 3 the RECORD_TYPE of this redirection record.

4 If RECORD_TYPE is equal to '00000000', the base station shall not include the type-
 5 specific fields.

6 If RECORD_TYPE is equal to '00000010', the base station shall include the following fields:

7

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM_CHANS occurrences of the following field:

{ (NUM_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

8

9 BAND_CLASS - Band class.
 10 The base station shall set this field to the CDMA band class, as
 11 specified in [30].

12 EXPECTED_SID - Expected SID.
 13 If the base station is redirecting the mobile station to a
 14 specific system, the base station shall set this field to the SID
 15 of that system; otherwise, the base station shall set this field
 16 to 0.

17 EXPECTED_NID - Expected NID.
 18 If the base station is redirecting the mobile station to a
 19 specific network, the base station shall set this field to the
 20 NID of that network; otherwise, the base station shall set this
 21 field to 65535.

22 RESERVED - Reserved bits.
 23 The base station shall set this field to '0000'.

24 NUM_CHANS - Number of CDMA Channels.
 25 The base station shall set this field to the number of
 26 occurrences of the CDMA_CHAN field in this record.

1	CDMA_CHAN	-	CDMA Channel number.
2			For each CDMA Channel on which the mobile station is to
3			attempt to acquire a CDMA system, the base station shall
4			include one occurrence of this field specifying the associated
5			CDMA Channel number.
6	RESERVED	-	Reserved bits.
7			The base station shall add reserved bits as needed in order to
8			make the length of the entire record equal to an integer
9			number of octets. The base station shall set these bits to '0'.
10			

1 3.7.3.3.2.24 Supplemental Channel Assignment Message
 2 MSG_TAG: SCAM

3

Field	Length (bits)
USE_RETRY_DELAY	1
RETRY_DELAY	0 or 8
REV_INCLUDED	1

Include the following record only if REV_INCLUDED is set to '1':

{

REV_DTX_DURATION	4
EXPL_REV_START_TIME	1
REV_START_TIME	0 or 6
USE_REV_DURATION	1
REV_DURATION	0 or 8
USE_REV_HDM_SEQ	1
REV_LINKED_HDM_SEQ	0 or 2
NUM_REV_CODES	3
USE_T_ADD_ABORT	1
USE_SCRM_SEQ_NUM	1
SCRM_SEQ_NUM	0 or 4
REV_PARS_INCLUDED	1
T_MULCHAN	0 or 3
BEGIN_PREAMBLE	0 or 3
RESUME_PREAMBLE	0 or 3

}

FOR_INCLUDED	1
--------------	---

4

(continues on next page)

5

1

Field	Length (bits)
-------	---------------

Include the following record only if FOR_INCLUDED is set to '1':

{

FOR_SUP_CONFIG	2
EXPL_FOR_START_TIME	0 or 1
FOR_START_TIME	0 or 6
USE_FOR_DURATION	1
FOR_DURATION	0 or 8
USE_FOR_HDM_SEQ	0 or 1
FOR_LINKED_HDM_SEQ	0 or 2

Include the following fields and records only if FOR_INCLUDED is set to '1' and FOR_SUP_CONFIG is set to '10' or '11':

NUM_SUP_PILOTS	3
NUM_FOR_SUP	3

Include NUM_SUP_PILOTS occurrences of the following record only if FOR_INCLUDED is set to '1' and FOR_SUP_CONFIG is set to '10' or '11':

{ (NUM_SUP_PILOTS)

PILOT_PN	9
EXPL_CODE_CHAN	1

If EXPL_CODE_CHAN is set to '1', for each PILOT_PN include NUM_FOR_SUP occurrences of the following field:

{ (NUM_FOR_SUP)

SUP_CODE_CHAN	0 or 8
---------------	--------

} (NUM_FOR_SUP)

If EXPL_CODE_CHAN is set to '0', the following field is included:

BASE_CODE_CHAN	0 or 8
----------------	--------

} (NUM_SUP_PILOTS)

}

2

3 USE_RETRY_DELAY - Assign or Retry Indicator.

1 The base station shall set this field to '1' to indicate that this
 2 message contains a retry delay time; otherwise, the base
 3 station shall set this field to '0' to indicate that no
 4 RETRY_DELAY has been included.

5 RETRY_DELAY - *Supplemental Channel Request Message* retry delay.

6 If USE_RETRY_DELAY is set to '1', the base station shall
 7 include and set this field to the duration of the delay interval
 8 in units of 320 ms (4 frames) from the next 80 ms system
 9 time boundary during which the mobile station is not
 10 permitted to send a *Supplemental Channel Request Message*.
 11 The base station shall set RETRY_DELAY to '11111111' to
 12 indicate that the mobile station is to refrain from sending
 13 *Supplemental Channel Request Messages* indefinitely.

14 REV_INCLUDED - Reverse Supplemental Code Channel configuration indicator.

15 The base station shall set this field to '1' to indicate that this
 16 message contains assignment information for Reverse
 17 Supplemental Code Channels; otherwise, the base station
 18 shall set this field to '0'.

19 If REV_INCLUDED is set to '1', then the base station shall include the following fields,
 20 otherwise the base station shall omit the following fields:

21 REV_DTX_DURATION - Reverse Discontinuous Transmission Duration.

22 The base station shall set this field to the maximum duration
 23 of time in units of 20 ms that the mobile station is allowed to
 24 stop transmission on a Reverse Supplemental Code Channel
 25 within the reverse assignment duration. The base station
 26 shall set this field to '0000' if the mobile station is to stop
 27 using a Reverse Supplemental Code Channel once it has
 28 stopped transmitting on that Reverse Supplemental Code
 29 Channel. The base station shall set this field to '1111' if the
 30 mobile station is allowed to resume transmission on a Reverse
 31 Supplemental Code Channel at any time within the reverse
 32 assignment duration.

33 EXPL_REV_START_TIME - Explicit Reverse Supplemental Code Channel assignment
 34 start time indicator.

35 This field indicates whether a start time for the specified
 36 Reverse Supplemental Code Channel Assignment is specified
 37 in this message. If a REV_START_TIME is specified in this
 38 message, the base station shall set this field to '1'; otherwise,
 39 the base station shall set this field to '0'. If
 40 EXPL_REV_START_TIME is set to '1', then the base station
 41 shall set USE_REV_HDM_SEQ to '0'.

42 REV_START_TIME - Explicit start time for Reverse Supplemental Code Channel
 43 assignment.

- 1 If EXPL_REV_START_TIME is included and set to '1', the base
2 station shall include and set this field to the System Time, in
3 units of 80 ms (modulo 64), at which the mobile station may
4 start transmitting on the specified number of Reverse
5 Supplemental Code Channels. If EXPL_REV_START_TIME is
6 omitted or set to '0', the base station shall omit this field.
- 7 USE_REV_DURATION - Use reverse duration indicator.
- 8 The base station shall set this field to '1' if the
9 REV_DURATION field is included in the message; otherwise,
10 the base station shall set this field to '0'. If the mobile station
11 is granted permission to transmit on Reverse Supplemental
12 Code Channels (i.e., NUM_REV_CODES is not '000') then a
13 value of '0' for this field indicates an infinite Reverse
14 Supplemental Code Channel assignment duration (i.e., the
15 mobile station may transmit on Reverse Supplemental Code
16 Channels until it receives a subsequent *Supplemental Channel*
17 *Assignment Message* or a *General Handoff Direction Message*
18 that specifies an updated REV_DURATION or an updated
19 value of NUM_REV_CODES).
- 20 REV_DURATION - Duration of Reverse Supplemental Code Channel assignment.
- 21 The base station shall include this field only if the
22 USE_REV_DURATION field is included and set to '1'. If this
23 field is included, this field indicates the allocated duration, in
24 units of 80 ms, during which the mobile station may transmit
25 on Reverse Supplemental Code Channels.
- 26 USE_REV_HDM_SEQ - Use Reverse *General Handoff Direction Message* sequence
27 number indicator.
- 28 The base station shall set this field to '1' to indicate that this
29 Reverse Supplemental Code Channel assignment shall take
30 effect at the same time as a corresponding *General Handoff*
31 *Direction Message*; otherwise, the base station shall set this
32 field to '0'. If USE_REV_HDM_SEQ is set to '1', then the base
33 station shall set EXPL_REV_START_TIME to '0'.
- 34 REV_LINKED_HDM_SEQ - Sequence number of the reverse linked *General Handoff*
35 *Direction Message*.
- 36 If USE_REV_HDM_SEQ is included and set to '1', then the
37 base station shall set this field to the sequence number of the
38 *General Handoff Direction Message* (HDM_SEQ) to which this
39 Reverse Supplemental Code Channel assignment is linked.
- 40 NUM_REV_CODES - Number of Reverse Supplemental Code Channels.
- 41 The base station shall set this field to the number of Reverse
42 Supplemental Code Channels that are assigned to the mobile
43 station.
- 44 USE_T_ADD_ABORT - Reverse use T_ADD abort indicator.
- 45 The base station shall set this field to '1' to indicate that the
46 mobile station is to utilize the T_ADD Reverse Supplemental
47 Code Channel abort feature for this reverse assignment;
48 otherwise, the base station shall set this field to '0'.

- 1 USE_SCRM_SEQ_NUM - Use *Supplemental Channel Request Message* sequence
2 number indicator.
- 3 The base station shall set this field to '1' if the
4 SCRM_SEQ_NUM field is included in this message; otherwise,
5 the base station shall set this field to '0'.
- 6 SCRM_SEQ_NUM - *Supplemental Channel Request Message* sequence number.
7
8 If USE_SCRM_SEQ_NUM is set to '1', the base station shall
9 set this field to the sequence number corresponding to the
10 SCRM_SEQ_NUM field in a *Supplemental Channel Request*
11 *Message* to which the mobile station is to match this
12 message; otherwise, the base station shall omit this field.
- 12 REV_PARAMS_INCLUDED - Reverse additional parameters included flag.
13
14 The base station shall set this field to '1' if the following three
15 fields (T_MULCHAN, BEGIN_PREAMBLE, and
16 RESUME_PREAMBLE) are included in this message;
17 otherwise, the base station shall set this field to '0'.
- 17 T_MULCHAN - *Supplemental Channel Request Message* pilot strength
18 reporting offset.
- 19 If REV_PARAMS_INCLUDED is set to '1', the base station shall
20 include this field and set this field to the threshold offset that
21 the mobile station is to use when reporting neighbor pilot
22 strength measurements in a *Supplemental Channel Request*
23 *Message*. The mobile station is to interpret this field as an
24 offset to T_ADD ranging from 0.5 dB (corresponding to
25 T_MULCHAN = '000') to 4.0 dB (corresponding to
26 T_MULCHAN = '111') in 0.5 dB increments.
- 27 BEGIN_PREAMBLE - Number of preamble frames on Reverse Supplemental Code
28 Channels at the beginning of transmission on Reverse
29 Supplemental Code Channel.
- 30 If REV_PARAMS_INCLUDED is set to '1', the base station shall
31 include this field and set this field to the number of Reverse
32 Supplemental Code Channel preamble frames that the mobile
33 station is to send when beginning transmission on Reverse
34 Supplemental Code Channels.
- 35 RESUME_PREAMBLE - Number of preamble frames on Reverse Supplemental Code
36 Channels at the resumption of transmission.
- 37 If REV_PARAMS_INCLUDED is set to '1', the base station shall
38 include this field and set this field to the number of Reverse
39 Supplemental Code Channel preamble frames that the mobile
40 station is to send when resuming transmission on a Reverse
41 Supplemental Code Channel following an autonomous
42 suspension of transmission on an allocated Supplemental
43 Code Channel.
- 44 FOR_INCLUDED - Forward Supplemental Code Channel configuration indicator.

- 1 The base station shall set this field to '1' to indicate that this
 2 message contains assignment information for Forward
 3 Supplemental Code Channels; otherwise, the base station
 4 shall set this field to '0'.
- 5 If FOR_INCLUDED is set to '1', then the base station shall
 6 include the remaining fields in this message, otherwise the
 7 base station shall omit all of the following except for
 8 RESERVED.
- 9 FOR_SUP_CONFIG - Forward Supplemental Code Channel configuration indicator.
- 10 The base station shall set this field to '00' to indicate that the
 11 mobile station is to stop processing the Forward
 12 Supplemental Code Channels at the implicit action time of the
 13 message.
- 14 The base station shall set this field to '01' to indicate that the
 15 mobile station is to start processing the Forward
 16 Supplemental Code Channels in the Code Channel List at the
 17 implicit, explicit, or linked start time specified by this
 18 message (see 2.6.6.2.5.1).
- 19 The base station shall set this field to '10' if the Forward
 20 Supplemental Code Channels are specified in the message
 21 and the mobile station is to update its Code Channel List and
 22 stop processing the Forward Supplemental Code Channels at
 23 the implicit action time of the message.
- 24 The base station shall set this field to '11' if the Forward
 25 Supplemental Code Channels are specified in the message
 26 and the mobile station is to start processing the Forward
 27 Supplemental Code Channels at the implicit, explicit, or
 28 linked start time specified by this message (see 2.6.6.2.5.1).
- 29 EXPL_FOR_START_TIME - Explicit forward start time indicator.
- 30 This field indicates whether an explicit Forward Supplemental
 31 Code Channel start time is specified in this message.
- 32 The base station shall include this field only if
 33 FOR_SUP_CONFIG is set to '01' or '11'. If a FOR_START_TIME
 34 is specified in this message, the base station shall set this
 35 field to '1'; otherwise, the base station shall set this field to '0'.
 36 If EXPL_FOR_START_TIME is set to '1', then the base station
 37 shall set USE_FOR_HDM_SEQ to '0'.
- 38 The following field is included only if EXPL_FOR_START_TIME is included and set to '1':
- 39 FOR_START_TIME - Start time of the Forward Supplemental Code Channel
 40 assignment.
- 41 The base station shall include this field only if
 42 FOR_SUP_CONFIG is set to '01' or '11'. If the
 43 EXPL_FOR_START_TIME field is set to '1', the base station
 44 shall set this field to the System Time, in units of 80 ms
 45 (modulo 64), at which the mobile station is to start processing
 46 the Forward Supplemental Code Channels. If
 47 EXPL_FOR_START_TIME is set to '0', the base station shall
 48 omit this field.

- 1 USE_FOR_DURATION - Use forward duration indicator.
- 2 The base station shall set this field to '1' if FOR_DURATION is
- 3 included in the message; otherwise, the base station shall set
- 4 this field to '0'.
- 5 If FOR_SUP_CONFIG is set to '01' or '11', then the base
- 6 station may set this field to '0' to indicate that the mobile
- 7 station is to be assigned an infinite Forward Supplemental
- 8 Code Channel assignment duration (i.e., the mobile station is
- 9 to continue processing Forward Supplemental Code Channels
- 10 until it receives a subsequent *Supplemental Channel*
- 11 *Assignment Message* or a *General Handoff Direction Message*
- 12 that specifies an updated FOR_DURATION). Otherwise, the
- 13 base station may set this field to '1' to indicate that the mobile
- 14 station is to be given a Forward Supplemental Code Channel
- 15 assignment for the duration specified by the FOR_DURATION
- 16 field.
- 17 If FOR_SUP_CONFIG is set to '00' or '10', then the base
- 18 station shall set USE_FOR_DURATION to '0'.
- 19 FOR_DURATION - Duration of Forward Supplemental Code Channel
- 20 assignment.
- 21 The base station shall include this field only if
- 22 USE_FOR_DURATION is included and set to '1'. If this field is
- 23 included, this field indicates allocated duration, in units of 80
- 24 ms, during which the mobile station is to process the Forward
- 25 Supplemental Code Channels.
- 26 USE_FOR_HDM_SEQ - Use Forward *General Handoff Direction Message* sequence
- 27 number indicator.
- 28 This field indicates whether processing of the Forward
- 29 Supplemental Code Channels shall take effect at the same
- 30 time as a corresponding *General Handoff Direction Message*.
- 31 The base station shall include this field only if
- 32 FOR_SUP_CONFIG is equal to '01' or '11'. If this message is
- 33 linked with a *General Handoff Direction Message*, the base
- 34 station shall set this field to '1'; otherwise, the base station
- 35 shall set this field to '0'. If USE_FOR_HDM_SEQ is set to '1',
- 36 then the base station shall set EXPL_FOR_START_TIME to '0'.
- 37 FOR_LINKED_HDM_SEQ - Sequence number of the *General Handoff Direction Message*.
- 38 If the USE_FOR_HDM_SEQ field is included and set to '1', the
- 39 base station shall set this field to the sequence number of the
- 40 *General Handoff Direction Message* (HDM_SEQ) to which this
- 41 Forward Supplemental Code Channel assignment is linked;
- 42 otherwise, if USE_FOR_HDM_SEQ is not included or is set to
- 43 '0', then base station shall omit this field.
- 44 NUM_SUP_PILOTS - Number of pilots in the Active Set which have at least one
- 45 associated Supplemental Code Channel.

1 If FOR_SUP_CONFIG is included and is set to '10' or '11', the
 2 base station shall include this field and shall set this field to
 3 the number of pilots for which there is at least one associated
 4 Supplemental Code Channel. This field shall not be included
 5 if FOR_SUP_CONFIG is omitted or is set to '01' or '00'.

6 NUM_FOR_SUP - Number of Forward Supplemental Code Channels.

7 If FOR_SUP_CONFIG is included and is set to '10' or '11', the
 8 base station shall include this field and shall set this field to
 9 the number of Forward Supplemental Code Channels
 10 assigned to the mobile station. NUM_FOR_SUP shall not
 11 exceed the maximum number of Forward Supplemental Code
 12 Channels for the negotiated multiplex option. This field shall
 13 not be included if FOR_SUP_CONFIG is omitted or is set to
 14 '01' or '00'.

15 If FOR_SUP_CONFIG is included and is set to '10' or '11', the base station shall include
 16 NUM_SUP_PILOTS occurrences of the following record, one for each pilot for which there is
 17 at least one associated Supplemental Code Channel:

18 PILOT_PN - Pilot PN sequence offset index.

19 The base station shall set this field to the pilot PN sequence
 20 offset for this pilot in units of 64 PN chips.

21 EXPL_CODE_CHAN - Explicit code channel indicator

22 The base station shall set this field to '1' to indicate explicit
 23 assignment of each Forward Supplemental Code Channel.
 24 The base station shall set this field to '0' if the mobile station
 25 is to use NUM_FOR_SUP successive code channels beginning
 26 with index BASE_CODE_CHAN (i.e., BASE_CODE_CHAN
 27 through BASE_CODE_CHAN + NUM_FOR_SUP - 1). In both
 28 cases (i.e., the explicit code channel list format and range
 29 format), the order of the code channel indices is the same for
 30 all the pilots specified in this message (i.e., the *i*th code
 31 channel index in the list for each pilot PN sequence offset
 32 indicates the appropriate code channel to be used for the *i*th
 33 Forward Supplemental Code Channel).

34 If EXPL_CODE_CHAN is set to '1', then the base station shall include NUM_FOR_SUP
 35 occurrences of the following field, one for each pilot which has been included:

36 SUP_CODE_CHAN - Supplemental Code Channel index.

37 The base station shall set this field to the code channel index
 38 (see [2]) in the range 1 to 63 inclusive of the Supplemental
 39 Code Channel associated with this pilot.

40 If EXPL_CODE_CHAN is set to '0', then the base station shall include the following field:

41 BASE_CODE_CHAN - Base code channel index.

1 If EXPL_CODE_CHAN is equal to '0', the base station shall
2 include this field and set it to the base code channel index
3 (see [2]) in the range of 1 to (63 – NUM_FOR_SUP + 1),
4 inclusive, that the mobile station is to use as the first Forward
5 Supplemental Code Channel associated with this pilot. The
6 mobile station is to use NUM_FOR_SUP successive code
7 channels beginning with index BASE_CODE_CHAN (i.e.,
8 BASE_CODE_CHAN through BASE_CODE_CHAN +
9 NUM_FOR_SUP – 1) for the Forward Supplemental Code
10 Channels associated with this pilot.

11 The base station shall not include this field if
12 EXPL_CODE_CHAN is equal to '1' or if EXPL_CODE_CHAN is
13 not included.

14

1 3.7.3.3.2.25 Power Control Message
 2 MSG_TAG: PCNM

3

Field	Length (bits)
PWR_CNTL_STEP	3
USE_TIME	1
ACTION_TIME	0 or 6
FPC_INCL	1
FPC_MODE	0 or 3
FPC_PRI_CHAN	0 or 1
FPC_OLPC_FCH_INCL	0 or 1
FPC_FCH_FER	0 or 5
FPC_FCH_MIN_SETPT	0 or 8
FPC_FCH_MAX_SETPT	0 or 8
FPC_OLPC_DCCH_INCL	0 or 1
FPC_DCCH_FER	0 or 5
FPC_DCCH_MIN_SETPT	0 or 8
FPC_DCCH_MAX_SETPT	0 or 8
FPC_SEC_CHAN	0 or 1
NUM_SUP	0 or 2

Include NUM_SUP occurrence of the following record:

{ (NUM_SUP)

SCH_ID	1
FPC_SCH_FER	5
FPC_SCH_MIN_SETPT	8
FPC_SCH_MAX_SETPT	8

} (NUM_SUP)

FPC_THRESH_INCL	0 or 1
-----------------	--------

FPC_THRESH_SCH_INCL	0 or 1
FPC_SETPT_THRESH_SCH	0 or 8
RPC_INCL	1
RPC_NUM_REC	0 or 2

If RPC INCL is set to '1', RPC_NUM_REC occurrences of the following record:

{ (RPC_NUM_REC)

RPC_ADJ_REC_TYPE	4
RPC_ADJ_REC_LEN	5
EXT_RPC_ADJ_REC_LEN	0 or 10
Type-specific fields	8× RPC_ADJ_REC_LEN, or 8 × EXT_RPC_ADJ_REC_LEN

} (RPC_NUM_REC)

REV_PDCH_PARMS_INCL	1
REV_PDCH_NUM_ARQ_ROUNDS_NORMAL	0 or 2
REV_PDCH_NUM_ARQ_ROUNDS_BOOST	0 or 2
FPC_BCMC_CHAN	0 or 1

2

3

PWR_CNTL_STEP - Power control step size

4

5

6

7

8

9

10

The base station shall set this field to the closed loop power control step size parameter shown in Table 3.7.3.3.2.25-1 corresponding to the power control step size that the mobile station is to use for closed loop power control. The base station should not set this field to '011' or '100' if base station has not assigned RC8 for the reverse link.

Table 3.7.3.3.2.25-1. Closed Loop Power Control Step Size

PWR_CNTL_STEP (binary)	Power Control Step Size (dB nominal)
000	1
001	0.5
010	0.25
011	1.5
100	2.0
All other PWR_CNTL_STEP values are reserved. The base station should not use PWR_CNTL_STEP values of '011' or '100' if base station has not assigned RC8 for the reverse link.	

- USE_TIME - Use action time indicator.
This field indicates whether an ACTION_TIME is specified in this message.
If an ACTION_TIME is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- ACTION_TIME - Action time.
If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $FRAME_OFFSET_S \times 1.25$ ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE_TIME field is set to '0', the base station shall omit this field.
- FPC_INCL - Forward Link Power Control parameter included indicator.
If the forward power control related information is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- FPC_MODE - Forward Power Control Operation Mode Indicator
If FPC_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
The base station shall set the value to the forward power control operation mode (see [2]).
- FPC_PRI_CHAN - Power Control Subchannel indicator.
If FPC_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel. The base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

1 If only the Fundamental Channel is assigned, the base station
 2 shall set this field to '0'. If only the Dedicated Control
 3 Channel is assigned, the base station shall set this field to '1'.

4 If the F-CPCCH is assigned, the base station will multiplex
 5 the Power Control Subchannel on the F-CPCCH; otherwise:

6 If this field is set to '0', the base station will multiplex the
 7 Power Control Subchannel on the Forward Fundamental
 8 Channel; otherwise, the base station will multiplex the Power
 9 Control Subchannel on the Forward Dedicated Control
 10 Channel.

11 FPC_OLPC_FCH_INCL - Fundamental Channel Outer Loop Power Control parameter
 12 included indicator.

13 If FPC_INCL is set to '0', the base station shall omit this field;
 14 otherwise, the base station shall set this field as follows:

15 If the forward link fundamental channel outer loop power
 16 control parameters are included in this message, the base
 17 station shall set this field to '1'; otherwise, the base station
 18 shall set this field to '0'.

19 FPC_FCH_FER - Fundamental channel target Frame Error Rate.

20 If FPC_OLPC_FCH_INCL is included and set to '1', the base
 21 station shall set this field to the target Frame Error Rate on
 22 the Forward Fundamental Channel, as specified in Table
 23 3.7.3.3.2.25-2; otherwise, the base station shall omit this
 24 field.

25 **Table 3.7.3.3.2.25-2. Target Frame Error Rate**

FER (Binary)	Frame Error Rate
00000	0.2%
00001-10100	0.5% - 10% (in units of 0.5%)
10101-11001	11% - 15% (in units of 1.0%)
11010-11110	18% - 30% (in units of 3.0%)
11111	Reserved

26 FPC_FCH_MIN_SETPT - Minimum Fundamental Channel Outer Loop Eb/Nt setpoint
 27 If FPC_OLPC_FCH_INCL is included and set to '1', the base
 28 station shall set this field to minimum Fundamental Channel
 29 Outer Loop Eb/Nt setpoint, in units of 0.125 dB; otherwise,
 30 the base station shall omit this field.

31 The base station shall set this field to '11111111', when it
 32 directs the mobile station to set this Eb/Nt setpoint to the
 33 current setpoint used at the mobile station on this channel.

34 FPC_FCH_MAX_SETPT - Maximum Fundamental Channel Outer Loop Eb/Nt setpoint

1 If FPC_OLPC_FCH_INCL is included and set to '1', the base
2 station shall set this field to maximum Fundamental Channel
3 Outer Loop Eb/Nt setpoint, in units of 0.125 dB; otherwise,
4 the base station shall omit this field.

5 The base station shall set this field to '11111111', when it
6 directs the mobile station to set this Eb/Nt setpoint to the
7 current setpoint used at the mobile station on this channel.

8 FPC_OLPC_DCCH_INCL - Dedicated Control Channel Outer Loop Power Control
9 parameter included indicator.

10 If FPC_INCL is set to '0', the base station shall omit this field;
11 otherwise, the base station shall set this field as follows:

12 If the forward link Dedicated Control Channel outer loop
13 power control parameters are included in this message, the
14 base station shall set this field to '1'; otherwise, the base
15 station shall set this field to '0'.

16 FPC_DCCH_FER - Dedicated Control Channel target Frame Error Rate.

17 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
18 station shall set this field to the target Frame Error Rate on
19 the Forward Dedicated Control Channel, as specified in Table
20 3.7.3.3.2.25-2; otherwise, the base station shall omit this
21 field.

22 FPC_DCCH_MIN_SETPT - Minimum Dedicated Control Channel Outer Loop Eb/Nt
23 setpoint.

24 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
25 station shall set this field to minimum Dedicated Control
26 Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB;
27 otherwise, the base station shall omit this field.

28 The base station shall set this field to '11111111', when it
29 directs the mobile station to set this Eb/Nt setpoint to the
30 current setpoint used at the mobile station on this channel.

31 FPC_DCCH_MAX_SETPT - Maximum Dedicated Control Channel Outer Loop Eb/Nt
32 setpoint.

33 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
34 station shall set this field to maximum Dedicated Control
35 Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB;
36 otherwise, the base station shall omit this field.

37 The base station shall set this field to '11111111', when it
38 directs the mobile station to set this Eb/Nt setpoint to the
39 current setpoint used at the mobile station on this channel.

40 FPC_SEC_CHAN - Master Supplemental channel index.

41 If FPC_INCL is set to '1' and FPC_MODE is set to '001', '010',
42 '101', or '110', the base station shall set this field to the
43 master Supplemental Channel index; otherwise, the base
44 station shall omit this field.

- 1 NUM_SUP - Number of Supplemental Channels.
2 If FPC_INCL is set to '0', the base station shall omit this field;
3 otherwise, the base station shall set this field to the total
4 number of the Supplemental Channels.
- 5 The base station shall include NUM_SUP occurrences of the following record:
- 6 SCH_ID - Supplemental channel index.
7 The base station shall set this field to the Supplemental
8 Channel index.
- 9 FPC_SCH_FER - Supplemental channel target Frame Error Rate.
10 The base station shall set this field to the target Frame Error
11 Rate on the Supplemental Channel, as specified in Table
12 3.7.3.3.2.25-2.
- 13 FPC_SCH_MIN_SETPT - Minimum Supplemental Channel outer loop Eb/Nt setpoint.
14 The base station shall set this field to minimum Supplemental
15 Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB.
16 The base station shall set this field to '11111111', when it
17 directs the mobile station to set this Eb/Nt setpoint to the
18 current setpoint used at the mobile station on this channel.
- 19 FPC_SCH_MAX_SETPT - Maximum Supplemental Channel outer loop Eb/Nt setpoint.
20 The base station shall set this field to maximum
21 Supplemental Channel Outer Loop Eb/Nt setpoint, in units of
22 0.125 dB.
23 The base station shall set this field to '11111111', when it
24 directs the mobile station to set this Eb/Nt setpoint to the
25 current setpoint used at the mobile station on this channel.
- 26 FPC_THRESH_INCL - Setpoint Report Threshold included indicator.
27 If FPC_INCL is set to '0', the base station shall omit this field;
28 otherwise, the base station shall set this field as follows:
29 If FPC_SETPT_THRESH is included in this message, the base
30 station shall set this field to '1'; otherwise, the base station
31 shall set this field to '0'.
- 32 FPC_SETPT_THRESH - Setpoint Report Threshold.
33 If FPC_THRESH_INCL is set to '1', the base station shall set
34 the value to FPC_SETPT_THRESH (in units of 0.125 dB) above
35 which the outer loop report message will be sent by the
36 mobile station; otherwise, the base station shall omit this
37 field.
- 38 FPC_THRESH_SCH_INCL- SCH Setpoint Report Threshold included indicator.
39 If FPC_INCL is set to '0', the base station shall omit this field;
40 otherwise, the base station shall set this field as follows:
41 If FPC_SETPT_THRESH_SCH is included in this message, the
42 base station shall set this field to '1'; otherwise, the base
43 station shall set this field to '0'.

- 1 FPC_SETPT_THRESH_SCH - SCH Setpoint Report Threshold.
 2 If FPC_THRESH_SCH_INCL is set to '1', the base station shall
 3 set the value to FPC_SETPT_THRESH_SCH (in units of 0.125
 4 dB) above which the outer loop report message will be sent by
 5 the mobile station; otherwise, the base station shall omit this
 6 field.
- 7 RPC_INCL - Reverse Link Power Control parameter included indicator.
 8 If the reverse power control related information is included in
 9 this message, the base station shall set this field to '1';
 10 otherwise, the base station shall set this field to '0'.
- 11 RPC_NUM_REC - Number of records for Reverse Link Power Control.
 12 If RPC_INCL is set to '0', the base station shall omit this field;
 13 otherwise, the base station shall set this field to one less than
 14 the number of records included in this message.
- 15 If RPC_NUM_REC is included in this message, the base station shall include
 16 RPC_NUM_REC occurrences of the following record:
- 17 RPC_ADJ_REC_TYPE - Reverse Link Power Control adjustment record type.
 18 The base station shall set this field to the value shown in
 19 Table 3.7.3.3.2.25-3 corresponding to the type of adjustment
 20 that is to be used.

21 **Table 3.7.3.3.2.25-3. RPC_ADJ_REC_TYPE and RPC_ADJ_REC_LEN fields**

Description	RPC_ADJ_REC_TYPE (binary)	RPC_ADJ_REC_LEN
Reverse Channel Adjustment Gain	0000	2-7
Attribute Adjustment Gain for Basic Rates	0001	2-26
Attribute Adjustment Gain for Higher Rates	0010	2-31
Attribute Adjustment Gain for R-CQICH	0011	2-6
Attribute Adjustment Gain for R-PDCCH	0100	13-936
All other values are reserved.		

- 22
- 23 RPC_ADJ_REC_LEN - Reverse Link Power Control adjustment record length.
 24 If RPC_ADJ_REC_TYPE is not equal to '0100', the base
 25 station shall set this field to the number of octets in the type-
 26 specific fields of this adjustment record as given in Table
 27 3.7.3.3.2.25-3.

1 If RPC_ADJ_REC_TYPE is equal to '0000', the base station shall set type-specific fields as
 2 specified in Table 3.7.3.3.2.25-4.

3 **Table 3.7.3.3.2.25-4. Type Specific Fields for RECORD_TYPE = '0000'**

Fields	Length (Bits)
FCH_INCL	1
FCH_CHAN_ADJ_GAIN	0 or 8
DCCH_INCL	1
DCCH_CHAN_ADJ_GAIN	0 or 8
SCH0_INCL	1
SCH0_CHAN_ADJ_GAIN	0 or 8
SCH1_INCL	1
SCH1_CHAN_ADJ_GAIN	0 or 8
REV_ACKCH_INCL	1
REV_ACKCH_CHAN_ADJ_GAIN	0 or 8
REV_CQICH_INCL	1
REV_CQICH_CHAN_ADJ_GAIN	0 or 8
RESERVED	0-7 (if needed)

4

5

6

FCH_INCL - FCH channel adjustment gain included indicator.

7

If FCH_CHAN_ADJ_GAIN is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

8

9

10

FCH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Fundamental Channel.

11

12

13

14

15

16

17

If FCH_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set each field to the value of the gain adjustment that the mobile station is to make for the Reverse Fundamental Channel. The base station shall set this field to the correction factor expressed as a two's complement value in units of 0.125 dB. The base station shall set the value in the range from -48 to 48 inclusive.

18

DCCH_INCL - DCCH channel adjustment gain included indicator.

19

20

21

If DCCH_CHAN_ADJ_GAIN is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

22

DCCH_CHAN_ADJ_GAIN - Channel adjustment gain for the Reverse Dedicated Control Channel.

23

1 If DCCH_INCL is set to '0', the base station shall omit this
2 field; otherwise, the base station shall set each field to the
3 value of the gain adjustment that the mobile station is to
4 make for the Reverse Dedicated Control Channel. The base
5 station shall set this field to the correction factor expressed as
6 a two's complement value in units of 0.125 dB. The base
7 station shall set the value in the range from -48 to 48
8 inclusive.

9 SCH0_INCL - SCH0 channel adjustment gain included indicator.

10 If SCH0_CHAN_ADJ_GAIN is included in this message, the
11 base station shall set this field to '1'; otherwise, the base
12 station shall set this field to '0'.

13 SCH0_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Supplemental Channel
14 0.

15 If SCH0_INCL is set to '0', the base station shall omit this
16 field; otherwise, the base station shall set each field to the
17 value of the gain adjustment that the mobile station is to
18 make for the Reverse Supplemental Channel 0. The base
19 station shall set this field to the correction factor expressed as
20 a two's complement value in units of 0.125 dB. The base
21 station shall set the value in the range from -48 to 48
22 inclusive.

23 SCH1_INCL - SCH1 channel adjustment gain included indicator.

24 If SCH1_CHAN_ADJ_GAIN is included in this message, the
25 base station shall set this field to '1'; otherwise, the base
26 station shall set this field to '0'.

27 SCH1_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Supplemental Channel
28 1.

29 If SCH1_INCL is set to '0', the base station shall omit this
30 field; otherwise, the base station shall set each field to the
31 value of the gain adjustment that the mobile station is to
32 make for the Supplemental Channel 1. The base station shall
33 set this field to the correction factor expressed as a two's
34 complement value in units of 0.125 dB. The base station
35 shall set the value in the range from -48 to 48 inclusive.

36 REV_ACKCH_INCL - Reverse Acknowledgment Channel channel adjustment gain
37 included indicator.

38 If REV_ACKCH_CHAN_ADJ_GAIN is included in this message,
39 the base station shall set this field to '1'; otherwise, the base
40 station shall set this field to '0'.

41 REV_ACKCH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Acknowledgment
42 Channel.

1 If REV_ACKCH_INCL is set to '0', the base station shall omit
 2 this field; otherwise, the base station shall set each field to
 3 the value of the gain adjustment that the mobile station is to
 4 make for the Reverse Acknowledgment Channel. The base
 5 station shall set this field to the correction factor expressed as
 6 a two's complement value in units of 0.125 dB. The base
 7 station shall set the value in the range from -24 to 24
 8 inclusive.

9 REV_CQICH_INCL - Reverse Channel Quality Indicator Channel channel
 10 adjustment gain included indicator.

11 If REV_CQICH_CHAN_ADJ_GAIN is included in this message,
 12 the base station shall set this field to '1'; otherwise, the base
 13 station shall set this field to '0'.

14 REV_CQICH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Channel Quality
 15 Indicator Channel.

16 If REV_CQICH_INCL is set to '0', the base station shall omit
 17 this field; otherwise, the base station shall set each field to
 18 the value of the gain adjustment that the mobile station is to
 19 make for the Reverse Channel Quality Indicator Channel. The
 20 base station shall set this field to the correction factor
 21 expressed as a two's complement value in units of 0.125 dB.
 22 The base station shall set the value in the range from -16 to
 23 16 inclusive.

24 RESERVED - Reserved bits.

25 The base station shall add reserved bits as needed in order to
 26 make the length of the entire record equal to an integer
 27 number of octets. The base station shall set these bits to '0'.

28 If RPC_ADJ_REC_TYPE is equal to '0001', the base station shall set type-specific fields as
 29 specified in Table 3.7.3.3.2.25-5.

1

Table 3.7.3.3.2.25-5. Type Specific Fields for RECORD_TYPE = '0001'

Fields	Length (Bits)
RL_ATT_ADJ_GAIN_TYPE	1
RC3_RC5_20MS_INCL	1
RL_ATT_ADJ_GAIN_1500	0 or 8
RL_ATT_ADJ_GAIN_2700	0 or 8
RL_ATT_ADJ_GAIN_4800	0 or 8
RL_ATT_ADJ_GAIN_9600	0 or 8
RC4_RC6_20MS_INCL	1
RL_ATT_ADJ_GAIN_1800	0 or 8
RL_ATT_ADJ_GAIN_3600	0 or 8
RL_ATT_ADJ_GAIN_7200	0 or 8
RL_ATT_ADJ_GAIN_14400	0 or 8
5MS_INCL	1
RL_ATT_ADJ_GAIN_9600_5MS	0 or 8
RC3_RC5_40MS_INCL	1
RL_ATT_ADJ_GAIN_1350_40MS	0 or 8
RL_ATT_ADJ_GAIN_2400_40MS	0 or 8
RL_ATT_ADJ_GAIN_4800_40MS	0 or 8
RL_ATT_ADJ_GAIN_9600_40MS	0 or 8
RC4_RC6_40MS_INCL	1
RL_ATT_ADJ_GAIN_1800_40MS	0 or 8
RL_ATT_ADJ_GAIN_3600_40MS	0 or 8
RL_ATT_ADJ_GAIN_7200_40MS	0 or 8
RL_ATT_ADJ_GAIN_14400_40MS	0 or 8
RC3_RC5_80MS_INCL	1
RL_ATT_ADJ_GAIN_1200_80MS	0 or 8
RL_ATT_ADJ_GAIN_2400_80MS	0 or 8
RL_ATT_ADJ_GAIN_4800_80MS	0 or 8

1

RESERVED	0-7 (if needed)
----------	-----------------

2

3 RL_ATT_ADJ_GAIN_TYPE- Reverse Link Attribute Adjustment Gain value type indicator.

4 If the following fields are set to the nominal attribute gain
 5 adjustment values that the mobile station is to use for the
 6 transmission attributes (relative to Nominal_Attribute_Gain
 7 specified in [2]), the base station shall set this field to '0'. If
 8 the following fields are set to the pilot reference level
 9 adjustment values that the mobile station is to use for the
 10 transmission attributes (relative to Pilot_Reference_Level
 11 specified in [2]), the base station shall set this field to '1'.

12 RC3_RC5_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 13 Configuration 3 or 5 of 20 ms frame included indicator.

14 If Reverse Link Attribute adjustment Gain for Radio
 15 Configuration 3 or 5 of 20 ms frame is included in this
 16 message, the base station shall set this field to '1'; otherwise,
 17 the base station shall set this field to '0'.

18 RL_ATT_ADJ_GAIN_1500 - Reverse Link Attribute Adjustment Gain for the transmission
 19 rate 1500 bits/s.

20 If RC3_RC5_20MS_INCL is set to '0', the base station shall
 21 omit this field.

22 If RC3_RC5_20MS_INCL is set to '1' and
 23 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 24 set this field to the value of the nominal attribute gain
 25 adjustment that the mobile station is to make for the
 26 transmission attributes with transmission rate 1500 bits/s,
 27 convolutional code and 20ms frame. The base station shall
 28 set the value in the range from -48 to 48 inclusive.

29 If RC3_RC5_20MS_INCL is set to '1' and
 30 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 31 set this field to the value of the pilot reference level
 32 adjustment that the mobile station is to make for the
 33 transmission attributes with transmission rate 1500 bits/s,
 34 convolutional code and 20ms frame.

1 The base station shall set this field to the correction factor
2 expressed as a two's complement value in units of 0.125 dB.

3 RL_ATT_ADJ_GAIN_2700 - Reverse Link Attribute Adjustment Gain for the transmission
4 rate 2700 bits/s.

5 If RC3_RC5_20MS_INCL is set to '0', the base station shall
6 omit this field.

7 If RC3_RC5_20MS_INCL is set to '1' and
8 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
9 set this field to the value of the nominal attribute gain
10 adjustment that the mobile station is to make for the
11 transmission attributes with transmission rate 2700 bits/s,
12 convolutional code and 20ms frame. The base station shall
13 set the value in the range from -48 to 48 inclusive.

14 If RC3_RC5_20MS_INCL is set to '1' and
15 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
16 set this field to the value of the pilot reference level
17 adjustment that the mobile station is to make for the
18 transmission attributes with transmission rate 2700 bits/s,
19 convolutional code and 20ms frame.

20 The base station shall set this field to the correction factor
21 expressed as a two's complement value in units of 0.125 dB.

22 RL_ATT_ADJ_GAIN_4800 - Reverse Link Attribute Gain Adjustment for the transmission
23 rate 4800 bits/s.

24 If RC3_RC5_20MS_INCL is set to '0', the base station shall
25 omit this field.

26 If RC3_RC5_20MS_INCL is set to '1' and
27 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
28 set this field to the value of the nominal attribute gain
29 adjustment that the mobile station is to make for the
30 transmission attributes with transmission rate 4800 bits/s,
31 convolutional code and 20ms frame. The base station shall
32 set the value in the range from -48 to 48 inclusive.

33 If RC3_RC5_20MS_INCL is set to '1' and
34 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
35 set this field to the value of the pilot reference level
36 adjustment that the mobile station is to make for the
37 transmission attributes with transmission rate 4800 bits/s,
38 convolutional code and 20ms frame.

39 The base station shall set this field to the correction factor
40 expressed as a two's complement value in units of 0.125 dB.

41 RL_ATT_ADJ_GAIN_9600 - Reverse Link Attribute Gain Adjustment for the transmission
42 rate 9600 bits/s.

43 If RC3_RC5_20MS_INCL is set to '0', the base station shall
44 omit this field.

1 If RC3_RC5_20MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 9600 bits/s,
 6 convolutional code and 20ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC3_RC5_20MS_INCL is set to '1' and
 9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 10 set this field to the value of the pilot reference level
 11 adjustment that the mobile station is to make for the
 12 transmission attributes with transmission rate 9600 bits/s,
 13 convolutional code and 20ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RC4_RC6_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 17 Configuration 4 or 6 of 20ms frame included indicator.

18 If Reverse Link Attribute Adjustment Gain for Radio
 19 Configuration 4 or 6 of 20ms frame is included in this
 20 message, the base station shall set this field to '1'; otherwise,
 21 the base station shall set this field to '0'.

22 RL_ATT_ADJ_GAIN_1800 - Reverse Link Attribute Gain Adjustment for the transmission
 23 rate 1800 bits/s.

24 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 25 omit this field.

26 If RC4_RC6_20MS_INCL is set to '1' and
 27 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 28 set this field to the value of the nominal attribute gain
 29 adjustment that the mobile station is to make for the
 30 transmission attributes with transmission rate 1800 bits/s,
 31 convolutional code and 20ms frame. The base station shall
 32 set the value in the range from -48 to 48 inclusive.

33 If RC4_RC6_20MS_INCL is set to '1' and
 34 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 35 set this field to the value of the pilot reference level
 36 adjustment that the mobile station is to make for the
 37 transmission attributes with transmission rate 1800 bits/s,
 38 convolutional code and 20ms frame.

39 The base station shall set this field to the correction factor
 40 expressed as a two's complement value in units of 0.125 dB.

41 RL_ATT_ADJ_GAIN_3600 - Reverse Link Attribute Adjustment Gain for the transmission
 42 rate 3600 bits/s.

43 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 44 omit this field.

1 If RC4_RC6_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3 set this field to the value of the nominal attribute gain
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 3600 bits/s,
6 convolutional code and 20ms frame. The base station shall
7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_20MS_INCL is set to '1' and
9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10 set this field to the value of the pilot reference level
11 adjustment that the mobile station is to make for the
12 transmission attributes with transmission rate 3600 bits/s,
13 convolutional code and 20ms frame.

14 The base station shall set this field to the correction factor
15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_7200 - Reverse Link Attribute Adjustment Gain for the transmission
17 rate 7200 bits/s.

18 If RC4_RC6_20MS_INCL is set to '0', the base station shall
19 omit this field.

20 If RC4_RC6_20MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
22 set this field to the value of the nominal attribute gain
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 7200 bits/s,
25 convolutional code and 20ms frame. The base station shall
26 set the value in the range from -48 to 48 inclusive.

27 If RC4_RC6_20MS_INCL is set to '1' and
28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29 this field to the value of the pilot reference level adjustment
30 that the mobile station is to make for the transmission
31 attributes with transmission rate 7200 bits/s, convolutional
32 code and 20ms frame.

33 The base station shall set this field to the correction factor
34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_14400- Reverse Link Attribute Adjustment Gain for the transmission
36 rate 14400 bits/s.

37 If RC4_RC6_20MS_INCL is set to '0', the base station shall
38 omit this field.

39 If RC4_RC6_20MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41 set this field to the value of the nominal gain adjustment that
42 the mobile station is to make for the transmission attributes
43 with transmission rate 14400 bits/s, convolutional code and
44 20ms frame. The base station shall set the value in the range
45 from -48 to 48 inclusive.

1 If RC4_RC6_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 14400 bits/s,
6 convolutional code and 20ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 5MS_INCL - 5ms frame Reverse Link Attribute Adjustment Gain included
10 indicator.

11 If Reverse Link Attribute Adjustment Gain for 5ms frame is
12 included in this message, the base station shall set this field
13 to '1'; otherwise, the base station shall set this field to '0'.

14 RL_ATT_ADJ_GAIN_9600_5MS - Reverse Link Attribute Adjustment Gain for the
15 transmission rate 9600 bits/s with 5ms frame.

16 If 5MS_INCL is set to '0', the base station shall omit this field.

17 If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
18 to '0', the base station shall set this field to the value of the
19 nominal attribute gain adjustment that the mobile station is
20 to make for the transmission attributes with transmission
21 rate 9600 bits/s, convolutional code and 5ms frame. The
22 base station shall set the value in the range from -48 to 48
23 inclusive.

24 If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
25 to '1', the base station shall set this field to the value of the
26 pilot reference level adjustment that the mobile station is to
27 make for the transmission attributes with transmission rate
28 9600 bits/s, convolutional code and 5ms frame.

29 The base station shall set this field to the correction factor
30 expressed as a two's complement value in units of 0.125 dB.

31 RC3_RC5_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
32 Configuration 3 or 5 of 40 ms frame included indicator.

33 If Reverse Link Attribute adjustment Gain for Radio
34 Configuration 3 or 5 of 40 ms frame is included in this
35 message, the base station shall set this field to '1'; otherwise,
36 the base station shall set this field to '0'.

37 RL_ATT_ADJ_GAIN_1350_40MS - Reverse Link Attribute Adjustment Gain for the
38 transmission rate 1350 bits/s.

39 If RC3_RC5_40MS_INCL is set to '0', the base station shall
40 omit this field.

41 If RC3_RC5_40MS_INCL is set to '1' and
42 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
43 set this field to the value of the nominal attribute gain
44 adjustment that the mobile station is to make for the
45 transmission attributes with transmission rate 1350 bits/s,
46 convolutional code and 40ms frame. The base station shall
47 set the value in the range from -48 to 48 inclusive.

1 If RC3_RC5_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 1350 bits/s,
6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_2400_40MS - Reverse Link Attribute Adjustment Gain for the
10 transmission rate 2400 bits/s.

11 If RC3_RC5_40MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_40MS_INCL is set to '1' and
14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15 set this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 2400 bits/s,
18 convolutional code and 40ms frame. The base station shall
19 set the value in the range from -48 to 48 inclusive.

20 If RC3_RC5_40MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22 set this field to the value of the pilot reference level
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 2400 bits/s,
25 convolutional code and 40ms frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_4800_40MS - Reverse Link Attribute Gain Adjustment for the
29 transmission rate 4800 bits/s.

30 If RC3_RC5_40MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_40MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 4800 bits/s,
37 convolutional code and 40ms frame. The base station shall
38 set the value in the range from -48 to 48 inclusive.

39 If RC3_RC5_40MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 4800 bits/s,
44 convolutional code and 40ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_9600_40MS - Reverse Link Attribute Gain Adjustment for the
48 transmission rate 9600 bits/s.

1 If RC3_RC5_40MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_40MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 9600 bits/s,
8 convolutional code and 40ms frame. The base station shall
9 set the value in the range from -48 to 48 inclusive.

10 If RC3_RC5_40MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 9600 bits/s,
15 convolutional code and 40ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4_RC6_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 4 or 6 of 40ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 4 or 6 of 40ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_1800_40MS - Reverse Link Attribute Gain Adjustment for the
25 transmission rate 1800 bits/s.

26 If RC4_RC6_40MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_40MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 1800 bits/s,
33 convolutional code and 40ms frame. The base station shall
34 set the value in the range from -48 to 48 inclusive.

35 If RC4_RC6_40MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 1800 bits/s,
40 convolutional code and 40ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_3600_40MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 3600 bits/s.

45 If RC4_RC6_40MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_40MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 3600 bits/s,
 6 convolutional code and 40ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_40MS_INCL is set to '1' and
 9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 10 set this field to the value of the pilot reference level
 11 adjustment that the mobile station is to make for the
 12 transmission attributes with transmission rate 3600 bits/s,
 13 convolutional code and 40ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_7200_40MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 7200 bits/s.

18 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_40MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 7200 bits/s,
 25 convolutional code and 40ms frame. The base station shall
 26 set the value in the range from -48 to 48 inclusive.

27 If RC4_RC6_40MS_INCL is set to '1' and
 28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 29 this field to the value of the pilot reference level adjustment
 30 that the mobile station is to make for the transmission
 31 attributes with transmission rate 7200 bits/s, convolutional
 32 code and 40ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_14400_40MS - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 14400 bits/s.

37 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC4_RC6_40MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal gain adjustment that
 42 the mobile station is to make for the transmission attributes
 43 with transmission rate 14400 bits/s, convolutional code and
 44 40ms frame. The base station shall set the value in the range
 45 from -48 to 48 inclusive.

1 If RC4_RC6_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 14400 bits/s,
6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC3_RC5_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 3 or 5 of 80 ms frame included indicator.

11 If Reverse Link Attribute adjustment Gain for Radio
12 Configuration 3 or 5 of 80 ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_1200_80MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 1200 bits/s.

17 If RC3_RC5_80MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC3_RC5_80MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 1200 bits/s,
24 convolutional code and 80ms frame. The base station shall
25 set the value in the range from -48 to 48 inclusive.

26 If RC3_RC5_80MS_INCL is set to '1' and
27 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
28 set this field to the value of the pilot reference level
29 adjustment that the mobile station is to make for the
30 transmission attributes with transmission rate 1200 bits/s,
31 convolutional code and 80ms frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_2400_80MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 2400 bits/s.

36 If RC3_RC5_80MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC3_RC5_80MS_INCL is set to '1' and
39 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
40 set this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 2400 bits/s,
43 convolutional code and 80ms frame. The base station shall
44 set the value in the range from -48 to 48 inclusive.

1 If RC3_RC5_80MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 2400 bits/s,
6 convolutional code and 80ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_4800_80MS - Reverse Link Attribute Gain Adjustment for the
10 transmission rate 4800 bits/s.

11 If RC3_RC5_80MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_40MS_INCL is set to '1' and
14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15 set this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 4800 bits/s,
18 convolutional code and 80ms frame. The base station shall
19 set the value in the range from -48 to 48 inclusive.

20 If RC3_RC5_80MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22 set this field to the value of the pilot reference level
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 4800 bits/s,
25 convolutional code and 80ms frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_9600_80MS - Reverse Link Attribute Gain Adjustment for the
29 transmission rate 9600 bits/s.

30 If RC3_RC5_80MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_80MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 9600 bits/s,
37 convolutional code and 80ms frame. The base station shall
38 set the value in the range from -48 to 48 inclusive.

39 If RC3_RC5_80MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 9600 bits/s,
44 convolutional code and 80ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RC4_RC6_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
48 Configuration 4 or 6 of 80ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio
2 Configuration 4 or 6 of 80ms frame is included in this
3 message, the base station shall set this field to '1'; otherwise,
4 the base station shall set this field to '0'.

5 RL_ATT_ADJ_GAIN_1800_80MS - Reverse Link Attribute Gain Adjustment for the
6 transmission rate 1800 bits/s.

7 If RC4_RC6_80MS_INCL is set to '0', the base station shall
8 omit this field.

9 If RC4_RC6_80MS_INCL is set to '1' and
10 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
11 set this field to the value of the nominal attribute gain
12 adjustment that the mobile station is to make for the
13 transmission attributes with transmission rate 1800 bits/s,
14 convolutional code and 80ms frame. The base station shall
15 set the value in the range from -48 to 48 inclusive.

16 If RC4_RC6_80MS_INCL is set to '1' and
17 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
18 set this field to the value of the pilot reference level
19 adjustment that the mobile station is to make for the
20 transmission attributes with transmission rate 1800 bits/s,
21 convolutional code and 80ms frame.

22 The base station shall set this field to the correction factor
23 expressed as a two's complement value in units of 0.125 dB.

24 RL_ATT_ADJ_GAIN_3600_80MS - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 3600 bits/s.

26 If RC4_RC6_80MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_80MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 3600 bits/s,
33 convolutional code and 80ms frame. The base station shall
34 set the value in the range from -48 to 48 inclusive.

35 If RC4_RC6_80MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 3600 bits/s,
40 convolutional code and 80ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_7200_80MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 7200 bits/s.

45 If RC4_RC6_80MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_80MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 7200 bits/s,
 6 convolutional code and 80ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_80MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 7200 bits/s, convolutional
 13 code and 80ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_14400_80MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 14400 bits/s.

18 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal gain adjustment that
 23 the mobile station is to make for the transmission attributes
 24 with transmission rate 14400 bits/s, convolutional code and
 25 80ms frame. The base station shall set the value in the range
 26 from -48 to 48 inclusive.

27 If RC4_RC6_40MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 14400 bits/s,
 32 convolutional code and 80ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RESERVED - Reserved bits.

36 The base station shall add reserved bits as needed in order to
 37 make the length of the entire record equal to an integer
 38 number of octets. The base station shall set these bits to '0'.

39 If RPC_ADJ_REC_TYPE is equal to '0010', the base station shall set type-specific fields as
 40 specified in Table 3.7.3.3.2.25-6.

1

Table 3.7.3.3.2.25-6. Type Specific Fields for RECORD_TYPE = '0010'

Fields	Length (Bits)
CODE_TYPE	1
RL_ATT_ADJ_GAIN_TYPE	1
RC3_RC5_20MS_INCL	1
RL_ATT_ADJ_GAIN_19200	0 or 8
RL_ATT_ADJ_GAIN_38400	0 or 8
RL_ATT_ADJ_GAIN_76800	0 or 8
RL_ATT_ADJ_GAIN_153600	0 or 8
RL_ATT_ADJ_GAIN_307200	0 or 8
RL_ATT_ADJ_GAIN_614400	0 or 8
RC4_RC6_20MS_INCL	1
RL_ATT_ADJ_GAIN_28800	0 or 8
RL_ATT_ADJ_GAIN_57600	0 or 8
RL_ATT_ADJ_GAIN_115200	0 or 8
RL_ATT_ADJ_GAIN_230400	0 or 8
RL_ATT_ADJ_GAIN_460800	0 or 8
RL_ATT_ADJ_GAIN_1036800	0 or 8
RC3_RC5_40MS_INCL	1
RL_ATT_ADJ_GAIN_19200_40MS	0 or 8
RL_ATT_ADJ_GAIN_38400_40MS	0 or 8
RL_ATT_ADJ_GAIN_76800_40MS	0 or 8
RL_ATT_ADJ_GAIN_153600_40MS	0 or 8
RL_ATT_ADJ_GAIN_307200_40MS	0 or 8
RC4_RC6_40MS_INCL	1
RL_ATT_ADJ_GAIN_28800_40MS	0 or 8
RL_ATT_ADJ_GAIN_57600_40MS	0 or 8
RL_ATT_ADJ_GAIN_115200_40MS	0 or 8

2

3

CODE_TYPE - Coding type indicator.

4

5

6

7

8

If the following corresponding gain adjustment fields apply for the convolutional code, the base station shall set this field to '0'. If the following corresponding gain adjustment fields apply for the Turbo code, the base station shall set this field to '1'.

9

RL_ATT_ADJ_GAIN_TYPE- Reverse Link Attribute adjustment Gain value type indicator.

10

11

12

13

14

15

16

17

18

19

If the following corresponding gain adjustment fields are set to the value of the nominal attribute gain adjustment that the mobile station is to make for the corresponding transmission attributes (relative to Nominal_Attribute_Gain specified in [2]), the base station shall set this field to '0'. If the following corresponding gain adjustment fields are set to the value of the pilot reference level adjustment that the mobile station is to use for the corresponding transmission attributes (relative to Pilot_Reference_Level specified in [2]), the base station shall set this field to '1'.

20

RC3_RC5_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio Configuration 3 or 5 of 20ms frame included indicator.

21

22

23

24

25

If Reverse Link Attribute Adjustment Gain for Radio Configuration 3 or 5 of 20ms frame is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

26

RL_ATT_ADJ_GAIN_19200 - Reverse Link Attribute Adjustment Gain for the transmission rate 19200 bits/s.

27

1 If RC3_RC5_20MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_20MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 19200 bits/s,
8 and 20ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC3_RC5_20MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 19200 bits/s
15 and 20ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RL_ATT_ADJ_GAIN_38400 - Reverse Link Attribute Adjustment Gain for the
19 transmission rate 38400 bits/s.

20 If RC3_RC5_20MS_INCL is set to '0', the base station shall
21 omit this field.

22 If RC3_RC5_20MS_INCL is set to '1' and
23 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
24 set this field to the value of the nominal attribute gain
25 adjustment that the mobile station is to make for the
26 transmission attributes with transmission rate 38400 bits/s,
27 and 20ms frame. The base station shall set the value in the
28 range from -48 to 48 inclusive.

29 If RC3_RC5_20MS_INCL is set to '1' and
30 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
31 this field to the value of the pilot reference level adjustment
32 that the mobile station is to make for the transmission
33 attributes with transmission rate 38400 bits/s and 20ms
34 frame.

35 The base station shall set this field to the correction factor
36 expressed as a two's complement value in units of 0.125 dB.

37 RL_ATT_ADJ_GAIN_76800 - Reverse Link Attribute Adjustment Gain for the
38 transmission rate 76800 bits/s.

39 If RC3_RC5_20MS_INCL is set to '0', the base station shall
40 omit this field.

41 If RC3_RC5_20MS_INCL is set to '1' and
42 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
43 set this field to the value of the nominal attribute gain
44 adjustment that the mobile station is to make for the
45 transmission attributes with transmission rate 76800 bits/s,
46 and 20ms frame. The base station shall set the value in the
47 range from -48 to 48 inclusive.

1 If RC3_RC5_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 76800 bits/s
6 and 20ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_153600 - Reverse Link Attribute Adjustment Gain for the
10 transmission rate 153600 bits/s.

11 If RC3_RC5_20MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_20MS_INCL is set to '1' and
14 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
15 this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 153600 bits/s,
18 and 20ms frame. The base station shall set the value in the
19 range from -48 to 48 inclusive.

20 If RC3_RC5_20MS_INCL is set to '1' and
21 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
22 this field to the value of the pilot reference level adjustment
23 that the mobile station is to make for the transmission
24 attributes with transmission rate 153600 bits/s and 20ms
25 frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_307200 - Reverse Link Attribute Adjustment Gain for the
29 transmission rate 307200 bits/s.

30 If RC3_RC5_20MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_20MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 307200 bits/s,
37 and 20ms frame. The base station shall set the value in the
38 range from -48 to 48 inclusive.

39 If RC3_RC5_20MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 307200 bits/s
44 and 20ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_614400 - Reverse Link Attribute Adjustment Gain for the
48 transmission rate 614400 bits/s.

1 If RC3_RC5_20MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_20MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 614400 bits/s,
8 and 20ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC3_RC5_20MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 614400 bits/s
15 and 20ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4_RC6_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 4 or 6 of 20ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 4 or 6 of 20ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_28800 - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 28800 bits/s.

26 If RC4_RC6_20MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_20MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 28800 bits/s,
33 and 20ms frame. The base station shall set the value in the
34 range from -48 to 48 inclusive.

35 If RC4_RC6_20MS_INCL is set to '1' and
36 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37 this field to the value of the pilot reference level adjustment
38 that the mobile station is to make for the transmission
39 attributes with transmission rate 28800 bits/s and 20ms
40 frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_57600 - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 57600 bits/s.

45 If RC4_RC6_20MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_20MS_INCL is set to '1' and
 2 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
 3 this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 57600 bits/s,
 6 and 20ms frame. The base station shall set the value in the
 7 range from -48 to 48 inclusive.

8 If RC4_RC6_20MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 57600 bits/s and 20ms
 13 frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_115200 - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 115200 bits/s.

18 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_20MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 115200 bits/s,
 25 and 20ms frame. The base station shall set the value in the
 26 range from -48 to 48 inclusive.

27 If RC4_RC6_20MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 115200 bits/s
 32 and 20ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_230400 - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 230400 bits/s.

37 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC4_RC6_20MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal attribute gain
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 230400 bits/s,
 44 and 20ms frame. The base station shall set the value in the
 45 range from -48 to 48 inclusive.

1 If RC4_RC6_20MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 3 set this field to the value of the pilot reference level
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 230400 bits/s
 6 and 20ms frame.

7 The base station shall set this field to the correction factor
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_460800 - Reverse Link Attribute Adjustment Gain for the
 10 transmission rate 460800 bits/s.

11 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 12 omit this field.

13 If RC4_RC6_20MS_INCL is set to '1' and
 14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 15 set this field to the value of the nominal attribute gain
 16 adjustment that the mobile station is to make for the
 17 transmission attributes with transmission rate 460800 bits/s,
 18 and 20ms frame. The base station shall set the value in the
 19 range from -48 to 48 inclusive.

20 If RC4_RC6_20MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 22 set this field to the value of the pilot reference level
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 460800 bits/s
 25 and 20ms frame.

26 The base station shall set this field to the correction factor
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_1036800- Reverse Link Attribute Adjustment Gain for the
 29 transmission rate 1036800 bits/s.

30 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 31 omit this field.

32 If RC4_RC6_20MS_INCL is set to '1' and
 33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 34 set this field to the value of the nominal attribute gain
 35 adjustment that the mobile station is to make for the
 36 transmission attributes with transmission rate 1036800
 37 bits/s, and 20ms frame. The base station shall set the value
 38 in the range from -48 to 48 inclusive.

39 If RC4_RC6_20MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 41 set this field to the value of the pilot reference level
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 1306800
 44 bits/s and 20ms frame.

45 The base station shall set this field to the correction factor
 46 expressed as a two's complement value in units of 0.125 dB.

47 RC3_RC5_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 48 Configuration 3 or 5 of 40ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio
 2 Configuration 3 or 5 of 40ms frame is included in this
 3 message, the base station shall set this field to '1'; otherwise,
 4 the base station shall set this field to '0'.

5 RL_ATT_ADJ_GAIN_19200_40MS - Reverse Link Attribute Adjustment Gain for the
 6 transmission rate 19200 bits/s.

7 If RC3_RC5_40MS_INCL is set to '0', the base station shall
 8 omit this field.

9 If RC3_RC5_40MS_INCL is set to '1' and
 10 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 11 set this field to the value of the nominal attribute gain
 12 adjustment that the mobile station is to make for the
 13 transmission attributes with transmission rate 19200 bits/s,
 14 and 40ms frame. The base station shall set the value in the
 15 range from -48 to 48 inclusive.

16 If RC3_RC5_40MS_INCL is set to '1' and
 17 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 18 set this field to the value of the pilot reference level
 19 adjustment that the mobile station is to make for the
 20 transmission attributes with transmission rate 19200 bits/s
 21 and 40ms frame.

22 The base station shall set this field to the correction factor
 23 expressed as a two's complement value in units of 0.125 dB.

24 RL_ATT_ADJ_GAIN_38400_40MS - Reverse Link Attribute Adjustment Gain for the
 25 transmission rate 38400 bits/s.

26 If RC3_RC5_40MS_INCL is set to '0', the base station shall
 27 omit this field.

28 If RC3_RC5_40MS_INCL is set to '1' and
 29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 30 set this field to the value of the nominal attribute gain
 31 adjustment that the mobile station is to make for the
 32 transmission attributes with transmission rate 38400 bits/s,
 33 and 40ms frame. The base station shall set the value in the
 34 range from -48 to 48 inclusive.

35 If RC3_RC5_20MS_INCL is set to '1' and
 36 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 37 this field to the value of the pilot reference level adjustment
 38 that the mobile station is to make for the transmission
 39 attributes with transmission rate 38400 bits/s and 40ms
 40 frame.

41 The base station shall set this field to the correction factor
 42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_76800_40MS - Reverse Link Attribute Adjustment Gain for the
 44 transmission rate 76800 bits/s.

45 If RC3_RC5_40MS_INCL is set to '0', the base station shall
 46 omit this field.

1 If RC3_RC5_40MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 76800 bits/s,
 6 and 40ms frame. The base station shall set the value in the
 7 range from -48 to 48 inclusive.

8 If RC3_RC5_40MS_INCL is set to '1' and
 9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 10 set this field to the value of the pilot reference level
 11 adjustment that the mobile station is to make for the
 12 transmission attributes with transmission rate 76800 bits/s
 13 and 40ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_153600_40MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 153600 bits/s.

18 If RC3_RC5_40MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC3_RC5_40MS_INCL is set to '1' and
 21 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
 22 this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 153600 bits/s,
 25 and 40ms frame. The base station shall set the value in the
 26 range from -48 to 48 inclusive.

27 If RC3_RC5_40MS_INCL is set to '1' and
 28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 29 this field to the value of the pilot reference level adjustment
 30 that the mobile station is to make for the transmission
 31 attributes with transmission rate 153600 bits/s and 40ms
 32 frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_307200_40MS - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 307200 bits/s.

37 If RC3_RC5_40MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC3_RC5_40MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal attribute gain
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 307200 bits/s,
 44 and 40ms frame. The base station shall set the value in the
 45 range from -48 to 48 inclusive.

1 If RC3_RC5_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 307200 bits/s
6 and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC4_RC6_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 4 or 6 of 40ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio
12 Configuration 4 or 6 of 40ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_28800_40MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 28800 bits/s.

17 If RC4_RC6_40MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC4_RC6_40MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 28800 bits/s,
24 and 40ms frame. The base station shall set the value in the
25 range from -48 to 48 inclusive.

26 If RC4_RC6_40MS_INCL is set to '1' and
27 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
28 this field to the value of the pilot reference level adjustment
29 that the mobile station is to make for the transmission
30 attributes with transmission rate 28800 bits/s and 40ms
31 frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_57600_40MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 57600 bits/s.

36 If RC4_RC6_40MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC4_RC6_40MS_INCL is set to '1' and
39 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
40 this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 57600 bits/s,
43 and 40ms frame. The base station shall set the value in the
44 range from -48 to 48 inclusive.

1 If RC4_RC6_40MS_INCL is set to '1' and
 2 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 3 this field to the value of the pilot reference level adjustment
 4 that the mobile station is to make for the transmission
 5 attributes with transmission rate 57600 bits/s and 40ms
 6 frame.

7 The base station shall set this field to the correction factor
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_115200_40MS - Reverse Link Attribute Adjustment Gain for the
 10 transmission rate 115200 bits/s.

11 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 12 omit this field.

13 If RC4_RC6_40MS_INCL is set to '1' and
 14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 15 set this field to the value of the nominal attribute gain
 16 adjustment that the mobile station is to make for the
 17 transmission attributes with transmission rate 115200 bits/s,
 18 and 40ms frame. The base station shall set the value in the
 19 range from -48 to 48 inclusive.

20 If RC4_RC6_40MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 22 set this field to the value of the pilot reference level
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 115200 bits/s
 25 and 40ms frame.

26 The base station shall set this field to the correction factor
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_230400_40MS - Reverse Link Attribute Adjustment Gain for the
 29 transmission rate 230400 bits/s.

30 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 31 omit this field.

32 If RC4_RC6_40MS_INCL is set to '1' and
 33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 34 set this field to the value of the nominal attribute gain
 35 adjustment that the mobile station is to make for the
 36 transmission attributes with transmission rate 230400 bits/s,
 37 and 40ms frame. The base station shall set the value in the
 38 range from -48 to 48 inclusive.

39 If RC4_RC6_40MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 41 set this field to the value of the pilot reference level
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 230400 bits/s
 44 and 40ms frame.

45 The base station shall set this field to the correction factor
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_518400_40MS - Reverse Link Attribute Adjustment Gain for the
 48 transmission rate 518400 bits/s.

1 If RC4_RC6_40MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC4_RC6_40MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 518400 bits/s,
8 and 40ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC4_RC6_40MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 518400 bits/s
15 and 40ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC3_RC5_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 3 or 5 of 80ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 3 or 5 of 80ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_19200_80MS - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 19200 bits/s.

26 If RC3_RC5_80MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC3_RC5_80MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 19200 bits/s,
33 and 80ms frame. The base station shall set the value in the
34 range from -48 to 48 inclusive.

35 If RC3_RC5_80MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 19200 bits/s
40 and 80ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_38400_80MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 38400 bits/s.

45 If RC3_RC5_80MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC3_RC5_80MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 38400 bits/s,
 6 and 80ms frame. The base station shall set the value in the
 7 range from -48 to 48 inclusive.

8 If RC3_RC5_80MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 38400 bits/s and 80ms
 13 frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_76800_80MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 76800 bits/s.

18 If RC3_RC5_80MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC3_RC5_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 76800 bits/s,
 25 and 80ms frame. The base station shall set the value in the
 26 range from -48 to 48 inclusive.

27 If RC3_RC5_80MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 76800 bits/s
 32 and 80ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_153600_80MS - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 153600 bits/s.

37 If RC3_RC5_80MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC3_RC5_80MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal attribute gain
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 153600 bits/s,
 44 and 80ms frame. The base station shall set the value in the
 45 range from -48 to 48 inclusive.

1 If RC3_RC5_80MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 153600 bits/s
6 and 80ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC4_RC6_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 4 or 6 of 80ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio
12 Configuration 4 or 6 of 80ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_28800_80MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 28800 bits/s.

17 If RC4_RC6_80MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC4_RC6_80MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 28800 bits/s,
24 and 80ms frame. The base station shall set the value in the
25 range from -48 to 48 inclusive.

26 If RC4_RC6_80MS_INCL is set to '1' and
27 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
28 this field to the value of the pilot reference level adjustment
29 that the mobile station is to make for the transmission
30 attributes with transmission rate 28800 bits/s and 80ms
31 frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_57600_80MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 57600 bits/s.

36 If RC4_RC6_80MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC4_RC6_80MS_INCL is set to '1' and
39 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
40 this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 57600 bits/s,
43 and 80ms frame. The base station shall set the value in the
44 range from -48 to 48 inclusive.

1 If RC4_RC6_80MS_INCL is set to '1' and
 2 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 3 this field to the value of the pilot reference level adjustment
 4 that the mobile station is to make for the transmission
 5 attributes with transmission rate 57600 bits/s and 80ms
 6 frame.

7 The base station shall set this field to the correction factor
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_115200_80MS - Reverse Link Attribute Adjustment Gain for the
 10 transmission rate 115200 bits/s.

11 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 12 omit this field.

13 If RC4_RC6_80MS_INCL is set to '1' and
 14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 15 set this field to the value of the nominal attribute gain
 16 adjustment that the mobile station is to make for the
 17 transmission attributes with transmission rate 115200 bits/s,
 18 and 80ms frame. The base station shall set the value in the
 19 range from -48 to 48 inclusive.

20 If RC4_RC6_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 22 set this field to the value of the pilot reference level
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 115200 bits/s
 25 and 80ms frame.

26 The base station shall set this field to the correction factor
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_259200_80MS - Reverse Link Attribute Adjustment Gain for the
 29 transmission rate 259200 bits/s.

30 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 31 omit this field.

32 If RC4_RC6_80MS_INCL is set to '1' and
 33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 34 set this field to the value of the nominal attribute gain
 35 adjustment that the mobile station is to make for the
 36 transmission attributes with transmission rate 259200 bits/s,
 37 and 80ms frame. The base station shall set the value in the
 38 range from -48 to 48 inclusive.

39 If RC4_RC6_80MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 41 set this field to the value of the pilot reference level
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 259200 bits/s
 44 and 80ms frame.

45 The base station shall set this field to the correction factor
 46 expressed as a two's complement value in units of 0.125 dB.

47 RESERVED - Reserved bits.

The base station shall add reserved bits as needed in order to make the length of the entire record equal to an integer number of octets. The base station shall set these bits to '0'.

If RPC_ADJ_REC_TYPE is equal to '0011', the base station shall set type-specific fields as specified in Table 3.7.3.3.2.25-7.

Table 3.7.3.3.2.25-7. Type Specific Fields for RECORD_TYPE = '0011'

Fields	Length (Bits)
RL_CQICH_ATT_ADJ_GAIN_TYPE	1
RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL	1
RL_CQICH_ATT_ADJ_GAIN_HIGH	0 or 8
RL_CQICH_ATT_ADJ_GAIN_LOW_INCL	1
RL_CQICH_ATT_ADJ_GAIN_LOW	0 or 8
RESERVED	0-7 (if needed)

RL_CQICH_ATT_ADJ_GAIN_TYPE - Reverse Channel Quality Indicator Channel attribute adjustment gain value type indicator

If the following fields are set to the nominal attribute gain adjustment values that the mobile station is to use for the transmission attributes (relative to Nominal_Attribute_Gain specified in [2]), the base station shall set this field to '0'. If the following fields are set to the pilot reference level adjustment values that the mobile station is to use for the transmission attributes (relative to Pilot_Reference_Level specified in [2]), the base station shall set this field to '1'.

RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL - Reverse Channel Quality Indicator Channel attribute adjustment gain for the high power level included indicator.

If the attribute adjustment gain for the high power level of Reverse Channel Quality Indicator Channel transmission is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

RL_CQICH_ATT_ADJ_GAIN_HIGH - Attribute adjustment gain for Reverse Channel Quality Indicator Channel for the high Channel Quality Indicator gain power level.

If RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

1 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 2 station shall set this field to the value of the nominal attribute
 3 gain adjustment that the mobile station is to make for the
 4 transmission attributes for the high power level of R-CQICH.
 5 The base station shall set the value in the range from -40 to
 6 16 inclusive.

7 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 8 station shall set this field to the value of the pilot reference
 9 level adjustment that the mobile station is to make for the
 10 transmission attributes for the high power level of R-CQICH.

11 The base station shall set this field to the correction factor
 12 expressed as a two's complement value in units of 0.125 dB.

13 RL_CQICH_ATT_ADJ_GAIN_LOW_INCL - Reverse Channel Quality Indicator Channel
 14 attribute adjustment gain for the low power level included
 15 indicator.

16 If the attribute adjustment gain for the low power level of
 17 Reverse Channel Quality Indicator Channel transmission is
 18 included in this message, the base station shall set this field
 19 to '1'; otherwise, the base station shall set this field to '0'.

20 RL_CQICH_ATT_ADJ_GAIN_LOW - Attribute adjustment gain for Reverse Channel
 21 Quality Indicator Channel for the low Channel Quality
 22 Indicator gain power level.

23 If RL_CQICH_ATT_ADJ_GAIN_LOW_INCL is set to '0', the base
 24 station shall omit this field; otherwise, the base station shall
 25 set this field as follows:

26 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 27 station shall set this field to the value of the nominal attribute
 28 gain adjustment that the mobile station is to make for the
 29 transmission attributes for the low power level of R-CQICH.
 30 The base station shall set the value in the range from -16 to
 31 16 inclusive.

32 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 33 station shall set this field to the value of the pilot reference
 34 level adjustment that the mobile station is to make for the
 35 transmission attributes for the low power level of R-CQICH.

36 The base station shall set this field to the correction factor
 37 expressed as a two's complement value in units of 0.125 dB.

38 If RPC_ADJ_REC_TYPE is equal to '0100', the base station shall set type-specific fields as
 39 specified in Table 3.7.3.3.2.25-8.

1

- REV_REQCH_ADJ_INCL - Reverse Request Channel Adjustment included field.
If the attribute adjustment gains for the Reverse Request Channel are included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- REV_REQCH_ADJ_GAIN - Reverse Request Channel Adjustment Gain.
If REV_REQCH_ADJ_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.
The base station shall set this field to the value of the nominal attribute gain adjustment that the mobile station is to make for the transmission attributes for the power level of R-REQCH. The base station shall set the value in the range from -24 to 40 inclusive.
The base station shall set this field to the correction factor expressed as a two's complement value in units of 0.125 dB.
- REV_SPICH_ADJ_INCL - Reverse Secondary Pilot Channel Adjustment included field.

- 1 If the attribute adjustment gains for the Reverse Secondary
 2 Pilot Channel are included in this message, the base station
 3 shall set this field to '1'; otherwise, the base station shall set
 4 this field to '0'.
- 5 REV_SPICH_ADJ_GAIN - Reverse Secondary Pilot Channel Adjustment Gain.
 6 If REV_SPICH_ADJ_INCL is set to '0', the base station shall
 7 omit this field; otherwise, the base station shall include this
 8 field, and set it as follows.
 9 The base station shall set this field to the value of the nominal
 10 attribute gain adjustment that the mobile station is to make
 11 for the transmission attributes for the power level of R-SPICH.
 12 The base station shall set the value in the range from -16 to
 13 48 inclusive.
 14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.
- 16 REV_SPICH_EP_SIZE - Minimum Encoder Packet Size for which the Reverse
 17 Secondary Pilot Channel is used.
 18 If REV_SPICH_ADJ_INCL is set to '0', the base station shall
 19 omit this field; otherwise, the base station shall include this
 20 field, and set it as follows.
 21 The base station shall set this field to the minimum encoder
 22 packet size for which the Reverse Secondary Pilot Channel is
 23 used (see [2] and [3]).
 24 The base station shall set this field to a value in the range 0 to
 25 10 inclusive, corresponding to the encoder packet sizes 192,
 26 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, and
 27 18456 bits respectively.
- 28 REV_PDCCH_ADJ_INCL - Reverse Packet Data Control Channel Adjustment included
 29 field.
 30 If the attribute adjustment gains for the Reverse Packet Data
 31 Control Channel are included in this message, the base
 32 station shall set this field to '1'; otherwise, the base station
 33 shall set this field to '0'.
- 34 REV_PDCCH_ADJ_GAIN - Reverse Packet Data Control Channel Adjustment Gain.
 35 If REV_PDCCH_ADJ_INCL is set to '0', the base station shall
 36 omit this field; otherwise, the base station shall include this
 37 field, and set it as follows.
 38 The base station shall set this field to the value of the nominal
 39 attribute gain adjustment that the mobile station is to make
 40 for the transmission attributes for the power level of R-
 41 PDCCH. The base station shall set the value in the range from
 42 -32 to 32 inclusive.
 43 The base station shall set this field to the correction factor
 44 expressed as a two's complement value in units of 0.125 dB.
- 45 REV_PDCCH_ATTRIBUTE_ADJ_INCL - Reverse Packet Data Control Channel
 46 Attribute Adjustment included field.

1 If the attribute adjustment gains for the Reverse Packet Data
 2 Control Channel are included per encoder packet size and per
 3 boost mode in this message, the base station shall set this
 4 field to '1'; otherwise, the base station shall set this field to '0'.

5 REV_PDCCH_EP_SIZE_NUM - Number of occurrences of Reverse Packet Data Control
 6 Channel Attribute Adjustment Gains.

7 If REV_PDCCH_ATTRIBUTE_ADJ_INCL is set to '0', the base
 8 station shall omit this field; otherwise, the base station shall
 9 include this field, and set it as follows.

10 The base station shall set this field to one less than half the
 11 number of occurrences of the field included hereafter. The
 12 records are listed per encoder packet size, in the following
 13 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
 14 9240, 12312, 15384, 18456 bits.

15

16 If REV_PDCCH_ATTRIBUTE_ADJ_INCL is set to '1', the base station shall include
 17 REV_PDCCH_EP_SIZE_NUM+1 occurrences of the following record:

18 The base station shall include 2 occurrences of the following field. The first occurrence of
 19 this field is for the non-boosted mode, while the second is for the boosted mode.

20 REV_PDCCH_ATTRIBUTE_ADJ_GAIN - Reverse Packet Data Control Channel Attribute
 21 Adjustment Gain.

22 The base station shall set this field to the value of the nominal
 23 attribute gain adjustment that the mobile station is to make
 24 for the transmission attributes for the power level of R-
 25 PDCCH, for the i-th encoder packet size, and for the non-
 26 boosted and boosted modes.

27 The base station shall set the value in the range from -32 to
 28 32 inclusive.

29 The base station shall set this field to the correction factor
 30 expressed as a two's complement value in units of 0.125 dB.

31 REV_PDCCH_BOOST_ADJ_INCL - Reverse Packet Data Control Channel Boost
 32 Adjustment included field.

33 If the attribute adjustment gains for the Reverse Packet Data
 34 Control Channel per boosted mode are included in this
 35 message, the base station shall set this field to '1'; otherwise,
 36 the base station shall set this field to '0'.

37

38 If REV_PDCCH_BOOST_ADJ_INCL is set to '1", the base station shall include two
 39 occurrences of the following record:

40 REV_PDCCH_BOOST_ADJ_GAIN - Reverse Packet Data Control Channel Boost
 41 Adjustment Gains.

1 The base station shall set this field to the value of the nominal
 2 attribute gain adjustment that the mobile station is to make
 3 for the transmission attributes for the power level of R-
 4 PDCCH, for the appropriate mode. The base station shall set
 5 the value in the range from -32 to 32 inclusive.

6 The first occurrence of this field is for the non-boosted mode,
 7 while the second is for the boosted mode. The base station
 8 shall set this field to the correction factor expressed as a two's
 9 complement value in units of 0.125 dB.

10 REV_PDCCH_PAYLOAD_ADJ_INCL - Reverse Packet Data Control Channel Payload
 11 Attribute Adjustment inclusion field.

12 If the attribute adjustment gains for the Reverse Packet Data
 13 Control Channel are included per encoder packet size in this
 14 message, the base station shall set this field to '1'; otherwise,
 15 the base station shall set this field to '0'.

16 REV_PDCCH_EP_SIZE_NUM_1 - Number of occurrences of Reverse Packet Data Control
 17 Channel Payload Attribute Adjustment Gain records.

18 If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '0', the base
 19 station shall omit this field; otherwise, the base station shall
 20 include this field, and set it as follows.

21 The base station shall set this field to one less than the
 22 number of occurrences of the field included hereafter. The
 23 fields are listed per encoder packet size, in the following
 24 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
 25 9240, 12312, 15384, 18456 bits.

26

27 If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '1', the base station shall include
 28 $(\text{REV_PDCCH_EP_SIZE_NUM_1} + 1) \times 2$ occurrences of the following record:

29 REV_PDCCH_PAYLOAD_ADJ_GAIN - Reverse Packet Data Control Channel Payload
 30 Attribute Adjustment Gain.

31 The base station shall set this field to the value of the nominal
 32 attribute gain adjustment that the mobile station is to make
 33 for the transmission attributes for the power level of R-
 34 PDCCH, for the i-th encoder packet size, and for the non-
 35 boosted and boosted modes. In each set for the i-th encoder
 36 packet, the first occurrence of this field is for the non-boosted
 37 mode, while the second is for the boosted mode.

38 The base station shall set the value in the range from -32 to
 39 32 inclusive. The base station shall set this field to the
 40 correction factor expressed as a two's complement value in
 41 units of 0.125 dB.

42 REV_PDCH_ADJ_INCL - Reverse Packet Data Channel Adjustment included field.

43 If the attribute adjustment gains for the Reverse Packet Data
 44 Channel are included in this message, the base station shall
 45 set this field to '1'; otherwise, the base station shall set this
 46 field to '0'.

1 REV_PDCH_ADJ_GAIN - Reverse Packet Data Channel Adjustment Gain.
 2 If REV_PDCH_ADJ_INCL is set to '0', the base station shall
 3 omit this field; otherwise, the base station shall include this
 4 field, and set it as follows.
 5 The base station shall set this field to the value of the nominal
 6 attribute gain adjustment that the mobile station is to make
 7 for the transmission attributes for the power level of R-PDCH.
 8 The base station shall set the value in the range from -40 to
 9 56 inclusive.
 10 The base station shall set this field to the correction factor
 11 expressed as a two's complement value in units of 0.125 dB.

12 REV_PDCH_PAYLOAD_ADJ_INCL - Reverse Packet Data Channel Adjustment included
 13 field.
 14 If the attribute adjustment gains for the Reverse Packet Data
 15 Channel are included per encoder packet size in this
 16 message, the base station shall set this field to '1'; otherwise,
 17 the base station shall set this field to '0'.

18 REV_PDCH_EP_SIZE_NUM - Number of occurrences of Reverse Packet Data Channel
 19 Payload Adjustment Gains.
 20 If REV_PDCH_PAYLOAD_ADJ_INCL is set to '0', the base
 21 station shall omit this field; otherwise, the base station shall
 22 include this field, and set it as follows.
 23 The base station shall set this field to one less than the
 24 number of occurrences of the following field. The fields are
 25 listed per encoder packet size, in the following ascending
 26 order: 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312,
 27 15384, 18456 bits

28 If REV_PDCH_PAYLOAD_ADJ_INCL is set to '1', the base station shall include
 29 REV_PDCH_EP_SIZE_NUM+1 occurrences of the following record:

30 REV_PDCH_PAYLOAD_ADJ_GAIN - Reverse Packet Data Channel Payload Adjustment
 31 Gain.
 32 The base station shall set this field to the value of the nominal
 33 attribute gain adjustment that the mobile station is to make
 34 for the transmission attributes for the power level of R-PDCH,
 35 for the i-th encoder packet size. The base station shall set the
 36 value in the range from -40 to 56 inclusive.
 37 The base station shall set this field to the correction factor
 38 expressed as a two's complement value in units of 0.125 dB.

39 REV_PDCH_BOOST_ADJ_INCL - Reverse Packet Data Channel Adjustment included
 40 field.
 41 If the attribute adjustment gains for the Reverse Packet Data
 42 Channel are included per boosted mode in this message, the
 43 base station shall set this field to '1'; otherwise, the base
 44 station shall set this field to '0'.

45

1 If REV_PDCH_BOOST_ADJ_INCL is set to '1', the base station shall include two
 2 occurrences of the following record. The first occurrence of this record is for the non-
 3 boosted mode, while the second is for the boosted mode.

4 REV_PDCH_BOOST_ADJ_GAIN - Reverse Packet Data Channel Boost-dependent
 5 Adjustment Gain.

6 The base station shall set this field to the value of the nominal
 7 attribute gain adjustment that the mobile station is to make
 8 for the transmission attributes for the power level of R-PDCH.
 9 The base station shall set the value in the range from -40 to
 10 56 inclusive.

11 The first occurrence of this field is for the non-boosted mode,
 12 while the second is for the boosted mode. The base station
 13 shall set this field to the correction factor expressed as a two's
 14 complement value in units of 0.125 dB.

15 REV_PDCH_SUBPACKET_ADJ_INCL- Reverse Packet Data Channel Subpacket
 16 Adjustment included field.

17 If the attribute adjustment gains for the Reverse Packet Data
 18 Channel are included per subpacket transmission round in
 19 this message, the base station shall set this field to '1';
 20 otherwise, the base station shall set this field to '0'.

21 REV_PDCH_RETRX_NUM- Number of occurrences of the Reverse Packet Data Channel
 22 Subpacket Adjustment Gains.

23 If REV_PDCH_SUBPACKET_ADJ_INCL is set to '0', the base
 24 station shall omit this field; otherwise, the base station shall
 25 include this field, and set it as follows.

26 The base station shall set this field to one less than the
 27 number of occurrences of the following field.

28 If REV_PDCH_SUBPACKET_ADJ_INCL is set to '1', the base station shall include
 29 (REV_PDCH_RETRX_NUM+1) occurrences of the following record:

30 REV_PDCH_SUBPACKET_ADJ_GAIN - Reverse Packet Data Channel Subpacket
 31 Adjustment Gain.

32 The base station shall set this field to the value of the nominal
 33 attribute gain adjustment that the mobile station is to make
 34 for the transmission attributes for the power level of R-PDCH,
 35 on the i-th transmission round. The base station shall set the
 36 value in the range from -40 to 56 inclusive.

37 The base station shall set this field to the correction factor
 38 expressed as a two's complement value in units of 0.125 dB.

39 REV_PDCH_ATTRIBUTE_ADJ_INCL - Reverse Packet Data Channel Attribute
 40 Adjustment included field.

41 If the attribute adjustment gains for the Reverse Packet Data
 42 Channel are included per encoder packet size and per
 43 subpacket transmission round in this message, the base
 44 station shall set this field to '1'; otherwise, the base station
 45 shall set this field to '0'.

1 REV_PDCH_EP_SIZE_NUM_1 - Number of occurrences of the Reverse Packet Data
2 Channel Attribute Adjustment Gains record.

3 If REV_PDCH_ATTRIBUTE_ADJ_INCL is set to '0', the base
4 station shall omit this field; otherwise, the base station shall
5 include this field, and set it as follows.

6 The base station shall set this field to one less than the
7 number of occurrences of the following subrecord. The
8 subrecords are listed per encoder packet size, in the following
9 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
10 9240, 12312, 15384, 18456 bits.

11

12 If REV_PDCH_ATTRIBUTE_ADJ_INCL is set to '1', the base station shall include
13 (REV_PDCH_EP_SIZE_NUM_1+1) occurrences of the following subrecord:

14 REV_PDCH_RETRX_NUM_1 - Number of occurrences of the Reverse Packet Data
15 Channel Subpacket Adjustment Gains.

16 The base station shall set this field to one less than the
17 number of occurrences of the Reverse Packet Data Channel
18 Subpacket Adjustment Gains record.

19

20 The base station shall include (REV_PDCH_RETRX_NUM_1+1) occurrences of the following
21 record:

22 The base station shall include 2 occurrences of the following field. The first occurrence of
23 this field is for the non-boosted mode, while the second is for the boosted mode.

24 REV_PDCH_ATTRIBUTE_ADJ_GAIN - Reverse Packet Data Channel Attribute
25 Adjustment Gain.

26 The base station shall set this field to the value of the nominal
27 attribute gain adjustment that the mobile station is to make
28 for the transmission attributes for the power level of R-PDCH,
29 for the i-th encoder packet size on a j-th transmission round,
30 using the non-boosted or boosted mode.

31 The base station shall set the value in the range from -40 to
32 56 inclusive. The base station shall set this field to the
33 correction factor expressed as a two's complement value in
34 units of 0.125 dB.

35 REV_PDCH_PARAMS_INCL - Reverse Packet Data Channel related parameters included
36 indicator.

37 The base station shall set this field to '1' if the R-PDCH
38 parameters are included in this message; otherwise, the base
39 station shall set this field to '0'.

40 REV_PDCH_NUM_ARQ_ROUNDS_NORMAL - Maximum number of allowed ARQ rounds
41 on the Reverse PDCH in the non-boosted mode.

42 If REV_PDCH_PARAMS_INCL is set to '0', the base station shall
43 omit this field; otherwise, the base station shall include this
44 field and set it as follows:

1 The base station shall set this field to one less the maximum
2 number of allowed ARQ rounds on the Reverse PDCH in the
3 non-boosted mode. The base station shall set this field to 0, 1,
4 or 2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

5 REV_PDCH_NUM_ARQ_ROUNDS_BOOST - Maximum number of allowed HARQ
6 retransmissions on the Reverse PDCH in the boosted mode.

7 If REV_PDCH_PARAMS_INCL is set to '0', the base station shall
8 omit this field; otherwise, the base station shall include this
9 field and set it as follows:

10 The base station shall set this field to one less the maximum
11 number of allowed ARQ rounds on the Reverse PDCH in the
12 boosted mode. The base station shall set this field to 0, 1, or 2
13 corresponding to 1, 2, or 3 rounds respectively (See [3]).

14 FPC_BCMC_CHAN - Channel used for secondary power control subchannel.

15 If FPC_INCL is set to '1' and FPC_MODE is set to '001', '010',
16 '101', or '110', the base station shall include this field and set
17 it as follows; otherwise, the base station shall omit this field.

18 If F-FCH is associated with secondary power control
19 subchannel, the base station shall set this field to '1';
20 otherwise, base station shall set this field to '0' to indicate
21 that FPC_SEC_CHAN points to the channel associated with
22 secondary power control subchannel.

23 RESERVED - Reserved bits.

24 The base station shall add reserved bits as needed in order to
25 make the length of the entire record equal to an integer
26 number of octets. The base station shall set these bits to '0'.
27

1 3.7.3.3.2.26 Extended Neighbor List Update Message

NGHBR_RESQ_CONFIGURED	1
-----------------------	---

} (NUM_NGHBR)

1

2

PILOT_INC - Pilot PN sequence offset index increment.

3

A mobile station searches for Remaining Set pilots at pilot PN sequence index values that are multiples of this value.

4

5

The base station shall set this field to the pilot PN sequence increment, in units of 64 PN chips, that mobile stations are to use for searching the Remaining Set. The base station should set this field to the largest increment such that the pilot PN sequence offsets of all its neighbor base stations are integer multiples of that increment.

6

7

8

9

10

11

The base station shall set this field to a value in the range 1 to 15 inclusive.

12

13

NGHBR_SRCH_MODE - Search mode.

14

The base station shall set this field to the value specified in Table 3.7.3.3.2.26-1 corresponding to the search mode.

15

16

1

Table 3.7.3.3.2.26-1. NGHBR_SRCH_MODE Field

Value (binary)	Description
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

2

3

SRCH_WIN_N - Default search window size for the Neighbor Set.

4

5

6

7

8

9

10

The base station shall set this field to the value specified in Table 2.6.6.2.1-1 corresponding to the default search window size to be used by the mobile station for its Neighbor Set. The mobile station uses the default search window size for all pilots in its Neighbor Set when the search window is not specified for each pilot individually (NGHBR_SRCH_MODE is set to a value other than '10' and '11').

11

USE_TIMING - Use timing indicator.

12

13

14

If base station timing information is included for neighbor base stations, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

15

GLOBAL_TIMING_INCL - Global timing included.

16

17

18

If USE_TIMING is set to '1', the base station shall include the field GLOBAL_TIMING_INCL and set this field as described below; otherwise, the base station shall omit this field.

19

20

21

22

If base station timing information is included globally for all neighbor base stations with TIMING_INCL equal to '1', the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

23

GLOBAL_TX_DURATION - Global neighbor transmit time duration.

24

25

26

27

If GLOBAL_TIMING_INCL is included and is set to '1', the base station shall include the field GLOBAL_TX_DURATION and shall set this field as described below; otherwise, the base station shall omit this field.

28

29

30

31

The base station shall set this field to the duration of the base station transmit window, during each period, in units of 80 ms. The base station should set this field to a value of 3 or greater.

32

GLOBAL_TX_PERIOD - Global neighbor transmit time period.

33

34

35

36

If GLOBAL_TIMING_INCL is included and is set to '1', the base station shall include the field GLOBAL_TX_PERIOD and shall set this field as described below; otherwise, the base station shall omit this field.

1 The base station shall set this field to duration of the period,
2 in units of 80 ms.

3 NUM_NGHBR - Number of neighbor pilot PN sequences.

4 The base station shall set this field to the number of
5 neighbors included in the message.

6 The base station shall include one occurrence of the following record for each pilot that a
7 mobile station is to place in its Neighbor Set

8 NGHBR_PN - Neighbor pilot PN sequence offset index.

9 The base station shall include one occurrence of this field for
10 each pilot in its neighbor list. The base station shall set this
11 field to the pilot's PN sequence offset, in units of 64 PN chips.

12 SEARCH_PRIORITY - Pilot Channel search priority.

13 If NGHBR_SRCH_MODE is set to '01' or '11', then the base
14 station shall set this field to the search priority for this
15 neighbor. The base station shall set the search priority as
16 specified in Table 3.7.3.3.2.26-2. If NGHBR_SRCH_MODE is
17 set to any other value, the base station shall omit this field.

18

19 **Table 3.7.3.3.2.26-2. SEARCH_PRIORITY Field**

Value (binary)	Search Priority
00	Low
01	Medium
10	High
11	Very High

20

21 SRCH_WIN_NGHBR - Neighbor pilot channel search window size.

22 If NGHBR_SRCH_MODE is set to '10' or '11', then the base
23 station shall set this field to the value specified in Table
24 2.6.6.2.1-1 corresponding to the search window size to be
25 used by the mobile stations for this neighbor. If
26 NGHBR_SRCH_MODE is set to any other value, the base
27 station shall omit this field.

28 TIMING_INCL - Timing included indicator.

29 If USE_TIMING is set to '1', the base station shall include the
30 field TIMING_INCL and set this field as described below;
31 otherwise, the base station shall omit this field.

32 If base station timing information is included for this neighbor
33 base station, the base station shall set this field to '1';
34 otherwise, the base station shall set this field to '0'.

35 NGHBR_TX_OFFSET - Neighbor transmit time offset.

- 1 If TIMING_INCL is included and is set to '1', the base station
 2 shall include the field NGHBR_TX_OFFSET and set this field
 3 as described below; otherwise, the base station shall omit this
 4 field.
- 5 The base station shall set this field to the time offset, in units
 6 of 80 ms, from the beginning of the neighbor timing period to
 7 the beginning of the first base station transmit window within
 8 the period. The beginning of the neighbor timing period
 9 occurs when $\lfloor t/4 \rfloor \bmod (16384) = 0$.
- 10 NGHBR_TX_DURATION - Neighbor transmit time duration.
- 11 If TIMING_INCL is included and is set to '1' and
 12 GLOBAL_TIMING_INCL is set to '0', the base station shall
 13 include the field NGHBR_TX_DURATION and set this field as
 14 described below; otherwise, the base station shall omit this
 15 field.
- 16 The base station shall set this field to duration of the base
 17 station transmit window, during each period, in units of
 18 80 ms. The base station should set this field to a value of 3 or
 19 greater.
- 20 NGHBR_TX_PERIOD - Neighbor transmit time period.
- 21 If TIMING_INCL is included and is set to '1' and
 22 GLOBAL_TIMING_INCL is set to '0', the base station shall
 23 include the field NGHBR_TX_PERIOD and set this field as
 24 described below; otherwise, the base station shall omit this
 25 field.
- 26 The base station shall set this field to duration of the period,
 27 in units of 80 ms.
- 28 SRCH_OFFSET_INCL - Neighbor pilot channel search window offset included.
- 29 If NGHBR_SRCH_MODE = '10' or '11' and if the
 30 SRCH_OFFSET_NGHR field is included in the following
 31 records, the base station shall set this bit to '1'; otherwise, the
 32 base station shall set this bit to '0'.
- 33 The base station shall include one occurrence of the following record for each pilot that a
 34 mobile station is to place in its Neighbor Set. The base station shall use the same order for
 35 the following record as is used for previous pilots which are listed in this message.
 36 Specifically, the i^{th} occurrence of the following record shall correspond the i^{th} pilot in this
 37 message.
- 38 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
- 39 The base station shall set this field to '1' if additional pilot
 40 information listed in NGHBR_PILOT_REC_TYPE and
 41 RECORD_LEN fields are included. The base station shall set
 42 this field to '0' if the corresponding pilot is the common pilot
 43 and there is no additional pilot information included.
- 44 NGHBR_PILOT_REC_TYPE - Neighbor Pilot record type

1 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 2 set this field to the NGHBR_PILOT_REC_TYPE value shown in
 3 Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record
 4 specified by this record.

5 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 6 omit this field.

7 RECORD_LEN - Pilot record length.

8 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 9 set this field to the number of octets in the type-specific fields
 10 of this pilot record.

11 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 12 omit this field.

13 Type-specific fields - Pilot record type-specific fields.

14 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 15 include type-specific fields based on the
 16 NGHBR_PILOT_REC_TYPE of this pilot record.

17 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 18 omit this field.

19

20 If NGHBR_PILOT_REC_TYPE is equal to '000', the base station shall include the following
 21 fields:

22

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

23

24 TD_POWER_LEVEL - TD Transmit Power Level.

25 The base station shall set this field to the TD transmit power
 26 level relative to that of the Forward Pilot Channel as specified
 27 in Table 3.7.2.3.2.26-4.

28 TD_MODE - Transmit Diversity mode.

29 The base station shall set this field to the Transmit Diversity
 30 mode, as specified in Table 3.7.2.3.2.26-3.

31 RESERVED - Reserved bits.

32 The base station shall set this field to '0000'.

33 If NGHBR_PILOT_REC_TYPE is equal to '001', the base station shall include the following
 34 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
16
17
18

- QOF - Quasi-orthogonal function index.
The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- WALSH_LENGTH - Length of the Walsh code.
The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used in as the Auxiliary Pilot.
- AUX_PILOT_WALSH - Walsh code for the Auxiliary Pilot.
The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.
- RESERVED - Reserved bits.
The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If NGHBR_PILOT_REC_TYPE is equal to '010', the base station shall include the following fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

19
20
21
22
23
24

- QOF - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.
The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- WALSH_LENGTH - Length of the Walsh code.

- 1 The base station shall set this field to the WALSH_LENGTH
 2 value shown in 3.7.2.3.2.22-6 corresponding to the length of
 3 the Walsh code for the pilots that are used as Auxiliary pilot
 4 in the transmit diversity mode.
- 5 AUX_WALSH - Walsh code for the Auxiliary Pilot.
- 6 The base station shall set this field to the Walsh code
 7 corresponding to the Auxiliary Pilot.
- 8 AUX_TD_POWER_LEVEL - Auxiliary Transmit Diversity Pilot power level.
- 9 The base station shall set this field to the Auxiliary Transmit
 10 Diversity Pilot transmit power level relative to that of the
 11 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.
- 12 TD_MODE - Transmit Diversity mode.
- 13 The base station shall set this field to the Transmit Diversity
 14 mode, as specified in Table 3.7.2.3.2.26-3.
- 15 RESERVED - Reserved bits.
- 16 The base station shall set all the bits of this field to '0' to
 17 make the entire record octet-aligned.

18 If NGHBR_PILOT_REC_TYPE is equal to '011', the base station shall include the following
 19 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- 20
- 21 SR3_PRIMARY_PILOT - Primary SR3 pilot.
- 22 The base station shall set this field to the value shown in
 23 Table 3.7.2.3.2.26-5 corresponding to the position of the
 24 primary SR3 pilot.
- 25 SR3_PILOT_POWER1 - The primary SR3 pilot power level relative to that of the pilot
 26 on the lower frequency of the two remaining SR3 frequencies.
- 27 The base station shall set this field to the value shown in
 28 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 29 primary pilot with respect to the pilot on the lower frequency
 30 of the two remaining SR3 frequencies.
- 31 SR3_PILOT_POWER2 - The primary SR3 pilot power level relative to that of the pilot
 32 on the higher frequency of the two remaining SR3
 33 frequencies.
- 34 The base station shall set this field to the value shown in
 35 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 36 primary pilot with respect to the pilot on the higher frequency
 37 of the two remaining SR3 frequencies.
- 38

1 If NGHBR_PILOT_REC_TYPE is equal to '100', the base station shall include the following
 2 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

3

4 SR3_PRIMARY_PILOT– Primary SR3 pilot.

5 The base station shall set this field to the value shown in
 6 Table 3.7.2.3.2.26-5 corresponding to the position of the
 7 primary SR3 pilot.

8 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
 9 on the lower frequency of the two remaining SR3 frequencies.

10 The base station shall set this field to the value shown in
 11 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 12 primary pilot with respect to the pilot on the lower frequency
 13 of the two remaining SR3 frequencies.

14 SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot
 15 on the higher frequency of the two remaining SR3
 16 frequencies.

17 The base station shall set this field to the value shown in
 18 Table 3.7.2.3.2.26-6 corresponding to the power level of the
 19 primary pilot with respect to the pilot on the higher frequency
 20 of the two remaining SR3 frequencies.

21 QOF – Quasi-orthogonal function index.

1			The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the frequency of the primary pilot.
2			
3			
4	WALSH_LENGTH	-	Length of the Walsh Code.
5			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the frequency of the primary pilot.
6			
7			
8			
9	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
10			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the frequency of the primary pilot.
11			
12			
13	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower frequency of the two remaining SR3 frequencies.
14			
15			If the additional information for the pilot on the lower frequencies of the two remaining SR3 frequencies is the same as pilot on the primary frequency, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
16			
17			
18			
19			
20		QOF1	- Quasi-orthogonal function index for the pilot on the lower frequency of the two remaining SR3 frequencies.
21			
22			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
23			
24			
25			The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the lower frequency of the two remaining SR3 frequencies.
26			
27			
28	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency of the two remaining SR3 frequencies.
29			
30			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
31			
32			
33			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the lower frequency of the two remaining SR3 frequencies.
34			
35			
36			
37			
38	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of the two remaining SR3 frequencies.
39			
40			If ADD_INFO_INCL1 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
41			
42			
43			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the lower frequency of the two remaining SR3 frequencies.
44			
45			

- 1 The base station shall set this field to '1' if the call rescue
 2 feature is enabled and there is at least one occurrence of
 3 NGHBR_RESQ_CONFIGURED set to '1' in this message;
 4 otherwise, the base station shall set this field to '0'.
- 5 RESQ_DELAY_TIME – Call rescue delay timer value.
 6 If RESQ_ENABLED is set to '0', the base station shall omit
 7 this field; otherwise, the base station shall include this field
 8 and set it as follows:
 9 The base station shall set this field to the value of the call
 10 rescue delay timer to be used by the mobile station, in units
 11 of 80 ms.
- 12 RESQ_ALLOWED_TIME – Call rescue allowed timer value.
 13 If RESQ_ENABLED is set to '0', the base station shall omit
 14 this field; otherwise, the base station shall include this field
 15 and set it as follows:
 16 The base station shall set this field to the value of the call
 17 rescue allowed timer to be used by the mobile station, in
 18 units of 80 ms.
- 19 RESQ_ATTEMPT_TIME – Call rescue attempt timer value.
 20 If RESQ_ENABLED is set to '0', the base station shall omit
 21 this field; otherwise, the base station shall include this field
 22 and set it as follows:
 23 The base station shall set this field to the value of the call
 24 rescue attempt timer to be used by the mobile station, in
 25 units of 40 ms.
- 26 RESQ_CODE_CHAN – Code channel index for the Rescue Channel.
 27 If RESQ_ENABLED is set to '0', the base station shall omit
 28 this field; otherwise, the base station shall include this field
 29 and set it as follows:
 30 The base station shall set this field to the code channel index
 31 (see [2]) that the mobile station is to use on the Forward
 32 Fundamental Channel when attempting Call Rescue Soft
 33 Handoff with the associated neighbor pilot.
 34 If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
 35 station shall set this field in the range 1 to 63 inclusive. If
 36 Radio Configuration 4, 6, 8, 11, or 12 is used, the base
 37 station shall set this field in the range 1 to 127 inclusive. If
 38 Radio Configuration 7 or 9 is used, the base station shall set
 39 this field in the range 1 to 255 inclusive.
- 40 RESQ_QOF – Quasi-Orthogonal Function mask identifier for the Rescue
 41 Channel.
 42 If RESQ_ENABLED is set to '0', the base station shall omit
 43 this field; otherwise, the base station shall include this field
 44 and set it as follows:

1 The base station shall set this field to the quasi-orthogonal
2 function mask identifier (see [2]) that the mobile station is to
3 use on the Forward Fundamental Channel when attempting
4 Call Rescue Soft Handoff with the associated neighbor pilot.

5 RESQ_MIN_PERIOD_INCL – Minimum time between consecutive rescues included
6 indicator.

7 If RESQ_ENABLED is set to '0', the base station shall omit
8 this field; otherwise, the base station shall include this field
9 and set it as follows:

10 The base station shall set this field to '1' if the
11 RESQ_MIN_PERIOD field is included in this message;
12 otherwise, the base station shall set this field to '0'.

13 This field is set to '0' if there is no minimum time restriction
14 between consecutive rescues.

15 RESQ_MIN_PERIOD – Minimum time between consecutive rescues.

16 If RESQ_MIN_PERIOD_INCL is not included, or is included
17 and set to '0', the base station shall omit this field; otherwise,
18 the base station shall include this field and set it as follows:

19 The base station shall set this field to one less than the
20 minimum time after a successful call rescue (i.e. receipt of
21 N_{3m} good frames by the mobile station after the rescue
22 attempt timer is enabled) before any subsequent call rescue
23 attempts can be initiated, in units of 2 seconds.

24 RESQ_NUM_TOT_TRANS_INCL – The required number of transmissions before declaring
25 L2 Acknowledgment Failure when Call Rescue is enabled
26 included indicator.

27 If RESQ_ENABLED is set to '0', the base station shall omit
28 this field; otherwise, the base station shall include this field
29 and set it as follows:

30 If the required number of transmissions of a regular PDU and
31 mini PDU before declaring L2 Acknowledgment Failure when
32 Call Rescue is enabled is included in this message, the base
33 station shall set this field to '1'; otherwise, the base station
34 shall set this field to '0'.

35 RESQ_NUM_TOT_TRANS_20MS – The required number of transmissions of a regular
36 PDU before declaring L2 Acknowledgment Failure when Call
37 Rescue is enabled.

38 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
39 included and is set to '0', the base station shall omit this field;
40 otherwise, the base station shall include this field and set it
41 as follows:

42 The base station shall set this field to the required number of
43 transmissions of a regular PDU before declaring L2
44 Acknowledgment Failure when Call Rescue is enabled.

45 The base station shall not set this field to a value greater than
46 N_{1m} .

- 1 RESQ_NUM_TOT_TRANS_5MS – The required number of transmissions of a mini PDU
 2 before declaring L2 Acknowledgment Failure when Call
 3 Rescue is enabled.
- 4 If RESQ_NUM_TOT_TRANS_INCL field is not included or is
 5 included and is set to '0', the base station shall omit this field;
 6 otherwise, the base station shall include this field and set it
 7 as follows:
- 8 The base station shall set this field to the required number of
 9 transmissions of a mini PDU before declaring L2
 10 Acknowledgment Failure when Call Rescue is enabled.
- 11 The base station shall not set this field to a value greater than
 12 N_{15m} .
- 13 RESQ_NUM_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft
 14 Handoff.
- 15 If RESQ_ENABLED is set to '0', the base station shall omit
 16 this field; otherwise, the base station shall include this field
 17 and set it to the length of Traffic Channel preamble that the
 18 mobile station is to send when performing a call rescue soft
 19 handoff, as follows:
- 20 If Radio configuration 1 or Radio configuration 2 is being
 21 used, the base station shall set this field to the Traffic
 22 Channel preamble length in 20 ms units; otherwise, the base
 23 station shall set this field to the value shown in Table
 24 3.7.3.3.2.17-1 corresponding to the Traffic Channel preamble
 25 length in 1.25 ms units.
- 26 RESQ_POWER_DELTA – The power level adjustment to be applied to the last closed-
 27 loop power level when re-enabling the transmitter for call
 28 rescue soft handoff.
- 29 If RESQ_ENABLED is set to '0', the base station shall omit
 30 this field; otherwise, the base station shall set this field to a
 31 value by which mobile stations are to adjust the last closed-
 32 loop power level when re-enabling the transmitter for call
 33 rescue, expressed as a two's complement value in units of
 34 1 dB.
- 35 The base station shall include NUM_NGHBR occurrences of the following one-field record if
 36 RESQ_ENABLED is set to '1'. The base station shall use the same order for the following
 37 field as is used for the NGHBR_PN fields listed in this message.
- 38 NGHBR_RESQ_CONFIGURED – Neighbor Rescue Channel configured indicator.
- 39 The base station shall set this field to '1' if a Rescue Channel
 40 is configured for this neighbor pilot; otherwise, the base
 41 station shall set this field to '0'.
- 42

1 3.7.3.3.2.27 Candidate Frequency Search Request Message
 2 MSG_TAG: CFSRQM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
RESERVED_1	4
CFSRM_SEQ	2
SEARCH_TYPE	2
SEARCH_PERIOD	4
SEARCH_MODE	4
MODE_SPECIFIC_LEN	8
Mode-specific fields	8 × MODE_SPECIFIC_LEN
ALIGN_TIMING	1
SEARCH_OFFSET	0 or 6

4

5 USE_TIME - Use action time indicator.
 6 This field indicates whether an explicit action time is specified
 7 in this message.
 8 If an explicit action time is specified in this message, the base
 9 station shall set this field to '1'; otherwise, the base station
 10 shall set this field to '0'.
 11 If the base station requests the mobile station to perform an
 12 aligned search (see 2.6.6.2.8.3), the base station shall specify
 13 an explicit action time for the message.

14 ACTION_TIME - Action time.
 15 If the USE_TIME field is set to '1', the base station shall set
 16 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 17 ms, in units of 80 ms (modulo 64), at which the message is to
 18 take effect. If the USE_TIME field is set to '0', the base station
 19 shall set this field to '000000'.

20 RESERVED_1 - Reserved bits.
 21 The base station shall set this field to '0000'.

22 CFSRM_SEQ - *Candidate Frequency Search Request Message* sequence
 23 number.
 24 The base station shall set this field to the *Candidate*
 25 *Frequency Search Request Message* sequence number, as
 26 specified in 2.6.6.2.2.3.

- 1 SEARCH_TYPE - Search command.
 2 The base station shall set this field to the appropriate
 3 SEARCH_TYPE code from Table 3.7.3.3.2.27-1 to indicate the
 4 purpose of the message.

5

6

Table 3.7.3.3.2.27-1. SEARCH_TYPE Codes

SEARCH_TYP E(binary)	Meaning
00	Directs the mobile station to stop any periodic search in progress (see 2.6.6.2.8.3.4 and 2.6.6.2.10.4)
01	Directs the mobile station to perform a single search (see 2.6.6.2.8.3.1 and 2.6.6.2.10.1).
11	Directs the mobile station to perform a periodic search (see 2.6.6.2.8.3.2 and 2.6.6.2.10.2).
10	Reserved.

7

- 8 SEARCH_PERIOD - Time between successive searches on the Candidate
 9 Frequency for periodic searches.
 10 The base station shall set this field to the SEARCH_PERIOD
 11 value shown in Table 2.6.6.2.8.3.2-1 corresponding to the
 12 search period to be used by the mobile station, i.e., the time
 13 between the beginning of successive searches on the
 14 Candidate Frequency.

- 15 SEARCH_MODE - Search mode.
 16 The base station shall set this field to the SEARCH_MODE
 17 value specified in Table 3.7.3.3.2.27-2 corresponding to the
 18 type of search specified by this message.

19

1

Table 3.7.3.3.2.27-2. SEARCH_MODE Types

SEARCH_MODE (binary)	Description
0000	Searches for CDMA pilots on a Candidate Frequency.
0001	Reserved (Previously: Searches for analog channels)
0010	Searches for Direct Spread (DS) neighbor cell (see [32]).
0011-1111	Reserved

2

3

MODE_SPECIFIC_LEN - Length of mode-specific fields.

4

The base station shall set this field to the number of octets in the mode-specific fields of this message.

5

6

Mode-specific fields - Search mode-specific fields.

7

The base station shall include mode-specific fields based on the SEARCH_MODE field.

8

9

If SEARCH_MODE is equal to '0000', the base station shall include the following fields:

10

Field	Length (bits)
BAND_CLASS	5
CDMA_FREQ	11
SF_TOTAL_EC_THRESH	5
SF_TOTAL_EC_I0_THRESH	5
DIFF_RX_PWR_THRESH	5
MIN_TOTAL_PILOT_EC_I0	5
CF_T_ADD	6
TF_WAIT_TIME	4
CF_PILOT_INC	4
CF_SRCH_WIN_N	4
CF_SRCH_WIN_R	4
RESERVED_2	5
PILOT_UPDATE	1
NUM_PILOTS	0 or 6
CF_NGHR_SRCH_MODE	0 or 2

NUM_PILOTS occurrences of the following record:

{ (0 or NUM_PILOTS)

NGHR_PN	9
SEARCH_SET	1
SEARCH_PRIORITY	0 or 2
SRCH_WIN_NGHR	0 or 4

} (0 or NUM_PILOTS)

NUM_PILOTS occurrences of the following record:

CF_SRCH_OFFSET_INCL	1
---------------------	---

(continues on next page)

1

2

1

Field	Length (bits)
NUM_PILOTS occurrences of the following record: { (0 or NUM_PILOTS)	
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8 × RECORD_LEN
SRCH_OFFSET_NGHBR	0 or 3
} (0 or NUM_PILOTS)	
RESERVED_3	0 - 7 (as needed)

2

3

BAND_CLASS - Band class.

4

The base station shall set this field to the CDMA band class of the Candidate Frequency.

5

6

CDMA_FREQ - Frequency assignment.

7

The base station shall set this field to the CDMA frequency assignment for the Candidate Frequency.

8

9

SF_TOTAL_EC_THRESH - Serving Frequency total pilot E_c threshold.

10

If the mobile station is not to use the measurement of total E_c of the pilots in the Serving Frequency Active Set in the Candidate Frequency periodic search procedure, the base station shall set this field to '11111'; otherwise, the base station shall set this field to

11

12

13

14

15

$$\lceil (10 \times \log_{10} (total_ec_thresh) + 120) / 2 \rceil$$

16

where *total_ec_thresh* is defined by the following rule: The mobile station is not to visit the CDMA Candidate Frequency to search for pilots if the total E_c of the pilots in the Serving Frequency Active Set is greater than *total_ec_thresh*.

17

18

19

20

SF_TOTAL_EC_I0_THRESH - Serving Frequency total pilot E_c/I_0 threshold.

21

If the mobile station is not to use the measurement of total E_c/I_0 of the pilots in the Serving Frequency Active Set in the Candidate Frequency periodic search procedure, the base station shall set this field to '11111'; otherwise, the base station shall set this field to

22

23

24

25

26

$$\lfloor -20 \times \log_{10} (total_ec_i0_thresh) \rfloor$$

- 1 where *total_ec_i0_thresh* is defined by the following rule: The
 2 mobile station is not to visit the CDMA Candidate Frequency
 3 to search for pilots if the total E_c/I_0 of the pilots in the
 4 Serving Frequency Active Set is greater than
 5 *total_ec_i0_thresh*.
- 6 DIFF_RX_PWR_THRESH - Minimum difference in received power.
- 7 If this message is used for the Candidate Frequency single or
 8 periodic search procedure:
- 9 If the mobile station is to search for pilots on the CDMA
 10 Candidate Frequency irrespective of the received power on
 11 the Candidate Frequency, the base station shall set this
 12 field to '00000'; otherwise, the base station shall set this
 13 field to
- 14 $\lceil (minimum_power_diff + 30) / 2 \rceil$
- 15 where *minimum_power_diff* is determined by the following
 16 rule: The mobile station is not to search for pilots on the
 17 CDMA Candidate Frequency if (*cand_freq_pwr* -
 18 *serv_freq_pwr*) is less than *minimum_power_diff* (in dB),
 19 where *cand_freq_pwr* is the received power on the CDMA
 20 Candidate Frequency, in dBm / 1.23 MHz, and
 21 *serv_freq_pwr* is the received power on the Serving
 22 Frequency, in dBm / 1.23 MHz.
- 23 If this message is used for the Hard Handoff with Return on
 24 Failure procedure:
- 25 If the mobile station is to continue hard handoff
 26 procedures irrespective of the received power on the
 27 Target Frequency, the base station shall set this field to
 28 '00000'; otherwise, the base station shall set this field to
- 29 $\lceil (minimum_power_diff + 30) / 2 \rceil$
- 30 where *minimum_power_diff* is determined by the following
 31 rule: The mobile station is to declare the handoff attempt
 32 to be unsuccessful if (*target_freq_pwr* - *serv_freq_pwr*)
 33 is less than *minimum_power_diff* (in dB), where
 34 *target_freq_pwr* is the received power on the CDMA Target
 35 Frequency, in dBm / 1.23 MHz, and *serv_freq_pwr* is
 36 the received power on the Serving Frequency, in dBm /
 37 1.23 MHz.
- 38 MIN_TOTAL_PILOT_EC_I0 - Minimum total pilot E_c/ I_0 .
- 39 If this message is used for the Candidate Frequency periodic
 40 search procedure:
- 41 If the mobile station is to search for pilots on the CDMA
 42 Candidate Frequency irrespective of the strength of pilots
 43 in the Candidate Frequency Search Set, the base station
 44 shall set this field to '00000'; otherwise, the base station
 45 shall set this field to
- 46 $\lfloor -20 \times \log_{10} total_pilot_threshold \rfloor$

1 where *total_pilot_threshold* is defined by the following rule:
 2 The mobile station is not to send the *Candidate Frequency*
 3 *Search Report Message* if the sum of E_c/I_0 of all pilots in
 4 the mobile station's Candidate Frequency Search Set that
 5 measure above CF_T_ADD is less than
 6 *total_pilot_threshold*.

7 If this message is used for the Hard Handoff with Return on
 8 Failure procedure:

9 If the mobile station is to attempt to demodulate the
 10 Forward Traffic Channels irrespective of the strength of
 11 pilots in the Active Set, the base station shall set this field
 12 to '00000'; otherwise, the base station shall set this field
 13 to

14
$$\lfloor -20 \times \log_{10} \textit{total_pilot_threshold} \rfloor$$

15 where *total_pilot_threshold* is defined by the following rule:
 16 The mobile station is not to attempt to demodulate the
 17 Forward Traffic Channels if the sum of E_c/I_0 of all pilots
 18 in the mobile station's Active Set is less than
 19 *total_pilot_threshold*.

20 CF_T_ADD - Pilot detection threshold for the CDMA Candidate Frequency.
 21 This value is used by the mobile station to trigger the sending
 22 of the *Candidate Frequency Search Report Message* during a
 23 periodic search of the CDMA Candidate Frequency (see
 24 2.6.6.2.8.3.2).

25 The base station shall set this field to the pilot detection
 26 threshold, expressed as an unsigned binary number equal to
 27 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.

28 TF_WAIT_TIME - The total maximum wait time on the CDMA Target Frequency.
 29 The base station shall set this field to the maximum wait
 30 time, in units of 80 ms, that the mobile station is to spend
 31 waiting for a period of $(N_{11m} \times 20)$ ms with sufficient signal
 32 quality (e.g. good frames) on the CDMA Target Frequency.

33 CF_PILOT_INC - Pilot PN sequence offset index increment to be used on the
 34 CDMA Candidate Frequency after handoff.
 35 The base station shall set this field to the pilot PN sequence
 36 increment, in units of 64 PN chips, that the mobile station is
 37 to use for searching the Remaining Set, after a handoff to the
 38 CDMA Candidate Frequency is successfully completed. The
 39 base station should set this field to the largest increment
 40 such that the pilot PN sequence offsets of all its neighbor base
 41 stations are integer multiples of that increment.

42 CF_SRCH_WIN_N - Default search window size for the Candidate Frequency
 43 Search Set.

1		The base station shall set this field to the value specified in
2		Table 2.6.6.2.1-1 corresponding to the default search window
3		size to be used by the mobile station for its Candidate
4		Frequency Search Set. The mobile station uses the default
5		search window size for all pilots in its Candidate Frequency
6		Search Set when the search window has not been specified for
7		each pilot individually.
8	CF_SRCH_WIN_R	- Search window size for the Remaining Set on the CDMA
9		Candidate Frequency.
10		The base station shall set this field to the window size
11		parameter shown in Table 2.6.6.2.1-1 corresponding to the
12		number of PN chips that the mobile station is to search for
13		pilots in the Remaining Set on the CDMA Candidate
14		Frequency after a handoff is successfully completed.
15	RESERVED_2	- Reserved bits.
16		The base station shall set this field to '0000'.
17	PILOT_UPDATE	- Pilot search parameter update indicator.
18		If the mobile station is to change its pilot search parameters,
19		the base station shall set this field to '1'; otherwise, the base
20		station shall set this field to '0'.
21	NUM_PILOTS	- Number of pilots included in the message.
22		If the PILOT_UPDATE field is set to '0', the base station shall
23		omit this field; otherwise, the base station shall include this
24		field and set it as follows:
25		The base station shall set this field to the number of the
26		CDMA Candidate Frequency pilots included in this message.
27		The base station shall set this field to a value from 0 to N_{8m} ,
28		inclusive.
29	CF_NGHR_SRCH_MODE	- Search mode for Candidate Frequency Search Set.
30		If the PILOT_UPDATE field is set to '0', the base station shall
31		omit this field; otherwise, the base station shall include this
32		field and set it as follows:
33		The base station shall set this field to the value shown in
34		Table 3.7.3.3.2.27-3 corresponding to the search mode.

Table 3.7.3.3.2.27-3. CF_NGHR_SRCH_MODE Field

Value (binary)	Description
00	No search priorities or search windows specified
01	Search priorities specified
10	Search windows specified
11	Search windows and search priorities specified

- 1 The base station shall include NUM_PILOTS occurrences of the following four-field record,
 2 one for each included CDMA Candidate Frequency pilot.
- 3 NGHBR_PN - Neighbor pilot PN sequence offset index.
 4 The base station shall set this field to the pilot's PN sequence
 5 offset, in units of 64 PN chips.
- 6 SEARCH_SET - Flag to indicate if the corresponding pilot is to be searched.
 7 The base station shall set this field to '1' if the mobile station
 8 should add the corresponding pilot to its Candidate
 9 Frequency Search Set; otherwise, the base station shall set
 10 this field to '0'.
- 11 SEARCH_PRIORITY - Pilot Channel search priority.
 12 If CF_NGHBR_SRCH_MODE is set to '01' or '11', then the
 13 base station shall set this field to the search priority for this
 14 neighbor. The base station shall set the search priority as
 15 specified in Table 3.7.3.3.2.26-2. If
 16 CF_NGHBR_SRCH_MODE is set to any other value, the base
 17 station shall omit this field.
- 18 SRCH_WIN_NGHBR - Neighbor pilot channel search window size.
 19 If CF_NGHBR_SRCH_MODE is set to '10' or '11', then the
 20 base station shall set this field to the value specified in
 21 Table 2.6.6.2.1-1 corresponding to the search window size to
 22 be used by mobile stations for this neighbor. If the
 23 CF_NGHBR_SRCH_MODE is set to any other value, the base
 24 station shall omit this field.
- 25 CF_SRCH_OFFSET_INCL - Neighbor pilot channel search window offset included.
 26 If PILOT_UPDATE is set to '0', the base station shall omit this
 27 field; otherwise, the base station shall include this field and
 28 set it as follows:
 29 If CF_NGHBR_SRCH_MODE is set to '10' or '11' and if
 30 SRCH_OFFSET_NGHBR is included in the message, the base
 31 station shall set this bit to '1'; otherwise, the base station
 32 shall set this bit to '0'.
- 33 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
 34 The base station shall set this field to '1' if additional pilot
 35 information listed in NGHBR_PILOT_REC_TYPE and
 36 RECORD_LEN fields are included. The base station shall set
 37 this field to '0' if the corresponding pilot is the common pilot
 38 and there is no additional pilot information included.
- 39 NGHBR_PILOT_REC_TYPE - Neighbor Pilot record type
 40 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 41 set this field to the NGHBR_PILOT_REC_TYPE value shown in
 42 Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record
 43 specified by this record.
 44 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 45 omit this field.

- 1 The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- 2
- 3 **WALSH_LENGTH** - Length of the Walsh code.
- 4 The base station shall set this field to the **WALSH_LENGTH** value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used in as the Auxiliary pilot.
- 5
- 6
- 7
- 8 **AUX_PILOT_WALSH** - Walsh code for the Auxiliary Pilot.
- 9 The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.
- 10
- 11 **RESERVED** - Reserved bits.
- 12 The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.
- 13

14 If **NGHBR_PILOT_REC_TYPE** is equal to '010', the base station shall include the following fields:

15

16

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

- 17
- 18 **QOF** - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.
- 19 The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- 20
- 21
- 22 **WALSH_LENGTH** - Length of the Walsh code.
- 23 The base station shall set this field to the **WALSH_LENGTH** value shown in 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilots that are used as Auxiliary pilot in the transmit diversity mode.
- 24
- 25
- 26
- 27 **AUX_WALSH** - Walsh code for the Auxiliary Pilot.
- 28 The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.
- 29
- 30 **AUX_TD_POWER_LEVEL** - Auxiliary Transmit Diversity Pilot power level.
- 31 The base station shall set this field to the Auxiliary Transmit Diversity Pilot transmit power level relative to that of the Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.
- 32
- 33

Field	Length (bits)
SR3_PRIMARY_PILOT	2

- SR3_PRIMARY_PILOT – Primary SR3 pilot.
- The base station shall set this field to the value shown in Table 3.7.2.3.2.26-5 corresponding to the position of the primary SR3 pilot.
- SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.
- The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.
- SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.
- The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.
- QOF – Quasi-orthogonal function index.
- The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the frequency of the primary pilot.

1	WALSH_LENGTH	-	Length of the Walsh Code.
2			The base station shall set this field to the WALSH_LENGTH
3			value shown in Table 3.7.2.3.2.22–6 corresponding to the
4			length of the Walsh code for the pilot that is used as the
5			Auxiliary pilot on the frequency of the primary pilot.
6	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
7			The base station shall set this field to the Walsh code
8			corresponding to the Auxiliary pilot on the frequency of the
9			primary pilot.
10	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
11			frequency of the two remaining SR3 frequencies.
12			If the additional information for the pilot on the lower
13			frequencies of the two remaining SR3 frequencies is the same
14			as pilot on the primary frequency, the base station shall set
15			this field to '0'; otherwise, the base station shall set this field
16			to '1'.
17	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
18			frequency of the two remaining SR3 frequencies.
19			If ADD_INFO_INCL1 is set to '0', the base station shall omit
20			this field; otherwise, the base station shall set this field as
21			follows:
22			The base station shall set this field to the index of the Quasi-
23			orthogonal function (see [2]) on the lower frequency of the two
24			remaining SR3 frequencies.
25	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
26			of the two remaining SR3 frequencies.
27			If ADD_INFO_INCL1 is set to '0', the base station shall omit
28			this field; otherwise, the base station shall set this field as
29			follows:
30			The base station shall set this field to the WALSH_LENGTH
31			value shown in Table 3.7.2.3.2.22–6 corresponding to the
32			length of the Walsh code for the pilot that is used as the
33			Auxiliary pilot on the lower frequency of the two remaining
34			SR3 frequencies.
35	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
36			the two remaining SR3 frequencies.
37			If ADD_INFO_INCL1 is set to '0', the base station shall omit
38			this field; otherwise, the base station shall set this field as
39			follows:
40			The base station shall set this field to the Walsh code
41			corresponding to the Auxiliary pilot on the lower frequency of
42			the two remaining SR3 frequencies.
43	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
44			frequency of the two remaining SR3 frequencies.

1			If the additional information for the pilot on the higher
2			frequencies of the two remaining SR3 frequencies is the same
3			as pilot on the primary frequency, the base station shall set
4			this field to '0'; otherwise, the base station shall set this field
5			to '1'.
6	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
7			frequency of the two remaining SR3 frequencies.
8			If ADD_INFO_INCL2 is set to '0', the base station shall omit
9			this field; otherwise, the base station shall set this field as
10			follows:
11			The base station shall set this field to the index of the Quasi-
12			orthogonal function (see [2]) on the higher frequency of the
13			two remaining SR3 frequencies.
14	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher frequency
15			of the two remaining SR3 frequencies.
16			If ADD_INFO_INCL2 is set to '0', the base station shall omit
17			this field; otherwise, the base station shall set this field as
18			follows:
19			The base station shall set this field to the WALSH_LENGTH
20			value shown in Table 3.7.2.3.2.22-6 corresponding to the
21			length of the Walsh code for the pilot that is used as the
22			Auxiliary pilot on the higher frequency of the two remaining
23			SR3 frequencies.
24	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
25			the two remaining SR3 frequencies.
26			If ADD_INFO_INCL2 is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			The base station shall set this field to the Walsh code
30			corresponding to the Auxiliary pilot on the higher frequency of
31			the two remaining SR3 frequencies.
32	RESERVED	-	Reserved bits.
33			The base station shall set all the bits of this field to '0' to
34			make the entire record octet-aligned.
35	SRCH_OFFSET_NGHBR	-	Neighbor pilot channel search window offset.
36			If CF_SRCH_OFFSET_INCL is included and equals to '1', then
37			the base station shall set this field to the value specified in
38			Table 2.6.6.2.1-2 corresponding to the search window offset
39			to be used by the mobile station for this neighbor; otherwise,
40			the base station shall omit this field.
41	RESERVED_3	-	Reserved bits.
42			The base station shall add reserved bits as needed in order to
43			make the length of the Mode-specific fields equal to an integer
44			number of octets. The base station shall set these bits to '0'.
45	ALIGN_TIMING	-	Align timing indicator.

1 If the base station requests that the mobile station offset the
2 start of the first search from the action time of this message
3 (or of a subsequent *Candidate Frequency Search Control*
4 *Message* that starts a search) by a delay specified by the
5 SEARCH_OFFSET field, the base station shall set this field to
6 '1'; otherwise, the base station shall set this field to '0'.

7 SEARCH_OFFSET - Search offset.

8 If the ALIGN_TIMING field is set to '0', the base station shall
9 omit this field; otherwise, the base station shall include this
10 field and set it to

11
$$\min (63, \lceil search_offset_time / 0.00125 \rceil)$$

12 where *search_offset_time* is the time offset, in seconds, of the
13 start of the first search from the action time of this message
14 (or of a subsequent *Candidate Frequency Search Control*
15 *Message* that starts a search).

16

1 3.7.3.3.2.28 Candidate Frequency Search Control Message
 2 MSG_TAG: CFSCNM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
CFSCM_SEQ	2
SEARCH_TYPE	2
ALIGN_TIMING	1

4

5 USE_TIME - Use action time indicator.
 6 This field indicates whether an explicit action time is specified
 7 in this message.
 8 If an explicit action time is specified in this message, the base
 9 station shall set this field to '1'; otherwise, the base station
 10 shall set this field to '0'.

11 If the base station requests the mobile station to perform an
 12 aligned search (see 2.6.6.2.8.3), the base station shall specify
 13 an explicit action time for the message.

14 ACTION_TIME - Action time.
 15 If the USE_TIME field is set to '1', the base station shall set
 16 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 17 ms, in units of 80 ms (modulo 64), at which the message is to
 18 take effect. If the USE_TIME field is set to '0', the base station
 19 shall set this field to '000000'.

20 CFSCM_SEQ - Candidate Frequency Search Control Message sequence
 21 number.
 22 The base station shall set this field to the Candidate
 23 Frequency Search Control Message sequence number, as
 24 specified in 3.6.6.2.2.5.

25 SEARCH_TYPE - Search command.
 26 The base station shall set this field to the appropriate
 27 SEARCH_TYPE code from Table 3.7.3.3.2.27-1 to indicate the
 28 purpose of the message.

29 ALIGN_TIMING - Align timing indicator.
 30 If the base station requests that the mobile station offset the
 31 start of the first search from the action time of this message
 32 by a delay specified by the SEARCH_OFFSET field of the last
 33 Candidate Frequency Search Request Message sent to the
 34 mobile station, the base station shall set this field to '1';
 35 otherwise, the base station shall set this field to '0'.

MAX_PWR_PUF	4
PUF_FREQ_INCL	1
PUF_BAND_CLASS	0 or 5
PUF_CDMA_FREQ	0 or 11

4

5 USE_TIME - Use action time indicator.

6 The base station shall set this field to '1'.

7 ACTION_TIME - Action time.

8 The base station shall set this field to the System Time minus
 9 $FRAME_OFFSET_s \times 1.25$ ms, in units of 80 ms (modulo 64),
 10 used in calculating the start of the first PUF probe.

11 ACTION_TIME_FRAME - Action time frame.

12 The base station shall set this field to the number of frames
 13 after ACTION_TIME that the mobile station is to begin the
 14 first PUF probe.

15 PUF_SETUP_SIZE - Number of PUF setup power control groups.

16 The base station shall set this field to one less than the
 17 number of power control groups that the mobile station is to
 18 transmit at nominal power prior to transmitting a PUF pulse.
 19 The base station shall set the values of PUF_SETUP_SIZE and
 20 PUF_PULSE_SIZE so that $[PUF_SETUP_SIZE + 1 +$
 21 $PUF_PULSE_SIZE + 1] \bmod 16$ is not equal to 0.

22 PUF_PULSE_SIZE - Number of PUF pulse power control groups.

- 1 The base station shall set this field to one less than the
2 number of power control groups that the mobile station is to
3 transmit at elevated power level during the PUF pulse. The
4 base station shall set the values of PUF_SETUP_SIZE and
5 PUF_PULSE_SIZE so that $[PUF_SETUP_SIZE + 1 +$
6 $PUF_PULSE_SIZE + 1] \bmod 16$ is not equal to 0.
- 7 PUF_INTERVAL - PUF interval.
- 8 The base station shall set this field to the number of frames
9 between the start of each PUF probe.
- 10 PUF_INIT_PWR - Power increase of initial PUF pulse.
- 11 The base station shall set this field to the amount (in dB) that
12 the mobile station is to increase its mean output power for the
13 first PUF pulse.
- 14 PUF_PWR_STEP - PUF power step.
- 15 The base station shall set this field to the value (in dB) by
16 which the mobile station is to increment the power of a PUF
17 pulse above nominal power from one PUF pulse to the next.
- 18 TOTAL_PUF_PROBES - Total number of PUF probes.
- 19 The base station shall set this field to one less than the
20 maximum number of PUF probes the mobile station is to
21 transmit in a PUF attempt.
- 22 MAX_PWR_PUF - Maximum number of PUF probes transmitted at full power.
- 23 The base station shall set this field to one less than the
24 number of PUF pulses that the mobile station is to transmit
25 at maximum power level.
- 26 PUF_FREQ_INCL - Frequency included indicator.
- 27 If the mobile station is to change PUF_BAND_CLASS or
28 PUF_CDMA_FREQ, the base station shall set this field to '1';
29 otherwise, the base station shall set this field to '0'.
- 30 PUF_BAND_CLASS - Band class.
- 31 If PUF_FREQ_INCL is set to '1', the base station shall include
32 this field and set it to the CDMA band class corresponding to
33 the CDMA frequency assignment for the CDMA Channel as
34 specified in [30]; otherwise, the base station shall omit this
35 field.
- 36 PUF_CDMA_FREQ - Frequency assignment.
- 37 If PUF_FREQ_INCL is set to '1', the base station shall include
38 this field and set it to the CDMA Channel number, in the
39 specified CDMA band class, corresponding to the CDMA
40 frequency for the CDMA Channel as specified in [2];
41 otherwise, the base station shall omit this field.
- 42

MS_LAT	0 or 22
MS_LONG	0 or 23
MS_LOC_TSTAMP	0 or 24

4

- 5 RESERVED - Reserved bits.
- 6 The base station shall set these bits to '000000'.
- 7 LOC_IND - Location indicator
- 8 If the base station is to include MS_LAT, MS_LONG, and
- 9 MS_LOC_TSTAMP in this message, the base station shall set
- 10 this field to '1'; otherwise, the base station shall set this field
- 11 to '0'.
- 12 RESERVED_1 - Reserved bits.
- 13 If LOC_IND is equal to '1', the base station shall set these bits
- 14 to '000'; otherwise, the base station shall not include this
- 15 field.
- 16 MS_LAT - Mobile station latitude.
- 17 If LOC_IND is equal to '1', the base station shall set this field
- 18 to the mobile station's latitude in units of 0.25 second,
- 19 expressed as a two's complement signed number with positive
- 20 numbers signifying North latitudes. The base station shall set
- 21 this field to a value in the range -1296000 to 1296000
- 22 inclusive (corresponding to a range of -90° to +90°).
- 23 Otherwise, the base station shall not include this field.
- 24 MS_LONG - Mobile station longitude.
- 25 If LOC_IND is equal to '1', the base station shall set this field
- 26 to the mobile station's longitude in units of 0.25 second,
- 27 expressed as a two's complement signed number with positive
- 28 numbers signifying East longitude. The base station shall set
- 29 this field to a value in the range -2592000 to 2592000
- 30 inclusive (corresponding to a range of -180° to +180°).
- 31 Otherwise, the base station shall not include this field.
- 32 MS_LOC_TSTAMP - Time stamp.

If LOC_IND is equal to '1', the base station shall set this field to the time at which the mobile station's location parameters were received; otherwise, the base station shall not include this field.

This field is formatted as shown below.

Field	Length (bits)
HOURS	8
MINUTES	8
SECONDS	8
Note: All subfields contain two 4-bit BCD numbers giving the decimal value of the subfield. For example, if the minute is 53, the MINUTES subfield contains '01010011'.	

- HOURS - Current hour (UTC).
The base station shall set this field to the current hour (UTC), in the range 0-23.
- MINUTES - Current minutes (UTC).
The base station shall set this field to the current minutes (UTC), in the range 0-59.
- SECONDS - Current seconds (UTC).
The base station shall set this field to the current seconds (UTC), in the range 0-59.

3

USE_TIME - Use action time indicator.

4

This field indicates whether an explicit action time is specified in this message.

5

6

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

7

8

9

ACTION_TIME - Action time.

10

If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $FRAME_OFFSET_s \times 1.25$ ms, in units of 80 ms (modulo 64), at which the handoff is to take effect. If the USE_TIME field is set to '0', the base station shall omit this field.

11

12

13

14

15

HDM_SEQ - *General Handoff Direction Message* sequence number.

16

This field is used by the mobile station in the *Power Measurement Report Message* to identify the order in which the reported pilot strengths are sent.

17

18

19

The base station shall set this field to the handoff message sequence number, as specified in 3.6.6.2.2.10.

20

21

SEARCH_INCLUDED - Pilot search parameters included.

22

If the mobile station is to change its pilot search parameters, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

23

24

25

SRCH_WIN_A - Search window size for the Active Set and Candidate Set.

26

If SEARCH_INCLUDED is set to '1', the base station shall include the field SRCH_WIN_A and set this field to the window size parameter shown in Table 2.6.6.2.1-1 corresponding to the number of PN chips that the mobile station is to search for pilots in the Active Set and the Candidate Set; otherwise, the base station shall omit this field.

27

28

29

30

31

32

SRCH_WIN_N - Search window size for the Neighbor Set.

- 1 If SEARCH_INCLUDED is set to '1', the base station shall
 2 include the field SRCH_WIN_N and set this field to the
 3 window size parameter shown in Table 2.6.6.2.1-1
 4 corresponding to the search window size to be used by mobile
 5 stations for the Neighbor Set after completion of the handoff;
 6 otherwise, the base station shall omit this field.
- 7 SRCH_WIN_R - Search window size for the Remaining Set.
- 8 If SEARCH_INCLUDED is set to '1', the base station shall
 9 include the field SRCH_WIN_R and set this field to the window
 10 size parameter shown in Table 2.6.6.2.1-1 corresponding to
 11 the search window size to be used by mobile stations for the
 12 Remaining Set after completion of the handoff; otherwise, the
 13 base station shall omit this field.
- 14 T_ADD - Pilot detection threshold.
- 15 This value is used by the mobile station to trigger the transfer
 16 of a pilot from the Neighbor Set or Remaining Set to the
 17 Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
 18 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
 19 *Measurement Message* initiating the handoff process (see
 20 2.6.6.2.5.2).
- 21 If SEARCH_INCLUDED is set to '1', the base station shall
 22 include the field T_ADD and set this field to the pilot detection
 23 threshold, expressed as an unsigned binary number equal to
 24 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 25 this field.
- 26 T_DROP - Pilot drop threshold.
- 27 This value is used by mobile stations to start a handoff drop
 28 timer for pilots in the Active Set and the Candidate Set (see
 29 2.6.6.2.3).
- 30 If SEARCH_INCLUDED is set to '1', the base station shall
 31 include the field T_DROP and set this field to the pilot drop
 32 threshold, expressed as an unsigned binary number equal to
 33 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 34 this field.
- 35 T_COMP - Active Set versus Candidate Set comparison threshold.
- 36 The mobile station transmits a *Pilot Strength Measurement*
 37 *Message* or *Extended Pilot Strength Measurement Message*
 38 when the strength of a pilot in the Candidate Set exceeds that
 39 of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
- 40 If SEARCH_INCLUDED is set to '1', the base station shall
 41 include the field T_COMP and set this field to the threshold
 42 Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
 43 otherwise, the base station shall omit this field.

- 1 T_TDROP - Drop timer value.
- 2 Timer value after which an action is taken by the mobile
- 3 station for a pilot that is a member of the Active Set or
- 4 Candidate Set, and whose strength has not become greater
- 5 than T_DROP. If the pilot is a member of the Active Set, a
- 6 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
- 7 *Measurement Message* is issued. If the pilot is a member of
- 8 the Candidate Set, it will be moved to the Neighbor Set.
- 9 If SEARCH_INCLUDED is set to '1', the base station shall
- 10 include the field T_TDROP and set this field to the T_TDROP
- 11 value shown in Table 2.6.6.2.3-1 corresponding to the drop
- 12 timer value to be used by the mobile station; otherwise, the
- 13 base station shall omit this field.
- 14 SOFT_SLOPE - The slope in the inequality criterion for adding a pilot to the
- 15 active set, or dropping a pilot from the active set (see 2.6.6.2.3
- 16 and 2.6.6.2.5.2).
- 17 If SEARCH_INCLUDED is set to '1', the base station shall
- 18 include the field SOFT_SLOPE in the additional fields and set
- 19 this field as an unsigned binary number; otherwise, the base
- 20 station shall omit this field.
- 21 ADD_INTERCEPT - The intercept in the inequality criterion for adding a pilot to
- 22 the active set (see 2.6.6.2.5.2).
- 23 If SEARCH_INCLUDED is set to '1', the base station shall
- 24 include the field ADD_INTERCEPT in the additional fields and
- 25 set this field as a two's complement signed binary number in
- 26 units of 0.5 dB; otherwise, the base station shall omit this
- 27 field.
- 28 DROP_INTERCEPT - The intercept in the inequality criterion for dropping a pilot
- 29 from the active set (see 2.6.6.2.3).
- 30 If SEARCH_INCLUDED is set to '1', the base station shall
- 31 include the field DROP_INTERCEPT in the additional fields
- 32 and set this field as a two' complement signed binary number
- 33 in units of 0.5 dB; otherwise, the base station shall omit this
- 34 field.
- 35 EXTRA_PARMS - Extra parameters included.
- 36 If the mobile station is to change FRAME_OFFSET,
- 37 PRIVATE_LCM, ENCRYPT_MODE, NOM_PWR, BAND_CLASS,
- 38 or CDMA_FREQ, or the mobile station is to perform a reset of
- 39 the acknowledgment procedures, or the mobile station is to
- 40 reset Forward Traffic Channel power control counters, the
- 41 base station shall set this field to '1'; otherwise, the base
- 42 station shall set this field to '0'.
- 43 P_REV - Protocol revision level.
- 44 If EXTRA_PARMS is set to '1', the base station shall set this
- 45 field to the base station protocol revision level that the mobile
- 46 station is to use after completion of the handoff; otherwise,
- 47 the base station shall omit this field.

1	PACKET_ZONE_ID	-	Packet data services zone identifier.
2			If EXTRA_PARMS is set to '1', the base station shall include
3			the field PACKET_ZONE_ID and set this field as described
4			below; otherwise, the base station shall omit this field.
5			If the base station supports a packet data service zone, the
6			base station shall set this field to the non-zero packet data
7			services zone identifier that the mobile station is to use after
8			completion of the handoff.
9			If the base station does not support a packet data service
10			zone, the base station shall set this field to '00000000'.
11	FRAME_OFFSET	-	Frame offset.
12			The Forward and Reverse Traffic Channel frames are delayed
13			FRAME_OFFSET × 1.25 ms relative to system timing (see [2]).
14			If EXTRA_PARMS is set to '1', the base station shall include
15			the field FRAME_OFFSET and set this field to the Forward
16			and Reverse Traffic Channel frame offset; otherwise, the base
17			station shall omit this field.
18	PRIVATE_LCM	-	Private long code mask indicator.
19			This field is used to change the long code mask after a hard
20			handoff.
21			If EXTRA_PARMS is set to '1', the base station shall include
22			the field PRIVATE_LCM and set this field as described below;
23			otherwise, the base station shall omit this field.
24			If the private long code mask is to be used after the handoff,
25			the base station shall set this field to '1'; otherwise, the base
26			station shall set this field to '0'.
27	RESET_L2	-	Reset acknowledgment procedures command.
28			This field is used to reset acknowledgment processing in the
29			mobile station.
30			If EXTRA_PARMS is set to '1', the base station shall include
31			the field RESET_L2 and set this field as described below;
32			otherwise, the base station shall omit this field.
33			If the field is included and the mobile station is to reset its
34			acknowledgment procedures, the base station shall set this
35			field to '1'; otherwise, the base station shall set this field to '0'.
36	RESET_FPC	-	Reset Forward Traffic Channel power control.
37			This field is used to reset the Forward Traffic Channel power
38			control counters.
39			If EXTRA_PARMS is set to '1', the base station shall include
40			the field RESET_FPC and set this field as described below;
41			otherwise, the base station shall omit this field.

- 1 The base station shall set this field to '0' if the Forward Traffic
2 Channel power control counters are to be maintained after
3 completion of the handoff. If the counters are to be initialized
4 as specified in 2.6.4.1.1.1, then the base station shall set this
5 field to '1'.
- 6 **SERV_NEG_TYPE** - Service negotiation type.
- 7 If EXTRA_PARMS is set to '1', the base station shall include
8 the field SERV_NEG_TYPE and set this field as described
9 below; otherwise, the base station shall omit this field.
- 10 If the mobile station is to use service negotiation, the base
11 station shall set this field to '1'. If the mobile station is to use
12 service option negotiation, the base station shall set this field
13 to '0'.
- 14 **ENCRYPT_MODE** - Message encryption mode.
- 15 If EXTRA_PARMS is set to '1', the base station shall include
16 the field ENCRYPT_MODE and set this field to the
17 ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2
18 corresponding to the encryption mode that is to be used for
19 messages sent on the Forward and Reverse Traffic Channels,
20 as specified in 2.3.12.2; otherwise, the base station shall omit
21 this field.
- 22 **NOM_PWR_EXT** - Extended nominal transmit power.
- 23 If EXTRA_PARMS is set to '1', the base station shall include
24 this field and set this field as described below; otherwise, the
25 base station shall omit this field.
- 26 If the mobile station is being handed off to a base station
27 operating in Band Class 0 or Band Class 3, the base station
28 shall set this field to '0'; otherwise, the base station shall set it
29 as follows:
- 30 If the correction factor to be used by the mobile station in the
31 open loop power estimate is between -24 dB and -9 dB
32 inclusive, the base station shall set this field to '1'; otherwise
33 (the correction factor is in the range -8 dB to 7 dB inclusive),
34 the base station shall set this field to '0'.
- 35 **NOM_PWR** - Nominal transmit power offset.
- 36 If EXTRA_PARMS is set to '1', the base station shall include
37 the field NOM_PWR and set this field to the correction factor
38 to be used by the mobile station in the open loop power
39 estimate, expressed as a two's complement value in units of 1
40 dB (see [2]); otherwise, the base station shall omit this field.
- 41 **NUM_PREAMBLE** - Traffic Channel preamble length.
- 42 If EXTRA_PARMS is set to '0', the base station shall omit the
43 NUM_PREAMBLE field; otherwise, the base station shall
44 include this field and set it to the length of Traffic Channel
45 preamble that the mobile station is to send when performing
46 a handoff; as follows:

- 1 If, after the handoff, radio configuration 1 or radio
 2 configuration 2 is to be used, the base station shall set
 3 NUM_PREAMBLE to the Traffic Channel preamble length in
 4 20 ms units; otherwise, the base station shall set
 5 NUM_PREAMBLE to the value shown in Table 3.7.3.3.2.17-1
 6 corresponding to the Traffic Channel preamble length in 1.25
 7 ms units.
- 8 **BAND_CLASS** - Band class.
- 9 If EXTRA_PARMS is set to '1', the base station shall include
 10 the field BAND_CLASS and set this field to the CDMA band
 11 class corresponding to the CDMA frequency assignment for
 12 the CDMA Channel as specified in [30]; otherwise, the base
 13 station shall omit this field.
- 14 **CDMA_FREQ** - Frequency assignment.
- 15 If EXTRA_PARMS is set to '1', the base station shall include
 16 the field CDMA_FREQ and set this field to the CDMA Channel
 17 number, in the specified CDMA band class, corresponding to
 18 the CDMA frequency assignment for the CDMA Channel as
 19 specified in [2]; otherwise, the base station shall omit this
 20 field.
- 21 **RETURN_IF_HANDOFF_FAIL** - Return on failure flag.
- 22 If EXTRA_PARMS is set to '1', the base station shall include
 23 the field RETURN_IF_HANDOFF_FAIL and set this field as
 24 described below; otherwise, the base station shall omit this
 25 field.
- 26 If the base station includes this field, it shall set this field to
 27 '1' if the mobile station is to resume the use of the Active Set
 28 on the Serving Frequency following an unsuccessful hard
 29 handoff attempt, as specified in 2.6.6.2.8.2; otherwise, the
 30 base station shall set this field to '0'.
- 31 **COMPLETE_SEARCH** - Flag to complete search.
- 32 If RETURN_IF_HANDOFF_FAIL is included and is set to '1',
 33 the base station shall include the field COMPLETE_SEARCH
 34 and set this field as described below; otherwise, the base
 35 station shall omit this field.
- 36 If the base station includes this field, it shall set this field to
 37 '1' if the mobile station is to complete the search of the
 38 Candidate Frequency Search Set before resuming the use of
 39 the Active Set on the Serving Frequency when an inter-
 40 frequency handoff attempt is unsuccessful, as specified in
 41 2.6.6.2.8.2; otherwise, the base station shall set this field to
 42 '0'.
- 43 **PERIODIC_SEARCH** - Flag to search the Candidate Frequency periodically.
- 44 If EXTRA_PARMS is set to '1', the base station shall include
 45 the field PERIODIC_SEARCH and set this field as described
 46 below; otherwise, the base station shall omit this field.

- 1 If the base station includes this field, it shall set this field to
 2 '1' if the mobile station is to periodically search the Candidate
 3 Frequency, as specified in 2.6.6.2.8.3; otherwise, the base
 4 station shall set this field to '0'.
- 5 **SCR_INCLUDED** - Service Configuration Record included indicator.
 6 If EXTRA_PARMS is set to '1', the base station shall include
 7 the field SCR_INCLUDED and shall set this field as described
 8 below; otherwise, the base station shall omit this field.
 9 The base station shall set this field to '1' if it includes Service
 10 Configuration Record in the message; otherwise, the base
 11 station shall set this field to '0'.
- 12 **SERV_CON_SEQ** - Connect sequence number.
 13 If SCR_INCLUDED is included and is set to '1', the base
 14 station shall include the field SERV_CON_SEQ and shall set
 15 this field to the connect sequence number pertaining to this
 16 service configuration as specified in 3.6.4.1.2.1.2.
- 17 If SCR_INCLUDED is included and is set to '1', the base station shall include one
 18 occurrence of the following three-field record to specify the service configuration.
- 19 **RECORD_TYPE** - Information record type.
 20 If SCR_INCLUDED is included and is set to '1', the base
 21 station shall include the field RECORD_TYPE and shall set
 22 this field to the record type value shown in Table 3.7.5-1
 23 corresponding to the Service Configuration information
 24 record.
- 25 **RECORD_LEN** - Information record length.
 26 If SCR_INCLUDED is included and is set to '1', the base
 27 station shall include the field RECORD_LEN and shall set this
 28 field to the number of octets included in the type-specific
 29 fields of the Service Configuration information record.
- 30 **Type-specific fields** - Type-specific fields.
 31 If SCR_INCLUDED is included and is set to '1', the base
 32 station shall include the type specific fields and shall set
 33 these fields as specified in 3.7.5.7 for the Service
 34 Configuration information record.
- 35 **SUP_CHAN_PARAMS_INCLUDED** - Supplemental code channel parameters included
 36 indicator.
 37 The base station shall set this field to '1' if the base station
 38 includes the FOR_INCLUDED, REV_INCLUDED, and
 39 REV_PARAMS_INCLUDED fields in the message; otherwise, the
 40 base station shall set this field to '0'.
- 41 **FOR_INCLUDED** - Forward assignment information included indicator.
 42 If SUP_CHAN_PARAMS_INCLUDED is set to '1', the base
 43 station shall include the field FOR_INCLUDED and set this
 44 field as described below; otherwise, the base station shall
 45 omit this field.

- 1 If the base station includes this field, it shall set this field to
 2 '1' if Forward Supplemental Code Channel assignment
 3 information is included in the message; otherwise, the base
 4 station shall set this field to '0'.
- 5 **FOR_SUP_CONFIG** - Forward Supplemental Code Channel configuration indicator.
 6 If FOR_INCLUDED is included and is set to '1', the base
 7 station shall include the field FOR_SUP_CONFIG and set this
 8 field according to the following rules:
- 9 The base station shall set this field to '00' if Forward
 10 Supplemental Code Channels are not specified in the
 11 message, and the mobile station is to stop processing all
 12 Forward Supplemental Code Channels.
- 13 The base station shall set this field to '01' if Forward
 14 Supplemental Code Channels are not specified in the
 15 message, and the mobile station is to start processing the
 16 Forward Supplemental Code Channels previously stored in its
 17 Code Channel List, CODE_CHAN_LIST_s.
- 18 The base station shall set this field to '10' if the Forward
 19 Supplemental Code Channels are specified in the message,
 20 and the mobile station is to stop processing all Forward
 21 Supplemental Code Channels in CODE_CHAN_LIST_s, and to
 22 update the CODE_CHAN_LIST_s, according to the information
 23 contained in the message.
- 24 The base station shall set this field to '11' if the Forward
 25 Supplemental Code Channels are specified in the message,
 26 and the mobile station is to update its Code Channel List,
 27 CODE_CHAN_LIST_s, according to the information contained
 28 in the message and to start processing the Forward
 29 Supplemental Code Channels.
- 30 **NUM_FOR_SUP** - Number of Forward Supplemental Code Channels.
 31 If FOR_SUP_CONFIG is included and is set to '10' or '11', the
 32 base station shall include the field NUM_FOR_SUP and set it
 33 to the number of Forward Supplemental Code Channels
 34 assigned to the mobile station; otherwise, the base station
 35 shall omit this field. NUM_FOR_SUP shall not exceed the
 36 maximum number of Forward Supplemental Code Channels
 37 for the negotiated multiplex option.
- 38 **USE_FOR_DURATION** - Use forward duration indicator.
 39 If FOR_SUP_CONFIG is included and is set to '01' or '11', the
 40 base station shall include the field USE_FOR_DURATION and
 41 set this field as described below; otherwise the base station
 42 shall omit this field.
- 43 The base station shall set this field to '1' if the
 44 FOR_DURATION field is included in the message and the
 45 mobile station is to process the Forward Supplemental Code
 46 Channels for a time duration indicated by FOR_DURATION.

- 1 The base station shall set this field to '0' if the mobile station
 2 is to process the Forward Supplemental Code Channels for an
 3 indefinite duration (i.e., the mobile station is to continue
 4 processing Forward Supplemental Code Channels until it
 5 receives a subsequent *Supplemental Channel Assignment*
 6 *Message* or a *General Handoff Direction Message* that specifies
 7 a different Forward Supplemental Code Channel assignment.
- 8 FOR_DURATION - Duration of Forward Supplemental Code Channel
 9 assignment.
- 10 If USE_FOR_DURATION is included and is set to '1', the base
 11 station shall include the field FOR_DURATION and set this
 12 field to the allocated duration, in units of 80 ms, for which the
 13 mobile station is to process the Forward Supplemental Code
 14 Channels; otherwise, the base station shall omit this field.
- 15 REV_INCLUDED - Reverse assignment information included indicator.
- 16 If SUP_CHAN_PARMS_INCLUDED is set to '1', the base
 17 station shall include the field REV_INCLUDED and set this
 18 field as described below; otherwise, the base station shall
 19 omit this field.
- 20 If the base station includes this field, it shall set this field to
 21 '1' if Reverse Supplemental Code Channel assignment
 22 information is included in the message; otherwise, the base
 23 station shall set this field to '0'.
- 24 REV_DTX_DURATION - Reverse Discontinuous Transmission Duration.
- 25 If REV_INCLUDED is included and is set to '1', the base
 26 station shall include the field REV_DTX_DURATION;
 27 otherwise the base station shall omit this field.
- 28 If the base station includes this field, it shall set this field to
 29 the maximum duration of time in units of 20 ms that the
 30 mobile station is allowed to stop transmission on a Reverse
 31 Supplemental Code Channel within the reverse assignment
 32 duration. The base station shall set this field to '0000' if the
 33 mobile station is to stop using a Reverse Supplemental Code
 34 Channel once it has stopped transmitting on that Reverse
 35 Supplemental Code Channel. The base station shall set this
 36 field to '1111' if the mobile station is allowed to resume
 37 transmission on a Reverse Supplemental Code Channel at
 38 any time within the reverse assignment duration.
- 39 CLEAR_RETRY_DELAY - Clear retry delay indicator.
- 40 If REV_INCLUDED is included and is set to '1', the base
 41 station shall include the field CLEAR_RETRY_DELAY and set
 42 this field as described below; otherwise the base station shall
 43 omit this field.
- 44 The base station shall set this field to '1' to indicate that the
 45 mobile station is to clear any existing retry delay which it has
 46 stored (see 2.6.6.2.5.1); otherwise, the base station shall set
 47 this field to '0'.
- 48 USE_REV_DURATION - Use reverse duration indicator.

- 1 If REV_INCLUDED is included and is set to '1', the base
 2 station shall include the field USE_REV_DURATION and set
 3 this field as described below; otherwise the base station shall
 4 omit this field.
- 5 The base station shall set this field to '1' if the
 6 REV_DURATION field is included in the message and the
 7 mobile station is allowed to transmit on the Reverse
 8 Supplemental Code Channels for a time duration indicated by
 9 REV_DURATION.
- 10 The base station shall set this field to '0' if the mobile station
 11 is allowed to transmit on the Reverse Supplemental Code
 12 Channels for an indefinite duration (i.e., the mobile station
 13 may continue to transmit on the Reverse Supplemental Code
 14 Channels until it receives a subsequent *Supplemental Channel*
 15 *Assignment Message* or a *General Handoff Direction Message*
 16 that specifies a different Reverse Supplemental Code Channel
 17 assignment.
- 18 REV_DURATION - Duration of Reverse Supplemental Code Channel Assignment.
 19 If USE_REV_DURATION is included and is set to '1', the base
 20 station shall include the field REV_DURATION and set this
 21 field to the allocated duration, in units of 80 ms, for which the
 22 mobile station may transmit on Reverse Supplemental Code
 23 Channels; otherwise the base station shall omit this field.
- 24 NUM_REV_CODES - Number of Reverse Supplemental Code Channels.
 25 If REV_INCLUDED is included and is set to '1', the base
 26 station shall include the field NUM_REV_CODES and set this
 27 field to the number of Reverse Supplemental Code Channels
 28 which are assigned to the mobile station; otherwise the base
 29 station shall omit this field.
- 30 USE_T_ADD_ABORT - Reverse use T_ADD abort indicator.
 31 If REV_INCLUDED is included and is set to '1', the base
 32 station shall include the field USE_T_ADD_ABORT and set
 33 this field as described below; otherwise the base station shall
 34 omit this field.
- 35 The base station shall set this field to '1' to indicate that the
 36 mobile station is to use the T_ADD Reverse Supplemental
 37 Code Channel abort feature for this reverse assignment;
 38 otherwise, the base station shall set this field to '0'.
- 39 REV_PARAMS_INCLUDED - Reverse assignment parameters included indicator.
 40 If SUP_CHAN_PARAMS_INCLUDED is set to '1', the base
 41 station shall include the field REV_PARAMS_INCLUDED and
 42 set this field as described below; otherwise, the base station
 43 shall omit this field.
- 44 If the base station includes this field, it shall set this field to
 45 '1' if the following three fields are included in the message;
 46 otherwise, the base station shall set this field to '0'.

1 The base station shall include one occurrence of the following four-part record for each of
 2 the NUM_PILOTS pilots included in the message:

- 3 PILOT_PN - Pilot PN sequence offset index.
 4 The base station shall set this field to the pilot PN sequence
 5 offset for this pilot in units of 64 PN chips.
- 6 PWR_COMB_IND - Power control symbol combining indicator.
 7 If the Forward Traffic Channel associated with this pilot will
 8 carry the same closed-loop power control subchannel bits as
 9 that of the previous pilot in this message, the base station
 10 shall set this field to '1'; otherwise, the base station shall set
 11 this field to '0'. The base station shall set this field to '0' in
 12 the first record in the pilot list.
- 13 FOR_FUND_CODE_CHAN - Forward Fundamental Channel.
 14 The base station shall set this field to the code channel index
 15 to be used for the Forward Fundamental Channel associated
 16 with this pilot.
- 17 FOR_SUP_INCLUDED - Forward Supplemental Code Channel included.
 18 The base station shall include this field if FOR_SUP_CONFIG
 19 is included and is set to '10' or '11'. If included, the base
 20 station shall set this field to '1' if there are Supplemental Code
 21 Channels associated with this pilot.
- 22 FOR_SUP_CHAN_REC - Forward Supplemental Code Channel record
 23 If FOR_SUP_INCLUDED is set to '1', the base station shall
 24 include the record FOR_SUP_CHAN_REC and set its fields as
 25 described below; otherwise, the base station shall omit this
 26 record.
 27 FOR_SUP_CHAN_REC contains information about Forward
 28 Supplemental Code Channels associated with this pilot, and
 29 consists of the field EXPL_CODE_CHAN, and either the
 30 BASE_CODE_CHAN field or NUM_FOR_SUP occurrences of
 31 the FOR_SUP_CODE_CHAN field, as shown below.

EXPL_CODE_CHAN	1
BASE_CODE_CHAN	0 or 8

If EXPL_CODE_CHAN is equal to '1', NUM_FOR_SUP occurrences of the following field:

{ (NUM_FOR_SUP)

FOR_SUP_CODE_CHAN	8
-------------------	---

} (NUM_FOR_SUP)

- 34 EXPL_CODE_CHAN - Explicit code channel indicator.

1 The base station shall set this field to '1' to indicate explicit
2 assignment of each Forward Supplemental Code Channel by
3 means of the field FOR_SUP_CODE_CHAN. The base station
4 shall set this field to '0' if the mobile station is to use
5 NUM_FOR_SUP adjacent code channels beginning with index
6 BASE_CODE_CHAN (i.e., BASE_CODE_CHAN through
7 BASE_CODE_CHAN + NUM_FOR_SUP - 1).

8 In both cases (i.e., the explicit code channel list format and
9 range format), the order of the code channel indices is the
10 same for all pilots specified in this message (i.e., for each
11 pilot, the i^{th} entry in the list indicates the code channel index
12 to be used for the i^{th} Forward Supplemental Code Channel
13 associated with that pilot).

14 **BASE_CODE_CHAN** - Base code channel index.

15 If the EXPL_CODE_CHAN field is included and is set to '0', the
16 base station shall include the field BASE_CODE_CHAN and
17 set this field as described below; otherwise the base station
18 shall omit this field.

19 The base station shall set this field to the base code channel
20 index (see [2]) in the range of 1 to (63 - NUM_FOR_SUP + 1),
21 inclusive, that the mobile station is to use as the first Forward
22 Supplemental Code Channel associated with this pilot. The
23 mobile station is to use code channel index
24 (BASE_CODE_CHAN + i - 1), where i ranges from 1 to
25 NUM_FOR_SUP, for the i^{th} Forward Supplemental Code
26 Channel associated with this pilot.

27 **FOR_SUP_CODE_CHAN** - Forward Supplemental Code Channel.

28 If EXPL_CODE_CHAN is included and is set to '1', the base
29 station shall include NUM_FOR_SUP occurrences of the field
30 FOR_SUP_CODE_CHAN and set this field as described below;
31 otherwise the base station shall omit this field.

32 The base station shall set the i^{th} occurrence of this field to the
33 code channel index (see [2]), in the range 1 to 63 inclusive,
34 that the mobile station is to use for the i^{th} Forward Code
35 Channel associated with this pilot.

36 **FPC_SUBCHAN_GAIN** - Forward power control subchannel relative gain.

37 The base station shall set FPC_SUBCHAN_GAIN equal to the
38 power level of the forward link power control subchannel
39 relative to that of 20 ms frames at a 9600 bps or 14400 bps
40 rate on the Forward Fundamental Channel or the Forward
41 Dedicated Control Channel indicated by FPC_PRI_CHAN_s.
42 The base station shall set the value in units of 0.25 dB.

43 **USE_PC_TIME** - Use power control action time indicator.

- 1 This field indicates whether an explicit time
2 [PC_ACTION_TIME] at which a new value for Power Control
3 Subchannel to traffic ratio (FPC_SUBCHAN_GAIN) takes effect
4 is specified in the message.
- 5 If an explicit action time is specified in this message, the base
6 station shall set this field to '1'; otherwise, the base station
7 shall set this field to '0'.
- 8 PC_ACTION_TIME - Power Control Subchannel gain action time.
- 9 If the USE_PC_TIME field is set to '1', the base station shall
10 set this field to the System Time minus FRAME_OFFSET_S ×
11 1.25 ms, in units of 80 ms (modulo 64), at which
12 FPC_SUBCHAN_GAIN specified in this message is to take
13 effect. If the USE_PC_TIME field is set to '0', the base station
14 shall omit this field.
- 15 RLGAIN_TRAFFIC_PILOT - Gain adjustment of the Reverse Traffic Channel relative to the
16 Reverse Pilot Channel power for Radio Configurations greater
17 than 2.
- 18 If EXTRA_PARMS is set to '1', the base station shall include
19 this field and set it to the correction factor to be used by
20 mobile stations in setting the power of a code channel,
21 expressed as a two's complement value in units of 0.125 dB
22 (see [2]); otherwise, the base station shall omit this field.
- 23 DEFAULT_RLAG - Default reverse link attribute gain used indicator.
- 24 If EXTRA_PARMS is set to '0', the base station shall omit this
25 field; otherwise, the base station shall set this field as follows.
- 26 If the mobile station is to use the default values for the
27 reverse link attribute gain, as specified in [2] after completion
28 of handoff, the base station shall set this field to '1';
29 otherwise, the base station shall set this field to '0'.
- 30 NNSCR_INCLUDED - Non-negotiable Service Configuration Record included
31 indicator.
- 32 The base station shall omit this field, if EXTRA_PARMS is set
33 to '0'; otherwise, the base station shall include this field and
34 set this field as described below:
- 35 The base station shall set this field to '1', if the Non-negotiable
36 Service Configuration record is included in this message;
37 otherwise, the base station shall set this field to '0'.
- 38 If NNSCR_INCLUDED is included and is set to '1', the base station shall include one
39 occurrence of the following three-field record to specify the non-negotiable service
40 configuration parameters.
- 41 RECORD_TYPE - Information record type.
- 42 If NNSCR_INCLUDED is included and is set to '1', the base
43 station shall include the field RECORD_TYPE and shall set
44 this field to the record type value shown in Table 3.7.5-1
45 corresponding to the Non-Negotiable Service Configuration
46 information record.

 2 MSG_TAG: RAM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
FPC_PRI_CHAN	1

4

5 USE_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is specified
 7 in this message.

8 If an explicit action time is specified in this message, the base
 9 station shall set this field to '1'; otherwise, the base station
 10 shall set this field to '0'.

11 ACTION_TIME - Action time.

12 If the USE_TIME field is set to '1', the base station shall set
 13 this field to the System Time minus $\text{FRAME_OFFSET}_s \times 1.25$
 14 ms, in units of 80 ms (modulo 64), at which this message is to
 15 take effect. If the USE_TIME field is set to '0', the base station
 16 shall omit this field.

17 FPC_PRI_CHAN - Power Control Subchannel indicator.

18 The base station shall set this field to '0' if the mobile station
 19 is to perform the primary inner loop estimation on the
 20 received Forward Fundamental Channel. The base station
 21 shall set this field to '1' if the mobile station is to perform the
 22 primary inner loop estimation on the received Forward
 23 Dedicated Control Channel.

24 If the F-CPCCH is assigned, the base station will multiplex
 25 the Power Control Subchannel on the F-CPCCH; otherwise:

26 If this field is set to '0', the base station will multiplex the
 27 Power Control Subchannel on the Forward Fundamental
 28 Channel; otherwise, the base station will multiplex the Power
 29 Control Subchannel on the Forward Dedicated Control
 30 Channel.

RER_TIME	0 or 3
RER_TIME_UNIT	0 or 2
MAX_RER_PILOT_LIST_SIZE	0 or 3
RSC_MODE_SUPPORTED	1
MAX_RSC_END_TIME_UNIT	0 or 2
MAX_RSC_END_TIME_VALUE	0 or 4
REQ_RSCI_INCL	0 or 1
REQ_RSCI	0 or 4
IGNORE_QPCH	0 or 1
TKZ_MODE_ENABLED	1
TKZ_ID	0 or 8
TKZ_MAX_NUM_MSG_IDX	0 or 3
TKZ_UPDATE_PRD	0 or 4
TKZ_LIST_LEN	0 or 4
TKZ_TIMER	0 or 8
TBR_RAND_SUPPR_ENABLE	1
TBR_RAND_WINDOW	2
BCMC_INFO_INCL	0 or 1
NUM_FSCH	0 or 3
NUM_BCMC_PROGRAMS	0 or 6

If NUM_FSCH field is included, then NUM_FSCH plus one occurrences of the following variable length record:

{ (NUM_FSCH + 1)

FSCH_RECORD_LEN	8
-----------------	---

Field	Length (bits)
FSCH_CODE_CHAN	11
FSCH_MUX_OPTION	16
FSCH_RC	5
FSCH_CODING	1
FSCH_OUTERCODE_INCL	1
FSCH_OUTERCODE_RATE	0 or 3
FSCH_OUTERCODE_OFFSET	0 or 6
FSCH_RATE	4
FSCH_FRAME_40_USED	1
FSCH_FRAME_80_USED	1
FSCH_RECORD_RESERVED	0-7 (as needed)
} (NUM_FSCH + 1)	

If NUM_BCMC_PROGRAMS field is included, then NUM_BCMC_PROGRAMS plus one occurrences of the following variable length record:

{ (NUM_BCMC_PROGRAMS + 1)

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	BCMC_PROGRAM_ID_LEN+1
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN

NUM_FLOW_DISCRIMINATOR+1 or 1 occurrences of the following variable length record

{ (NUM_FLOW_DISCRIMINATOR+1) or 1

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN
NUM_LPM_ENTRIES	3

NUM_LPM_ENTRIES plus one occurrences of the following variable-length record:

{ (NUM_LPM_ENTRIES + 1)

FSCH_ID	7
BSR_ID	3

} (NUM_LPM_ENTRIES + 1)

} (NUM_FLOW_DISCRIMINATOR+1) or 1

} (NUM_BCMC_PROGRAMS + 1)

1

2

USE_TIME - Use action time indicator.

1 This field indicates whether an explicit action time is specified
 2 in this message.

3 If an explicit action time is specified in this message, the base
 4 station shall set this field to '1'; otherwise, the base station
 5 shall set this field to '0'.

6 ACTION_TIME - Action time.

7 If the USE_TIME field is set to '1', the base station shall set
 8 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 9 ms, in units of 80 ms (modulo 64), at which the message is to
 10 take effect. If the USE_TIME field is set to '0', the base station
 11 shall omit this field.

12 CH_IND - Channel Indicator.

13 The base station shall set this field as shown in Table
 14 3.7.3.3.2.34-1, to release physical resources.

15 **Table 3.7.3.3.2.34-1. Channel Indicator**

CH_IND (binary)	Physical Resource(s) Released
000	No Fundamental Channel, Dedicated Control Channel, or Continuous Reverse Pilot Channel released
001	Fundamental Channel
010	Dedicated Control Channel
011	Reserved
100	Continuous Reverse Pilot Channel
101	Fundamental Channel and Continuous Reverse Pilot Channel
110	Reserved
111	Fundamental Channel, Dedicated Control Channel, and Continuous Reverse Pilot Channel

16
 17 GATING_RATE_INCL - Reverse pilot gating rate included flag.

18 The base station shall set this field to '1' if the
 19 PILOT_GATING_RATE field is included, otherwise it shall set
 20 this field to '0'.

21 PILOT_GATING_RATE - Actual Reverse Pilot gating Rate.

22 If the GATING_RATE_INCL field is set to '1', then the base
 23 station shall set this field to the PILOT_GATING_RATE field
 24 shown in Table 3.7.3.3.2.34-2 corresponding to the actual
 25 gating rate on the Reverse Pilot Channel; otherwise, the base
 26 station shall omit this field.

1

2

Table 3.7.3.3.2.34-2. Actual Reverse Pilot Gating rate

PILOT_GATING_RATE field (binary)	Meaning
00	Gating rate 1
01	Gating rate $\frac{1}{2}$
10	Gating rate $\frac{1}{4}$
11	Reserved

3

4

USE_EXT_CH_IND - Use EXT_CH_IND to set channel configuration

5

6

7

8

The base station shall set this field to '1' if the EXT_CH_IND field is included in this message and is used to set the channel configuration; otherwise, the base station shall set this field to '0'.

9

EXT_CH_IND - Extended Channel Indicator.

10

11

12

If the USE_EXT_CH_IND field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

13

14

The base station shall set this field to the desired channel configuration shown in Table 2.7.1.3.2.4-11.

15

PDCH_CONTROL_HOLD - Packet Data Channel Control Hold mode indication.

16

17

18

If the USE_EXT_CH_IND field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

19

20

21

The base station shall set this field to '1' to instruct the mobile station to transition to the Packet Data Channel Control Hold Mode.

22

23

If EXT_CH_IND signals the allocation of F-FCH, this field shall be set to '0'.

24

Table 3.7.3.3.2.34-3 shows the valid combinations of CH_IND, EXT_CH_IND, and

25

PDCH_CONTROL_HOLD.

1 **Table 3.7.3.3.2.34-3. Valid CH_IND, EXT_CH_IND, and PDCH_CONTROL_HOLD**

- 1 SWITCHING_PARMS_INCL - R-CQICH switching parameters included indicator.
 2
 3 If the USE_EXT_CH_IND or the GATING_RATE_INCL field is
 4 set to '0', the base station shall omit this field; otherwise, the
 5 base station shall include this field and set it as follows:
 6
 7 The base station shall set this field to '1' if the parameters for
 8 R-CQICH soft and softer switching are included in this
 9 message; otherwise, the base station shall set this field to '0'.
- 8 NUM_SOFT_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH soft
 9 switching while in Control Hold.
 10
 11 If SWITCHING_PARMS_INCL is not included or included and
 12 set to '0', then the base station shall omit this field; otherwise,
 13 the base station shall include this field and set it as follows:
 14
 15 The base station shall set this field to the duration of the cell
 16 switching period, in units of 20 ms, minus one, during which
 17 the mobile station, while in Control Hold, is to transmit the
 18 cell switch sequence on the R-CQICH when it switches
 19 between two pilots which are in different groups.
- 18 NUM_SOFTER_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH softer
 19 switching while in Control Hold.
 20
 21 If SWITCHING_PARMS_INCL is not included or included and
 22 set to '0', then the base station shall omit this field; otherwise,
 23 the base station shall include this field and set it as follows:
 24
 25 The base station shall set this field to the duration of the cell
 26 switching period, in units of 20 ms, minus one, during which
 27 the mobile station, while in Control Hold, is to transmit the
 28 cell switch sequence on the R-CQICH when it switches
 29 between two pilots which are in the same group.
- 28 DIRECT_TO_IDLE_INFO_INCL - Direct to Idle information included.
 29
 30 If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
 31 '111' or the physical channels indicated by the two least
 32 significant bits of CH_IND includes all the physical channels
 33 (FCH, DCCH, or both) currently being processed by the
 34 mobile station, the base station shall set this field as follows:
 35
 36 • If DIRECT TO IDLE record is included, the base station
 37 shall set this field to '1'; otherwise base station shall set
 38 this field to '0'.
 39
 40 Otherwise the base station shall set this field to '0'.
- 38 RELEASE_TYPE - Release type.
 39
 40 If DIRECT_TO_IDLE_INFO_INCL is set to '0', the base station
 41 shall omit this field; otherwise, the base station shall include
 42 this field and shall set it as follows:
 43
 44 The base station shall set this field as specified in Table
 45 3.7.3.3.2.34-4.

1

Table 3.7.3.3.2.34-4 Release Type

Value (binary)	Release Type/Usage
000	Release to <i>Mobile Station Idle State</i> on the PCH
001	Release to <i>Mobile Station Idle State</i> on the Primary BCCH.
010	Release to <i>Mobile Station Idle State</i> on the Primary BCCH that supports Transmit Diversity.
011	Release to <i>System Determination Substate of the Mobile Station Initialization State</i> .
100- 111	Reserved.

2

3

SID - System identification.

4

5

6

7

8

If RELEASE_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it to the system identification number for the wireless system that the mobile station is being directed to (see 2.6.5.2).

9

NID - Network identification.

10

11

12

13

If RELEASE_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it as follows:

14

15

This field serves as a sub-identifier of a system as defined by the owner of the SID.

16

17

18

The base station shall set this field to the network identification number for the network that the mobile station is being directed to (see 2.6.5.2).

19

FREQ_INCL - Frequency included indicator.

20

21

22

23

If RELEASE_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it as follows:

24

25

26

If the CDMA_FREQ and BAND_CLASS fields are included, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

27

CDMA_FREQ - Frequency assignment.

1			If the <code>FREQ_INCL</code> field is not included or is included and set
2			to '0', the base station shall omit this field; otherwise, the
3			base station shall set this field to the CDMA Channel number
4			corresponding to the CDMA frequency assignment for the
5			CDMA Channel containing the Paging Channel or Primary
6			Broadcast Control Channel.
7	<code>BAND_CLASS</code>	-	Band class.
8			If the <code>FREQ_INCL</code> field is not included or is included and set
9			to '0', the base station shall omit this field; otherwise, the
10			base station shall set this field to the CDMA band class, as
11			specified in [30], corresponding to the CDMA frequency
12			assignment for the CDMA Channel containing the Paging
13			Channel or Primary Broadcast Control Channel.
14	<code>PAGE_CH</code>	-	Paging Channel.
15			If <code>RELEASE_TYPE</code> field is included and equals '000', the base
16			station shall set this field to the Paging Channel number of
17			the Paging Channel that the mobile station is being directed
18			to; otherwise, the base station shall omit this field.
19	<code>PRAT</code>	-	Paging Channel data rate.
20			If <code>RELEASE_TYPE</code> field is included and equals '000', the base
21			station shall set this field to the <code>PRAT</code> field value shown in
22			Table 3.7.2.3.2.26-1 corresponding to the data rate used by
23			the Paging Channel that the mobile station is being directed
24			to; otherwise, the base station shall omit this field.
25	<code>SR1_BCCH_CODE_CHAN_NON_TD</code>	-	Walsh code for the Spreading Rate 1 BCCH in non
26			Transmit Diversity mode.
27			If <code>RELEASE_TYPE</code> field is not included or is included and is
28			not equal to '001', the base station shall omit this field;
29			otherwise, the base station shall set this field to the Walsh
30			code corresponding to the Spreading Rate 1 BCCH in non
31			Transmit Diversity mode that the mobile station is being
32			directed to.
33	<code>SR1_CRAT_NON_TD</code>	-	BCCH code rate in non Transmit Diversity mode for
34			Spreading Rate 1.
35			If <code>RELEASE_TYPE</code> field is not included or is included and is
36			not equal to '001', the base station shall omit this field;
37			otherwise the base station shall set this field as follows:
38			The base station shall set this field to '0' if the BCCH Code
39			Rate is 1/4 (see [2]). The base station shall set this field to '1'
40			if the BCCH code rate is 1/2 (see [2]).
41	<code>SR1_BRAT_NON_TD</code>	-	BCCH data rate in non Transmit Diversity mode for Spreading
42			Rate 1.
43			If <code>RELEASE_TYPE</code> field is not included or is included and is
44			not equal to '001', the base station shall omit this field;
45			otherwise, the base station shall set this field as follows:

- 1 The base station shall set this field to the BRAT field value
 2 shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
 3 used by the Primary Broadcast Control Channel that the
 4 mobile station is being directed to.
- 5 SR1_TD_MODE - Spreading Rate 1 Transmit Diversity Mode.
 6 If RELEASE_TYPE field is included and equals '010', the base
 7 station shall set this field to the value shown in Table
 8 3.7.2.3.2.26-3; otherwise, the base station shall omit this
 9 field.
- 10 SR1_BCCH_CODE_CHAN_TD - Walsh Code for Spreading Rate 1 BCCH in Transmit
 11 Diversity mode.
 12 If RELEASE_TYPE field is included and equals '010', the base
 13 station shall set this field to the Walsh Code corresponding to
 14 the Spreading Rate 1 BCCH in Transmit Diversity mode that
 15 the mobile station is being directed to; otherwise, the base
 16 station shall omit this field
- 17 SR1_CRAT_TD - BCCH code rate in Transmit Diversity mode for Spreading
 18 Rate 1.
 19 If RELEASE_TYPE field is not included or is included and is
 20 not equal to '010', the base station shall omit this field;
 21 otherwise, the base station shall set this field as follows:
 22 The base station shall set this field to '0' if the BCCH Code
 23 Rate is $\frac{1}{4}$ (see [2]). The base station shall set this field to '1' if
 24 the BCCH Code Rate is $\frac{1}{2}$ (see [2]).
- 25 SR1_BRAT_TD - BCCH data rate in Transmit Diversity mode for Spreading
 26 Rate 1.
 27 If RELEASE_TYPE field is included and equals '010', the base
 28 station shall set this field to the BRAT field value shown in
 29 Table 3.7.2.3.2.26-2 corresponding to the data rate used by
 30 the Primary Broadcast Control Channel that the mobile
 31 station is being directed to; otherwise, the base station shall
 32 omit this field.
- 33 SR1_TD_POWER_LEVEL - Spreading Rate 1 TD transmit power level.
 34 If RELEASE_TYPE field is not included or is included and is
 35 not equal to '010', the base station shall omit this field;
 36 otherwise, the base station shall set this field as follows:
 37 The base station shall set this field to the TD transmit power
 38 level relative to that of the Forward Pilot Channel, as specified
 39 in Table 3.7.2.3.2.26-4.
- 40 NUM_PILOTS_D2I_INCL - Number of Pilots (Direct to Idle) Included Indicator.
 41 If RELEASE_TYPE field is not included or is included and is
 42 equal to '011', the base station shall omit this field; otherwise,
 43 the base station shall include this field and shall set it as
 44 follows:

- 1 The base station shall set this field to '0' to indicate any pilot
 2 can be used for direct to idle transition; otherwise, the base
 3 station shall set this field to '1'.
- 4 NUM_PILOTS_D2I - Number of Pilots (Direct to Idle).
- 5 If NUM_PILOTS_D2I_INCL field is not included or is included
 6 and is equal to '0', the base station shall omit this field;
 7 otherwise, the base station shall include this field and shall
 8 set it as follows:
- 9 The base station shall set this field to '000' to indicate any
 10 pilot in the active set can be used for direct to idle transition;
 11 otherwise, the base station shall set this field to number of
 12 pilots included in this DIRECT TO IDLE record.
- 13 If NUM_PILOTS_D2I field is included, the base station shall include NUM_PILOTS_D2I
 14 occurrences of the following record:
- 15 PILOT_PN - Pilot PN sequence offset index.
- 16 The base station shall set this field to the pilot PN sequence
 17 offset for this pilot in units of 64 PN chips.
- 18 RER_MODE_ENABLED - Radio environment reporting mode enabled indicator.
- 19 If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
 20 '111', or the physical channels indicated by the two least
 21 significant bits of CH_IND includes all the physical channels
 22 (FCH, DCCH, or both) currently being processed by the
 23 mobile station, the base station shall set this field as follows:
- 24 • If the radio environment reporting mode is enabled in this
 25 message, the base station shall set this field to '1';
 26 otherwise, the base station shall set this field to '0'.
- 27 Otherwise, the base station shall set this field to '0'.
- 28 RER_MAX_NUM_MSG_IDX - Maximum number of *Radio Environment Messages*
 29 permitted while in radio environment reporting mode index.
- 30 If RER_MODE_ENABLED is set to '0', the base station shall
 31 omit this field; otherwise, the base station shall include this
 32 field and set it as follows:
- 33 The base station shall set this field to the maximum number
 34 of *Radio Environment Messages* that the mobile station is
 35 allowed to transmit while in radio environment reporting
 36 mode, expressed as $2^{\text{RER_MAX_NUM_MSG_IDX}}$ where $0 \leq$
 37 $\text{RER_MAX_NUM_MSG_IDX} \leq 6$. If the mobile station is
 38 allowed to transmit an unlimited number of *Radio*
 39 *Environment Message*, then the base station shall set this field
 40 to '111'.
- 41 RER_TIME - Radio environment report timer value.

1 If RER_MODE_ENABLED is set to '0', the base station shall
 2 omit this field; otherwise, the base station shall include this
 3 field and set it as follows:

4 The base station shall set this field to the value of the radio-
 5 environment report timer, expressed as 2^{RER_TIME} where $0 \leq$
 6 $RER_TIME \leq 6$ and in units of RER_TIME_UNIT. If the value
 7 of the radio-environment report timer is infinite, then the base
 8 station shall set this field to '111'.

9 RER_TIME_UNIT - Radio environment report timer value units.

10 If RER_MODE_ENABLED is set to '1' and RER_TIME is not set
 11 to '111', the base station shall include this field and shall set
 12 it according to Table 3.7.3.3.2.34-5; otherwise, the base
 13 station shall omit this field.

14 **Table 3.7.3.3.2.34-5 RER_TIME_UNIT values**

RER TIME UNIT (binary)	Meaning
00	Seconds
01	Minutes
10	Hours
11	Reserved

15 MAX_RER_PILOT_LIST_SIZE - Maximum number of pilots to maintain in RER_PILOT_LIST.

16 If RER_MODE_ENABLED is set to '0', the base station shall omit
 17 this field; otherwise, the base station shall include this field and
 18 set it as follows:

19 The base station shall set this field to the maximum number of
 20 pilots that the mobile station is to maintain in RER_PILOT_LIST
 21 (see [4]). The base station shall set this field to a value in the
 22 range 1 to 6 inclusive.

23 RSC_MODE_SUPPORTED - Reduced slot cycle mode supported indicator.

24 If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
 25 '111', or the physical channels indicated by the two least
 26 significant bits of CH_IND includes all the physical channels
 27 (FCH, DCCH, or both) currently being processed by the
 28 mobile station, the base station shall set this field as follows:

- 29 • If the fields related to reduced slot cycle mode are
 30 included in this message, the base station shall set this
 31 field to '1'; otherwise, the base station shall set this field to
 32 '0'.

33 Otherwise, the base station shall set this field to '0'.

1	TKZ_ID	-	Tracking zone identifier.
2			If TKZ_MODE_ENABLED is set to '0', the base station shall
3			omit this field; otherwise, the base station shall set this field
4			to its tracking zone identifier.
5	TKZ_MAX_NUM_MSG_IDX	-	Maximum number of <i>Radio Environment Messages</i>
6			permitted while in tracking zone mode index.
7			If TKZ_MODE_ENABLED is set to '0', the base station shall
8			omit this field; otherwise, the base station shall include this
9			field and set it as follows:
10			The base station shall set this field to the maximum number
11			of <i>Radio Environment Messages</i> that the mobile station is
12			allowed to transmit while in tracking zone mode, expressed as
13			$2^{TKZ_MAX_NUM_MSG_IDX}$ where $0 \leq TKZ_MAX_NUM_MSG_IDX \leq$
14			6. If the mobile station is allowed to transmit an unlimited
15			number of <i>Radio Environment Messages</i> , then the base station
16			shall set this field to '111'.
17	TKZ_UPDATE_PRD	-	Tracking zone update period.
18			If TKZ_MODE_ENABLED is set to '0', the base station shall
19			omit this field; otherwise, the base station shall include this
20			field and set it as follows:
21			The base station shall set this field such that the desired
22			tracking zone update timer value is $2^{TKZ_UPDATE_PRD+6}$
23			seconds. If the value of the timer is infinite, then the base
24			station shall set this field to '1111'.
25	TKZ_LIST_LEN	-	Tracking zone list length.
26			If TKZ_MODE_ENABLED is set to '0', the base station shall
27			omit this field; otherwise, the base station shall include this
28			field and set it as follows:
29			The base station shall set this field to the length of the
30			tracking zone list minus one.
31	TKZ_TIMER	-	Tracking zone timer.
32			If TKZ_MODE_ENABLED is set to '0', the base station shall
33			omit this field; otherwise, the base station shall include this
34			field and set it as follows:
35			The base station shall set this field to the value of the tracking
36			zone timer (in units of seconds) minus one.
37	TBR_RAND_SUPPR_ENABLE	-	Timer Based Registration Randomization Suppression
38			enable indicator.
39			The base station shall set this field to '1', if the mobile station
40			is allowed to suppress timer-based registration randomization
41			in order to eliminate unnecessary timer-based registrations
42			(see 2.6.5.1.3.1); otherwise, the base station shall set this
43			field to '0'.

- 1 TBR_RAND_WINDOW - Timer-based registration randomization window.
 2
 3 The base station shall set this field to the value shown in
 4 Table 2.6.5.1.3-1 corresponding to the randomization for
 5 timer-based registration (see 2.6.5.1.3).
- 6 BCMC_INFO_INCL - BCMC information Included Indicator
 7
 8 If RELEASE_TYPE field is not included or is included and is
 9 equal to '011', the base station shall omit this field; otherwise,
 10 the base station shall include this field and shall set it as
 11 follows:
 12
 13 The base station shall set this field to '1' if BCMC information
 14 is included in this message; otherwise, the base station shall
 15 set this field to '0'.
 16
 17 The BCMC information included in this message is applicable
 18 to all the pilots indicated by the DIRECT TO IDLE record in
 19 this message.
- 20 NUM_FSCH - Number of Forward Supplemental Channels.
 21
 22 If BCMC_INFO_INCL field is not included or is included and is
 23 equal to '0', the base station shall omit this field; otherwise,
 24 the base station shall include this field and shall set it as
 25 follows:
 26
 27 The base station shall set this field to the number of Forward
 28 Supplemental Channels for which information is included in
 29 this message minus one.
- 30 NUM_BCMC_PROGRAMS- Number of BCMC Programs
 31
 32 If BCMC_INFO_INCL field is not included or is included and is
 33 equal to '0', the base station shall omit this field; otherwise,
 34 the base station shall include this field and shall set it as
 35 follows:
 36
 37 The base station shall set this field to the number of BCMC
 38 programs for which information is included in this message
 39 minus one.
- 40 If NUM_FSCH field is included, the base station shall include NUM_FSCH plus one
 41 occurrences of the following variable length record:
- 42 FSCH_RECORD_LEN - Forward Supplemental Channel record length.
 43
 44 The base station shall set this field to the number of octets
 45 included in this Forward Supplemental Channel record
 46 including this field.
- 47 FSCH_CODE_CHAN - Code channel index of the Forward Supplemental Channel.
 48
 49 The base station shall set this field to the code channel index
 50 of this Forward Supplemental Channel as specified in [2].
- 51 FSCH_MUX_OPTION - Multiplex Option of the Forward Supplemental Channel

1			The base station shall set this field to the multiplex option of
2			this Forward Supplemental Channel as specified in [3].
3	FSCH_RC	-	Radio configuration of the Forward Supplemental Channel.
4			The base station shall set this field to the radio configuration
5			of this Forward Supplemental Channel as specified in [2].
6	FSCH_CODING	-	Coding type of the Forward Supplemental Channel.
7			The base station shall set this field to '1' if Convolutional
8			Coding will be used when the number of channel bits per
9			frame is less than 360 and Turbo Coding when the number of
10			channel bits per frame is equal to or greater than 360. The
11			base station shall set this field to '0' if Convolution Coding will
12			be used for all block sizes.
13	FSCH_OUTERCODE_INCL	-	Forward Supplemental Channel Outer Code included
14			indicator.
15			The base station shall set this field to '1' if the Forward
16			Supplemental Channel outer code information is included in
17			this message; otherwise, the base station shall set this field to
18			'0'.
19	FSCH_OUTERCODE_RATE	-	Outer Code Rate of the Forward Supplemental Channel.
20			If the FSCH_OUTERCODE_INCL field is set to '0', the base
21			station shall omit this field; otherwise, the base station shall
22			include this field and set it as follows:
23			The base station shall set this field to the outer code rate of
24			the Forward Supplemental Channel as specified in Table
25			3.7.2.3.2.38-3.
26	FSCH_OUTERCODE_OFFSET	-	Outer Coding Buffer Offset of the Forward
27			Supplemental Channel.
28			If the FSCH_OUTERCODE_INCL field is set to '0', the base
29			station shall omit this field; otherwise, the base station shall
30			include this field and set it as follows:
31			The base station shall set this field to the outer coding buffer
32			offset of the Forward Supplemental Channel in units of 20ms
33			as specified in [2].
34	FSCH_RATE	-	Data Rate of the Forward Supplemental Channel.
35			The base station shall set this field to the data rate of this
36			Forward Supplemental Channel as specified in [2].
37	FSCH_FRAME_40_USED	-	Forward Supplemental Channel 40ms frame used indicator.
38			The base station shall set this field to '1' if 40ms frame is
39			used on this Forward Supplemental Channel; otherwise, the
40			base station shall set this field to '0'.
41			The base station shall not set both FSCH_FRAME_40_USED
42			and FSCH_FRAME_80_USED fields to '1'.
43	FSCH_FRAME_80_USED	-	Forward Supplemental Channel 80ms frame used indicator.

1 The base station shall set this field to '1' if 80ms frame is
2 used on this Forward Supplemental Channel; otherwise, the
3 base station shall set this field to '0'.

4 The base station shall not set both FSCH_FRAME_40_USED
5 and FSCH_FRAME_80_USED fields to '1'.

6

7 FSCH_RECORD_RESERVED - Forward Supplemental Channel record Reserved bits.

8 The base station shall add reserved bits as needed in order to
9 make the length of this Forward Supplemental Channel
10 record equal to an integer number of octets. The base station
11 shall set these bits to '0'.

12 If NUM_BCMC_PROGRAMS field is included, the base station shall include
13 NUM_BCMC_PROGRAMS plus one occurrences of the following variable length record:

14 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

15 The base station shall set this field to one less than the length
16 in bits of the BCMC_PROGRAM_ID of this program.

17 BCMC_PROGRAM_ID - BCMC program Identifier

18 The length of this field shall be one more than the value of
19 BCMC_PROGRAM_ID_LEN bits.

20 The base station shall set this field to the BCMC program
21 identifier of this program.

22 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

23 The base station shall set this field to the length in bits of the
24 BCMC_FLOW_DISCRIMINATOR of this program.

25 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators.

26 The length of this field shall be determined by the value of the
27 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
28 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
29 is omitted; otherwise, the length of this field shall be
30 BCMC_FLOW_DISCRIMINATOR_LEN bits.

31 The base station shall set this field to the number of flow
32 discriminators included for this program minus one.

33 If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include
34 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
35 otherwise, the base station shall include 1 occurrence of the following variable length
36 record:

37 BCMC_FLOW_DISCRIMINATOR - BCMC flow discriminator

38 The length of this field shall be determined by the value of the
39 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
40 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
41 is omitted; otherwise, the length of this field shall be
42 BCMC_FLOW_DISCRIMINATOR_LEN bits.

1 3.7.3.3.2.35 Extended Release Mini Message
 2 MSG_TAG: ERMM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
CH_IND	3
GATING_RATE_INCL	1
PILOT_GATING_RATE	0 or 2
USE_EXT_CH_IND	1
EXT_CH_IND	0 or 5
PDCH_CONTROL_HOLD	0 or 1

4

5

USE_TIME - Use action time indicator.

6

This field indicates whether an ACTION_TIME is specified in this message.

7

8

If an ACTION_TIME is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

9

10

11

ACTION_TIME - Action time.

12

If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $\text{FRAME_OFFSET}_s \times 1.25$ ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE_TIME field is set to '0', the base station shall omit this field.

13

14

15

16

17

CH_IND - Channel Indicator.

18

The base station shall set this field as shown in Table 3.7.3.3.2.34-1, to release physical resources.

19

20

GATING_RATE_INCL - Reverse pilot gating rate included flag.

21

The base station shall set this field to '1' if the PILOT_GATING_RATE field is included, otherwise it shall set this field to '0'.

22

23

24

PILOT_GATING_RATE - Actual Reverse Pilot gating Rate.

25

If the GATING_RATE_INCL field is set to '1', then the base station shall set this field to the PILOT_GATING_RATE field shown in Table 3.7.3.3.2.34-2 corresponding to the actual gating rate on the Reverse Pilot Channel; otherwise, the base station shall omit this field.

26

27

28

29

30

USE_EXT_CH_IND - Use EXT_CH_IND to set channel configuration

1 The base station shall set this field to '1' if the EXT_CH_IND is
2 included in this message and is used to set the channel
3 configuration; otherwise, the base station shall set this field to
4 '0'.

5 EXT_CH_IND - Extended Channel Indicator.

6 If the USE_EXT_CH_IND field is set to '0', the base station
7 shall omit this field; otherwise, the base station shall include
8 this field and set it as follows:

9 The base station shall set this field to the desired channel
10 configuration shown in Table 2.7.1.3.2.4-11.

11 PDCH_CONTROL_HOLD - Packet Data Channel Control Hold mode indication.

12 If the USE_EXT_CH_IND field is set to '0', the base station
13 shall omit this field; otherwise, the base station shall include
14 this field and set it as follows:

15 The base station shall set this field to '1' to instruct the
16 mobile station to transition to the Packet Data Channel
17 Control Hold Mode.

18 If EXT_CH_IND signals the allocation of F-FCH, this field shall
19 be set to '0'.

20 Table 3.7.3.3.2.34-3 shows the valid combinations of CH_IND, EXT_CH_IND, and
21 PDCH_CONTROL_HOLD.

2

3

USE_TIME - Use action time indicator.

4

This field indicates whether an explicit action time is specified in this message.

5

6

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

7

8

9

ACTION_TIME - Action time.

- 1 If the USE_TIME field is set to '1', the base station shall set
2 this field to the System Time minus $\text{FRAME_OFFSET}_s \times 1.25$
3 ms, in units of 80 ms (modulo 64), at which the handoff is to
4 take effect. If the USE_TIME field is set to '0', the base station
5 shall omit this field.
- 6 HDM_SEQ - *Universal Handoff Direction Message* sequence number.
7 This field is used by the mobile station in the *Power*
8 *Measurement Report Message* to identify the order in which
9 the reported pilot strengths are sent.
10 The base station shall set this field to the handoff message
11 sequence number, as specified in 2.6.6.2.2.10.
- 12 PARMS_INCL - Parameters included indicator.
13 The base station shall set this field to '1', if P_REV and
14 SERV_NEG_TYPE are included; otherwise, the base station
15 shall set this field '0'.
- 16 P_REV - Protocol revision level.
17 If PARMS_INCL is set to '1', the base station shall set this field
18 to the base station protocol revision level that the mobile
19 station is to use after completion of the handoff; otherwise,
20 the base station shall omit this field.
- 21 SERV_NEG_TYPE - Service negotiation type.
22 If PARMS_INCL is set to '1', the base station shall include the
23 field SERV_NEG_TYPE and set this field as described below;
24 otherwise, the base station shall omit this field.
25 If the mobile station is to use service negotiation, the base
26 station shall set this field to '1'. If the mobile station is to use
27 service option negotiation, the base station shall set this field
28 to '0'.
- 29 SEARCH_INCLUDED - Pilot search parameters included.
30 If the mobile station is to change its pilot search parameters,
31 the base station shall set this field to '1'; otherwise, the base
32 station shall set this field to '0'.
- 33 SRCH_WIN_A - Search window size for the Active Set and Candidate Set.
34 If SEARCH_INCLUDED is set to '1', the base station shall
35 include the field SRCH_WIN_A and set this field to the window
36 size parameter shown in Table 2.6.6.2.1-1 corresponding to
37 the number of PN chips that the mobile station is to search
38 for pilots in the Active Set and the Candidate Set; otherwise,
39 the base station shall omit this field.
- 40 SRCH_WIN_N - Search window size for the Neighbor Set.

- 1 If SEARCH_INCLUDED is set to '1', the base station shall
 2 include the field SRCH_WIN_N and set this field to the
 3 window size parameter shown in Table 2.6.6.2.1-1
 4 corresponding to the search window size to be used by mobile
 5 stations for the Neighbor Set after completion of the handoff;
 6 otherwise, the base station shall omit this field.
- 7 SRCH_WIN_R - Search window size for the Remaining Set.
- 8 If SEARCH_INCLUDED is set to '1', the base station shall
 9 include the field SRCH_WIN_R and set this field to the window
 10 size parameter shown in Table 2.6.6.2.1-1 corresponding to
 11 the search window size to be used by mobile stations for the
 12 Remaining Set after completion of the handoff; otherwise, the
 13 base station shall omit this field.
- 14 T_ADD - Pilot detection threshold.
- 15 This value is used by the mobile station to trigger the transfer
 16 of a pilot from the Neighbor Set or Remaining Set to the
 17 Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
 18 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
 19 *Measurement Message* initiating the handoff process (see
 20 2.6.6.2.5.2).
- 21 If SEARCH_INCLUDED is set to '1', the base station shall
 22 include the field T_ADD and set this field to the pilot detection
 23 threshold, expressed as an unsigned binary number equal to
 24 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 25 this field.
- 26 T_DROP - Pilot drop threshold.
- 27 This value is used by mobile stations to start a handoff drop
 28 timer for pilots in the Active Set and the Candidate Set (see
 29 2.6.6.2.3).
- 30 If SEARCH_INCLUDED is set to '1', the base station shall
 31 include the field T_DROP and set this field to the pilot drop
 32 threshold, expressed as an unsigned binary number equal to
 33 $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$; otherwise, the base station shall omit
 34 this field.
- 35 T_COMP - Active Set versus Candidate Set comparison threshold.
- 36 The mobile station transmits a *Pilot Strength Measurement*
 37 *Message* or *Extended Pilot Strength Measurement Message*
 38 when the strength of a pilot in the Candidate Set exceeds that
 39 of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
- 40 If SEARCH_INCLUDED is set to '1', the base station shall
 41 include the field T_COMP and set this field to the threshold
 42 Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
 43 otherwise, the base station shall omit this field.

- 1 T_TDROP - Drop timer value.
- 2 Timer value after which an action is taken by the mobile
3 station for a pilot that is a member of the Active Set or
4 Candidate Set, and whose strength has not become greater
5 than T_DROP. If the pilot is a member of the Active Set, a
6 *Pilot Strength Measurement Message* or *Extended Pilot Strength*
7 *Measurement Message* is issued. If the pilot is a member of
8 the Candidate Set, it will be moved to the Neighbor Set.
- 9 If SEARCH_INCLUDED is set to '1', the base station shall
10 include the field T_TDROP and set this field to the T_TDROP
11 value shown in Table 2.6.6.2.3-1 corresponding to the drop
12 timer value to be used by the mobile station; otherwise, the
13 base station shall omit this field.
- 14 SOFT_SLOPE - The slope in the inequality criterion for adding a pilot to the
15 Active Set, or dropping a pilot from the Active Set (see
16 2.6.6.2.3 and 2.6.6.2.5.2).
- 17 If SEARCH_INCLUDED is set to '1', the base station shall
18 include the field SOFT_SLOPE in the additional fields and set
19 this field as an unsigned binary number; otherwise, the base
20 station shall omit this field.
- 21 ADD_INTERCEPT - The intercept in the inequality criterion for adding a pilot to
22 the Active Set (see 2.6.6.2.5.2).
- 23 If SEARCH_INCLUDED is set to '1', the base station shall
24 include the field ADD_INTERCEPT in the additional fields and
25 set this field as a two's complement signed binary number in
26 units of 0.5 dB; otherwise, the base station shall omit this
27 field.
- 28 DROP_INTERCEPT - The intercept in the inequality criterion for dropping a pilot
29 from the Active Set (see 2.6.6.2.3).
- 30 If SEARCH_INCLUDED is set to '1', the base station shall
31 include the field DROP_INTERCEPT in the additional fields
32 and set this field as a two's complement signed binary
33 number in units of 0.5 dB; otherwise, the base station shall
34 omit this field.
- 35 EXTRA_PARMS - Extra parameters included.
- 36 If the base station includes the fields PACKET_ZONE_ID,
37 FRAME_OFFSET, PRIVATE_LCM, RESET_L2, RESET_FPC,
38 SERV_NEG_TYPE, ENCRYPT_MODE, NOM_PWR_EXT,
39 NOM_PWR, RLGAIN_TRAFFIC_PILOT, DEFAULT_RLAG,
40 NUM_PREAMBLE, BAND_CLASS, PERIODIC_SEARCH, or
41 CDMA_FREQ in this message, the base station shall set this
42 field to '1'; otherwise, the base station shall set this field to '0'.
- 43 PACKET_ZONE_ID - Packet data services zone identifier.
- 44 If EXTRA_PARMS is set to '1', the base station shall include
45 the field PACKET_ZONE_ID and set this field as described
46 below; otherwise, the base station shall omit this field.

- 1 If the base station supports a packet data service zone, the
 2 base station shall set this field to the non-zero packet data
 3 services zone identifier that the mobile station is to use after
 4 completion of the handoff.
- 5 If the base station does not support a packet data service
 6 zone, the base station shall set this field to '00000000'.
- 7 **FRAME_OFFSET** - Frame offset.
- 8 The Forward and Reverse Traffic Channel frames are delayed
 9 $\text{FRAME_OFFSET} \times 1.25$ ms relative to system timing (see [2]).
- 10 If EXTRA_PARMS is set to '1', the base station shall include
 11 the field FRAME_OFFSET and set this field to the Forward
 12 and Reverse Traffic Channel frame offset (the frame offset
 13 does not apply to the F-PDCH); otherwise, the base station
 14 shall omit this field.
- 15 **PRIVATE_LCM** - Private long code mask indicator.
- 16 This field is used to change the long code mask after a hard
 17 handoff.
- 18 If EXTRA_PARMS is set to '1', the base station shall include
 19 the field PRIVATE_LCM and set this field as described below;
 20 otherwise, the base station shall omit this field.
- 21 If the private long code mask is to be used after the handoff,
 22 the base station shall set this field to '1'; otherwise, the base
 23 station shall set this field to '0'.
- 24 **RESET_L2** - Reset acknowledgment procedures command.
- 25 This field is used to reset acknowledgment processing in the
 26 mobile station.
- 27 If EXTRA_PARMS is set to '1', the base station shall include
 28 the field RESET_L2 and set this field as described below;
 29 otherwise, the base station shall omit this field.
- 30 If the field is included and the mobile station is to reset its
 31 acknowledgment procedures, the base station shall set this
 32 field to '1'; otherwise, the base station shall set this field to '0'.
- 33 **RESET_FPC** - Reset Forward Traffic Channel power control.
- 34 This field is used to reset the Forward Traffic Channel power
 35 control counters.
- 36 If EXTRA_PARMS is set to '1', the base station shall include
 37 the field RESET_FPC and set this field as described below;
 38 otherwise, the base station shall omit this field.
- 39 The base station shall set this field to '0' if the Forward Traffic
 40 Channel power control counters are to be maintained after
 41 completion of the handoff. If the counters are to be initialized
 42 as specified in 2.6.4.1.1.1, then the base station shall set this
 43 field to '1'.

1 If EXTRA_PARMS is set to '0', the base station shall omit the
2 NUM_PREAMBLE field; otherwise, the base station shall
3 include this field and set it to the length of Traffic Channel
4 preamble that the mobile station is to send when performing
5 a handoff; as follows:

6 If, after the handoff, radio configuration 1 or radio
7 configuration 2 is to be used, the base station shall set
8 NUM_PREAMBLE to the Traffic Channel preamble length in
9 20 ms units; otherwise, the base station shall set
10 NUM_PREAMBLE to the value shown in Table 3.7.3.3.2.17-1
11 corresponding to the Traffic Channel preamble length in 1.25
12 ms units.

13 BAND_CLASS - Band class.

14 If EXTRA_PARMS is set to '1', the base station shall include
15 the field BAND_CLASS and set this field to the CDMA band
16 class corresponding to the CDMA frequency assignment for
17 the CDMA Channel as specified in [30]; otherwise, the base
18 station shall omit this field.

19 CDMA_FREQ - Frequency assignment.

20 If EXTRA_PARMS is set to '0', the base station shall omit this
21 field; otherwise, the base station shall set this field as follows:

22 If a Radio Configuration associated with Spreading Rate 1 is
23 used, the base station shall set this field to the CDMA
24 Channel number, in the specified CDMA band class,
25 corresponding to the CDMA frequency assignment for the
26 CDMA Channel as specified in [2]. If a Radio Configuration
27 associated with Spreading Rate 3 is used, the base station
28 shall include the field CDMA_FREQ and set this field to the
29 CDMA Channel number, in the specified CDMA band class,
30 corresponding to the CDMA center SR3 frequency assignment
31 for the CDMA Channel.

32 RETURN_IF_HANDOFF_FAIL - Return on failure flag.

33 If EXTRA_PARMS is set to '1', the base station shall include
34 the field RETURN_IF_HANDOFF_FAIL and set this field as
35 described below; otherwise, the base station shall omit this
36 field.

37 If the base station includes this field, it shall set this field to
38 '1' if the mobile station is to resume the use of the Active Set
39 on the Serving Frequency following an unsuccessful hard
40 handoff attempt, as specified in 2.6.6.2.8.2; otherwise, the
41 base station shall set this field to '0'.

42 COMPLETE_SEARCH - Flag to complete search.

43 If RETURN_IF_HANDOFF_FAIL is included and is set to '1',
44 the base station shall include the field COMPLETE_SEARCH
45 and set this field as described below; otherwise, the base
46 station shall omit this field.

- 1 If the base station includes this field, it shall set this field to
 2 '1' if the mobile station is to complete the search of the
 3 Candidate Frequency Search Set before resuming the use of
 4 the Active Set on the Serving Frequency when an inter-
 5 frequency handoff attempt is unsuccessful, as specified in
 6 2.6.6.2.8.2; otherwise, the base station shall set this field to
 7 '0'.
- 8 PERIODIC_SEARCH - Flag to search the Candidate Frequency periodically.
 9 If EXTRA_PARMS is set to '1', the base station shall include
 10 the field PERIODIC_SEARCH and set this field as described
 11 below; otherwise, the base station shall omit this field.
 12 If the base station includes this field, it shall set this field to
 13 '1' if the mobile station is to periodically search the Candidate
 14 Frequency, as specified in 2.6.6.2.8.3; otherwise, the base
 15 station shall set this field to '0'.
- 16 SCR_INCLUDED - Service Configuration Record included indicator.
 17 If EXTRA_PARMS is set to '1', the base station shall include
 18 the field SCR_INCLUDED and shall set this field as described
 19 below; otherwise, the base station shall omit this field.
 20 The base station shall set this field to '1' if it includes the
 21 Service Configuration Record in the message; otherwise, the
 22 base station shall set this field to '0'.
- 23 SERV_CON_SEQ - Connect sequence number.
 24 If SCR_INCLUDED is included and is set to '1', the base
 25 station shall include the field SERV_CON_SEQ and shall set
 26 this field to the connect sequence number pertaining to this
 27 service configuration as specified in 3.6.4.1.2.1.2.
- 28 If SCR_INCLUDED is included and is set to '1', the base station shall include one
 29 occurrence of the following three-field record to specify the service configuration.
- 30 RECORD_TYPE - Information record type.
 31 If SCR_INCLUDED is included and is set to '1', the base
 32 station shall include the field RECORD_TYPE and shall set
 33 this field to the record type value shown in Table 3.7.5-1
 34 corresponding to the Service Configuration information
 35 record.
- 36 RECORD_LEN - Information record length.
 37 If SCR_INCLUDED is included and is set to '1', the base
 38 station shall include the field RECORD_LEN and shall set this
 39 field to the number of octets included in the type-specific
 40 fields of the Service Configuration information record.
- 41 Type-specific fields - Type-specific fields.
 42 If SCR_INCLUDED is included and is set to '1', the base
 43 station shall include the type specific fields and shall set
 44 these fields as specified in 3.7.5.7 for the Service
 45 Configuration information record.

- 1 NNSCR_INCLUDED - Non-negotiable Service Configuration Record Included
2 indicator
- 3 The base station shall omit this field, if EXTRA_PARMS is set
4 to '0'; otherwise, the base station shall include this field and
5 set this field as described below:
- 6 The base station shall set this field to '1', if the Non-negotiable
7 Service Configuration record is included in this message;
8 otherwise, the base station shall set this field to '0'.
- 9 If NNSCR_INCLUDED is included and is set to '1', the base station shall include one
10 occurrence of the following three-field record to specify the non-negotiable service
11 configuration.
- 12 RECORD_TYPE - Information record type.
- 13 If NNSCR_INCLUDED is included and is set to '1', the base
14 station shall include the field RECORD_TYPE and shall set
15 this field to the record type value shown in Table 3.7.5-1
16 corresponding to the Non-Negotiable Service Configuration
17 information record.
- 18 RECORD_LEN - Information record length.
- 19 If NNSCR_INCLUDED is included and is set to '1', the base
20 station shall include the field RECORD_LEN and shall set this
21 field to the number of octets included in the type-specific
22 fields of the Non-Negotiable Service Configuration information
23 record.
- 24 Type-specific fields - Type-specific fields.
- 25 If NNSCR_INCLUDED is included and is set to '1', the base
26 station shall include the type specific fields and shall set
27 these fields as specified in 3.7.5.20 for the Non-Negotiable
28 Service Configuration information record.
- 29 USE_PWR_CNTL_STEP - Power control step size indicator.
- 30 The base station shall set this field to '1' if the field
31 PWR_CNTL_STEP is included in the message.
- 32 PWR_CNTL_STEP - Power control step size.
- 33 If USE_PWR_CNTL_STEP is set to '1', then the base station
34 shall include the field PWR_CNTL_STEP and set this field to
35 the step size that the mobile station is to use for closed loop
36 power control, according to Table 3.7.3.3.2.25-1; otherwise,
37 the base station shall omit this field.
- 38 CLEAR_RETRY_DELAY - Clear retry delay indicator.
- 39 The base station shall set this field to '1' if the mobile station
40 is to clear any existing retry delay which it has stored (see
41 2.6.6.2.5.1); otherwise, the base station shall set this field to
42 '0'.
- 43 SCH_INCL - Supplemental Channel related parameters included indicator.

- 1 The base station shall set this field to '1' if this message
2 includes the NUM_FOR_ASSIGN, NUM_REV_ASSIGN,
3 NUM_FOR_SCH, NUM_REV_SCH, and NUM_SCH fields.
4 Otherwise, the base station shall set this field to '0'.
- 5 NUM_FOR_ASSIGN - Number of Forward Supplemental Channel assigned.
6 If SCH_INCL is set to '0', the base station shall omit this field;
7 otherwise, the base station shall set this field to the number
8 of Forward Supplemental Channel assigned.
- 9 The base station shall include NUM_FOR_ASSIGN occurrences of the following five fields
10 (FOR_SCH_ID, FOR_SCH_DURATION, FOR_SCH_START_TIME_INCL,
11 FOR_SCH_START_TIME, and SCCL_INDEX).
- 12 FOR_SCH_ID - Forward Supplemental Channel identifier.
13 The base station shall set this field to the Identifier of the
14 Forward Supplemental Channel.
- 15 FOR_SCH_DURATION - Duration of Forward Supplemental Channel assignment.
16 The base station shall set this field to the duration (see Table
17 3.7.3.3.2.37-3), starting at the start time of the message
18 specified by FOR_SCH_START_TIME, during which the mobile
19 station is to process the Forward Supplemental Channel.
20 The base station shall set this field to '0000' to indicate that
21 the mobile station should stop processing the Forward
22 Supplemental Channel starting at the explicit start time of the
23 message specified by FOR_SCH_START_TIME or at the
24 implicit start time if FOR_SCH_START_TIME_INCL is set to '0'.
25 The base station shall set this field to '1111' to indicate that
26 the mobile station should process the Forward Supplemental
27 Channel, starting at the start time of the message specified by
28 FOR_SCH_START_TIME, until the start time specified by a
29 subsequent Forward Supplemental Channel assignment
30 corresponding to the same forward Supplemental Channel
31 (see 2.6.6.2.5.1.1).
- 32 FOR_SCH_START_TIME_INCL - Start time included indicator.
33 If FOR_SCH_DURATION is not equal to '0000', the base
34 station shall set this field to '1'. If FOR_SCH_DURATION is
35 equal to '0000', the base station shall set this field as follows:
36 The base station shall set this field to '1' if
37 FOR_SCH_START_TIME is included in this message;
38 otherwise, the base station shall set this field to '0'.
- 39 FOR_SCH_START_TIME - Start time for Forward Supplemental Channel Assignment.

- 1 If FOR_SCH_START_TIME_INCL is set to '0', the base station
 2 shall omit this field; otherwise, the base station shall set this
 3 field to the System Time, in units of time specified by
 4 START_TIME_UNIT, (modulo 32) at which the mobile station
 5 is to start processing (if FOR_SCH_DURATION is not equal to
 6 '0000') or stop processing (if FOR_SCH_DURATION is equal to
 7 '0000') the Forward Supplemental Channel specified in this
 8 message. The explicit start time to start or stop processing
 9 the Forward Supplemental Channels is the time for which
- $$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{FOR_SCH_START_TIME} \bmod 32 = 0,$$
- 10
 11
 12 where t is the System Time in units of 20 ms.
- 13 SCCL_INDEX - Supplemental Channel Code list index.
- 14 The base station shall set this field to the index of the record
 15 in the Forward Supplemental Channel Code list
 16 corresponding to the FOR_SCH_ID. The base station shall
 17 include an SCCL_INDEX whose SCH Active Set is a subset of
 18 the Active Set of the Fundamental Channel, Dedicated
 19 Control Channel, or both.
- 20 NUM_REV_ASSIGN - Number of Reverse Supplemental Channel assigned.
- 21 If SCH_INCL is set to '0', the base station shall omit this field;
 22 otherwise, the base station shall set this field to the number
 23 of Reverse Supplemental Channel assigned.
- 24 The base station shall include NUM_REV_ASSIGN occurrences of the following five fields
 25 (REV_SCH_ID, REV_SCH_DURATION, REV_SCH_START_TIME_INCL,
 26 REV_SCH_START_TIME, and REV_SCH_NUM_BITS_IDX).
- 27 REV_SCH_ID - Reverse Supplemental Channel Identifier.
- 28 The base station shall set this field to the identifier of the
 29 Reverse Supplemental Channel.
- 30 REV_SCH_DURATION - Duration of Reverse Supplemental Channel assignment.
- 31 The base station shall set this field to '0000' to indicate that
 32 the mobile station is to stop transmitting on the Reverse
 33 Supplemental Channel specified by REV_SCH_ID at the
 34 explicit start time specified by REV_SCH_START_TIME or at
 35 the implicit start time if REV_SCH_START_TIME_INCL is set
 36 to '0'. The base station shall set this field to '1111' to indicate
 37 that the mobile station may transmit on the Reverse
 38 Supplemental Channel specified by REV_SCH_ID, starting at
 39 the explicit start time specified by REV_SCH_START_TIME in
 40 this message, until the start time specified by a subsequent
 41 Reverse Supplemental Channel assignment corresponding to
 42 the same Supplemental Channel (see 2.6.6.2.5.1.1). The base
 43 station shall set this field to the duration according to Table
 44 3.7.3.3.2.37-3, starting at the explicit start time specified by
 45 REV_SCH_START_TIME, during which the mobile station may
 46 transmit on the Reverse Supplemental Channel specified by
 47 REV_SCH_ID.

- 1 REV_SCH_START_TIME_INCL - Start time included indicator.
 2 If REV_SCH_DURATION is not equal to '0000', the base
 3 station shall set this field to '1'. If REV_SCH_DURATION is
 4 equal to '0000', the base station shall set this field as follows:
 5 The base station shall set this field to '1' if
 6 REV_SCH_START_TIME is included in this message;
 7 otherwise, the base station shall set this field to '0'.
- 8 REV_SCH_START_TIME - Start time for Reverse Supplemental Channel Assignment.
 9 If REV_SCH_START_TIME_INCL is set to '0', the base station
 10 shall omit this field; otherwise, the base station shall set this
 11 field to the System Time, in units of time specified by
 12 START_TIME_UNIT, (modulo 32) at which the mobile station
 13 may start transmitting (if REV_SCH_DURATION is not equal
 14 to '0000') or stop transmitting (if REV_SCH_DURATION is
 15 equal to '0000') on the Reverse Supplemental Channel
 16 specified in this message. The explicit start time to start or
 17 stop transmitting on the Reverse Supplemental Channel is
 18 the time for which
 19
$$\lfloor t / (\text{START_TIME_UNIT}_s + 1) \rfloor - \text{REV_SCH_START_TIME} \bmod 32 = 0,$$

 20 where t is the System Time in units of 20 ms.
- 21
- 22 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
 23 index granted by the base station.
 24 If USE_FLEX_NUM_BITS is equal to '0' or if
 25 USE_FLEX_NUM_BITS is equal to '1' and
 26 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
 27 the base station shall set this field according to Table
 28 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
 29 number of information bits per frame and the number of CRC
 30 bits per frame, that the mobile station may transmit on the
 31 reverse Supplemental Channel identified by REV_SCH_ID.
 32 If USE_FLEX_NUM_BITS is equal to '1' and
 33 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
 34 then the base station shall set this field to indicate the
 35 Reverse Supplemental Channel number of information bits
 36 per frame that the mobile station may transmit on the
 37 Reverse Supplemental Channel identified by REV_SCH_ID to
 38 be NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 39 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
 40 Channel number of CRC bits per frame that the mobile
 41 station may transmit on the Reverse Supplemental Channel
 42 identified by REV_SCH_ID to be
 43 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 44 [REV_SCH_NUM_BITS_IDX].
- 45 FPC_SUBCHAN_GAIN - Forward power control subchannel relative gain.

- 1 The base station shall set FPC_SUBCHAN_GAIN equal to the
 2 power level of the forward link power control subchannel
 3 relative to that of 20 ms frames at a 9600 bps or 14400 bps
 4 rate on the Forward Fundamental Channel or the Forward
 5 Dedicated Control Channel indicated by FPC_PRI_CHAN_s.
 6 The base station shall set the value in units of 0.25 dB.
- 7 USE_PC_TIME - Use power control action time indicator.
- 8 This field indicates whether an explicit time
 9 [PC_ACTION_TIME] at which a new value for power control
 10 sub-channel to traffic ratio [FPC_SUBCHAN_GAIN] takes
 11 effect is specified in the message.
- 12 If an explicit action time is specified in this message, the base
 13 station shall set this field to '1'; otherwise, the base station
 14 shall set this field to '0'.
- 15 PC_ACTION_TIME - Power Control Subchannel gain action time.
- 16 If the USE_PC_TIME field is set to '1', the base station shall
 17 set this field to the System Time minus FRAME_OFFSET_s ×
 18 1.25 ms, in units of 80 ms (modulo 64), at which
 19 FPC_SUBCHAN_GAIN specified in this message is to take
 20 effect. If the USE_PC_TIME field is set to '0', the base station
 21 shall omit this field.
- 22 CH_IND - Channel Indicator.
- 23 The base station shall set this field as shown in Table
 24 3.7.3.3.2.36-1.

1

Table 3.7.3.3.2.36-1. Channel Indicator

CH_IND (Binary)	Physical Resource(s) Allocated
000	Refer to EXT_CH_IND.
001	Reserved
010	Dedicated Control Channel
011	Reserved
100	Reserved
101	For Radio Configuration greater than 2, Fundamental Channel and Continuous Reverse Pilot Channel; For Radio Configuration 1 or 2, Fundamental Channel only.
110	Dedicated Control Channel and Continuous Reverse Pilot Channel
111	Fundamental Channel, Dedicated Control Channel and Continuous Reverse Pilot Channel

2

3 ACTIVE_SET_REC_LEN - Active Set record length.

4 The base station shall set this field to the number of octets in
5 the ACTIVE_SET_REC_FIELDS included in this message.

6 ACTIVE_SET_REC_FIELDS - Active Set record fields.

7 The Active Set record fields are determined by the value of
8 CH_IND, as described below.

9 REV_FCH_GATING_MODE - Reverse eighth gating mode indicator.

10 If CH_IND is set to '010' or '110', or if EXT_CH_IND does not
11 signal allocation of R-FCH, then the base station shall omit
12 this field; otherwise, the base station include this field and set
13 it as follows:14 The base station shall set this field to '1' if the mobile station
15 is allowed to perform the reverse eighth gating mode after
16 handoff; otherwise, the base station shall set this field to '0'.

17 REV_PWR_CNTL_DELAY_INCL - Reverse power control delay included indicator.

18 If REV_FCH_GATING_MODE is not included, or is included
19 and set to '0', then the base station shall omit this field;
20 otherwise, the base station shall include this field and set it
21 as follows.22 The base station shall set this field to '1' if
23 REV_PWR_CNTL_DELAY is included in this message;
24 otherwise, the base station shall set this field to '0'.

- 1 REV_PWR_CNTL_DELAY - The reverse power control delay.
 2
 3 If REV_PWR_CNTL_DELAY_INCL is not included, or is
 4 included and set to '0', then the base station shall omit this
 5 field; otherwise, the base station shall include this field and
 6 set it as follows:
 7
 8 The base station shall set this field to the closed-loop reverse
 9 power control delay minus one (the closed-loop reverse power
 10 control delay is the time between the end of a gated-on
 11 reverse PCG and the beginning of the reverse PCG where the
 corresponding feedback is sent on the Forward Power Control
 Subchannel, see [2]), in units of 1.25 ms.
- 12 D_SIG_ENCRYPT_MODE - Dedicated channel signaling encryption mode indicator.
 13
 14 If ENCRYPT_MODE is included and is set to '11', the base station
 15 shall include this field and shall set it to the dedicated channel
 16 signaling encryption mode, as shown in Table 3.7.4.5-1;
 otherwise the base station shall omit this field.
- 17 ENC_KEY_SIZE - Encryption key size indication.
 18
 19 If ENCRYPT_MODE is included and is set to '10' or '11', the
 20 base station shall include this field and set it to the
 21 encryption key size, as shown in Table 3.7.4.5-2; otherwise,
 the base station shall omit this field.
- 22 3XFL_1XRL_INCL - 3X Forward Link and 1X Reverse Link indicator.
 23
 24 The base station shall set this field to '1' if the base station is
 25 assigning 3X traffic channel on the Forward Link and 1X
 26 traffic channel on the Reverse Link; otherwise, the base
 station shall set this field to '0'.
- 27 1XRL_FREQ_OFFSET - 1X Reverse Link frequency offset.
 28
 29 If 3XFL_1XRL_INCL is set to '0', the base station shall omit
 30 this field; otherwise, the base station shall set this field as
 follows:
 31
 32 The base station shall set this field to the value shown in
 33 Table 3.7.2.3.2.21-8 corresponding to the frequency offset of
 the 1X reverse link.

- 1 The base station shall set this field to the number of new call
2 assignments included in this message.
- 3 The base station shall include NUM_CALLS_ASSIGN occurrences of the following variable
4 length record (CON_REF, RESPONSE_IND, TAG, BYPASS_ALERT_ANSWER as per the
5 following requirements).
- 6 CON_REF – Connection reference.
- 7 The base station shall set this field to the connection
8 reference of the service option connection corresponding to
9 this call.
- 10 RESPONSE_IND – Response indicator.
- 11 The base station shall set this field to ‘1’ if this call
12 assignment is a response to an *Enhanced Origination Message*
13 from the mobile station; otherwise, the base station shall set
14 this field to ‘0’.
- 15 TAG – Transaction identifier.
- 16 If the RESPONSE_IND field is set to ‘0’, the base station shall
17 omit this field; otherwise, the base station shall include this
18 field and set it as follows:
- 19 The base station shall set this field to the value of the TAG
20 field received in the *Enhanced Origination Message* to which
21 this call assignment is the response.
- 22 BYPASS_ALERT_ANSWER – Bypass alert indicator.
- 23 If the RESPONSE_IND field is set to ‘1’, the base station shall
24 omit this field; otherwise, the base station shall include this
25 field and set it as follows:
- 26 If the mobile station is to bypass the *Waiting for Order*
27 *Substate* and the *Waiting for Mobile Station Answer Substate*
28 for this call, the base station shall set this field to ‘1’;
29 otherwise, the base station shall set this field to ‘0’.
- 30 CS_SUPPORTED – Concurrent Services supported indicator.
- 31 If the base station supports concurrent services, the base
32 station shall set this field to ‘1’; otherwise, the base station
33 shall set this field to ‘0’.
- 34 CHM_SUPPORTED – Control Hold Mode supported indicator.
- 35 The base station shall set this field to ‘1’ to indicate that the
36 base station supports the Control Hold Mode; otherwise, the
37 base station shall set this field to ‘0’.
- 38 CDMA_OFF_TIME_REP_SUP_IND – CDMA off time report supported indicator.

- 1 If the base station supports mobile station report for CDMA
2 off time information using the *CDMA Off Time Report Message*,
3 the base station shall set this field to '1'; otherwise, the base
4 station shall set this field to '0'.
- 5 CDMA_OFF_TIME_REP_THRESHOLD_UNIT – CDMA off time report threshold unit
- 6 If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
7 station shall omit this field; otherwise, the base station shall
8 include this field and set it as follows:
- 9 The base station shall set this field to the time unit used in
10 CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
11 3.7.2.3.2.13-5
- 12 CDMA_OFF_TIME_REP_THRESHOLD – CDMA off time report threshold
- 13 If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
14 station shall omit this field; otherwise, the base station shall
15 include this field and set it as follows:
- 16 The base station shall set this field to the time in units of
17 CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
18 mobile station goes away from the CDMA traffic channel
19 longer than this value, the mobile station is to send a *CDMA*
20 *Off Time Report Message*.
- 21 RELEASE_TO_IDLE_IND - Release to Idle State allowed indicator.
- 22 If the mobile station is allowed to return to the *Mobile Station*
23 *Idle State* upon call release, the base station shall set this field
24 to '1'; otherwise, the base station shall set this field to '0'.
- 25 MSG_INTEGRITY_SUP - Message integrity supported indicator.
- 26 If the base station supports message integrity, the base
27 station shall set this field to '1'; otherwise, the base station
28 shall set this field to '0'.
- 29 GEN_2G_KEY - Generate 2G encryption key indicator.
- 30 If the base station is to generate a new CMEAKEKEY from the
31 current CK, the base station shall set this field to '1' to order
32 the mobile station to perform similar procedures; otherwise,
33 the base station shall set this field to '0'.
- 34 REGISTER_IN_IDLE - Register in idle state indicator.
- 35 If the mobile station is to perform registration after
36 transitioning back to the *Mobile Station Idle State*, the base
37 station shall set this field to '1'; otherwise, the base station
38 shall set this field to '0'.
- 39 PLCM_TYPE_INCL - The Public Long Code Mask type Included Indicator.
- 40 If the mobile station is to change its public long code mask
41 after handoff, the base station shall set this field to '1';
42 otherwise, the base station shall set this field to '0'.
- 43 PLCM_TYPE - The Public Long Code Mask Type.

- 1 If PLCM_TYPE_INCL is set to '0', the base station shall omit
 2 this field; otherwise, the base station shall include this field
 3 and set it as follows:
- 4 The base station shall set this field to the Public Long Code
 5 Mask type to be used by the mobile station after the handoff
 6 as specified in Table 3.7.2.3.2.21-5.
- 7 PLCM_TYPE '0010' shall not be used when the mobile station
 8 is not in its home country (i.e., the MCC of the mobile station
 9 is different from the MCC of this base station).
- 10 PLCM_TYPE '0011' shall not be used when the mobile station
 11 is not in its home network (i.e., the MCC or MNC of the mobile
 12 station is different from the MCC or MNC of this base station).
- 13 PLCM_39 - The 39 LSBs of the Public Long Code Mask.
- 14 If PLCM_TYPE is included and set to '0001', the base station
 15 shall include this field and set it to the 39 least significant
 16 bits of the public long code mask to be used by the mobile
 17 station after the handoff as defined in Table 3.6.4.1.10;
 18 otherwise, the base station shall omit this field.
- 19 T_TDROP_RANGE_INCL - Drop timer range value included indicator.
- 20 If SEARCH_INCLUDED is set to '0', the base station shall omit
 21 this field; otherwise, the base station shall include this field
 22 and set it as follows:
- 23 The base station shall set this field to '1' if the
 24 T_TDROP_RANGE field is included in this message; otherwise,
 25 the base station shall set this field to '0'.
- 26 T_TDROP_RANGE - Drop timer range value.
- 27 Timer range value to use in association with the T_TDROP
 28 parameter when determining the drop timer expiration.
- 29 If T_TDROP_RANGE_INCL is not included, or included and set
 30 to '0', the base station shall omit this field; otherwise, the
 31 base station shall set this field to the T_TDROP_RANGE value
 32 shown in Table 2.6.6.2.3-2 corresponding to the timer
 33 expiration range value to be used by the mobile station.
- 34 FOR_PDCH_SUPPORTED - Forward Packet Data Channel supported indicator.
- 35 If the base station supports Forward Packet Data Channel,
 36 the base station shall set this field to '1'; otherwise, the base
 37 station shall set this field to '0'.
- 38 PDCH_CHM_SUPPORTED - PDCH Control Hold Mode supported indicator.
- 39 If FOR_PDCH_SUPPORTED is set to '0', the base station shall
 40 omit this field; otherwise, the base station shall include this
 41 field and set it as follows:
- 42 The base station shall set this field to '1' to indicate that the
 43 base station supports the PDCH Control Hold Mode; otherwise,
 44 the base station shall set this field to '0'.
- 45 PILOT_INFO_REQ_SUPPORTED - Pilot information request supported indicator.

1 If the base station supports mobile station request for pilot
2 information using the “Pilot Information” record in the *Base*
3 *Station Status Request Message*, the base station shall set this
4 field to ‘1’; otherwise, the base station shall set this field to ‘0’.

5 ENC_SUPPORTED – Encryption fields included.
6 The base station shall set this field to ‘1’ if the encryption
7 related fields are included; otherwise, the base station shall
8 set this field to ‘0’.

9 SIG_ENCRYPT_SUP – Signaling Encryption supported indicator.
10 If ENC_SUPPORTED is equal to ‘1’, the base station shall
11 include this field; otherwise, the base station shall omit this
12 field. If this field is included, this field indicates which
13 signaling encryption algorithms are supported by the base
14 station.
15 This field consists of the subfields shown in Table 2.7.1.3.2.1-
16 5.
17 If this field is included, the base station shall set the subfields
18 as follows:
19 The base station shall set the CMEA subfield to ‘1’.
20 The base station shall set each other subfield to ‘1’ if the
21 corresponding signaling algorithm is supported by the base
22 station; otherwise, the base station shall set the subfield to
23 ‘0’.
24 The base station shall set the RESERVED subfield to ‘00000’.

25 UI_ENCRYPT_SUP – User information Encryption supported indicator.
26 If ENC_SUPPORTED is equal to ‘1’, the base station shall
27 include this field; otherwise, the base station shall omit this
28 field. If this field is included, the base station shall set this
29 field to indicate the supported user information encryption
30 algorithms.
31 This field consists of the subfields shown in Table 2.7.1.3.2.4-
32 9.
33 The base station shall set each subfield to ‘1’ if the
34 corresponding user information encryption algorithm is
35 supported by the base station; otherwise, the base station
36 shall set the subfield to ‘0’.

37 USE_SYNC_ID – Sync ID supported indicator.
38 The base station shall set this field to ‘1’ to indicate that the
39 mobile station is permitted to include the SYNC_ID field in the
40 *Page Response Message*, the *Reconnect Message*, the
41 *Origination Message*, and the *Enhanced Origination Message*;
42 otherwise, the base station shall set this field to ‘0’.

43 SID_INCL – SID included indicator.

1			If the SID field is included in this message, the base station
2			shall set this field to '1'; otherwise, the base station shall set
3			this field to '0'.
4	SID	-	System identification.
5			If the SID_INCL field is set to '0', the base station shall omit
6			this field; otherwise, the base station shall include this field
7			and set it as follows:
8			The base station shall set this field to the system
9			identification number for this wireless system (see 2.6.5.2).
10	NID_INCL	-	NID included indicator.
11			If the NID field is included in this message, the base station
12			shall set this field to '1'; otherwise, the base station shall set
13			this field to '0'.
14	NID	-	Network identification.
15			If the NID_INCL field is set to '0', the base station shall omit
16			this field; otherwise, the base station shall include this field
17			and set it as follows:
18			This field serves as a sub-identifier of a system as defined by
19			the owner of the SID.
20			The base station shall set this field to the network
21			identification number for this network (see 2.6.5.2).
22	SDB_SUPPORTED	-	Short Data Burst supported indicator.
23			The base station shall set this field to '1' if the mobile station
24			is permitted to send a Short Data Burst; otherwise, the base
25			station shall set this field to '0'.
26	MOB_QOS	-	Indicator granting permission to the mobile station to request
27			QoS parameter settings in the <i>Origination Message</i> ,
28			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
29			<i>Message</i> .
30			If CS_SUPPORTED is equal to '0', the base station shall omit
31			this field; otherwise the base station shall include this field
32			and shall set it as follows:
33			The base station shall set this field to '1', if the mobile station
34			is allowed to include a QoS record in the <i>Origination Message</i> ,
35			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
36			<i>Message</i> ; otherwise, the base station shall set this field to '0'.
37	MS_INIT_POS_LOC_SUP_IND	-	Mobile station initiated position location determination
38			supported indicator.
39			If the target base station supports mobile station initiated
40			position determination, the base station shall set this field to
41			'1'; otherwise, the base station shall set this field to '0'.
42	REV_PDCH_SUPPORTED	-	Reverse Packet Data Channel supported indicator.
43			If FOR_PDCH_SUPPORTED is set to '0', the base station shall
44			omit this field; otherwise, the base station shall include this
45			field and set it as follows:

1			If the base station supports the Reverse Packet Data Channel
2			(R-PDCH), the base station shall set this field to '1'; otherwise,
3			the base station shall set this field to '0'.
4	PZ_HYST_ENABLED	-	Packet zone hysteresis enabled.
5			If the PACKET_ZONE_ID field is set to '00000000', the base
6			station shall omit this field; otherwise, the base station shall
7			include this field and set it as follows:
8			If the packet zone hysteresis feature is to be enabled at the
9			mobile station, the base station shall set this field to '1';
10			otherwise, the base station shall set this field to '0'.
11	PZ_HYST_INFO_INCL	-	Packet zone hysteresis information included indicator.
12			If the PZ_HYST_ENABLED field is included and is set to '1',
13			the base station shall include this field and set it as follows;
14			otherwise, the base station shall omit this field.
15			If the base includes the PZ_HYST_LIST_LEN,
16			PZ_HYST_ACT_TIMER and packet zone hysteresis timer
17			related fields, the base station shall set this field to '1';
18			otherwise, the base station shall set this field to '0'.
19	PZ_HYST_LIST_LEN	-	Packet zone hysteresis list length.
20			If the PZ_HYST_INFO_INCL field is included and is set to '1',
21			the base station shall include this field and set it as follows;
22			otherwise, the base station shall omit this field.
23			The base station shall set this field to the length of the packet
24			zone hysteresis list. This field shall be within the range '0001'
25			through '1111', inclusive.
26	PZ_HYST_ACT_TIMER	-	Packet zone hysteresis activation timer.
27			If the PZ_HYST_INFO_INCL field is included and is set to '1',
28			the base station shall include this field and set it as follows;
29			otherwise, the base station shall omit this field.
30			The base station shall set to the value of the packet zone
31			hysteresis activation timer (in units of seconds). This field
32			shall be within the range '00000001' through '11111111',
33			inclusive.
34	PZ_HYST_TIMER_MUL	-	Packet zone hysteresis timer multiplier.
35			If the PZ_HYST_INFO_INCL field is included and is set to '1',
36			the base station shall include this field and set it as follows;
37			otherwise, the base station shall omit this field.
38			The base station shall set the field to x, where $x \times 8^y$ seconds
39			is the value of the hysteresis timer and y is the value
40			indicated in the PZ_HYST_TIMER_EXP field. The base station
41			shall set this field to a value that is between 1 and 7
42			inclusive. The value 0 is reserved.
43	PZ_HYST_TIMER_EXP	-	Packet zone hysteresis timer exponent.

- 1 If the PZ_HYST_INFO_INCL field is included and is set to '1',
 2 the base station shall include this field and set it as follows;
 3 otherwise, the base station shall omit this field.
- 4 The base station shall set the field to y, where $x \times 8^y$ seconds
 5 is the value of the hysteresis timer and x is the value
 6 indicated in the PZ_HYST_TIMER_MUL field. The base station
 7 shall set this field to a value that is between 0 and 4
 8 inclusive. All the other values are reserved.
- 9 **BCMC_ON_TRAFFIC_SUP** - BCMC on traffic channel supported indicator.
- 10 The base station shall set this field to '1' to indicate that the
 11 BCMC feature is supported on traffic channel; otherwise, the
 12 base station shall set this field to '0'.
- 13 **AUTO_REQ_TRAF_ALLOWED_IND** - Autonomous BCMC request on traffic channel
 14 allowed indicator.
- 15 If the BCMC_ON_TRAFFIC_SUP field is set to '0', the base
 16 station shall omit this field; otherwise, the base station shall
 17 include this field and set it as follows:
- 18 The base station shall set this field to '1' to indicate that the
 19 mobile station is allowed to request for a BCMC flow
 20 autonomously on traffic channel; otherwise, the base station
 21 shall set this field to '0'.
- 22 **SCH_BCMC_IND** - BCMC on supplemental channel Indicator.
- 23 If the BCMC_ON_TRAFFIC_SUP field is set to '0', or if
 24 NUM_FOR_ASSIGN field is not included or is included and is
 25 set to '00', the base station shall omit this field; otherwise, the
 26 base station shall include this field and set it as follows:
- 27 If the channel assignment in this message contains a Forward
 28 Supplemental Channel used for BCMC transmission, the base
 29 station shall set this field to '1'; otherwise, the base station
 30 shall set this field to '0'.
- 31 **ADD_PLCM_FOR_SCH_INCL** - Additional PLCM for forward SCH included indicator.
- 32 If the SCH_BCMC_IND field is not included or is included and
 33 is set to '0', the base station shall omit this field; otherwise,
 34 the base station shall include this field and set it as follows:
- 35 If the additional PLCM for forward SCH is included in this
 36 message, the base station shall set this field to '1'; otherwise,
 37 the base station shall set this field to '0'.
- 38 **ADD_PLCM_FOR_SCH_TYPE** - The Additional Public Long Code Mask for forward SCH
 39 type indicator.
- 40 If ADD_PLCM_FOR_SCH_INCL is not included or is included
 41 and is set to '0', the base station shall omit this field;
 42 otherwise, the base station shall include this field and set it
 43 as follows:

- 1 The base station shall set this field to the maximum number
 2 of additional service reference identifiers that can be included
 3 in the *Origination Message* or *Enhanced Origination Message*.
- 4 USE_CH_CFG_RRM - Channel configuration request allowed indicator.
 5 The base station shall set this field to '1' to indicate that the
 6 mobile station is permitted to include the CH_IND and
 7 EXT_CH_IND fields in the *Resource Request Message*, and the
 8 *Resource Request Mini Message*; otherwise, the base station
 9 shall set this field to '0'.
- 10 TX_PWR_LIMIT_INCL - Transmit Power Limit inclusion for the current base station
 11 If TX_PWR_LIMIT_DEFAULT is included in this message, the
 12 base station shall set this field to '1'; otherwise, the base
 13 station shall set this field to '0'.
- 14 TX_PWR_LIMIT_DEFAULT - Use the Default Transmit Power Limit
 15 If TX_PWR_LIMIT_INCL is set to '0', the base station shall omit
 16 this field; otherwise, the base station shall include this field
 17 and set to as follows.
 18 The base station shall set this field to '1' if the mobile station
 19 is to limit its transmission power in the 1915MHz – 1920MHz
 20 block of the PCS band to no more than the default value
 21 defined in [11]; otherwise, the base station shall set this field
 22 to '0' if the mobile station is to limit its transmission power to
 23 no more than the value indicated by TX_PWR_LIMIT.
- 24 TX_PWR_LIMIT - Transmit Power Limit for the current base station
 25 If TX_PWR_LIMIT_DEFAULT is omitted, or if it is included and
 26 set to '1', the base station shall omit this field; otherwise, the
 27 base station shall include this field and set to as follows.
 28 The base station shall set this field to thirty dB more than
 29 transmit power limit in dBm EIRP, in steps of 1 dB. This field
 30 can take the values 30 to 53 corresponding to maximum
 31 transmit power values 0 dBm to 23 dBm.
- 32 If the CH_IND field is set to '101', the base station shall include the following fields:
- 33 NUM_FOR_SCH - Number of Forward Supplemental Channel records.
 34 If SCH_INCL is set to '0', the base station shall omit this field;
 35 otherwise, the base station shall set this field as follows:
 36 The base station shall set this field to the number of the
 37 Forward Supplemental Channel records need to be updated.
- 38 If NUM_FOR_SCH is included and not equal to '00000', the base station shall include
 39 NUM_FOR_SCH occurrence of the following three fields:
- 40 FOR_SCH_ID - Forward Supplemental Channel identifier.
 41 The base station shall set this field to the identifier of the
 42 Forward Supplemental Channel.
- 43 SCCL_INDEX - Supplemental Channel Code list index.

- 1 The base station shall set this field to the index of the record
 2 in the Supplemental Channel Code list.
- 3 FOR_SCH_NUM_BITS_IDX - Forward Supplemental Channel number of information
 4 bits index.
- 5 If USE_FLEX_NUM_BITS is equal to '0' or if
 6 USE_FLEX_NUM_BITS is equal to '1' and
 7 FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
 8 then the base station shall set this field according to Table
 9 3.7.3.3.2.37-4 to indicate the number of information bits per
 10 frame and the length of the CRC field for the Forward
 11 Supplemental Channel identified by FOR_SCH_ID
 12 corresponding to SCCL_INDEX.
- 13 If USE_FLEX_NUM_BITS_s is equal to '1' and
 14 FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
 15 then the base station shall set this field to indicate that the
 16 number of information bits per frame for the Forward
 17 Supplemental channel identified by FOR_SCH_ID to be
 18 NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
 19 NUM_BITS_IDX] and the number of CRC bits per frame for
 20 the Forward Supplemental channel identified by FOR_SCH_ID
 21 to be
 22 CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SC
 23 H_NUM_BITS_IDX].
- 24 NUM_REV_SCH - Number of Reverse Supplemental Channel records.
- 25 If SCH_INCL is set to '0', the base station shall omit this field;
 26 otherwise, the base station shall set this field as follows:
- 27 The base station shall set this field to the number of the
 28 Reverse Supplemental Channels need to be updated.
- 29 If NUM_REV_SCH is included and not equal to '00000', the base station shall include
 30 NUM_REV_SCH occurrence of the following three fields:
- 31 REV_SCH_ID - Reverse Supplemental Channel identifier.
- 32 The base station shall set this field to the identifier of the
 33 Reverse Supplemental Channel.
- 34 REV_WALSH_ID - Reverse Supplemental Channel Walsh cover Identifier.
- 35 The base station shall set this field according to Table
 36 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
 37 station is to use when transmitting at the rate specified by
 38 REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
 39 Channel specified by REV_SCH_ID. If only one reverse
 40 supplemental channel is assigned, the base station should set
 41 this field to the default value for the REV_WALSH_ID as
 42 specified in 2.6.4.2.
- 43 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
 44 index.

- 1 If USE_FLEX_NUM_BITS is equal to '0' or if
 2 USE_FLEX_NUM_BITS is equal to '1' and
 3 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
 4 the base station shall set this field according to Table
 5 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
 6 number of information bits per frame and the CRC bits per
 7 frame, corresponding to REV_WALSH_ID field.
- 8 If USE_FLEX_NUM_BITS is equal to '1' and
 9 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
 10 then the base station shall set this field to indicate the
 11 Reverse Supplemental Channel number of information bits
 12 per frame, corresponding to REV_WALSH_ID field to be
 13 NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 14 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
 15 Channel number of CRC bits per frame corresponding to
 16 REV_WALSH_ID field to be
 17 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 18 [REV_SCH_NUM_BITS_IDX].
- 19 NUM_PILOTS - Number of pilots included in the message.
 20 The base station shall set this field to the number of pilots
 21 included in the message. The base station shall set this field
 22 to an integer that is equal to or greater than 1.
- 23 SRCH_OFFSET_INCL - Target pilot channel search window offset included.
 24 If the SRCH_OFFSET field is included in the following records,
 25 the base station shall set this field to '1'; otherwise, the base
 26 station shall set this field to '0'.
- 27 The base station shall include one occurrence of the following record for each of the
 28 NUM_PILOTS pilots included in the message:
- 29 PILOT_PN - Pilot PN sequence offset index.
 30 The base station shall set this field to the pilot PN sequence
 31 offset for this pilot in units of 64 PN chips.
- 32 SRCH_OFFSET - Target pilot channel search window offset.
 33 If SRCH_OFFSET_INCL equals to '1', then the base station
 34 shall set this field to the value shown in Table 2.6.6.2.1-2
 35 corresponding to the search window offset to be used by the
 36 mobile station for this target pilot. Otherwise, the base
 37 station shall omit this field.
- 38 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
 39 The base station shall set this field to '1' if additional pilot
 40 information listed in PILOT_REC_TYPE and RECORD_LEN
 41 fields are included. The base station shall set this field to '0'
 42 if the corresponding pilot is the common pilot and there is no
 43 additional pilot information included.
- 44 PILOT_REC_TYPE - Pilot record type.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the PILOT_REC_TYPE value shown in Table
3			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
4			specified by this record.
5			If ADD_PILOT_REC_INCL is set to '0', the base station shall
6			omit this field.
7	RECORD_LEN	-	Pilot record length.
8			If ADD_PILOT_REC_INCL is set to '1', the base station shall
9			set this field to the number of octets in the type-specific fields
10			of this pilot record.
11			If ADD_PILOT_REC_INCL is set to '0', the base station shall
12			omit this field.
13	Type-specific fields	-	Pilot record type-specific fields.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			include type-specific fields based on the PILOT_REC_TYPE of
16			this pilot record as described in 3.7.6.1.
17			If ADD_PILOT_REC_INCL is set to '0', the base station shall
18			omit this field.
19	PWR_COMB_IND	-	Power control symbol combining indicator.
20			If the Forward Traffic Channel associated with this pilot will
21			carry the same closed-loop power control subchannel bits as
22			that of the previous pilot in this message, the base station
23			shall set this field to '1'; otherwise, the base station shall set
24			this field to '0'. The base station shall set this field to '0' in
25			the first record in the pilot list.
26	CODE_CHAN_FCH	-	Code channel on the Fundamental Channel.
27			If a Radio Configuration associated with Spreading Rate 1 is
28			used, the base station shall set this field to the code channel
29			index (see [2]) that the mobile station is to use on the
30			Fundamental Channel of the Forward Traffic Channel. If a
31			Radio Configuration associated with Spreading Rate 3 is used,
32			the base station shall set this field to the code channel index
33			that the mobile station is to use for the Fundamental Channel
34			on the center SR3 frequency.
35			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
36			station shall set this field in the range 1 to 63 inclusive. If
37			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
38			station shall set this field in the range 1 to 127 inclusive. If
39			Radio Configuration 7 or 9 is used, the base station shall set
40			this field in the range 1 to 255 inclusive.
41	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
42			Channel.

1	CODE_CHAN_FCH_HIGH-	Code channel for the Fundamental Channel on the highest
2		SR3 frequency.
3		If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
4		this field; otherwise, the base station shall set this field as
5		follows:
6		The base station shall set this field to the code channel index
7		(see [2]) that the mobile station is to use on the Fundamental
8		Channel on the highest SR3 frequency. If Radio
9		Configuration 6 or 8 is used, the base station shall set this
10		field in the range 1 to 127 inclusive. If Radio Configuration 7
11		or 9 is used, the base station shall set this field in the range 1
12		to 255 inclusive.
13	3X_SCH_INFO_INCL	- 3X Supplemental Channel information included indicator.
14		If SCH_INCL is set to '0', the base station shall omit this field;
15		otherwise, the base station shall set this field as follows:
16		If the 3X Supplemental Channel information is included, the
17		base station shall set this field to '1'; otherwise, the base
18		station shall set this field to '0'.
19		The base station shall include NUM_SCH occurrences of the following seven fields record if
20		3X_SCH_INFO_INCL is included and set to '1'.
21	FOR_SCH_ID	- Forward Supplemental Channel identifier.
22		The base station shall set this field the identifier of the
23		Forward Supplemental Channel pertaining to this record.
24	3X_SCH_LOW_INCL	- SCH code channel on the lowest SR3 frequency included
25		indicator.
26		If the Supplemental Channel on the lowest SR3 frequencies
27		has a different code channel than the Supplemental Channel
28		on the center SR3 frequency, the base station shall set this
29		field to '1'; otherwise, the base station shall set this field to '0'.
30	QOF_MASK_ID_SCH_LOW	- QOF index for the Supplemental Channel on the lowest
31		SR3 frequency.
32		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
33		this field; otherwise, the base station shall set this field as
34		follows:
35		The base station shall set this field to the index of the Quasi-
36		orthogonal function (see [2]) corresponding to the QOF index
37		for the Supplemental Channel on the lowest SR3 frequency.
38	CODE_CHAN_SCH_LOW	- Code channel for the Supplemental Channel on the lowest
39		SR3 frequency.
40		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
41		this field; otherwise, the base station shall set this field as
42		follows:

1 If the USE_CCSH_ENCODER_TIME field is included and set
 2 to '1', the base station shall set this field to the System Time
 3 minus $\text{FRAME_OFFSET}_s \times 1.25$ ms, in units of 80ms (modulo
 4 64), at which Turbo Encoder types included in this message
 5 are to take effect; otherwise, the base station shall omit this
 6 field.

7 If the CCSH_INCLUDED field is set to '1', the base station shall include one occurrence of
 8 the following one field for each of the Forward Supplemental Channel records (as specified
 9 by NUM_PILOTS and NUM_SCH) with PILOT_INCL field set to '1'. The base station shall use
 10 the same order for the following field as is used for the Forward Supplemental Channel
 11 records.

12 CCSH_ENCODER_TYPE - Code Combining Soft Handoff Turbo Encoder type.

13 The base station shall set this field to '0' if the Turbo Encoder
 14 type to be used on the Forward Supplemental Channel
 15 identified by FOR_SCH_ID and SCCL_INDEX is the default
 16 encoder type. The base station shall set this field to '1' if the
 17 Turbo Encoder to be used is the complementary type.

18 RESERVED - Reserved bits.

19 The base station shall add reserved bits as needed in order to
 20 make the length of the ACTIVE_SET_REC_FIELDS record
 21 equal to an integer number of octets. The base station shall
 22 set these bits to '0'.

23 If the CH_IND field is set to '010' or '110', the base station shall include the following fields:

24 NUM_FOR_SCH - Number of Forward Supplemental Channel records.

25 If SCH_INCL is set to '0', the base station shall omit this field;
 26 otherwise, the base station shall set this field as follows:

27 The base station shall set this field to the number of the
 28 Forward Supplemental Channel records need to be updated.

29 If NUM_FOR_SCH is included and not equal to '00000', the base station shall include
 30 NUM_FOR_SCH occurrence of the following three fields:

31 FOR_SCH_ID - Forward Supplemental Channel identifier.

32 The base station shall set this field to identifier of the Forward
 33 Supplemental Channel.

34 SCCL_INDEX - Supplemental Channel Code list index.

35 The base station shall set this field to the index of the record
 36 in the Supplemental Channel Code list.

37 FOR_SCH_NUM_BITS_IDX - Forward Supplemental Channel number of information
 38 bits index.

1 If USE_FLEX_NUM_BITS is equal to '0' or if
 2 USE_FLEX_NUM_BITS is equal to '1' and
 3 FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
 4 then the base station shall set this field according to Table
 5 3.7.3.3.2.37-4 to indicate the number of information bits per
 6 frame and the length of the CRC field for the Forward
 7 Supplemental Channel identified by FOR_SCH_ID
 8 corresponding to SCCL_INDEX.

9 If USE_FLEX_NUM_BITS_s is equal to '1' and
 10 FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
 11 then the base station shall set this field to indicate that the
 12 number of information bits per frame for the Forward
 13 Supplemental channel identified by FOR_SCH_ID to be
 14 NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
 15 NUM_BITS_IDX] and the number of CRC bits per frame for
 16 the Forward Supplemental channel identified by FOR_SCH_ID
 17 to be
 18 CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SC
 19 H_NUM_BITS_IDX].

20 NUM_REV_SCH - Number of Reverse Supplemental Channel records.
 21 If SCH_INCL is set to '0', the base station shall omit this field;
 22 otherwise, the base station shall set this field as follows:
 23 The base station shall set this field to the number of the
 24 Reverse Supplemental Channels need to be updated.

25 If NUM_REV_SCH is included and not equal to '00000', the base station shall include
 26 NUM_REV_SCH occurrence of the following three fields:

27 REV_SCH_ID - Reverse Supplemental Channel identifier.
 28 The base station shall set this field to the identifier of the
 29 Reverse Supplemental Channel.

30 REV_WALSH_ID - Reverse Supplemental Channel Walsh cover Identifier.
 31 The base station shall set this field according to Table
 32 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
 33 station is to use when transmitting at the rate specified by
 34 REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
 35 Channel specified by REV_SCH_ID. If only one reverse
 36 supplemental channel is assigned, the base station should set
 37 this field to the default value for the REV_WALSH_ID as
 38 specified in 2.6.4.2.

39 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
 40 index.

41 If USE_FLEX_NUM_BITS is equal to '0' or if
 42 USE_FLEX_NUM_BITS is equal to '1' and
 43 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
 44 the base station shall set this field according to Table
 45 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
 46 number of information bits per frame and the number of CRC
 47 bits per frame, corresponding to REV_WALSH_ID field.

- 1 If USE_FLEX_NUM_BITS is equal to '1' and
 2 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
 3 then the base station shall set the REV_SCH_NUM_BITS_IDX
 4 field to indicate the Reverse Supplemental Channel number of
 5 information bits per frame, corresponding to REV_WALSH_ID
 6 field to be NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 7 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
 8 Channel number of CRC bits per frame, corresponding to
 9 REV_WALSH_ID field to be
 10 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 11 [REV_SCH_NUM_BITS_IDX].
- 12 NUM_PILOTS - Number of pilots included in the message.
 13 The base station shall set this field to the number of pilots
 14 included in the message. The base station shall set this field
 15 to an integer that is equal to or greater than 1.
- 16 SRCH_OFFSET_INCL - Target pilot channel search window offset included.
 17 If the SRCH_OFFSET field is included in the following records,
 18 the base station shall set this field to '1'; otherwise, the base
 19 station shall set this field to '0'.
- 20 The base station shall include one occurrence of the following record for each of the
 21 NUM_PILOTS pilots included in the message:
- 22 PILOT_PN - Pilot PN sequence offset index.
 23 The base station shall set this field to the pilot PN sequence
 24 offset for this pilot in units of 64 PN chips.
- 25 SRCH_OFFSET - Target pilot channel search window offset.
 26 If SRCH_OFFSET_INCL equals to '1', then the base station
 27 shall set this field to the value shown in Table 2.6.6.2.1-2
 28 corresponding to the search window offset to be used by the
 29 mobile station for this target pilot. Otherwise, the base
 30 station shall omit this field.
- 31 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
 32 The base station shall set this field to '1' if additional pilot
 33 information listed in PILOT_REC_TYPE and RECORD_LEN
 34 fields are included. The base station shall set this field to '0'
 35 if the corresponding pilot is the common pilot and there is no
 36 additional pilot information included.
- 37 PILOT_REC_TYPE - Pilot record type.
 38 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 39 set this field to the PILOT_REC_TYPE value shown in Table
 40 3.7.2.3.2.21-9 corresponding to the type of Pilot Record
 41 specified by this record.
 42 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 43 omit this field.
- 44 RECORD_LEN - Pilot record length.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the number of octets in the type-specific fields
3			of this pilot record.
4			If ADD_PILOT_REC_INCL is set to '0', the base station shall
5			omit this field.
6	Type-specific fields	-	Pilot record type-specific fields.
7			If ADD_PILOT_REC_INCL is set to '1', the base station shall
8			include type-specific fields based on the PILOT_REC_TYPE of
9			this pilot record as described in 3.7.6.1.
10			If ADD_PILOT_REC_INCL is set to '0', the base station shall
11			omit this field.
12	PWR_COMB_IND	-	Power control symbol combining indicator.
13			If this pilot will carry the same closed-loop power control
14			subchannel bits as that of the previous pilot in this message,
15			the base station shall set this field to '1'; otherwise, the base
16			station shall set this field to '0'. The base station shall set
17			this field to '0' in the first record in the pilot list.
18	CODE_CHAN_DCCH	-	Code channel on the Dedicated Control Channel.
19			If a Radio Configuration associated with Spreading Rate 1 is
20			used, the base station shall set this field to the code channel
21			index (see [2]), in the range of 1 to 127 inclusive, that the
22			mobile station is to use on the Dedicated Control Channel of
23			the Forward Traffic Channel. If a Radio Configuration
24			associated with Spreading Rate 3, the base station shall set
25			this field to the code channel index (see [2]), in the range of 1
26			to 255 inclusive, that the mobile station is to use for the
27			Dedicated Control Channel on the center SR3 frequency.
28			If Radio Configuration 3 or 5 (see [2]) is used, the base station
29			shall set this field in the range 1 to 63 inclusive. If Radio
30			Configuration 4, 6 or 8 is used, the base station shall set this
31			field in the range 1 to 127 inclusive. If Radio Configuration 7
32			or 9 is used, the base station shall set this field in the range 1
33			to 255 inclusive.
34	QOF_MASK_ID_DCCH	-	Quasi-orthogonal function index on the Dedicated Control
35			Channel.
36			If a Radio Configuration associated with Spreading Rate 1 is
37			used, the base station shall set this field to the index of the
38			Quasi-orthogonal function (see [2]). If a Radio Configuration
39			associated with Spreading Rate 3 is used, the base station
40			shall set this field to the index of the Quasi-orthogonal
41			function (see [2]).
42	NUM_SCH	-	Number of Supplemental Channel records.
43			If SCH_INCL is set to '0', the base station shall omit this field;
44			otherwise, the base station shall set this field as follows:
45			The base station shall set this field to the number of the
46			Supplemental Channel records need to be updated.

1 If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH
2 occurrence of the following five fields:

- 3 FOR_SCH_ID - Forward Supplemental Channel identifier
4 The base station shall set this field to the identifier of the
5 Forward Supplemental Channel pertaining to this record.
- 6 SCCL_INDEX - Supplemental Channel Code list index.
7 The base station shall set this field to the index of the record
8 in the Supplemental Channel Code list.
- 9 PILOT_INCL - The corresponding pilot included in Supplemental Channel
10 Active Set indicator.
11 The base station shall set this field to '1' if the corresponding
12 pilot is included in the Active Set of Supplemental Channel;
13 otherwise, the base station shall set this field to '0'.
- 14 CODE_CHAN_SCH - Code channel on the Supplemental Channel.
15 The base station shall set this field to the code channel index
16 (see [2]) that the mobile station is to use on the Supplemental
17 Channel of the Forward Traffic Channel indexed by
18 SCCL_INDEX.
- 19 QOF_MASK_ID_SCH - Quasi-orthogonal function index on the Supplemental
20 Channel.
21 If SCH_INCL is set to '0', the base station shall omit this field;
22 otherwise, the base station shall set this field as follows:
23 The base station shall set this field to the index of the Quasi-
24 orthogonal function (see [2]).
- 25 3X_DCCH_INFO_INCL - 3X Dedicated Control Channel information included indicator.
26 If the 3X Dedicated Control Channel information is included,
27 the base station shall set this field to '1'; otherwise, the base
28 station shall set this field to '0'.

29 The base station shall include NUM_PILOTS occurrences of the following record if
30 3X_DCCH_INFO_INCL is set to '1'. The base station shall use the same order for the
31 following fields as is used for the PILOT_PN fields listed in this message.

- 32 3X_DCCH_LOW_INCL - DCCH code channel on the lowest SR3 frequency included
33 indicator.
34 If the Dedicated Control Channel on the lowest SR3
35 frequencies has a different code channel than the Dedicated
36 Control Channel on the center SR3 frequency, the base
37 station shall set this field to '1'; otherwise, the base station
38 shall set this field to '0'.
- 39 QOF_MASK_ID_DCCH_LOW - QOF index for the Dedicated Control Channel on the
40 lowest SR3 frequency.
41 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
42 omit this field; otherwise, the base station shall set this field
43 as follows:

1 The base station shall set this field to the index of the Quasi-
2 orthogonal function (see [2]) corresponding to the QOF index
3 for the Dedicated Control Channel on the lowest SR3
4 frequency.

5 CODE_CHAN_DCCH_LOW - Code channel for the Dedicated Control Channel on the
6 lowest SR3 frequency.

7 If 3X_DCCH_LOW_INCL is set to '0', the base station shall
8 omit this field; otherwise, the base station shall set this field
9 as follows:

10 The base station shall set this field to the code channel index
11 (see [2]) that the mobile station is to use on the Dedicated
12 Control Channel on the lowest SR3 frequency. If Radio
13 Configuration 6 or 8 is used, the base station shall set this
14 field in the range 1 to 127 inclusive. If Radio Configuration 7
15 or 9 is used, the base station shall set this field in the range 1
16 to 255 inclusive.

17 3X_DCCH_HIGH_INCL - DCCH code channel on the highest SR3 frequency included
18 indicator.

19 If the Dedicated Control Channel on the highest SR3
20 frequencies has a different code channel than the Dedicated
21 Control Channel on the center SR3 frequency, the base
22 station shall set this field to '1'; otherwise, the base station
23 shall set this field to '0'.

24 QOF_MASK_ID_DCCH_HIGH - QOF index for the Dedicated Control Channel on the
25 highest SR3 frequency.

26 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
27 omit this field; otherwise, the base station shall set this field
28 as follows:

29 The base station shall set this field to the index of the Quasi-
30 orthogonal function (see [2]) corresponding to the QOF index
31 for the Dedicated Control Channel on the highest SR3
32 frequency.

33 CODE_CHAN_DCCH_HIGH - Code channel for the Dedicated Control Channel on the
34 highest SR3 frequency.

35 If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
36 omit this field; otherwise, the base station shall set this field
37 as follows:

38 The base station shall set this field to the code channel index
39 (see [2]) that the mobile station is to use on the Dedicated
40 Control Channel on the highest SR3 frequency. If Radio
41 Configuration 6 or 8 is used, the base station shall set this
42 field in the range 1 to 127 inclusive. If Radio Configuration 7
43 or 9 is used, the base station shall set this field in the range 1
44 to 255 inclusive.

45 3X_SCH_INFO_INCL - 3X Supplemental Channel information included indicator.

46 If SCH_INCL is set to '0', the base station shall omit this field;
47 otherwise, the base station shall set this field as follows:

1 The base station shall set this field to the index of the Quasi-
2 orthogonal function (see [2]) corresponding to the QOF index
3 for the Supplemental Channel on the highest SR3 frequency.

4 CODE_CHAN_SCH_HIGH - Code channel for the Supplemental Channel on the highest
5 SR3 frequency.

6 If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
7 this field; otherwise, the base station shall set this field as
8 follows:

9 The base station shall set this field to the code channel index
10 (see [2]) that the mobile station is to use on the Supplemental
11 Channel on the highest SR3 frequency. If Radio
12 Configuration 6 or 8 is used, the base station shall set this
13 field in the range 1 to 127 inclusive. If Radio Configuration 7
14 or 9 is used, the base station shall set this field in the range 1
15 to 255 inclusive.

16 CESH_INCLUDED - Code Combining Soft Handoff information included indicator.

17 The base station shall set this field to '1' if Code Combining
18 Soft Handoff information is included in this message;
19 otherwise, the base station shall set this field to '0'.

20 USE_CESH_ENCODER_TIME - Use Code Combining Soft Handoff Turbo Encoder
21 swapping action time indicator.

22 If the CESH_INCLUDED field is set to '0', the base station
23 shall omit this field; otherwise, the base station shall include
24 this field and set it as follows.

25 If an explicit action time at which Turbo Encoder types
26 (CESH_ENCODER_TYPE) included in this message takes
27 effect is specified, the base station shall set this field to '1';
28 otherwise, the base station shall set this field to '0'.

29 CESH_ENCODER_ACTION_TIME - Code Combining Soft Handoff Turbo Encoder
30 swapping action time.

31 If the USE_CESH_ENCODER_TIME field is included and set
32 to '1', the base station shall set this field to the System Time
33 minus $FRAME_OFFSET_s \times 1.25$ ms, in units of 80ms (modulo
34 64), at which Turbo Encoder types included in this message
35 are to take effect; otherwise, the base station shall omit this
36 field.

37 If the CESH_INCLUDED field is set to '1', the base station shall include one occurrence of
38 the following one field for each of the Forward Supplemental Channel records (as specified
39 by NUM_PILOTS and NUM_SCH) with PILOT_INCL field set to '1'. The base station shall use
40 the same order for the following field as is used for the Forward Supplemental Channel
41 records.

42 CESH_ENCODER_TYPE - Code Combining Soft Handoff Turbo Encoder type.

- 1 The base station shall set this field to '0' if the Turbo Encoder
 2 type to be used on the Forward Supplemental Channel
 3 identified by FOR_SCH_ID and SCCL_INDEX is the default
 4 encoder type. The base station shall set this field to '1' if the
 5 Turbo Encoder to be used is the complementary type.
- 6 FUNDICATED_BCMC_IND - BCMC on fundicated channel Indicator.
- 7 If the channel assignment in this message contains a Forward
 8 Fundicated Channel used for BCMC transmission, the base
 9 station shall set this field to '1'; otherwise, the base station
 10 shall set this field to '0'.
- 11 If FUNDICATED_BCMC_IND field is set to '1', the base station shall include NUM_PILOT
 12 occurrences of the following record:
- 13 FOR_CPCCH_WALSH - The Forward Common Power Control Channel Walsh code
 14 assignment.
 15 The base station shall set this field to the Walsh code
 16 assignment for the Forward Common Power Control Channel.
- 17 FOR_CPCSCH - The Forward Common Power Control Channel Subchannel.
 18 The base station shall set this field to the Forward Common
 19 Power Control Channel Subchannel associated with this base
 20 station.
- 21 RESERVED - Reserved bits.
 22 The base station shall add reserved bits as needed in order to
 23 make the length of the ACTIVE_SET_REC_FIELDS record
 24 equal to an integer number of octets. The base station shall
 25 set these bits to '0'.
- 26 If the CH_IND field is set to '111', the base station shall include the following fields:
- 27 NUM_FOR_SCH - Number of Forward Supplemental Channel records.
 28 If SCH_INCL is set to '0', the base station shall omit this field;
 29 otherwise, the base station shall set this field as follows:
 30 The base station shall set this field to the number of the
 31 Forward Supplemental Channel records need to be updated.
- 32 If NUM_FOR_SCH is included and not equal to '00000', the base station shall include
 33 NUM_FOR_SCH occurrence of the following three fields:
- 34 FOR_SCH_ID - Forward Supplemental Channel identifier.
 35 The base station shall set this field to the identifier of the
 36 Forward Supplemental Channel.
- 37 SCCL_INDEX - Supplemental Channel Code list index.
 38 The base station shall set this field to the index of the record
 39 in the Supplemental Channel Code list.
- 40 FOR_SCH_NUM_BITS_IDX - Forward Supplemental Channel number of information
 41 bits index.

1 If USE_FLEX_NUM_BITS is equal to '0' or if
 2 USE_FLEX_NUM_BITS is equal to '1' and
 3 FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
 4 then the base station shall set this field according to Table
 5 3.7.3.3.2.37-4 to indicate the number of information bits per
 6 frame and the length of the CRC field for the Forward
 7 Supplemental Channel identified by FOR_SCH_ID
 8 corresponding to SCCL_INDEX.

9 If USE_FLEX_NUM_BITS_s is equal to '1' and
 10 FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
 11 then the base station shall set this field to indicate that the
 12 number of information bits per frame for the Forward
 13 Supplemental channel identified by FOR_SCH_ID to be
 14 NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
 15 NUM_BITS_IDX] and the number of CRC bits per frame for
 16 the Forward Supplemental channel identified by FOR_SCH_ID
 17 to be
 18 CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SC
 19 H_NUM_BITS_IDX].

20 NUM_REV_SCH - Number of Reverse Supplemental Channel records.
 21 If SCH_INCL is set to '0', the base station shall omit this field;
 22 otherwise, the base station shall set this field as follows:
 23 The base station shall set this field to the number of the
 24 Reverse Supplemental Channels need to be updated.

25 If NUM_REV_SCH is included and not equal to '00000', the base station shall include
 26 NUM_REV_SCH occurrence of the following three fields:

27 REV_SCH_ID - Reverse Supplemental Channel identifier.
 28 The base station shall set this field to the identifier of the
 29 Reverse Supplemental Channel.

30 REV_WALSH_ID - Reverse Supplemental Channel Walsh cover Identifier.
 31 The base station shall set this field according to Table
 32 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
 33 station is to use when transmitting at the rate specified by
 34 REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
 35 Channel specified by REV_SCH_ID. If only one reverse
 36 supplemental channel is assigned, the base station should set
 37 this field to the default value for the REV_WALSH_ID as
 38 specified in 2.6.4.2.

39 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
 40 index.

41 If USE_FLEX_NUM_BITS is equal to '0' or if
 42 USE_FLEX_NUM_BITS is equal to '1' and
 43 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
 44 the base station shall set this field according to Table
 45 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
 46 number of information bits per frame and the number of CRC
 47 bits per frame, corresponding to REV_WALSH_ID field.

- 1 If USE_FLEX_NUM_BITS is equal to '1' and
 2 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
 3 then the base station shall set the REV_SCH_NUM_BITS_IDX
 4 field to indicate the Reverse Supplemental Channel number of
 5 information bits per frame, corresponding to REV_WALSH_ID
 6 field to be NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 7 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
 8 Channel number of information bits per frame, corresponding
 9 to REV_WALSH_ID field to be to be
 10 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
 11 [REV_SCH_NUM_BITS_IDX].
- 12 NUM_PILOTS - Number of pilots included in the message.
 13 The base station shall set this field to the number of pilots
 14 included in the message. The base station shall set this field
 15 to an integer that is equal to or greater than 1.
- 16 SRCH_OFFSET_INCL - Target pilot channel search window offset included.
 17 If the SRCH_OFFSET field is included in the following records,
 18 the base station shall set this field to '1'; otherwise, the base
 19 station shall set this field to '0'.
- 20 The base station shall include one occurrence of the following record for each of the
 21 NUM_PILOTS pilots included in the message:
- 22 PILOT_PN - Pilot PN sequence offset index.
 23 The base station shall set this field to the pilot PN sequence
 24 offset for this pilot in units of 64 PN chips.
- 25 SRCH_OFFSET - Target pilot channel search window offset.
 26 If SRCH_OFFSET_INCL equals to '1', then the base station
 27 shall set this field to the value shown in Table 2.6.6.2.1-2
 28 corresponding to the search window offset to be used by the
 29 mobile station for this target pilot. Otherwise, the base
 30 station shall omit this field.
- 31 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
 32 The base station shall set this field to '1' if additional pilot
 33 information listed in PILOT_REC_TYPE and RECORD_LEN
 34 fields are included. The base station shall set this field to '0'
 35 if the corresponding pilot is the common pilot and there is no
 36 additional pilot information included.
- 37 PILOT_REC_TYPE - Pilot record type.
 38 If ADD_PILOT_REC_INCL is set to '1', the base station shall
 39 set this field to the PILOT_REC_TYPE value shown in Table
 40 3.7.2.3.2.21-9 corresponding to the type of Pilot Record
 41 specified by this record.
 42 If ADD_PILOT_REC_INCL is set to '0', the base station shall
 43 omit this field.
- 44 RECORD_LEN - Pilot record length.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the number of octets in the type-specific fields
3			of this pilot record.
4			If ADD_PILOT_REC_INCL is set to '0', the base station shall
5			omit this field.
6	Type-specific fields	-	Pilot record type-specific fields.
7			If ADD_PILOT_REC_INCL is set to '1', the base station shall
8			include type-specific fields based on the PILOT_REC_TYPE of
9			this pilot record as described in 3.7.6.1.
10			If ADD_PILOT_REC_INCL is set to '0', the base station shall
11			omit this field.
12	PWR_COMB_IND	-	Power control symbol combining indicator.
13			If this pilot will carry the same closed-loop power control
14			subchannel bits as that of the previous pilot in this message,
15			the base station shall set this field to '1'; otherwise, the base
16			station shall set this field to '0'. The base station shall set
17			this field to '0' in the first record in the pilot list.
18	CODE_CHAN_FCH	-	Code Channel on the Fundamental Channel.
19			If a Radio Configuration associated with Spreading Rate 1 is
20			used, the base station shall set this field to the code channel
21			index (see [2]) that the mobile station is to use on the
22			Fundamental Channel of the Forward Traffic Channel. If a
23			Radio Configuration associated with Spreading Rate 3 is used,
24			the base station shall set this field to the code channel index
25			that the mobile station is to use for the Fundamental Channel
26			on the center SR3 frequency.
27			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
28			station shall set this field in the range 1 to 63 inclusive. If
29			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
30			station shall set this field in the range 1 to 127 inclusive. If
31			Radio Configuration 7 or 9 is used, the base station shall set
32			this field in the range 1 to 255 inclusive.
33	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
34			Channel.
35			If a Radio Configuration associated with Spreading Rate 1 is
36			used, the base station shall set this field to the index of the
37			Quasi-orthogonal function (see [2]). If a Radio Configuration
38			associated with Spreading Rate 3 is used, the base station
39			shall set this field to the index of the Quasi-orthogonal
40			function on the center SR3 frequency.

- 1 CODE_CHAN_DCCH - Code channel on the Dedicated Control Channel.
- 2 If a Radio Configuration associated with Spreading Rate 1 is
- 3 used, the base station shall set this field to the code channel
- 4 index (see [2]), in the range of 1 to 127 inclusive, that the
- 5 mobile station is to use on the Dedicated Control Channel of
- 6 the Forward Traffic Channel. If a Radio Configuration
- 7 associated with Spreading Rate 3 is used, the base station
- 8 shall set this field to the code channel index in the range of 1
- 9 to 255 inclusive, that the mobile station is to use for the
- 10 Dedicated Control Channel on the center SR3 frequency.
- 11 If Radio Configuration 3 or 5 (see [2]) is used, the base station
- 12 shall set this field in the range 1 to 63 inclusive. If Radio
- 13 Configuration 4, 6 or 8 is used, the base station shall set this
- 14 field in the range 1 to 127 inclusive. If Radio Configuration 7
- 15 or 9 is used, the base station shall set this field in the range 1
- 16 to 255 inclusive.
- 17 QOF_MASK_ID_DCCH - Quasi-orthogonal function index on the Dedicated Control
- 18 Channel.
- 19 If a Radio Configuration associated with Spreading Rate 1 is
- 20 used, the base station shall set this field to the index of the
- 21 Quasi-orthogonal function (see [2]). If a Radio Configuration
- 22 associated with Spreading Rate 1 is used, the base station
- 23 shall set this field to the index of the Quasi-orthogonal
- 24 function on the center SR3 frequency.
- 25 NUM_SCH - Number of Supplemental Channel records.
- 26 The base station shall set this field to the number of the
- 27 Supplemental Channel records need to be updated.
- 28 If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH
- 29 occurrence of the following fields:
- 30 FOR_SCH_ID - Forward Supplemental Channel identifier.
- 31 The base station shall set this field to the identifier of the
- 32 Forward Supplemental Channel pertaining to this record.
- 33 SCCL_INDEX - Supplemental Channel Code list index.
- 34 The base station shall set this field to the index of the record
- 35 in the Supplemental Channel Code List Table.
- 36 PILOT_INCL - The corresponding pilot included in Supplemental Channel
- 37 Active Set indicator.
- 38 The base station shall set this field to '1' if the corresponding
- 39 pilot is included in the Active Set of Supplemental Channel;
- 40 otherwise, the base station shall set this field to '0'.
- 41 CODE_CHAN_SCH - Code Channel on the Supplemental Channel.
- 42 If SCH_INCL is set to '0', the base station shall omit this field;
- 43 otherwise, the base station shall set this field as follows:

1 The base station shall set this field to the code channel index
2 (see [2]) that the mobile station is to use on the Supplemental
3 Channel of the Forward Traffic Channel indexed by
4 SCCL_INDEX.

5 QOF_MASK_ID_SCH - Quasi-orthogonal function index on the Supplemental
6 Channel.

7 If SCH_INCL is set to '0', the base station shall omit this field;
8 otherwise, the base station shall set this field as follows:

9 The base station shall set this field to the index of the Quasi-
10 orthogonal function (see [2]).

11 3X_FCH_INFO_INCL - 3X Fundamental Channel information included indicator.

12 If the 3X Fundamental Channel information is included, the
13 base station shall set this field to '1'; otherwise, the base
14 station shall set this field to '0'.

15 3X_DCCH_INFO_INCL - 3X Dedicated Control Channel information included indicator.

16 If the 3X Dedicated Control Channel information is included,
17 the base station shall set this field to '1'; otherwise, the base
18 station shall set this field to '0'.

19 The base station shall include NUM_PILOTS occurrences of the following record if
20 3X_FCH_INFO_INCL or 3X_DCCH_INFO_INCL is set to '1'. The base station shall use the
21 same order for the following fields as is used for the PILOT_PN fields listed in this message.

22 3X_FCH_LOW_INCL - FCH code channel on the lowest SR3 frequency included
23 indicator.

24 If 3X_FCH_INFO_INCL is set to '0', the base station shall set
25 omit this field; otherwise, the base station shall set this field
26 as follows:

27 If the Fundamental Channel on the lowest SR3 frequencies
28 has a different code channel than the Fundamental Channel
29 on the center SR3 frequency, the base station shall set this
30 field to '1'; otherwise, the base station shall set this field to '0'.

31 QOF_MASK_ID_FCH_LOW - QOF index for the Fundamental Channel on the lowest
32 SR3 frequency.

33 If 3X_FCH_LOW_INCL is included and set to '1', the base
34 station shall set this field as follows; otherwise, the base
35 station shall omit this field:

36 The base station shall set this field to the index of the Quasi-
37 orthogonal function (see [2]) corresponding to the QOF index
38 for the Fundamental Channel on the lowest SR3 frequency.

39 CODE_CHAN_FCH_LOW - Code channel for the Fundamental Channel on the lowest
40 SR3 frequency.

41 If 3X_FCH_LOW_INCL is included and set to '1', the base
42 station shall set this field as follows; otherwise, the base
43 station shall omit this field:

1		The base station shall set this field to the code channel index
2		(see [2]) that the mobile station is to use on the Fundamental
3		Channel on the lowest SR3 frequency. If Radio Configuration
4		6 or 8 is used, the base station shall set this field in the range
5		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
6		base station shall set this field in the range 1 to 255 inclusive.
7	3X_FCH_HIGH_INCL	– FCH code channel on the highest SR3 frequency included
8		indicator.
9		If 3X_FCH_INFO_INCL is set to '0', the base station shall omit
10		this field; otherwise, the base station shall set this field as
11		follows:
12		If the Fundamental Channel on the highest SR3 frequencies
13		has a different code channel than the Fundamental Channel
14		on the center SR3 frequency, the base station shall set this
15		field to '1'; otherwise, the base station shall set this field to '0'.
16	QOF_MASK_ID_FCH_HIGH	– QOF index for the Fundamental Channel on the
17		highest SR3 frequency.
18		If 3X_FCH_HIGH_INCL is included and set to '1', the base
19		station shall set this field as follows; otherwise, the base
20		station shall omit this field:
21		The base station shall set this field to the index of the Quasi-
22		orthogonal function (see [2]) corresponding to the QOF index
23		for the Fundamental Channel on the highest SR3 frequency.
24	CODE_CHAN_FCH_HIGH	– Code channel for the Fundamental Channel on the highest
25		SR3 frequency.
26		If 3X_FCH_HIGH_INCL is included and set to '1', the base
27		station shall set this field as follows; otherwise, the base
28		station shall omit this field:
29		The base station shall set this field to the code channel index
30		(see [2]) that the mobile station is to use on the Fundamental
31		Channel on the highest SR3 frequency. If Radio
32		Configuration 6 or 8 is used, the base station shall set this
33		field in the range 1 to 127 inclusive. If Radio Configuration 7
34		or 9 is used, the base station shall set this field in the range 1
35		to 255 inclusive.
36	3X_DCCH_LOW_INCL	– DCCH code channel on the lowest SR3 frequency included
37		indicator.
38		If 3X_DCCH_INFO_INCL is set to '0', the base station shall
39		omit this field; otherwise, the base station shall set this field
40		as follows:
41		If the Dedicated Control Channel on the lowest SR3
42		frequencies has a different code channel than the Dedicated
43		Control Channel on the center SR3 frequency, the base
44		station shall set this field to '1'; otherwise, the base station
45		shall set this field to '0'.
46	QOF_MASK_ID_DCCH_LOW	– QOF index for the Dedicated Control Channel on the
47		lowest SR3 frequency.

1 If 3X_DCCH_LOW_INCL is included and set to '1', the base
2 station shall set this field as follows; otherwise, the base
3 station shall omit this field:

4 The base station shall set this field to the index of the Quasi-
5 orthogonal function (see [2]) corresponding to the QOF index
6 for the Dedicated Control Channel on the lowest SR3
7 frequency.

8 CODE_CHAN_DCCH_LOW - Code channel for the Dedicated Control Channel on the
9 lowest SR3 frequency.

10 If 3X_DCCH_LOW_INCL is included and set to '1', the base
11 station shall set this field as follows; otherwise, the base
12 station shall omit this field:

13 The base station shall set this field to the code channel index
14 (see [2]) that the mobile station is to use on the Dedicated
15 Control Channel on the lowest SR3 frequency. If Radio
16 Configuration 6 or 8 is used, the base station shall set this
17 field in the range 1 to 127 inclusive. If Radio Configuration 7
18 or 9 is used, the base station shall set this field in the range 1
19 to 255 inclusive.

20 3X_DCCH_HIGH_INCL - DCCH code channel on the highest SR3 frequency included
21 indicator.

22 If 3X_DCCH_INFO_INCL is set to '0', the base station shall
23 omit this field; otherwise, the base station shall set this field
24 as follows:

25 If the Dedicated Control Channel on the highest SR3
26 frequencies has a different code channel than the Dedicated
27 Control Channel on the center SR3 frequency, the base
28 station shall set this field to '1'; otherwise, the base station
29 shall set this field to '0'.

30 QOF_MASK_ID_DCCH_HIGH - QOF index for the Dedicated Control Channel on the
31 highest SR3 frequency.

32 If 3X_DCCH_HIGH_INCL is included and set to '1', the base
33 station shall set this field as follows; otherwise, the base
34 station shall omit this field:

35 The base station shall set this field to the index of the Quasi-
36 orthogonal function (see [2]) corresponding to the QOF index
37 for the Dedicated Control Channel on the highest SR3
38 frequency.

39 CODE_CHAN_DCCH_HIGH - Code channel for the Dedicated Control Channel on the
40 highest SR3 frequency.

41 If 3X_DCCH_HIGH_INCL is included and set to '1', the base
42 station shall set this field as follows; otherwise, the base
43 station shall omit this field:

- 1 The base station shall set this field to the code channel index
2 (see [2]) that the mobile station is to use on the Dedicated
3 Control Channel on the highest SR3 frequency. If Radio
4 Configuration 6 or 8 is used, the base station shall set this
5 field in the range 1 to 127 inclusive. If Radio Configuration 7
6 or 9 is used, the base station shall set this field in the range 1
7 to 255 inclusive.
- 8 **3X_SCH_INFO_INCL** - 3X Supplemental Channel information included indicator.
9 If SCH_INCL is set to '0', the base station shall omit this field;
10 otherwise, the base station shall set this field as follows:
11 If the 3X Supplemental Channel information is included, the
12 base station shall set this field to '1'; otherwise, the base
13 station shall set this field to '0'.
- 14 The base station shall include NUM_SCH occurrences of the following seven fields record if
15 3X_SCH_INFO_INCL is included and set to '1'.
- 16 **FOR_SCH_ID** - Forward Supplemental Channel identifier.
17 The base station shall set this field the identifier of the
18 Forward Supplemental Channel pertaining to this record.
- 19 **3X_SCH_LOW_INCL** - SCH code channel on the lowest SR3 frequency included
20 indicator.
21 If the Supplemental Channel on the lowest SR3 frequencies
22 has a different code channel than the Supplemental Channel
23 on the center SR3 frequency, the base station shall set this
24 field to '1'; otherwise, the base station shall set this field to '0'.
- 25 **QOF_MASK_ID_SCH_LOW** - QOF index for the Supplemental Channel on the lowest
26 SR3 frequency.
27 If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
28 this field; otherwise, the base station shall set this field as
29 follows:
30 The base station shall set this field to the index of the Quasi-
31 orthogonal function (see [2]) corresponding to the QOF index
32 for the Supplemental Channel on the lowest SR3 frequency.
- 33 **CODE_CHAN_SCH_LOW** - Code channel for the Supplemental Channel on the lowest
34 SR3 frequency.
35 If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
36 this field; otherwise, the base station shall set this field as
37 follows:
38 The base station shall set this field to the code channel index
39 (see [2]) that the mobile station is to use on the Supplemental
40 Channel on the lowest SR3 frequency. If Radio Configuration
41 6 or 8 is used, the base station shall set this field in the range
42 1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
43 base station shall set this field in the range 1 to 255 inclusive.
- 44 **3X_SCH_HIGH_INCL** - SCH code channel on the highest SR3 frequency included
45 indicator.

1 If the Supplemental Channel on the highest SR3 frequencies
2 has a different code channel than the Supplemental Channel
3 on the center SR3 frequency, the base station shall set this
4 field to '1'; otherwise, the base station shall set this field to '0'.

5 QOF_MASK_ID_SCH_HIGH – QOF index for the Supplemental Channel on the highest
6 SR3 frequency.

7 If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
8 this field; otherwise, the base station shall set this field as
9 follows:

10 The base station shall set this field to the index of the Quasi-
11 orthogonal function (see [2]) corresponding to the QOF index
12 for the Supplemental Channel on the highest SR3 frequency.

13 CODE_CHAN_SCH_HIGH– Code channel for the Supplemental Channel on the highest
14 SR3 frequency.

15 If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
16 this field; otherwise, the base station shall set this field as
17 follows:

18 The base station shall set this field to the code channel index
19 (see [2]) that the mobile station is to use on the Supplemental
20 Channel on the highest SR3 frequency. If Radio
21 Configuration 6 or 8 is used, the base station shall set this
22 field in the range 1 to 127 inclusive. If Radio Configuration 7
23 or 9 is used, the base station shall set this field in the range 1
24 to 255 inclusive.

25 CCSH_INCLUDED - Code Combining Soft Handoff information included indicator.

26 The base station shall set this field to '1' if Code Combining
27 Soft Handoff information is included in this message;
28 otherwise, the base station shall set this field to '0'.

29 USE_CCSH_ENCODER_TIME - Use Code Combining Soft Handoff Turbo Encoder
30 swapping action time indicator.

31 If the CSH_INCLUDED field is set to '0', the base station
32 shall omit this field; otherwise, the base station shall include
33 this field and set it as follows.

34 If an explicit action time at which Turbo Encoder types
35 (CCSH_ENCODER_TYPE) included in this message takes
36 effect is specified, the base station shall set this field to '1';
37 otherwise, the base station shall set this field to '0'.

38 CCSH_ENCODER_ACTION_TIME - Code Combining Soft Handoff Turbo Encoder
39 swapping action time.

40 If the USE_CCSH_ENCODER_TIME field is included and set
41 to '1', the base station shall set this field to the System Time
42 minus $FRAME_OFFSET_s \times 1.25$ ms, in units of 80ms (modulo
43 64), at which Turbo Encoder types included in this message
44 are to take effect; otherwise, the base station shall omit this
45 field.

1 If the CCSH_INCLUDED field is set to '1', the base station shall include one occurrence of
 2 the following one field for each of the Forward Supplemental Channel records (as specified
 3 by NUM_PILOTS and NUM_SCH) with PILOT_INCL field set to '1'. The base station shall use
 4 the same order for the following field as is used for the Forward Supplemental Channel
 5 records.

6 CCSH_ENCODER_TYPE - Code Combining Soft Handoff Turbo Encoder type.

7 The base station shall set this field to '0' if the Turbo Encoder
 8 type to be used on the Forward Supplemental Channel
 9 identified by FOR_SCH_ID and SCCL_INDEX is the default
 10 encoder type. The base station shall set this field to '1' if the
 11 Turbo Encoder to be used is the complementary type.

12 FUNDICATED_BCMC_IND - BCMC on fundicated channel Indicator.

13 If the channel assignment in this message contains a Forward
 14 Fundicated Channel used for BCMC transmission, the base
 15 station shall set this field to '1'; otherwise, the base station
 16 shall set this field to '0'.

17 REV_FCH_ASSIGNED - Reverse FCH channel assigned indicator.

18 If the FUNDICATED_BCMC_IND field is set to '0', the base
 19 station shall omit this field; otherwise, the base station shall
 20 include this field and set it as follows:

21 If the reverse FCH is assigned in this message, the base
 22 station shall set this field to '1'; otherwise, the base station
 23 shall set this field to '0'.

24 ADD_PLCM_FOR_FCH_INCL - Additional PLCM for forward FCH included indicator.

25 If the FUNDICATED_BCMC_IND field is set to '0', the base
 26 station shall omit this field; otherwise, the base station shall
 27 include this field and set it as follows:

28 If the additional PLCM for forward FCH is included in this
 29 message, the base station shall set this field to '1'; otherwise,
 30 the base station shall set this field to '0'.

31 ADD_PLCM_FOR_FCH_TYPE - The Additional Public Long Code Mask for forward FCH
 32 type indicator.

33 If ADD_PLCM_FOR_FCH_INCL not included or is included
 34 and is set to '0', the base station shall omit this field;
 35 otherwise, the base station shall include this field and set it
 36 as follows.

37 The base station shall set this field to '1' to indicate PLCM
 38 specified by the base station. The field value '0' is reserved.

39 ADD_PLCM_FOR_FCH_39 - The 39 LSB bits of the additional Public Long Code Mask
 40 for forward FCH.

41 If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
 42 '1', the base station shall include this field and set it to the 39
 43 least significant bits of the public long code mask used by the
 44 mobile station; otherwise, the base station shall omit this
 45 field.

- 1 FOR_CPCCH_INFO_INCL – CPCCH information included indicator.
 2 If the FUNDICATED_BCNC_IND field is set to ‘0’, the base
 3 station shall omit this field; otherwise, the base station shall
 4 include this field and set it as follows:
 5 If the F-CPCCH information is included in this message, the
 6 base station shall set this field to ‘1’; otherwise, the base
 7 station shall set this field to ‘0’.
- 8 If FOR_CPCCH_INFO_INCL field is included and is set to ‘1’, the base station shall include
 9 NUM_PILOT occurrences of the following record:
- 10 FOR_CPCCH_WALSH - The Forward Common Power Control Channel Walsh code
 11 assignment.
 12 The base station shall set this field to the Walsh code
 13 assignment for the Forward Common Power Control Channel.
- 14 FOR_CPCSCH - The Forward Common Power Control Channel Subchannel.
 15 The base station shall set this field to the Forward Common
 16 Power Control Channel Subchannel associated with this base
 17 station.
- 18 RESERVED - Reserved bits.
 19 The base station shall add reserved bits as needed in order to
 20 make the length of the ACTIVE_SET_REC_FIELDS record
 21 equal to an integer number of octets. The base station shall
 22 set these bits to ‘0’.
- 23 If the CH_IND field is set to ‘000’, the base station shall include the following fields:
- 24 EXT_CH_IND - Extended Channel Indicator.
 25 The base station shall set this field as shown in
 26 Table2.7.1.3.2.4-11.
- 27 RESERVED - Reserved bits for octet alignment.
 28 Reserved bits to align the octets between ACTIVE_SET-
 29 _REC_FIELDS and EXT_ACTIVE_SET_REC_FIELDS so that
 30 the latter has a length of ACTIVE_SET_REC_LEN-1 bytes.
- 31 EXT_ACTIVE_SET_REC_FIELDS - Extended Active Set record fields.
 32 The Active Set record fields are determined by the value of
 33 EXT_CH_IND, as described below.
- 34 The EXT_ACTIVE_SET_REC_FIELDS shall be:
- 35 PDCH_CONTROL_HOLD - Packet Data Channel Control Hold mode indication.
 36 The base station shall set this field to ‘1’ to instruct the
 37 mobile station to transition to the Packet Data Channel
 38 Control Hold Mode.
 39 If EXT_CH_IND signals the allocation of a F-FCH this field
 40 shall be set to ‘0’.
- 41 FULL_CI_FEEDBACK_IND - Full C/I feedback rate indicator.

- 1 If the mobile station is to send full C/I feedback every 1.25
 2 ms, the base station shall set this field to '1'. If the mobile
 3 station is to transmit full C/I feedback every 20 ms, the base
 4 station shall set this field to '0'.
- 5 **FOR_CPCCH_RATE** - The Forward Common Power Control Channel Rate.
 6 If EXT_CH_IND equals '01000', the base station shall include
 7 this field and shall set it as follows; otherwise, the base
 8 station shall omit this field.
 9 The base station shall set this field to the rate of the Forward
 10 Common Power Control Channel as specified in Table
 11 3.7.2.3.2.21-12. See [2].
- 12 **FOR_CPCCH_UPDATE_RATE** - Forward Common Power Control update rate.
 13 If EXT_CH_IND equals '01000', the base station shall include
 14 this field and shall set it as follows; otherwise, the base
 15 station shall omit this field.
 16 The base station shall set this field to the update rate of the
 17 Forward Common Power Control as specified in Table
 18 3.7.2.3.2.21-13. See [2].
- 19 **REV_CQICH_FRAME_OFFSET** - Reverse Channel Quality Indicator Channel Frame
 20 Offset.
 21 The C/I feedback reports on the Reverse Channel Quality
 22 Indicator Channel are delayed REV_CQICH_FRAME_OFFSET
 23 × 1.25 ms relative to system timing (see [2]).
 24 The base station shall set this field to the Reverse Channel
 25 Quality Indicator Channel frame offset.
- 26 **REV_CQICH_REPS** - Reverse Channel Quality Indicator Channel repetition factor.
 27 The base station shall set this field according to Table
 28 3.7.3.3.2.49-1.
- 29 **REV_ACKCH_REPS** - Reverse Acknowledgment Channel repetition factor.
 30 The base station shall set this field according to Table
 31 3.7.3.3.2.49-2.
- 32 **NUM_FOR_SCH** - Number of Forward Supplemental Channel records.
 33 If EXT_CH_IND does not signal the allocation of neither a F-
 34 FCH nor a F-DCCH, or if SCH_INCL is set to '0', the base
 35 station shall omit this field; otherwise, the base station shall
 36 include this field and shall set it as follows:
 37 The base station shall set this field to the number of Forward
 38 Supplemental Channel records that need to be updated.
- 39 If NUM_FOR_SCH is included and not equal to '00000', the base station shall include
 40 NUM_FOR_SCH occurrence of the following three fields:
- 41 **FOR_SCH_ID** - Forward Supplemental Channel identifier.
 42 The base station shall set this field to the identifier of the
 43 Forward Supplemental Channel.

- 1 SCCL_INDEX - Supplemental Channel Code list index.
2 The base station shall set this field to the index of the record
3 in the Supplemental Channel Code list.
- 4 FOR_SCH_NUM_BITS_IDX - Forward Supplemental Channel number of information
5 bits index.
6 If USE_FLEX_NUM_BITS is equal to '0' or if
7 USE_FLEX_NUM_BITS is equal to '1' and
8 FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
9 then the base station shall set this field according to Table
10 3.7.3.3.2.37-4 to indicate the number of information bits per
11 frame and the length of the CRC field for the Forward
12 Supplemental Channel identified by FOR_SCH_ID
13 corresponding to SCCL_INDEX.
14 If USE_FLEX_NUM_BITS_s is equal to '1' and
15 FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
16 then the base station shall set this field to indicate that the
17 number of information bits per frame for the Forward
18 Supplemental channel identified by FOR_SCH_ID to be
19 NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
20 NUM_BITS_IDX] and the number of CRC bits per frame for
21 the Forward Supplemental channel identified by FOR_SCH_ID
22 to be
23 CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SC
24 H_NUM_BITS_IDX].
- 25 NUM_REV_SCH - Number of Reverse Supplemental Channel records.
26 If SCH_INCL is set to '0', the base station shall omit this field;
27 otherwise, the base station shall include this field and shall
28 set it as follows:
29 The base station shall set this field to the number of the
30 Reverse Supplemental Channels need to be updated.
31 If NUM_REV_SCH is included and not equal to '00000', the base station shall include
32 NUM_REV_SCH occurrence of the following three fields:
- 33 REV_SCH_ID - Reverse Supplemental Channel identifier.
34 The base station shall set this field to the identifier of the
35 Reverse Supplemental Channel.
- 36 REV_WALSH_ID - Reverse Supplemental Channel Walsh cover Identifier.
37 The base station shall set this field according to Table
38 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
39 station is to use when transmitting at the rate specified by
40 REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
41 Channel specified by REV_SCH_ID. If only one reverse
42 supplemental channel is assigned, the base station should set
43 this field to the default value for the REV_WALSH_ID as
44 specified in 2.6.4.2.
- 45 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
46 index.

- 1 If USE_FLEX_NUM_BITS is equal to '0' or if
2 USE_FLEX_NUM_BITS is equal to '1' and
3 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
4 the base station shall set this field according to Table
5 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
6 number of information bits per frame and the CRC bits per
7 frame, corresponding to REV_WALSH_ID field.
- 8 If USE_FLEX_NUM_BITS is equal to '1' and
9 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
10 then the base station shall set this field to indicate the
11 Reverse Supplemental Channel number of information bits
12 per frame, corresponding to REV_WALSH_ID field to be
13 NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
14 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
15 Channel number of CRC bits per frame corresponding to
16 REV_WALSH_ID field to be
17 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
18 [REV_SCH_NUM_BITS_IDX].
- 19 NUM_PILOTS - Number of pilots included in the message.
20 The base station shall set this field to the number of pilots
21 included in the message. The base station shall set this field
22 to an integer that is equal to or greater than 1.
- 23 SRCH_OFFSET_INCL - Target pilot channel search window offset included.
24 If the SRCH_OFFSET field is included in the following records,
25 the base station shall set this field to '1'; otherwise, the base
26 station shall set this field to '0'.
- 27 PDCH_GROUP_IND_INCL- Packet Data Channel Group Indicator included flag.
28 The base station shall set this field to '1' if the
29 PDCH_GROUP_IND fields are included; otherwise, the base
30 station shall set this field to '0'.
31 If this field is set to '0', the mobile station is to use
32 PWR_COMB_IND to determine whether the softer or soft
33 reselection parameters are used when re-pointing between
34 pilots in its Active Set (see [3]).
- 35 FOR_PDCH_PARMS_INCL - Indicator of the inclusion of Forward Packet Data Channel
36 configuration fields.
37 The base station shall set this field to '1' if the Forward Packet
38 Data Channel configuration fields are included; otherwise, the
39 base station shall set this field to '0'.
- 40 FOR_PDCH_RLGAIN_INCL - Forward Packet Data Channel parameters related to
41 reverse link adjustment gains included indicator.
42 If FOR_PDCH_PARMS_INCL is omitted, or if it is included and
43 set to '0', the base station shall omit this field; otherwise, the
44 base station shall include this field, and set it as follows.
45 The base station shall set this field to '1' if the following F-
46 PDCH gain related fields are included in this message;
47 otherwise, the base station shall set this field to '0'.

- 1 RLGAIN_ACKCH_PILOT - Reverse Acknowledgment Channel to pilot adjustment gain.
 2 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
 3 set to '0', the base station shall omit this field; otherwise, the
 4 base station shall include this field, and set it as follows.
 5 The base station shall set this field to the Reverse
 6 Acknowledgment Channel to pilot adjustment gain expressed
 7 as a two's complement value in units of 0.125 dB (see [2]).
- 8 RLGAIN_CQICH_PILOT - Reverse Channel Quality Indicator Channel to pilot
 9 adjustment gain.
 10 If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and
 11 set to '0', the base station shall omit this field; otherwise, the
 12 base station shall include this field, and set it as follows.
 13 The base station shall set this field to the Reverse Channel
 14 Quality Indicator Channel to pilot adjustment gain expressed
 15 as a two's complement value in units of 0.125 dB (see [2]).
- 16 NUM_SOFT_SWITCHING_FRAMES - Number of frames for R-CQICH soft switching.
 17 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
 18 shall omit this field; otherwise, the base station shall include
 19 this field and set it as follows:
 20 The base station shall set this field to the duration of the cell
 21 switching period, in units of 20 ms, minus one, during which
 22 the mobile station is to transmit the cell switch sequence on
 23 the R-CQICH channel when it switches between two pilots
 24 which are in different groups.
 25 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 26 indicated by PDCH_GROUP_IND; otherwise, they are
 27 indicated by PWR_COMB_IND.
- 28 NUM_SOFTSWITCHING_FRAMES - Number of frames for R-CQICH softer
 29 switching.
 30 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
 31 shall omit this field; otherwise, the base station shall include
 32 this field and set it as follows:
 33 The base station shall set this field to the duration of the cell
 34 switching period, in units of 20 ms, minus one, during which
 35 the mobile station is to transmit the cell switch sequence on
 36 the R-CQICH channel when it switches between two pilots
 37 which are in the same group.
 38 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 39 indicated by PDCH_GROUP_IND; otherwise, they are
 40 indicated by PWR_COMB_IND.
- 41
- 42 NUM_SOFT_SWITCHING_SLOTS - Number of slots per frame for R-CQICH soft switching.
 43 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
 44 shall omit this field; otherwise, the base station shall include
 45 this field and set it as follows:

1 The base station shall set this field to the duration of the cell
 2 switching slots within a switching frame, in units of 1.25 ms
 3 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 4 station is to transmit the cell switch indication by using
 5 Walsh cover of target on the R-CQICH when it switches
 6 between two pilots which are in different groups.

7 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 8 indicated by PDCH_GROUP_IND; otherwise, they are
 9 indicated by PWR_COMB_IND.

10 NUM_SOFTEN_SWITCHING_SLOTS - Number of slots per frame for R-CQICH softer
 11 switching.

12 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
 13 shall omit this field; otherwise, the base station shall include
 14 this field and set it as follows:

15 The base station shall set this field to the duration of the cell
 16 switching slots within a switching frame, in units of 1.25 ms
 17 as specified in Table 3.7.2.3.2.21-10, during which the mobile
 18 station is to transmit the cell switch indication by using
 19 Walsh cover of target on the R-CQICH when it switches
 20 between two pilots which are in the same group.

21 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 22 indicated by PDCH_GROUP_IND; otherwise, they are
 23 indicated by PWR_COMB_IND.

24 CHM_SWITCHING_PARAMS_INCL - Control Hold Mode fields included indicator.

25 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
 26 shall omit this field; otherwise, the base station shall include
 27 this field and set it as follows.

28 The base station shall set this field to '1' if the switching
 29 parameters for Control Hold Mode are included; otherwise,
 30 the base station shall set this field to '0'.

31 NUM_SOFT_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH soft
 32 switching while in Control Hold.

33 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',
 34 the base station shall omit this field; otherwise, the base
 35 station shall include this field and set it as follows:

36 The base station shall set this field to the duration of the cell
 37 switching period, in units of 20 ms, minus one, during which
 38 the mobile station, while in Control Hold, is to transmit the
 39 cell switch sequence on the R-CQICH when it switches
 40 between two pilots which are in different groups.

41 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 42 indicated by PDCH_GROUP_IND; otherwise, they are
 43 indicated by PWR_COMB_IND.

44 NUM_SOFTEN_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH softer
 45 switching while in Control Hold.

1 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',
2 the base station shall omit this field; otherwise, the base
3 station shall include this field and set it as follows:

4 The base station shall set this field to the duration of the cell
5 switching period, in units of 20 ms, minus one, during which
6 the mobile station, while in Control Hold, is to transmit the
7 cell switch sequence on the R-CQICH when it switches
8 between two pilots which are in the same group.

9 If PDCH_GROUP_IND_INCL is set to '1', these groups are
10 indicated by PDCH_GROUP_IND; otherwise, they are
11 indicated by PWR_COMB_IND.

12 NUM_SOFT_SWITCHING_SLOTS_CHM - Number of slots per frame for R-CQICH soft
13 switching while in Control Hold.

14 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',,
15 the base station shall omit this field; otherwise, the base
16 station shall include this field and set it as follows:

17 The base station shall set this field to the duration of the cell
18 switching slots within a switching frame, in units of 1.25 ms
19 as specified in Table 3.7.2.3.2.21-10, during which the mobile
20 station, while in Control Hold, is to transmit the cell switch
21 indication by using Walsh cover of target on the R-CQICH
22 when it switches between two pilots which are in different
23 groups.

24 If PDCH_GROUP_IND_INCL is set to '1', these groups are
25 indicated by PDCH_GROUP_IND; otherwise, they are
26 indicated by PWR_COMB_IND.

27 NUM_SOFTER_SWITCHING_SLOTS_CHM - Number of slots per frame for R-CQICH
28 softer switching while in Control Hold.

29 If CHM_SWITCHING_PARAMS_INCL is omitted or equal to '0',,
30 the base station shall omit this field; otherwise, the base
31 station shall include this field and set it as follows:

32 The base station shall set this field to the duration of the cell
33 switching slots within a switching frame, in units of 1.25 ms
34 as specified in Table 3.7.2.3.2.21-10, during which the mobile
35 station, while in Control Hold, is to transmit the cell switch
36 indication by using Walsh cover of target on the R-CQICH
37 when it switches between two pilots which are in the same
38 group.

39 If PDCH_GROUP_IND_INCL is set to '1', these groups are
40 indicated by PDCH_GROUP_IND; otherwise, they are
41 indicated by PWR_COMB_IND.

42 PDCH_SOFT_SWITCHING_DELAY - F-PDCH Soft Switching Delay.

43 If FOR_PDCH_PARAMS_INCL is equal to '0', the base station
44 shall omit this field; otherwise, the base station shall include
45 this field and set it as follows:

- 1 The base station shall set this field to the minimum
 2 interruption seen by the mobile station, in units of 10 ms,
 3 minus one, when the mobile station is to transmit the cell
 4 switch sequence on the R-CQICH when it switches between
 5 two pilots which are in different groups.
- 6 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 7 indicated by PDCH_GROUP_IND; otherwise, they are
 8 indicated by PWR_COMB_IND.
- 9 PDCH_SOFTEN_SWITCHING_DELAY - F-PDCH Soft Switching Delay.
- 10 If FOR_PDCH_PARMS_INCL is equal to '0', the base station
 11 shall omit this field; otherwise, the base station shall include
 12 this field and set it as follows:
- 13 The base station shall set this field to the minimum
 14 interruption seen by the mobile station, in units of 10 ms,
 15 minus one, when the mobile station is to transmit the cell
 16 switch sequence on the R-CQICH when it switches between
 17 two pilots which are in the same group.
- 18 If PDCH_GROUP_IND_INCL is set to '1', these groups are
 19 indicated by PDCH_GROUP_IND; otherwise, they are
 20 indicated by PWR_COMB_IND.
- 21 FOR_PDCH_COMMON_PARMS - Common Forward Packet Data Channel configuration
 22 fields indicator.
- 23 If FOR_PDCH_PARMS_INCL is set to '1', the base station shall
 24 include this field and set it as follows; otherwise, the base
 25 station shall omit this field.
- 26 The base station shall set this field to '1' if the following
 27 Forward Packet Data Channel configuration fields
 28 (WALSH_TABLE_ID, NUM_PDCCH, and FOR_PDCCH_WALSH)
 29 are common for all the pilots in the Active Set; otherwise, it
 30 shall be set to '0'.
- 31 WALSH_TABLE_ID - The index of the Walsh Table used.
- 32 If FOR_PDCH_COMMON_PARMS is included and set to '1',
 33 the base station shall include this field and set it as follows;
 34 otherwise, the base station shall omit this field.
- 35 The base station shall set this field to the index of the Walsh
 36 Table being used by the Packet Data Channel. (See [3]).
- 37 NUM_PDCCH - The number of Packet Data Control Channels supported.
- 38 If FOR_PDCH_COMMON_PARMS is included and set to '1',
 39 the base station shall include this field and set it as follows;
 40 otherwise, the base station shall omit this field.

1 The base station shall set this field to '000' if the pilot
 2 supports one Packet Data Control Channel. The base station
 3 shall set this field to '001' if the pilot supports two Packet
 4 Data Control Channels. The base station shall not set this
 5 field to any other value.

6 The base station shall include NUM_PDCCH+1 occurrences of the following one-field
 7 record:

8 FOR_PDCCH_WALSH - Forward Packet Data Control Channel Walsh code
 9 assignment.

10 If FOR_PDCH_COMMON_PARMS is included and set to '1',
 11 the base station shall include this field and set it as follows;
 12 otherwise, the base station shall omit this field.

13 The base station shall set this field to the Walsh code
 14 assignment for the Forward Packet Data Control Channel.

15 If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
 16 shall be included first, followed by the Walsh code for
 17 PDCCH1.

18 TX_DISABLED_TIMER_INCL - Transmitter disabled timer included flag.

19 The base station shall set this field to '1' if the following
 20 TX_DISABLED_TIMER field is included; otherwise, the base
 21 station shall set this field to '0'.

22 TX_DISABLED_TIMER - Transmitter disabled timer.

23 If TX_DISABLED_TIMER_INCL is equal to '0', the base station
 24 shall omit this field; otherwise, the base station shall include
 25 this field and set it as follows:

26 The base station shall set this field to the maximum time, in
 27 units of 20ms, the mobile station's transmitter can be
 28 disabled before the MAC Layer is to perform Forward Packet
 29 Data Channel initialization (see [3]).

30 FOR_GCH_ASSIGNED - Forward Grant Channel assignment indicator.

31 If EXT_CH_IND signals the allocation of a R-PDCH, the base
 32 station shall include this field and shall set it as follows;
 33 otherwise, the base station shall omit this field.

34 The base station shall set this field to '1' if the mobile station
 35 is to listen to grants on the Forward Grant Channel;
 36 otherwise, the base station shall set this field to '0' (see [3]).

37 FOR_RCCH_ASSIGNED - Forward Rate Control Channel assignment indicator.

38 If EXT_CH_IND signals the allocation of a R-PDCH, the base
 39 station shall include this field and shall set it as follows;
 40 otherwise, the base station shall omit this field.

1		The base station shall set this field to '1' if the mobile station
2		is to follow rate control indicators on the Forward Rate
3		Control Channel; otherwise, the base station shall set this
4		field to '0' (see [3]).
5	FOR_RCCH_DRC_MODE -	Forward Rate Control Channel Dedicated Rate Control Mode
6		Indicator.
7		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
8		set to '0', the base station shall omit this field; otherwise, the
9		base station shall include this field and set it as follows.
10		The base station shall set this field to '1' if the dedicated rate
11		control mode is being used on the Forward Rate Control
12		Channel; otherwise, the base station shall set this field to '0' if
13		the common rate control mode is being used (see [3]).
14	FOR_RCCH_REPETITION -	Forward Rate Control Subchannel repetition factor.
15		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
16		set to '0', the base station shall omit this field; otherwise, the
17		base station shall include this field and set it as follows.
18		The base station shall set this field to the subchannel
19		repetition factor of the Rate Control Subchannel on all pilots
20		as specified in Table 3.7.2.3.2.21-11 (see [2]).
21	FOR_RCCH_UPDATE_RATE -	Forward Rate Control Subchannel update rate.
22		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
23		set to '0', the base station shall omit this field; otherwise, the
24		base station shall include this field and set it as follows.
25		The base station shall set this field to the update rate of the
26		Rate Control Subchannel on all pilots as specified in Table
27		3.7.2.3.2.21-13. See [2].
28	FOR_ACKCH_ASSIGNED -	Forward Acknowledgment Channel assignment indicator.
29		If EXT_CH_IND signals the allocation of a R-PDCH, the base
30		station shall include this field and shall set it as follows;
31		otherwise, the base station shall omit this field.
32		The base station shall set this field to '1' if the mobile station
33		is to listen to acknowledgments on the Forward
34		Acknowledgment Channel; otherwise, the base station shall
35		set this field to '0' (see [2] and [3]).
36	FOR_ACKCH_MODE -	Forward Acknowledgment Channel Mode.
37		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
38		set to '0', the base station shall omit this field; otherwise, the
39		base station shall include this field and set it as follows.
40		The base station shall set this field to the Acknowledgement
41		Channel mode identifier that governs how the
42		Acknowledgment channel is demodulated. See [2] and [3] for
43		the details.

1 The base station shall set this field to '00' if the mobile station
2 is to attempt the reception of the Forward Acknowledgment
3 Channel from all members of the reduced active set of the
4 Forward Packet Data Channel.

5 The base station shall set this field to '01' if the mobile station
6 is to attempt reception of the Forward Acknowledgment
7 Channel from all members of the reduced active set, and is to
8 combine the acknowledgments from all sectors in the same
9 combining indicator set.

10 The base station shall set this field to '10' if the mobile station
11 is to attempt reception of the Forward Acknowledgment
12 Channel from the serving sector only.

13 The base station shall set this field to '11' if the mobile station
14 is to combine the Forward Acknowledgment Channel from all
15 sectors in the same combining indicator set as the serving
16 sector.

17 FOR_ACKCH_COMB_SEL- Forward Acknowledgment Channel Combining method
18 selector.

19 If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
20 set to '0', or if FOR_ACKCH_MODE is omitted, or if it is
21 included and set to '00' or '10', or if PDCH_GROUP_IND_INCL
22 is set to '0', the base station shall omit this field; otherwise, it
23 shall include it and set it as follows.

24 The base station shall set this field to '0' if the mobile station
25 is to use PWR_COMB_IND as a combining indicator when
26 receiving the Forward Acknowledgment Channel; otherwise, it
27 shall set it to '1' if the mobile station is to use
28 PDCH_GROUP_IND as the indicator for combining sectors.

29 REV_PDCH_PARAMS_INCL - Reverse Packet Data Channel related parameters included
30 indicator.

31 If EXT_CH_IND signals the allocation of a R-PDCH, the base
32 station shall include this field and shall set it as follows;
33 otherwise, the base station shall omit this field.

34 The base station shall set this field to '1' if the following R-
35 PDCH parameters are included in this message; otherwise,
36 the base station shall set this field to '0'.

37 REV_PDCH_RLGAIN_INCL - Reverse Packet Data Channel parameters related to
38 reverse link adjustment gains included indicator.

39 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
40 set to '0', the base station shall omit this field; otherwise, the
41 base station shall include this field, and set it as follows.

42 The base station shall set this field to '1' if the following R-
43 PDCH gain related fields are included in this message;
44 otherwise, the base station shall set this field to '0'.

45 RLGAIN_SPICH_PILOT - Reverse Secondary Pilot Channel to pilot adjustment gain.

- 1 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 2 set to '0', the base station shall omit this field; otherwise, the
 3 base station shall include this field, and set it as follows.
- 4 The base station shall set this field to the Reverse Secondary
 5 Pilot Channel to pilot adjustment gain expressed as a two's
 6 complement value in units of 0.125 dB (see [2]).
- 7 RLGAIN_REQCH_PILOT - Reverse Request Channel to pilot adjustment gain.
- 8 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 9 set to '0', the base station shall omit this field; otherwise, the
 10 base station shall include this field, and set it as follows.
- 11 The base station shall set this field to the Reverse Request
 12 Channel to pilot adjustment gain expressed as a two's
 13 complement value in units of 0.125 dB (see [2]).
- 14 RLGAIN_PDCCH_PILOT - Reverse Packet Data Control Channel to pilot adjustment
 15 gain.
- 16 If REV_PDCH_RLGAIN_INCL is omitted, or if it is included and
 17 set to '0', the base station shall omit this field; otherwise, the
 18 base station shall include this field, and set it as follows.
- 19 The base station shall set this field to the Reverse Packet Data
 20 Channel to pilot adjustment gain expressed as a two's
 21 complement value in units of 0.125 dB (see [2]).
- 22 REV_PDCH_PARAMS_1_INCL - Reverse Packet Data Channel parameters subset included
 23 indicator.
- 24 If REV_PDCH_PARAMS_INCL is omitted, or if it is included and
 25 set to '0', the base station shall omit this field; otherwise, the
 26 base station shall include this field, and set it as follows.
- 27 The base station shall set this field to '1' if the following R-
 28 PDCH parameters are included in this message; otherwise,
 29 the base station shall set this field to '0'.
- 30 REV_PDCH_TABLE_SEL - Reverse Packet Data Channel Table selector.
- 31 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
 32 and set to '0', the base station shall omit this field; otherwise,
 33 the base station shall include this field, and set it as follows.
- 34 The base station shall set this field to the Reverse Packet Data
 35 Channel Table selector (see [2]).
- 36 REV_PDCH_MAX_AUTO_TPR- Reverse Packet Data Channel maximum traffic to pilot
 37 ratio for autonomous transmission.
- 38 If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included
 39 and set to '0', the base station shall omit this field; otherwise,
 40 the base station shall include this field and set it as follows.
- 41 The base station shall set this field to the maximum traffic to
 42 pilot ratio for autonomous transmission on the Reverse
 43 Packet Data Channel (see [2] and [3]).
- 44 The base station shall set this field to a value in the range 0 to
 45 18 dB inclusive in units of 0.125 dB.

- 1 The base station shall include NUM_PILOTS occurrences of the following record:
- 2 PILOT_PN - Pilot PN sequence offset index.
- 3 The base station shall set this field to the pilot PN sequence
4 offset for this pilot in units of 64 PN chips.
- 5 SRCH_OFFSET - Target pilot channel search window offset.
- 6 If SRCH_OFFSET_INCL equals to '1', then the base station
7 shall include this field and set it to the value shown in Table
8 2.6.6.2.1-2 corresponding to the search window offset to be
9 used by the mobile station for this target pilot; otherwise, the
10 base station shall omit this field.
- 11 ADD_PILOT_REC_INCL - Additional pilot information included indicator.
- 12 The base station shall set this field to '1' if additional pilot
13 information listed in PILOT_REC_TYPE and RECORD_LEN
14 fields are included. The base station shall set this field to '0'
15 if the corresponding pilot is the common pilot and there is no
16 additional pilot information included.
- 17 PILOT_REC_TYPE - Pilot record type.
- 18 If ADD_PILOT_REC_INCL is set to '1', the base station shall
19 set this field to the PILOT_REC_TYPE value shown in Table
20 3.7.2.3.2.21-9 corresponding to the type of Pilot Record
21 specified by this record.
- 22 If ADD_PILOT_REC_INCL is set to '0', the base station shall
23 omit this field.
- 24 RECORD_LEN - Pilot record length.
- 25 If ADD_PILOT_REC_INCL is set to '1', the base station shall
26 set this field to the number of octets in the type-specific fields
27 of this pilot record.
- 28 If ADD_PILOT_REC_INCL is set to '0', the base station shall
29 omit this field.
- 30 Type-specific fields - Pilot record type-specific fields.
- 31 If ADD_PILOT_REC_INCL is set to '1', the base station shall
32 include type-specific fields based on the PILOT_REC_TYPE of
33 this pilot record as described in 3.7.6.1.
- 34 If ADD_PILOT_REC_INCL is set to '0', the base station shall
35 omit this field.
- 36 FOR_PDCH_INCL - Forward Packet Data Channel configuration field included
37 indicator.
- 38 The base station shall set this field to '1' if the MS is assigned
39 resources on the PDCH channel; otherwise, the base station
40 shall set this field to '0'. This field shall be set to '1' for at least
41 one of the pilots included in this message.
- 42 WALSH_TABLE_ID - The index of the Walsh Table used.

- 1 If FOR_PDCH_INCL is set to '1', and if
 2 FOR_PDCH_COMMON_PARMS is included and set to '0', the
 3 base station shall include this field and set it as follows;
 4 otherwise, the base station shall omit this field.
- 5 The base station shall set this field to the index of the Walsh
 6 Table being used by the Packet Data Channel. (See [3]).
- 7 NUM_PDCCH - The number of Packet Data Control Channels supported.
- 8 If FOR_PDCH_INCL is set to '1', and if
 9 FOR_PDCH_COMMON_PARMS is included and set to '0', the
 10 base station shall include this field and set it as follows;
 11 otherwise, the base station shall omit this field.
- 12 The base station shall set this field to '000' if the pilot
 13 supports one Packet Data Control Channel. The base station
 14 shall set this field to '1' if the pilot supports two Packet Data
 15 Control Channels. The base station shall not set this field to
 16 any other value.
- 17 The base station shall include *NUM_PDCCH+1* occurrences of the following one-field record:
- 18 FOR_PDCCH_WALSH - Forward Packet Data Control Channel Walsh code
 19 assignment.
- 20 If FOR_PDCH_INCL is set to '1', and if
 21 FOR_PDCH_COMMON_PARMS is included and set to '0', the
 22 base station shall include this field and set it as follows;
 23 otherwise, the base station shall omit this field.
- 24 The base station shall set this field to the Walsh code
 25 assignment for the Forward Packet Data Control Channel.
- 26 If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
 27 shall be included first, followed by the Walsh code for
 28 PDCCH1.
- 29 MAC_ID - Medium Access Control index.
- 30 If FOR_PDCH_INCL is set to '0', the base station shall omit
 31 this field; otherwise, the base station shall include this field
 32 and set it as follows:
- 33 The base station shall set this field to the MAC index assigned
 34 to the mobile station by this pilot.
- 35 The base station shall set this field to an integer value larger
 36 than 63.
- 37 REV_CQICH_COVER - Reverse Channel Quality Indicator Channel cover.
- 38 If FOR_PDCH_INCL is set to '0', the base station shall omit
 39 this field; otherwise, the base station shall include this field
 40 and set it as follows:
- 41 The base station shall set this field to the index of the R-
 42 CQICH cover associated with this pilot.

- 1 If this pilot is a member of the mobile station's current Active
2 Set, the base station should assign the same value for the
3 Walsh cover that is in the mobile station's current Active Set.
- 4 If this pilot is not a member of the mobile station's current
5 Active Set, the base station should assign a value for the
6 Walsh cover that was not recently assigned (See [2]).
- 7 **FOR_CPCCH_WALSH** - The Forward Common Power Control Channel Walsh code
8 assignment.
- 9 If EXT_CH_IND signals the allocation of a F-CPCCH, and
10 either of the following conditions is true:
- 11 - EXT_CH_IND signals the allocation of a F-FCH or a F-
12 DCCH
 - 13 - all of the following conditions are true:
 - 14 + FOR_PDCH_INCL is set to '1'
 - 15 + EXT_CH_IND does not signal allocation of a F-FCH
 - 16 + EXT_CH_IND does not signal allocation of a F-DCCH
- 17 the base station shall include this field and shall set it as
18 follows; otherwise, the base station shall omit this field
- 19 The base station shall set this field to the Walsh code
20 assignment for the Forward Common Power Control Channel.
- 21 **FOR_CPCSCH** - The Forward Common Power Control Channel Subchannel.
- 22 If EXT_CH_IND signals the allocation of a F-CPCCH, and
23 either of the following conditions is true:
- 24 - EXT_CH_IND signals the allocation of a F-FCH or a F-
25 DCCH
 - 26 - all of the following conditions are true:
 - 27 + FOR_PDCH_INCL is set to '1'
 - 28 + EXT_CH_IND does not signal allocation of a F-FCH
 - 29 + EXT_CH_IND does not signal allocation of a F-DCCH
- 30 the base station shall include this field and shall set it as
31 follows; otherwise, the base station shall omit this field
- 32 The base station shall set this field to the Forward Common
33 Power Control Channel Subchannel associated with this base
34 station.
- 35 If FOR_CPCCH_RATE is omitted, or if it is included and set to
36 '00', the base station shall set this field to a value in the range
37 0 to 23 inclusive. If FOR_CPCCH_RATE is included and set
38 set to '01', the base station shall set this field to a value in the
39 range 0 to 47 inclusive. If FOR_CPCCH_RATE is included and
40 set set to '10', the base station shall set this field to a value in
41 the range 0 to 95 inclusive.
- 42 **PWR_COMB_IND** - Power control symbol combining indicator.

- 1 If the Forward Traffic Channel or Forward Common Power
 2 Control Channel associated with this pilot will carry the same
 3 closed-loop power control subchannel bits as that of the
 4 previous pilot in this message, the base station shall set this
 5 field to '1'; otherwise, the base station shall set this field to '0'.
 6 The base station shall set this field to '0' in the first record in
 7 the pilot list.
- 8 PDCH_GROUP_IND - Packet Data Channel Group Indicator.
- 9 If PDCH_GROUP_IND_INCL is set to '1', the base station shall
 10 include this field and shall set it as follows; otherwise, the
 11 base station shall omit this field.
- 12 If the mobile station is to use the softer reselection
 13 parameters when re-pointing between this pilot and the
 14 previous pilot in this message that has a F-PDCH assigned to
 15 this mobile station (i.e. FOR_PDCH_INCL is set to '1'), the
 16 base station shall set this field to '1' (See [3]).
- 17 If the mobile station is to use the soft reselection parameters
 18 when re-pointing between this pilot and the previous pilot in
 19 this message that has a F-PDCH assigned to this mobile
 20 station (i.e. FOR_PDCH_INCL is set to '1'), the base station
 21 shall set this field to '0' (See [3]).
- 22 The base station shall set this field to '0' in the first record in
 23 the pilot list that has a F-PDCH assigned to this mobile
 24 station (i.e. FOR_PDCH_INCL is set to '1').
- 25 CODE_CHAN_FCH - Code channel on the Fundamental Channel.
- 26 If EXT_CH_IND signals the allocation of a F-FCH, the base
 27 station shall include this field and shall set it as follows;
 28 otherwise it shall be omitted.
- 29 The base station shall set this field to the code channel index
 30 (see [2]) that the mobile station is to use on the Fundamental
 31 Channel of the Forward Traffic Channel.
- 32 If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
 33 station shall set this field in the range 1 to 63 inclusive. If
 34 Radio Configuration 4, 11, or 12 is used, the base station
 35 shall set this field in the range 1 to 127 inclusive.
- 36 QOF_MASK_ID_FCH - Quasi-orthogonal function index on the Fundamental
 37 Channel.
- 38 If EXT_CH_IND signals the allocation of a F-FCH, the base
 39 station shall include this field and shall set it as follows;
 40 otherwise it shall be omitted.
- 41 The base station shall set this field to the index of the Quasi-
 42 orthogonal function (see [2]).
- 43 CODE_CHAN_DCCH - Code channel on the Dedicated Control Channel.
- 44 If EXT_CH_IND signals the allocation of a F-DCCH, the base
 45 station shall include this field and shall set it as follows;
 46 otherwise it shall be omitted.

1 The base station shall set this field to the code channel index
2 (see [2]), in the range of 1 to 127 inclusive, that the mobile
3 station is to use on the Dedicated Control Channel of the
4 Forward Traffic Channel.

5 If Radio Configuration 3 or 5 (see [2]) is used, the base station
6 shall set this field in the range 1 to 63 inclusive. If Radio
7 Configuration 4 is used, the base station shall set this field in
8 the range 1 to 127 inclusive.

9 QOF_MASK_ID_DCCH - Quasi-orthogonal function index on the Dedicated Control
10 Channel.

11 If EXT_CH_IND signals the allocation of a F-DCCH', the base
12 station shall include this field and shall set it as follows;
13 otherwise it shall be omitted.

14 The base station shall set this field to the index of the Quasi-
15 orthogonal function (see [2]).

16 FOR_ACKCH_WALSH_INDEX - Walsh Code for the Forward Acknowledgment
17 Channel.

18 If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
19 set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
20 does not signal the allocation of a R-PDCH, the base station
21 shall omit this field; otherwise, it shall include it and set it as
22 follows.

23 The base station shall set this field to the Walsh code of the
24 Forward Acknowledgment Channel (see [2]).

25 FOR_ACKSCH_INDEX - Forward Acknowledgment Subchannel Index.

26 If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
27 set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
28 does not signal the allocation of a R-PDCH, the base station
29 shall omit this field; otherwise, it shall include it and set it as
30 follows.

31 The base station shall set this field to the subchannel index of
32 the Forward Acknowledgment Channel (see [2]). The base
33 station should not use FOR_ACKSCH_INDEX = 0, 1, 2, 96,
34 97, or 98.

35 FOR_RCCH_INCL - Forward Rate Control Subchannel included flag.

36 If FOR_PDCH_INCL is set to '0', or if FOR_RCCH_ASSIGNED
37 is omitted, or if it is included and set to '0', the base station
38 shall omit this field; otherwise, the base station shall include
39 this field and set it as follows.

40 The base station shall set this field to '1' if a Forward Rate
41 Control Channel Subchannel is allocated on this pilot (see
42 [2]); otherwise, the base station shall set this field to '0'.

43 The base station shall set this field to a non zero value for at
44 least one pilot in this message.

45 FOR_RCCH_WALSH_INDEX - Walsh Code for the Forward Rate Control Channel
46 Subchannel.

- 1 If FOR_RCCH_INCL is omitted, or if it is included and set to
2 '0', the base station shall omit this field; otherwise, the base
3 station shall include this field and set it as follows.
- 4 The base station shall set this field to the Walsh code of the
5 Forward Rate Control Channel Subchannel (see [2]).
- 6 **FOR_RCCH_INDEX** - Forward Rate Control Subchannel.
- 7 If FOR_RCCH_INCL is omitted, or if it is included and set to
8 '0', the base station shall omit this field; otherwise, the base
9 station shall include this field and set it as follows.
- 10 The base station shall set this field to the subchannel index of
11 the Rate Control Subchannel on this pilot (see [2]).
- 12 If FOR_RCCH_REPETITION is set to '00' this field shall take
13 values in the range 0 to 96. If FOR_RCCH_REPETITION is set
14 to '01' this field shall take values in the range 0 to 48. If
15 FOR_RCCH_REPETITION is set to '10' this field shall take
16 values in the range 0 to 24.
- 17 **NUM_FOR_GCH** - Number of Forward Grant Channels
- 18 If FOR_PDCH_INCL is set to '0', or if FOR_GCH_ASSIGNED is
19 omitted, or if it is included and set to '0', the base station
20 shall omit this field; otherwise, the base station shall include
21 this field and set it as follows.
- 22 The base station shall set this field to the number of assigned
23 Forward Grant Channels on this pilot. The base station shall
24 set this field to 0, 1, or 2.
- 25 The base station shall set this field to a non zero value for at
26 least one pilot in this message.
- 27 If FOR_PDCH_INCL is set to '1', and if FOR_GCH_ASSIGNED is included and set to '1', the
28 base station shall include NUM_FOR_GCH occurrences of the field
29 **FOR_GCH_WALSH_INDEX**:
- 30 **FOR_GCH_WALSH_INDEX** - Walsh Code for the Forward Grant Channel.
- 31 The base station shall set this field to the Walsh code of the
32 Forward Grant Channels (see [2]).
- 33 **NUM_SCH** - Number of Supplemental Channel records.
- 34 If SCH_INCL is set to '0', the base station shall omit this field;
35 otherwise, the base station shall include this field and shall
36 set it as follows:
- 37 The base station shall set this field to the number of the
38 Supplemental Channel records need to be updated.
- 39 If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH
40 occurrence of the following five fields:
- 41 **FOR_SCH_ID** - Forward Supplemental Channel identifier.
- 42 The base station shall set this field the identifier of the
43 Forward Supplemental Channel pertaining to this record.

1	SCCL_INDEX	-	Supplemental Channel Code list index.
2			The base station shall set this field to the index of the record
3			in the Supplemental Channel Code list.
4	PILOT_INCL	-	The corresponding pilot included in Supplemental Channel
5			Active Set indicator.
6			The base station shall set this field to '1' if the corresponding
7			pilot is included in the Active Set of Supplemental Channel;
8			otherwise, the base station shall set this field to '0'.
9	CODE_CHAN_SCH	-	Code channel on the Supplemental Channel.
10			If PILOT_INCL is included and set to '1', the base station shall
11			include this field and shall set it as follows; otherwise, the
12			base station shall omit this field.
13			The base station shall set this field to the code channel index
14			(see [2]) that the mobile station is to use on the Supplemental
15			Channel of the Forward Traffic Channel indexed by
16			SCCL_INDEX.
17	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
18			Channel.
19			If PILOT_INCL is included and set to '1', the base station shall
20			include this field and shall set it as follows; otherwise, the
21			base station shall omit this field.
22			The base station shall set this field to the index of the Quasi-
23			orthogonal function (see [2]).
24	CCSH_INCLUDED	-	Code Combining Soft Handoff information included indicator.
25			The base station shall set this field to '1' if Code Combining
26			Soft Handoff information is included in this message;
27			otherwise, the base station shall set this field to '0'.
28	USE_CCSH_ENCODER_TIME	-	Use Code Combining Soft Handoff Turbo Encoder
29			swapping action time indicator.
30			If the CCSH_INCLUDED field is set to '0', the base station
31			shall omit this field; otherwise, the base station shall include
32			this field and set it as follows.
33			If an explicit action time at which Turbo Encoder types
34			(CCSH_ENCODER_TYPE) included in this message takes
35			effect is specified, the base station shall set this field to '1';
36			otherwise, the base station shall set this field to '0'.
37	CCSH_ENCODER_ACTION_TIME	-	Code Combining Soft Handoff Turbo Encoder
38			swapping action time.
39			If the USE_CCSH_ENCODER_TIME field is included and set
40			to '1', the base station shall set this field to the System Time
41			minus $FRAME_OFFSET_s \times 1.25$ ms, in units of 80ms (modulo
42			64), at which Turbo Encoder types included in this message
43			are to take effect; otherwise, the base station shall omit this
44			field.

1 If the CCSH_INCLUDED field is set to '1', the base station shall include one occurrence of
 2 the following one field for each of the Forward Supplemental Channel records (as specified
 3 by NUM_PILOTS and NUM_SCH) with PILOT_INCL field set to '1'. The base station shall use
 4 the same order for the following field as is used for the Forward Supplemental Channel
 5 records.

6 CCSH_ENCODER_TYPE - Code Combining Soft Handoff Turbo Encoder type.

7 The base station shall set this field to '0' if the Turbo Encoder
 8 type to be used on the Forward Supplemental Channel
 9 identified by FOR_SCH_ID and SCCL_INDEX is the default
 10 encoder type. The base station shall set this field to '1' if the
 11 Turbo Encoder to be used is the complementary type.

12 FUNDICATED_BCNC_IND - BCNC on fundicated channel Indicator.

13 If the channel assignment in this message contains a Forward
 14 Fundicated Channel used for BCNC transmission, the base
 15 station shall set this field to '1'; otherwise, the base station
 16 shall set this field to '0'.

17 ADD_PLCM_FOR_FCH_INCL - Additional PLCM for forward FCH included indicator.

18 If the FUNDICATED_BCNC_IND field is set to '0', the base
 19 station shall omit this field; otherwise, the base station shall
 20 include this field and set it as follows:

21 If the additional PLCM for forward FCH is included in this
 22 message, the base station shall set this field to '1'; otherwise,
 23 the base station shall set this field to '0'.

24 ADD_PLCM_FOR_FCH_TYPE - The Additional Public Long Code Mask for forward FCH
 25 type indicator.

26 If ADD_PLCM_FOR_FCH_INCL not included or is included
 27 and is set to '0', the base station shall omit this field;
 28 otherwise, the base station shall include this field and set it
 29 as follows.

30 The base station shall set this field to '1' to indicate PLCM
 31 specified by the base station. The field value '0' is reserved.

32 ADD_PLCM_FOR_FCH_39 - The 39 LSB bits of the additional Public Long Code Mask
 33 for forward FCH.

34 If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
 35 '1', the base station shall include this field and set it to the 39
 36 least significant bits of the public long code mask used by the
 37 mobile station; otherwise, the base station shall omit this
 38 field.

39 RESERVED - Reserved bits.

40 The base station shall add reserved bits as needed in order to
 41 make the length of the ACTIVE_SET_REC_FIELDS record
 42 equal to an integer number of octets. The base station shall
 43 set these bits to '0'.

44

- 1 3.7.3.3.2.37 Extended Supplemental Channel Assignment Message

FSCH_OUTERCODE_INCL	1
FSCH_OUTERCODE_RATE	0 or 3
FSCH_OUTERCODE_OFFSET	0 or 6

} (NUM_FOR_SCH)

FPC_BCMC_CHAN	0 or 1
---------------	--------

1

2 START_TIME_UNIT - Unit for start time.

3 The base station shall set this field to indicate the units of
4 start time included in *Extended Supplemental Channel*
5 *Assignment Message*, *Forward Supplemental Channel*
6 *Assignment Mini Message*, *Reverse Supplemental Channel*
7 *Assignment Mini Message*, and *Universal Handoff Direction*
8 *Message*. The base station shall set this field to one less than
9 the number of 20 ms frames that determines the
10 START_TIME_UNIT.

11 REV_SCH_DTX_DURATION - Discontinuous Transmission on Reverse Supplemental
12 Channel.

13 The base station shall set this field to the maximum duration
14 of time in units of 20 ms that the mobile station is allowed to
15 stop transmission on a Reverse Supplemental Channel within
16 the reverse assignment duration. The base station shall set
17 this field to '0000' if the mobile station is to stop using a
18 Reverse Supplemental Channel once it has stopped
19 transmitting on that Reverse Supplemental Channel. The
20 base shall set this field to '1111' if the mobile station is
21 allowed to resume transmission on a Reverse Supplemental
22 Channel at any time within the reverse assignment duration.

23 USE_T_ADD_ABORT - Reverse use T_ADD abort indicator.

24 The base station shall set this field to '1' to indicate that the
25 mobile station is to utilize the T_ADD Reverse Supplemental
26 Channel abort feature for this reverse assignment; otherwise,
27 the base station shall set this field to '0'.

28 USE_SCRM_SEQ_NUM - Use Supplemental Channel Request Message sequence
29 number indicator.

30 The base station shall set this field to '1' if the
31 SCRM_SEQ_NUM field is included in this message; otherwise,
32 the base station shall set this field to '0'.

33 SCRM_SEQ_NUM - Supplemental Channel Request Message sequence number.

34 If USE_SCRM_SEQ_NUM is set to '1', the base station shall set
35 this field to the sequence number corresponding to the
36 SCRM_SEQ_NUM field in a *Supplemental Channel Request*
37 *Message* to which the mobile station is to match this message;
38 otherwise, the base station shall omit this field.

39 ADD_INFO_INCL - Additional information included indicator.

40 If the message is to contain the FPC_PRI_CHAN field, the base
41 station shall set this field to '1'; otherwise, the base station
42 shall set this field to '0'.

43 The base station shall set this field to '0' if any of the following
44 conditions holds:

- 1 - The message does not contain any Supplemental Channel
2 assignment.
- 3 - The mobile station is currently in the Active mode.
4 FPC_PRI_CHAN - Power Control Subchannel Indicator.
- 5 If the ADD_INFO_INCL field is set to '0', the base station shall
6 omit this field; otherwise, the base station shall set this field
7 as follows:
- 8 The base station shall set this field to '0' if the mobile station
9 is to perform the primary inner loop estimation on the
10 received Forward Fundamental Channel. The base station
11 shall set this field to '1' if the mobile station is to perform the
12 primary inner loop estimation on the received Forward
13 Dedicated Control Channel If the F-CPCCH is
14 assigned, the base station shall multiplex the Power Control
15 Subchannel on the F-CPCCH; otherwise:
- 16 If this field is set to '0', the base station shall multiplex the
17 Power Control Subchannel on the Forward Fundamental
18 Channel; otherwise, the base station shall multiplex the
19 Power Control Subchannel on the Forward Dedicated Control
20 Channel.
- 21 REV_CFG_INCLUDED - Reverse Supplemental Channel configuration included.
22 The base station shall set this field to '1' if this message
23 contains a Reverse Supplemental Channel configuration.
24 Otherwise, the base station shall set this field to '0'.
- 25 NUM_REV_CFG_RECS - Number of the Reverse Supplemental Channel configuration
26 Records.
27 If REV_CFG_INCLUDED is set to '1', the base station shall set
28 this field to one less than the number of reverse supplemental
29 channel configuration records consisting of the following three
30 fields that are included in this message; otherwise, the base
31 station shall omit this field.
- 32 The base station shall include NUM_REV_CFG_RECS+1 occurrences of the following three
33 fields only if the REV_CFG_INCLUDED field is set to '1'.
- 34 REV_SCH_ID - Reverse Supplemental Channel Identifier.
35 The base station shall set this field to the identifier of the
36 Reverse Supplemental Channel.
- 37 REV_WALSH_ID - Reverse Supplemental Channel Walsh cover Identifier.
38 The base station shall set this field according to Table
39 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
40 station is to use when transmitting number of bits per frame
41 specified by REV_NUM_BITS_IDX on the Reverse
42 Supplemental Channel specified by REV_SCH_ID. If only one
43 reverse supplemental channel is assigned, the base station
44 should set this field to the default value for the
45 REV_WALSH_ID as specified in 2.6.4.2.

Table 3.7.3.3.2.37-1. REV_WALSH_ID Field

REV_WALSH_ID (binary)	Walsh Cover	
	SCH_ID = '0'	SCH_ID = '1'
0	+ -	++ - -
1	++ - -	++ - - - - ++

REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame index.

If USE_FLEX_NUM_BITS is equal to '0' or if USE_FLEX_NUM_BITS is equal to '1' and RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then the base station shall set this field according to Table 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel number of information bits per frame and the number of CRC bits per frame, corresponding to REV_WALSH_ID field.

If USE_FLEX_NUM_BITS is equal to '1' and RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000', then the base station shall set this field to indicate the Reverse Supplemental Channel number of information bits per frame, corresponding to REV_WALSH_ID field to be NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]][REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental Channel number of CRC bits per frame, corresponding to REV_WALSH_ID field to be CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]][REV_SCH_NUM_BITS_IDX].

Table 3.7.3.3.2.37-2. R-SCH Number of Information Bits per Frame

REV_SCH_NUM_BITS_IDX (binary)	Number of information bits per frame		Number of CRC bits per frame
	RC 3, 5	RC 4, 6	
0000	172	267	12
0001	360	552	16
0010	744	1,128	16
0011	1,512	2,280	16
0100	3,048	4,584	16
0101	6,120	Reserved	16
0110	12,264	9,192	16

REV_SCH_NUM_BITS_IDX	Number of information bits per frame		Number of CRC bits per frame
0111	Reserved	Reserved	Reserved
1000	Reserved	20,712	16
RESERVED	All other values are reserved

31

NUM_REV_SCH - Number of Reverse Supplemental Channels assigned.
 The base station shall set this field to the number of Reverse Supplemental Channel assigned. The base station shall set this field to '00' if the assignment of Supplemental Channel is not included.

The base station shall include NUM_REV_SCH occurrences of the following five fields (REV_SCH_ID, REV_SCH_DURATION, REV_SCH_START_TIME_INCL, REV_SCH_START_TIME, and REV_SCH_NUM_BITS_IDX).

REV_SCH_ID - Reverse Supplemental Channel Identifier.
 The base station shall set this field to the identifier of the Reverse Supplemental Channel.

REV_SCH_DURATION - Duration of Reverse Supplemental Channel assignment
 The base station shall set this field to '0000' to indicate that the mobile station is to stop transmitting on the Reverse Supplemental Channel specified by REV_SCH_ID at the explicit start time specified by REV_SCH_START_TIME or at the implicit start time if REV_SCH_START_TIME_INCL is set to '0'. The base station shall set this field to '1111' to indicate that the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID, starting at the explicit start time specified by REV_SCH_START_TIME in this message, until the start time specified by a subsequent Reverse Supplemental Channel assignment corresponding to the same Supplemental Channel (see 2.6.6.2.5.1.1). The base station shall set this field to the duration according to Table 3.7.3.3.2.37-3, starting at the start time specified by REV_SCH_START_TIME, during which the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID.

Table 3.7.3.3.2.37-3. FOR_SCH_DURATION and REV_SCH_DURATION Fields

FOR_SCH_DURATION REV_SCH_DURATION (binary)	Duration in 20 ms
0001	1
0010	2
0011	3
0100	4

FOR_SCH_DURATION REV_SCH_DURATION (binary)	Duration in 20 ms
0101	5
0110	6
0111	7
1000	8
1001	16
1010	32
1011	64
1100	96
1101	128
1110	256
1111	Infinity

- 1 REV_SCH_START_TIME_INCL - Start time included indicator.
- 2 If REV_SCH_DURATION is not equal to '0000', the base
3 station shall set this field to '1'. If REV_SCH_DURATION is
4 equal to '0000', the base station shall set this field as follows:
- 5 The base station shall set this field to '1' if
6 REV_SCH_START_TIME is included in this message;
7 otherwise, the base station shall set this field to '0'.
- 8 REV_SCH_START_TIME - Start time for Reverse Supplemental Channel assignment.
- 9 If REV_SCH_START_TIME_INCL is set to '0', the base station
10 shall omit this field; otherwise, the base station shall set this
11 field to the System Time, in units of time specified by
12 START_TIME_UNIT, (modulo 32) at which the mobile station
13 may start transmitting (if REV_SCH_DURATION is not equal
14 to '0000') or stop transmitting (if REV_SCH_DURATION is
15 equal to '0000') on the Reverse Supplemental Channel
16 specified in this message. The explicit start time to start or
17 stop transmitting on the Reverse Supplemental Channel is
18 the time for which
- 19
$$\lfloor t / (\text{START_TIME_UNIT}_s + 1) \rfloor - \text{REV_SCH_START_TIME} \pmod{32} = 0,$$
- 20 where t is the System Time in units of 20 ms.
- 21
- 22 REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of bits per frame
23 index.

1 If USE_FLEX_NUM_BITS is equal to '0' or if
2 USE_FLEX_NUM_BITS is equal to '1' and
3 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
4 the base station shall set this field according to Table
5 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
6 number of information bits per frame and the number of CRC
7 bits per frame, corresponding to REV_WALSH_ID field.

8 If USE_FLEX_NUM_BITS is equal to '1' and
9 RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
10 then the base station shall set this field to indicate the
11 Reverse Supplemental Channel number of information bits
12 per frame, corresponding to REV_WALSH_ID field to be
13 NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
14 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
15 Channel number of CRC bits per frame, corresponding to
16 REV_WALSH_ID field to be
17 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
18 [REV_SCH_NUM_BITS_IDX].

19 FOR_CFG_INCLUDED - Forward Supplemental Channel configuration included.
20 The base station shall set this field to '1' if this message
21 contains a Forward Supplemental Channel configuration.
22 Otherwise, the base station shall set this field to '0'.

23 FOR_SCH_FER_REP - Forward Supplemental Channel FER report indicator.
24 If FOR_CFG_INCLUDED is set to '0', the base station shall
25 omit this field, otherwise, the base station shall include this
26 field and set it as follows:
27 The base station shall set this field to '1' if the mobile station
28 is to report the Supplemental Channel frame counts (see
29 2.6.4.1.1); otherwise, the base station shall set this field to '0'.

30 NUM_FOR_CFG_RECS - Number of the Forward Supplemental Channel configuration
31 Records.
32 If FOR_CFG_INCLUDED is set to '1', the base station shall set
33 this field to one less than the number of forward
34 supplemental channel configuration records consisting of the
35 following fields that are included in this message; otherwise,
36 the base station shall omit this field.

37 The base station shall include NUM_FOR_CFG_RECS+1 occurrences of the following fields
38 only if the FOR_CFG_INCLUDED field is set to '1'.

39 FOR_SCH_ID - Forward Supplemental Channel identifier
40 The base station shall set this field to the identifier of the
41 Forward Supplemental Channel.

42 SCCL_INDEX - Supplemental Channel Code list index.
43 The base station shall set this field to the index of the record
44 in the Supplemental Channel Code list.

45 FOR_SCH_NUM_BITS_IDX - Forward Supplemental Channel number of information
46 bits index.

If USE_FLEX_NUM_BITS is equal to '0' or if USE_FLEX_NUM_BITS is equal to '1' and FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000', then the base station shall set this field according to Table 3.7.3.3.2.37-4 to indicate the number of information bits per frame and the length of the CRC field for the Forward Supplemental Channel identified by FOR_SCH_ID corresponding to SCCL_INDEX.

Table 3.7.3.3.2.37-4. F-SCH Number of Information Bits per Frame

FOR_SCH_NUM _BITS_IDX (binary)	Number of information bits per frame		Number of CRC bits per frame
	RC 3, 4, 6, 7	RC 5, 8, 9	
0000	172	267	12
0001	360	552	16
0010	744	1,128	16
0011	1,512	2,280	16
0100	3,048	4,584	16
0101	6,120	Reserved	16
0110	12,264	9,192	16
0111	Reserved	Reserved	Reserved
1000	Reserved	20,712	16
RESERVED	All other values are reserved		

If USE_FLEX_NUM_BITS_s is equal to '1' and FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000', then the base station shall set this field to indicate that the number of information bits per frame for the Forward Supplemental channel identified by FOR_SCH_ID to be NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_NUM_BITS_IDX] that the number of CRC bits per frame for the Forward Supplemental channel identified by FOR_SCH_ID to be CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_NUM_BITS_IDX].

NUM_SUP_SHO - Number of Forward Supplemental Channels in Soft Handoff
The base station shall set this field to the size of the Forward Supplemental Channel Active Set minus one.

The base station shall include NUM_SUP_SHO+1 occurrences of the following fields for each Forward Supplemental channel corresponding to the FOR_SCH_ID and the SCCL_INDEX whose frames may be soft-combined by the mobile station:

1		
2	PILOT_PN	- Pilot PN sequence offset index.
3		The base station shall set this field to the pilot PN sequence
4		offset for this pilot in units of 64 PN chips.
5	ADD_PILOT_REC_INCL	- Additional pilot information included indicator.
6		The base station shall set this field to '1' if additional pilot
7		information listed in PILOT_REC_TYPE and RECORD_LEN
8		fields are included. The base station shall set this field to '0'
9		if the corresponding pilot is the common pilot and there is no
10		additional pilot information included.
11	PILOT_REC_TYPE	- Pilot record type
12		If ADD_PILOT_REC_INCL is set to '1', the base station shall
13		set this field to the PILOT_REC_TYPE value shown in Table
14		3.7.2.3.2.21-9 corresponding to the type of Pilot Record
15		specified by this record.
16		If ADD_PILOT_REC_INCL is set to '0', the base station shall
17		omit this field.
18	RECORD_LEN	- Pilot record length.
19		If ADD_PILOT_REC_INCL is set to '1', the base station shall
20		set this field to the number of octets in the type-specific fields
21		of this pilot record.
22		If ADD_PILOT_REC_INCL is set to '0', the base station shall
23		omit this field.
24	Type-specific fields	- Pilot record type-specific fields.
25		If ADD_PILOT_REC_INCL is set to '1', the base station shall
26		include type-specific fields based on the
27		ACTIVE_PILOT_REC_TYPE of this pilot record as described in
28		3.7.6.1.
29		If ADD_PILOT_REC_INCL is set to '0', the base station shall
30		omit this field.
31	CODE_CHAN_SCH	- Code channel on the Supplemental Channel.
32		The base station shall set this field to the code channel index
33		(see [2]) that the mobile station is to use on the Supplemental
34		Channel of the Forward Traffic Channel indexed by
35		SCCL_INDEX.
36	QOF_MASK_ID_SCH	- Quasi-orthogonal function index on the Supplemental
37		Channel.
38		The base station shall set this field to the index of the Quasi-
39		orthogonal function (see [2]).
40	NUM_FOR_SCH	- Number of Forward Supplemental Channels assigned.
41		The base station shall set this field to the number of forward
42		Supplemental Channel assigned. The base station shall set
43		this field to '00' if the assignment of Supplemental Channel is
44		not included.

1 The base station shall include NUM_FOR_SCH occurrences of the following five fields
 2 (FOR_SCH_ID, FOR_SCH_DURATION, FOR_SCH_START_TIME_INCL,
 3 FOR_SCH_START_TIME, and SCCL_INDEX).

4 FOR_SCH_ID - Forward Supplemental Channel identifier.

5 The base station shall set this field to the identifier of the
 6 Forward Supplemental Channel pertaining to this record.

7 FOR_SCH_DURATION - Duration of Forward Supplemental Channel assignment.

8 The base station shall set this field to the duration (see Table
 9 3.7.3.3.2.37-3), starting at the start time of the message
 10 specified by FOR_SCH_START_TIME, during which the mobile
 11 station is to process the Forward Supplemental Channel.

12 The base station shall set this field to '0000' to indicate that
 13 the mobile station should stop processing the Forward
 14 Supplemental Channel starting at the explicit start time of the
 15 message specified by FOR_SCH_START_TIME or at the
 16 implicit start time if FOR_SCH_START_TIME_INCL is set to '0'.

17 The base station shall set this field to '1111' to indicate that
 18 the mobile station should process the Forward Supplemental
 19 Channel, starting at the start time of the message specified by
 20 FOR_SCH_START_TIME, until the start time specified by a
 21 subsequent Forward Supplemental Channel assignment
 22 corresponding to the same Supplemental Channel (see
 23 2.6.6.2.5.1.1).

24 FOR_SCH_START_TIME_INCL - Start time included indicator.

25 If FOR_SCH_DURATION is not equal to '0000', the base
 26 station shall set this field to '1'. If FOR_SCH_DURATION is
 27 equal to '0000', the base station shall set this field as follows:

28 The base station shall set this field to '1' if
 29 FOR_SCH_START_TIME is included in this message;
 30 otherwise, the base station shall set this field to '0'.

31 FOR_SCH_START_TIME - Start time for Forward Supplemental Channel assignment.

32 If FOR_SCH_START_TIME_INCL is set to '0', the base station
 33 shall omit this field; otherwise, the base station shall set this
 34 field to the System Time, in units of time specified by
 35 START_TIME_UNIT, (modulo 32) at which the mobile station
 36 is to start processing (if FOR_SCH_DURATION is not equal to
 37 '0000') or stop processing (if FOR_SCH_DURATION is equal to
 38 '0000') the Forward Supplemental Channel specified in this
 39 message. The explicit start time to start or stop processing
 40 the Forward Supplemental Channels is the time for which
 41
$$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{FOR_SCH_START_TIME} \pmod{32} = 0,$$

42 where t is the System Time in units of 20 ms.

43

44 SCCL_INDEX - Supplemental Channel Code list index.

- 1 The base station shall set this field to the index of the record
 2 in the Forward Supplemental Channel Code list
 3 corresponding to the FOR_SCH_ID. The base station shall
 4 include an SCCL_INDEX whose SCH Active Set is a subset of
 5 the Active Set of the Fundamental Channel, Dedicated
 6 Control Channel, or both.
- 7 FPC_INCL - Forward Link Power Control parameter included indicator.
 8 If the forward power control related information is included in
 9 this message, the base station shall set this field to '1';
 10 otherwise, the base station shall set this field to '0'.
- 11 FPC_MODE_SCH - Forward Power Control operational mode indicator used
 12 during forward Supplemental Channel assignment interval.
 13 If FPC_INCL is set to '1', the base station shall set the value to
 14 the forward power control operation mode (see [2]); otherwise,
 15 the base station shall omit this field.
- 16 FPC_SCH_INIT_SETPT_OP - Initial Supplemental Channel Outer Loop Eb/Nt setpoint
 17 option.
 18 If FPC_INCL is set to '0', the base station shall omit this field;
 19 otherwise, the base station shall set this field as follows:
 20 The base station shall set this field to '0' to indicate that
 21 FPC_SCH_INIT_SETPT contains the absolute value of the
 22 initial F-SCH Eb/Nt setpoint. The base station shall set this
 23 field to '1' to indicate that FPC_SCH_INIT_SETPT contains the
 24 offset value of the initial F-SCH Eb/Nt setpoint relative to the
 25 current value used in the mobile station for the channel
 26 carrying the Forward Power Control Subchannel.
- 27 FPC_SEC_CHAN - Master Supplemental channel index.
 28 If FPC_INCL is set to '1' and FPC_MODE_SCH is set to '001',
 29 '010', '101', or '110', the base station shall set this field to the
 30 master Supplemental Channel index; otherwise, the base
 31 station shall omit this field.
- 32 NUM_SUP - Number of Supplemental Channels.
 33 If FPC_INCL is set to '0', the base station shall omit this field;
 34 otherwise, the base station shall set this field to the total
 35 number of the Supplemental Channels.
- 36 The base station shall include NUM_SUP occurrences of the following record:
- 37 SCH_ID - Supplemental Channel index.
 38 The base station shall set this field to the Supplemental
 39 Channel index.
- 40 FPC_SCH_FER - Supplemental Channel target Frame Error Rate.
 41 The base station shall set this field to the target Frame Error
 42 Rate on the Supplemental Channel, as specified in Table
 43 3.7.3.3.2.25-2.
- 44 FPC_SCH_INIT_SETPT - Initial Supplemental Channel Output Loop Eb/Nt setpoint

- 1 The base station shall set this field to initial Supplemental
2 Channel Outer Loop Eb/Nt setpoint (absolute value or offset
3 value as indicated by FPC_SCH_INIT_SETPT_OP) as follows:
- 4 • If FPC_SCH_INIT_SETPT_OP is set to '0', the unit is
5 0.125 dB;
 - 6 • If FPC_SCH_INIT_SETPT_OP is set to '1', the unit is 0.125
7 dB and the offset is expressed as two's complement signed
8 number.
- 9 FPC_SCH_MIN_SETPT - Minimum Supplemental Channel outer loop Eb/Nt setpoint.
10 The base station shall set this field to minimum Supplemental
11 Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB.
- 12 FPC_SCH_MAX_SETPT - Maximum Supplemental Channel outer loop Eb/Nt setpoint.
13 The base station shall set this field to maximum
14 Supplemental Channel Outer Loop Eb/Nt setpoint, in units of
15 0.125 dB.
- 16 FPC_THRESH_SCH_INCL- Supplemental Channel Setpoint Report Threshold Included
17 Indicator.
18 If FPC_INCL is set to '0', the base station shall omit this field;
19 otherwise, the base station shall set this field as follows:
20 If Supplemental Channel setpoint report threshold is included
21 in this message, the base station shall set this field to '1';
22 otherwise, the base station shall set this field to '0'.
- 23 FPC_SETPT_THRESH_SCH - Supplemental Channel Setpoint Report Threshold.
24 If FPC_THRESH_SCH_INCL is set to '1', the base station shall
25 set this field to the value of the Supplemental Channel
26 setpoint threshold (in units of 0.125 dB) above which the
27 outer loop report message will be sent by the mobile station;
28 otherwise, the base station shall omit this field.
- 29 RPC_INCL - Reverse Power Control parameter included indicator.
30 The base station shall set this field to '1' if RPC_NUM_SUP is
31 included in this message; otherwise the base station shall set
32 this field to '0'.
- 33 RPC_NUM_SUP - Number of Supplemental Channels.
34 If RPC_INCL is set to '1', the base station shall set this field to
35 the total number of the Supplemental Channels minus one;
36 otherwise, the base station shall omit this field.
- 37 The base station shall include RPC_NUM_SUP +1 occurrences of the following record:
- 38 SCH_ID - Supplemental Channel index.
39 The base station shall set this field to the Supplemental
40 Channel index.
- 41 RLGAIN_SCH_PILOT - Supplemental Channel power offset adjustment relative to
42 Reverse Pilot Channel power for radio configurations greater
43 than 2.

1		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
2		this field; otherwise, the base station shall set this field as
3		follows:
4		The base station shall set this field to the index of the Quasi-
5		orthogonal function (see [2]) corresponding to the QOF index
6		for the Supplemental Channel on the lowest SR3 frequency.
7	CODE_CHAN_SCH_LOW -	Code channel for the Supplemental Channel on the lowest
8		SR3 frequency.
9		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
10		this field; otherwise, the base station shall set this field as
11		follows:
12		The base station shall set this field to the code channel index
13		(see [2]) that the mobile station is to use on the Supplemental
14		Channel on the lowest SR3 frequency. If Radio Configuration
15		6 or 8 is used, the base station shall set this field in the range
16		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
17		base station shall set this field in the range 1 to 255 inclusive.
18	3X_SCH_HIGH_INCL -	SCH code channel on the highest SR3 frequency included
19		indicator.
20		If the Supplemental Channel on the highest SR3 frequencies
21		has a different code channel than the Supplemental Channel
22		on the center SR3 frequency, the base station shall set this
23		field to '1'; otherwise, the base station shall set this field to '0'.
24	QOF_MASK_ID_SCH_HIGH -	QOF index for the Supplemental Channel on the highest
25		SR3 frequency.
26		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
27		this field; otherwise, the base station shall set this field as
28		follows:
29		The base station shall set this field to the index of the Quasi-
30		orthogonal function (see [2]) corresponding to the QOF index
31		for the Supplemental Channel on the highest SR3 frequency.
32	CODE_CHAN_SCH_HIGH -	Code channel for the Supplemental Channel on the highest
33		SR3 frequency.
34		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
35		this field; otherwise, the base station shall set this field as
36		follows:
37		The base station shall set this field to the code channel index
38		(see [2]) that the mobile station is to use on the Supplemental
39		Channel on the highest SR3 frequency. If Radio
40		Configuration 6 or 8 is used, the base station shall set this
41		field in the range 1 to 127 inclusive. If Radio Configuration 7
42		or 9 is used, the base station shall set this field in the range 1
43		to 255 inclusive.
44	CCSH_INCLUDED -	Code Combining Soft Handoff information included indicator.
45		The base station shall set this field to '1' if Code Combining
46		Soft Handoff information is included in this message;
47		otherwise, the base station shall set this field to '0'.

1 If the CCSH_INCLUDED field is set to '1', the base station shall include one occurrence of
 2 the following one field for each of the Forward Supplemental Channel records included in
 3 this message (as specified by NUM_FOR_CFG_RECS and NUM_SUP_SHO). The base station
 4 shall use the same order for the following field as is used for the Forward Supplemental
 5 Channel records.

6 CCSH_ENCODER_TYPE - Code Combining Soft Handoff Turbo Encoder type.
 7
 8 The base station shall set this field to '0' if the Turbo Encoder
 9 type to be used on the Forward Supplemental Channel
 10 indexed by FOR_SCH_ID and SCCL_INDEX is the default
 11 encoder type. The base station shall set this field to '1' if the
 Turbo Encoder to be used is the complementary type.

12 FOR_SCH_CC_INCL - Channel configuration for the Forward Supplemental Channel
 13 included indicator.

14 The base station shall set this field to '1' if the channel
 15 configuration information for the Forward Supplemental
 16 Channel is included; otherwise, the base station shall set this
 17 field to '0'.

18 The base station shall set FOR_SCH_CC_INCL to '0' if
 19 NUM_FOR_SCH is set to '00' or if FOR_SCH_DURATION is set
 20 to '0000'.

21 If FOR_SCH_CC_INCL is set to '1', the base station shall include NUM_FOR_SCH
 22 occurrences of the following three-field record.

23 FOR_SCH_ID - Forward Supplemental Channel Identifier.

24 The base station shall set this field to the identifier of the
 25 Forward Supplemental Channel pertaining to this record.

26 The base station shall set this field to the Supplemental
 27 Channel identifier, shown in Table 3.7.5.7-5.

28 FOR_SCH_MUX - Forward Supplemental Channel Multiplex Option.

29 The base station shall set this field to the Multiplex Option
 30 associated with the maximum data rate for this Forward
 31 Supplemental Channel (see [3]).

32 SCH_CC_Type-specific field - Supplemental Channel Configuration Information.

33 The base station shall set this field as defined in 3.7.5.7.1 for
 34 this Forward Supplemental Channel.

35 REV_SCH_CC_INCL - Channel configuration for the Reverse Supplemental Channel
 36 included indicator.

37 The base station shall set this field to '1' if the channel
 38 configuration information for the Reverse Supplemental
 39 Channel is included; otherwise, the base station shall set this
 40 field to '0'.

41 The base station shall set REV_SCH_CC_INCL to '0' if
 42 NUM_REV_SCH is set to '00' or if REV_SCH_DURATION is set
 43 to '0000'.

- 1 If REV_SCH_CC_INCL is set to '1', the base station shall include NUM_REV_SCH
2 occurrences of the following three-field record.
- 3 REV_SCH_ID - Reverse Supplemental Channel Identifier.
4 The base station shall set this field to the identifier of the
5 Reverse Supplemental Channel pertaining to this record.
6 The base station shall set this field to the Supplemental
7 Channel identifier, shown in Table 3.7.5.7-5.
- 8 REV_SCH_MUX - Reverse Supplemental Channel Multiplex Option.
9 The base station shall set this field to the Multiplex Option
10 associated with the maximum data rate for this Reverse
11 Supplemental Channel (see [3]).
- 12 SCH_CC_Type-specific field - Supplemental Channel Configuration Information.
13 The base station shall set this field as defined in 3.7.5.7.1 for
14 this Reverse Supplemental Channel
- 15 SCH_BCMC_IND - BCMC on supplemental channel Indicator.
16 If NUM_FOR_SCH field is set to '00', the base station shall
17 omit this field; otherwise, the base station shall include this
18 field and set it as follows:
19 If the channel assignment in this message contains a Forward
20 Supplemental Channel used for BCMC transmission, the base
21 station shall set this field to '1'; otherwise, the base station
22 shall set this field to '0'.
- 23 ADD_PLCM_FOR_SCH_INCL - Additional PLCM for forward SCH included indicator.
24 If the SCH_BCMC_IND field is not included or is included and
25 is set to '0', the base station shall omit this field; otherwise,
26 the base station shall include this field and set it as follows:
27 If the additional PLCM for forward SCH is included in this
28 message, the base station shall set this field to '1'; otherwise,
29 the base station shall set this field to '0'.
- 30 ADD_PLCM_FOR_SCH_TYPE - The Additional Public Long Code Mask for forward SCH
31 type indicator.
32 If ADD_PLCM_FOR_SCH_INCL is not included or is included
33 and is set to '0', the base station shall omit this field;
34 otherwise, the base station shall include this field and set it
35 as follows:
36 The base station shall set this field to '1' to indicate PLCM
37 specified by the base station. The field value '0' is reserved.
- 38 ADD_PLCM_FOR_SCH_35 - The 35 LSB bits of the additional Public Long Code Mask
39 for forward SCH.
40 If ADD_PLCM_FOR_SCH_TYPE field is included and is set to
41 '1', the base station shall include this field and set it to the 35
42 least significant bits of the public long code mask used by the
43 mobile station; otherwise, the base station shall omit this
44 field.

- 1 If SCH_BCMC_IND field is included and is set to '1', the base station shall include
2 NUM_FOR_SCH occurrences of the following record:
- 3 USE_ADD_PLCM_FOR_SCH - Use additional PLCM for forward SCH indicator.
4
5 The base station shall set this field to '1' if the additional
6 PLCM for forward SCH included in this message is to be used
7 for this Forward Supplemental Channel; otherwise, the base
8 station shall set this field to '0'.
- 8 FSCH_OUTERCODE_INCL - Forward Supplemental Channel Outer Code included
9 indicator.
10
11 The base station shall set this field to '1' if the Forward
12 Supplemental Channel outer code information is included in
13 this message; otherwise, the base station shall set this field to
14 '0'.
- 14 FSCH_OUTERCODE_RATE - Outer Code Rate of the Forward Supplemental Channel.
15
16 If the FSCH_OUTERCODE_INCL field is not included or is
17 included and is set to '0', the base station shall omit this field;
18 otherwise, the base station shall include this field and set it
19 as follows:
20
21 The base station shall set this field to the outer code rate of
22 the Forward Supplemental Channel as specified in Table
23 3.7.2.3.2.38-3.
- 22 FSCH_OUTERCODE_OFFSET - Outer Coding Buffer Offset of the Forward
23 Supplemental Channel.
24
25 If the FSCH_OUTERCODE_INCL field is not included or is
26 included and is set to '0', the base station shall omit this field;
27 otherwise, the base station shall include this field and set it
28 as follows:
29
30 The base station shall set this field to the outer coding buffer
31 offset of the Forward Supplemental Channel in units of 20ms
32 as specified in [2].
- 31 FPC_BCMC_CHAN - Channel used for secondary power control subchannel.
32
33 If FPC_INCL is set to '1' and FPC_MODE_SCH is set to '001',
34 '010', '101', or '110', the base station shall include this field
35 and set it as follows; otherwise, the base station shall omit
36 this field.
37
38 If F-FCH is associated with secondary power control
39 subchannel, the base station shall set this field to '1';
40 otherwise, base station shall set this field to '0' to indicate
41 that FPC_SEC_CHAN points to the channel associated with
secondary power control subchannel.

- 1 3.7.3.3.2.38 Forward Supplemental Channel Assignment Mini Message
- 2 MSG_TAG: FSCAMM

3

Field	Length (bits)
FOR_SCH_ID	1
FOR_SCH_DURATION	4
FOR_SCH_START_TIME	5
SCCL_INDEX	4

- 1 FOR_SCH_ID - Forward Supplemental Channel identifier.
- 2 The base station shall set this field to the identifier of the
- 3 Forward Supplemental Channel.
- 4 FOR_SCH_DURATION - Duration of Forward Supplemental Channel assignment.
- 5 The base station shall set this field to the duration (see Table
- 6 3.7.3.3.2.37-3), starting at the start time of the message
- 7 specified by FOR_SCH_START_TIME, during which the mobile
- 8 station is to process the Forward Supplemental Channel.
- 9 The base station shall set this field to '0000' to indicate that
- 10 the mobile station should stop processing the Forward
- 11 Supplemental Channel starting at the start time of the
- 12 message specified by FOR_SCH_START_TIME.
- 13 The base station shall set this field to '1111' to indicate that
- 14 the mobile station should process the Forward Supplemental
- 15 Channel, starting at the explicit start time of the message
- 16 specified by FOR_SCH_START_TIME, until the start time of a
- 17 subsequent Forward Supplemental Channel assignment
- 18 corresponding to the same Forward Supplemental Channel
- 19 (see 2.6.6.2.5.1.1).
- 20 FOR_SCH_START_TIME - Start time for Forward Supplemental Channel assignment.
- 21 The base station shall set this field to the System Time, in
- 22 units of time specified by START_TIME_UNIT, (modulo 32) at
- 23 which the mobile station is to start processing the Forward
- 24 Supplemental Channel specified in this message. The start
- 25 time for processing Forward Supplemental Channels is the
- 26 time for which
- 27
$$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{FOR_SCH_START_TIME} \pmod{32}$$
- 28 = 0,
- 29 where t is the System Time in units of 20 ms.
- 30 SCCL_INDEX - Supplemental Channel Code list index.
- 31 The base station shall set this field to the index of the record
- 32 in the Forward Supplemental Channel Code list corresponding
- 33 to the FOR_SCH_ID. The base station shall include an
- 34 SCCL_INDEX whose SCH Active Set is a subset of the Active
- 35 Set of the Fundamental Channel, Dedicated Control Channel,
- 36 or both.
- 37

REV_SCH_ID - Reverse Supplemental Channel identifier.

The base station shall set this field to the identifier of the Reverse Supplemental Channel.

REV_SCH_DURATION - Duration of Reverse Supplemental Channel assignment.

The base station shall set this field to '0000' to indicate that the mobile station is to stop transmitting on the Reverse Supplemental Channel specified by REV_SCH_ID at the start time specified by START_TIME. The base station shall set this field to '1111' to indicate that the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID, starting at the start time specified by REV_SCH_START_TIME in this message, until the start time specified by a subsequent Reverse Supplemental Channel assignment corresponding to the same Supplemental Channel (see 2.6.6.2.5.1.1). The base station shall set this field to the duration according to Table 3.7.3.3.2.37-3, starting at the explicit start time specified by REV_SCH_START_TIME, during which the mobile station may transmit on the Reverse Supplemental Channel specified by REV_SCH_ID.

REV_SCH_START_TIME - Start time for *Reverse Supplemental Channel Assignment Mini Message*.

The base station shall set this field to the System Time, in units of time specified by START_TIME_UNIT, (modulo 32) at which the mobile station may start transmitting on the Reverse Supplemental Channel specified in this message. The explicit start time for transmitting on the Reverse Supplemental Channel is the time for which

$$\lfloor t / (\text{START_TIME_UNIT} + 1) \rfloor - \text{REV_SCH_START_TIME} \pmod{32} = 0,$$

where t is the System Time in units of 20 ms.

REV_SCH_NUM_BITS_IDX - Reverse Supplemental Channel number of information bits per frame index.

If USE_FLEX_NUM_BITS is equal to '0' or if USE_FLEX_NUM_BITS is equal to '1' and RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then the base station shall set this field according to Table 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel number of information bits per frame and the number of CRC bits per frame, that the mobile station may transmit on the reverse Supplemental Channel identified by REV_SCH_ID.

If USE_FLEX_NUM_BITS_s is equal to '1' and RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000', then the base station shall set the REV_SCH_NUM_BITS_IDX field to indicate the Reverse Supplemental Channel number of information bits per frame that the mobile station may

1 transmit on the Reverse Supplemental Channel identified by
2 REV_SCH_ID to be
3 NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
4 [REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
5 Channel number of CRC bits per frame that the mobile station
6 may transmit on the Reverse Supplemental Channel identified
7 by REV_SCH_ID to be
8 CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
9 [REV_SCH_NUM_BITS_IDX].
10
11

1 3.7.3.3.2.40 Mobile Assisted Burst Operation Parameters Message
 2 MSG_TAG: MABOPM

Field	Length (bits)
ORDER_FLAG	1

If ORDER_FLAG is set to '1', the base station shall include following record:

PS_MIN_DELTA	3
ORDER_INTERVAL	3

PERIODIC_FLAG	1
---------------	---

If PERIODIC_FLAG is set to '1', the base station shall include following record:

NUM_PILOTS	3
PERIODIC_INTERVAL	6

THRESHOLD_FLAG	1
----------------	---

If THRESHOLD_FLAG is set to '1', the base station shall include following record:

PS_FLOOR_HIGH	6
PS_FLOOR_LOW	6
PS_CEILING_HIGH	6
PS_CEILING_LOW	6
THRESHOLD_INTERVAL	6

3

4 ORDER_FLAG - Order change reporting flag.

5 The base station shall set this field to '1' to indicate that the
 6 mobile station is to send a *Pilot Strength Measurement Mini*
 7 *Message* to the base station whenever a received pilot
 8 strength measurement changes its relative order with respect
 9 to all other reported pilot strength measurements during
 10 supplemental channel burst operations; otherwise, the base
 11 station shall set this field to '0'.

12 If ORDER_FLAG is set to '1', the base stations shall include the following two-field record:

13 PS_MIN_DELTA - Minimum power strength delta.

1 The base station shall set this field to one less than the
 2 minimum pilot strength measurement difference between two
 3 pilots (in units of 0.5 dB) that must be measured in order for
 4 the mobile station to send a *Pilot Strength Measurement Mini*
 5 *Messages* when the rank order mode is enabled. A difference
 6 in pilot strength of at least (PS_MIN_DELTA + 1), in units of
 7 0.5 dB, must be measured for ORDER_INTERVAL successive
 8 20 ms intervals before a rank order based *Pilot Strength*
 9 *Measurement Mini Message* is generated.

10 ORDER_INTERVAL - Order interval.

11 The base station shall set this field to the minimum interval
 12 (in 20 ms units) during which the indicated pilot strength
 13 measurement difference greater than or equal to
 14 (PS_MIN_DELTA + 1), in units of 0.5 dB, must be measured
 15 by the mobile station in order for the mobile station to send a
 16 *Pilot Strength Measurement Mini Messages* when the rank
 17 order mode is enabled.

18 PERIODIC_FLAG - Periodic report flag.

19 The base station shall set this field to '1' to indicate that the
 20 mobile station is to send *Pilot Strength Measurement Mini*
 21 *Messages* periodically during supplemental channel burst
 22 operations; otherwise the base station shall set this field to
 23 '0'.

24 If PERIODIC_FLAG is set to '1', the base station shall include the following two-field record:

25 NUM_PILOTS - Number of pilots.

26 The base station shall set this field to the number of pilots for
 27 which the mobile station is to send *Pilot Strength Measurement*
 28 *Mini Messages* when the periodic mode is enabled.

29 PERIODIC_INTERVAL - Periodic interval.

30 The base station shall set this field to the interval (in 20 ms
 31 units) between *Pilot Strength Measurement Mini Messages*
 32 when the periodic mode is enabled.

33 THRESHOLD_FLAG - Threshold reporting flag.

34 The base station shall set this field to '1' to indicate that the
 35 mobile station is to send *Pilot Strength Measurement Mini*
 36 *Messages* whenever a measured pilot crosses below a lower
 37 bound or exceeds an upper bound during Supplemental
 38 channel burst operations; otherwise the base station shall set
 39 this field to '0'.

40 If THRESHOLD_FLAG is set to '1', the base station shall include the following five-field
 41 record:

42 PS_FLOOR_HIGH - Lower bound reporting high water mark.

43 The base station shall set this field to the high water mark for
 44 the lower bound below which the mobile station is to send
 45 *Pilot Strength Measurement Mini Messages* when the threshold
 46 mode is enabled.

1			The base station shall set this field as an unsigned binary
2			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
3	PS_FLOOR_LOW	-	Lower bound reporting low water mark.
4			The base station shall set this field to the low water mark for
5			the lower bound below which the mobile station is to send
6			<i>Pilot Strength Measurement Mini Messages</i> when the threshold
7			mode is enabled.
8			The base station shall set this field as an unsigned binary
9			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
10	PS_CEILING_HIGH	-	Upper bound reporting high water mark.
11			The base station shall set this field to the high water mark for
12			the upper bound above which the mobile station is to send
13			<i>Pilot Strength Measurement Mini Messages</i> when the threshold
14			mode is enabled.
15			The base station shall set this field as an unsigned binary
16			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
17	PS_CEILING_LOW	-	Upper bound reporting low water mark.
18			The base station shall set this field to the low water mark for
19			the upper bound above which the mobile station is to send
20			<i>Pilot Strength Measurement Mini Messages</i> when the threshold
21			mode is enabled.
22			The base station shall set this field as an unsigned binary
23			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$.
24	THRESHOLD_INTERVAL	-	Threshold reporting interval.
25			The base station shall set this field to the interval (in 20 ms
26			units) between <i>Pilot Strength Measurement Mini Messages</i>
27			when the threshold reporting mode is enabled.
28			

1 3.7.3.3.2.41 User Zone Reject Message
 2 MSG_TAG: UZRM

Field	Length (bits)
REJECT_UZID	16
REJECT_ACTION_INDI	3
UZID_ASSIGN_INCL	1
ASSIGN_UZID	0 or 16

- 3 REJECT_UZID - Rejected User Zone identifier.
 4 The base station shall set this field to the User Zone identifier
 5 of the User Zone rejected by the base station.
- 6 REJECT_ACTION_INDI - Rejection action indicator.
 7 The base station shall set this field to the value shown in
 8 Table 3.7.2.3.2.29-1 corresponding to the User Zone rejection
 9 action field to identify the mobile station action.
- 10 UZID_ASSIGN_INCL - User Zone identifier assignment included indicator.
 11 If assigned UZID information is included, the base station
 12 shall set this field to '1'; otherwise, the base station shall set
 13 this field to '0'.
- 14 ASSIGN_UZID - Assigned User Zone identifiers.
 15 The base station shall set this field to the User Zone identifier
 16 of the User Zone assigned to the mobile station.
 17

ADD_CON_REF	0 or 8

} (NUM_ADD_CALL_RECORDS + 1)

- 3
 4 RESPONSE_IND – Response indicator.

1			The base station shall set this field to '1' if this message is a
2			response to an <i>Enhanced Origination Message</i> from the mobile
3			station; otherwise, the base station shall set this field to '0'.
4	TAG	–	Transaction identifier.
5			If the RESPONSE_IND field is set to '0', the base station shall
6			omit this field; otherwise, the base station shall include this
7			field and set it as follows:
8			The base station shall set this field to the value of the TAG or
9			ADD_TAG field of the <i>Enhanced Origination Message</i> to which
10			this message is the response.
11	ACCEPT_IND	–	Accepted indicator.
12			If the RESPONSE_IND field is set to '0', the base station shall
13			omit this field; otherwise, the base station shall include this
14			field and shall set it as follows:
15			If the base station accepts the call request from the mobile
16			station, the base station shall set this field to '1'; otherwise,
17			the base station shall set this field to '0'.
18	REJECT_PKTDATA_IND	–	Packet data service option rejection indicator.
19			If the ACCEPT_IND field is not included or is included and is
20			set to '1', the base station shall omit this field; otherwise, the
21			base station shall include this field and shall set it as follows:
22			The base station shall set this field to '1' to indicate rejection
23			of the packet data service option requested by the mobile
24			station; otherwise, the base station shall set this field to '0'.
25	BYPASS_ALERT_ANSWER	–	Bypass alert indicator.
26			If the RESPONSE_IND field is set to '1', the base station shall
27			omit this field; otherwise, the base station shall include this
28			field and shall set it as follows:
29			If the mobile station is to bypass the <i>Waiting for Order</i>
30			<i>Substate</i> and the <i>Waiting for Mobile Station Answer Substate</i>
31			for this call, the base station shall set this field to '1';
32			otherwise, the base station shall set this field to '0'.
33	SO_INCL	–	Service option included indicator.
34			The base station shall set this field to '1' if the SO field is
35			included in this message; otherwise, it the base station shall
36			set this field to '0'.
37			If the USE_OLD_SERV_CONFIG is included and is set to '1',
38			the base station shall set this field to '0'.
39	SO	–	Service option.
40			If the SO_INCL field is set to '0', the base station shall omit
41			this field; otherwise, the base station shall include this field
42			and shall set it to the value of the service option number (as
43			specified in [30]) that the base station proposes for this call.
44	CON_REF_INCL	–	Connection reference included indicator.

1 If the ACCEPT_IND field is not included or is included but is
2 set to '1', the base station shall set this field to '1'; otherwise,
3 the base station shall set this field to '0'.

4 If the USE_OLD_SERV_CONFIG is included and is set to '1',
5 the base station shall set this field to '0'.

6 CON_REF - Connection reference.

7 If the CON_REF_INCL field is set to '0', the base station shall
8 omit this field; otherwise, the base station shall include this
9 field and shall set it to the value of the connection reference
10 that was/will be assigned to the service option connection
11 corresponding to this call.

12 USE_OLD_SERV_CONFIG - Use stored service option connection record(s) indicator.

13 This field may be used by the base station to instruct the
14 mobile station to use the stored service option connection
15 record(s).

16 If the ACCEPT_IND field is included and is set to '0', the base
17 station shall omit this field; otherwise, the base station shall
18 include this field and shall set it as follows:

19 If the mobile station is to restore one or more service option
20 connection record(s) from the stored service configuration, the
21 base station shall set this field to '1'; otherwise, the base
22 station shall set this field to '0'.

23 SR_ID - Service reference identifier.

24 If the USE_OLD_SERV_CONFIG field is not included or is
25 included and is set to '0', the base station shall omit this field;
26 otherwise, the base station shall include this field and set it
27 as follows.

28 If the mobile station is to restore all remaining service option
29 connections record from the stored service configuration, the
30 base station shall set this field to '111'; if the mobile station is
31 to restore more than one but not all remaining service option
32 connections from the stored service configuration, the base
33 station shall set this field to '000'; otherwise, the base station
34 shall set this field to the service reference identifier
35 corresponding to the service option connection to be restored.

36 SR_ID_RESTORE_BITMAP - Bitmap of service reference identifiers to be restored.

37 If the SR_ID field is included and set to '000', the base station
38 shall include this field and set it as follows; otherwise, the
39 base station shall omit this field.

40 This field consists of the subfields defined in Table
41 3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
42 indicate that the mobile station is to restore the service option
43 connection of the corresponding service reference identifier;
44 otherwise, the base station shall set the subfield to '0'.

- 1 ADD_CALL_INFO_INCLUDED – Additional call information included indicator.
- 2 If USE_OLD_SERV_CONFIG is not included, or is included
3 and is set to '1', the base station shall omit this field;
4 otherwise, the base station shall include this field and set it
5 as follows:
- 6 If at least one occurrence of the additional call record is
7 included in this message, the base station shall set this field
8 to '1'; otherwise, the base station shall set this field to '0'.
- 9 NUM_ADD_CALL_RECORDS – Number of additional call records included.
- 10 If ADD_CALL_INFO_INCLUDED is not included or is included
11 and set to '0', the base station shall omit this field; otherwise,
12 the base station shall include this field and set it to one less
13 than the number of occurrences of the call records included
14 in this message.
- 15 If NUM_ADD_CALL_RECORDS is included, the base station shall include
16 NUM_ADD_CALL_RECORDS + 1 occurrences of the following variable-field record:
- 17 ADD_TAG – Additional transaction identifier.
- 18 If the RESPONSE_IND field is set to '0', the base station shall
19 omit this field; otherwise, the base station shall include this
20 field and set it as follows:
- 21 The base station shall set this field to the value of the TAG or
22 ADD_TAG field of the *Enhanced Origination Message* to which
23 this message is the response.
- 24 ADD_ACCEPT_IND – Additional accepted indicator.
- 25 If the RESPONSE_IND field is set to '0', the base station shall
26 omit this field; otherwise, the base station shall include this
27 field and set it as follows:
- 28 If the base station accepts the call request from the mobile
29 station, the base station shall set this field to '1'; otherwise,
30 the base station shall set this field to '0'.
- 31 ADD_REJECT_PKTDATA_IND – Additional packet data service option rejection
32 indicator.
- 33 If the ADD_ACCEPT_IND field is not included or is included
34 and is set to '1', the base station shall omit this field;
35 otherwise, the base station shall include this field and shall
36 set it as follows:
- 37 The base station shall set this field to '1' to indicate rejection
38 of the packet data service option requested by the mobile
39 station; otherwise, the base station shall set this field to '0'.
- 40 ADD_SO_INCL – Additional service option included indicator.
- 41 The base station shall set this field to '1' if the ADD_SO field
42 is included in this message; otherwise, it the base station
43 shall set this field to '0'.
- 44 ADD_SO – Additional service option.

 24 the type-specific fields included in this record.

- 1 Type-specific fields - Type-specific fields.
- 2 The base station shall include type-specific fields as specified
- 3 in 3.7.5.
- 4

1 3.7.3.3.2.46 Security Mode Command Message
 2 MSG_TAG: SMCM

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
D_SIG_ENCRYPT_MODE	3
NUM_RECS	3

NUM_RECS occurrences of the following record

{ (NUM_RECS)

CON_REF	8
UI_ENCRYPT_MODE	3

} (NUM_RECS)

ENC_KEY_SIZE	0 or 3
C_SIG_ENCRYPT_MODE_INCL	1
C_SIG_ENCRYPT_MODE	0 or 3
MSG_INT_INFO_INCL	1
CHANGE_KEYS	0 or 1
USE_UAK	0 or 1

3

4 USE_TIME - Use action time indicator.

5 This field indicates whether an ACTION_TIME is specified in
 6 this message.

7 If an ACTION_TIME is specified in this message, the base
 8 station shall set this field to '1'; otherwise, the base station
 9 shall set this field to '0'.

10 ACTION_TIME - Action time.

11 If the USE_TIME field is set to '1', the base station shall set
 12 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 13 ms, in units of 80 ms (modulo 64), at which the message is to
 14 take effect. If the USE_TIME field is set to '0', the base station
 15 shall omit this field.

16 D_SIG_ENCRYPT_MODE - Dedicated channel encryption mode indicator.

17 The base station shall set it to signaling encryption mode, as
 18 shown in Table 3.7.4.5-1.

19 NUM_REC - Number of user information encryption records.

20 The base station shall set this field to the number of user
 21 information encryption records included in this message.

1
2
3
4
5
6

If the base station receives an authentication vector with a UAK, the base station shall set this field to '1' to indicate that the mobile station is to use UMAC; otherwise, the base station shall set this field to '0' to indicate that the mobile station is to use MAC-I.

1 3.7.3.3.2.47 Base Station Status Response Message
 2 MSG_TAG: BSSRSPM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields.	8 × QUAL_INFO_LEN
NUM_RECORDS	4

NUM_RECORDS occurrences of the following record:

{ (NUM_RECORDS)

RECORD_TYPE	8
RECORD_LENGTH	8
Record type specific fields	variable
RESERVED	0-7 (as required)

} (NUM_RECORDS)

- 4 QUAL_INFO_TYPE - Qualification information type.
 5 The base station shall set this field to the QUAL_INFO_TYPE
 6 field in the corresponding *Base Station Status Request*
 7 *Message*.
- 8 QUAL_INFO_LEN - Qualification information length.
 9 The base station shall set this field to the QUAL_INFO_LEN
 10 field in the corresponding *Base Station Status Request*
 11 *Message*.
- 12 Type-specific fields - Type-specific fields.
 13 The base station shall set these fields to the qualification
 14 information in the corresponding *Base Station Status Request*
 15 *Message*.
- 16 NUM_RECORDS - Number of records included in this message.
 17 The base station shall set this field to the number of
 18 occurrences of RECORD_TYPE field in this message.

19 The base station shall include one occurrence of the following variable-length record for
 20 each information record that is included:

- 21 RECORD_TYPE - Information record type.
 22 The base station shall set this field to the record type value
 23 shown in Table 3.7.3.3.2.47-1 corresponding to the
 24 information record included.

Table 3.7.3.3.2.47-1. Base Station Status Response Information Record Types

Information Record Requested	Record Type
Pilot Information	00000000
Reserved	00000001- 11111111

RECORD_LENGTH - Information record length.

The base station shall set this field to the length, in octets, of the record type specific fields included in this record.

Record type specific fields - Record type specific fields

The base station shall set this field to the type specific fields corresponding to this record type.

If the RECORD_TYPE field is set to '00000000', the base station shall set the record type specific field as follows:

Field	Length (bits)
NUM_PILOTS	4
SID_NID_IND	1

NUM_PILOTS occurrences of the following record:

{ (NUM_PILOTS)

RECORD_LEN	4
PILOT_PN	9
BASE_ID	16
SID_NID_INCL	0 or 1
SID	0 or 15
NID	0 or 16
BASE_LAT_LONG_INCL	1
BASE_LAT	0 or 22
BASE_LONG	0 or 23
RESERVED_1	0-7 (as required)

} (NUM_PILOTS)

- 1 NUM_PILOTS - Number of Pilots reported.
- 2 The base station shall set this field to the number of pilots
- 3 whose information is reported in this message.
- 4 The base station shall set this field to a number equal or
- 5 greater than one.
- 6 SID_NID_IND - SID, NID included indicator.
- 7 The base station shall set this field to '1' if SID, NID
- 8 information is included in this message; otherwise, it shall set
- 9 this field to '0'.
- 10 The base station shall include NUM_PILOTS occurrences of the following variable length
- 11 record:
- 12 RECORD_LEN - Record Length.
- 13 The base station shall set this field to the length in octets of
- 14 this record.
- 15 PILOT_PN - Pilot PN sequence offset index.
- 16 The base station shall set this field to the pilot PN sequence
- 17 offset for this base station, in units of 64 PN chips.
- 18 BASE_ID - Base station identification.
- 19 The base station shall set this field to the Base Station
- 20 identification number corresponding to this pilot.
- 21 SID_NID_INCL - SID, NID included indicator.
- 22 If the SID_NID_IND field is set to '0', the base station shall
- 23 omit this field; otherwise, the base station shall include this
- 24 field and set it as follows:
- 25 If this is the first pilot included in this message, the base
- 26 station shall set this field to '1'; otherwise, the base station
- 27 shall set this field as follows:
- 28 If the SID and NID of this pilot are same as the SID and NID
- 29 of the previous pilot, the base station shall set this field to '0';
- 30 otherwise, the base station shall set this field to '1'.
- 31 SID - System identification.
- 32 If the SID_NID_INCL field is not included or is included and is
- 33 set to '0', the base station shall omit this field; otherwise, the
- 34 base station shall include this field and set it as follows:
- 35 The base station shall set this field to the system
- 36 identification number of the system corresponding to this
- 37 pilot (see 2.6.5.2).
- 38 NID - Network identification.

1 If the SID_NID_INCL field is not included or is included and is
2 set to '0', the base station shall omit this field; otherwise, the
3 base station shall include this field and set it as follows:
4
5 The base station shall set this field to the network
6 identification number of the network corresponding to this
7 pilot (see 2.6.5.2).

8 **BASE_LAT_LONG_INCL** - Base station LAT/LONG included indicator.
9
10 The base station shall set this field to '1' if the base station
11 LAT/LONG fields are included in this message; otherwise, the
12 base station shall set this field to '0'.

13 **BASE_LAT** - Base station latitude.
14
15 If the BASE_LAT_LONG_INCL is set to '0', the base station
16 shall omit this field; otherwise, the base station shall include
17 this field and set it as follows:
18
19 The base station shall set this field to its latitude in units of
20 0.25 second, expressed as a two's complement signed number
21 with positive numbers signifying North latitudes. The base
22 station shall set this field to a value in the range -1296000 to
23 1296000 inclusive (corresponding to a range of -90° to +90°).

24 **BASE_LONG** - Base station longitude.
25
26 If the BASE_LAT_LONG_INCL is set to '0', the base station
27 shall omit this field; otherwise, the base station shall include
28 this field and set it as follows:
29
30 The base station shall set this field to its longitude in units of
31 0.25 second, expressed as a two's complement signed number
32 with positive numbers signifying East longitude. The base
33 station shall set this field to a value in the range -2592000 to
34 2592000 inclusive (corresponding to a range of -180° to
35 +180°).

36 **RESERVED_1** - Reserved bits.
37
38 The base station shall add reserved bits as needed in order to
39 make the length of the pilot specific record equal to an integer
40 number of octets. The base station shall set these bits to '0'.

41 **RESERVED** - Reserved bits.
42
43 The base station shall add reserved bits as needed in order to
44 make the length of the record equal to an integer number of
45 octets. The base station shall set these bits to '0'.

1 3.7.3.3.2.48 Authentication Request Message

2 MSG_TAG: AUREQM

3

Field	Length (bits)
RANDA	128
CON_SQN	48
AMF	16
MAC_A	64

4

5 RANDA – The Random Challenge Number.

6 The base station shall set this field to the value of the
7 Random Challenge Number in the authentication vector.

8 CON_SQN – Concealed Sequence Number.

9 The base station shall set this field to the value of the
10 Concealed Sequence Number in the authentication vector.

11 AMF – Authentication Management Field.

12 The base station shall set this field to the value of the
13 Authentication Management Field in the authentication
14 vector.

15 MAC_A – Message Authentication Code.

16 The base station shall set this field to the value of the
17 Message Authentication Code in the authentication vector.

18

- 1 3.7.3.3.2.49 Rate Change Message
- 2 MSG_TAG: RATCHGM

Fields	Length (Bits)

2

USE_TIME - Use action time indicator.

1 This field indicates whether an explicit action time is specified
 2 in this order.

3 If an explicit action time is specified in this message, the base
 4 station shall set this field to '1'; otherwise, the base station
 5 shall set this field to '0'.

6 ACTION_TIME - Action time.

7 If the USE_TIME field is set to '1', the base station shall set
 8 this field to the System Time minus $FRAME_OFFSET_s \times 1.25$
 9 ms, in units of 80 ms (modulo 64), at which the rate change is
 10 to take effect. If the USE_TIME field is set to '0', the base
 11 station shall set this field to '000000'.

12 REV_CQICH_RATE_CHANGE_INCL - Reverse Channel Quality Indicator Channel rate
 13 change included indicator.

14 If the base station determines to change the rate of R-CQICH,
 15 the base station shall set this field to '1'; otherwise, the base
 16 station shall set this field to '0'.

17 FULL_CI_FEEDBACK_IND - Full C/I feedback rate indicator.

18 If REV_CQICH_RATE_CHANGE_INCL is equal to '0', the base
 19 station shall omit this field; otherwise, the base station shall
 20 set this field as follows:

21 If the mobile station is to send full C/I feedback every 1.25
 22 ms, the base station shall set this field to '1'. If the mobile
 23 station is to transmit full C/I feedback every 20 ms, the base
 24 station shall set this field to '0'.

25 REV_CQICH_REPS - Reverse Channel Quality Indicator Channel repetition factor.

26 If REV_CQICH_RATE_CHANGE_INCL is equal to '0', the base
 27 station shall omit this field; otherwise, the base station shall
 28 set this field according to the Table 3.7.3.3.2.49-1.

29 **Table 3.7.3.3.2.49-1 R-CQICH Repetition Factor**

REV_CQICH_REPS (Binary)	Value
00	1
01	2
10	4
11	Reserved

30 SWITCHING_PARMS_INCL - R-CQICH switching parameters included indicator.

31 If the REV_CQICH_RATE_CHANGE_INCL field is set to '0', the
 32 base station shall omit this field; otherwise, the base station
 33 shall include this field and set it as follows:

34 The base station shall set this field to '1' if the parameters for
 35 R-CQICH soft and softer switching are included in this
 36 message; otherwise, the base station shall set this field to '0'.

- 1 NUM_SOFT_SWITCHING_FRAMES - Number of frames for R-CQICH soft switching.
 2 If SWITCHING_PARAMS_INCL is not included or included and
 3 set to '0', then the base station shall omit this field; otherwise,
 4 the base station shall include this field and set it as follows:
 5
 6 The base station shall set this field to the duration of the cell
 7 switching period, in units of 20 ms, minus one, during which
 8 the mobile station is to transmit the cell switch sequence on
 9 the R-CQICH channel when it switches between two pilots
 10 which are in different groups.
- 10 NUM_SOFTER_SWITCHING_FRAMES - Number of frames for R-CQICH softer
 11 switching.
 12 If SWITCHING_PARAMS_INCL is not included or included and
 13 set to '0', then the base station shall omit this field; otherwise,
 14 the base station shall include this field and set it as follows:
 15
 16 The base station shall set this field to the duration of the cell
 17 switching period, in units of 20 ms, minus one, during which
 18 the mobile station is to transmit the cell switch sequence on
 19 the R-CQICH channel when it switches between two pilots
 20 which are in the same group.
- 20 CHM_SWITCHING_PARAMS_INCL- Control Hold Mode fields included indicator.
 21 If SWITCHING_PARAMS_INCL is omitted or equal to '0', the
 22 base station shall omit this field; otherwise, the base station
 23 shall include this field and set it as follows.
 24
 25 The base station shall set this field to '1' if the switching
 26 parameters for Control Hold Mode are included; otherwise,
 27 the base station shall set this field to '0'.
- 27 NUM_SOFT_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH soft
 28 switching while in Control Hold.
 29 If CHM_SWITCHING_PARAMS_INCL is not included or included
 30 and set to '0', then the base station shall omit this field;
 31 otherwise, the base station shall include this field and set it
 32 as follows:
 33
 34 The base station shall set this field to the duration of the cell
 35 switching period, in units of 20 ms, minus one, during which
 36 the mobile station, while in Control Hold, is to transmit the
 37 cell switch sequence on the R-CQICH when it switches
 38 between two pilots which are in different groups.
- 38 NUM_SOFTER_SWITCHING_FRAMES_CHM- Number of frames for R-CQICH softer
 39 switching while in Control Hold.
 40 If CHM_SWITCHING_PARAMS_INCL is not included or included
 41 and set to '0', then the base station shall omit this field;
 42 otherwise, the base station shall include this field and set it
 43 as follows:

1 The base station shall set this field to the duration of the cell
2 switching period, in units of 20 ms, minus one, during which
3 the mobile station, while in Control Hold, is to transmit the
4 cell switch sequence on the R-CQICH when it switches
5 between two pilots which are in the same group.

6 RL_CQICH_ATT_ADJ_GAIN_INCL - Attribute adjustment gain for Reverse Channel
7 Quality Indicator Channel included indicator.

8 If REV_CQICH_RATE_CHANGE_INCL is equal to '0', the base
9 station shall omit this field; otherwise, the base station shall
10 set this field as follows:

11 If the attribute adjustment gain for Reverse Channel Quality
12 Indicator Channel is included in this message, the base
13 station shall set this field to '1'; otherwise, the base station
14 shall set this field to '0'.

15 NUM_RECS - Number of the records.

16 If RL_CQICH_ATT_ADJ_GAIN_INCL is omitted, or if it is
17 included and set to '0', the base station shall omit this field.

18 Otherwise, the base station shall set this field to one less than
19 the number of occurrences of the records included in this
20 message.

21 If NUM_RECS is included in this message, the base station shall include NUM_RECS+1
22 occurrences of the following record:

23 RL_CQICH_ATT_ADJ_GAIN_TYPE - Reverse Channel Quality Indicator Channel
24 attribute adjustment gain value type indicator

25 If the following fields are set to the nominal attribute gain
26 adjustment values that the mobile station is to use for the
27 transmission attributes (relative to Nominal_Attribute_Gain
28 specified in [2]), the base station shall set this field to '0'. If
29 the following fields are set to the pilot reference level
30 adjustment values that the mobile station is to use for the
31 transmission attributes (relative to Pilot_Reference_Level
32 specified in [2]), the base station shall set this field to '1'.

33 RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL - Attribute adjustment gain for the high power
34 level of Reverse Channel Quality Indicator Channel
35 transmission included indicator.

36 If the attribute adjustment gain for the high power level of
37 Reverse Channel Quality Indicator Channel transmission is
38 included in this message, the base station shall set this field
39 to '1'; otherwise, the base station shall set this field to '0'.

40 RL_CQICH_ATT_ADJ_GAIN_HIGH - Attribute adjustment gain for the high power level
41 of Reverse Channel Quality Indicator Channel transmission
42 for the corresponding rate indicated in REV_CQICH_REPS.

43 If RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL is not included or
44 included but is set to '0', the base station shall omit this field;
45 otherwise, the base station shall include this field and set it
46 as follows:

1 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 2 station shall set this field to the value of the nominal attribute
 3 gain adjustment that the mobile station is to make for the
 4 transmission attributes for the high power level of R-CQICH.
 5 The base station shall set the value in the range from -40 to
 6 16 inclusive.

7 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 8 station shall set this field to the value of the pilot reference
 9 level adjustment that the mobile station is to make for the
 10 transmission attributes for the high power level of R-CQICH.

11 The base station shall set this field to the correction factor
 12 expressed as a two's complement value in units of 0.125 dB.

13 RL_CQICH_ATT_ADJ_GAIN_LOW_INCL - Attribute adjustment gain for Reverse Channel
 14 Quality Indicator Channel transmission Included Indicator.

15 If the attribute adjustment gain for the low power level of
 16 Reverse Channel Quality Indicator Channel transmission is
 17 included in this message, the base station shall set this field
 18 to '1'; otherwise, the base station shall set this field to '0'.

19 RL_CQICH_ATT_ADJ_GAIN_LOW - Attribute adjustment gain for the low power level of
 20 Reverse Channel Quality Indicator Channel transmission for
 21 the corresponding rate indicated in REV_CQICH_REPS.

22 If RL_CQICH_ATT_ADJ_GAIN_LOW_INCL is not included or
 23 included but is set to '0', the base station shall omit this field;
 24 otherwise, the base station shall include this field and set it
 25 as follows:

26 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 27 station shall set this field to the value of the nominal attribute
 28 gain adjustment that the mobile station is to make for the
 29 transmission attributes for the low power level of R-CQICH.
 30 The base station shall set the value in the range from -16 to
 31 16 inclusive.

32 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 33 station shall set this field to the value of the pilot reference
 34 level adjustment that the mobile station is to make for the
 35 transmission attributes for the low power level of R-CQICH.

36 The base station shall set this field to the correction factor
 37 expressed as a two's complement value in units of 0.125 dB.

38 REV_ACKCH_RATE_CHANGE_INCL - Reverse Acknowledgment Channel rate change
 39 included indicator

40 If the base station determines to change the rate of R-ACKCH,
 41 the base station shall set this field to '1'; otherwise, the base
 42 station shall set this field to '0'.

43 If REV_CQICH_RATE_CHANGE_INCL is set to '0',
 44 REV_ACKCH_RATE_CHANGE_INCL shall be set to '1'.

45 REV_ACKCH_REPS - Reverse Acknowledgment Channel repetition factor.

1 If REV_ACKCH_RATE_CHANGE_INCL is equal to '0', the base
 2 station shall omit this field; otherwise, the base station shall
 3 include this field and set it according to the Table
 4 3.7.3.3.2.49-2.

5 **Table 3.7.3.3.2.49-2 R-ACKCH Repetition Factor**

REV_ACKCH_REPS (Binary)	Value
'00'	1
'01'	2
'10'	4
'11'	Reserved

6 REV_PDCH_MAX_PARAMS_INCL - Reverse Packet Data Channel maximum traffic to pilot
 7 ratio included indicator.

8 The base station shall set this field to '1' if the Reverse Packet
 9 Data Channel maximum traffic to pilot ratio for autonomous
 10 transmission is included; otherwise, the base station shall set
 11 this field to '0'.

12 REV_PDCH_MAX_AUTO_TPR- Reverse Packet Data Channel maximum traffic to pilot
 13 ratio for autonomous transmission.

14 If REV_PDCH_MAX_PARAMS_INCL is set to '0', the base station
 15 shall omit this field; otherwise, the base station shall include
 16 this field and set it as follows.

17 The base station shall set this field to the maximum traffic to
 18 pilot ratio for autonomous transmission on the Reverse
 19 Packet Data Channel (see [2] and [3]).

20 The base station shall set this field to values in the range 0 to
 21 18 dB inclusive in units of 0.125 dB.

22 REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET - Maximum Allowed Reverse
 23 PDCH encoder packet size.

24 If REV_PDCH_MAX_PARAMS_INCL is set to '0', the base station
 25 shall omit this field; otherwise, the base station shall include
 26 this field and set it as follows.

27 The base station shall set this field to the maximum size
 28 encoder packet that the mobile station is allowed to use. (see
 29 [2] and [3]).

30 The base station shall set this field to a value in the range 0 to
 31 10 inclusive, corresponding to the encoder packet sizes 192,
 32 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, and
 33 18456 bits respectively.

34 REV_PDCH_PARAMS_INCL - Reverse Packet Data Channel related parameters included
 35 indicator.

1 The base station shall set this field to '1' if the R-PDCH
2 parameters are included in this message; otherwise, the base
3 station shall set this field to '0'.

4 REV_PDCH_NUM_ARQ_ROUNDS_NORMAL - Maximum number of allowed ARQ rounds
5 on the Reverse PDCH in the non-boosted mode.

6 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
7 omit this field; otherwise, the base station shall include this
8 field and set it as follows:

9 The base station shall set this field to one less the maximum
10 number of allowed ARQ rounds on the Reverse PDCH in the
11 non-boosted mode. The base station shall set this field to 0, 1,
12 or 2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

13 REV_PDCH_NUM_ARQ_ROUNDS_BOOST - Maximum number of allowed HARQ
14 retransmissions on the Reverse PDCH in the boosted mode.

15 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
16 omit this field; otherwise, the base station shall include this
17 field and set it as follows:

18 The base station shall set this field to one less the maximum
19 number of allowed ARQ rounds on the Reverse PDCH in the
20 boosted mode. The base station shall set this field to 0, 1, or 2
21 corresponding to 1, 2, or 3 rounds respectively (See [3]).

AUTH_SIGNATURE_REQ_IND	0 or 1
BCMC_FLOW_ON_TRAFFIC_IDLE_IND	0 or 2

} (NUM_FLOW_DISCRIMINATOR+1) or 1

} (NUM_BCMC_PROGRAMS+1)

3
 4 AUTO_REQ_TRAF_ALLOWED_IND - Autonomous BCMC request on traffic channel
 5 allowed indicator.

6 The base station shall set this field to '1' to indicate that the
 7 mobile station is allowed to request for a BCMC flow on traffic
 8 channel that is not included in this message; otherwise, the
 9 base station shall set this field to '0'.

10 BCMC_ON_IDLE_SUP - BCMC on idle state supported indicator.

1 The base station shall set this field to '1' to indicate that the
2 BCMC feature is supported on idle state; otherwise, the base
3 station shall set this field to '0'.

4 BCMC_FLOWS_ON_TRAFFIC_ONLY_IND - BCMC flows on traffic channel only
5 indicator.

6 If the BCMC_ON_IDLE_SUP_IND field is set to '0', the base
7 station shall omit this field; otherwise, the base station shall
8 include this field and set it as follows:

9 The base station shall set this field to '1' if this message
10 contains information only about BCMC flows on traffic
11 channel; otherwise, the base station shall set this field to '0'.

12 AUTH_SIGNATURE_REQUIRED - Authorization signature required indication.

13 The base station shall set this field to '1' to indicate that the
14 mobile station is to include the authorization signature in the
15 Origination Message, Page Response Message and Enhanced
16 Origination Message that include BCMC_FLOW_ID (see
17 2.6.13.11) for BCMC flows indicated in this message if
18 included in that message; otherwise, the base station shall set
19 this field to '0'.

20 NON_DEFAULT_VALUE_INCLUDED - Non-default values for Authorization signature
21 included indicator.

22 If the AUTH_SIGNATURE_REQUIRED field is set to '0', the
23 base station shall omit this field; otherwise, the base station
24 shall include this field and set it as follows:

25 The base station shall set this field to '0' if default values are
26 to be used to generate the Authorization signature; otherwise,
27 the base station shall set this field to '1'.

28 ACH_TIME_STAMP_SHORT_LENGTH - Length of time stamp for use on r-csch.

29 If the NON_DEFAULT_VALUE_INCLUDED field is not included
30 or is included and is set to '0', the base station shall omit this
31 field; otherwise, the base station shall include this field and
32 set it as follows:

33 The base station shall set this field to the length of the time
34 stamp, in units of bits, included on the Origination Message,
35 Page Response Message and Enhanced Origination Message.

36 TIME_STAMP_LONG_LENGTH - Length of time stamp.

37 If the NON_DEFAULT_VALUE_INCLUDED field is not included
38 or is included and is set to '0', the base station shall omit this
39 field; otherwise, the base station shall include this field and
40 set it as follows:

41 The base station shall set this field to the length of the time
42 stamp, in units of bits, used to generate the Authorization
43 signature.

44 TIME_STAMP_UNIT - Unit for time stamp length.

1 If the NON_DEFAULT_VALUE_INCLUDED field is not included
2 or is included and is set to '0', the base station shall omit this
3 field; otherwise, the base station shall include this field and
4 set it as follows:

5 The base station shall set this field to the unit of the time
6 stamp length field as follows: the unit of the time stamp field
7 shall be 2 to the power of the value of this field.

8 NUM_BCMC_PROGRAMS- Number of BCMC Programs.

9 The base station shall set this field to the number of BCMC
10 programs available in this base station in any one of the
11 frequencies minus one.

12 The base station shall include NUM_BCMC_PROGRAMS plus one occurrences of the
13 following variable length record:

14 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

15 The base station shall set this field to one less than the length
16 in bits of the BCMC_PROGRAM_ID of this program.

17 BCMC_PROGRAM_ID - BCMC program Identifier

18 The length of this field shall be one more than the value of
19 BCMC_PROGRAM_ID_LEN bits.

20 The base station shall set this field to the BCMC program
21 identifier of this program.

22 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

23 The base station shall set this field to the length in bits of the
24 BCMC_FLOW_DISCRIMINATOR of this program.

25 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators

26 The length of this field shall be determined by the value of the
27 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
28 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
29 is omitted; otherwise, the length of this field shall be
30 BCMC_FLOW_DISCRIMINATOR_LEN bits.

31 The base station shall set this field to the number of flow
32 discriminators included for this program minus one.

33 If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include
34 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
35 otherwise, the base station shall include 1 occurrence of the following variable length
36 record:

37 BCMC_FLOW_DISCRIMINATOR - BCMC flow discriminator

38 The length of this field shall be determined by the value of the
39 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
40 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
41 is omitted; otherwise, the length of this field shall be
42 BCMC_FLOW_DISCRIMINATOR_LEN bits.

43 The base station shall set this field to the BCMC flow
44 discriminator of this flow.

1 AUTH_SIGNATURE_REQ_IND - Authorization signature required indicator

2 If the AUTH_SIGNATURE_REQUIRED field is set to '0', the
3 base station shall omit this field; otherwise, the base station
4 shall include this field and set it as follows:

5 The base station shall set this field to '1' if the mobile station
6 is to include the authorization signature in the Origination
7 Message, Page Response Message, and Enhanced Origination
8 Message for this BCMC flow; otherwise, the base station shall
9 set this field to '0'.

10 BCMC_FLOW_ON_TRAFFIC_IDLE_IND - BCMC flow on traffic state or idle state
11 supported indicator.

12 If the BCMC_FLOWS_ON_TRAFFIC_ONLY_IND field is not
13 included or is included and set to '1', the base station shall
14 omit this field; otherwise, the base station shall include this
15 field and set it as follows:

16 The base station shall set this field as specified in Table
17 3.7.3.3.2.50-1 to indicate the availability of this flow in the
18 traffic state or idle state.

19 **Table 3.7.3.3.2.50-1. BCMC Flow Availability**

BCMC_FLOW_ON_TRAFFIC_ IDLE_IND (Binary)	Availability
00	Available in Idle State only
01	Available in Traffic State only
10	Available in both Idle State and Traffic State
11	Reserved

} (NUM_RC_PARAMS_RECORDS)

1

2

USE_TIME - Use action time indicator.

3

This field indicates whether an explicit action time is specified in this message.

4

5

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

6

7

8

ACTION_TIME - Action time.

9

If the USE_TIME field is set to '1', the base station shall set this field to the System Time minus $\text{FRAME_OFFSET}_s \times 1.25$ ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE_TIME field is set to '0', the base station shall omit this field.

10

11

12

13

14

FOR_FCH_ACK_MASK_RL_BLANKING_INC - Ack mask for F-FCH RC11 and RC12 when RL Blanking is enabled is included

15

16

If the FOR_FCH_ACK_MASK_RL_BLANKING field is included in this message, then the base station shall set this field to '1'. Otherwise, the base station shall set this field to '0'.

17

18

19

FOR_FCH_ACK_MASK_RL_BLANKING - Ack mask for F-FCH RC11 and RC12 when RL Blanking is enabled.

20

21

If the FOR_FCH_ACK_MASK_RL_BLANKING_INC field is set to '0', then the base station shall omit this field. Otherwise, the base station shall include this field and set it to ack mask for F-FCH RC11 and RC12 when RL Blanking is enabled as describe below:

22

23

24

25

26

This field consists of the subfields shown in Table 3.7.3.3.2.51-1. The base station shall set the subfields corresponding to the PCGs where Ack can be sent to '1', and shall set the remaining subfields to '0'.

27

28

29

1

Table 3.7.3.3.2.51-1. Ack Mask

Subfield	Length (bits)	Subfield Description
ACK_MASK_0	1	Ack allowed in PCG 0
ACK_MASK_1	1	Ack allowed in PCG 1
ACK_MASK_2	1	Ack allowed in PCG 2
ACK_MASK_3	1	Ack allowed in PCG 3
ACK_MASK_4	1	Ack allowed in PCG 4
ACK_MASK_5	1	Ack allowed in PCG 5
ACK_MASK_6	1	Ack allowed in PCG 6
ACK_MASK_7	1	Ack allowed in PCG 7
ACK_MASK_8	1	Ack allowed in PCG 8
ACK_MASK_9	1	Ack allowed in PCG 9
ACK_MASK_10	1	Ack allowed in PCG 10
ACK_MASK_11	1	Ack allowed in PCG 11
ACK_MASK_12	1	Ack allowed in PCG 12
ACK_MASK_13	1	Ack allowed in PCG 13
ACK_MASK_14	1	Ack allowed in PCG 14
ACK_MASK_15	1	Ack allowed in PCG 15

2

3 FOR_FCH_ACK_MASK_NO_RL_BLANKING_INC - Ack mask for F-FCH RC11 and
4 RC12 when RL Blanking is disabled is included

5 If the FOR_FCH_ACK_MASK_NO_RL_BLANKING field is
6 included in this message, then the base station shall set this
7 field to '1'. Otherwise, the base station shall set this field to
8 '0'.

9 FOR_FCH_ACK_MASK_NO_RL_BLANKING - Ack mask for F-FCH RC11 and RC12 when
10 RL Blanking is disabled.

11 If the FOR_FCH_ACK_MASK_NO_RL_BLANKING_INC field is
12 set to '0'; then the base station shall omit this field.
13 Otherwise, the base station shall include this field and set it
14 to ack mask for F-FCH RC11 and RC12 when RL Blanking is
15 disabled as describe below:

16 This field consists of the subfields shown in Table
17 3.7.3.3.2.51-1. The base station shall set the subfields
18 corresponding to the PCGs where Ack can be sent to '1', and
19 shall set the remaining subfields to '0'.

20 REV_FCH_ACK_MASK_INC - Ack mask for R-FCH RC08 included

- 1 If the REV_FCH_ACK_MASK field is included in this message,
 2 then the base station shall set this field to '1'. Otherwise, the
 3 base station shall set this field to '0'.
- 4 REV_FCH_ACK_MASK - Ack mask for R-FCH RC08
- 5 If the REV_FCH_ACK_MASK_INC field is set to '0', then the
 6 base station shall omit this field. Otherwise, the base station
 7 shall include this field and set it to ack mask for R-FCH RC08
 8 as describe below:
- 9 This field consists of the subfields shown in Table
 10 3.7.3.3.2.51-1. The base station shall set the subfields
 11 corresponding to the PCGs where Ack can be sent to '1', and
 12 shall set the remaining subfields to '0'.
- 13 FOR_SCH_ACK_MASK_RL_BLANKING_INC - Ack mask for F-SCH RC11 and RC12 when
 14 RL Blanking is enabled is included
- 15 If the FOR_SCH_ACK_MASK_RL_BLANKING field is included
 16 in this message, then the base station shall set this field to '1'.
 17 Otherwise, the base station shall set this field to '0'.
- 18 FOR_SCH_ACK_MASK_RL_BLANKING - Ack mask for F-SCH RC11 and RC12 when RL
 19 Blanking is enabled.
- 20 If the FOR_SCH_ACK_MASK_RL_BLANKING_INC field is set to
 21 '0', then the base station shall omit this field. Otherwise, the
 22 base station shall include this field and set it to ack mask for
 23 F-SCH RC11 and RC12 when RL Blanking is enabled as
 24 describe below:
- 25 This field consists of the subfields shown in Table
 26 3.7.3.3.2.51-1. The base station shall set the subfields
 27 corresponding to the PCGs where Ack can be sent to '1', and
 28 shall set the remaining subfields to '0'.
- 29 FOR_SCH_ACK_MASK_NO_RL_BLANKING_INC - Ack mask for F-SCH RC11 and
 30 RC12 when RL Blanking is disabled is included
- 31 If the FOR_SCH_ACK_MASK_NO_RL_BLANKING field is
 32 included in this message, then the base station shall set this
 33 field to '1'. Otherwise, the base station shall set this field to
 34 '0'.
- 35 FOR_SCH_ACK_MASK_NO_RL_BLANKING - Ack mask for F-SCH RC11 and RC12 when
 36 RL Blanking is disabled.
- 37 If the FOR_SCH_ACK_MASK_NO_RL_BLANKING_INC field is
 38 set to '0'; then the base station shall omit this field.
 39 Otherwise, the base station shall include this field and set it
 40 to ack mask for F-SCH RC11 and RC12 when RL Blanking is
 41 disabled as describe below:
- 42 This field consists of the subfields shown in Table
 43 3.7.3.3.2.51-1. The base station shall set the subfields
 44 corresponding to the PCGs where Ack can be sent to '1', and
 45 shall set the remaining subfields to '0'.
- 46 REV_SCH_ACK_MASK_INC - Ack mask for R-SCH RC08 included

1 If the REV_SCH_ACK_MASK field is included in this message,
 2 then the base station shall set this field to '1'. Otherwise, the
 3 base station shall set this field to '0'.

4 REV_SCH_ACK_MASK - Ack mask for R-SCH RC08

5 If the REV_SCH_ACK_MASK_INC field is set to '0', then the
 6 base station shall omit this field. Otherwise, the base station
 7 shall include this field and set it to ack mask for R-SCH RC08
 8 as describe below:

9 This field consists of the subfields shown in Table
 10 3.7.3.3.2.51-1. The base station shall set the subfields
 11 corresponding to the PCGs where Ack can be sent to '1', and
 12 shall set the remaining subfields to '0'.

13 FOR_N2M_IND - N_{2m} for Forward Link RC11 and RC12 Indicator

14 The base station shall set this field to the value shown in
 15 Table 3.7.3.3.2.51-3 corresponding to the number of
 16 guaranteed transmission frames received with insufficient
 17 signal quality that will cause the mobile station to disable its
 18 transmitter when RC11 and RC12 is used on F-FCH.

19 **Table 3.7.3.3.2.51-3. N_{2m} value for Forward Link RC11 and RC12**

Value (binary)	Number of bad frames
000	2
001	4
010	6
011	8
All other values are reserved.	

20 FPC_MODE - Forward Power Control Operation Mode Indicator

21 The base station shall set the value to the forward power
 22 control operation mode (see [2]).

23 RPC_MODE - Power control mode

24 The base station shall set this field as follows:

- 25 - Set to '00' if power control rate is 200 to 400 bps.
- 26 - Set to '01' if power control rate is 200 bps.

27 The base station shall not set this field to '10' or '11'.

29 PWR_CNTL_STEP - Power control step size ~~during RL Blanking~~

30 The base station shall set this field to the closed loop power
 31 control step size parameter shown in Table 3.7.3.3.2.25-1
 32 corresponding to the power control step size that the mobile
 33 station is to use for closed loop power control in RC 8.

34

1 FOR_FCH_BLANKING_DUTYCYCLE - N (duty cycle) value for Forward Link RC11 and RC12.

2 The base station shall set this field to the value shown in
3 Table 3.7.3.3.2.51-5 corresponding to the duty cycle value to
4 be used on Forward Link RC11 and RC12.

5 **Table 3.7.3.3.2.51-5. N (duty cycle) value for FL RC11, RC12 and RL RC08**

Value (binary)	N	Description
000	1	Blanking Disabled
001	4	At least 1 out of 4 frames transmitted
010	8	At least 1 out of 8 frames transmitted
All other values are reserved.		

6
7 REV_FCH_BLANKING_DUTYCYCLE - N (duty cycle) value for Reverse Link RC08.

8 The base station shall set this field to the value shown in
9 Table 3.7.3.3.2.51-5 corresponding to the duty cycle value to
10 be used on Reverse Link RC08.

11 REV_ACKCH_GAIN_ADJ_ACS1_INC - Channel adjustment gain for Reverse Acknowledgment
12 Channel 1, Reverse Acknowledgment Channel 2, and Reverse
13 Acknowledgment Channel 3 for RC11 and RC12 when number of
14 cells in the active set equals 1 is included.

15 If the REV_ACKCH_GAIN_ADJ_ACS1 field is included in this
16 message, then the base station shall set this field to '1'.
17 Otherwise, the base station shall set this field to '0'.

18 REV_ACKCH_GAIN_ADJ_ACS1 - Channel adjustment gain for Reverse Acknowledgment
19 Channel 1, Reverse Acknowledgment Channel 2, and Reverse
20 Acknowledgment Channel 3 for RC11 and RC12 when number of
21 cells in the active set equals 1.

22 If REV_ACKCH_GAIN_ADJ_ACS1_INC is set to '0', the base
23 station shall omit this field; otherwise, the base station shall
24 set this field to the value of the gain adjustment that the
25 mobile station is to make for the Reverse Acknowledgment
26 Channel 1, Reverse Acknowledgment Channel 2, and Reverse
27 Acknowledgment Channel 3. The base station shall set this
28 field to the correction factor expressed as a two's complement
29 value in units of 0.125 dB. The base station shall set the
30 value in the range from -8 to 87.75 inclusive.

31 REV_ACKCH_GAIN_ADJ_ACS2PLUS_INC - Channel adjustment gain for Reverse
32 Acknowledgment Channel 1, Reverse Acknowledgment Channel
33 2, and Reverse Acknowledgment Channel 3 for RC11 and RC12
34 when number of cells in the active set exceeds 1 is included.

35 If the REV_ACKCH_GAIN_ADJ_ACS2PLUS field is included in
36 this message, then the base station shall set this field to '1'.
37 Otherwise, the base station shall set this field to '0'.

1 REV_ACKCH_GAIN_ADJ_ACS2PLUS- Channel adjustment gain for Reverse Acknowledgment
 2 Channel 1, Reverse Acknowledgment Channel 2, and Reverse
 3 Acknowledgment Channel 3 for RC11 and RC12 when number of
 4 cells in the active set exceeds 1.

5 If REV_ACKCH_GAIN_ADJ_ACS2PLUS_INC is set to '0', the
 6 base station shall omit this field; otherwise, the base station
 7 shall set this field to the value of the gain adjustment that the
 8 mobile station is to make for the Reverse Acknowledgment
 9 Channel 1, Reverse Acknowledgment Channel 2, and Reverse
 10 Acknowledgment Channel 3. The base station shall set this
 11 field to the correction factor expressed as a two's complement
 12 value in units of 0.125 dB. The base station shall set the
 13 value in the range from -8 to 7.758 inclusive.

14 NUM_RC_PARAMS_RECORDS - Number of RC Parameters Records
 15 The base station shall set this field to number of RC
 16 Parameters records included in this message.

17 PILOT_PN - Pilot PN sequence offset index.
 18 The base station shall set this field to the pilot PN sequence
 19 offset for this base station, in units of 64 PN chips.

20 QOF_SET_IN_USE - QOF Set in use
 21 This field consists of the subfields shown in Table
 22 3.7.3.3.2.51-2. The base station shall set the subfields
 23 corresponding to the QOF Sets that are in use for this
 24 PILOT_PN to '1', and shall set the remaining subfields to '0'.

25 **Table 3.7.3.3.2.51-2. QOF Set in use**

Subfield	Length (bits)	Subfield Description
QOF_SET_1	1	QOF SET 1
QOF_SET_2	1	QOF SET 2
QOF_SET_3	1	QOF SET 3

26 REV_SCH0_ACK_BIT_INC - Reverse SCH0 Ack bit assignment included
 27 If the REV_SCH0_ACK_CH_WALSH and REV_SCH0_ACK_BIT
 28 fields are included, then the base station shall set this field to
 29 '1'. Otherwise, the base station shall set this field to '0'.

30 REV_SCH0_ACK_CH_WALSH - Reverse SCH0 Ack Channel Walsh Code Assignment
 31 for RC08
 32 If the REV_SCH0_ACK_BIT_INC field is set to '0', then the
 33 base station shall omit this field. Otherwise, the base station
 34 shall include this field and set it as follows:

35 The base station shall set this field to the Walsh code
 36 assignment for the Ack Channel used for RC08.

37 REV_SCH0_ACK_BIT - Reverse SCH0 Ack Bit for RC08

1 If the REV_SCH0_ACK_BIT_INC field is set to '0', then the
2 base station shall omit this field. Otherwise, the base station
3 shall include this field and set it as follows:

4 The base station shall set this field to Ack Bit (on Ack
5 Channel in the REV_SCH0_ACK_CH_WALSH field) used for
6 RC08.

7 REV_SCH1_ACK_BIT_INC - Reverse SCH1 Ack bit assignment included

8 If the REV_SCH1_ACK_CH_WALSH and REV_SCH1_ACK_BIT
9 fields are included, then the base station shall set this field to
10 '1'. Otherwise, the base station shall set this field to '0'.

11 REV_SCH1_ACK_CH_WALSH - Reverse SCH1 Ack Channel for RC08

12 If the REV_SCH1_ACK_BIT_INC field is set to '0', then the
13 base station shall omit this field. Otherwise, the base station
14 shall include this field and set it as follows:

15 The base station shall set this field to the Walsh code
16 assignment for the Ack Channel used for RC08.

17 REV_SCH1_ACK_BIT - Reverse SCH1 Ack Bit for RC08

18 If the REV_SCH1_ACK_BIT_INC field is set to '0', then the
19 base station shall omit this field. Otherwise, the base station
20 shall include this field and set it as follows:

21 The base station shall set this field to Ack Bit (on Ack
22 Channel in the REV_SCH1_ACK_CH_WALSH field) used for
23 RC08.

24 FOR_FCH_CCSH_INTERLEAVER_TYPE - Interleaver type used for Forward FCH RC12

25 The base station shall set this field to '0' for all RCs other
26 than RC12, and may set this bit to '1' for RC12. The base
27 station shall set this bit to '1' to indicate that alternate
28 interleaver type is being used.

- 6 defined in section 3.7.2.3.2.45.

7

1 3.7.4 Orders

2 *Order Messages* are sent by the base station on the f-csch and the f-dsch. The general PDU
3 format used on the f-csch is defined in 3.7.2.3.2.7, and the general PDU format used on
4 the f-dsch is defined in 3.7.3.3.2.1. There are many specific types of *Order Messages*, as
5 shown in Table 3.7.4-1.

6 The base station may send on the f-csch any type of order shown in Table 3.7.4-1 with a 'Y'
7 in the first column, but shall not send on the f-csch any type of order with an 'N' in the first
8 column. The base station may send on the f-dsch any type of order shown in Table 3.7.4-1
9 with a 'Y' in the second column, but shall not send on the f-dsch any type of order with an
10 'N' in the second column.

11 An order consists of a 6-bit order code and zero or more order-specific fields. The base
12 station shall set the ORDER field in the *Order Message* to the order code shown in Table
13 3.7.4-1 corresponding to the type of order being sent.

14 If the order qualification code in the fourth column of Table 3.7.4-1 is '00000000' and there
15 are no other additional fields as shown by an 'N' in the sixth column, the base station shall
16 include no order qualification code or other order-specific fields in the *Order Message*. The
17 order qualification code of such a message is implicitly '00000000'.

18 If the order qualification code is not '00000000' and there are no other additional fields as
19 shown in Table 3.7.4-1 by an 'N' in the sixth column, the base station shall include the
20 order qualification code as the only order specific field in the *Order Message*.

21 If there are other additional fields as shown in Table 3.7.4-1 by a 'Y' in the sixth column,
22 the base station shall include order-specific fields as specified in the corresponding
23 subsection of this section.

24

1 **Table 3.7.4-1. Order and Order Qualification Codes Used on the f-csch and the f-dsch**

f-csch Order	f-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	ACTIO N_TIME can be specified	Additional Fields other than ORDQ	P_REV_I N_USE¹²³	Name/Function
Y	N	000001	00000000	N	N	All	<i>Abbreviated Alert Order</i>
Y	Y	000010	00000000	N	Y	All	<i>Base Station Challenge Confirmation Order</i> (see 3.7.4.1)
N	Y	000011	000000nn	Y	N	All	<i>Message Encryption Mode Order</i> (where nn is the mode per Table 3.7.2.3.2.8-2)
Y	N	000100	00000000	N	N	All	<i>Reorder Order</i>
N	Y	000101	0000nnnn	N	N	All	<i>Parameter Update Order</i> (where 'nnnn' is the Request Number)
Y	Y	000110	00000000	N	N	All	<i>Audit Order</i>
Y	N	001001	00000000	N	N	All	<i>Intercept Order</i>
N	Y	001010	00000000	N	N	All	<i>Maintenance Order</i>
Y	Y	010000	00000000	N	N	All	<i>Base Station Acknowledgment Order</i> (see [4])
N	Y	010001	00000000	N	N	All	<i>Pilot Measurement Request Order</i>
N	Y	010001	Nnnnnnnn (in the range of 00000001 to 11111111)	N	Y	≥ 4	<i>Periodic Pilot Measurement Request Order</i> (see 3.7.4.6)
Y	Y	010010	0001nnnn	N	N	All	<i>Lock Until Power-Cycled Order</i> (where nnnn is the lock reason)
Y	Y	010010	0010nnnn	N	N	All	<i>Maintenance Required Order</i> (where nnnn is the maintenance reason)

¹²³ P_REV_IN_USE equal to "All" implies all values applicable to the Band Class.

f-csch Order	f-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	ACTIO N_TIME can be specified	Additional Fields other than ORDQ	P_REV_I N_USE 123	Name/Function
Y	N	010010	11111111	N	N	All	<i>Unlock Order</i>
N	Y	010011	00000000	Y	Y	< 7	<i>Service Option Request Order (Band Class 0 only) (see 3.7.4.2)</i>
N	Y	010100	00000000	Y	Y	< 7	<i>Service Option Response Order (Band Class 0 only; see 3.7.4.3)</i>
Y	Y	010101	00000000	N	N	All	<i>Release Order (no reason given)</i>
Y	Y	010101	00000010	N	N	All	<i>Release Order (indicates that requested service option is rejected)</i>
N	Y	010110	00000000	N	N	≥ 6	<i>Outer Loop Report Request Order</i>
N	Y	010111	00000000	Y	N	All	<i>Long Code Transition Request Order (request public)</i>
N	Y	010111	00000001	Y	N	All	<i>Long Code Transition Request Order (request private)</i>
N	Y	011001	0000nnnn	N	N	All	<i>Continuous DTMF Tone Order (where the tone is designated by 'nnnn' as defined in Table 2.7.1.3.2.4-4)</i>
N	Y	011001	11111111	N	N	All	<i>Continuous DTMF Tone Order (stop continuous DTMF tone)</i>
N	Y	011010	nnnnnnnn	N	N	< 8	<i>Status Request Order (Band Class 0 only; see 3.7.4.4)</i>
Y	N	011011	00000000	N	N	All	<i>Registration Accepted Order (ROAM_INDI not included; see 3.7.4.5)</i>
Y	N	011011	00000001	N	N	All	<i>Registration Request Order</i>
Y	N	011011	00000010	N	N	All	<i>Registration Rejected Order</i>
Y	N	011011	00000100	N	N	1, ≥ 4	<i>Registration Rejected Order (delete TMSI)</i>

f-csch Order	f-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	ACTIO N_TIME can be specified	Additional Fields other than ORDQ	P_REV_I N_USE₁₂₃	Name/Function
Y	N	011011	00000101	N	Y	≥ 4	<i>Registration Accepted Order</i> (ROAM_INDI included but the signaling encryption related fields are not included; see 3.7.4.5)
Y	N	011011	00000111	N	Y	≥ 7	<i>Registration Accepted Order</i> (ROAM_INDI and the signaling encryption related fields are included; see 3.7.4.5)
N	Y	011101	nnnnnnnn	Y	N	< 7	<i>Service Option Control Order</i> (Band Class 0 only) (the specific control is designated by 'nnnnnnnn' as determined by each service option)
Y	Y	011110	nnnnnnnn	N	N	All	<i>Local Control Order</i> (the specific order is designated by 'nnnnnnnn' as determined by each system)
Y	N	011111	00000000	N	N	≥ 6	<i>Slotted Mode Order</i> (transition to the slotted mode operation.)
Y	Y	100000	00000000	N	Y	≥ 6	<i>Retry Order</i> (indicates that the requested operation is rejected and retry delay is included, see 3.7.4.7)
Y	Y	100001	00000000	Y	N	≥ 7	<i>Base Station Reject Order</i> (indicates that the base station can not decrypt an <i>Origination Message</i> or <i>Reconnect Message</i> with ORIG_IND set to '1' from the mobile station)

f-csch Order	f-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	ACTIO N_TIME can be specified	Additional Fields other than ORDQ	P_REV_I N_USE₁₂₃	Name/Function
Y	Y	100001	00000001	Y	N	≥ 7	<i>Base Station Reject Order</i> (indicates that the base station can not decrypt any message (other than an <i>Origination Message</i> or <i>Reconnect Message</i> with ORIG_IND set to '1') from the mobile station)
Y	Y	100001	00000010	Y	Y	≥ 10	<i>Base Station Reject Order</i> (indicates that the base station does not accept the message from the mobile station due to either encryption error, message integrity error, or both, see 3.7.4.9)
Y	N	100010	00000000	N	N	≥ 10	<i>Transit to Idle Order</i> (indicates that the mobile station is going to transit to the Idle State from the <i>System Access Substate</i> upon reception of this order)
Y	Y	100011	00000000	N	Y	≥ 11	<i>BCMC Order</i> (see 3.7.4.10)
Y	N	100100	00000000	N	Y	≥ 11	<i>Fast Call Setup Order</i> (indicates base station request for mobile station to operate in fast call setup mode, see 3.7.4.11)
Y	N	100100	00000001	N	Y	≥ 11	<i>Fast Call Setup Order</i> (indicates base station response to mobile station's request to operate in fast call setup mode, see 3.7.4.11)
Y	Y	100101	00000000	N	Y	≥ 11	<i>Service Status Order</i> (indicates status of requested services; see 3.7.4.12)

f-csch Order	f-dsch Order	Order Code, ORDER (binary)	Order Qualification Code, ORDQ (binary)	ACTIO N_TIME can be specified	Additional Fields other than ORDQ	P_REV_I N_USE₁₂₃	Name/Function
Y	Y	100110	00000001	N	Y	≥ 11	<i>Location Services Order</i> (indicates mobile station is to release current location services session(s), see 3.7.4.13)
N	Y	100111	00000000	N	N	≥ 11	<i>Shared Channel Configuration Order</i> (indicates R-FCH assignment)
N	Y	100111	00000001	N	N	≥ 11	<i>Shared Channel Configuration Order</i> (indicates R-FCH release)
All other codes are reserved.							

1 3.7.4.1 Base Station Challenge Confirmation Order

2 The *Base Station Challenge Confirmation Order* can be sent on either the f-csch or on the f-
3 dsch.

4

Order Specific Field	Length (bits)
ORDQ	8
AUTHBS	18
RESERVED	6

5

6 ORDQ - Order qualification code.

7 The base station shall set this field to '00000000'.

8 AUTHBS - Challenge response.

9 The base station shall set this field as specified in 2.3.12.1.5.

10 RESERVED - Reserved bits.

11 The base station shall set this field to '000000'.

12

1 3.7.4.2 Service Option Request Order

2 The *Service Option Request Order* can be sent only on the f-dsch.

3

Order Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

4

5 ORDQ - Order qualification code.

6 The base station shall set this field to '00000000'.

7 SERVICE_OPTION - Service option.

8 The base station shall set this field to the service option code
 9 shown in [30], corresponding to the requested or alternative
 10 service option.

11

1 3.7.4.3 Service Option Response Order

2 The *Service Option Response Order* can be sent only on the f-dsch.

3

Order Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

4

5 ORDQ - Order qualification code.

6 The base station shall set this field to '00000000'.

7 SERVICE_OPTION - Service option.

8 The base station shall set this field to the service option code
9 shown in [30], corresponding to the accepted service option,
10 or to '0000000000000000' to reject the last service option
11 requested by the mobile station.

12

1 3.7.4.4 Status Request Order

2 The *Status Request Order* can be sent only on the f-dsch. The ORDQ field of the *Status*
 3 *Request Order* specifies the information record to be returned by the mobile station in the
 4 *Status Message*.

5

Order Specific Field	Length (bits)
ORDQ	8

6

7

ORDQ - Order qualification code.

8

9

10

11

The base station shall set this field to the order qualification code corresponding to the information record type to be returned by the mobile station in the *Status Message*, as shown in Table 3.7.4.4-1.

12

13

14

If MOB_P_REV is equal to or greater than seven, the base station shall not request the Call Mode information record (record type '00000111' in Table 3.7.2.3.2.15-2).

15

16

Table 3.7.4.4-1. Status Request ORDQ Values

Information Record Requested	ORDQ (binary)
Reserved	00000110
Call Mode	00000111
Terminal Information	00001000
Roaming Information	00001001
Security Status	00001010
IMSI	00001100
ESN	00001101
IMSI_M	00001110
IMSI_T	00001111
All other ORDQ values are reserved.	

17

1

Table 3.7.4.5-1. (Part 1 of 2) Signaling Message Encryption Modes

C_SIG_ENCRYPT_MODE Field (binary)	Encryption Mode Used
000	Common Channel Signaling encryption disabled
001	Enhanced Cellular Message Encryption Algorithm enabled
010	Rijndael Encryption Algorithm enabled
011 - 111	Reserved

2

3

Table 3.7.4.5-1 (Part 2 of 2). Signaling Message Encryption Modes

D_SIG_ENCRYPT_MODE Field (binary)	Encryption Mode Used
000	If D_SIG_ENCRYPT_MODE _r is included and is set to '000' in a <i>Channel Assignment Message</i> or <i>Extended Channel Assignment Message</i> , the mobile station is to continue to use the current common channel encryption mode and algorithm for the dedicated channel. If D_SIG_ENCRYPT_MODE _r is included and is set to '000' in a <i>Security Mode Command Message</i> , <i>General Handoff Direction Message</i> or <i>Universal Handoff Direction Message</i> , the mobile station is to disable dedicated channel Signaling encryption.
001	Enhanced Cellular Message Encryption Algorithm enabled
010	Rijndael Encryption Algorithm enabled
011 - 111	Reserved

ENC_KEY_SIZE – Key size used for encryption

If C_SIG_ENCRYPT_MODE is included and set to '001', or '010', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field.

The base station shall set this field to the encryption key_size as shown in Table 3.7.4.5-2;

Table 3.7.4.5-2. ENC_KEY_SIZE Values

ENC_KEY_SIZE (binary)	Descriptions
000	Reserved
001	64 bits
010	128 bits
011-111	Reserved

MSG_INT_INFO_INCL – Message integrity information included indicator

If ORDQ is set to '00000111', the base station shall include this field and shall set it as follows; otherwise, the base station shall omit this field.

3.7.4.6 Periodic Pilot Measurement Request Order

The *Periodic Pilot Measurement Request Order* can be sent only on the f-dsch.

Order Specific Field	Length (bits)
ORDQ	8
MIN_PILOT_PWR_THRESH	5
MIN_PILOT_EC_I0_THRESH	5
INCL_SETPT	1
RESERVED	5

ORDQ - Order qualification code.

If INCL_SETPT equals '0', the base station shall set this field to a report period, in units of 0.08 seconds, in the range of '00001010' to '1111110' inclusive; otherwise, the base station shall set this field to a report period, in units of 0.08 seconds, in the range of '00000001' to '11111110' inclusive. The base station shall set this field to '11111111' to request a one time *Periodic Pilot Strength Measurement Message*.

MIN_PILOT_PWR_THRESH - The threshold of the total received E_c of the pilots in the Active Set.

If the mobile station is to report pilot strength measurements periodically to the base station irrespective of the pilot power of the Active Set, the base station shall set this field to '11111'; otherwise, the base station shall set this field to the total E_c threshold, expressed as an unsigned binary number equal to:

$$\lceil (10 \times \log_{10}(\text{pilot_ec_thresh}) + 120) / 2 \rceil$$

where *pilot_ec_thresh* is the threshold of the mobile station received total E_c (in mW) of the pilots in the Active Set below which the mobile station is to send the pilot strength measurements periodically to the base station.

MIN_PILOT_EC_I0_THRESH - Pilot Strength Threshold of Serving Frequency.

If the mobile station is to ignore this threshold, the base station shall set this field to '11111'; otherwise, the base station shall set this field to the total E_c/I_0 threshold, expressed as an unsigned binary number equal to:

$$\lceil -20 \times \log_{10} \text{pilot_streng_thresh} \rceil,$$

- 1 where *pilot_streng_thresh* is the threshold of the total received
2 E_c/I_0 of the pilots in Active Set (see 2.6.6.2.2) below which
3 the mobile station is to send the pilot strength measurements
4 periodically to the base station.
- 5 INCL_SETPT - Include Setpoint information indicator.
- 6 The base station shall set this field to '1' to indicate that the
7 mobile station shall include outer loop E_b/N_t setpoint
8 information in the *Periodic Pilot Strength Measurement*
9 *Message*; otherwise, the base station shall set this field to '0'.
- 10 RESERVED - Reserved bits.
- 11 The base station shall set this field to '00000'.
- 12

1 3.7.4.7 Retry Order

2 The *Retry Order* can be sent on either the f-csch or on the f-dsch to indicate the requested
 3 service is rejected and specify the retry delay.

4

Order Specific Field	Length (bits)
ORDQ	8
RETRY_TYPE	3
RETRY_DELAY	0 or 8
RESERVED	5

5 ORDQ - Order qualification code.

6 The base station shall set this field to '00000000'.

7 RETRY_TYPE - Retry delay type.

8 The base station shall set this field specified as in Table
 9 3.7.4.7-1.

10

1

Table 3.7.4.7-1 Retry Delay Type

Value (binary)	Retry Type	Usage
000	Clear all	The <i>Retry Order</i> is used to clear any existent retry delay
001	Origination	The <i>Retry Order</i> specifies the RETRY_DELAY for a Packet Data <i>Origination Message</i> , <i>Reconnect Message</i> , or <i>Enhanced Origination Message</i>
010	Resource Request	The <i>Retry Order</i> specifies the RETRY_DELAY for a <i>Resource Request Message</i> or <i>Resource Request Mini Message</i>
011	Supplemental Channel Request	The <i>Retry Order</i> specifies the RETRY_DELAY for a <i>Supplemental Channel Request Message</i> or <i>Supplemental Channel Request Mini Message</i>
100	Short Data Burst	The <i>Retry Order</i> specifies the RETRY_DELAY for Short Data Burst ¹²⁴ (see [30], [42])
101	Origination and Short Data Burst	The <i>Retry Order</i> specifies the RETRY_DELAY for both Short Data Burst (see [30], [42]) and Packet Data <i>Origination Message</i> , <i>Reconnect Message</i> , or <i>Enhanced Origination Message</i>
100-111	Reserved	

2

3

RETRY_DELAY - Retry delay.

4

If RETRY_TYPE is set to '000', the base station shall omit this field. Otherwise the base station shall include this field and set it as follows:

6

¹²⁴ Short Data Burst can be included in *Data Burst Message* or *Reconnect Message*

If RETRY_TYPE is set to '001', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send an *Origination Message*, *Reconnect Message*, or an *Enhanced Origination Message* with a Packet Data Service Option¹²⁵. The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

Table 3.7.4.7-2 Retry Delay for RETRY_TYPE '001'

Bits	Description
7 (MSB)	Unit for the Retry Delay '0' – unit is 1s '1' – unit is 1 min
6 to 0	Retry Delay interval

If RETRY_TYPE is set to '010' or '011', the base station shall set this field to the duration of the delay interval in units of 320 ms during which the mobile station is not permitted to send another *Supplemental Channel Request (Mini) Message* or *Resource Request (Mini) Message*. The base station shall set RETRY_DELAY to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay. The base station shall set RETRY_DELAY to '11111111' to indicate that the mobile station is to refrain from sending the request indefinitely.

If RETRY_TYPE is set to '100', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send a Short Data Burst (see [30], [42]). The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

If RETRY_TYPE is set to '101', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send a Short Data Burst (see [30], [42]) and the mobile station is not permitted to send an *Origination Message*, *Reconnect Message*, or an *Enhanced Origination Message* with a Packet Data Service Option. The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

RESERVED - Reserved bits.

¹²⁵ Packet data service option refers to SO 60, SO 61 or any service option in Service Option Group 4 and 5 in [30]

1
2
3
4
5

The base station shall set this field to '00000'.

1 3.7.4.8 Reserved.

2

1 3.7.4.9 Base Station Reject Order

2 The *Base Station Reject Order* can be sent on either the f-csch or on the f-dsch to indicate
 3 the base station does not accept a message from a mobile station due to encryption error,
 4 message integrity error, or both.

5

Order Specific Field	Length (bits)
ORDQ	8
REJECT_REASON	4
REJECTED_MSG_TYPE	8
REJECTED_MSG_SEQ	3

6

7 ORDQ - Order qualification code.
 8 The base station shall set this field to '00000010'.

9 REJECT_REASON - Reason of rejection.
 10 The base station shall set this field as specified in Table
 11 3.7.4.9-1.

12

Table 3.7.4.9-1 Reject Reason Type

Value (binary)	Reject Reason	Usage
0000	The MACI field is missing	The <i>Base Station Reject Order</i> is used to indicate that the MACI field required in the message is missing.
0001	The MACI field is present but invalid	The <i>Base Station Reject Order</i> is used to indicate that the MACI field is present but is invalid.
0010	The security sequence number is invalid	The <i>Base Station Reject Order</i> is used to indicate that the security sequence number is invalid.
0011	The base station has failed to decrypt an encrypted message	The <i>Base Station Reject Order</i> is used to indicate that the base station has failed to decrypt an encrypted message from the mobile station.
0100-1111	Reserved	Reserved

13

14 REJECTED_MSG_TYPE - Message type of the rejected message.

1 The base station shall set this field to the value of the
2 MSG_TYPE or the MSG_ID (see [4]) field of the message being
3 rejected.
4 If the MSG_TYPE or the MSG_ID (see [4]) field is not 8 bits,
5 the base station shall set the least significant bits of this field
6 to the value of the MSG_TYPE field and set all the remaining
7 bits to '0'.
8 REJECTED_MSG_SEQ - The Layer 2 message sequence number (see [4]) of the rejected
9 message.
10 The base station shall set this field to the Layer 2 message
11 sequence number (see [4]) of the rejected message.
12

1 3.7.4.10 BCMC Order

2 The *BCMC Order* is sent on f-csch or f-dsch to provide information on the requested BCMC
 3 flows.

4

Order Specific Field	Length (bits)
ORDQ	8
ALL_BCMC_FLOWS_IND	1
CLEAR_ALL_RETRY_DELAY	0 or 1
ALL_BCMC_REASON	0 or 4
ALL_BCMC_RETRY_DELAY	0 or 8
NUM_BCMC_PROGRAMS	0 or 6

If NUM_BCMC_PROGRAMS field is included,
 NUM_BCMC_PROGRAMS plus one occurrences of the
 following record

{ (NUM_BCMC_PROGRAMS+1)

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	BCMC_PROGRAM_I D_LEN+1
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISC RIMINATOR_LEN

NUM_FLOW_DISCRIMINATOR+1 or 1 occurrences of the
 following variable length record:

{ (NUM_FLOW_DISCRIMINATOR+1) or 1

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISC RIMINATOR_LEN
SAME_AS_PREVIOUS_BCMC_FLOW	1
CLEAR_RETRY_DELAY	0 or 1
BCMC_REASON	0 or 4
BCMC_RETRY_DELAY	0 or 8

} (NUM_FLOW_DISCRIMINATOR+1) or 1

} (NUM_BCMC_PROGRAMS+1)

5

6

ORDQ - Order qualification code.

7

The base station shall set this field to '00000000'.

1 ALL_BCMC_FLOWS_IND – All BCMC flows indicator.

2 The base station shall set this field to '1' to indicate the
3 ALL_BCMC_REASON applies to all flows for which mobile
4 station is expecting a response; otherwise the base station
5 shall set this field to '0'.

6 CLEAR_ALL_RETRY_DELAY - Clear all retry delay indicator

7 If ALL_BCMC_FLOWS_IND is set to '0', the base station shall
8 omit this field; otherwise, the base station shall include this
9 field and set it as follows:

10 The base station shall set this field to '1' to indicate that the
11 mobile station should clear all retry delays associated with
12 each BCMC Flow; otherwise the base station shall set this
13 field to '0'.

14 ALL_BCMC_REASON - All BCMC reason.

15 If ALL_BCMC_FLOWS_IND is set to '0' or if
16 CLEAR_ALL_RETRY_DELAY is set to '1', the base station shall
17 omit this field; otherwise, the base station shall include this
18 field and set it as follows:

19 The base station shall set this field as specified in Table
20 3.7.4.10-1 to indicate the purpose of this order.

21

Table 3.7.4.10-1 BCMC Reason

Value (binary)	BCMC_REASON/ALL_BCMC_REASON
0000	BCMC_FLOW_ID not available
0001	BCMC_FLOW_ID not transmitted
0010	BCMC_FLOW_ID available in idle state
0011	BCMC Registration Accepted; requested BCMC flow will be transmitted at a later time
0100	Authorization failure
0101	Retry later
0110-1111	Reserved

22 ALL_BCMC_RETRY_DELAY - All BCMC retry delay.

1 If the ALL_BCMC_REASON field is not included or is included
 2 and is not set to '0101', the base station shall omit this field;
 3 otherwise, the base station shall include this field and set it
 4 as follows:

5 The base station shall set this field to the duration of the
 6 delay interval, as shown in Table 3.7.4.10-2, during which the
 7 mobile station is not permitted to request *any* BCMC flows.
 8 The base station shall not set this field to '00000000'.

9 **Table 3.7.4.10-2 BCMC Retry Delay**

Bits	Description
7 (MSB)	Unit for the Retry Delay '0' – unit is 1s '1' – unit is 1 min
6 to 0	BCMC Retry Delay interval

10

11 NUM_BCMC_PROGRAMS– Number of BCMC programs included.

12 If ALL_BCMC_FLOWS_IND is set to '1', the base station shall
 13 omit this field; otherwise, the base station shall include this
 14 field and set it as follows.

15 The base station shall set this field to the number of BCMC
 16 programs included in this message minus one.

17 If the NUM_BCMC_PROGRAMS field is included, the base station shall include
 18 NUM_BCMC_PROGRAMS plus one occurrences of the following record:

19 BCMC_PROGRAM_ID_LEN - Length of BCMC_PROGRAM_ID field

20 The base station shall set this field to one less than the length
 21 in bits of the BCMC_PROGRAM_ID of this program.

22 BCMC_PROGRAM_ID - BCMC program Identifier

23 The length of this field shall be one more than the value of
 24 BCMC_PROGRAM_ID_LEN bits.

25 The base station shall set this field to the BCMC program
 26 identifier of this program.

27 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field

28 The base station shall set this field to the length in bits of the
 29 BCMC_FLOW_DISCRIMINATOR of this program.

30 NUM_FLOW_DISCRIMINATOR - Number of BCMC flow discriminators.

31 The length of this field shall be determined by the value of the
 32 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
 33 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
 34 is omitted; otherwise, the length of this field shall be
 35 BCMC_FLOW_DISCRIMINATOR_LEN bits.

36 The base station shall set this field to the number of flow
 37 discriminators included for this program minus one.

1 If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include
 2 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
 3 otherwise, the base station shall include 1 occurrence of the following variable length
 4 record:

5 **BCMC_FLOW_DISCRIMINATOR** – BMCB Flow discriminator.

6 The length of this field shall be determined by the value of the
 7 **BCMC_FLOW_DISCRIMINATOR_LEN** as follows: if
 8 **BCMC_FLOW_DISCRIMINATOR_LEN** is set to '000', this field
 9 is omitted; otherwise, the length of this field shall be
 10 **BCMC_FLOW_DISCRIMINATOR_LEN** bits.

11 The base station shall set this field to the discriminator of the
 12 BMCB flow.

13 **SAME_AS_PREVIOUS_BCMB_FLOW** – Same As Previous BMCB Flow Identifier.

14 If **CLEAR_RETRY_DELAY**, **BCMB_REASON** and
 15 **BCMB_RETRY_DELAY** are the same for this **BCMB_FLOW_ID**
 16 (see 2.6.13.11) as for the previous **BCMB_FLOW_ID**, the base
 17 station shall set this field to '1'; otherwise, the base station
 18 shall set this field to '0'.

19 **CLEAR_RETRY_DELAY** - Clear retry delay indicator

20 If **SAME_AS_PREVIOUS_BCMB_FLOW** is set to '1', the base
 21 station shall omit this field; otherwise, the base station shall
 22 set this field as follows:

23 The base station shall set this field to '1' to indicate that the
 24 mobile station should clear retry delay associated with this
 25 BMCB Flow; otherwise the base station shall set this field to
 26 '0'.

27 **BCMB_REASON** - BMCB reason.

28 If **SAME_AS_PREVIOUS_BCMB_FLOW** is set to '1' or if
 29 **CLEAR_RETRY_DELAY** is set to '1', the base station shall omit
 30 this field; otherwise, the base station shall set this field as
 31 follows:

32 The base station shall set this field as specified in Table
 33 3.7.4.10-1 to indicate the purpose for this order.

34 **BCMB_RETRY_DELAY** - BMCB retry delay.

35 If the **BCMB_REASON** field is not included or is included and
 36 is not set to '0101', the base station shall omit this field;
 37 otherwise, the base station shall include this field and set it
 38 as follows:

39 The base station shall set this field to the duration of the
 40 delay interval, as shown in Table 3.7.4.10-2, during which the
 41 mobile station is not permitted to request this
 42 **BCMB_FLOW_ID**. The base station shall not set this field to
 43 '00000000'.

44

1			The base station shall set this field to the maximum system
2			time, in units of time specified by MAX_RSC_END_TIME_UNIT
3			(modulo 16), at which the mobile station is to exit the reduced
4			slot cycle mode.
5	REQ_RSCI	-	Requested reduced slot cycle index.
6			If ORDQ is equal to '00000000' and RSC_MODE_SUPPORTED
7			is equal to '1', the base station shall set this field as specified
8			in Table 2.7.1.3.2.1-8 to the reduced slot cycle index value
9			that it is requesting the mobile station to operate with;
10			otherwise, the base station shall omit this field.
11	IGNORE_QPCH	-	Ignore QPCH indicators.
12			If RSC_MODE_SUPPORTED is equal to '0', the base station
13			shall omit this field; otherwise, the base station shall include
14			this field and set it as follows:
15			The base station shall set this field to '1' to indicate to the
16			mobile station that it is not to check its assigned paging
17			indicators on the QPCH while operating in the reduced slot
18			cycle mode if the reduced slot cycle index is -3 or -4;
19			otherwise, the base station shall set this field to '0'.
20	RER_MODE_INCL	-	Radio environment reporting mode information included
21			indicator.
22			If radio environment reporting mode related fields are
23			included in this message, the base station shall set this field
24			to '1'; otherwise, the base station shall set this field to '0'.
25	RER_MODE_ENABLED	-	Radio environment reporting mode enabled indicator.
26			If RER_MODE_INCL is set to '0', the base station shall omit
27			this field; otherwise, the base station shall include this field
28			and set it as follows:
29			If the radio environment reporting mode is enabled in this
30			message, the base station shall set this field to '1'; otherwise,
31			the base station shall set this field to '0'.
32	RER_MAX_NUM_MSG_IDX	-	Maximum number of <i>Radio Environment Messages</i>
33			permitted while in radio environment reporting mode index.
34			If RER_MODE_ENABLED is not included, or is included and
35			set to '0', the base station shall omit this field; otherwise, the
36			base station shall include this field and set it as follows:
37			The base station shall set this field to the maximum number
38			of <i>Radio Environment Messages</i> that the mobile station is
39			allowed to transmit while in radio environment reporting
40			mode, expressed as $2^{\text{RER_MAX_NUM_MSG_IDX}}$ where $0 \leq$
41			$\text{RER_MAX_NUM_MSG_IDX} \leq 6$. If the mobile station is
42			allowed to transmit an unlimited number of <i>Radio</i>
43			<i>Environment Messages</i> , then the base station shall set this
44			field to '111'.

- 1 RER_TIME - Radio environment report timer value.
- 2 If RER_MODE_ENABLED is not included, or is included and
3 set to '0', the base station shall omit this field; otherwise, the
4 base station shall include this field and set it as follows:
- 5 The base station shall set this field to the value of the radio-
6 environment report timer, expressed as 2^{RER_TIME} where $0 \leq$
7 RER_TIME ≤ 6 and in units of RER_TIME_UNIT. If the value
8 of the radio-environment report timer is infinite, then the base
9 station shall set this field to '111'.
- 10 RER_TIME_UNIT - Radio environment report timer value units.
- 11 If RER_MODE_ENABLED is included and set to '1', and
12 RER_TIME is not set to '111', the base station shall include
13 this field and shall set it according to Table 3.7.3.3.2.34-5;
14 otherwise, the base station shall omit this field.
- 15 MAX_RER_PILOT_LIST_SIZE - Maximum number of pilots to maintain in
16 RER_PILOT_LIST.
- 17 If RER_MODE_ENABLED is not included, or is included and
18 set to '0', the base station shall omit this field; otherwise, the
19 base station shall include this field and set it as follows:
- 20 The base station shall set this field to the maximum number
21 of pilots that the mobile station is to maintain in
22 RER_PILOT_LIST (see [4]). The base station shall set this field
23 to a value in the range 1 to 6 inclusive.
- 24 TKZ_MODE_INCL - Tracking zone mode information included indicator.
- 25 If tracking zone mode related fields are included in this
26 message, the base station shall set this field to '1'; otherwise,
27 the base station shall set this field to '0'.
- 28 TKZ_MODE_ENABLED - Tracking zone mode enabled indicator.
- 29 If TKZ_MODE_INCL is set to '0', the base station shall omit
30 this field; otherwise, the base station shall include this field
31 and set it as follows:
- 32 If the tracking zone mode is enabled in this message, the base
33 station shall set this field to '1'; otherwise, the base station
34 shall set this field to '0'.
- 35 TKZ_MAX_NUM_MSG_IDX - Maximum number of *Radio Environment Messages*
36 permitted while in tracking zone mode index.
- 37 If TKZ_MODE_ENABLED is not included, or is included and
38 set to '0', the base station shall omit this field; otherwise, the
39 base station shall include this field and set it as follows:

- 1 The base station shall set this field to the maximum number
 2 of *Radio Environment Messages* that the mobile station is
 3 allowed to transmit while in tracking zone mode, expressed as
 4 $2^{TKZ_MAX_NUM_MSG_IDX}$ where $0 \leq TKZ_MAX_NUM_MSG_IDX \leq$
 5 6. If the mobile station is allowed to transmit an unlimited
 6 number of *Radio Environment Messages*, then the base station
 7 shall set this field to '111'.
- 8 **TKZ_UPDATE_PRD** - Tracking zone update period.
- 9 If **TKZ_MODE_ENABLED** is not included, or is included and
 10 set to '0', the base station shall omit this field; otherwise, the
 11 base station shall include this field and set it as follows:
- 12 The base station shall set this field such that the desired
 13 tracking zone update timer value is $2^{TKZ_UPDATE_PRD+6}$
 14 seconds. If the value of the timer is infinite, then the base
 15 station shall set this field to '1111'.
- 16 **TKZ_LIST_LEN** - Tracking zone list length.
- 17 If **TKZ_MODE_ENABLED** is not included, or is included and
 18 set to '0', the base station shall omit this field; otherwise, the
 19 base station shall include this field and set it as follows:
- 20 The base station shall set this field to the length of the
 21 tracking zone list minus one.
- 22 **TKZ_TIMER** - Tracking zone timer.
- 23 If **TKZ_MODE_ENABLED** is not included, or is included and
 24 set to '0', the base station shall omit this field; otherwise, the
 25 base station shall include this field and set it as follows:
- 26 The base station shall set this field to the value of the tracking
 27 zone timer (in units of seconds) minus one.
- 28

3.7.4.12 Service Status Order

The *Service Status Order* can be sent on f-csch or f-dsch to indicate the status of the services requested by the mobile station.

Order Specific Field	Length (bits)
ORDQ	8
SR_ID_BITMAP	6
{ (weight of SR_ID_BITMAP)	
SERVICE_STATUS	3
} (weight of SR_ID_BITMAP)	
RESERVED	0 – 7 (as needed)

ORDQ – Order qualification code.

The base station shall set this field to ‘00000000’.

SR_ID_BITMAP – Service Reference Identifier Bitmap.

This field consists of the subfields defined in Table 3.7.4.12-1. The base station shall set a subfield to ‘1’ to indicate that the service status information corresponding to the service reference identifier is included in this message; otherwise, the base station shall set the subfield to ‘0’.

Table 3.7.4.12-1. SR_ID_BITMAP Subfields.

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	SR_ID 1 service status included indicator
SR_ID_2	1	SR_ID 2 service status included indicator
SR_ID_3	1	SR_ID 3 service status included indicator
SR_ID_4	1	SR_ID 4 service status included indicator
SR_ID_5	1	SR_ID 5 service status included indicator
SR_ID_6	1	SR_ID 6 service status included indicator

The base station shall include the following subrecord for each bit set to ‘1’ in SR_ID_BITMAP:

SERVICE_STATUS – Service Status.

The base station shall set this field to the SERVICE_STATUS value shown in Table 3.7.4.12-2 indicating the service status corresponding to this service reference identifier.

1

Table 3.7.4.12-2. Service Status Values

SERVICE_STATUS Value (binary)	Service Status
000	Service request accepted
001	Service request rejected
All other values are reserved.	

2

RESERVED - Reserved bits.

3

4

5

6

The base station shall add reserved bits as needed in order to make the total length of the fields included in this order equal to an integer number of octets. The base station shall set these bits to '0'.

7

1 3.7.4.13 Location Services Order

2

Order Specific Field	Length (bits)
ORDQ	8
REGULATORY_IND_INCL	1
REGULATORY_IND	0 or 2

3

ORDQ - Order qualification code.

4

The base station shall set this field to the ORDQ value shown in Table 3.7.4-1.

5

6

REGULATORY_IND_INCL - Regulatory indicator included.

7

The base station shall set this field to '0' to indicate that the mobile station is to release all current location sessions associated with *Data Burst Message* transport; the base station shall set this field to '1' to indicate that the mobile station is to release the current location session that is associated with *Data Burst Message* transport corresponding to the regulatory type specified by this message.

8

9

10

11

12

13

14

REGULATORY_IND - Regulatory indication.

15

If the REGULATORY_IND_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

16

17

18

The base station shall set this field to indicate the regulatory type, as specified in [43], of the position location session that the mobile station is to release.

19

20

21

1 3.7.5 Information Records

2 On the f-csch, information records may be included in the *Feature Notification Message*. On
3 the f-dsch, information records may be included in the *Alert with Information Message*, the
4 *Flash with Information Message*, the *Extended Alert with Information Message*, the *Extended*
5 *Flash with Information Message*, the *Service Request Message*, the *Service Response*
6 *Message*, the *Service Connect Message*, the *General Handoff Direction Message*, and the
7 *Universal Handoff Direction Message*. Table 3.7.5-1 lists the information record type values
8 that may be used with each message type. The following sections describe the contents of
9 each of the record types in detail.

1

Table 3.7.5-1. Information Record Types

Information Record	Record Type (binary)	Message Type	f-csch	f-dsch	P_REV_I N_USE 126
Display	00000001	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Called Party Number	00000010	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Calling Party Number	00000011	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Connected Number	00000100	FWI	N	Y	All
Signal	00000101	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Message Waiting	00000110	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Service Configuration	00000111	SRQM	N	Y	1, \geq 3
		SRPM	N	Y	
		SCM	N	Y	
		GHDM	N	Y	
		UHDM	N	Y	
Called Party Subaddress	00001000	FNM	Y	N	\geq 4
		AWI	N	Y	
		FWI	N	Y	
Calling Party Subaddress	00001001	FNM	Y	N	\geq 4
		AWI	N	Y	
		FWI	N	Y	

¹²⁶ P_REV_IN_USE equal to "All" implies all values applicable to the Band Class.

Information Record	Record Type (binary)	Message Type	f-csch	f-dsch	P_REV_I N_USE 126
Connected Subaddress	00001010	FWI	N	Y	≥ 4
Redirecting Number	00001011	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Redirecting Subaddress	00001100	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Meter Pulses	00001101	AWI	N	Y	≥ 4
		FWI	N	Y

		AWI	N	Y	
		FWI	N	Y	
Call Waiting Indicator	00010101	AWI	N	Y	≥ 7
		FWI	N	Y	
Enhanced Multiple Character Extended Display	00010110	FNM	Y	N	≥ 9
		AWI	N	Y	
		FWI	N	Y	
Extended Record Type – International	11111110	Country-Specific			≥ 4

Information Record	Record Type (binary)	Message Type	f-csch	f-dsch	P_REV_I N_USE 126
<p>All other record type values are reserved.</p> <p>“AWI” refers to either the <i>Alert With Information Message</i> or the <i>Extended Alert With Information Message</i>.</p> <p>“FWI” refers to either the <i>Flash With Information Message</i> or the <i>Extended Flash With Information Message</i>.</p>					

1

1 3.7.5.1 Display

2 This information record allows the network to supply display information that may be
 3 displayed by the mobile station.

4

Type-Specific Field	Length (bits)
----------------------------	----------------------

One or more occurrences of the following field:

{

CHAR _i	8
-------------------	---

}

5

6 CHAR_i - Character.

7 The base station shall include one occurrence of this field for
 8 each character to be displayed. The base station shall set
 9 each occurrence of this field to the ASCII representation
 10 corresponding to the character entered, as specified in [9],
 11 with the most significant bit set to '0'.

12

1 3.7.5.2 Called Party Number

2 This information record identifies the called party's number.

3

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	1
----------	---

4

5 NUMBER_TYPE - Type of number.

6 The base station shall set this field to the NUMBER_TYPE
7 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
8 of the called number, as defined in [7], Section 4.5.9.

9 NUMBER_PLAN - Numbering plan.

10 The base station shall set this field to the NUMBER_PLAN
11 value shown in Table 2.7.1.3.2.4-3 corresponding to the
12 numbering plan used for the called number, as defined in [7],
13 Section 4.5.9.

14 CHARi - Character.

15 The base station shall include one occurrence of this field for
16 each character in the called number. The base station shall
17 set each occurrence of this field to the ASCII representation
18 corresponding to the character, as specified in [9], with the
19 most significant bit set to '0'.

20 RESERVED - Reserved bits.

21 The base station shall set this field to '0'.

22

3.7.5.3 Calling Party Number

This information record identifies the calling party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

NUMBER_TYPE - Type of number.

The base station shall set this field to the NUMBER_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the calling number, as defined in [7], Section 4.5.9.

NUMBER_PLAN - Numbering plan.

The base station shall set this field to the NUMBER_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the calling number, as defined in [7], Section 4.5.9.

PI - Presentation indicator.

This field indicates whether or not the calling number should be displayed.

The base station shall set this field to the PI value shown in Table 2.7.4.4-1 corresponding to the presentation indicator, as defined in [7], Section 4.5.9.

SI - Screening indicator.

This field indicates how the calling number was screened.

The base station shall set this field to the SI value shown in Table 2.7.4.4-2 corresponding to the screening indicator value, as defined in [7], Section 4.5.9.

CHARi - Character.

The base stations shall include one occurrence of this field for each character in the calling number. The base station shall set each occurrence of this field to the ASCII representation corresponding to the character, as specified in [9], with the most significant bit set to '0'.

1 3.7.5.4 Connected Number

2 This information record identifies the responding party to a call.

3

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

4

5 NUMBER_TYPE - Type of number.

6 The base station shall set this field to the NUMBER_TYPE
7 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
8 of the connected number, as defined in [7], Section 4.5.9.

9 NUMBER_PLAN - Numbering plan.

10 The base station shall set this field to the NUMBER_PLAN
11 value shown in Table 2.7.1.3.2.4-3 corresponding to the
12 numbering plan used for the connected number, as defined in
13 [7], Section 4.5.9.

14 PI - Presentation indicator.

15 This field indicates whether or not the connected number
16 should be displayed.

17 The base station shall set this field to the PI value shown in
18 Table 2.7.4.4-1 corresponding to the presentation indicator,
19 as defined in [7], Section 4.5.9.

20 SI - Screening indicator.

21 This field indicates how the connected number was screened.

22 The base station shall set this field to the SI value shown in
23 Table 2.7.4.4-2 corresponding to the screening indicator
24 value, as defined in [7], Section 4.5.9.

25 CHARi - Character.

26 The base station shall include one occurrence of this field for
27 each character in the connected number. The base station
28 shall set each occurrence of this field to the ASCII
29 representation corresponding to the character, as specified in
30 [9], with the most significant bit set to '0'.

- 1 RESERVED - Reserved bits.
- 2 The base station shall set this field to '00000'.
- 3

1 3.7.5.5 Signal

2 This information record allows the network to convey information to a user by means of
3 tones and other alerting signals.

4 The Standard Alert is defined as SIGNAL_TYPE = '10', ALERT_PITCH = '00' and SIGNAL =
5 '000001'.

Type-Specific Field	Length (bits)
SIGNAL_TYPE	2
ALERT_PITCH	2
SIGNAL	6
RESERVED	6

7
8 SIGNAL_TYPE - Signal type.

9 The base station shall set this field to the signal type value
10 shown in Table 3.7.5.5-1.

11
12 **Table 3.7.5.5-1. Signal Type**

Description	SIGNAL_TYPE (binary)
Tone signal	00
ISDN Alerting	01
IS-54B Alerting	10
Reserved	11

13
14 ALERT_PITCH - Pitch of the alerting signal.

15 This field is ignored by the mobile station unless
16 SIGNAL_TYPE is '10', IS-54B Alerting.

17 If SIGNAL_TYPE is '10', the base station shall set this field to
18 the alert pitch shown in Table 3.7.5.5-2; otherwise, the base
19 station shall set this field to '00'.

1

Table 3.7.5.5-2. Alert Pitch

Description	ALERT_PITCH (binary)
Medium pitch (standard alert)	00
High pitch	01
Low pitch	10
Reserved	11

2

3

SIGNAL - Signal code.

4

5

6

7

8

9

The base station shall set this field to the specific signal desired. If SIGNAL_TYPE is '00', the base station shall set this field as described in Table 3.7.5.5-3. If SIGNAL_TYPE is '01', the base station shall set this field as described in Table 3.7.5.5-4. If SIGNAL_TYPE is '10', the base station shall set this field as described in Table 3.7.5.5-5.

10

1

Table 3.7.5.5-3. Tone Signals (SIGNAL_TYPE = '00')

Description	SIGNAL (binary)
Dial tone on: a continuous 350 Hz tone added to a 440 Hz tone.	000000
Ring back tone on: a 440 Hz tone added to a 480 Hz tone repeated in a 2 s on, 4 s off pattern.	000001
Intercept tone on: alternating 440 Hz and 620 Hz tones, each on for 250 ms.	000010
Abbreviated intercept: alternating 440 Hz and 620 Hz tones, each on for 250 ms, repeated for four seconds.	000011
Network congestion (reorder) tone on: a 480 Hz tone added to a 620 Hz tone repeated in a 250 ms on, 250 ms off cycle.	000100
Abbreviated network congestion (reorder): a 480 Hz tone added to a 620 Hz tone repeated in a 250 ms on, 250 ms off cycle for four seconds.	000101
Busy tone on: a 480 Hz tone added to a 620 Hz tone repeated in a 500 ms on, 500 ms off cycle.	000110
Confirm tone on: a 350 Hz tone added to a 440 Hz tone repeated 3 times in a 100 ms on, 100 ms off cycle.	000111
Answer tone on: answer tone is not presently used in North American networks.	001000
Call waiting tone on: a 300 ms burst of 440 Hz tone.	001001
Pip tone on: four bursts of 480 Hz tone (0.1 s on, 0.1 s off).	001010
Tones off	111111
All other SIGNAL values are reserved

3

1

Table 3.7.5.5-4. ISDN Alerting (SIGNAL_TYPE = '01')

Description	SIGNAL (binary)
Normal Alerting: 2.0 s on, 4.0 s off, repeating	000000
Intergroup Alerting: 0.8 s on, 0.4 s off, 0.8 s on, 4.0 s off, repeating	000001
Special/Priority Alerting: 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 4.0 s off, repeating	000010
Reserved (ISDN Alerting pattern 3)	000011
“Ping ring”: single burst of 500 ms	000100
Reserved (ISDN Alerting pattern 5)	000101
Reserved (ISDN Alerting pattern 6)	000110
Reserved (ISDN Alerting pattern 7)	000111
Alerting off	001111
All other SIGNAL values are reserved	

2

1

Table 3.7.5.5-5. IS-54B Alerting (SIGNAL_TYPE = '10')

Description	SIGNAL (binary)
<i>No Tone: Off</i>	000000
<i>Long: 2.0 s on, 4.0 s off, repeating (standard alert)</i>	000001
<i>Short-Short: 0.8 s on, 0.4 s off, 0.8 s on, 4.0 s off, repeating</i>	000010
<i>Short-Short-Long: 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 4.0 s off, repeating</i>	000011
<i>Short-Short-2: 1.0 s on, 1.0 s off, 1.0 s on, 3.0 s off, repeating.</i>	000100
<i>Short-Long-Short: 0.5 s on, 0.5 s off, 1.0 s on, 0.5 s off, 0.5 s on, 3.0 s off, repeating.</i>	000101
<i>Short-Short-Short-Short: 0.5 s on, 0.5 s off, 0.5 s on, 0.5 s off, 0.5 s on, 0.5 s off, 0.5 s on, 2.5 s off, repeating.</i>	000110
<i>PBX Long: 1.0 s on, 2.0 s off, repeating.</i>	000111
<i>PBX Short-Short: 0.4 s on, 0.2 s off, 0.4 s on, 2.0 off, repeating.</i>	001000
<i>PBX Short-Short-Long: 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 1.0 s off, repeating.</i>	001001
<i>PBX Short-Long-Short: 0.4 s on, 0.2 s off, 0.8 s on, 0.2 s off, 0.4 s on, 1.0 s off, repeating.</i>	001010
<i>PBX Short-Short-Short-Short: 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.4 s on, 0.8 s off, repeating.</i>	001011
<i>Pip-Pip-Pip-Pip: 0.1 s on, 0.1 s off, 0.1 s on, 0.1 s off, 0.1 s on, 0.1 s off, 0.1 s on.</i>	001100
All other SIGNAL values are reserved	

2

3

RESERVED - Reserved bits.

4

The base station shall set this field to '000000'.

5

1 3.7.5.6 Message Waiting

2 This information record conveys to the user the number of messages waiting.

3

Type-Specific Field	Length (bits)
MSG_COUNT	8

4

5 MSG_COUNT - Number of waiting messages.

6 The base station shall set this field to the number of
7 messages waiting.

8

1 3.7.5.7 Service Configuration

2 For the mobile station, this record is included in a *Status Response Message* to return the
 3 current service configuration, and in a *Service Request Message* and a *Service Response*
 4 *Message* to propose a service configuration.

5 For a base station, this record is included in a *Service Request Message* and a *Service*
 6 *Response Message* to propose a service configuration. It is included in a *Service Connect*
 7 *Message* to specify an actual service configuration to be used. It can be included in a
 8 *General Handoff Direction Message* and *Universal Handoff Direction Message* to specify an
 9 actual service configuration to be used.

10

Type-Specific Field	Length (bits)
FOR_MUX_OPTION	16
REV_MUX_OPTION	16
FOR_NUM_BITS	8
REV_NUM_BITS	8
NUM_CON_REC	8

NUM_CON_REC occurrences of the following variable-length record:

{ (NUM_CON_REC)

RECORD_LEN	8
CON_REF	8
SERVICE_OPTION	16
FOR_TRAFFIC	4
REV_TRAFFIC	4
UI_ENCRYPT_MODE	3
SR_ID	3
RLP_INFO_INCL	1
RLP_BLOB_LEN	0 or 4
RLP_BLOB	0 or (8 × RLP_BLOB_LEN)
QOS_PARMS_INCL	1
QOS_PARMS_LEN	0 or 5
QOS_PARMS	0 or variable
QOS_RESERVED	0-7
RESERVED	0-7 (as needed)

} (*NUM_CON_REC*)

FCH_CC_INCL	1
FCH_FRAME_SIZE	0 or 1
FOR_FCH_RC	0 or 5
REV_FCH_RC	0 or 5
DCCH_CC_INCL	1
DCCH_FRAME_SIZE	0 or 2
FOR_DCCH_RC	0 or 5
REV_DCCH_RC	0 or 5

(continues on next page)

1

2

1

Type-Specific Field	Length (bits)
FOR_SCH_CC_INCL	1
NUM_FOR_SCH	0 or 2

NUM_FOR_SCH occurrences of the following record

{ (NUM_FOR_SCH)

FOR_SCH_ID	2
FOR_SCH_MUX	16
SCH_CC_Type-specific field	Variable (see 3.7.5.7.1)

} (NUM_FOR_SCH)

REV_SCH_CC_INCL	1
NUM_REV_SCH	0 or 2

NUM_REV_SCH occurrences of the following record

{ (NUM_REV_SCH)

REV_SCH_ID	2
REV_SCH_MUX	16
SCH_CC_Type-specific field	Variable (see 3.7.5.7.1)

} (NUM_REV_SCH)

FCH_DCCH_MUX_OPTION_IND	2
FOR_DCCH_MUX_OPTION	0 or 16
REV_DCCH_MUX_OPTION	0 or 16
FOR_PDCH_CC_INCL	1
FOR_PDCH_MUX_OPTION	0 or 16
FOR_PDCH_RC	0 or 5
REV_PDCH_CC_INCL	1
REV_PDCH_MUX_OPTION_HIGH_RATE	0 or 16
REV_PDCH_MUX_OPTION_LOW_RATE	0 or 16
REV_PDCH_RC	0 or 5
RESERVED	0-7 (as needed)

2

3

FOR_MUX_OPTION - Forward multiplex option.

1 If P_REV_IN_USE_s is less than eight, the mobile station shall
2 set this field as follows:

3 For a *Status Response Message*, the mobile station shall
4 set this field to the number of the multiplex option for the
5 Forward Fundamental Channel, Forward Dedicated
6 Control Channel, or both, if both are present (e.g., 1
7 corresponds to Multiplex Option 1).

8 For a *Service Request Message* and a *Service Response*
9 *Message*, the mobile station shall set this field to the
10 number of the multiplex option for the Forward
11 Fundamental Channel, Forward Dedicated Control
12 Channel, or both, if both are present.

13 If P_REV_IN_USE_s is greater than or equal to eight, the mobile
14 station shall set this field as follows:

15 For a *Status Response Message*, the mobile station shall
16 set this field to the number of the multiplex option for the
17 Forward Fundamental Channel, Forward Dedicated
18 Control Channel, or both (e.g., 1 corresponds to Multiplex
19 Option 1), according to the value as specified by
20 FCH_DCCH_MUX_OPTION_IND.

21 For a *Service Request Message* and a *Service Response*
22 *Message*, the mobile station shall set this field to the
23 number of the multiplex option for the Forward
24 Fundamental Channel, Forward Dedicated Control
25 Channel, or both, according to the value as specified by
26 FCH_DCCH_MUX_OPTION_IND.

27 If neither the Forward Fundamental Channel nor Forward
28 Dedicated Control Channel configuration is assigned, then
29 the mobile station shall set this field to 0.

30 If MOB_P_REV is less than eight, the base station shall set
31 this field as follows:

32 For a *Service Request Message* and a *Service Response*
33 *Message*, the base station shall set this field to the
34 number of the multiplex option for the Forward
35 Fundamental Channel, Forward Dedicated Control
36 Channel, or both, if both are present.

37 For a *Service Connect Message*, *General Handoff Direction*
38 *Message*, and a *Universal Handoff Direction Message*, the
39 base station shall set this field to the number of the
40 multiplex option for the Forward Fundamental Channel,
41 Forward Dedicated Control Channel, or both, if both are
42 present.

43 If MOB_P_REV is greater than or equal to eight, the base
44 station shall set this field as follows:

1 For a *Service Request Message* and a *Service Response*
 2 *Message*, the base station shall set this field to the
 3 number of the multiplex option for the Forward
 4 Fundamental Channel, Forward Dedicated Control
 5 Channel, or both, according to the value as specified by
 6 FCH_DCCH_MUX_OPTION_IND.

7 For a *Service Connect Message*, *General Handoff Direction*
 8 *Message*, and a *Universal Handoff Direction Message*, the
 9 base station shall set this field to the number of the
 10 multiplex option for the Forward Fundamental Channel,
 11 Forward Dedicated Control Channel, or both, according to
 12 the value as specified by FCH_DCCH_MUX_OPTION_IND.

13 If neither the Forward Fundamental Channel nor Forward
 14 Dedicated Control Channel configuration is assigned, the
 15 base station shall set this field to 0.

16 REV_MUX_OPTION - Reverse multiplex option.

17 If P_REV_IN_USE_s is less than eight, the mobile station shall
 18 set this field as follows:

19 For a *Status Response Message*, the mobile station shall
 20 set this field to the number of the multiplex option for the
 21 Reverse Fundamental Channel, Reverse Dedicated Control
 22 Channel, or both, if both are present (e.g., 1 corresponds
 23 to Multiplex Option 1).

24 For a *Service Request Message* and a *Service Response*
 25 *Message*, the mobile station shall set this field to the
 26 number of the multiplex option for the Reverse
 27 Fundamental Channel, Reverse Dedicated Control
 28 Channel, or both, if both are present.

29 If P_REV_IN_USE_s is greater than or equal to eight, the mobile
 30 station shall set this field as follows:

31 For a *Status Response Message*, the mobile station shall
 32 set this field to the number of the multiplex option for the
 33 Reverse Fundamental Channel, Reverse Dedicated Control
 34 Channel, or both [e.g., 1 corresponds to Multiplex Option
 35 1), according to the value as specified by
 36 FCH_DCCH_MUX_OPTION_IND.

37 For a *Service Request Message* and a *Service Response*
 38 *Message*, the mobile station shall set this field to the
 39 number of the multiplex option for the Reverse
 40 Fundamental Channel, Reverse Dedicated Control
 41 Channel, or both, according to the value as specified by
 42 FCH_DCCH_MUX_OPTION_IND.

43 If neither the Reverse Fundamental Channel nor Reverse
 44 Dedicated Control Channel configuration is assigned, the
 45 mobile station shall set this field to 0.

46

47 If MOB_P_REV is less than eight, the base station shall set
 48 this field as follows:

1 For a *Service Request Message* and a *Service Response*
 2 *Message*, the base station shall set this field to the
 3 number of the multiplex option for the Reverse
 4 Fundamental Channel, Reverse Dedicated Control
 5 Channel, or both, if both are present.

6 For a *Service Connect Message*, *General Handoff Direction*
 7 *Message*, and a *Universal Handoff Direction Message*, the
 8 base station shall set this field to the number of the
 9 multiplex option for the Reverse Fundamental Channel,
 10 Reverse Dedicated Control Channel, or both, if both are
 11 present.

12 If MOB_P_REV is greater than or equal to eight, the base
 13 station shall set this field as follows:

14 For a *Service Request Message* and a *Service Response*
 15 *Message*, the base station shall set this field to the
 16 number of the multiplex option for the Reverse
 17 Fundamental Channel, Reverse Dedicated Control
 18 Channel, or both, according to the value as specified by
 19 FCH_DCCH_MUX_OPTION_IND.

20 For a *Service Connect Message*, *General Handoff Direction*
 21 *Message*, and a *Universal Handoff Direction Message*, the
 22 base station shall set this field to the number of the
 23 multiplex option for the Reverse Fundamental Channel,
 24 Reverse Dedicated Control Channel, or both, according to
 25 the value as specified by FCH_DCCH_MUX_OPTION_IND.

26 FOR_NUM_BITS - Set of number of bits per frame of the Forward Fundamental
 27 Channel.

28 The mobile station shall set this field as follows:

29 The mobile station shall use the Forward Fundamental
 30 Channel transmission set of number of bits per frame
 31 specified in 2.7.4.28 for the specified Forward Traffic
 32 Channel multiplex option.

33 For a *Status Response Message*, the mobile station shall
 34 set the subfields corresponding to the Forward Traffic
 35 Channel transmission set of number of bits per frame of
 36 the current service configuration to '1', and shall set the
 37 remaining subfields to '0'. If FOR_MUX_OPTION is equal
 38 to 1 or 2, the mobile station shall set RESERVED to
 39 '0000'. If the Forward Fundamental Channel configuration
 40 is not specified in this record, then the mobile station
 41 shall set this field to 0.

1 For a *Service Request Message* and a *Service Response*
 2 *Message*, the mobile station shall set the subfields
 3 corresponding to the Forward Traffic Channel
 4 transmission set of number of bits per frame of the
 5 proposed service configuration to '1', and shall set the
 6 remaining subfields to '0'. If FOR_MUX_OPTION is equal
 7 to 1 or 2, the mobile station shall set RESERVED to
 8 '0000'. If the Forward Fundamental Channel configuration
 9 is not specified in this record, then the mobile station
 10 shall set this field to 0.

11 The base station shall set this field as follows:

12 The base station shall set this field to the Forward
 13 Fundamental Channel transmission set of number of bits
 14 per frame specified in 2.7.4.28 for the specified Forward
 15 Traffic Channel multiplex option.

16 For a *Service Request Message* or a *Service Response*
 17 *Message*, the base station shall set the subfields
 18 corresponding to the Forward Fundamental Channel
 19 transmission set of number of bits per frame of the
 20 proposed service configuration to '1', and shall set the
 21 remaining subfields to '0'. If FOR_MUX_OPTION is equal
 22 to 1 or 2, the base station shall set RESERVED to '0000'.
 23 If the Forward Fundamental Channel configuration is not
 24 specified in this record, then the base station shall set this
 25 field to 0.

26 For a *Service Connect Message*, *General Handoff Direction*
 27 *Message*, and a *Universal Handoff Direction Message*, the
 28 base station shall set the subfields corresponding to the
 29 Forward Fundamental Channel transmission set of
 30 number of bits per frame of the actual service
 31 configuration to be used to '1', and shall set the remaining
 32 subfields to '0'. If FOR_MUX_OPTION is equal to 1 or 2,
 33 the base station shall set RESERVED to '0000'. If the
 34 Forward Fundamental Channel configuration is not
 35 specified in this record, then the base station shall set this
 36 field to 0.

37 REV_NUM_BITS - Set of number of bits per frame of the Reverse Fundamental
 38 Channel.

39 The mobile station shall set this field as follows:

40 The mobile station shall use the Reverse Fundamental
 41 Channel transmission set of number of bits per frame
 42 specified in 2.7.4.28 for the specified Reverse Traffic
 43 Channel multiplex option.

1 For a *Status Response Message*, the mobile station shall
 2 set the subfields corresponding to the Reverse Traffic
 3 Channel transmission set of number of bits per frame of
 4 the current service configuration to '1', and shall set the
 5 remaining subfields to '0'. If REV_MUX_OPTION is equal
 6 to 1 or 2, the mobile station shall set RESERVED to
 7 '0000'.

8 For a *Service Request Message* and a *Service Response*
 9 *Message*, the mobile station shall set the subfields
 10 corresponding to the Reverse Traffic Channel transmission
 11 set of number of bits per frame of the proposed service
 12 configuration to '1', and shall set the remaining subfields
 13 to '0'. If REV_MUX_OPTION is equal to 1 or 2, the mobile
 14 station shall set RESERVED to '0000'.

15 The base station shall set this field as follows:

16 The base station shall set this field to the Reverse
 17 Fundamental Channel transmission set of number of bits
 18 per frame specified in 2.7.4.28 for the specified Reverse
 19 Traffic Channel multiplex option.

20 For a *Service Request Message* or a *Service Response*
 21 *Message*, the base station shall set the subfields
 22 corresponding to the Reverse Fundamental Channel
 23 transmission set of number of bits per frame of the
 24 proposed service configuration to '1', and shall set the
 25 remaining subfields to '0'. If REV_MUX_OPTION is equal
 26 to 1 or 2, the base station shall set RESERVED to '0000'.

27 For a *Service Connect Message*, *General Handoff Direction*
 28 *Message*, and a *Universal Handoff Direction Message*, the
 29 base station shall set the subfields corresponding to the
 30 Reverse Fundamental Channel transmission set of
 31 number of bits per frame of the actual service
 32 configuration to be used to '1', and shall set the remaining
 33 subfields to '0'. If REV_MUX_OPTION is equal to 1 or 2,
 34 the base station shall set RESERVED to '0000'.

35 NUM_CON_REC - Number of service option connection records.

36 The mobile station shall set this field as follows:

37 The mobile station shall set this field to the number of
 38 service option connection records included in the
 39 message.

40 The base station shall set this field as follows:

41 The base station shall set this field to the number of
 42 service option connection records included in the
 43 message.

44 For a *Status Response Message*, the mobile station shall include one occurrence of the
 45 following variable-length record for each service option connection of the current service
 46 configuration. For a *Service Request Message* and a *Service Response Message*, the mobile

1 station shall include one occurrence of the following variable-length record for each service
2 option connection of the proposed service configuration.

3 For a *Service Request Message* or a *Service Response Message*, the base station shall
4 include one occurrence of the following variable-length record for each service option
5 connection of the proposed service configuration.

6 For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal*
7 *Handoff Direction Message*, the base station shall include one occurrence of the following
8 variable-length record for each service option connection of the actual service configuration
9 to be used.

10 RECORD_LEN - Service option connection record length.

11 The mobile station shall set this field as follows:

12 The mobile station shall set this field to the number of
13 octets included in this service option connection record
14 including this field.

15 The base station shall set this field as follows:

16 The base station shall set this field to the number of
17 octets included in this service option connection record
18 including this field.

19 CON_REF - Service option connection reference.

20 The mobile station shall set this field as follows:

21 For a *Status Response Message*, the mobile station shall
22 set this field to the service option connection reference.

23 For a *Service Request Message* and a *Service Response*
24 *Message*, if the service option connection is part of the
25 current service configuration, the mobile station shall set
26 this field to the service option connection reference;
27 otherwise, the mobile station shall set this field to
28 '00000000'.

29 The base station shall set this field as follows:

30 For a *Service Request Message* or a *Service Response*
31 *Message*: if the service option connection is part of the
32 current service configuration, the base station shall set
33 this field to the service option connection reference;
34 otherwise, the base station shall set this field to
35 '00000000'.

36 For a *Service Connect Message*, *General Handoff Direction*
37 *Message*, and a *Universal Handoff Direction Message*, the
38 base station shall set this field to the service option
39 connection reference assigned to the service option
40 connection.

41 SERVICE_OPTION - Service option.

42 The mobile station shall set this field as follows:

1 For a *Status Response Message*, the mobile station shall
2 set this field to the service option in use with the service
3 option connection.

4 For a *Service Request Message* and a *Service Response*
5 *Message*, the mobile station shall set this field to the
6 service option to be used with the service option
7 connection.

8 The base station shall set this field as follows:

9 The base station shall set this field to the service option to
10 be used with the service option connection.

11 FOR_TRAFFIC - Forward Traffic Channel traffic type.

12 The mobile station shall set this field as follows:

13 For a *Status Response Message*, the mobile station shall
14 set this field to the FOR_TRAFFIC code shown in
15 Table 3.7.5.7-1 corresponding to the Forward Traffic
16 Channel traffic type in use with the service option
17 connection.

18 For a *Service Request Message* and a *Service Response*
19 *Message*, the mobile station shall set this field to the
20 FOR_TRAFFIC code shown in Table 3.7.5.7-1
21 corresponding to the Forward Traffic Channel traffic type
22 to be used with the service option connection.

23 The base station shall set this field as follows:

24 The base station shall set this field to the FOR_TRAFFIC
25 code shown in Table 3.7.5.7-1 corresponding to the
26 Forward Traffic Channel traffic type to be used with the
27 service option connection.

28

1

Table 3.7.5.7-1. FOR_TRAFFIC Codes

FOR_TRAFFIC (binary)	Description
0000	The service option connection does not use Forward Traffic Channel traffic.
0001	The service option connection uses primary traffic on the Forward Traffic Channel.
0010	The service option connection uses secondary traffic on the Forward Traffic Channel.
0011	The service option connection uses signaling traffic on the Forward Traffic Channel.
0100	The service option connection uses the Forward Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other FOR_TRAFFIC codes are reserved.	

2

3

REV_TRAFFIC - Reverse Traffic Channel traffic type.

4

The mobile station shall set this field as follows:

5

For a *Status Response Message*, the mobile station shall set this field to the REV_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type in use with the service option connection.

6

7

8

9

10

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the REV_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type to be used with the service option connection.

11

12

13

14

15

The base station shall set this field as follows:

16

The base station shall set this field to the REV_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type to be used with the service option connection.

17

18

19

20

1

Table 3.7.5.7-2. REV_TRAFFIC Codes

REV_TRAFFIC (binary)	Description
0000	The service option connection does not use Reverse Traffic Channel traffic.
0001	The service option connection uses primary traffic on the Reverse Traffic Channel.
0010	The service option connection uses secondary traffic on the Reverse Traffic Channel.
0011	The service option connection uses signaling traffic on the Reverse Traffic Channel.
0100	The service option connection uses the Reverse Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other REV_TRAFFIC codes are reserved.	

2

3

UI_ENCRYPT_MODE - Encryption mode indicator for user information privacy.

4

The mobile station shall set this field as follows:

5

For a *Status Response Message*, the mobile station shall set this field to indicate the current user information encryption mode as shown in Table 3.7.5.7-3.

6

7

8

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to indicate the proposed user information encryption mode as shown in Table 3.7.5.7-3.

9

10

11

12

The base station shall set this field as follows:

13

For a *Service Request Message* or a *Service Response Message*: the base station shall set this field to the proposed user information encryption mode, as shown in Table 3.7.5.7-3.

14

15

16

17

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the assigned user information encryption mode, as shown in Table 3.7.5.7-3.

18

19

21

1

Table 3.7.5.7-3. User information Encryption Modes

UI_ENCRYPT_MODE Field (binary)	Encryption Mode Used
000	User information Encryption disabled
001	User information Encryption with ORYX encryption algorithm enabled (not applicable to voice service option). Encryption procedures specified in the service option standard shall be performed.
010	<p>If P_REV_IN_USE is less than nine, this value indicates that User information Encryption uses the Rijndael encryption algorithm. Encryption procedures defined in 2.3.12.4.2.1 shall be performed.</p> <p>If P_REV_IN_USE is greater than or equal to nine, this value indicates that User information Encryption uses the Rijndael encryption algorithm. Encryption procedures defined in the corresponding service option specification shall be performed. (Encryption of voice service option is defined in this document).</p>
011- 111	Reserved

2

SR_ID – Service reference identifier.

3

The mobile station shall set this field as follows:

4

For a *Status Response Message*, the mobile station shall set this field to the service reference identifier in use.

5

6

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field as follows:

7

8

If the service option connection is a part of the current service configuration, the mobile station shall set this field to the service reference identifier in use.

9

10

1 If the service option connection is not a part of the current
 2 service configuration, the mobile station shall perform the
 3 following:

- 4 – If this service option connection request is initiated by
 5 the base station, the mobile station shall set this field
 6 to the value sent by the base station.
- 7 – If this service option connection request is initiated by
 8 the mobile station, the mobile station shall perform
 9 the following: if the service instance provides a service
 10 reference identifier, the mobile station shall set this
 11 field to the service reference identifier specified by the
 12 service instance; otherwise, the mobile station shall
 13 set this field to the smallest unused service reference
 14 identifier value between 1 and 6 inclusive.

15 The base station shall set this field as follows:

16 For a *Service Request Message*, a *Service Response*
 17 *Message*, a *Service Connect Message*, a *General Handoff*
 18 *Direction Message*, or a *Universal Handoff Direction*
 19 *Message*, the base station shall set this field as follows:

20 If the service option connection is a part of the current
 21 service configuration, the base station shall set this field
 22 to the service reference identifier in use.

23 If the service option connection is not a part of the current
 24 service configuration, the base station shall perform the
 25 following:

- 26 – If this service option connection request is initiated by
 27 the mobile station, the base station shall set this field
 28 to the value sent by the mobile station.
- 29 – If this service option connection request is initiated by
 30 the base station, the base station shall perform the
 31 following: if the service instance provides a service
 32 reference identifier, the base station shall set this field
 33 to the service reference identifier specified by the
 34 service instance; otherwise, the base station shall set
 35 this field to the highest unused service reference
 36 identifier value between 1 and 6 inclusive.

37 RLP_INFO_INCL - RLP information included indicator.

38 The mobile station shall set this field as follows:

39 The mobile station shall set this field to '1' if the
 40 RLP_BLOB field is included in this record; otherwise, it
 41 shall set this field to '0'.

42 The base station shall set this field as follows:

43 The base station shall set this field to '1' if the RLP_BLOB
 44 field is included in this record; otherwise, it shall set this
 45 field to '0'.

- 1 RLP_BLOB_LEN - RLP information block of bits length.
- 2 The mobile station shall set this field as follows:
- 3 If the RLP_INFO_INCL field is set to '0', the mobile station
- 4 shall omit this field; otherwise, it shall include this field
- 5 and set it as follows:
- 6 The mobile station shall set this field to the size of the
- 7 RLP_BLOB field in integer number of octets.
- 8 The base station shall set this field as follows:
- 9 If the RLP_INFO_INCL field is set to '0', the base station
- 10 shall omit this field; otherwise, it shall include this field
- 11 and set it as follows:
- 12 The base station shall set this field to the size of the
- 13 RLP_BLOB field in integer number of octets.
- 14 RLP_BLOB - Radio Link Protocol block of bits.
- 15 The mobile station shall set this field as follows:
- 16 If the RLP_INFO_INCL field is set to '0', the mobile station
- 17 shall omit this field; otherwise, the mobile station shall
- 18 include this field and set it as follows:
- 19 For a *Status Response Message*, the mobile station shall
- 20 set this field to the Radio Link Protocol block of bits for
- 21 this service option connection.
- 22 For a *Service Request Message* or *Service Response*
- 23 *Message*, the mobile station shall set this field to the
- 24 proposed Radio Link Protocol block of bits for this service
- 25 option connection, and shall add '0' bits to the end of the
- 26 field as needed in order to make the length of this field
- 27 equal to an integer number of octets.
- 28 The base station shall set this field as follows:
- 29 If the RLP_INFO_INCL field is set to '0', the base station
- 30 shall omit this field; otherwise, the base station shall
- 31 include this field and set it as follows:
- 32 The base station shall set this field to the Radio Link
- 33 Protocol block of bits for this service option connection,
- 34 and shall add '0' bits to the end of the field as needed in
- 35 order to make the length of this field equal to an integer
- 36 number of octets.
- 37 QOS_PARMS_INCL - Presence indicator for the QoS parameters.
- 38 The mobile station shall set this field as follows:

1 The base station shall set this field as follows:

2 If QOS_PARMS_INCL is set to '1', the base station shall
 3 include the minimum number of '0' bits necessary to
 4 ensure that the combined length of the QOS_PARMS field
 5 and of this field is an integer number of octets; otherwise,
 6 the base station shall omit this field.

7 RESERVED - Reserved bits.

8 The mobile station shall set this field as follows:

9 The mobile station shall add reserved bits as needed in
 10 order to make the length of the entire record equal to an
 11 integer number of octets. The mobile station shall set
 12 these bits to '0'.

13 The base station shall set this field as follows:

14 The base station shall add reserved bits as needed in
 15 order to make the length of this record equal to an integer
 16 number of octets. The base station shall set these bits to
 17 '0'.

18 FCH_CC_INCL - Channel configuration for the Fundamental Channel included
 19 indicator.

20 The mobile station shall set this field as follows:

21 The mobile station shall set this field to '1', if
 22 Fundamental Channel Configuration information is
 23 included in the record; otherwise, the mobile station shall
 24 set this field to '0' to indicate the current values of
 25 Channel configuration for the Fundamental Channel are
 26 to be used.

27 The base station shall set this field as follows:

28 The base station shall set this field to '1', if the channel
 29 configuration information for the Fundamental Channel is
 30 included in this Service Configuration Record; otherwise,
 31 the base station shall set this field to '0' to indicate the
 32 current values of Channel configuration for the
 33 Fundamental Channel are to be used.

34 FCH_FRAME_SIZE - Fundamental Channel frame size supported indicator.

35 The mobile station shall set this field as follows:

36 If FCH_CC_INCL field is set to '1', the mobile station shall
 37 include this field and set it as described below; otherwise,
 38 the mobile station shall omit this field.

1 For a *Status Response Message*, the mobile station shall
 2 set this field to '1', if the 5ms frame size is used in the
 3 Forward Fundamental Channel (if specified in this record)
 4 and Reverse Fundamental Channel, in addition to the
 5 20ms frame size, for the current service configuration;
 6 otherwise, the mobile station shall set this field to '0'.

7 For a *Service Request Message* or a *Service Response*
 8 *Message*, the mobile station shall set this field to '1' if the
 9 5 ms frame size is used in the Forward Fundamental
 10 Channel (if specified in this record) and Reverse
 11 Fundamental Channel, in addition to the 20 ms frame
 12 size, for the proposed service configuration; otherwise the
 13 mobile station shall set this field to '0'

14 The base station shall set this field as follows:

15 If the FCH_CC_INCL field is set to '0', the base station
 16 shall omit this field; otherwise, the base station shall
 17 include this field and set it as follows:

18 The base station shall set this field to '1' if the service
 19 configuration includes the use of 5 ms frame size in
 20 addition to 20ms frame size for the Forward Fundamental
 21 Channel (if specified in this record) and Reverse
 22 Fundamental Channel; otherwise, the base station shall
 23 set this field to '0'.

24 FOR_FCH_RC - Forward Fundamental Channel Radio Configuration.

25 The mobile station shall set this field as follows:

26 If FCH_CC_INCL field is set to '1', the mobile station shall
 27 include this field and set it as described below; otherwise,
 28 the mobile station shall omit this field.

29 For a *Status Response Message*, the mobile station shall
 30 set this field to the Forward Fundamental Channel Radio
 31 Configuration (see [2]) for the current service
 32 configuration. If the Forward Fundamental Channel
 33 configuration is not specified in this record, then the
 34 mobile station shall set this field to 0.

35 For a *Service Request Message* or *Service Response*
 36 *Message*, the mobile station shall set this field to the
 37 Forward Fundamental Channel Radio Configuration for
 38 the proposed service configuration. If the Forward
 39 Fundamental Channel configuration is not specified in
 40 this record, then the mobile station shall set this field to
 41 0.

42 The base station shall set this field as follows:

43 If the FCH_CC_INCL field is set to '0', the base station
 44 shall omit this field; otherwise, the base station shall
 45 include this field and set it as follows:

1 For a *Service Request Message* or a *Service Response*
 2 *Message*, the base station shall set this field to the
 3 Forward Fundamental Channel Radio Configuration (see
 4 [2]) in the proposed service configuration. If the Forward
 5 Fundamental Channel configuration is not specified in
 6 this record, then the base station shall set this field to 0.

7 For a *Service Connect Message*, a *General Handoff*
 8 *Direction Message*, or a *Universal Handoff Direction*
 9 *Message*, the base station shall set this field to the actual
 10 Forward Fundamental Channel Radio Configuration to be
 11 used. If the Forward Fundamental Channel configuration
 12 is not specified in this record, then the base station shall
 13 set this field to 0.

14 REV_FCH_RC - Reverse Fundamental Channel Radio Configuration.

15 The mobile station shall set this field as follows:

16 If FCH_CC_INCL field is set to '1', the mobile station shall
 17 include this field and set it as described below; otherwise,
 18 the mobile station shall omit this field.

19 For a *Status Response Message*, the mobile station shall
 20 set field to the Reverse Fundamental Channel Radio
 21 Configuration (see [2]) for the current service
 22 configuration.

23 For a *Service Request Message* or a *Service Response*
 24 *Message*, the mobile station shall set this field to the
 25 Reverse Fundamental Channel Radio Configuration for
 26 the proposed service configuration.

27 The base station shall set this field as follows:

28 If the FCH_CC_INCL field is set to '0', the base station
 29 shall omit this field; otherwise, the base station shall
 30 include this field and set it as follows:

31 For a *Service Request Message* or a *Service Response*
 32 *Message*, the base station shall set this field to the
 33 Reverse Fundamental Channel Radio Configuration (see
 34 [2]) in the proposed service configuration.

35 For a *Service Connect Message*, a *General Handoff*
 36 *Direction Message*, or a *Universal Handoff Direction*
 37 *Message*, the base station shall set this field to the actual
 38 Reverse Fundamental Channel Radio Configuration to be
 39 used.

40 DCCH_CC_INCL - Channel configuration for the Dedicated Control Channel
 41 included indicator.

42 The mobile station shall set this field as follows:

43 The mobile station shall set this field to '1', if DCCH
 44 channel configuration information is included in this
 45 record; otherwise, the mobile station shall set this field to
 46 '0' to indicate the current values of Channel configuration
 47 for the Dedicated Control Channel are to be used.

The base station shall set this field as follows:

The base station shall set this field to '1', if channel configuration information for the Dedicated Control Channel is included in this Service Configuration Record; otherwise, the base station shall set this field to '0' to indicate the current values of Channel configuration for the Dedicated Control Channel are to be used.

DCCH_FRAME_SIZE - Dedicated Control Channel frame size.

The mobile station shall set this field as follows:

If DCCH_CC_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set this field to the frame size, as defined in Table 3.7.5.7-4, for the current service configuration.

For a *Service Request Message* or a *Service Response Message*, the mobile station shall set this field to the frame size, as defined in Table 3.7.5.7-4, for the proposed service configuration.

The base station shall set this field as follows:

If the DCCH_CC_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it according to the Table 3.7.5.7-4 as follows:

For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall set this field to the Dedicated Control Channel frame size(s) for the actual service configuration.

For a *Service Request Message* or a *Service Response Message*, the base station shall set this field to the Dedicated Control Channel frame size(s) for the proposed service configuration.

Table 3.7.5.7-4. DCCH Frame Size

DCCH_FRAME_SIZE (binary)	Description
00	Reserved
01	20 ms frame size only
10	5 ms frame size only
11	Both 5 ms and 20 ms frame sizes

FOR_DCCH_RC - Forward Dedicated Control Channel Radio Configuration.

The mobile station shall set this field as follows:

If DCCH_CC_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set this field to the Forward Dedicated Control Channel Radio Configuration (see [2]) for the current service configuration. If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

For a *Service Request Message* or a *Service Response Message*, the mobile station shall set this field to the Forward Dedicated Control Channel Radio Configuration for the proposed service configuration. If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

The base station shall set this field as follows:

If the DCCH_CC_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall set this field to the actual Forward Dedicated Control Channel Radio Configuration to be used (see [2]). If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

For a *Service Request Message* or a *Service Response Message*, the base station shall set this field to the Forward Dedicated Control Channel Radio Configuration in the proposed service configuration. If the Forward Dedicated Control Channel configuration is not specified in this record, then the base station shall set this field to 0.

REV_DCCH_RC - Reverse Dedicated Control Channel Radio Configuration.

The mobile station shall set this field as follows:

If DCCH_CC_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set this field to the Reverse Dedicated Control Channel Radio Configuration (see [2]) for the current service configuration.

1 For a *Service Request Message* or a *Service Response*
2 *Message*, the mobile station shall set this field to the
3 Reverse Dedicated Control Channel Radio Configuration
4 for the proposed service configuration.

5 The base station shall set this field as follows:

6 If the DCCH_CC_INCL field is set to '0', the base station
7 shall omit this field; otherwise, the base station shall
8 include this field and set it as follows:

9 For a *Service Connect Message*, a *General Handoff*
10 *Direction Message*, or a *Universal Handoff Direction*
11 *Message*, the base station shall set this field to the actual
12 Reverse Dedicated Control Channel Radio Configuration
13 to be used (see [2]).

14 For a *Service Request Message* or a *Service Response*
15 *Message*, the base station shall set this field to the
16 Reverse Dedicated Control Channel Radio Configuration
17 for the proposed service configuration.

18 FOR_SCH_CC_INCL - Channel configuration for the Forward Supplemental Channel
19 included indicator.

20 The mobile station shall set this field as follows:

21 The mobile station shall set this field to '1', if the Forward
22 Supplemental Channel Configuration information is
23 included; otherwise, the mobile station shall set this field
24 to '0' to indicate the current values of Channel
25 configuration for the Forward Supplemental Channel are
26 to be used.

27 The base station shall set this field as follows:

28 The base station shall set this field to '1', if the channel
29 configuration information for the Forward Supplemental
30 Channel is included in this Service Configuration Record;
31 otherwise, the base station shall set this field to '0' to
32 indicate the current values of Channel configuration for
33 the Forward Supplemental Channel are to be used.

34 NUM_FOR_SCH - Number of Forward Supplemental Channels.

35 The mobile station shall set this field as follows:

36 If FOR_SCH_CC_INCL field is set to '1', the mobile station
37 shall include this field and set it as describe below;
38 otherwise, the mobile station shall omit this field.

39 For a *Status Response Message*, the mobile station shall
40 set this field to the number of Forward Supplemental
41 Channels for the current service configuration and include
42 one occurrence of the following three-field SCH record for
43 each Supplemental Channel Configuration.

1 For a *Service Request Message* or a *Service Response*
 2 *Message*, the mobile station shall set this field to the
 3 number of Forward Supplemental Channels for the
 4 proposed service configuration and include one
 5 occurrence of the following three-field SCH record for each
 6 Supplemental Channel Configuration.

7 The base station shall set this field as follows:

8 If the FOR_SCH_CC_INCL field is set to '0', the base
 9 station shall omit this field; otherwise, the base station
 10 shall set this field to the number of Forward Supplemental
 11 Channels associated with this service configuration.

12 If the FOR_SCH_CC_INCL field is set to '1', the base
 13 station shall not set this field to '00'.

14 If the NUM_FOR_SCH field is present, the base station shall include one occurrence of the
 15 following three-field record for each Forward Supplemental Channel included in this
 16 record:

17 FOR_SCH_ID - Forward Supplemental Channel Identification

18 The mobile station shall set this field as follows:

19 The mobile station shall set this field to the identification
 20 of the Supplemental Channel included in this Forward
 21 Supplemental Channel Configuration record.

22 The mobile station shall set this field to the Supplemental
 23 Channel identifier, shown in Table 3.7.5.7-5.

24 **Table 3.7.5.7-5. SCH Identifier**

FOR_SCH_ID REV_SCH_ID (binary)	Description
00	Supplemental Channel 0
01	Supplemental Channel 1
10-11	Reserved

25 The base station shall set this field as follows:

26 The base station shall set this field to the identifier of the
 27 Forward Supplemental Channel pertaining to this record.

28 The base station shall set this field to the Supplemental
 29 Channel identifier, shown in Table 3.7.5.7-5.

30

31 FOR_SCH_MUX - Forward Supplemental Channel Multiplex Option.

32 The mobile station shall set this field as follows:

33 The mobile station shall set this field to the Multiplex
 34 Option associated with the maximum data rate for this
 35 Forward Supplemental Channel (see [3]).

1 For a *Service Request Message* or a *Service Response*
 2 *Message*, the mobile station shall set this field to the
 3 number of Reverse Supplemental Channels for the
 4 proposed service configuration and include one
 5 occurrence of the following three-field record for each
 6 reverse Supplemental Channel Configuration.

7 The base station shall set this field as follows:

8 If the REV_SCH_CC_INCL field is set to '0', the base
 9 station shall omit this field; otherwise, the base station
 10 shall set this field to the number of Reverse Supplemental
 11 Channels associated with this service configuration.

12 If the REV_SCH_CC_INCL field is set to '1', the base
 13 station shall not set this field to '00'.

14 If the NUM_REV_SCH field is present, the base station shall include one occurrence of the
 15 following three-field record for each Reverse Supplemental Channel included in this record:

16 REV_SCH_ID - Reverse Supplemental Channel Identification

17 The mobile station shall set this field as follows:

18 The mobile station shall set this field to the identifier of
 19 the Supplemental Channel included in this Reverse
 20 Supplemental Channel Configuration record.

21 The mobile station shall set this field to the Supplemental
 22 Channel identifier, shown in Table 3.7.5.7-5.

23 The base station shall set this field as follows:

24 The base station shall set this field to the identifier of the
 25 Reverse Supplemental Channel pertaining to this record.

26 The base station shall set this field to the Supplemental
 27 Channel identifier, shown in Table 3.7.5.7-5.

28 REV_SCH_MUX - Reverse Supplemental Channel Multiplex Option

29 The mobile station shall set this field as follows:

30 The mobile station shall set this field to the Multiplex
 31 Option associated with the maximum data rate for this
 32 Reverse Supplemental Channel (see [3]).

33 The base station shall set this field as follows:

34 The base station shall set this field to the Multiplex Option
 35 associated with the maximum data rate for this Reverse
 36 Supplemental Channel (see [3]).

37 SCH_CC_Type-specific field - Supplemental Channel Configuration Information.

38 The mobile station shall set this field as follows:

1 The mobile station shall set this field to the subfields of
 2 the Channel Configuration record defined in 3.7.5.7.1, for
 3 this Reverse Supplemental Channel included in the
 4 service configuration.

5 The base station shall set this field as follows:

6 The base station shall set this field as defined in 3.7.5.7.1
 7 for this Reverse Supplemental Channel.

8 **FCH_DCCH_MUX_OPTION_IND** – FCH and DCCH Multiplex Option Indicator

9 The mobile station shall set this field according to Table
 10 3.7.5.7-6.

11 The base station shall set this field according to Table 3.7.5.7-
 12 6.

13

14 **Table 3.7.5.7-6. FCH_DCCH_MUX_OPTION_IND USAGE**

FCH_DCCH_MUX_OPTION_IND	Description
00	FOR_MUX_OPTION applies to both the Forward Fundamental Channel and the Forward Dedicated Control Channel (if specified in this record), and REV_MUX_OPTION applies to both the Reverse Fundamental Channel and the Reverse Dedicated Control Channel
01	FOR_MUX_OPTION applies only to the Forward Fundamental Channel (if specified in this record), and REV_MUX_OPTION applies only to the Reverse Fundamental Channel.
10	FOR_MUX_OPTION applies only to the Forward Dedicated Control Channel (if specified in this record), and REV_MUX_OPTION applies only to the Reverse Dedicated Control Channel.
11	FOR_MUX_OPTION applies only to the Forward Fundamental Channel, and REV_MUX_OPTION applies only to the Reverse Fundamental Channel. FOR_DCCH_MUX_OPTION is included for the Forward Dedicated Control Channel (if specified in this record), and REV_DCCH_MUX_OPTION is included for the Reverse Dedicated Control Channel.

15

16 **FOR_DCCH_MUX_OPTION** – Forward DCCH Multiplex Option.

17 If FCH_DCCH_MUX_OPTION_IND is set to a value other than
 18 '11', the mobile station shall omit this field; otherwise, the
 19 mobile station shall include this field and set as follows:

1 For a *Status Response Message*, the mobile station shall
 2 set this field to the number of the multiplex option for the
 3 Forward Dedicated Control Channel (e.g., 1 corresponds
 4 to Multiplex Option 1). If the Forward Dedicated Control
 5 Channel configuration is not specified in this record, then
 6 the mobile station shall set this field to 0.

7 For a *Service Request Message* and a *Service Response*
 8 *Message*, the mobile station shall set this field to the
 9 number of the multiplex option for the Forward Dedicated
 10 Control Channel. If the Forward Dedicated Control
 11 Channel configuration is not specified in this record, then
 12 the mobile station shall set this field to 0.

13 If FCH_DCCH_MUX_OPTION_IND is set to a value other than
 14 '11', the base station shall omit this field; otherwise, the base
 15 station shall include this field and set as follows:

16 For a *Service Request Message* and a *Service Response*
 17 *Message*, the base station shall set this field to the
 18 number of the multiplex option for the Forward Dedicated
 19 Control Channel. If the Forward Dedicated Control
 20 Channel configuration is not specified in this record, then
 21 the mobile station shall set this field to 0.

22 For a *Service Connect Message*, *General Handoff Direction*
 23 *Message*, and a *Universal Handoff Direction Message*, the
 24 base station shall set this field to the number of the
 25 multiplex option for the Forward Dedicated Control
 26 Channel. If the Forward Dedicated Control Channel
 27 configuration is not specified in this record, then the base
 28 station shall set this field to 0.

29 REV_DCCH_MUX_OPTION – Reverse DCCH Multiplex Option.

30 If FCH_DCCH_MUX_OPTION_IND is set to a value other than
 31 '11', the mobile station shall omit this field; otherwise, the
 32 mobile station shall include this field and set as follows:

33 For a *Status Response Message*, the mobile station shall
 34 set this field to the number of the multiplex option for the
 35 Reverse Dedicated Control Channel (e.g., 1 corresponds to
 36 Multiplex Option 1).

37 For a *Service Request Message* and a *Service Response*
 38 *Message*, the mobile station shall set this field to the
 39 number of the multiplex option for the Reverse Dedicated
 40 Control Channel.

41 If DCCH_MUX_OPTION_INCL is set to a value other than '11',
 42 the base station shall omit this field; otherwise, the base
 43 station shall include this field and set as follows:

44 For a *Service Request Message* and a *Service Response*
 45 *Message*, the base station shall set this field to the
 46 number of the multiplex option for the Reverse Dedicated
 47 Control Channel.

1 For a *Service Connect Message*, *General Handoff Direction*
 2 *Message*, and a *Universal Handoff Direction Message*, the
 3 base station shall set this field to the number of the
 4 multiplex option for the Reverse Dedicated Control
 5 Channel.

6 FOR_PDCH_CC_INCL - Channel configuration for the Forward Packet Data Channel
 7 included indicator.

8 The mobile station shall set this field as follows:

9 The mobile station shall set this field to '1', if channel
 10 configuration information for the Forward Packet Data
 11 Channel is included in this Service Configuration Record;
 12 otherwise, the mobile station shall set this field to '0' to
 13 indicate the current values of Channel configuration for
 14 the Forward Packet Data Channel are to be used.

15 The base station shall set this field as follows:

16 The base station shall set this field to '1', if channel
 17 configuration information for the Forward Packet Data
 18 Channel is included in this Service Configuration Record;
 19 otherwise, the base station shall set this field to '0' to
 20 indicate the current values of Channel configuration for
 21 the Forward Packet Data Channel are to be used.

22 FOR_PDCH_MUX_OPTION - Forward Packet Data Channel Multiplex Option.

23 The mobile station shall set this field as follows:

24 If FOR_PDCH_CC_INCL is set to '0', then the mobile
 25 station shall omit this field; otherwise, the mobile station
 26 shall set this field to the Multiplex Option associated with
 27 the Forward Packet Data Channel (see [3]).

28 The base station shall set this field as follows:

29 If FOR_PDCH_CC_INCL is set to '0', then the base station
 30 shall omit this field; otherwise, the base station shall set
 31 this field to the Multiplex Option associated with the
 32 Forward Packet Data Channel (see [3]).

33 FOR_PDCH_RC - Forward Packet Data Channel Radio Configuration.

34 The mobile station shall set this field as follows:

35 If FOR_PDCH_CC_INCL is set to '0', then the mobile
 36 station shall omit this field; otherwise, the mobile station
 37 shall include this field and set it as follows:

38 For a *Status Response Message*, the mobile station shall
 39 set this field to the Forward Packet Data Channel Radio
 40 Configuration (see [2]) for the current service
 41 configuration.

1 For a *Service Request Message* or a *Service Response*
 2 *Message*, the mobile station shall set this field to the
 3 Forward Packet Data Channel Radio Configuration (see
 4 [2]) for the proposed service configuration.

5 The base station shall set this field as follows:

6 If FOR_PDCH_CC_INCL field is set to '0', then the base
 7 station shall omit this field; otherwise, the base station
 8 shall include this field and set it as follows:

9 For a *Service Connect Message*, a *General Handoff*
 10 *Direction Message*, or a *Universal Handoff Direction*
 11 *Message*, the base station shall set this field to the actual
 12 Forward Packet Data Channel Radio Configuration to be
 13 used (see [2]).

14 For a *Service Request Message* or a *Service Response Message*,
 15 the base station shall set this field to the Forward Packet
 16 Data Channel Radio Configuration (see [2]) for the proposed
 17 service configuration.

18 REV_PDCH_CC_INCL - Channel configuration for the Reverse Packet Data Channel
 19 included indicator.

20 The mobile station shall set this field as follows:

21 The mobile station shall set this field to '1', if channel
 22 configuration information for the Reverse Packet Data
 23 Channel is included in this Service Configuration Record;
 24 otherwise, the mobile station shall set this field to '0' to
 25 indicate the current values of Channel configuration for
 26 the Reverse Packet Data Channel are to be used.

27 The base station shall set this field as follows:

28 The base station shall set this field to '1', if channel
 29 configuration information for the Reverse Packet Data
 30 Channel is included in this Service Configuration Record;
 31 otherwise, the base station shall set this field to '0' to
 32 indicate the current values of Channel configuration for
 33 the Reverse Packet Data Channel are to be used.

34 REV_PDCH_MUX_OPTION_HIGH_RATE - Reverse Packet Data Channel Multiplex Option
 35 for Higher Data Rates.

36 The mobile station shall set this field as follows:

37 If REV_PDCH_CC_INCL is set to '0', then the mobile
 38 station shall omit this field; otherwise, the mobile station
 39 shall include this field and set it as follows:

40 For a *Status Response Message*, the mobile station shall
 41 set this field to the Multiplex Option for Higher Data Rates
 42 associated with the Reverse Packet Data Channel (see [3])
 43 for the current service configuration.

1 For a *Service Request Message* or a *Service Response*
2 *Message*, the mobile station shall set this field to the
3 Multiplex Option for Higher Data Rates associated with
4 the Reverse Packet Data Channel (see [3]) for the proposed
5 service configuration.

6 The base station shall set this field as follows:

7 If REV_PDCH_CC_INCL field is set to '0', then the base
8 station shall omit this field; otherwise, the base station
9 shall include this field and set it as follows:

10 For a *Service Connect Message*, a *General Handoff*
11 *Direction Message*, or a *Universal Handoff Direction*
12 *Message*, the base station shall set this field to the actual
13 Multiplex Option for Higher Data Rates associated with
14 the Reverse Packet Data Channel to be used (see [3]).

15 For a *Service Request Message* or a *Service Response*
16 *Message*, the base station shall set this field to the
17 Multiplex Option for Higher Data Rates associated with
18 the Reverse Packet Data Channel (see [3]) for the proposed
19 service configuration.

20 REV_PDCH_MUX_OPTION_LOW_RATE - Reverse PDCH Mux Option for Lower Data Rates

21 The mobile station shall set this field as follows:

22 If REV_PDCH_CC_INCL is set to '0', then the mobile
23 station shall omit this field; otherwise, the mobile station
24 shall include this field and set it as follows:

25 This field shall be set to 0x1, 0x1301, or 0x1305.

26 For a *Status Response Message*, the mobile station shall
27 set this field to the Multiplex Option for Lower Data Rates
28 associated with the Reverse Packet Data Channel (see [3])
29 for the current service configuration.

30 For a *Service Request Message* or a *Service Response*
31 *Message*, the mobile station shall set this field to the
32 Multiplex Option for Lower Data Rates associated with the
33 Reverse Packet Data Channel (see [3]) for the proposed
34 service configuration

35 The base station shall set this field as follows:

36 If REV_PDCH_CC_INCL field is set to '0', then the base
37 station shall omit this field; otherwise, the base station
38 shall include this field and set it as follows:

39 For a *Service Connect Message*, a *General Handoff*
40 *Direction Message*, or a *Universal Handoff Direction*
41 *Message*, the base station shall set this field to the actual
42 Multiplex Option for Lower Data Rates associated with the
43 Reverse Packet Data Channel to be used (see [3])

1 For a *Service Request Message* or a *Service Response*
 2 *Message*, the base station shall set this field to the
 3 Multiplex Option for Lower Data Rates associated with the
 4 Reverse Packet Data Channel (see [3]) for the proposed
 5 service configuration.

6 REV_PDCH_RC - Reverse Packet Data Channel Radio Configuration.

7 The mobile station shall set this field as follows:

8 If REV_PDCH_CC_INCL is set to '0', then the mobile
 9 station shall omit this field; otherwise, the mobile station
 10 shall include this field and set it as follows:

11 For a *Status Response Message*, the mobile station shall
 12 set this field to the Reverse Packet Data Channel Radio
 13 Configuration (see [2]) for the current service
 14 configuration.

15 For a *Service Request Message* or a *Service Response*
 16 *Message*, the mobile station shall set this field to the
 17 Reverse Packet Data Channel Radio Configuration (see [2])
 18 for the proposed service configuration.

19 The base station shall set this field as follows:

20 If REV_PDCH_CC_INCL field is set to '0', then the base
 21 station shall omit this field; otherwise, the base station
 22 shall include this field and set it as follows:

23 For a *Service Connect Message*, a *General Handoff*
 24 *Direction Message*, or a *Universal Handoff Direction*
 25 *Message*, the base station shall set this field to the actual
 26 Reverse Packet Data Channel Radio Configuration to be
 27 used (see [2]).

28 For a *Service Request Message* or a *Service Response*
 29 *Message*, the base station shall set this field to the
 30 Reverse Packet Data Channel Radio Configuration (see [2])
 31 for the proposed service configuration.

32 RESERVED - Reserved bits.

33 The mobile station shall set this field as follows:

34 The mobile station shall add reserved bits as needed in
 35 order to make the length of the entire information record
 36 equal to an integer number of octets. The mobile station
 37 shall set these bits to '0'.

38 The base station shall set this field as follows:

39 The base station shall add reserved bits as needed in
 40 order to make the length of the entire message equal to an
 41 integer number of octets. The base station shall set these
 42 bits to '0'.

43

1 3.7.5.7.1 Channel Configuration for the Supplemental Channel

2 The channel configuration information for the Supplemental Channel consists of the
 3 following subfields:

4

Subfields	Length (bits)
SCH_REC_LEN	4
SCH_RC	5
CODING	1
FRAME_40_USED	1
FRAME_80_USED	1
MAX_RATE	4

5

6 SCH_REC_LEN - Supplemental Channel channel configuration record length.
 7 The mobile station or base station shall set this field to the
 8 number of octets included in this Supplemental Channel
 9 channel configuration record including this SCH_REC_LEN
 10 field.

11 SCH_RC - Supplemental Channel Radio Configuration.
 12 The mobile station or base station shall set this field to the
 13 Radio Configuration for this Supplemental Channel. Radio
 14 Configurations are defined in [2].

15 CODING - Coding type.
 16 The mobile station or base station shall set this field to '1' if
 17 the mobile station or the base station is to use Convolutional
 18 Coding when the number of channel bits per frame is less
 19 than 360 and Turbo Coding when the number of channel bits
 20 per frame is equal to or greater than 360. The mobile station
 21 or base station shall set this field to '0' if the mobile station or
 22 the base station uses Convolution Coding for all block sizes.

23 FRAME_40_USED - 40ms frame used indicator
 24 The mobile station or base station shall set this field to '1' if
 25 40ms frame is used; otherwise, the mobile station or base
 26 station shall set this field to '0'.
 27 If a f-dtch logical channel corresponding to the same sr_id is
 28 mapped to both forward Supplemental Channels 0 and 1,
 29 then the mobile station or base station shall specify the same
 30 frame length for both forward Supplemental Channels 0 and
 31 1.

1 If a r-dtch logical channel corresponding to the same sr_id is
 2 mapped to both reverse Supplemental Channels 0 and 1, then
 3 the mobile station or base station shall specify the same
 4 frame length for both forward Supplemental Channels 0 and
 5 1.

6 The base station shall not set both FRAME_40_USED and
 7 FRAME_80_USED fields set to '1'.

8

9 FRAME_80_USED - 80ms frame used indicator.

10 The mobile station or base station shall set this field to '1' if
 11 80ms frame is to be used; otherwise, the mobile station or
 12 base station shall set this field to '0'.

13 If a f-dtch logical channel corresponding to the same sr_id is
 14 mapped to both forward Supplemental Channels 0 and 1,
 15 then the mobile station or base station shall specify the same
 16 frame length for both forward Supplemental Channels 0 and
 17 1.

18 If a r-dtch logical channel corresponding to the same sr_id is
 19 mapped to both reverse Supplemental Channels 0 and 1, then
 20 the mobile station or base station shall specify the same
 21 frame length for both reverse Supplemental Channels 0 and
 22 1.

23 Then the base station shall not set both FRAME_40_USED
 24 and FRAME_80_USED fields set to '1'.

25 MAX_RATE - Maximum supplemental channel rate

26 The mobile station or base station shall set this field
 27 according to Table 2.7.4.27.3-2 to indicate the maximum
 28 forward or reverse supplemental channel data rate supported.

29

1 3.7.5.8 Called Party Subaddress

2 This information record identifies the called party subaddress.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

4

5 EXTENSION_BIT - The extension bit.

6 The base station shall set this field to '1'.

7 SUBADDRESS_TYPE - Type of subaddress.

8 The base station shall set this field to the
 9 SUBADDRESS_TYPE value shown in Table 2.7.4.19-1
 10 corresponding to the type of the subaddress, as defined in [7],
 11 Section 4.5.8.

12 ODD/EVEN_INDICATOR - The indicator of odd/even bits.

13 The base station shall set this field to the
 14 ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2
 15 corresponding to the indicator of even/odd bits, as defined in
 16 [7], Section 4.5.8. It is only used when the type of subaddress
 17 is "User specified" and the coding is BCD.

18 RESERVED - Reserved bits.

19 The base station shall set this field to '000'.

20 CHARi - Character.

21 The base station shall include one occurrence of this field for
 22 each character in the called party subaddress.

23 When the SUBADDRESS_TYPE field is equal to '000', the
 24 NSAP address shall be encoded using the preferred binary
 25 encoding specified in [35].

26 When the SUBADDRESS_TYPE field is set to '010', user-
 27 specified subaddress field is encoded according to the user
 28 specification, subject to a maximum length of 20 octets.
 29 When interworking with [36] networks, BCD coding should be
 30 applied.

31

3.7.5.9 Calling Party Subaddress

This information record identifies the calling party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR _i	8
-------------------	---

}

- EXTENSION_BIT - The extension bit.
The base station shall set this field to '1'.
- SUBADDRESS_TYPE - Type of subaddress.
The base station shall set this field to the SUBADDRESS_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.10.
- ODD/EVEN INDICATOR - The indicator of odd/even bits.
The base station shall set this field to the ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.10. It is only used when the type of subaddress is "User specified" and the coding is BCD.
- RESERVED - Reserved bits.
The base station shall set this field to '000'.
- CHAR_i - Character.
The base station shall include one occurrence of this field for each character in the calling party subaddress.
When the SUBADDRESS_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].
When the SUBADDRESS_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets.
When interworking with [36] networks, BCD coding should be applied.

1 3.7.5.10 Connected Subaddress

2 This information record identifies the subaddress of the responding party.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

4

5 EXTENSION_BIT - The extension bit.

6 The base station shall set this field to '1'.

7 SUBADDRESS_TYPE - Type of subaddress.

8 The base station shall set this field to the
 9 SUBADDRESS_TYPE value shown in Table 2.7.4.19-1
 10 corresponding to the type of the subaddress, as defined in [7],
 11 Section 4.5.14.

12 ODD/EVEN INDICATOR - The indicator of odd/even bits.

13 The base station shall set this field to the
 14 ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2
 15 corresponding to the indicator of even/odd bits, as defined in
 16 [7], Section 4.5.14. It is only used when the type of
 17 subaddress is "User specified" and the coding is BCD.

18 RESERVED - Reserved bits.

19 The base station shall set this field to '000'.

20 CHARi - Character.

21 The base station shall include one occurrence of this field for
 22 each character in the connected subaddress.

23 When the SUBADDRESS_TYPE field is equal to '000', the
 24 NSAP address shall be encoded using the preferred binary
 25 encoding specified in [35].

26 When the SUBADDRESS_TYPE field is set to '010', user-
 27 specified subaddress field is encoded according to the user
 28 specification, subject to a maximum length of 20 octets.
 29 When interworking with [36] networks, BCD coding should be
 30 applied.

31

1 3.7.5.11 Redirecting Number

2 This information record identifies the Redirecting Number.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT_1	1
NUMBER_TYPE	3
NUMBER_PLAN	4
EXTENSION_BIT_2	0 or 1
PI	0 or 2
RESERVED	0 or 3
SI	0 or 2
EXTENSION_BIT_3	0 or 1
RESERVED	0 or 3
REDIRECTION_REASON	0 or 4

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

4

5 EXTENSION_BIT_1 - The extension bit.

6 If the PI and SI are included in this record, the base station
7 shall set this field to '0'; otherwise, the base station shall set
8 this field to '1'.

9 NUMBER_TYPE - Type of number.

10 The base station shall set this field to the NUMBER_TYPE
11 value shown in Table 2.7.1.3.2.4-2 corresponding to the type
12 of the redirecting number, as defined in [34].

13 NUMBER_PLAN - Numbering plan.

14 The base station shall set this field to the NUMBER_PLAN
15 value shown in Table 2.7.1.3.2.4-3 corresponding to the
16 numbering plan used for the redirecting number, as defined
17 in [34].

18 EXTENSION_BIT_2 - The extension bit.

1 If the EXTENSION_BIT_1 is set to '0' and
2 REDIRECTION_REASON is included in this record, the base
3 station shall set this field to '0'. If the EXTENSION_BIT_1 is
4 set to '0' and REDIRECTION_REASON is not included in this
5 record, the base station shall set this field to '1'. If the
6 EXTENSION_BIT_1 is set to '1', the base station shall omit
7 this field.

8 PI - Presentation indicator.
9 This field indicates whether or not the redirecting number
10 should be displayed.
11 if the EXTENSION_BIT_1 is set to '0', the base station shall
12 set this field to the PI value shown in Table 2.7.4.4-1
13 corresponding to the presentation indicator, as defined in
14 [34]; otherwise, the base station shall omit this field.

15 RESERVED - Reserved bits.
16 If the EXTENSION_BIT_1 is set to '0', the base station shall
17 set this field to '000'; otherwise, the base station shall omit
18 this field.

19 SI - Screening indicator.
20 This field indicates how the redirecting number was screened.
21 If the EXTENSION_BIT_1 is set to '0', the base station shall
22 set this field to the SI value shown in Table 2.7.4.4-2
23 corresponding to the screening indicator value, as defined in
24 [34]; otherwise, the base station shall omit this field.

25 EXTENSION_BIT_3 - The extension bit.
26 If the EXTENSION_BIT_2 is set to '0', the base station shall
27 set this field to '1'; otherwise, the base station shall omit this
28 field.

29 RESERVED - Reserved bits.
30 If the EXTENSION_BIT_2 is set to '0', the base station shall
31 set this field to '000'; otherwise, the base station shall omit
32 this field.

33 REDIRECTION_REASON - The reason for redirection.
34 If the EXTENSION_BIT_2 is set to '0', the base station shall
35 set this field to the REDIRECTION_REASON value shown in
36 Table 3.7.5.5.11-1 corresponding to the redirection reason, as
37 defined in [34]; otherwise, the base station shall omit this
38 field.

39

1

Table 3.7.5.11-1. Redirection Reason

Description	REDIRECTION-REASON (binary)
Unknown	0000
Call forwarding busy or called DTE busy	0001
Call forwarding no reply (circuit-mode only)	0010
Called DTE out of order (packet-mode only)	1001
Call forwarding by the called DTE (packet-mode only)	1010
Call forwarding unconditional or Systematic call redirection	1111
Reserved	others

2

3

CHARi - Character.

4

5

6

7

8

9

The base stations shall include one occurrence of this field for each character in the Redirecting Number. The base station shall set each occurrence of this field to the ASCII representation corresponding to the character, as specified in [9], with the most significant bit set to '0'.

1 3.7.5.12 Redirecting Subaddress

2 This information record identifies the subaddress of the responding party.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR _i	8
-------------------	---

}

4

5 EXTENSION_BIT - The extension bit.

6 The base station shall set this field to '1'.

7 SUBADDRESS_TYPE - Type of subaddress.

8 The base station shall set this field to the
 9 SUBADDRESS_TYPE value shown in Table 2.7.4.19-1
 10 corresponding to the type of the subaddress, as defined in
 11 [34].

12 ODD/EVEN INDICATOR - The indicator of odd /even bits.

13 The base station shall set this field to the
 14 ODD/EVEN_INDICATOR value shown in Table 2.7.4.19-2
 15 corresponding to the indicator of even/odd bits, as defined in
 16 [34]. It is only used when the type of subaddress is "User
 17 specified" and the coding is BCD.

18 RESERVED - Reserved bits.

19 The base station shall set this field to '000'.

20 CHAR_i - Character.

21 The base station shall include one occurrence of this field for
 22 each character in the redirecting subaddress.

23 When the SUBADDRESS_TYPE field is equal to '000', the
 24 NSAP address shall be encoded using the preferred binary
 25 encoding specified in [35].

26 When the SUBADDRESS_TYPE field is set to '010', user-
 27 specified subaddress field is encoded according to the user
 28 specification, subject to a maximum length of 20 octets.
 29 When interworking with [36] networks, BCD coding should be
 30 applied.

31

1 3.7.5.13 Meter Pulses

2 This information record identifies the number of meter pulses and frequency of the alert
3 tone.

4

Type-Specific Field	Length (bits)
PULSE_FREQUENCY	11
PULSE_ON_TIME	8
PULSE_OFF_TIME	8
PULSE_COUNT	4
RESERVED	1

5

6 PULSE_FREQUENCY - Pulse frequency.

7 The base station shall set this field to the frequency of the
8 alert signals in units of 10 Hz or to zero to indicate that line
9 polarity control is to be used. If this field is set to zero, the
10 PULSE_ON_TIME and PULSE_OFF_TIME shall be the period
11 of line polarity reversal and normal line polarity, respectively.

12 PULSE_ON_TIME - Pulse on time.

13 The base station shall set this field to the period of the meter
14 pulses in units of 5 ms.

15 PULSE_OFF_TIME - Pulse off time.

16 The base station shall set this field to the period of the inter-
17 pulse spacing in units of 5 ms.

18 PULSE_COUNT - Pulse count.

19 The base station shall set this field to the number of meter
20 pulses.

21 RESERVED - Reserved bits.

22 The base station shall set this field to '0'.

23

1 3.7.5.14 Parametric Alerting

2 This information record allows the network to convey information to a user by means of
 3 programmable alerting signals.

4

Type-Specific Field	Length (bits)
CADENCE_COUNT	8
NUM_GROUPS	4

NUM_GROUPS occurrences of the following record:

{ (NUM_GROUPS)

AMPLITUDE	8
FREQ_1	10
FREQ_2	10
ON_TIME	8
OFF_TIME	8
REPEAT	4
DELAY	8

} (NUM_GROUPS)

CADENCE_TYPE	2
RESERVED	2

5

6 CADENCE_COUNT - Cadence count.
 7 The base station shall set this field to the number of times the
 8 cadence of tone groups will be generated between 0x01 and
 9 0xFE. The base station shall set this field to 0x00 to indicate
 10 that the mobile station should end alert tone generation. The
 11 base station shall set this field to 0xFF to indicate that the
 12 cadence will repeat indefinitely.

13 NUM_GROUPS - Number of groups.
 14 The base station shall set this field to the number of groups.

15 AMPLITUDE - Amplitude.
 16 The base station shall set this field to the amplitude level of
 17 the tone group in units of -1 dBm.

18 FREQ_1 - Tone frequency 1.
 19 The base station shall set this field to the first frequency of
 20 the tone group in units of 5 Hz.

21 FREQ_2 - Tone frequency 2.

1 3.7.5.15 Line Control

2 This information record allows the network to convey line control information.

3

Type-Specific Field	Length (bits)
POLARITY_INCLUDED	1
TOGGLE_MODE	0 or 1
REVERSE_POLARITY	0 or 1
POWER_DENIAL_TIME	8
RESERVED	0 - 7 (as needed)

4

5 POLARITY_INCLUDED - Polarity parameter included.

6 If the mobile station is to change the line polarity, the base
 7 station shall set this field to '1'; otherwise, the base station
 8 shall set this field to '0'.

9 TOGGLE_MODE - If POLARITY_INCLUDED is set to '1', the base station shall
 10 include this field and set it to '1' to toggle the line polarity or
 11 to '0' to set the polarity to the absolute value indicated in the
 12 REVERSE_POLARITY field.

13 REVERSE_POLARITY - Reverse polarity.
 14 If POLARITY_INCLUDED is set to '1' and TOGGLE_MODE is
 15 equal to '0', the base station shall include this field and set it
 16 to '1' to reverse the tip and ring polarity or to '0' to use normal
 17 polarity. If POLARITY_INCLUDED is set to '1' and
 18 TOGGLE_MODE is set to '1', the base station shall include
 19 this field and set it to '0'; otherwise, the base station shall
 20 omit this field.

21 POWER_DENIAL_TIME - Power denial timeout.
 22 The base station shall include this field and set it to the
 23 duration of the power denial in increments of 5 ms.

24 RESERVED - Reserved bits.
 25 The base station shall add reserved bits as needed in order to
 26 make the length of the entire message equal to an integer
 27 number of octets. The base station shall set these bits to '0'.

28

1 3.7.5.16 Extended Display

2 This information record allows the network to supply supplementary service display
3 information that may be displayed by the mobile station.

4

Type-Specific Field	Length (bits)
EXT_DISPLAY_IND	1
DISPLAY_TYPE	7

One or more occurrences of the following record:

{

DISPLAY_TAG	8
DISPLAY_LEN	8

DISPLAY_LEN occurrences of the following field if the
DISPLAY_TAG field is not equal to '10000000' or
'10000001':

{ (DISPLAY_LEN)

CHAR _i	8
-------------------	---

} (DISPLAY_LEN)

}

5

6 EXT_DISPLAY_IND - The indicator of Extended Display Information record.
7 The base station shall set this field to '1'.

7

8 DISPLAY_TYPE - The type of display.

8

9 The base station shall set this field to the DISPLAY_TYPE
10 value shown in Table 3.7.5.16-1 corresponding to the type of
11 display, as defined in [8] Annex D.

10

11

12

13

Table 3.7.5.16-1. Display Type

Description	DISPLAY_TYPE (binary)
Normal	0000000
All other DISPLAY_TYPE values are reserved.	

14

15 DISPLAY_TAG - The indicator of the display information.

15

16

17 There are three types of display tags: mandatory control tags
18 (Blank and Skip), display text tags, and optional control tags,
see [8] Annex D.

18

1
2
3
4
5
6

The base station shall set this field to the DISPLAY_TAG value shown in Table 3.7.5.16-2 corresponding to the type of information contained in the following CHARi field, as defined in [8] Annex D.

1

Table 3.7.5.16-2. Mandatory Control Tags and Display Text Tags

Description	DISPLAY_TAG (binary)
Blank	10000000
Skip	10000001
Continuation	10000010
Called Address	10000011
Cause	10000100
Progress Indicator	10000101
Notification Indicator	10000110
Prompt	10000111
Accumulated Digits	10001000
Status	10001001
Inband	10001010
Calling Address	10001011
Reason	10001100
Calling Party Name	10001101
Called Party Name	10001110
Original Called Name	10001111
Redirecting Name	10010000
Connected Name	10010001
Originating Restrictions	10010010
Date & Time of Day	10010011
Call Appearance ID	10010100
Feature Address	10010101
Redirection Name	10010110
Redirection Number	10010111
Redirecting Number	10011000
Original Called Number	10011001
Connected Number	10011010
Text (e.g., ASCII)	10011110

2

1 DISPLAY_LEN - The display length.
2 The base station shall set this field to the number of octets of
3 display text. See [8] Annex D.
4 CHARi - Character.
5 The base station shall include DISPLAY_LEN occurrences of
6 this field, one for each character to be displayed, except for
7 blank and skip. The base station shall set each occurrence of
8 this field to the ASCII representation corresponding to the
9 character entered, as specified in [9], with the most significant
10 bit set to '0'.
11

1 3.7.5.17 Extended Record Type - International

2 The use of this record type is country-specific. The first ten bits of the type-specific fields
3 shall include the Mobile Country Code (MCC) associated with the national standards
4 organization administering the use of the record type. Encoding of the MCC shall be as
5 specified in 2.3.1.3. The remaining six bits of the first two octets of the type-specific fields
6 shall be used to specify the country-specific record type.

7

1 3.7.5.18 Reserved

2

1 3.7.5.19 Reserved

2

1 3.7.5.20 Non-Negotiable Service Configuration

2 This record is included in a *Service Connect Message* to specify the non-negotiable service
3 configuration parameters to be used by the mobile station. This record can be included in
4 a *General Handoff Direction Message* or a *Universal Handoff Direction Message* to specify the
5 non-negotiable service configuration parameters to be used by the mobile station.

6

Type Specific Field	Length (bits)
FPC_INCL	1
FPC_PRI_CHAN	0 or 1
FPC_MODE	0 or 3
FPC_OLPC_FCH_INCL	0 or 1
FPC_FCH_FER	0 or 5
FPC_FCH_MIN_SETPT	0 or 8
FPC_FCH_MAX_SETPT	0 or 8
FPC_OLPC_DCCH_INCL	0 or 1
FPC_DCCH_FER	0 or 5
FPC_DCCH_MIN_SETPT	0 or 8
FPC_DCCH_MAX_SETPT	0 or 8

GATING_RATE_INCL	1
PILOT_GATING_RATE	0 or 2

FOR_SCH_INCL	1
NUM_FOR_SCH	0 or 2

If FOR_SCH_INCL = '1', include NUM_FOR_SCH occurrences of the following record:

{ (NUM_FOR_SCH)

FOR_SCH_ID	2
FOR_SCH_FRAME_OFFSET	2

} (NUM_FOR_SCH)

REV_SCH_INCL	1
NUM_REV_SCH	0 or 2

If REV_SCH_INCL = '1', include NUM_REV_SCH occurrences of the following record:

{ (NUM_REV_SCH)

REV_SCH_ID	2
REV_SCH_FRAME_OFFSET	2

} (NUM_REV_SCH)

LPM_IND	2
NUM_LPM_ENTRIES	0 or 4

If LPM_IND = '01', include NUM_LPM_ENTRIES occurrences of the following record:

{ (NUM_LPM_ENTRIES)

SR_ID	3
LOGICAL_RESOURCE	4
PHYSICAL_RESOURCE	4
FORWARD_FLAG	1
REVERSE_FLAG	1
PRIORITY	4

} (NUM_LPM_ENTRIES)

NUM_REC	3
---------	---

NUM_REC occurrences of the following record:

{ (NUM_REC)

RECORD_LEN	8
SR_ID	3
SDB_SO_OMIT	1
RESERVED	0-7 (as needed)

} (NUM_REC)

1

2

1

Type Specific Field	Length (bits)
USE_FLEX_NUM_BITS	1
NUM_BITS_TABLES_INCL	0 or 1
NUM_BITS_TABLES_COUNT	0 or 3

If USE_FLEX_NUM_BITS is equal to '1' and NUM_BITS_TABLES_INCL is equal to '1', then include NUM_BITS_TABLES_COUNT+1 occurrences of the following record:

{ (NUM_BITS_TABLES_COUNT+1)

NUM_BITS_TABLE_ID	4
NUM_RECS	4

If USE_FLEX_NUM_BITS is equal to '1', then NUM_RECS +1 occurrences of the following record:

{ (NUM_RECS+1)

NUM_BITS_IDX	4
NUM_BITS	16
CRC_LEN_IDX	3

} (NUM_RECS+1)

} (NUM_BITS_TABLES_COUNT+1)

3

1

USE_VAR_RATE	1
VAR_TABLES_INCL	0 or 1
VAR_RATE_TABLES_COUNT	0 or 3

If USE_VAR_RATE is equal to '1' and VAR_TABLES_INCL is equal to '1', then include VAR_RATE_TABLES_COUNT+1 occurrences of the following record

{ (VAR_RATE_TABLES_COUNT+1)

VAR_RATE_TABLE_ID	3
NUM_RECS	4

If USE_VAR_RATE is equal to '1', include NUM_RECS + 1 occurrences of the following record

{ (NUM_RECS+1)

NUM_BITS_IDX	4
MASK	NUM_BITS_IDX

} (NUM_RECS+1)

} (VAR_RATE_TABLES_COUNT+1)

If USE_FLEX_NUM_BITS is equal to '1', include the following fields

USE_OLD_FLEX_MAPPING	1
FSCH0_NBIT_TABLE_ID	0 or 4

(continues on next page)

2

3

1

Type Specific Field	Length (bits)
RSCH0_NBIT_TABLE_ID	0 or 4
FSCH1_NBIT_TABLE_ID	0 or 4
RSCH1_NBIT_TABLE_ID	0 or 4
FFCH_NBIT_TABLE_ID	0 or 4
RFCH_NBIT_TABLE_ID	0 or 4
FDCCH_NBIT_TABLE_ID	0 or 4
FDCCH_NBITS_IDX	0 or 4
RDCCH_NBIT_TABLE_ID	0 or 4
RDCCH_NBITS_IDX	0 or 4

If USE_VAR_RATE is equal to '1', include the following fields

USE_OLD_VAR_MAPPING	1
FSCH0_VAR_TABLE_ID	0 or 3
RSCH0_VAR_TABLE_ID	0 or 3
FSCH1_VAR_TABLE_ID	0 or 3
RSCH1_VAR_TABLE_ID	0 or 3
R_INC_RATE_ALLOWED	0 or 1
F_INC_RATE_ALLOWED	0 or 1

LTU_INFO_INCL	1
LTU_TABLES_INCL	0 or 1
NUM_LTU_TABLES	0 or 2

Include NUM_LTU_TABLES + 1 occurrences of the following record

{ (NUM_LTU_TABLES+1)

LTU_TABLE_ID	3
--------------	---

(continues on next page)

2

3

1

Type Specific Field	Length (bits)
NUM_ROWS	4

NUM_ROWS + 1 occurrences of the following records

{ (NUM_ROWS+1)

RESERVED	0-7 (as needed)
----------	-----------------

3

4

5

FPC_INCL - Forward power control information included indicator.

6

The base station shall set this field to '1' if the forward power control information parameters are included in this record; otherwise, it shall set this field to '0'.

7

8

9

FPC_PRI_CHAN - Power Control Subchannel indicator.

10

If the FPC_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

11

12

13

The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel; the base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

14

15

16

17

18

1 If only Fundamental Channel is assigned, the base station
2 shall set this field to '0'. If only the Dedicated Control
3 Channel is assigned, the base station shall set this field to '1'.
4
5 If the F-CPCCH is assigned, the base station will multiplex
6 the Power Control Subchannel on the F-CPCCH; otherwise:
7
8 If this field is set to '0', the base station will multiplex the
9 Power Control Subchannel on the Forward Fundamental
10 Channel; otherwise, the base station will multiplex the Power
11 Control Subchannel on the Forward Dedicated Control
12 Channel.

11 FPC_MODE - Forward Power Control operation mode indicator.
12
13 If the FPC_INCL field is set to '0', the base station shall omit
14 this field; otherwise, the base station shall include this field
15 and set it as follows:
16
17 The base station shall set this field to the value of the forward
18 power control operation mode (see [2]).

17 FPC_OLPC_FCH_INCL - Fundamental Channel Outer Loop Power Control
18 parameter included indicator.
19
20 If the FPC_INCL field is set to '0', the base station shall omit
21 this field; otherwise, the base station shall include this field
22 and set it as follows:
23
24 If the forward link Fundamental Channel outer loop power
25 control parameters are included in this record, the base
26 station shall set this field to '1'; otherwise, the base station
27 shall set this field to '0'.

26 FPC_FCH_FER - Fundamental Channel target Frame Error Rate.
27
28 If FPC_OLPC_FCH_INCL is included and set to '1', the base
29 station shall set this field to the target Frame Error Rate on
30 the Forward Fundamental Channel, as specified in Table
31 3.7.3.3.2.25-2; otherwise, the base station shall omit this
32 field.

32 FPC_FCH_MIN_SETPT - Minimum Fundamental Channel Outer Loop Eb/Nt setpoint.
33
34 If FPC_OLPC_FCH_INCL is included and set to '1', the base
35 station shall set this field to minimum Fundamental Channel
36 Outer Loop Eb/Nt setpoint, in units of 0.125dB; otherwise,
37 the base station shall omit this field.

37 FPC_FCH_MAX_SETPT - Maximum Fundamental Channel Outer Loop Eb/Nt setpoint.
38
39 If FPC_OLPC_FCH_INCL is set to '1', the base station shall set
40 this field to maximum Fundamental Channel Outer Loop
41 Eb/Nt setpoint, in units of 0.125dB; otherwise, the base
42 station shall omit this field.

42 FPC_OLPC_DCCH_INCL - Dedicated Control Channel Outer Loop Power Control
43 parameter included indicator.
44
45 If the FPC_INCL field is set to '0', the base station shall omit
46 this field; otherwise, the base station shall include this field
and set it as follows:

- 1 If the forward link Dedicated Control Channel outer loop
 2 power control parameters are included in this message, the
 3 base station shall set this field to '1'; otherwise, the base
 4 station shall set this field to '0'.
- 5 **FPC_DCCH_FER** - Dedicated Control Channel target Frame Error Rate.
 6 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
 7 station shall set this field to the target Frame Error Rate on
 8 the Forward Dedicated Control Channel, as specified in Table
 9 3.7.3.3.2.25-2; otherwise, the base station shall omit this
 10 field.
- 11 **FPC_DCCH_MIN_SETPT** - Minimum Dedicated Control Channel Outer Loop Eb/Nt
 12 setpoint.
 13 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
 14 station shall set this field to minimum Dedicated Control
 15 Channel Outer Loop Eb/Nt setpoint, in units of 0.125dB;
 16 otherwise, the base station shall omit this field.
- 17 **FPC_DCCH_MAX_SETPT** - Maximum Dedicated Control Channel Outer Loop Eb/Nt
 18 setpoint.
 19 If FPC_OLPC_DCCH_INCL is included and set to '1', the base
 20 station shall set this field to maximum Dedicated Control
 21 Channel Outer Loop Eb/Nt setpoint, in units of 0.125dB;
 22 otherwise, the base station shall omit this field.
- 23 **GATING_RATE_INCL** - Reverse Pilot Channel Gating rate included flag.
 24 The base station shall set this field to '1' if the
 25 PILOT_GATING_RATE field is included; otherwise, it shall set
 26 this field to '0'.
- 27 **PILOT_GATING_RATE** - Reverse Pilot Channel Gating rate.
 28 If the GATING_RATE_INCL field is set to '0', the base station
 29 shall omit this field; otherwise, the base station shall set this
 30 field as follows: The base station shall set this field to the
 31 PILOT_GATING_RATE field shown in Table 3.7.5.20-1
 32 corresponding to the gating rate on the Reverse Pilot Channel.

Table 3.7.5.20-1. Reverse Pilot Gating rate

PILOT_GATING_RATE field (binary)	Meaning
00	Gating rate 1
01	Gating rate $\frac{1}{2}$
10	Gating rate $\frac{1}{4}$
11	Reserved

- 34
- 35 **FOR_SCH_INCL** - Forward Supplemental Channel information included
 36 indicator.

1 The base station shall set this field to '1', if the forward
 2 Supplemental Channel information is included; otherwise, the
 3 base station shall set this field to '0'.

4 NUM_FOR_SCH - Number of Forward Supplemental Channels.

5 If the FOR_SCH_INCL field is set to '0', the base station shall
 6 omit this field; otherwise, the base station shall set this field
 7 to the number of Forward Supplemental Channels associated
 8 with this service configuration.

9 If the NUM_FOR_SCH field is present and is set to any value other than '00', the base
 10 station shall include one occurrence of the following two field record for each Forward
 11 Supplemental Channel included in this record:

12 FOR_SCH_ID - Forward Supplemental Channel Identification.

13 The base station shall set this field to the identifier of the
 14 Forward Supplemental Channel pertaining to this record.

15 FOR_SCH_FRAME_OFFSET - Forward Supplemental Channel multiple frame offset.

16 The base station shall set this field to the multiple frame
 17 offset of this Forward Supplemental Channel. The frames of
 18 this Forward Supplemental Channel are delayed by
 19 $(FRAME_OFFSET \times 1.25 + FOR_SCH_FRAME_OFFSET \times 20)$
 20 ms relative to system timing (see [2]).

21 REV_SCH_INCL - Reverse Supplemental Channel information included
 22 indicator.

23 The base station shall set this field to '1' if the reverse
 24 Supplemental Channel information is included; otherwise, the
 25 base station shall set this field to '0'.

26 NUM_REV_SCH - Number of Reverse Supplemental Channels.

27 If the REV_SCH_INCL field is set to '0', the base station shall
 28 omit this field; otherwise, the base station shall set this field
 29 to the number of Reverse Supplemental Channels associated
 30 with this service configuration.

31 If the NUM_REV_SCH field is present and is set to any value other than '00', the base
 32 station shall include one occurrence of the following two-field record for each Reverse
 33 Supplemental Channel included in this record:

34 REV_SCH_ID - Reverse Supplemental Channel Identification.

35 The base station shall set this field to the identifier of the
 36 Reverse Supplemental Channel pertaining to this record.

37 REV_SCH_FRAME_OFFSET - Reverse Supplemental Channel multiple frame offset.

38 The base station shall set this field to the multiple frame
 39 offset with this Reverse Supplemental Channel. The frames of
 40 this Reverse Supplemental Channel are delayed by
 41 $(FRAME_OFFSET \times 1.25 + REV_SCH_FRAME_OFFSET \times 20)$
 42 ms relative to system timing (see [2]).

43 LPM_IND - Logical to Physical Mapping indicator.

The base station shall set this field to the LPM_IND field value shown in Table 3.7.5.20-2 corresponding to the Logical to Physical Mapping indicator.

The base station shall not set this field to '00' if there is more than one service option connection in the current Service Configuration information record.

Table 3.7.5.20-2. Logical to Physical Mapping indicator

LPM_IND Field (binary)	Logical-to-Physical Mapping indicator
00	Use the default Logical-to-Physical Mapping
01	Use the Logical-to-Physical Mapping included in this record
10	Use the previously stored Logical-to-Physical Mapping
11	Reserved

NUM_LPM_ENTRIES - Number of Logical-to-Physical Mapping entries.

If the LPM_IND field is set to '01', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field:

The base station shall set this field to the number of Logical-to-Physical Mapping entries that are included in this record.

If the NUM_LPM_ENTRIES field is included and is not equal to '0000', the base station shall include NUM_LPM_ENTRIES occurrences of the following six-field record for each Logical-to-Physical Mapping entry:

SR_ID - Service reference identifier.

The base station shall set this field to the identifier of the service reference to which this Logical to Physical Mapping entry applies.

For the signaling service, the base station shall set this field to '000'.

LOGICAL_RESOURCE - Logical resource identifier.

The base station shall set this field to the logical resource identifier shown in Table 3.7.5.20-3 which is to be mapped by this Logical to Physical Mapping entry.

Table 3.7.5.20-3. Logical Resource Identifier.

LOGICAL_RESOURCE (binary)	Logical Resource
0000	dtch
0001	dsch
0010 – 1111	Reserved

PHYSICAL_RESOURCE

- Physical resource identifier.

The base station shall set this field to the physical resource identifier shown in Table 3.7.5.20-4 to which the logical channel specified in this Logical to Physical Mapping entry is to be mapped.

If the LOGICAL_RESOURCE field of this record is set to '0001', then the base station shall not set this field to '0010' or '0011'.

Table 3.7.5.20-4. Physical Resource Identifier.

PHYSICAL_RESOURCE (binary)	Physical Resource
0000	FCH
0001	DCCH
0010	SCH0
0011	SCH1
0100	PDCH
0101 – 1111	Reserved

FORWARD_FLAG

- Forward mapping indicator.

The base station shall set this field to '1' if the logical to physical channel mapping specified in this record applies to forward logical channels; otherwise, the base station shall set this field to '0'.

REVERSE_FLAG

- Reverse mapping indicator.

The base station shall set this field to '1' if the logical to physical channel mapping specified in this record applies to reverse logical channels; otherwise, the base station shall set this field to '0'.

PRIORITY

- Multiplexing priority.

The base station shall set this field to '0000'.

NUM_REC

- Number of service-specific records.

1 If the NUM_BITS_TABLES_INCL field is included and is equal
 2 to '1', the base station shall include this field and set this field
 3 to one less than the number of instances of the Flexible Rate
 4 Table included in this message; otherwise, the base station
 5 shall omit this field.

6 If NUM_TABLES_INCL is included and is equal to '1', the base station shall include
 7 NUM_BITS_TABLES_COUNT+1 instances of the Flexible Rate Table

8 NUM_BITS_TABLE_ID - Flexible Rate Table ID.

9 The base station shall set this field to the ID of the Flexible
 10 Rate Table that follows. The base station shall not set this
 11 field to '0000'.

12 NUM_RECS - Number of records in the Flexible Rate Table.

13 The base station shall set this field to one less than the
 14 number of three-field records that follows

15 The base station shall include NUM_RECS+1 instances of the following three-field record:

16 NUM_BITS_IDX - Index to the number of bits array.

17 The base station shall set this field to the index to the array
 18 that identifies the number of bits per frame.

19 NUM_BITS - Number of bits array.

20 The base station shall set this field to the number of
 21 information bits per frame corresponding to the index
 22 specified by NUM_BITS_IDX. The base station shall set the
 23 number of information bits per frame in accordance with the
 24 number of information bits per frame specified by the service
 25 option numbers included in the service configuration record.

26 CRC_LEN_IDX - Array of Number of CRC bits.

27 The base station shall set this field to specify the number of
 28 CRC bits per frame corresponding to the index specified by
 29 NUM_BITS_IDX according to Table 3.7.5.20-5. The base
 30 station shall not specify more than one value of the CRC
 31 length for the same number of bits per frame for a specific
 32 channel (i.e., for a given channel, the number of information
 33 bits per frame uniquely specifies the length of the CRC field).

1

Table 3.7.5.20-5. CRC_LEN_IDX

CRC_LEN_IDX (binary)	Number of CRC bits per frame
000	0
001	6
010	8
011	10
100	12
101	16
110-111	Reserved

2

3

USE_VAR_RATE - Use variable rate on supplemental channels indicator.

4

5

6

7

8

The base station shall set this field to '1' to indicate that at least one of the forward or reverse supplemental channels is to operate in the variable rate mode (i.e., the rate of the supplemental channel can be picked from a pre-determined set of rates autonomously).

9

10

The base station shall set this bit to '0' to indicate that variable rate on supplemental channels are not allowed.

11

VAR_TABLES_INCL - Variable Rate Tables included indicator.

12

13

14

If the USE_VAR_RATE field is equal to '0', the base station shall omit this field; otherwise, the base station shall include this field and set this field as follows:

15

16

17

If the Variable Rate Tables are included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

18

19

VAR_RATE_TABLES_COUNT - Number of instances of the Variable Rate Mask Table included in this message.

20

21

22

23

24

If VAR_TABLES_INCL is included and is equal to '1', the base station shall include this field and set this field to one less than the number of instances of the Variable Rate Mask table included in this message as follows; otherwise, the base station shall omit this field:

25

26

If VAR_TABLES_INCL is included and is equal to '1', the base station shall include VAR_RATE_TABLES_COUNT + 1 instances of the Variable Rate Mask table

27

28

29

30

VAR_RATE_TABLE_ID - Variable Rate Mask table ID.

The base station shall set this field to the ID of the Variable Rate Mask table that follows. The base station shall not set this field to '000'.

31

NUM_RECS - Number of records in the Variable Rate Mask table.

- 1 If the USE_OLD_FLEX_MAPPING field is included and is equal
 2 to '0', the base station shall include this field and set this field
 3 as follows; otherwise, the base station shall omit this field:
- 4 The base station shall set this field to the ID of the Flexible
 5 Rate Table corresponding to Forward Supplemental Channel
 6 1. The base station shall set this field to '0000' to indicate
 7 that the Flexible Rate feature is not used for Forward
 8 Supplemental 1 and the default table specified in
 9 3.7.3.3.2.37-4 shall be used.
- 10 RSCH1_NBIT_TABLE_ID - Reverse Supplemental Channel 1 Flexible Rate Table ID.
- 11 If the USE_OLD_FLEX_MAPPING field is included and is equal
 12 to '0', the base station shall include this field and set this field
 13 as follows; otherwise, the base station shall omit this field:
- 14 The base station shall set this field to the ID of the Flexible
 15 Rate Table corresponding to Reverse Supplemental Channel
 16 1. The base station shall set this field to '0000' to indicate
 17 that the Flexible Rate feature is not used for Reverse
 18 Supplemental 1 and the default table specified in
 19 3.7.3.3.2.37-2 shall be used.
- 20 FFCH_NBIT_TABLE_ID - Forward Fundamental Channel Flexible Rate Table ID.
- 21 If the USE_OLD_FLEX_MAPPING field is included and is equal
 22 to '0', the base station shall include this field and set this field
 23 as follows; otherwise, the base station shall omit this field:
- 24 The base station shall set this field to the ID of the Flexible
 25 Rate Table corresponding to the Forward Fundamental
 26 Channel. The base station shall set this field to '0000' to
 27 indicate that the Flexible Rate feature is not used for the
 28 Forward Fundamental Channel.
- 29 RFCH_NBIT_TABLE_ID - Reverse Fundamental Channel Flexible Rate Table ID.
- 30 If the USE_OLD_FLEX_MAPPING field is included and is equal
 31 to '0', the base station shall include this field and set this field
 32 as follows; otherwise, the base station shall omit this field:
- 33 The base station shall set this field to the ID of the Flexible
 34 Rate Table corresponding to the Reverse Fundamental
 35 Channel. The base station shall set this field to '0000' to
 36 indicate that the Flexible Rate feature is not used for the
 37 Reverse Fundamental Channel.
- 38 FDCCH_NBIT_TABLE_ID - Forward Dedicated Control Channel Flexible Rate Table ID.
- 39 If the USE_OLD_FLEX_MAPPING field is included and is equal
 40 to '0', the base station shall include this field and set this field
 41 as follows; otherwise, the base station shall omit this field:
- 42 The base station shall set this field to the ID of the Flexible
 43 Rate Table corresponding to the Forward Dedicated Control
 44 Channel. The base station shall set this field to '0000' to
 45 indicate that the Flexible Rate feature is not used for the
 46 Forward Dedicated Control Channel.

- 1 FDCCH_NBITS_IDX - Forward Dedicated Control Channel number of information
2 bits per frame index.
- 3 If the FDCCH_NBIT_TABLE_ID field is included and is not
4 equal to '0000', the base station shall include this field and
5 set this field to indicate the number of information bits per
6 Forward Dedicated Control Channel frame; otherwise, the
7 base station shall omit this field.
- 8 The number of information bits per frame is specified by the
9 Flexible Rate Table associated with Forward Dedicated
10 Control Channel and FDCCH_NBITS_IDX as the index to the
11 table (i.e.,
12 NUM_BITS_s[FDCCH_NBIT_TABLE_ID_r][FDCCH_NBITS_IDX].
- 13 RDCCH_NBIT_TABLE_ID - Reverse Dedicated Control Channel Flexible Rate Table ID.
- 14 If the USE_OLD_FLEX_MAPPING field is included and is equal
15 to '0', the base station shall include this field and set this field
16 as follows; otherwise, the base station shall omit this field:
- 17 The base station shall set this field to the ID of the Flexible
18 Rate Table corresponding to the Reverse Dedicated Control
19 Channel. The base station shall set this field to '0000' to
20 indicate that the Flexible Rate feature is not used for the
21 Reverse Dedicated Control Channel.
- 22 RDCCH_NBITS_IDX - Reverse Dedicated Control Channel number of information
23 bits per frame index.
- 24 If the RDCCH_NBIT_TABLE_ID field is included and is not
25 equal to '0000', the base station shall include this field and
26 set this field to indicate the number of information bits per
27 Reverse Dedicated Control Channel frame; otherwise, the
28 base station shall omit this field.
- 29 The number of information bits per frame is specified by the
30 Flexible Rate Table associated with Reverse Dedicated Control
31 Channel and RDCCH_NBITS_IDX as the index to the table
32 (i.e.,
33 NUM_BITS_s[RDCCH_NBIT_TABLE_ID_r][RDCCH_NBITS_IDX].
- 34 USE_OLD_VAR_MAPPING - Use the previously downloaded mapping between the
35 channels and Variable Rate Mask Tables.
- 36 If the USE_VAR_RATE field is equal to '0', the base station
37 shall omit this field; otherwise, the base station shall include
38 this field and set this field as follows:
- 39 The base station shall set this field to '1' to indicate that the
40 mobile station is to use the previously downloaded mapping
41 between the channels and Variable Rate Mask Tables. The
42 base station shall set this field to '0', if the following four
43 fields are included in this message.

- 1 FSCH0_VAR_TABLE_ID - Forward Supplemental Channel 0 Variable Rate Mask Table
2 ID.
- 3 If the USE_OLD_VAR_MAPPING field is included and is equal
4 to '0', the base station shall include this field and set this field
5 as follows; otherwise, the base station shall omit this field:
- 6 The base station shall set this field to the ID of the Variable
7 Rate Mask Table corresponding to Forward Supplemental
8 Channel 0. The base station shall set this field to '000' to
9 indicate that no variable rate operation is performed on the F-
10 SCH0.
- 11 RSCH0_VAR_TABLE_ID - Reverse Supplemental Channel 0 Variable Rate Mask Table
12 ID.
- 13 If the USE_OLD_VAR_MAPPING field is included and is equal
14 to '0', the base station shall include this field and set this field
15 as follows; otherwise, the base station shall omit this field:
- 16 The base station shall set this field to the ID of the Variable
17 Rate Mask Table corresponding to Reverse Supplemental
18 Channel 0. The base station shall set this field to '000' to
19 indicate that the mobile station is not to autonomously
20 change the rate of the R-SCH0.
- 21 FSCH1_VAR_TABLE_ID - Forward Supplemental Channel 1 Variable Rate Mask Table
22 ID.
- 23 If the USE_OLD_VAR_MAPPING field is included and is equal
24 to '0', the base station shall include this field and set this field
25 as follows; otherwise, the base station shall omit this field:
- 26 The base station shall set this field to the ID of the Variable
27 Rate Mask Table corresponding to Forward Supplemental
28 Channel 1. The base station shall set this field to '000' to
29 indicate that no variable rate operation is performed on the F-
30 SCH1.
- 31 RSCH1_VAR_TABLE_ID - Reverse Supplemental Channel 1 Variable Rate Mask Table
32 ID.
- 33 If the USE_OLD_VAR_MAPPING field is included and is equal
34 to '0', the base station shall include this field and set this field
35 as follows; otherwise, the base station shall omit this field:
- 36 The base station shall set this field to the ID of the Variable
37 Rate Mask Table corresponding to Reverse Supplemental
38 Channel 1. The base station shall set this field to '000' to
39 indicate that the mobile station is not to autonomously
40 change the rate of the R-SCH1.
- 41 R_INC_RATE_ALLOWED - Reverse increase rate within Variable Rate Set Allowed
42 indicator.
- 43 If the USE_VAR_RATE field is included and is equal to '1', the
44 base station shall include this field and set this field as
45 follows; otherwise, the base station shall omit this field:

1 The base station shall set this field to '1' to indicate that the
 2 mobile station is allowed to switch between any of the rates
 3 (i.e., number of bits per frame) in the Variable Rate Set for the
 4 Reverse Supplemental channels. The base station shall set
 5 this field to '0' to indicate that only a downward transition in
 6 rate within the rates (i.e., number of bits per frame) in the
 7 Variable Rate Set for the Reverse Supplemental channels is
 8 allowed.

9 F_INC_RATE_ALLOWED - Forward increase rate within Variable Rate Set Allowed
 10 indicator.

11 If the USE_VAR_RATE field is included and is equal to '1', the
 12 base station shall include this field and set this field as
 13 follows; otherwise, the base station shall omit this field:

14 The base station shall set this field to '1' to indicate that the
 15 base station is allowed to switch between any of the rates (i.e.,
 16 number of bits per frame) in the Variable Rate Set for the
 17 Forward Supplemental channels. The base station shall set
 18 this field to '0' to indicate that only a downward transition in
 19 rate within the rates (i.e., number of bits per frame) in the
 20 Variable Rate Set for the Forward Supplemental channels is
 21 possible.

22 LTU_INFO_INCL - LTU Tables included indicator.

23 The base station shall set this field to '1' if the base station
 24 includes LTU related information in this message; otherwise,
 25 the base station shall set this field to '0'.

26 The base station shall set this field to '0' if the mobile station
 27 indicates that it does not support downloadable LTU Table in
 28 the capability information (i.e., the
 29 F_SCH_LTU_TAB_SUPPORTED and
 30 R_SCH_LTU_TAB_SUPPORTED fields in the capability
 31 information are equal to '0').

32 LTU_TABLES_INCL - LTU Tables included indicator.

33 If the LTU_INFO_INCL field is equal to '0', the base station
 34 shall omit this field; otherwise, the base stations shall include
 35 this field and set this field as follows:

36 If the LTU Tables are included in this message, the base
 37 station shall set this field to '1'; otherwise, the base station
 38 shall set this field to '0'.

39 If LTU_TABLES_INCL is included and is equal to '1', the base station shall include the
 40 following fields related to the LTU Table information:

41 NUM_LTU_TABLES - Number of LTU tables included.

42 The base station shall set this field to the number of LTU
 43 Tables minus one included in this message.

44 If LTU_TABLES_INCL is included and is equal to '1', then the base station shall include
 45 NUM_LTU_TABLES + 1 occurrences of the following fields:

- 1 LTU_TABLE_ID - LTU Table ID.
- 2 The base station shall set this field to the ID of the LTU Table
- 3 that follows. The base station shall not set this field to '000'.
- 4 NUM_ROWS - Number of configurations associated with the LTU Table
- 5 identified by LTU_TABLE_ID.
- 6 The base station shall set this field to one less than the
- 7 number of rows of the LTU Table identified by LTU_TABLE_ID.

8 If LTU_TABLES_INCL is included and is equal to '1', then the base station shall include the
 9 NUM_ROWS + 1 occurrences of the following fields:

- 10 NBITS_IDX - Number of bits per frame index.
- 11 The base station shall set this field to the 4-bit index that
- 12 specified the number of information bits per supplemental
- 13 channel frame.
- 14 NUM_LTUS - Number of LTUs per physical layer supplemental channel
- 15 frame.
- 16 The base station shall specify the number of LTUs per
- 17 physical layer supplemental channel frame corresponding to
- 18 the number of information bits per supplemental channel
- 19 frame specified by NBITS_IDX according to Table 3.7.5.20-6.
- 20 The base station shall set this field to '0000' to indicate that
- 21 no LTUs are supported for the number of information bits per
- 22 frame specified by NBITS_IDX.

23 **Table 3.7.5.20-6. NUM_LTUS**

NUM_LTUS (binary)	Number of LTUS per supplemental channel frame
0000	0
0001	2
0010	3
0011	4
0100	5
0101	6
0110	7
0111	8
1000-1111	Reserved

- 24
- 25
- 26 USE_OLD_LTU_MAPPING - Use the previously downloaded mapping between the
- 27 channels and LTU Tables.

1 If the LTU_INFO_INCL field is equal to '0', the base station
2 shall omit this field; otherwise, the base station shall include
3 this field and set this field as follows:

4 The base station shall set this field to '1' to indicate that the
5 mobile station is to use the previously downloaded mapping
6 between the channels and LTU Tables. The base station shall
7 set this field to '0' if the following four fields are included in
8 this message.

9 **FSCH0_LTU_TAB_ID** - Forward Supplemental Channel LTU Table ID.

10 If **USE_OLD_LTU_MAPPING** is included and is equal to '0',
11 the base station shall include this field and set this field as
12 follows; otherwise, the base station shall omit this field:

13 The base station shall set this field to the LTU Table ID to be
14 used for the Forward Supplemental Channel 0. The base
15 station shall set this field to '000' to indicate that the default
16 number of LTUs are to be used (see [3]). The base station
17 shall set this field to '000' if MuxPDU Type 5 is not used on
18 this channel (see [3]).

19 **RSCH0_LTU_TAB_ID** - Reverse Supplemental Channel LTU Table ID.

20 If **USE_OLD_LTU_MAPPING** is included and is equal to '0',
21 the base station shall include this field and set this field as
22 follows; otherwise, the base station shall omit this field:

23 The base station shall set this field to the LTU Table ID to be
24 used for the Reverse Supplemental Channel 0. The base
25 station shall set this field to '000' to indicate that the default
26 number of LTUs are to be used (see [3]). The base station
27 shall set this field to '000' if MuxPDU Type 5 is not used on
28 this channel (see [3]).

29 **FSCH1_LTU_TAB_ID** - Forward Supplemental Channel LTU Table ID.

30 If **USE_OLD_LTU_MAPPING** is included and is equal to '0',
31 the base station shall include this field and set this field as
32 follows; otherwise, the base station shall omit this field:

33 The base station shall set this field to the LTU Table ID to be
34 used for the Forward Supplemental Channel 1. The base
35 station shall set this field to '000' to indicate that the default
36 number of LTUs are to be used (see [3]). The base station
37 shall set this field to '000' if MuxPDU Type 5 is not used on
38 this channel (see [3]).

39 **RSCH1_LTU_TAB_ID** - Reverse Supplemental Channel LTU Table ID.

40 If **USE_OLD_LTU_MAPPING** is included and is equal to '0',
41 the base station shall include this field and set this field as
42 follows; otherwise, the base station shall omit this field:

1 The base station shall set this field to the LTU Table ID to be
 2 used for the Reverse Supplemental Channel 1. The base
 3 station shall set this field to '000' to indicate that the default
 4 number of LTUs are to be used (see [3]). The base station
 5 shall set this field to '000' if MuxPDU Type 5 is not used on
 6 this channel (see [3]).

7 PARTITION_TABLES_INFO_INCL - Partition Tables information included indicator.

8 If USE_FLEX_NUM_BITS is equal to '0', the base station shall
 9 omit this field; otherwise, the base station shall include this
 10 field and set this field as follows:

11 If Partition Tables information is included in this message, the
 12 base station shall set this field to '1'; otherwise, the base
 13 station shall set this field to '0'.

14 PARTITION_TABLES_INCL - Partition Tables included indicator.

15 If PARTITION_TABLES_INFO_INCL is equal to '0', the base
 16 station shall omit this field; otherwise, the base station shall
 17 include this field and set this field as follows:

18 If the Partition Tables are included in this message, the base
 19 station shall set this field to '1'; otherwise, the base station
 20 shall set this field to '0'.

21

22 If PARTITION_TABLES_INCL is included and is equal to '1', then the base station shall
 23 include the following fields

24 NUM_PARTITION_TABLES - Number of partition tables.

25 The base station shall set this field to one less than the
 26 number of Partition Tables corresponding to an FCH or DCCH
 27 included in this message.

28 If PARTITION_TABLES_INCL is included and is equal to '1', then the base station shall
 29 include the NUM_PARTITION_TABLES + 1 occurrences of the following fields:

30 PARTITION_TABLE_ID - Partition Table ID.

31 The base station shall set this field to the ID of the Partition
 32 Table that follows. The base station shall not set this field to
 33 '000'.

34 NUM_ROWS - Number of configurations associated with the Partition Table
 35 identified by PARTITION_TABLE_ID.

36 The base station shall set this field to one less than the
 37 number of rows of the Partition Table identified by
 38 PARTITION_TABLE_ID.

39 If PARTITION_TABLES_INCL is included and is equal to '1', then the base station shall
 40 include NUM_ROWS + 1 occurrences of the following fields:

41 CATEGORY - Category number.

- 1 The base station shall set this field to the category number of
2 the entry of the Partition Table identified by number of bits
3 per each service as specified below. The base station shall
4 not set this field to '00001' or '00010'. The base station shall
5 place rows of the Partition Table corresponding to the same
6 number of total information bits per frame consecutively. See
7 [3].
- 8 MUX_HEADER_LEN - Multiplex Sublayer Header Length.
9 The base station shall set this field to the length of the
10 multiplex sublayer header corresponding to the entry of the
11 Partition Table identified by number of bits per each service
12 as specified below.
- 13 MUX_HEADER - Multiplex Sublayer Header.
14 The base station shall set this field to the multiplex sublayer
15 header corresponding to the entry of the Partition Table
16 identified by number of bits per each service as specified
17 below.¹²⁷
- 18 NUM_PARTITIONS - Number of partitions.
19 The base station shall set this field to one less than the
20 number of partitions corresponding to each service (including
21 signaling) included in the entry of the Partition Table
22 identified by CATEGORY.
- 23 If PARTITION_TABLES_INCL is included and is equal to '1', then the base station shall
24 include NUM_PARTITIONS + 1 occurrences of the following fields:
- 25 SR_ID - Service Reference ID.
26 The base station shall set this field to the sr_id of the service
27 (sr_id = '000' for signaling) present in this category.
- 28 SRV_NUM_BITS - Number of bits allocated to the service.
29 The base station shall set this field to the number of bits
30 allocated to the service (including signaling) identified by
31 SR_ID.
- 32 USE_OLD_PART_MAPPING - Use the previously downloaded mapping between the
33 channels and Partition Tables.
34 If PARTITION_TABLES_INFO_INCL is equal to '1', the base
35 station shall include this field and set this field as follows;
36 otherwise, the base station shall omit this field:

¹²⁷ The values of the MUX_HEADER corresponding to a specific number of bits per frame, shall be encoded using prefix-free codes. Prefix-free code is defined to be a code constructed so that any partial code word, beginning at the start of a code word but terminating prior to the end of that code word, is not a valid code word.

- 1 The base station shall set this field to '1' to indicate that the
 2 mobile station is to use the previously downloaded mapping
 3 between the channels and Partition Tables. The base station
 4 shall set this field to '0', if the following four fields are
 5 included in this message.
- 6 **FFCH_PART_TAB_ID** - Forward Fundamental Channel Partition Table ID.
 7 If **USE_OLD_PART_MAPPING** is included and is equal to '0',
 8 the base station shall include this field and set this field as
 9 follows; otherwise, the base station shall omit this field:
- 10 The base station shall set this field to the Partition Table ID to
 11 be used for the Forward Fundamental Channel. The base
 12 station shall set this field to '000' to indicate that the default
 13 number of bits per service is to be used (see MuxPDU Type 1
 14 and 2 Categories and Formats for the FCH and DCCH in [3]).
 15 The base station shall set this field to a value other than '000'
 16 if the **FFCH_NBIT_TABLE_ID** field is included in this message
 17 and is not set to '0000'.
- 18 **RFCH_PART_TAB_ID** - Reverse Fundamental Channel Partition Table ID.
 19 If **USE_OLD_PART_MAPPING** is included and is equal to '0',
 20 the base station shall include this field and set this field as
 21 follows; otherwise, the base station shall omit this field:
- 22 The base station shall set this field to the Partition Table ID to
 23 be used for the Reverse Fundamental Channel. The base
 24 station shall set this field to '000' to indicate that the default
 25 number of bits per service is to be used (see MuxPDU Type 1
 26 and 2 Categories and Formats for the FCH and DCCH in [3]).
 27 The base station shall set this field to a value other than '000'
 28 if the **RFCH_NBIT_TABLE_ID** is included in this message and
 29 field is not set to '0000'.
- 30 **FDCCH_PART_TAB_ID** - Forward Dedicated Control Channel Partition Table ID.
 31 If **USE_OLD_PART_MAPPING** is included and is equal to '0',
 32 the base station shall include this field and set this field as
 33 follows; otherwise, the base station shall omit this field:
- 34 The base station shall set this field to the Partition Table ID to
 35 be used for the Forward Dedicated Control Channel. The
 36 base station shall set this field to '000' to indicate that the
 37 default number of bits per service is to be used (see MuxPDU
 38 Type 1 and 2 Categories and Formats for the FCH and DCCH
 39 in [3]). The base station shall set this field to a value other
 40 than '000' if the **FDCCH_NBIT_TABLE_ID** field is included in
 41 this message and is not set to '0000'.
- 42 **RDCCH_PART_TAB_ID** - Reverse Dedicated Control Channel Partition Table ID.

- 1 If USE_OLD_PART_MAPPING is included and is equal to '0',
 2 the base station shall include this field and set this field as
 3 follows; otherwise, the base station shall omit this field:
- 4 The base station shall set this field to the Partition Table ID to
 5 be used for the Reverse Dedicated Control Channel. The base
 6 station shall set this field to '000' to indicate that the default
 7 number of bits per service is to be used (see MuxPDU Type 1
 8 and 2 Categories and Formats for the FCH and DCCH in [3]).
 9 The base station shall set this field to a value other than '000'
 10 if the RDCCH_NBIT_TABLE_ID field is included in this
 11 message and is not set to '0000'.
- 12 USE_ERAM - Use the Enhanced Rate Adaptation Mode indicator.
 13 The base station shall include this field only if
 14 USE_FLEX_NUM_BITS or USE_VAR_RATE is equal to '1'. If
 15 included, the base station shall set this field to '1' if the base
 16 station is to use lower rate turbo codes for RC4 and RC5
 17 Forward Supplemental Channel and the mobile station is to
 18 use lower rate turbo codes for RC4 Reverse Supplemental
 19 Channel to match the desired channel interleaver block size
 20 instead of pure code symbol repetition; otherwise, the base
 21 station shall set this field to '0'.
- 22 SWITCHING_PARMES_INCL - R-CQICH switching parameters included indicator.
 23 If the GATING_RATE_INCL field is set to '0', the base station
 24 shall omit this field; otherwise, the base station shall include
 25 this field and set it as follows:
 26 The base station shall set this field to '1' if the parameters for
 27 R-CQICH soft and softer switching are included in this
 28 message; otherwise, the base station shall set this field to '0'.
- 29 NUM_SOFT_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH soft
 30 switching while in Control Hold.
 31 If SWITCHING_PARMES_INCL is not included or included and
 32 set to '0', then the base station shall omit this field; otherwise,
 33 the base station shall include this field and set it as follows:
 34 The base station shall set this field to the duration of the cell
 35 switching period, in units of 20 ms, minus one, during which
 36 the mobile station, while in Control Hold, is to transmit the
 37 cell switch sequence on the R-CQICH when it switches
 38 between two pilots which are in different groups.
- 39 NUM_SOFTER_SWITCHING_FRAMES_CHM - Number of frames for R-CQICH softer
 40 switching while in Control Hold.
 41 If SWITCHING_PARMES_INCL is not included or included and
 42 set to '0', then the base station shall omit this field; otherwise,
 43 the base station shall include this field and set it as follows:

- 1 The base station shall set this field to the duration of the cell
2 switching period, in units of 20 ms, minus one, during which
3 the mobile station, while in Control Hold, is to transmit the
4 cell switch sequence on the R-CQICH when it switches
5 between two pilots which are in the same group.
- 6 RPC_INCL - Reverse Link Power Control parameter included indicator.
7 If the reverse power control related information is included in
8 this message, the base station shall set this field to '1';
9 otherwise, the base station shall set this field to '0'.
- 10 RPC_NUM_REC - Number of records for Reverse Link Power Control.
11 If RPC_INCL is set to '0', the base station shall omit this field;
12 otherwise, the base station shall set this field to one less than
13 the number of records included in this message.
- 14 If RPC_NUM_REC is included in this message, the base station shall include
15 RPC_NUM_REC occurrences of the following record:
- 16 RPC_ADJ_REC_TYPE - Reverse Link Power Control adjustment record type.
17 The base station shall set this field to the value shown in
18 Table 3.7.3.3.2.25-3 corresponding to the type of adjustment
19 that is to be used.
- 20 RPC_ADJ_REC_LEN - Reverse Link Power Control adjustment record length.
21 If RPC_ADJ_REC_TYPE is not equal to '0100', the base
22 station shall set this field to the number of octets in the type-
23 specific fields of this adjustment record as given in Table
24 3.7.3.3.2.25-3.
25 If RPC_ADJ_REC_TYPE is equal to '0100', the base station
26 shall set this field to '0000'.
- 27 EXT_RPC_ADJ_REC_LEN- Reverse Link Power Control adjustment record length.
28 If RPC_ADJ_REC_TYPE is not equal to '0100', the base
29 station shall omit this field; otherwise, the base station shall
30 include this field and set it as follows.
31 If RPC_ADJ_REC_TYPE is equal to '0100', the base station
32 shall set this field to the number of octets in the type-specific
33 fields of this adjustment record as given in Table 3.7.3.3.2.25-
34 3.
- 35 Type-specific fields - Reverse Link Power Control adjustment record type-specific
36 fields.
37 The base station shall include type-specific fields based on
38 the RPC_ADJ_REC_TYPE of this adjustment record, as
39 specified as below.
- 40 If RPC_ADJ_REC_TYPE is equal to '0000', the base station shall set type-specific fields as
41 specified in Table 3.7.5.20-4.

1

Table 3.7.5.20-4. Type Specific Fields for RECORD_TYPE = '0000'

Fields	Length (Bits)
FCH_INCL	1
FCH_CHAN_ADJ_GAIN	0 or 8
DCCH_INCL	1
DCCH_CHAN_ADJ_GAIN	0 or 8
SCH0_INCL	1
SCH0_CHAN_ADJ_GAIN	0 or 8
SCH1_INCL	1
SCH1_CHAN_ADJ_GAIN	0 or 8
REV_ACKCH_INCL	1
REV_ACKCH_CHAN_ADJ_GAIN	0 or 8
REV_CQICH_INCL	1
REV_CQICH_CHAN_ADJ_GAIN	0 or 8
RESERVED	0-7 (if needed)

2

3

4

FCH_INCL - FCH channel adjustment gain included indicator.

5

If FCH_CHAN_ADJ_GAIN is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

6

7

8

FCH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Fundamental Channel.

9

10

11

12

13

14

15

If FCH_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set each field to the value of the gain adjustment that the mobile station is to make for the Reverse Fundamental Channel. The base station shall set this field to the correction factor expressed as a two's complement value in units of 0.125 dB. The base station shall set the value in the range from -48 to 48 inclusive.

16

DCCH_INCL - DCCH channel adjustment gain included indicator.

17

18

19

If DCCH_CHAN_ADJ_GAIN is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

20

DCCH_CHAN_ADJ_GAIN - Channel adjustment gain for the Reverse Dedicated Control Channel.

21

- 1 If DCCH_INCL is set to '0', the base station shall omit this
 2 field; otherwise, the base station shall set each field to the
 3 value of the gain adjustment that the mobile station is to
 4 make for the Reverse Dedicated Control Channel. The base
 5 station shall set this field to the correction factor expressed as
 6 a two's complement value in units of 0.125 dB. The base
 7 station shall set the value in the range from -48 to 48
 8 inclusive.
- 9 SCH0_INCL - SCH0 channel adjustment gain included indicator.
- 10 If SCH0_CHAN_ADJ_GAIN is included in this message, the
 11 base station shall set this field to '1'; otherwise, the base
 12 station shall set this field to '0'.
- 13 SCH0_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Supplemental Channel
 14 0.
- 15 If SCH0_INCL is set to '0', the base station shall omit this
 16 field; otherwise, the base station shall set each field to the
 17 value of the gain adjustment that the mobile station is to
 18 make for the Reverse Supplemental Channel 0. The base
 19 station shall set this field to the correction factor expressed as
 20 a two's complement value in units of 0.125 dB. The base
 21 station shall set the value in the range from -48 to 48
 22 inclusive.
- 23 SCH1_INCL - SCH1 channel adjustment gain included indicator.
- 24 If SCH1_CHAN_ADJ_GAIN is included in this message, the
 25 base station shall set this field to '1'; otherwise, the base
 26 station shall set this field to '0'.
- 27 SCH1_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Supplemental Channel
 28 1.
- 29 If SCH1_INCL is set to '0', the base station shall omit this
 30 field; otherwise, the base station shall set each field to the
 31 value of the gain adjustment that the mobile station is to
 32 make for the Supplemental Channel 1. The base station shall
 33 set this field to the correction factor expressed as a two's
 34 complement value in units of 0.125 dB. The base station shall
 35 set the value in the range from -48 to 48 inclusive.
- 36 REV_ACKCH_INCL - Reverse Acknowledgment Channel channel adjustment gain
 37 included indicator.
- 38 If REV_ACKCH_CHAN_ADJ_GAIN is included in this message,
 39 the base station shall set this field to '1'; otherwise, the base
 40 station shall set this field to '0'.
- 41 REV_ACKCH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Acknowledgment
 42 Channel.

1 If REV_ACKCH_INCL is set to '0', the base station shall omit
 2 this field; otherwise, the base station shall set each field to
 3 the value of the gain adjustment that the mobile station is to
 4 make for the Reverse Acknowledgment Channel. The base
 5 station shall set this field to the correction factor expressed as
 6 a two's complement value in units of 0.125 dB. The base
 7 station shall set the value in the range from -24 to 24
 8 inclusive.

9 REV_CQICH_INCL - Reverse Channel Quality Indicator Channel channel
 10 adjustment gain included indicator.

11 If REV_CQICH_CHAN_ADJ_GAIN is included in this message,
 12 the base station shall set this field to '1'; otherwise, the base
 13 station shall set this field to '0'.

14 REV_CQICH_CHAN_ADJ_GAIN - Channel adjustment gain for Reverse Channel Quality
 15 Indicator Channel.

16 If REV_CQICH_INCL is set to '0', the base station shall omit
 17 this field; otherwise, the base station shall set each field to
 18 the value of the gain adjustment that the mobile station is to
 19 make for the Reverse Channel Quality Indicator Channel. The
 20 base station shall set this field to the correction factor
 21 expressed as a two's complement value in units of 0.125 dB.
 22 The base station shall set the value in the range from -16 to
 23 16 inclusive.

24 RESERVED - Reserved bits.

25 The base station shall add reserved bits as needed in order to
 26 make the length of the entire record equal to an integer
 27 number of octets. The base station shall set these bits to '0'.

28 If RPC_ADJ_REC_TYPE is equal to '0001', the base station shall set type-specific fields as
 29 specified in Table 3.7.5.20-5.

1

Table 3.7.5.20-5. Type Specific Fields for RECORD_TYPE = '0001'

Fields	Length (Bits)
RL_ATT_ADJ_GAIN_TYPE	1
RC3_RC5_20MS_INCL	1
RL_ATT_ADJ_GAIN_1500	0 or 8
RL_ATT_ADJ_GAIN_2700	0 or 8
RL_ATT_ADJ_GAIN_4800	0 or 8
RL_ATT_ADJ_GAIN_9600	0 or 8
RC4_RC6_20MS_INCL	1
RL_ATT_ADJ_GAIN_1800	0 or 8
RL_ATT_ADJ_GAIN_3600	0 or 8
RL_ATT_ADJ_GAIN_7200	0 or 8
RL_ATT_ADJ_GAIN_14400	0 or 8
5MS_INCL	1
RL_ATT_ADJ_GAIN_9600_5MS	0 or 8
RC3_RC5_40MS_INCL	1
RL_ATT_ADJ_GAIN_1350_40MS	0 or 8
RL_ATT_ADJ_GAIN_2400_40MS	0 or 8
RL_ATT_ADJ_GAIN_4800_40MS	0 or 8
RL_ATT_ADJ_GAIN_9600_40MS	0 or 8
RC4_RC6_40MS_INCL	1
RL_ATT_ADJ_GAIN_1800_40MS	0 or 8
RL_ATT_ADJ_GAIN_3600_40MS	0 or 8
RL_ATT_ADJ_GAIN_7200_40MS	0 or 8
RL_ATT_ADJ_GAIN_14400_40MS	0 or 8
RC3_RC5_80MS_INCL	1
RL_ATT_ADJ_GAIN_1200_80MS	0 or 8
RL_ATT_ADJ_GAIN_2400_80MS	0 or 8
RL_ATT_ADJ_GAIN_4800_80MS	0 or 8

1

RESERVED	0-7 (if needed)
----------	-----------------

2

3 RL_ATT_ADJ_GAIN_TYPE- Reverse Link Attribute Adjustment Gain value type indicator.

4 If the following fields are set to the nominal attribute gain
 5 adjustment values that the mobile station is to use for the
 6 transmission attributes (relative to Nominal_Attribute_Gain
 7 specified in [2]), the base station shall set this field to '0'. If
 8 the following fields are set to the pilot reference level
 9 adjustment values that the mobile station is to use for the
 10 transmission attributes (relative to Pilot_Reference_Level
 11 specified in [2]), the base station shall set this field to '1'.

12 RC3_RC5_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 13 Configuration 3 or 5 of 20 ms frame included indicator.

14 If Reverse Link Attribute adjustment Gain for Radio
 15 Configuration 3 or 5 of 20 ms frame is included in this
 16 message, the base station shall set this field to '1'; otherwise,
 17 the base station shall set this field to '0'.

18 RL_ATT_ADJ_GAIN_1500 - Reverse Link Attribute Adjustment Gain for the transmission
 19 rate 1500 bits/s.

20 If RC3_RC5_20MS_INCL is set to '0', the base station shall
 21 omit this field.

22 If RC3_RC5_20MS_INCL is set to '1' and
 23 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 24 set this field to the value of the nominal attribute gain
 25 adjustment that the mobile station is to make for the
 26 transmission attributes with transmission rate 1500 bits/s,
 27 convolutional code and 20ms frame. The base station shall
 28 set the value in the range from -48 to 48 inclusive.

29 If RC3_RC5_20MS_INCL is set to '1' and
 30 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 31 set this field to the value of the pilot reference level
 32 adjustment that the mobile station is to make for the
 33 transmission attributes with transmission rate 1500 bits/s,
 34 convolutional code and 20ms frame.

35 The base station shall set this field to the correction factor
 36 expressed as a two's complement value in units of 0.125 dB.

1 RL_ATT_ADJ_GAIN_2700 - Reverse Link Attribute Adjustment Gain for the transmission
2 rate 2700 bits/s.
3 If RC3_RC5_20MS_INCL is set to '0', the base station shall
4 omit this field.
5 If RC3_RC5_20MS_INCL is set to '1' and
6 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
7 set this field to the value of the nominal attribute gain
8 adjustment that the mobile station is to make for the
9 transmission attributes with transmission rate 2700 bits/s,
10 convolutional code and 20ms frame. The base station shall
11 set the value in the range from -48 to 48 inclusive.
12 If RC3_RC5_20MS_INCL is set to '1' and
13 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
14 set this field to the value of the pilot reference level
15 adjustment that the mobile station is to make for the
16 transmission attributes with transmission rate 2700 bits/s,
17 convolutional code and 20ms frame.
18 The base station shall set this field to the correction factor
19 expressed as a two's complement value in units of 0.125 dB.

20 RL_ATT_ADJ_GAIN_4800 - Reverse Link Attribute Gain Adjustment for the transmission
21 rate 4800 bits/s.
22 If RC3_RC5_20MS_INCL is set to '0', the base station shall
23 omit this field.
24 If RC3_RC5_20MS_INCL is set to '1' and
25 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
26 set this field to the value of the nominal attribute gain
27 adjustment that the mobile station is to make for the
28 transmission attributes with transmission rate 4800 bits/s,
29 convolutional code and 20ms frame. The base station shall
30 set the value in the range from -48 to 48 inclusive.
31 If RC3_RC5_20MS_INCL is set to '1' and
32 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
33 set this field to the value of the pilot reference level
34 adjustment that the mobile station is to make for the
35 transmission attributes with transmission rate 4800 bits/s,
36 convolutional code and 20ms frame.
37 The base station shall set this field to the correction factor
38 expressed as a two's complement value in units of 0.125 dB.

39 RL_ATT_ADJ_GAIN_9600 - Reverse Link Attribute Gain Adjustment for the transmission
40 rate 9600 bits/s.
41 If RC3_RC5_20MS_INCL is set to '0', the base station shall
42 omit this field.

1 If RC3_RC5_20MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 9600 bits/s,
 6 convolutional code and 20ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC3_RC5_20MS_INCL is set to '1' and
 9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 10 set this field to the value of the pilot reference level
 11 adjustment that the mobile station is to make for the
 12 transmission attributes with transmission rate 9600 bits/s,
 13 convolutional code and 20ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RC4_RC6_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 17 Configuration 4 or 6 of 20ms frame included indicator.

18 If Reverse Link Attribute Adjustment Gain for Radio
 19 Configuration 4 or 6 of 20ms frame is included in this
 20 message, the base station shall set this field to '1'; otherwise,
 21 the base station shall set this field to '0'.

22 RL_ATT_ADJ_GAIN_1800 - Reverse Link Attribute Gain Adjustment for the transmission
 23 rate 1800 bits/s.

24 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 25 omit this field.

26 If RC4_RC6_20MS_INCL is set to '1' and
 27 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 28 set this field to the value of the nominal attribute gain
 29 adjustment that the mobile station is to make for the
 30 transmission attributes with transmission rate 1800 bits/s,
 31 convolutional code and 20ms frame. The base station shall
 32 set the value in the range from -48 to 48 inclusive.

33 If RC4_RC6_20MS_INCL is set to '1' and
 34 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 35 set this field to the value of the pilot reference level
 36 adjustment that the mobile station is to make for the
 37 transmission attributes with transmission rate 1800 bits/s,
 38 convolutional code and 20ms frame.

39 The base station shall set this field to the correction factor
 40 expressed as a two's complement value in units of 0.125 dB.

41 RL_ATT_ADJ_GAIN_3600 - Reverse Link Attribute Adjustment Gain for the transmission
 42 rate 3600 bits/s.

43 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 44 omit this field.

1 If RC4_RC6_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3 set this field to the value of the nominal attribute gain
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 3600 bits/s,
6 convolutional code and 20ms frame. The base station shall
7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_20MS_INCL is set to '1' and
9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10 set this field to the value of the pilot reference level
11 adjustment that the mobile station is to make for the
12 transmission attributes with transmission rate 3600 bits/s,
13 convolutional code and 20ms frame.

14 The base station shall set this field to the correction factor
15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_7200 - Reverse Link Attribute Adjustment Gain for the transmission
17 rate 7200 bits/s.

18 If RC4_RC6_20MS_INCL is set to '0', the base station shall
19 omit this field.

20 If RC4_RC6_20MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
22 set this field to the value of the nominal attribute gain
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 7200 bits/s,
25 convolutional code and 20ms frame. The base station shall
26 set the value in the range from -48 to 48 inclusive.

27 If RC4_RC6_20MS_INCL is set to '1' and
28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29 this field to the value of the pilot reference level adjustment
30 that the mobile station is to make for the transmission
31 attributes with transmission rate 7200 bits/s, convolutional
32 code and 20ms frame.

33 The base station shall set this field to the correction factor
34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_14400- Reverse Link Attribute Adjustment Gain for the transmission
36 rate 14400 bits/s.

37 If RC4_RC6_20MS_INCL is set to '0', the base station shall
38 omit this field.

39 If RC4_RC6_20MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41 set this field to the value of the nominal gain adjustment that
42 the mobile station is to make for the transmission attributes
43 with transmission rate 14400 bits/s, convolutional code and
44 20ms frame. The base station shall set the value in the range
45 from -48 to 48 inclusive.

1 If RC4_RC6_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 14400 bits/s,
6 convolutional code and 20ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 5MS_INCL - 5ms frame Reverse Link Attribute Adjustment Gain included
10 indicator.

11 If Reverse Link Attribute Adjustment Gain for 5ms frame is
12 included in this message, the base station shall set this field
13 to '1'; otherwise, the base station shall set this field to '0'.

14 RL_ATT_ADJ_GAIN_9600_5MS - Reverse Link Attribute Adjustment Gain for the
15 transmission rate 9600 bits/s with 5ms frame.

16 If 5MS_INCL is set to '0', the base station shall omit this field.

17 If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
18 to '0', the base station shall set this field to the value of the
19 nominal attribute gain adjustment that the mobile station is
20 to make for the transmission attributes with transmission
21 rate 9600 bits/s, convolutional code and 5ms frame. The base
22 station shall set the value in the range from -48 to 48
23 inclusive.

24 If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
25 to '1', the base station shall set this field to the value of the
26 pilot reference level adjustment that the mobile station is to
27 make for the transmission attributes with transmission rate
28 9600 bits/s, convolutional code and 5ms frame.

29 The base station shall set this field to the correction factor
30 expressed as a two's complement value in units of 0.125 dB.

31 RC3_RC5_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
32 Configuration 3 or 5 of 40 ms frame included indicator.

33 If Reverse Link Attribute adjustment Gain for Radio
34 Configuration 3 or 5 of 40 ms frame is included in this
35 message, the base station shall set this field to '1'; otherwise,
36 the base station shall set this field to '0'.

37 RL_ATT_ADJ_GAIN_1350_40MS - Reverse Link Attribute Adjustment Gain for the
38 transmission rate 1350 bits/s.

39 If RC3_RC5_40MS_INCL is set to '0', the base station shall
40 omit this field.

41 If RC3_RC5_40MS_INCL is set to '1' and
42 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
43 set this field to the value of the nominal attribute gain
44 adjustment that the mobile station is to make for the
45 transmission attributes with transmission rate 1350 bits/s,
46 convolutional code and 40ms frame. The base station shall
47 set the value in the range from -48 to 48 inclusive.

1 If RC3_RC5_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 1350 bits/s,
6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_2400_40MS - Reverse Link Attribute Adjustment Gain for the
10 transmission rate 2400 bits/s.

11 If RC3_RC5_40MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_40MS_INCL is set to '1' and
14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15 set this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 2400 bits/s,
18 convolutional code and 40ms frame. The base station shall
19 set the value in the range from -48 to 48 inclusive.

20 If RC3_RC5_40MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22 set this field to the value of the pilot reference level
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 2400 bits/s,
25 convolutional code and 40ms frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_4800_40MS - Reverse Link Attribute Gain Adjustment for the
29 transmission rate 4800 bits/s.

30 If RC3_RC5_40MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_40MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 4800 bits/s,
37 convolutional code and 40ms frame. The base station shall
38 set the value in the range from -48 to 48 inclusive.

39 If RC3_RC5_40MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 4800 bits/s,
44 convolutional code and 40ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_9600_40MS - Reverse Link Attribute Gain Adjustment for the
48 transmission rate 9600 bits/s.

1 If RC3_RC5_40MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_40MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 9600 bits/s,
8 convolutional code and 40ms frame. The base station shall
9 set the value in the range from -48 to 48 inclusive.

10 If RC3_RC5_40MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 9600 bits/s,
15 convolutional code and 40ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4_RC6_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 4 or 6 of 40ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 4 or 6 of 40ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_1800_40MS - Reverse Link Attribute Gain Adjustment for the
25 transmission rate 1800 bits/s.

26 If RC4_RC6_40MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_40MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 1800 bits/s,
33 convolutional code and 40ms frame. The base station shall
34 set the value in the range from -48 to 48 inclusive.

35 If RC4_RC6_40MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 1800 bits/s,
40 convolutional code and 40ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_3600_40MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 3600 bits/s.

45 If RC4_RC6_40MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_40MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 3600 bits/s,
 6 convolutional code and 40ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_40MS_INCL is set to '1' and
 9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 10 set this field to the value of the pilot reference level
 11 adjustment that the mobile station is to make for the
 12 transmission attributes with transmission rate 3600 bits/s,
 13 convolutional code and 40ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_7200_40MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 7200 bits/s.

18 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_40MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 7200 bits/s,
 25 convolutional code and 40ms frame. The base station shall
 26 set the value in the range from -48 to 48 inclusive.

27 If RC4_RC6_40MS_INCL is set to '1' and
 28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 29 this field to the value of the pilot reference level adjustment
 30 that the mobile station is to make for the transmission
 31 attributes with transmission rate 7200 bits/s, convolutional
 32 code and 40ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_14400_40MS - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 14400 bits/s.

37 If RC4_RC6_40MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC4_RC6_40MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal gain adjustment that
 42 the mobile station is to make for the transmission attributes
 43 with transmission rate 14400 bits/s, convolutional code and
 44 40ms frame. The base station shall set the value in the range
 45 from -48 to 48 inclusive.

1 If RC4_RC6_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 14400 bits/s,
6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC3_RC5_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 3 or 5 of 80 ms frame included indicator.

11 If Reverse Link Attribute adjustment Gain for Radio
12 Configuration 3 or 5 of 80 ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_1200_80MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 1200 bits/s.

17 If RC3_RC5_80MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC3_RC5_80MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 1200 bits/s,
24 convolutional code and 80ms frame. The base station shall
25 set the value in the range from -48 to 48 inclusive.

26 If RC3_RC5_80MS_INCL is set to '1' and
27 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
28 set this field to the value of the pilot reference level
29 adjustment that the mobile station is to make for the
30 transmission attributes with transmission rate 1200 bits/s,
31 convolutional code and 80ms frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_2400_80MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 2400 bits/s.

36 If RC3_RC5_80MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC3_RC5_80MS_INCL is set to '1' and
39 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
40 set this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 2400 bits/s,
43 convolutional code and 80ms frame. The base station shall
44 set the value in the range from -48 to 48 inclusive.

1 If RC3_RC5_80MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 2400 bits/s,
6 convolutional code and 80ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_4800_80MS - Reverse Link Attribute Gain Adjustment for the
10 transmission rate 4800 bits/s.

11 If RC3_RC5_80MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_40MS_INCL is set to '1' and
14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15 set this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 4800 bits/s,
18 convolutional code and 80ms frame. The base station shall
19 set the value in the range from -48 to 48 inclusive.

20 If RC3_RC5_80MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22 set this field to the value of the pilot reference level
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 4800 bits/s,
25 convolutional code and 80ms frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_9600_80MS - Reverse Link Attribute Gain Adjustment for the
29 transmission rate 9600 bits/s.

30 If RC3_RC5_80MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_80MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 9600 bits/s,
37 convolutional code and 80ms frame. The base station shall
38 set the value in the range from -48 to 48 inclusive.

39 If RC3_RC5_80MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 9600 bits/s,
44 convolutional code and 80ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RC4_RC6_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
48 Configuration 4 or 6 of 80ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio
2 Configuration 4 or 6 of 80ms frame is included in this
3 message, the base station shall set this field to '1'; otherwise,
4 the base station shall set this field to '0'.

5 RL_ATT_ADJ_GAIN_1800_80MS - Reverse Link Attribute Gain Adjustment for the
6 transmission rate 1800 bits/s.

7 If RC4_RC6_80MS_INCL is set to '0', the base station shall
8 omit this field.

9 If RC4_RC6_80MS_INCL is set to '1' and
10 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
11 set this field to the value of the nominal attribute gain
12 adjustment that the mobile station is to make for the
13 transmission attributes with transmission rate 1800 bits/s,
14 convolutional code and 80ms frame. The base station shall
15 set the value in the range from -48 to 48 inclusive.

16 If RC4_RC6_80MS_INCL is set to '1' and
17 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
18 set this field to the value of the pilot reference level
19 adjustment that the mobile station is to make for the
20 transmission attributes with transmission rate 1800 bits/s,
21 convolutional code and 80ms frame.

22 The base station shall set this field to the correction factor
23 expressed as a two's complement value in units of 0.125 dB.

24 RL_ATT_ADJ_GAIN_3600_80MS - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 3600 bits/s.

26 If RC4_RC6_80MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_80MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 3600 bits/s,
33 convolutional code and 80ms frame. The base station shall
34 set the value in the range from -48 to 48 inclusive.

35 If RC4_RC6_80MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 3600 bits/s,
40 convolutional code and 80ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_7200_80MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 7200 bits/s.

45 If RC4_RC6_80MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_80MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 7200 bits/s,
 6 convolutional code and 80ms frame. The base station shall
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4_RC6_80MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 7200 bits/s, convolutional
 13 code and 80ms frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_14400_80MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 14400 bits/s.

18 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal gain adjustment that
 23 the mobile station is to make for the transmission attributes
 24 with transmission rate 14400 bits/s, convolutional code and
 25 80ms frame. The base station shall set the value in the range
 26 from -48 to 48 inclusive.

27 If RC4_RC6_40MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 14400 bits/s,
 32 convolutional code and 80ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RESERVED - Reserved bits.

36 The base station shall add reserved bits as needed in order to
 37 make the length of the entire record equal to an integer
 38 number of octets. The base station shall set these bits to '0'.

39 If RPC_ADJ_REC_TYPE is equal to '0010', the base station shall set type-specific fields as
 40 specified in Table 3.7.5.20-6.

1

Table 3.7.5.20-6. Type Specific Fields for RECORD_TYPE = '0010'

Fields	Length (Bits)
CODE_TYPE	1
RL_ATT_ADJ_GAIN_TYPE	1
RC3_RC5_20MS_INCL	1
RL_ATT_ADJ_GAIN_19200	0 or 8
RL_ATT_ADJ_GAIN_38400	0 or 8
RL_ATT_ADJ_GAIN_76800	0 or 8
RL_ATT_ADJ_GAIN_153600	0 or 8
RL_ATT_ADJ_GAIN_307200	0 or 8
RL_ATT_ADJ_GAIN_614400	0 or 8
RC4_RC6_20MS_INCL	1
RL_ATT_ADJ_GAIN_28800	0 or 8
RL_ATT_ADJ_GAIN_57600	0 or 8
RL_ATT_ADJ_GAIN_115200	0 or 8
RL_ATT_ADJ_GAIN_230400	0 or 8
RL_ATT_ADJ_GAIN_460800	0 or 8
RL_ATT_ADJ_GAIN_1036800	0 or 8
RC3_RC5_40MS_INCL	1
RL_ATT_ADJ_GAIN_19200_40MS	0 or 8
RL_ATT_ADJ_GAIN_38400_40MS	0 or 8
RL_ATT_ADJ_GAIN_76800_40MS	0 or 8
RL_ATT_ADJ_GAIN_153600_40MS	0 or 8
RL_ATT_ADJ_GAIN_307200_40MS	0 or 8
RC4_RC6_40MS_INCL	1
RL_ATT_ADJ_GAIN_28800_40MS	0 or 8
RL_ATT_ADJ_GAIN_57600_40MS	0 or 8
RL_ATT_ADJ_GAIN_115200_40MS	0 or 8

2

3

CODE_TYPE - Coding type indicator.

4

5

6

7

If the following corresponding gain adjustment fields apply for the convolutional code, the base station shall set this field to '0'. If the following corresponding gain adjustment fields apply for the Turbo code, the base station shall set this field to '1'.

8

RL_ATT_ADJ_GAIN_TYPE- Reverse Link Attribute adjustment Gain value type indicator.

9

10

11

12

13

14

15

16

17

18

If the following corresponding gain adjustment fields are set to the value of the nominal attribute gain adjustment that the mobile station is to make for the corresponding transmission attributes (relative to Nominal_Attribute_Gain specified in [2]), the base station shall set this field to '0'. If the following corresponding gain adjustment fields are set to the value of the pilot reference level adjustment that the mobile station is to use for the corresponding transmission attributes (relative to Pilot_Reference_Level specified in [2]), the base station shall set this field to '1'.

19

RC3_RC5_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio Configuration 3 or 5 of 20ms frame included indicator.

20

21

22

23

24

If Reverse Link Attribute Adjustment Gain for Radio Configuration 3 or 5 of 20ms frame is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

25

RL_ATT_ADJ_GAIN_19200 - Reverse Link Attribute Adjustment Gain for the transmission rate 19200 bits/s.

26

1 If RC3_RC5_20MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_20MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 19200 bits/s,
8 and 20ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC3_RC5_20MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 19200 bits/s
15 and 20ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RL_ATT_ADJ_GAIN_38400 - Reverse Link Attribute Adjustment Gain for the
19 transmission rate 38400 bits/s.

20 If RC3_RC5_20MS_INCL is set to '0', the base station shall
21 omit this field.

22 If RC3_RC5_20MS_INCL is set to '1' and
23 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
24 set this field to the value of the nominal attribute gain
25 adjustment that the mobile station is to make for the
26 transmission attributes with transmission rate 38400 bits/s,
27 and 20ms frame. The base station shall set the value in the
28 range from -48 to 48 inclusive.

29 If RC3_RC5_20MS_INCL is set to '1' and
30 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
31 this field to the value of the pilot reference level adjustment
32 that the mobile station is to make for the transmission
33 attributes with transmission rate 38400 bits/s and 20ms
34 frame.

35 The base station shall set this field to the correction factor
36 expressed as a two's complement value in units of 0.125 dB.

37 RL_ATT_ADJ_GAIN_76800 - Reverse Link Attribute Adjustment Gain for the
38 transmission rate 76800 bits/s.

39 If RC3_RC5_20MS_INCL is set to '0', the base station shall
40 omit this field.

41 If RC3_RC5_20MS_INCL is set to '1' and
42 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
43 set this field to the value of the nominal attribute gain
44 adjustment that the mobile station is to make for the
45 transmission attributes with transmission rate 76800 bits/s,
46 and 20ms frame. The base station shall set the value in the
47 range from -48 to 48 inclusive.

1 If RC3_RC5_20MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 76800 bits/s
6 and 20ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_153600 - Reverse Link Attribute Adjustment Gain for the
10 transmission rate 153600 bits/s.

11 If RC3_RC5_20MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC3_RC5_20MS_INCL is set to '1' and
14 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
15 this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 153600 bits/s,
18 and 20ms frame. The base station shall set the value in the
19 range from -48 to 48 inclusive.

20 If RC3_RC5_20MS_INCL is set to '1' and
21 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
22 this field to the value of the pilot reference level adjustment
23 that the mobile station is to make for the transmission
24 attributes with transmission rate 153600 bits/s and 20ms
25 frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_307200 - Reverse Link Attribute Adjustment Gain for the
29 transmission rate 307200 bits/s.

30 If RC3_RC5_20MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC3_RC5_20MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 307200 bits/s,
37 and 20ms frame. The base station shall set the value in the
38 range from -48 to 48 inclusive.

39 If RC3_RC5_20MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 307200 bits/s
44 and 20ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_614400 - Reverse Link Attribute Adjustment Gain for the
48 transmission rate 614400 bits/s.

1 If RC3_RC5_20MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC3_RC5_20MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 614400 bits/s,
8 and 20ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC3_RC5_20MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 614400 bits/s
15 and 20ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4_RC6_20MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 4 or 6 of 20ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 4 or 6 of 20ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_28800 - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 28800 bits/s.

26 If RC4_RC6_20MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC4_RC6_20MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 28800 bits/s,
33 and 20ms frame. The base station shall set the value in the
34 range from -48 to 48 inclusive.

35 If RC4_RC6_20MS_INCL is set to '1' and
36 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37 this field to the value of the pilot reference level adjustment
38 that the mobile station is to make for the transmission
39 attributes with transmission rate 28800 bits/s and 20ms
40 frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_57600 - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 57600 bits/s.

45 If RC4_RC6_20MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC4_RC6_20MS_INCL is set to '1' and
 2 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
 3 this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 57600 bits/s,
 6 and 20ms frame. The base station shall set the value in the
 7 range from -48 to 48 inclusive.

8 If RC4_RC6_20MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 57600 bits/s and 20ms
 13 frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_115200 - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 115200 bits/s.

18 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC4_RC6_20MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 115200 bits/s,
 25 and 20ms frame. The base station shall set the value in the
 26 range from -48 to 48 inclusive.

27 If RC4_RC6_20MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 115200 bits/s
 32 and 20ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_230400 - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 230400 bits/s.

37 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC4_RC6_20MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal attribute gain
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 230400 bits/s,
 44 and 20ms frame. The base station shall set the value in the
 45 range from -48 to 48 inclusive.

1 If RC4_RC6_20MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 3 set this field to the value of the pilot reference level
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 230400 bits/s
 6 and 20ms frame.

7 The base station shall set this field to the correction factor
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_460800 - Reverse Link Attribute Adjustment Gain for the
 10 transmission rate 460800 bits/s.

11 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 12 omit this field.

13 If RC4_RC6_20MS_INCL is set to '1' and
 14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 15 set this field to the value of the nominal attribute gain
 16 adjustment that the mobile station is to make for the
 17 transmission attributes with transmission rate 460800 bits/s,
 18 and 20ms frame. The base station shall set the value in the
 19 range from -48 to 48 inclusive.

20 If RC4_RC6_20MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 22 set this field to the value of the pilot reference level
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 460800 bits/s
 25 and 20ms frame.

26 The base station shall set this field to the correction factor
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_1036800 - Reverse Link Attribute Adjustment Gain for the
 29 transmission rate 1036800 bits/s.

30 If RC4_RC6_20MS_INCL is set to '0', the base station shall
 31 omit this field.

32 If RC4_RC6_20MS_INCL is set to '1' and
 33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 34 set this field to the value of the nominal attribute gain
 35 adjustment that the mobile station is to make for the
 36 transmission attributes with transmission rate 1036800
 37 bits/s, and 20ms frame. The base station shall set the value
 38 in the range from -48 to 48 inclusive.

39 If RC4_RC6_20MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 41 set this field to the value of the pilot reference level
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 1306800
 44 bits/s and 20ms frame.

45 The base station shall set this field to the correction factor
 46 expressed as a two's complement value in units of 0.125 dB.

47 RC3_RC5_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
 48 Configuration 3 or 5 of 40ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio
2 Configuration 3 or 5 of 40ms frame is included in this
3 message, the base station shall set this field to '1'; otherwise,
4 the base station shall set this field to '0'.

5 RL_ATT_ADJ_GAIN_19200_40MS - Reverse Link Attribute Adjustment Gain for the
6 transmission rate 19200 bits/s.

7 If RC3_RC5_40MS_INCL is set to '0', the base station shall
8 omit this field.

9 If RC3_RC5_40MS_INCL is set to '1' and
10 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
11 set this field to the value of the nominal attribute gain
12 adjustment that the mobile station is to make for the
13 transmission attributes with transmission rate 19200 bits/s,
14 and 40ms frame. The base station shall set the value in the
15 range from -48 to 48 inclusive.

16 If RC3_RC5_40MS_INCL is set to '1' and
17 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
18 set this field to the value of the pilot reference level
19 adjustment that the mobile station is to make for the
20 transmission attributes with transmission rate 19200 bits/s
21 and 40ms frame.

22 The base station shall set this field to the correction factor
23 expressed as a two's complement value in units of 0.125 dB.

24 RL_ATT_ADJ_GAIN_38400_40MS - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 38400 bits/s.

26 If RC3_RC5_40MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC3_RC5_40MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 38400 bits/s,
33 and 40ms frame. The base station shall set the value in the
34 range from -48 to 48 inclusive.

35 If RC3_RC5_20MS_INCL is set to '1' and
36 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37 this field to the value of the pilot reference level adjustment
38 that the mobile station is to make for the transmission
39 attributes with transmission rate 38400 bits/s and 40ms
40 frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_76800_40MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 76800 bits/s.

45 If RC3_RC5_40MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC3_RC5_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3 set this field to the value of the nominal attribute gain
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 76800 bits/s,
6 and 40ms frame. The base station shall set the value in the
7 range from -48 to 48 inclusive.

8 If RC3_RC5_40MS_INCL is set to '1' and
9 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10 set this field to the value of the pilot reference level
11 adjustment that the mobile station is to make for the
12 transmission attributes with transmission rate 76800 bits/s
13 and 40ms frame.

14 The base station shall set this field to the correction factor
15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_153600_40MS - Reverse Link Attribute Adjustment Gain for the
17 transmission rate 153600 bits/s.

18 If RC3_RC5_40MS_INCL is set to '0', the base station shall
19 omit this field.

20 If RC3_RC5_40MS_INCL is set to '1' and
21 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
22 this field to the value of the nominal attribute gain
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 153600 bits/s,
25 and 40ms frame. The base station shall set the value in the
26 range from -48 to 48 inclusive.

27 If RC3_RC5_40MS_INCL is set to '1' and
28 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29 this field to the value of the pilot reference level adjustment
30 that the mobile station is to make for the transmission
31 attributes with transmission rate 153600 bits/s and 40ms
32 frame.

33 The base station shall set this field to the correction factor
34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_307200_40MS - Reverse Link Attribute Adjustment Gain for the
36 transmission rate 307200 bits/s.

37 If RC3_RC5_40MS_INCL is set to '0', the base station shall
38 omit this field.

39 If RC3_RC5_40MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41 set this field to the value of the nominal attribute gain
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 307200 bits/s,
44 and 40ms frame. The base station shall set the value in the
45 range from -48 to 48 inclusive.

1 If RC3_RC5_40MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 307200 bits/s
6 and 40ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC4_RC6_40MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 4 or 6 of 40ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio
12 Configuration 4 or 6 of 40ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_28800_40MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 28800 bits/s.

17 If RC4_RC6_40MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC4_RC6_40MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 28800 bits/s,
24 and 40ms frame. The base station shall set the value in the
25 range from -48 to 48 inclusive.

26 If RC4_RC6_40MS_INCL is set to '1' and
27 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
28 this field to the value of the pilot reference level adjustment
29 that the mobile station is to make for the transmission
30 attributes with transmission rate 28800 bits/s and 40ms
31 frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_57600_40MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 57600 bits/s.

36 If RC4_RC6_40MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC4_RC6_40MS_INCL is set to '1' and
39 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
40 this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 57600 bits/s,
43 and 40ms frame. The base station shall set the value in the
44 range from -48 to 48 inclusive.

1 If RC4_RC6_40MS_INCL is set to '1' and
2 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
3 this field to the value of the pilot reference level adjustment
4 that the mobile station is to make for the transmission
5 attributes with transmission rate 57600 bits/s and 40ms
6 frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_115200_40MS - Reverse Link Attribute Adjustment Gain for the
10 transmission rate 115200 bits/s.

11 If RC4_RC6_40MS_INCL is set to '0', the base station shall
12 omit this field.

13 If RC4_RC6_40MS_INCL is set to '1' and
14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15 set this field to the value of the nominal attribute gain
16 adjustment that the mobile station is to make for the
17 transmission attributes with transmission rate 115200 bits/s,
18 and 40ms frame. The base station shall set the value in the
19 range from -48 to 48 inclusive.

20 If RC4_RC6_40MS_INCL is set to '1' and
21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22 set this field to the value of the pilot reference level
23 adjustment that the mobile station is to make for the
24 transmission attributes with transmission rate 115200 bits/s
25 and 40ms frame.

26 The base station shall set this field to the correction factor
27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_230400_40MS - Reverse Link Attribute Adjustment Gain for the
29 transmission rate 230400 bits/s.

30 If RC4_RC6_40MS_INCL is set to '0', the base station shall
31 omit this field.

32 If RC4_RC6_40MS_INCL is set to '1' and
33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34 set this field to the value of the nominal attribute gain
35 adjustment that the mobile station is to make for the
36 transmission attributes with transmission rate 230400 bits/s,
37 and 40ms frame. The base station shall set the value in the
38 range from -48 to 48 inclusive.

39 If RC4_RC6_40MS_INCL is set to '1' and
40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41 set this field to the value of the pilot reference level
42 adjustment that the mobile station is to make for the
43 transmission attributes with transmission rate 230400 bits/s
44 and 40ms frame.

45 The base station shall set this field to the correction factor
46 expressed as a two's complement value in units of 0.125 dB.

47 RL_ATT_ADJ_GAIN_518400_40MS - Reverse Link Attribute Adjustment Gain for the
48 transmission rate 518400 bits/s.

1 If RC4_RC6_40MS_INCL is set to '0', the base station shall
2 omit this field.

3 If RC4_RC6_40MS_INCL is set to '1' and
4 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5 set this field to the value of the nominal attribute gain
6 adjustment that the mobile station is to make for the
7 transmission attributes with transmission rate 518400 bits/s,
8 and 40ms frame. The base station shall set the value in the
9 range from -48 to 48 inclusive.

10 If RC4_RC6_40MS_INCL is set to '1' and
11 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12 set this field to the value of the pilot reference level
13 adjustment that the mobile station is to make for the
14 transmission attributes with transmission rate 518400 bits/s
15 and 40ms frame.

16 The base station shall set this field to the correction factor
17 expressed as a two's complement value in units of 0.125 dB.

18 RC3_RC5_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
19 Configuration 3 or 5 of 80ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio
21 Configuration 3 or 5 of 80ms frame is included in this
22 message, the base station shall set this field to '1'; otherwise,
23 the base station shall set this field to '0'.

24 RL_ATT_ADJ_GAIN_19200_80MS - Reverse Link Attribute Adjustment Gain for the
25 transmission rate 19200 bits/s.

26 If RC3_RC5_80MS_INCL is set to '0', the base station shall
27 omit this field.

28 If RC3_RC5_80MS_INCL is set to '1' and
29 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30 set this field to the value of the nominal attribute gain
31 adjustment that the mobile station is to make for the
32 transmission attributes with transmission rate 19200 bits/s,
33 and 80ms frame. The base station shall set the value in the
34 range from -48 to 48 inclusive.

35 If RC3_RC5_80MS_INCL is set to '1' and
36 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37 set this field to the value of the pilot reference level
38 adjustment that the mobile station is to make for the
39 transmission attributes with transmission rate 19200 bits/s
40 and 80ms frame.

41 The base station shall set this field to the correction factor
42 expressed as a two's complement value in units of 0.125 dB.

43 RL_ATT_ADJ_GAIN_38400_80MS - Reverse Link Attribute Adjustment Gain for the
44 transmission rate 38400 bits/s.

45 If RC3_RC5_80MS_INCL is set to '0', the base station shall
46 omit this field.

1 If RC3_RC5_80MS_INCL is set to '1' and
 2 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 3 set this field to the value of the nominal attribute gain
 4 adjustment that the mobile station is to make for the
 5 transmission attributes with transmission rate 38400 bits/s,
 6 and 80ms frame. The base station shall set the value in the
 7 range from -48 to 48 inclusive.

8 If RC3_RC5_80MS_INCL is set to '1' and
 9 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 10 this field to the value of the pilot reference level adjustment
 11 that the mobile station is to make for the transmission
 12 attributes with transmission rate 38400 bits/s and 80ms
 13 frame.

14 The base station shall set this field to the correction factor
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL_ATT_ADJ_GAIN_76800_80MS - Reverse Link Attribute Adjustment Gain for the
 17 transmission rate 76800 bits/s.

18 If RC3_RC5_80MS_INCL is set to '0', the base station shall
 19 omit this field.

20 If RC3_RC5_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 22 set this field to the value of the nominal attribute gain
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 76800 bits/s,
 25 and 80ms frame. The base station shall set the value in the
 26 range from -48 to 48 inclusive.

27 If RC3_RC5_80MS_INCL is set to '1' and
 28 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 29 set this field to the value of the pilot reference level
 30 adjustment that the mobile station is to make for the
 31 transmission attributes with transmission rate 76800 bits/s
 32 and 80ms frame.

33 The base station shall set this field to the correction factor
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL_ATT_ADJ_GAIN_153600_80MS - Reverse Link Attribute Adjustment Gain for the
 36 transmission rate 153600 bits/s.

37 If RC3_RC5_80MS_INCL is set to '0', the base station shall
 38 omit this field.

39 If RC3_RC5_80MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 41 set this field to the value of the nominal attribute gain
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 153600 bits/s,
 44 and 80ms frame. The base station shall set the value in the
 45 range from -48 to 48 inclusive.

1 If RC3_RC5_80MS_INCL is set to '1' and
2 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3 set this field to the value of the pilot reference level
4 adjustment that the mobile station is to make for the
5 transmission attributes with transmission rate 153600 bits/s
6 and 80ms frame.

7 The base station shall set this field to the correction factor
8 expressed as a two's complement value in units of 0.125 dB.

9 RC4_RC6_80MS_INCL - Reverse Link Attribute Adjustment Gain for Radio
10 Configuration 4 or 6 of 80ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio
12 Configuration 4 or 6 of 80ms frame is included in this
13 message, the base station shall set this field to '1'; otherwise,
14 the base station shall set this field to '0'.

15 RL_ATT_ADJ_GAIN_28800_80MS - Reverse Link Attribute Adjustment Gain for the
16 transmission rate 28800 bits/s.

17 If RC4_RC6_80MS_INCL is set to '0', the base station shall
18 omit this field.

19 If RC4_RC6_80MS_INCL is set to '1' and
20 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
21 set this field to the value of the nominal attribute gain
22 adjustment that the mobile station is to make for the
23 transmission attributes with transmission rate 28800 bits/s,
24 and 80ms frame. The base station shall set the value in the
25 range from -48 to 48 inclusive.

26 If RC4_RC6_80MS_INCL is set to '1' and
27 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
28 this field to the value of the pilot reference level adjustment
29 that the mobile station is to make for the transmission
30 attributes with transmission rate 28800 bits/s and 80ms
31 frame.

32 The base station shall set this field to the correction factor
33 expressed as a two's complement value in units of 0.125 dB.

34 RL_ATT_ADJ_GAIN_57600_80MS - Reverse Link Attribute Adjustment Gain for the
35 transmission rate 57600 bits/s.

36 If RC4_RC6_80MS_INCL is set to '0', the base station shall
37 omit this field.

38 If RC4_RC6_80MS_INCL is set to '1' and
39 NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
40 this field to the value of the nominal attribute gain
41 adjustment that the mobile station is to make for the
42 transmission attributes with transmission rate 57600 bits/s,
43 and 80ms frame. The base station shall set the value in the
44 range from -48 to 48 inclusive.

1 If RC4_RC6_80MS_INCL is set to '1' and
 2 NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
 3 this field to the value of the pilot reference level adjustment
 4 that the mobile station is to make for the transmission
 5 attributes with transmission rate 57600 bits/s and 80ms
 6 frame.

7 The base station shall set this field to the correction factor
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL_ATT_ADJ_GAIN_115200_80MS - Reverse Link Attribute Adjustment Gain for the
 10 transmission rate 115200 bits/s.

11 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 12 omit this field.

13 If RC4_RC6_80MS_INCL is set to '1' and
 14 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 15 set this field to the value of the nominal attribute gain
 16 adjustment that the mobile station is to make for the
 17 transmission attributes with transmission rate 115200 bits/s,
 18 and 80ms frame. The base station shall set the value in the
 19 range from -48 to 48 inclusive.

20 If RC4_RC6_80MS_INCL is set to '1' and
 21 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 22 set this field to the value of the pilot reference level
 23 adjustment that the mobile station is to make for the
 24 transmission attributes with transmission rate 115200 bits/s
 25 and 80ms frame.

26 The base station shall set this field to the correction factor
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL_ATT_ADJ_GAIN_259200_80MS - Reverse Link Attribute Adjustment Gain for the
 29 transmission rate 259200 bits/s.

30 If RC4_RC6_80MS_INCL is set to '0', the base station shall
 31 omit this field.

32 If RC4_RC6_80MS_INCL is set to '1' and
 33 RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
 34 set this field to the value of the nominal attribute gain
 35 adjustment that the mobile station is to make for the
 36 transmission attributes with transmission rate 259200 bits/s,
 37 and 80ms frame. The base station shall set the value in the
 38 range from -48 to 48 inclusive.

39 If RC4_RC6_80MS_INCL is set to '1' and
 40 RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
 41 set this field to the value of the pilot reference level
 42 adjustment that the mobile station is to make for the
 43 transmission attributes with transmission rate 259200 bits/s
 44 and 80ms frame.

45 The base station shall set this field to the correction factor
 46 expressed as a two's complement value in units of 0.125 dB.

47 RESERVED - Reserved bits.

1 The base station shall add reserved bits as needed in order to
 2 make the length of the entire record equal to an integer
 3 number of octets. The base station shall set these bits to '0'.

4

5 If RPC_ADJ_REC_TYPE is equal to '0011', the base station shall set type-specific fields as
 6 specified in Table 3.7.5.20-7.

7

Table 3.7.5.20-7. Type Specific Fields for RECORD_TYPE = '0011'

Fields	Length (Bits)
RL_CQICH_ATT_ADJ_GAIN_TYPE	1
RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL	1
RL_CQICH_ATT_ADJ_GAIN_HIGH	0 or 8
RL_CQICH_ATT_ADJ_GAIN_LOW_INCL	1
RL_CQICH_ATT_ADJ_GAIN_LOW	0 or 8
RESERVED	0-7 (if needed)

8

9 RL_CQICH_ATT_ADJ_GAIN_TYPE - Reverse Channel Quality Indicator Channel
 10 attribute adjustment gain value type indicator

11 If the following fields are set to the nominal attribute gain
 12 adjustment values that the mobile station is to use for the
 13 transmission attributes (relative to Nominal_Attribute_Gain
 14 specified in [2]), the base station shall set this field to '0'. If
 15 the following fields are set to the pilot reference level
 16 adjustment values that the mobile station is to use for the
 17 transmission attributes (relative to Pilot_Reference_Level
 18 specified in [2]), the base station shall set this field to '1'.

19 RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL - Reverse Channel Quality Indicator Channel
 20 attribute adjustment gain for the high power level included
 21 indicator.

22 If the attribute adjustment gain for the high power level of
 23 Reverse Channel Quality Indicator Channel transmission is
 24 included in this message, the base station shall set this field
 25 to '1'; otherwise, the base station shall set this field to '0'.

26 RL_CQICH_ATT_ADJ_GAIN_HIGH - Attribute adjustment gain for Reverse Channel
 27 Quality Indicator Channel for the high Channel Quality
 28 Indicator gain power level.

29 If RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL is set to '0', the
 30 base station shall omit this field; otherwise, the base station
 31 shall set this field as follows:

1 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 2 station shall set this field to the value of the nominal attribute
 3 gain adjustment that the mobile station is to make for the
 4 transmission attributes for the high power level of R-CQICH.
 5 The base station shall set the value in the range from -40 to
 6 16 inclusive.

7 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 8 station shall set this field to the value of the pilot reference
 9 level adjustment that the mobile station is to make for the
 10 transmission attributes for the high power level of R-CQICH.

11 The base station shall set this field to the correction factor
 12 expressed as a two's complement value in units of 0.125 dB.

13 RL_CQICH_ATT_ADJ_GAIN_LOW_INCL - Reverse Channel Quality Indicator Channel
 14 attribute adjustment gain for the low power level included
 15 indicator.

16 If the attribute adjustment gain for the low power level of
 17 Reverse Channel Quality Indicator Channel transmission is
 18 included in this message, the base station shall set this field
 19 to '1'; otherwise, the base station shall set this field to '0'.

20 RL_CQICH_ATT_ADJ_GAIN_LOW - Attribute adjustment gain for Reverse Channel
 21 Quality Indicator Channel for the low Channel Quality
 22 Indicator gain power level.

23 If RL_CQICH_ATT_ADJ_GAIN_LOW_INCL is set to '0', the base
 24 station shall omit this field; otherwise, the base station shall
 25 set this field as follows:

26 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
 27 station shall set this field to the value of the nominal attribute
 28 gain adjustment that the mobile station is to make for the
 29 transmission attributes for the low power level of R-CQICH.
 30 The base station shall set the value in the range from -16 to
 31 16 inclusive.

32 If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
 33 station shall set this field to the value of the pilot reference
 34 level adjustment that the mobile station is to make for the
 35 transmission attributes for the low power level of R-CQICH.

36 The base station shall set this field to the correction factor
 37 expressed as a two's complement value in units of 0.125 dB.

38

39

1 If RPC_ADJ_REC_TYPE is equal to '0100', the base station shall set type-specific fields as
 2 specified in Table 3.7.5.20-8.

3 Table 3.7.5.20-8. Type Specific Fields for RECORD_TYPE = '0100'

Fields	Length (Bits)
REV_REQCH_ADJ_INCL	1

1

2

REV_REQCH_ADJ_INCL - Reverse Request Channel Adjustment included field.

3

If the attribute adjustment gains for the Reverse Request

4

Channel are included in this message, the base station shall

5

set this field to '1'; otherwise, the base station shall set this

6

field to '0'.

7

REV_REQCH_ADJ_GAIN - Reverse Request Channel Adjustment Gain.

1 If REV_REQCH_ADJ_INCL is set to '0', the base station shall
 2 omit this field; otherwise, the base station shall include this
 3 field, and set it as follows.

4 TThe base station shall set this field to the value of the
 5 nominal attribute gain adjustment that the mobile station is
 6 to make for the transmission attributes for the power level of
 7 R-REQCH.

8 The base station shall set the value in the range from -24 to
 9 40 inclusive. The base station shall set this field to the
 10 correction factor expressed as a two's complement value in
 11 units of 0.125 dB.

12 REV_SPICH_ADJ_INCL - Reverse Secondary Pilot Channel Adjustment included
 13 field.

14 If the attribute adjustment gains for the Reverse Secondary
 15 Pilot Channel are included in this message, the base station
 16 shall set this field to '1'; otherwise, the base station shall set
 17 this field to '0'.

18 REV_SPICH_ADJ_GAIN - Reverse Secondary Pilot Channel Adjustment Gain.

19 If REV_SPICH_ADJ_INCL is set to '0', the base station shall
 20 omit this field; otherwise, the base station shall include this
 21 field, and set it as follows.

22 TThe base station shall set this field to the value of the
 23 nominal attribute gain adjustment that the mobile station is
 24 to make for the transmission attributes for the power level of
 25 R-SPICH.

26 The base station shall set the value in the range from -16 to
 27 48 inclusive. The base station shall set this field to the
 28 correction factor expressed as a two's complement value in
 29 units of 0.125 dB.

30 REV_SPICH_EP_SIZE- Minimum Encoder Packet Size for which the Reverse Secondary Pilot
 31 Channel is used.

32 If REV_SPICH_ADJ_INCL is set to '0', the base station shall
 33 omit this field; otherwise, the base station shall include this
 34 field, and set it as follows.

35 The base station shall set this field to the minimum encoder
 36 packet size for which the Reverse Secondary Pilot Channel is
 37 used (see [2] and [3]).

38 This field shall take the values 0 to 10 corresponding to the
 39 encoder packet sizes 192, 408, 792, 1560, 3096, 4632, 6168,
 40 9240, 12312, 15384, 18456 bits.

41 REV_PDCCH_ADJ_INCL - Reverse Packet Data Control Channel Adjustment
 42 included field.

43 If the attribute adjustment gains for the Reverse Packet Data
 44 Control Channel are included in this message, the base
 45 station shall set this field to '1'; otherwise, the base station
 46 shall set this field to '0'.

1 REV_PDCCH_ADJ_GAIN - Reverse Packet Data Control Channel Adjustment Gain.
2 If REV_PDCCH_ADJ_INCL is set to '0', the base station shall
3 omit this field; otherwise, the base station shall include this
4 field, and set it as follows.

5 The base station shall set this field to the value of the nominal
6 attribute gain adjustment that the mobile station is to make
7 for the transmission attributes for the power level of R-
8 PDCCH.

9 The base station shall set the value in the range from -32 to
10 32 inclusive. The base station shall set this field to the
11 correction factor expressed as a two's complement value in
12 units of 0.125 dB.

13 REV_PDCCH_ATTRIBUTE_ADJ_INCL - Reverse Packet Data Control Channel
14 Attribute Adjustment included field.
15 If the attribute adjustment gains for the Reverse Packet Data
16 Control Channel are included per encoder packet size and per
17 boost mode in this message, the base station shall set this
18 field to '1'; otherwise, the base station shall set this field to '0'.

19 REV_PDCCH_EP_SIZE_NUM - Number of occurrences of Reverse Packet Data Control
20 Channel Attribute Adjustment Gains.
21 If REV_PDCCH_ATTRIBUTE_ADJ_INCL is set to '0', the base
22 station shall omit this field; otherwise, the base station shall
23 include this field, and set it as follows.

24 The base station shall set this field to one less than half the
25 number of occurrences of the field included hereafter. The
26 records are listed per encoder packet size, in the following
27 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
28 9240, 12312, 15384, 18456 bits.

29 If REV_PDCCH_ATTRIBUTE_ADJ_INCL is set to '1', the base station shall include
30 REV_PDCCH_EP_SIZE_NUM+1 occurrences of the following record:

31 The base station shall include 2 occurrences of the following field. The first occurrence of
32 this field is for the non-boosted mode, while the second is for the boosted mode.

33 REV_PDCCH_ATTRIBUTE_ADJ_GAIN - Reverse Packet Data Control Channel Attribute
34 Adjustment Gain.
35 The base station shall set this field to the value of the nominal
36 attribute gain adjustment that the mobile station is to make
37 for the transmission attributes for the power level of R-
38 PDCCH, for the i-th encoder packet size, and for the non-
39 boosted and boosted modes.

40 The base station shall set the value in the range from -32 to
41 32 inclusive. The base station shall set this field to the
42 correction factor expressed as a two's complement value in
43 units of 0.125 dB.

1 REV_PDCCH_BOOST_ADJ_INCL - Reverse Packet Data Control Channel Boost
 2 Adjustment included field.
 3 If the attribute adjustment gains for the Reverse Packet Data
 4 Control Channel per boosted mode are included in this
 5 message, the base station shall set this field to '1'; otherwise,
 6 the base station shall set this field to '0'.

7 If REV_PDCCH_BOOST_ADJ_INCL is set to '1', the base station shall include two
 8 occurrences of the following record:

9 REV_PDCCH_BOOST_ADJ_GAIN - Reverse Packet Data Control Channel Boost
 10 Adjustment Gains.
 11 The base station shall set this field to the value of the nominal
 12 attribute gain adjustment that the mobile station is to make
 13 for the transmission attributes for the power level of R-
 14 PDCCH, for the appropriate mode.
 15 The base station shall set the value in the range from -32 to
 16 32 inclusive.
 17 The first occurrence of this field is for the non-boosted mode,
 18 while the second is for the boosted mode. The base station
 19 shall set this field to the correction factor expressed as a two's
 20 complement value in units of 0.125 dB.

21 REV_PDCCH_PAYLOAD_ADJ_INCL - Reverse Packet Data Control Channel Payload
 22 Attribute Adjustment included field.
 23 If the attribute adjustment gains for the Reverse Packet Data
 24 Control Channel are included per encoder packet size in this
 25 message, the base station shall set this field to '1'; otherwise,
 26 the base station shall set this field to '0'.

27 REV_PDCCH_EP_SIZE_NUM_1 - Number of occurrences of Reverse Packet Data Control
 28 Channel Payload Attribute Adjustment Gain records.
 29 If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '0', the base
 30 station shall omit this field; otherwise, the base station shall
 31 include this field, and set it as follows.
 32 The base station shall set this field to one less than the
 33 number of occurrences of the field included hereafter. The
 34 fields are listed per encoder packet size, in the following
 35 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
 36 9240, 12312, 15384, 18456 bits.

37 If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '1', the base station shall include
 38 (REV_PDCCH_EP_SIZE_NUM_1+1)x2 occurrences of the following record:

- 1 REV_PDCCH_PAYLOAD_ADJ_GAIN - Reverse Packet Data Control Channel Payload
 2 Attribute Adjustment Gain.
 3 The base station shall set this field to the value of the nominal
 4 attribute gain adjustment that the mobile station is to make
 5 for the transmission attributes for the power level of R-
 6 PDCCH, for the i-th encoder packet size, and for the non-
 7 boosted and boosted modes. In each set for the i-th encoder
 8 packet, the first occurrence of this field is for the non-boosted
 9 mode, while the second is for the boosted mode.
- 10 The base station shall set the value in the range from -32 to
 11 32 inclusive. The base station shall set this field to the
 12 correction factor expressed as a two's complement value in
 13 units of 0.125 dB.
- 14 REV_PDCH_ADJ_INCL - Reverse Packet Data Channel Adjustment included field.
 15 If the attribute adjustment gains for the Reverse Packet Data
 16 Channel are included in this message, the base station shall
 17 set this field to '1'; otherwise, the base station shall set this
 18 field to '0'.
- 19 REV_PDCH_ADJ_GAIN - Reverse Packet Data Channel Adjustment Gain.
 20 If REV_PDCH_ADJ_INCL is set to '0', the base station shall
 21 omit this field; otherwise, the base station shall include this
 22 field, and set it as follows.
- 23 The base station shall set this field to the value of the nominal
 24 attribute gain adjustment that the mobile station is to make
 25 for the transmission attributes for the power level of R-PDCH.
- 26 The base station shall set the value in the range from -40 to
 27 56 inclusive. The base station shall set this field to the
 28 correction factor expressed as a two's complement value in
 29 units of 0.125 dB.
- 30 REV_PDCH_PAYLOAD_ADJ_INCL - Reverse Packet Data Channel Adjustment included
 31 field.
 32 If the attribute adjustment gains for the Reverse Packet Data
 33 Channel are included per encoder packet size in this
 34 message, the base station shall set this field to '1'; otherwise,
 35 the base station shall set this field to '0'.
- 36 REV_PDCH_EP_SIZE_NUM - Number of occurrences of Reverse Packet Data Channel
 37 Payload Adjustment Gains.
 38 If REV_PDCH_PAYLOAD_ADJ_INCL is set to '0', the base
 39 station shall omit this field; otherwise, the base station shall
 40 include this field, and set it as follows.
- 41 The base station shall set this field to one less than the
 42 number of occurrences of the following field. The fields are
 43 listed per encoder packet size, in the following ascending
 44 order: 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312,
 45 15384, 18456 bits.

1 If REV_PDCH_PAYLOAD_ADJ_INCL is set to '1', the base station shall include
 2 REV_PDCH_EP_SIZE_NUM+1 occurrences of the following record:

3 REV_PDCH_PAYLOAD_ADJ_GAIN - Reverse Packet Data Channel Payload Adjustment
 4 Gain.

5 The base station shall set this field to the value of the nominal
 6 attribute gain adjustment that the mobile station is to make
 7 for the transmission attributes for the power level of R-PDCH,
 8 for the i-th encoder packet size.

9 The base station shall set the value in the range from -40 to
 10 56 inclusive. The base station shall set this field to the
 11 correction factor expressed as a two's complement value in
 12 units of 0.125 dB.

13 REV_PDCH_BOOST_ADJ_INCL - Reverse Packet Data Channel Adjustment included
 14 field.

15 If the attribute adjustment gains for the Reverse Packet Data
 16 Channel are included per boosted mode in this message, the
 17 base station shall set this field to '1'; otherwise, the base
 18 station shall set this field to '0'.

19 If REV_PDCH_BOOST_ADJ_INCL is set to '1', the base station shall include two
 20 occurrences of the following record. The first occurrence of this field is for the non-boosted
 21 mode, while the second is for the boosted mode.

22 REV_PDCH_BOOST_ADJ_GAIN - Reverse Packet Data Channel Boost-dependent
 23 Adjustment Gain.

24 The base station shall set this field to the value of the nominal
 25 attribute gain adjustment that the mobile station is to make
 26 for the transmission attributes for the power level of R-PDCH.

27 The base station shall set the value in the range from -40 to
 28 56 inclusive. The first occurrence of this field is for the non-
 29 boosted mode, while the second is for the boosted mode. The
 30 base station shall set this field to the correction factor
 31 expressed as a two's complement value in units of 0.125 dB.

32 REV_PDCH_SUBPACKET_ADJ_INCL - Reverse Packet Data Channel Subpacket
 33 Adjustment included field.

34 If the attribute adjustment gains for the Reverse Packet Data
 35 Channel are included per subpacket transmission round in
 36 this message, the base station shall set this field to '1';
 37 otherwise, the base station shall set this field to '0'.

38 REV_PDCH_RETRX_NUM - Number of occurrences of the Reverse Packet Data
 39 Channel Subpacket Adjustment Gains.

40 If REV_PDCH_SUBPACKET_ADJ_INCL is set to '0', the base
 41 station shall omit this field; otherwise, the base station shall
 42 include this field, and set it as follows.

43 The base station shall set this field to one less than the
 44 number of occurrences of the following field.

1 If REV_PDCH_SUBPACKET_ADJ_INCL is set to '1', the base station shall include
2 (REV_PDCH_RETRX_NUM+1) occurrences of the following record:

3 REV_PDCH_SUBPACKET_ADJ_GAIN - Reverse Packet Data Channel Subpacket
4 Adjustment Gain.

5 The base station shall set this field to the value of the nominal
6 attribute gain adjustment that the mobile station is to make
7 for the transmission attributes for the power level of R-PDCH
8 on the i-th transmission round.

9 The base station shall set the value in the range from -40 to
10 56 inclusive. The base station shall set this field to the
11 correction factor expressed as a two's complement value in
12 units of 0.125 dB.

13 REV_PDCH_ATTRIBUTE_ADJ_INCL - Reverse Packet Data Channel Attribute
14 Adjustment included field.

15 If the attribute adjustment gains for the Reverse Packet Data
16 Channel are included per encoder packet size and per
17 subpacket transmission round in this message, the base
18 station shall set this field to '1'; otherwise, the base station
19 shall set this field to '0'.

20 REV_PDCH_EP_SIZE_NUM_1 - Number of occurrences of the Reverse Packet Data
21 Channel Attribute Adjustment Gains record.

22 If REV_PDCH_ATTRIBUTE_ADJ_INCL is set to '0', the base
23 station shall omit this field; otherwise, the base station shall
24 include this field, and set it as follows.

25 The base station shall set this field to one less than the
26 number of occurrences of the following subrecord. The
27 subrecords are listed per encoder packet size, in the following
28 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
29 9240, 12312, 15384, 18456 bits.

30 If REV_PDCH_ATTRIBUTE_ADJ_INCL is set to '1', the base station shall include
31 (REV_PDCH_EP_SIZE_NUM_1+1) occurrences of the following subrecord:

32 REV_PDCH_RETRX_NUM_1 - Number of occurrences of the Reverse Packet Data
33 Channel Subpacket Adjustment Gains.

34 The base station shall set this field to one less than the
35 number of occurrences of the following field.

36 The base station shall include (REV_PDCH_RETRX_NUM_1+1) occurrences of the following
37 record:

38 The base station shall include 2 occurrences of the following field. The first occurrence of
39 this field is for the non-boosted mode, while the second is for the boosted mode.

1	REV_PDCH_ATTRIBUTE_ADJ_GAIN	-	Reverse Packet Data Channel Attribute
2			Adjustment Gain.
3			The base station shall set this field to the value of the nominal
4			attribute gain adjustment that the mobile station is to make
5			for the transmission attributes for the power level of R-PDCH,
6			for the i-th encoder packet size on a j-th transmission round,
7			using the non-boosted or boosted mode.
8			The base station shall set the value in the range from -40 to
9			56 inclusive. The base station shall set this field to the
10			correction factor expressed as a two's complement value in
11			units of 0.125 dB.
12	RESERVED	-	Reserved bits.
13			The base station shall add reserved bits as needed in order to
14			make the length of the entire record equal to an integer
15			number of octets. The base station shall set these bits to '0'.
16	BCMC_LPM_INCL	-	BCMC Logical to Physical Mapping included indicator.
17			The base station shall set this field to '1' if BCMC Logical to
18			Physical Mapping is included in this message; otherwise, the
19			base station shall set this field to '0'.
20	BCMC_LPM_IND	-	BCMC Logical to Physical Mapping indicator.
21			If the BCMC_LPM_INCL field is set to '0', the base station
22			shall omit this field; otherwise, the base station shall include
23			this field and set it as follows:
24			The base station shall set this field to '01' or '10' as shown in
25			Table 3.7.5.20-2 corresponding to the Logical to Physical
26			Mapping indicator.
27	NUM_BCMC_PROGRAMS-		Number of BCMC Programs
28			If the BCMC_LPM_IND field is not included or is included and
29			is not set to '01', the base station shall omit this field;
30			otherwise, the base station shall include this field and set it
31			as follows:
32			The base station shall set this field to the number of BCMC
33			programs included in this LPM record minus 1.
34	The base station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following		
35	variable length record:		
36	BCMC_PROGRAM_ID_LEN	-	Length of BCMC_PROGRAM_ID field
37			The base station shall set this field to one less than the
38			length, in bits, of the BCMC_PROGRAM_ID of this program.
39	BCMC_PROGRAM_ID	-	BCMC program Identifier
40			The length of this field shall be one more than the value of
41			BCMC_PROGRAM_ID_LEN bits.
42			The base station shall set this field to the identifier of the
43			BCMC program to which this Logical to Physical Mapping
44			entry applies.

- 1 BCMC_FLOW_DISCRIMINATOR_LEN - Length of BCMC_FLOW_DISCRIMINATOR field
 2 The base station shall set this field to the length, in bits, of
 3 the BCMC_FLOW_DISCRIMINATOR of this program.
- 4 NUM_FLOW_DISCRIMINATOR - Number of flow discriminators
 5 The length of this field shall be determined by the value of the
 6 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
 7 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
 8 is omitted; otherwise, the length of this field shall be
 9 BCMC_FLOW_DISCRIMINATOR_LEN bits.
 10 The base station shall set this field to the number of flow
 11 discriminators included for this program.
- 12 If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include
 13 NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;
 14 otherwise, the base station shall include 1 occurrence of the following variable length
 15 record:
- 16 BCMC_FLOW_DISCRIMINATOR - BCMC Flow discriminator.
 17 The length of this field shall be determined by the value of the
 18 BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
 19 BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
 20 is omitted; otherwise, the length of this field shall be
 21 BCMC_FLOW_DISCRIMINATOR_LEN bits.
 22 The base station shall set this field to the BCMC flow
 23 discriminator to which this Logical to Physical Mapping entry
 24 applies.
- 25 PHYSICAL_RESOURCE - Physical resource identifier.
 26 The base station shall set this field to the physical resource
 27 identifier '0000', '0001', '0010', '0011' as shown in Table
 28 3.7.5.20-4 to which the logical BCMC traffic channel
 29 corresponding to BCMC_FLOW_ID specified in this BCMC
 30 Logical to Physical Mapping entry is to be mapped.
- 31 FORWARD_FLAG - Forward mapping indicator.
 32 The base station shall set this field to '1' if the logical to
 33 physical channel mapping specified in this record applies to
 34 forward logical channels; otherwise, the base station shall set
 35 this field to '0'.
- 36 REVERSE_FLAG - Reverse mapping indicator.
 37 The base station shall set this field to '1' if the logical to
 38 physical channel mapping specified in this record applies to
 39 reverse logical channels; otherwise, the base station shall set
 40 this field to '0'.
- 41 BSR_ID_INCL - BSR_ID included indicator.
 42 The base station shall set this field to '1' if BSR_ID field is
 43 included in this message; otherwise, the base station shall set
 44 this field to '0' and include FOR_TRAFFIC, REV_TRAFFIC
 45 fields in this message.

1

Table 3.7.5.20-6. REV_TRAFFIC Codes

REV_TRAFFIC (binary)	Description
0000	The BCMC flow does not use Reverse Traffic Channel traffic.
0001	The BCMC flow uses primary traffic on the Reverse Traffic Channel.
0010	The BCMC flow uses secondary traffic on the Reverse Traffic Channel.
0011	Reserved.
0100	The BCMC flow uses the Reverse Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other REV_TRAFFIC codes are reserved.	

2

REV_PDCH_PARAMS_INCL

- Reverse PDCH Parameters Included indicator.

3

The base station shall set this field to '1' if the reverse Packet Data Channel parameters are included; otherwise, the base station shall set this field to '0'.

4

5

6

REV_PDCH_PARAMS_1_INCL

- Reverse Packet Data Channel parameters subset included indicator.

7

8

If REV_PDCH_PARAMS_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.

9

10

11

The base station shall set this field to '1' if the following R-PDCH parameters are included in this message; otherwise, the base station shall set this field to '0'.

12

13

14

REV_PDCH_MAX_AUTO_TPR

- Reverse Packet Data Channel maximum traffic to pilot ratio for autonomous transmission.

15

16

If REV_PDCH_PARAMS_1_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

17

18

19

The base station shall set this field to the maximum traffic to pilot ratio for autonomous transmission on the Reverse Packet Data Channel (see [2] and [3]).

20

21

22

The base station shall set this field to a value in the range 0 to 18 dB inclusive in units of 0.125 dB.

23

24

REV_PDCH_NUM_ARQ_ROUNDS_NORMAL - Maximum number of allowed ARQ rounds on the Reverse PDCH in the non-boosted mode.

25

26

If REV_PDCH_PARAMS_1_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

27

28

1 The base station shall set this field to one less the maximum
2 number of allowed ARQ rounds on the Reverse PDCH in the
3 non-boosted mode. The base station shall set this field to 0, 1,
4 or 2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

5 REV_PDCH_OPER_PARMS_INCL - Reverse Packet Data Channel operational parameters
6 included indicator.

7 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
8 omit this field; otherwise, the base station shall include this
9 field and set it as follows.

10 The base station shall set this field to '1' if the following R-
11 PDCH operational parameters are included in this message;
12 otherwise, the base station shall set this field to '0'.

13 REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET - Maximum Allowed Reverse
14 PDCH encoder packet size.

15 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
16 included and set to '0', the base station shall omit this field;
17 otherwise, the base station shall include this field and set it
18 as follows.

19 The base station shall set this field to the maximum size
20 encoder packet that the mobile station is allowed to use. (see
21 [2] and [3]).

22 The base station shall set this field to a value in the range 0 to
23 10 inclusive, corresponding to the encoder packet sizes 192,
24 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, and
25 18456 bits respectively.

26 REV_PDCH_DEFAULT_PERSISTENCE - Reverse Packet Data Channel default initial
27 persistence.

28 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
29 included and set to '0', the base station shall omit this field;
30 otherwise, the base station shall include this field and set it
31 as follows:

32 The base station shall set this field to '1' if the mobile station
33 is to be persistent at the call setup; otherwise, the base
34 station shall set this field to '0' (See [3]).

35 REV_PDCH_RESET_PERSISTENCE - Reverse Packet Data Channel reset persistence
36 indicator.

37 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
38 included and set to '0', the base station shall omit this field;
39 otherwise, the base station shall include this field and set it
40 as follows:

41 The base station shall set this field to '1' if, at the end of a
42 persistent grant, the mobile station shall reset its persistent
43 indicator to persistent; otherwise, the base station shall set
44 this field to '0' if the mobile station shall reset its persistent
45 indicator to non-persistent (See [3]).

46 REV_PDCH_GRANT_PRECEDENCE - Reverse Packet Data Channel Grant Precedence
47 Indicator.

1 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
 2 included and set to '0', the base station shall omit this field;
 3 otherwise, the base station shall include this field and set it
 4 as follows:

5 The base station shall set this field to '1' if unicast Forward
 6 Grant Channel messages have precedence over Rate Control
 7 commands; otherwise, the base station shall set this field to
 8 '0' to indicate that Rate Control down commands from non-
 9 serving sectors have precedence over Forward Grant Channel
 10 messages (see [3]).

11 REV_PDCH_MSIB_SUPPORTED - Reverse Packet Data Channel MSIB usage indicator.

12 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
 13 included and set to '0', the base station shall omit this field;
 14 otherwise, the base station shall include this field and set it
 15 as follows:

16 The base station shall set this field to '1' if the mobile station
 17 is to use the MSIB bit on the Reverse Packet Data Control
 18 Channel; otherwise, the base station shall set this field to
 19 '0'(See [3]).

20 REV_PDCH_ALWAYS_ACK_FINAL_ROUND - Reverse Packet Data Channel Final Round
 21 Always Acknowledged

22 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
 23 included and set to '0', the base station shall omit this field;
 24 otherwise, the base station shall include this field and set it
 25 as follows:

26 The base station shall set this field to '1' if all of the following
 27 conditions are true:

- 28 • The Forward Acknowledgment Channel is assigned to
 29 the mobile station,
- 30 • The base station does not send an acknowledgment on
 31 the assigned Forward Acknowledgment Channel
 32 whenever a Reverse Packet Data Channel
 33 transmission is not successfully decoded on the last
 34 ARQ round, and
- 35 • The base station sends an acknowledgment on the
 36 assigned Forward Acknowledgment Channel to the
 37 mobile station whenever a Reverse Packet Data
 38 Channel transmission is successfully decoded on the
 39 last ARQ round,

40 Otherwise, the base station shall set this field to '0'.

41 REV_PDCH_SOFT_HANDOFF_RESET_IND - Reverse Packet Data Channel soft handoff
 42 reset indicator.

- 1 If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
 2 included and set to '0', the base station shall omit this field;
 3 otherwise, the base station shall include this field and set it
 4 as follows:
- 5 The base station shall set this field to '1' if the mobile station
 6 is to initialize RPDCHCF when soft selection occurs in the
 7 FPDCHCF; otherwise, the base station shall set this field to '0'
 8 (see [3]).
- 9 REV_PDCH_BOOST_PARMS_INCL - Reverse Packet Data Channel boosted mode
 10 parameters included indicator.
- 11 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
 12 omit this field; otherwise, the base station shall include this
 13 field and set it as follows.
- 14 The base station shall set this field to '1' if the Reverse Packet
 15 Data Channel boosted mode parameters are included;
 16 otherwise, the base station shall set this field to '0'.
- 17 REV_PDCH_NUM_ARQ_ROUNDS_BOOST - Maximum number of allowed ARQ rounds
 18 on the Reverse PDCH in the boosted mode.
- 19 If REV_PDCH_BOOST_PARMS_INCL is omitted, or if it is
 20 included and set to '0', the base station shall omit this field;
 21 otherwise, the base station shall include this field and set it
 22 as follows.
- 23 The base station shall set this field to one less the maximum
 24 number of allowed ARQ rounds on the Reverse PDCH in the
 25 boosted mode. The base station shall set this field to 0, 1, or 2
 26 corresponding to 1, 2, or 3 rounds respectively (See [3]).
- 27 REV_PDCH_BOOST_OVERSHOOT - Reverse Packet Data Channel Boost Overshoot.
- 28 If REV_PDCH_BOOST_PARMS_INCL is omitted, or if it is
 29 included and set to '0', the base station shall omit this field;
 30 otherwise, the base station shall include this field and set it
 31 as follows.
- 32 The base station shall set this field to the boosted QoS
 33 parameter that defines the overshoot allowed by boosted QoS
 34 on the Reverse Packet Data Channel (see [3]).
- 35 The base station shall set this field to a value in the range 0 to
 36 3.875 dB inclusive in units of 0.125 dB.
- 37 REV_REQCH_ENABLED - Reverse Request Channel Enabled.
- 38 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
 39 omit this field; otherwise, the base station shall include this
 40 field and set it as follows.
- 41 The base station shall set this field to '1' if the mobile station
 42 is to enable the Reverse Request Channel; otherwise, the base
 43 station shall set this field to '0'.
- 44 REV_REQCH_PARMS_INCL - Reverse Request Channel Parameters Included Indicator.

1 If REV_REQCH_ENABLED is omitted, or if it is included and
2 is set to '0', the base station shall omit this field; otherwise,
3 the base station shall include this field and set it as follows.

4 The base station shall set this field to '1' if the Reverse
5 Request Channel Parameters are included hereafter;
6 otherwise, the base station shall set this field to '0'.

7 REV_REQCH_QUICK_REPEAT_ALLOWED - Reverse Request Channel Quick Repeat
8 Allowed indicator.

9 If REV_REQCH_PARAMS_INCL is omitted, or if it is included
10 and set to '0', the base station shall omit this field; otherwise,
11 the base station shall include this field and set it as follows.

12 The base station shall set this field to '1' if quick repeats are
13 allowed on the Reverse Request Channel; otherwise, the base
14 station shall set this field to '0' (see [3]).

15 REV_REQCH_POWER_REPORTS_PARAMS_INCL - Reverse Request Channel Power Report
16 Parameters Included indicator.

17 If REV_REQCH_PARAMS_INCL is omitted, or if it is included
18 and set to '0', the base station shall omit this field; otherwise,
19 the base station shall include this field and set it as follows.

20 The base station shall set this field to '1' if the parameters
21 needed for power status reports are included hereafter;
22 otherwise, the base station shall set this field to '0'.

23 REV_REQCH_POWER_HEADROOM_INCREASE- Reverse Request Channel Power
24 headroom increase delta to trigger power report.

25 If REV_REQCH_POWER_REPORTS_PARAMS_INCL is omitted,
26 or if it is included and set to '0', the base station shall omit
27 this field; otherwise, the base station shall include this field
28 and set it as follows.

29 The base station shall set this field to the power headroom
30 increase delta that triggers a power report (see [3]).

31 The base station shall set this field to a value in the range 0 to
32 18 dB inclusive in units of 1 dB, or to 31 which means plus
33 infinity.

34 REV_REQCH_POWER_HEADROOM_DECREASE - Reverse Request Channel Power
35 headroom decrease delta to trigger power report.

36 If REV_REQCH_POWER_REPORTS_PARAMS_INCL is omitted,
37 or if it is included and set to '0', the base station shall omit
38 this field; otherwise, the base station shall include this field
39 and set it as follows.

40 The base station shall set this field to the power headroom
41 decrease delta that triggers a power report (see [3]).

42 The base station shall set this field to a value in the range 0 to
43 18 dB inclusive in units of 1 dB, or to 31 which means plus
44 infinity.

45 REV_REQCH_HEADROOM_DURATION - Reverse Request Channel minimum power
46 headroom update trigger interval.

1 If REV_REQCH_POWER_REPORTS_PARMS_INCL is omitted,
 2 or if it is included and set to '0', the base station shall omit
 3 this field; otherwise, the base station shall include this field
 4 and set it as follows.

5 The base station shall set this field to the minimum power
 6 headroom update trigger interval (see [3]).

7 The base station shall set this field to a value in the range 0 to
 8 5.10 seconds inclusive in units of 20 ms.

9 REV_REQCH_MAX_POWER_UPDATE_DURATION - Reverse Request Channel
 10 maximum power headroom update trigger interval.

11 If REV_REQCH_POWER_REPORTS_PARMS_INCL is omitted,
 12 or if it is included and set to '0', the base station shall omit
 13 this field; otherwise, the base station shall include this field
 14 and set it as follows.

15 The base station shall set this field to the maximum power
 16 headroom update trigger interval (see [3]).

17 The base station shall set this field to a value in the range
 18 0.02 to 5.10 seconds inclusive in units of 20 ms, or to 0
 19 which means plus infinity.

20 REV_PDCH_CRC_PARMS_INCL - Reverse Packet Data Channel Common Rate Control
 21 Parameters Included Indicator.

22 If REV_PDCH_PARMS_INCL is set to '0', the base station shall
 23 omit this field; otherwise, the base station shall include this
 24 field and set it as follows.

25 The base station shall set this field to '1' if Reverse Packet
 26 Data Channel Common Rate Control Parameters are included
 27 hereafter; otherwise, the base station shall set this field to '0'.

28 REV_PDCH_INIT_TARGET_TPR - Reverse Packet Data Channel initial target traffic to
 29 pilot ratio.

30 If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
 31 included and set to '0', the base station shall omit this field;
 32 otherwise, the base station shall include this field and set it
 33 as follows.

34 The base station shall set this field to the initial target traffic
 35 to pilot ratio on the Reverse Packet Data Channel (see [3]).

36 The base station shall set this field to a value in the range 0 to
 37 18 dB inclusive in units of 0.125 dB.

38 REV_PDCH_MAX_TARGET_TPR - Reverse Packet Data Channel maximum target traffic
 39 to pilot ratio.

40 If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
 41 included and set to '0', the base station shall omit this field;
 42 otherwise, the base station shall include this field and set it
 43 as follows.

44 The base station shall set this field to the maximum target
 45 traffic to pilot ratio on the Reverse Packet Data Channel (see
 46 [3]).

- 1 REV_PDCH_SR_ID_MAP - Number of Reverse PDCH Encoder Packet sizes.
 2 If REV_PDCH_PARAMS_INCL is set to '0', the base station shall
 3 omit this field; otherwise, the base station shall include this
 4 field and set it as follows.
 5 The base station shall set the i-th bit to '1' for each SR_ID
 6 associated with the Reverse Packet Data Channel. The LSB
 7 corresponds to SR_ID 0. The MSB corresponds to SR_ID 6.
- 8 The base station shall include the following subrecord for each bit set to '1' in
 9 REV_PDCH_SR_ID_MAP:
- 10 REV_PDCH_BOOST_ALLOWED - Reverse PDCH TPR Boost Allowed indicator.
 11 If REV_PDCH_PARAMS_INCL is omitted or is included and is
 12 set to '0', then the base station shall omit this field; otherwise,
 13 the base station shall include this field and set it as follows:
 14 The base station shall set this field to '1' if TPR (traffic to pilot
 15 ratio) power boost on the Reverse PDCH is allowed; otherwise,
 16 the base station shall set this field to '0'.
- 17 REV_PDCH_AUTO_ALLOWED - Reverse PDCH Autonomous Transmission Allowed
 18 indicator.
 19 If REV_PDCH_PARAMS_INCL is set to '0', the base station shall
 20 omit this field; otherwise, the base station shall include this
 21 field and set it as follows.
 22 The base station shall set this field to '1' if autonomous
 23 transmission on the Reverse PDCH is allowed; otherwise, the
 24 base station shall set this field to '0'.
- 25 If REV_REQCH_PARAMS_INCL, is not included or is included and is set to '0', the base
 26 station shall omit the following fields; otherwise, the base station shall include the following
 27 subrecord as described hereafter;
- 28 • The base station shall include an occurrence of the following subrecord for each bit
 29 set to '1' in REV_PDCH_SR_ID_MAP,
 - 30 • The base station shall include an additional subrecord for the aggregate traffic
 31 across all SR_ID's, and,
 - 32 • The base station shall set REV_REQCH_USE_POWER_REPORTS,
 33 REV_REQCH_USE_BUFFER_REPORTS, or REV_REQCH_USE_WATERMARKS to '1'
 34 in at least one of these subrecords.
- 35 REV_REQCH_MIN_DURATION - Reverse Request Channel Minimum Duration.
 36 The base station shall set this field to the minimum duration
 37 between REQCH messages for this sr_id(see [3]).
 38 The base station shall set this field to a value in the range 0 to
 39 5.10 seconds inclusive in units of 20 ms.
- 40 REV_REQCH_USE_POWER_REPORTS - Reverse Request Channel Use of Power Status
 41 Reports indicator.

1 If REV_REQCH_POWER_REPORTS_PARMS_INCL is omitted,
 2 or if it is included and set to '0', the base station shall omit
 3 this field; otherwise, the base station shall include this field
 4 and set it as follows.

5 The base station shall set this field to '1' if power status
 6 reports are allowed; otherwise, the base station shall set this
 7 field to '0'.

8 REV_REQCH_USE_BUFFER_REPORTS - Reverse Request Channel Use of Buffer Status
 9 Reports indicator.

10 The base station shall set this field to '1' if buffer status
 11 reports are allowed; otherwise, the base station shall set this
 12 field to '0'.

13 REV_REQCH_USE_WATERMARKS - Reverse Request Channel Use of Watermark Reports
 14 indicator.

15 The base station shall set this field to '1' if watermark reports
 16 are allowed; otherwise, the base station shall set this field to
 17 '0'.

18 REV_REQCH_USE_DEFAULT_TAB - Reverse Packet Data Channel use default buffer
 19 size table indicator.

20 If REV_REQCH_USE_POWER_REPORTS is included and set
 21 to '1', or if REV_REQCH_USE_BUFFER_REPORTS is set to '1',
 22 or if REV_REQCH_USE_WATERMARKS is set to '1', the base
 23 station shall include this field and set it according to Table
 24 3.7.5.20.7; otherwise, the base station shall omit this field.

25 Table 3.7.5.20.7. Encoding of REV_REQCH_USE_DEFAULT_TAB

26

REV_REQCH_US E_DEFAULT_TAB	Descriptions
'000'	Use the REV_REQCH_BUF_QUANT_PARM_1 field and REV_REQCH_BUF_QUANT_PARM_2 field to generate a buffer size table
'001'	Use the default buffer size table as shown in Table Table 3.7.5.20.8
'010'	Use the default buffer size table as shown in Table Table 3.7.5.20.9
'011' – '111'	Reserved

1 REV_REQCH_BUF_QUANT_PARM_1 - Reverse Request Channel First Buffer Quantization
2 Parameter.

3 If REV_REQCH_USE_DEFAULT_TAB is omitted, or if it is
4 included and not set to '000', the base station shall omit this
5 field; otherwise, the base station shall include this field and
6 set it as follows.

7 The base station shall set this field to the first Reverse Packet
8 Data Channel buffer size quantization parameter.

9 The base station shall not set this field to '0000000' if
10 REV_REQCH_BUF_QUANT_PARM_2 is equal to '00000000'
11 (see [3]).

12 REV_REQCH_BUF_QUANT_PARM_2 - Reverse Request Channel Second Buffer
13 Quantization Parameter.

14 If REV_REQCH_USE_DEFAULT_TAB is omitted, or if it is
15 included and not set to '000', the base station shall omit this
16 field; otherwise, the base station shall include this field and
17 set it as follows.

18 The base station shall set this field to the second Reverse
19 Packet Data Channel buffer size quantization parameter.

20 The base station shall not set this field to '0000000' if
21 REV_REQCH_BUF_QUANT_PARM_1 is equal to '00000000'
22 (see [3]).

23 REV_REQCH_HIGH_WATERMARK_1- Reverse Request Channel First High Watermark
24 Parameter.

25 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
26 station shall omit this field; otherwise, the base station shall
27 include this field and set it to the first high watermark
28 parameter (for high priority reports) for this sr_id:

29 REV_REQCH_HIGH_WATERMARK_2 - Reverse Request Channel Second High Watermark
30 Parameter.

31 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
32 station shall omit this field; otherwise, the base station shall
33 include this field and set it to the second high watermark
34 parameter (for high priority report) for this sr_id.

35 REV_REQCH_LOW_WATERMARK_1 - Reverse Request Channel First Low Watermark
36 Parameter .

37 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
38 station shall omit this field; otherwise, the base station shall
39 include this field and set it to the first low watermark
40 parameter (for high priority reports) for this sr_id.

41 REV_REQCH_LOW_WATERMARK_2 - Reverse Request Channel Second Low
42 WatermarkParameter.

43 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
44 station shall omit this field; otherwise, the base station shall
45 include this field and set it to the second low watermark
46 prameter (for high priority reports) for this sr_id.

- 1 REV_REQCH_CEILING_1 - Reverse Request Channel Ceiling first parameter.
2 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
3 station shall omit this field; otherwise, the base station shall
4 include this field and set it to the first high ceiling level
5 parameter for this sr_id .
- 6 REV_REQCH_CEILING_2 - Reverse Request Channel Ceiling second parameter.
7 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
8 station shall omit this field; otherwise, the base station shall
9 include this field and set it to the second high ceiling level
10 parameter for this sr_id.
- 11 REV_REQCH_FLOOR_1 - Reverse Request Channel Floor first parameter.
12 If REV_REQCH_USE_WATERMARKS is equal to '0',the base
13 station shall omit this field; otherwise, the base station shall
14 include this field and set it to the first low floor level
15 parameters for this sr_id.
- 16 REV_REQCH_FLOOR_2 - Reverse Request Channel Floor second parameter.
17 If REV_REQCH_USE_WATERMARKS is equal to '0', the base
18 station shall omit this field; otherwise, the base station shall
19 include this field and set it to the second low floor level
20 parameter for this sr_id.
- 21 RESERVED - Reserved bits.
22 The base station shall add reserved bits as needed in order to
23 make the length of the entire record equal to an integer
24 number of octets. The base station shall set these bits to '0'.
25

1 3.7.5.21 Multiple Character Extended Display

2 If P_REV_IN_USE is equal to or greater than nine, the base station shall not transmit this
 3 information record to the mobile station.

4 This information record allows the network to supply supplementary service multiple
 5 character display information that may be displayed by the mobile station.

6

Type-Specific Field	Length (bits)
MC_EXT_DISPLAY_IND	1
DISPLAY_TYPE	7

One or more occurrences of the following record:

{

DISPLAY_TAG	8
NUM_RECORD	8

NUM_RECORD occurrences of the following record

{ (NUM_RECORD)

DISPLAY_ENCODING	8
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHAR _i	Variable
-------------------	----------

} (NUM_FIELDS)

} (NUM_RECORDS)

}

RESERVED	0 - 7 (as needed)
----------	-------------------

7

8 MC_EXT_DISPLAY_IND - The indicator of Multiple Character Extended Display
 9 information record.

10 The base station shall set this field to '1'.

11 DISPLAY_TYPE - The type of display.

12 The base station shall set this field to the DISPLAY_TYPE
 13 value shown in Table 3.7.5.16-1 corresponding to the type of
 14 display, as defined in [8] Annex D.

15 DISPLAY_TAG - The indicator of the display information.

16 There are three types of display tags: mandatory control tags
 17 (Blank and Skip), display text tags, and optional control tags,
 18 see [8] Annex D.

1 The base station shall set this field to the DISPLAY_TAG value
 2 shown in Table 3.7.5.16-2 corresponding to the type of
 3 information contained in the following CHAR_i field, as defined
 4 in [8] Annex D.

5 NUM_RECORD - The number of records displaying.

6 The base station shall set this field to the number of records
 7 of display text.

8 If the DISPLAY_TAG field is equal to '10000000' or
 9 '10000001', the base station shall set this field to '00000000'.

10 The base station shall include NUM_RECORD occurrences of the following record.

11 DISPLAY_ENCODING - Display encoding.

12 The three most significant bits of this field shall be set to '000'
 13 and the five least significant bit of this field shall be set to a
 14 value as specified in [30] to indicate the display encoding type
 15 used.

16 Support of an encoding method does not imply that the entire
 17 encodable character set must be supported. In general, once
 18 the supported character set is determined, various subsets of
 19 the character set can be supported. If a message is
 20 comprised entirely of characters from a supported subset of a
 21 character set, it can be displayed. If a message contains an
 22 unsupported character of a character set, it can be discarded.

23 NUM_FIELDS - Number of occurrences of the CHAR_i field.

24 The base station shall set this field to the number of
 25 characters included in this record.

26 CHAR_i - Character.

27 The base station shall include NUM_FIELDS occurrences of
 28 this field, one for each character to be displayed.

29 RESERVED - Reserved bits.

30 The base station shall add reserved bits as needed in order to
 31 make the length of the entire record equal to an integer
 32 number of octets. The base station shall set these bits to '0'.

33

1 3.7.5.22 Call Waiting Indicator

2 This information record allows the base station to inform the mobile station that a call
 3 waiting call is available. This indicator may be used to suppress the generation of the
 4 local dial tone in mobile stations that provide locally generated dial tone.

5

Type-Specific Field	Length (bits)
CALL_WAITING_INDICATOR	1
RESERVED	7

6

7 CALL_WAITING_INDICATOR - Call waiting indicator.

8 The base station shall set this field to a '1' to indicate to the
 9 mobile station that a call is waiting. The base station shall
 10 set this field to a '0' if the call waiting call is not answered by
 11 the mobile station and the call waiting call goes away.

12 RESERVED - Reserved bits.

13 The base station shall set this field to '0000000'.

14

1 3.7.5.23 Enhanced Multiple Character Extended Display

2 This information record allows the network to supply supplementary service multiple
3 character display information that may be displayed by the mobile station.

4

Type-Specific Field	Length (bits)
DISPLAY_TYPE	7
NUM_DISPLAYS	8

NUM_DISPLAYS+1 occurrences of the following variable length record:

{ (NUM_DISPLAYS)+1

DISPLAY_TAG	8
NUM_RECORD	8

NUM_RECORD occurrences of the following record

{ (NUM_RECORD)

RECORD_LENGTH	8
DISPLAY_ENCODING	8
NUM_FIELDS	8

NUM_FIELDS occurrences of the following field:

{ (NUM_FIELDS)

CHAR _i	Variable
-------------------	----------

} (NUM_FIELDS)

RESERVED	0 - 7 (as needed)
----------	-------------------

} (NUM_RECORD)

} (NUM_DISPLAYS)+1

RESERVED_1	0 - 7 (as needed)
------------	-------------------

- 5 DISPLAY_TYPE - The type of display.
- 6 The base station shall set this field to the DISPLAY_TYPE
- 7 value shown in Table 3.7.5.16-1 corresponding to the type of
- 8 display, as defined in [8] Annex D.
- 9 NUM_DISPLAYS - The number of occurrences of display text included.
- 10 The base station shall set this field to one less then the
- 11 number of occurrences of display text included.
- 12 The base station shall include NUM_DISPLAYS + 1
- 13 occurrences of the following variable-field record:
- 14 DISPLAY_TAG - The indicator of the display information.

- 1 There are three types of display tags: mandatory control tags
 2 (Blank and Skip), display text tags, and optional control tags,
 3 see [8] Annex D.
- 4 The base station shall set this field to the DISPLAY_TAG value
 5 shown in Table 3.7.5.16-2 corresponding to the type of
 6 information contained in the following CHARi field, as defined
 7 in [8] Annex D.
- 8 NUM_RECORD - The number of records displaying.
 9 The base station shall set this field to the number of records
 10 of display text.
 11 If the DISPLAY_TAG field is equal to '10000000' or
 12 '10000001', the base station shall set this field to '00000000'.
- 13 The base station shall include NUM_RECORD occurrences of the following record.
- 14 RECORD_LENGTH - Display text record length.
 15 The base station shall set this field to the number of octets
 16 included in this display text record, of specified encoding,
 17 including this field.
- 18 DISPLAY_ENCODING - Display encoding.
 19 The three most significant bits of this field shall be set to '000'
 20 and the five least significant bit of this field shall be set to a
 21 value as specified in [30] to indicate the display encoding type
 22 used.
- 23 Support of an encoding method does not imply that the entire
 24 encodable character set must be supported. In general, once
 25 the supported character set is determined, various subsets of
 26 the character set can be supported. If a message is
 27 comprised entirely of characters from a supported subset of a
 28 character set, it can be displayed. If a message contains an
 29 unsupported character of a character set, it can be discarded.
- 30 NUM_FIELDS - Number of occurrences of the CHARi field.
 31 The base station shall set this field to the number of
 32 characters included in this record.
- 33 CHARi - Character.
 34 The base station shall include NUM_FIELDS occurrences of
 35 this field, one for each character to be displayed.
- 36 RESERVED - Reserved bits.
 37 The base station shall add reserved bits as needed in order to
 38 make the length of the entire record, of specified encoding,

1 equal to an integer number of octets. The base station shall
2 set these bits to '0'.

3 RESERVED_1 - Reserved bits for octet alignment.

4 The mobile station shall add the minimum number of bits
5 necessary to make the record length in bits an integral
6 multiple of 8. The mobile station shall set these bits to '0'.

7

8

3.7.6 Information Elements

3.7.6.1 Pilot Record Type Specific Fields

If PILOT_REC_TYPE is equal to '000', the Pilot Record Type Specific fields include the following fields:

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

TD_POWER_LEVEL - TD transmit power level.

The base station or mobile station shall set this field to the TD transmit power level relative to that of the Forward Pilot Channel, as specified in Table 3.7.6.1-1.

Table 3.7.6.1-1. TD Transmit Power Level

TD_POWER_LEVEL	Transmit Power Level
00	9 dB below the Forward Pilot Channel transmit power
01	6 dB below the Forward Pilot Channel transmit power
10	3 dB below the Forward Pilot Channel transmit power
11	Same as the Forward Pilot Channel transmit power

TD_MODE - Transmit Diversity mode.

The base station or mobile station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.6.1-2.

Table 3.7.6.1-2. TD Mode

TD_MODE	Descriptions
00	OTD (Orthogonal Transmit Diversity) mode
01	STS (Space Time Spreading) mode
10-11	Reserved

RESERVED - Reserved bits.

1 The base station or mobile station shall set this field to
 2 '000000'.

3
 4 If PILOT_REC_TYPE is equal to '001', the base station or mobile station shall include the
 5 following fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

- 6
 7 QOF - Quasi-orthogonal function index.
 8 The base station or mobile station shall set this field to the
 9 index of the Quasi-orthogonal function (see [2]).
 10 WALSH_LENGTH - Length of the Walsh Code.
 11 The base station or mobile station shall set this field to the
 12 WALSH_LENGTH value shown in Table 3.7.6.1-3
 13 corresponding to the length of the Walsh code for the pilot
 14 that is used as the Auxiliary pilot.

15 **Table 3.7.6.1-3. Walsh Code Length**

WALSH_LENGTH (binary)	Length of the Walsh Code
'000'	64
'001'	128
'010'	256
'011'	512
'100' - '111'	Reserved

- 16
 17 AUX_PILOT_WALSH - Walsh Code for the Auxiliary Pilot.
 18 The base station or mobile station shall set this field to the
 19 Walsh code corresponding to the Auxiliary pilot.
 20 RESERVED - Reserved bits.
 21 The base station or mobile station shall set all the bits of this
 22 field to '0' to make the entire record octet-aligned.

23 If PILOT_REC_TYPE is equal to '010', the base station or mobile station shall include the
 24 following fields:

25

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2

- QOF - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.
The base station or mobile station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- WALSH_LENGTH - Length of the Walsh code.
The base station or mobile station shall set this field to the WALSH_LENGTH value shown in 3.7.6.1-3 corresponding to the length of the Walsh code for the pilots that are used as Auxiliary pilot in the transmit diversity mode.
- AUX_WALSH - Walsh Code for the Auxiliary Pilot.
The base station or mobile station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.
- AUX_TD_POWER_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.
The base station or mobile station shall set this field to the Auxiliary Transmit Diversity Pilot transmit power level relative to that of the Auxiliary Pilot as specified in Table 3.7.6.1-4.

Table 3.7.6.1-4. Auxiliary Transmit Diversity Pilot Transmit Power Level

AUX_TD_POWER_LEVEL	Transmit Power Level
00	9 dB below the Auxiliary Pilot Channel transmit power

The base station or mobile station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If PILOT_REC_TYPE is equal to '011', the base station or mobile station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

SR3_PRIMARY_PILOT – Primary SR3 pilot.

The base station or mobile station shall set this field to the value shown in Table 3.7.6.1-5 corresponding to the position of the primary SR3 pilot.

Table 3.7.6.1-5. The Position of the Primary SR3 Pilot

SR3_PRIMARY_PILOT (Binary)	Position
00	The primary pilot is on the lowest SR3 frequency
01	The primary pilot is on the center SR3 frequency
10	The primary pilot is on the highest SR3 frequency
11	Reserved

SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.

The base station or mobile station shall set this field to the value shown in Table 3.7.6.1-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.

001	1dB
010	2dB
011	3dB
100	4dB
101	5dB
110	6dB
111	7dB

SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

The base station or mobile station shall set this field to the value shown in Table 3.7.6.1-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

If PILOT_REC_TYPE is equal to '100', the base station or mobile station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1

WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

1

2 SR3_PRIMARY_PILOT – Primary SR3 pilot.

3 The base station or mobile station shall set this field to the
4 value shown in Table 3.7.6.1-5 corresponding to the position
5 of the primary SR3 pilot.

6 SR3_PILOT_POWER1 – The primary SR3 pilot power level relative to that of the pilot
7 on the lower frequency of the two remaining SR3 frequencies.

8 The base station or mobile station shall set this field to the
9 value shown in Table 3.7.6.1-6 corresponding to the power
10 level of the primary pilot with respect to the pilot on the lower
11 frequency of the two remaining SR3 frequencies.

12 SR3_PILOT_POWER2 – The primary SR3 pilot power level relative to that of the pilot
13 on the higher frequency of the two remaining SR3
14 frequencies.

15 The base station or mobile station shall set this field to the
16 value shown in Table 3.7.6.1-6 corresponding to the power
17 level of the primary pilot with respect to the pilot on the
18 higher frequency of the two remaining SR3 frequencies.

19 QOF – Quasi-orthogonal function index.

20 The base station or mobile station shall set this field to the
21 index of the Quasi-orthogonal function (see [2]) on the
22 frequency of the primary pilot.

1	WALSH_LENGTH	-	Length of the Walsh Code.
2			The base station or mobile station shall set this field to the
3			WALSH_LENGTH value shown in Table 3.7.6.1-3
4			corresponding to the length of the Walsh code for the pilot
5			that is used as the Auxiliary pilot on the frequency of the
6			primary pilot.
7	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
8			The base station or mobile station shall set this field to the
9			Walsh code corresponding to the Auxiliary pilot on the
10			frequency of the primary pilot.
11	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
12			frequency of the two remaining SR3 frequencies.
13			If the additional information for the pilot on the lower
14			frequencies of the two remaining SR3 frequencies is the same
15			as pilot on the primary frequency, the base station or mobile
16			station shall set this field to '0'; otherwise, the base station or
17			mobile station shall set this field to '1'.
18	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
19			frequency of the two remaining SR3 frequencies.
20			If ADD_INFO_INCL1 is set to '0', the base station or mobile
21			station shall omit this field; otherwise, the base station or
22			mobile station shall set this field as follows:
23			The base station or mobile station shall set this field to the
24			index of the Quasi-orthogonal function (see [2]) on the lower
25			frequency of the two remaining SR3 frequencies.
26	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
27			of the two remaining SR3 frequencies.
28			If ADD_INFO_INCL1 is set to '0', the base station or mobile
29			station shall omit this field; otherwise, the base station or
30			mobile station shall set this field as follows:
31			The base station or mobile station shall set this field to the
32			WALSH_LENGTH value shown in Table 3.7.6.1-3
33			corresponding to the length of the Walsh code for the pilot
34			that is used as the Auxiliary pilot on the lower frequency of
35			the two remaining SR3 frequencies.
36	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
37			the two remaining SR3 frequencies.
38			If ADD_INFO_INCL1 is set to '0', the base station or mobile
39			station shall omit this field; otherwise, the base station or
40			mobile station shall set this field as follows:
41			The base station or mobile station shall set this field to the
42			Walsh code corresponding to the Auxiliary pilot on the lower
43			frequency of the two remaining SR3 frequencies.
44	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
45			frequency of the two remaining SR3 frequencies.

- 1 If the additional information for the pilot on the higher
2 frequencies of the two remaining SR3 frequencies is the same
3 as pilot on the primary frequency, the base station or mobile
4 station shall set this field to '0'; otherwise, the base station or
5 mobile station shall set this field to '1'.
- 6 QOF2 - Quasi-orthogonal function index for the pilot on the higher
7 frequency of the two remaining SR3 frequencies.
8 If ADD_INFO_INCL2 is set to '0', the base station or mobile
9 station shall omit this field; otherwise, the base station or
10 mobile station shall set this field as follows:
11 The base station or mobile station shall set this field to the
12 index of the Quasi-orthogonal function (see [2]) on the higher
13 frequency of the two remaining SR3 frequencies.
- 14 WALSH_LENGTH2 - Length of the Walsh Code for the pilot on the higher frequency
15 of the two remaining SR3 frequencies.
16 If ADD_INFO_INCL2 is set to '0', the base station or mobile
17 station shall omit this field; otherwise, the base station or
18 mobile station shall set this field as follows:
19 The base station or mobile station shall set this field to the
20 WALSH_LENGTH value shown in Table 3.7.6.1-3
21 corresponding to the length of the Walsh code for the pilot
22 that is used as the Auxiliary pilot on the higher frequency of
23 the two remaining SR3 frequencies.
- 24 AUX_PILOT_WALSH2 - Walsh Code for the Auxiliary Pilot on the higher frequency of
25 the two remaining SR3 frequencies.
26 If ADD_INFO_INCL2 is set to '0', the base station or mobile
27 station shall omit this field; otherwise, the base station or
28 mobile station shall set this field as follows:
29 The base station or mobile station shall set this field to the
30 Walsh code corresponding to the Auxiliary pilot on the higher
31 frequency of the two remaining SR3 frequencies.
- 32 RESERVED - Reserved bits.
33 The base station or mobile station shall set all the bits of this
34 field to '0' to make the entire record octet-aligned.

Annex B CDMA CALL FLOW EXAMPLES

This is an informative annex which contains examples of call flow. The diagrams follow these conventions:

- All messages are received without error
- Receipt of messages is not shown except in the handoff examples
- Acknowledgments are not shown
- Optional authentication procedures are not shown
- Optional private long code transitions are not shown

For the call flow diagrams B-22 through B-31, the following conventions hold:

- The following message acronyms are defined:

ERRM: Extended Release Response Message

ERRMM: Extended Release Response Mini Message

RRM: Resource Request Message

RRMM: Resource Request Mini Message

RRRM: Resource Release Request Message

RRRMM: Resource Release Request Mini Message

SreqM: Service Request Message

SCRM: Supplemental Channel Request Message

SCRMM: Supplemental Channel Request Mini Message

ERM: Extended Release Message

ERMM: Extended Release Mini Message

RAM: Resource Allocation Message

RAMM: Resource Allocation Mini Message

SCM: Service Connect Message

GHDM: General Handoff Direction Message

UHDM: Universal Handoff Direction Message

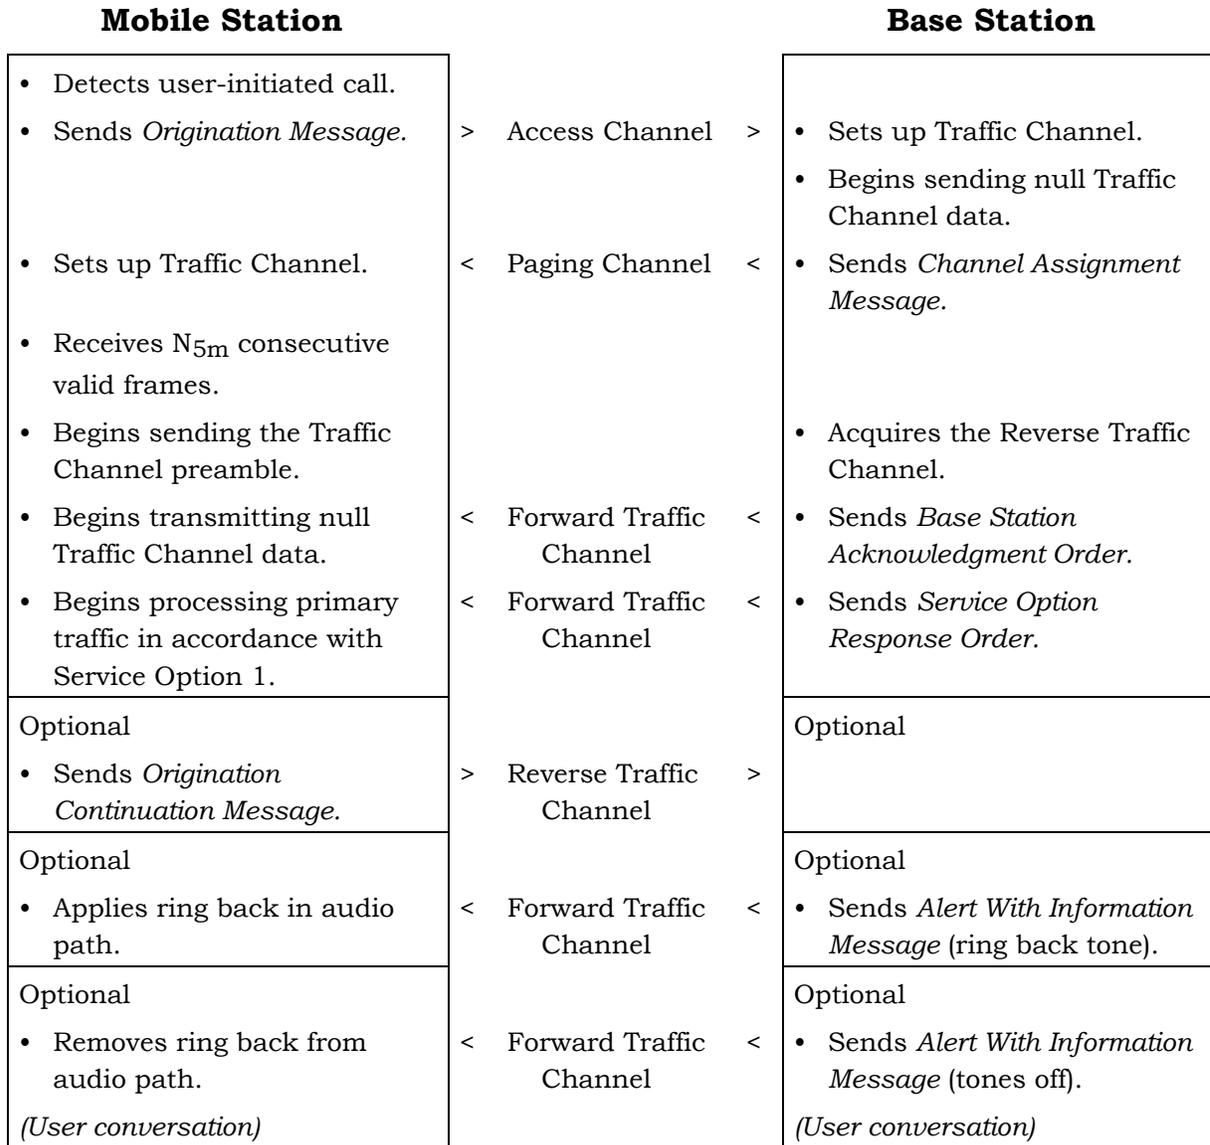

ESCAM: Extended Supplemental Channel Assignment Message

FSCAMM: Forward Supplemental Channel Assignment Mini Message

1 RSCAMM: Reverse Supplemental Channel Assignment Mini Message

2 HCM: (Extended) Handoff Complete Message

Figure B-10 illustrates call processing operations for failure recovery for hard handoff on the same frequency. Figure B-11 illustrates call flow for failure recovery for inter-frequency handoff when the mobile station does not search the Candidate Frequency. Figures B-12 and B-13 show the call flow for mobile-assisted inter-frequency handoff (handoff preceded by searching of the Candidate Frequency Search Set by the mobile station), where the search is started by using the *Candidate Frequency Search Control Message*. Figures B-14 and B-15 illustrate call flow for inter-frequency handoff when failure recovery also includes searching the Candidate Frequency Search Set. In the periodic search examples (Figures B-13 and B-15), it is assumed that the mobile station performs a search of the Candidate Frequency Search Set in a single visit to the Candidate Frequency. Figures B-16 and B-17 illustrate the interaction of inter-frequency handoff operations with an ongoing periodic search of the Candidate Frequency Search Set.

1 **Annex D CDMA CONSTANTS**

2 Annex D is a normative annex which contains tables that give specific values for the
3 constant identifiers. These identifiers take the forms such as T_{20m} and N_{5m} . The
4 subscripted numbers vary to identify the particular constant. Typically the subscripted
5 letter “m” refers to the mobile station and the subscripted letter “b” refers to the base
6 station. The following tables provide values for identifiers given in the text:

7 Table D-1. Time Limits

8 Table D-2. Other Constants

9

Table D-1. Time Limits

Time Limit	Description	Value	References
T _{5m}	Limit of the Forward Traffic Channel fade timer	5 s	2.6.4.1.8
T _{20m}	Maximum time to remain in the <i>Pilot Channel Acquisition Substate</i> of the <i>Mobile Station Initialization State</i>	15 s	2.6.1.2
T _{21m}	Maximum time to receive a valid Sync Channel message	1 s	2.6.1.3
T _{30m}	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message	3 s	2.6.2.1.1.1
T _{31m}	Maximum time for which configuration parameters are considered valid	600 s	2.6.2.2
T _{32m}	Maximum time to enter the <i>Update Overhead Information Substate</i> of the <i>System Access State</i> to respond to an <i>SSD Update Message</i> , <i>Base Station Challenge Confirmation Order</i> , <i>Authentication Challenge Message</i> , and <i>Authentication Request Message</i>	5 s	2.6.2.4 2.6.4
T _{33m}	Maximum time to enter the <i>Update Overhead Information Substate</i> of the <i>System Access State</i> (except in response to authentication messages)	0.3 s	2.6.2 2.6.5.5.2.3
T _{34m}	Maximum time to enter the <i>Update Overhead Information Substate</i> or the <i>Mobile Station Idle State</i> after receiving a <i>Channel Assignment Message</i> with ASSIGN_MODE _r equal to '001' or '101' or <i>Extended Channel Assignment Message</i> with ASSIGN_MODE _r equal to '001'	3 s	2.6.3.3
T _{40m}	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message before aborting an access attempt (see T _{72m})	3 s	2.6.3.1.8
T _{41m}	Maximum time to obtain updated overhead messages arriving on the Paging Channel or Broadcast Control Channel	4 s	2.6.3.2

Time Limit	Description	Value	References
T42m	<p>Maximum time to receive a delayed Layer 3 response following the receipt of an acknowledgment for an access probe in the <i>System Access State</i>.</p> <p>The maximum time to receive a Layer 3 response to an <i>Enhanced Origination Message</i> on the <i>Mobile Station Control on the Traffic Channel State</i>.</p> <p>The maximum time to receive connection reference after call control instance is instantiated.</p>	12 s	2.6.3.1.1.2 2.6.3.3 2.6.3.5 2.6.4
T50m	<p>When a F-CPCCH is not assigned:</p> <ul style="list-style-type: none"> Maximum time to obtain ($N_{5m} \times 20$) ms of sufficient signal quality on the physical channel corresponding to $FPC_PRI_CHAN_S$ when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> <p>When a F-CPCCH is assigned:</p> <ul style="list-style-type: none"> Maximum time to obtain ($N_{18m} \times 1.25$) ms of sufficient signal quality on the Forward Common Power Control Subchannel assigned to this mobile station when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> 	1 s	2.6.4.2
T51m	Maximum time for the mobile station to receive a <i>forward dedicated channel acquired</i> indication from Layer 2 (see [4]) after the transmitter was last enabled.	2 s	2.6.4.2
T52m	Maximum time to receive a message in the <i>Waiting for Order Substate</i> of the Call Control processing that transits Call Control instance to a different substate or state	5 s	2.6.10.1.1
T53m	Maximum time to receive a message in the <i>Waiting for Mobile Station Answer Substate</i> of Call Control processing that transits the Call Control instance to a different substate or state	65 s	2.6.10.1.2

Time Limit	Description	Value	References
T54m	Maximum time for the Call Control instance to send an <i>Origination Continuation Message</i> upon entering the <i>Conversation Substate</i>	0.2 s	2.6.10.2
T55m	Maximum time to receive a message in the <i>Release Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> that transits the mobile station to a different substate or state	2 s	2.6.4.4
T56m	Default maximum time to respond to a received message or order on the Forward Traffic Channel	0.2 s	2.6.4 2.6.6
T57m	Limit of the power-up registration timer	20 s	2.6.5.1.1 2.6.5.5.1.3
T58m	Maximum time for the mobile station to respond to a service option request	5 s	2.6.4.1.2.2
T59m	Maximum time for the mobile station to respond to a <i>Service Request Message</i> or a <i>Service Response Message</i>	5 s	2.6.4.1.2.2
T60m	Maximum time to execute a hard handoff without return on failure involving a new frequency assignment using the same base station	0.06 s	2.6.6.2.8.1
T61m	Maximum time to execute a hard handoff without return on failure involving a new frequency assignment using a different base station	0.08 s	2.6.6.2.8.1
T62m	Maximum time to execute a hard handoff without return on failure involving the same frequency assignment	0.02 s	2.6.6.2.8.1
T63m	Reserved (Previously: Maximum time to execute a CDMA-to-Analog handoff)		
T64m	Maximum time to wait for a <i>Base Station Challenge Confirmation Order</i>	10 s	2.3.12.1.5
T65m	Maximum time for the mobile station to wait for a <i>Service Connect Message</i> while the <i>Waiting for Service Connect Message Subfunction</i> is active	5 s	2.6.4.1.2.2.4
T66m	Maximum time for the mobile station to delete the TMSI after TMSI expiration time has exceeded the System Time	200 s	2.6.2
T68m	Maximum time for the mobile station to wait for a <i>Service Request Message</i> , <i>Service Response Message</i> , or <i>Service Connect Message</i> while the <i>Waiting for Service Request Message Subfunction</i> or <i>Waiting for Service Response Message Subfunction</i> is active	5 s	2.6.4.1.2.2.2 2.6.4.1.2.2.3

Time Limit	Description	Value	References
T _{69m}	Fixed portion of the full-TMSI timer	24 s	2.6.3.1.6
T _{70m}	Maximum time between the mobile station's obtaining a measurement and sending a <i>Candidate Frequency Search Report Message</i> which contains that measurement	0.8 s	2.6.6.2.8.3 2.6.6.2.10
T _{71m}	Maximum time for the mobile station to send a <i>Candidate Frequency Search Report Message</i> after completing a search	0.04 s	2.6.6.2.8.3
T _{72m}	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message before aborting an access attempt, when there exists at least one access handoff candidate pilot for the access attempt (see also T _{40m})	1 s	2.6.3.1.8
T _{73m}	Maximum time for the mobile station to send a <i>Handoff Completion Message</i> after the action time of a received handoff message directing the mobile station to perform a hard handoff without return on failure	0.3s	2.6.6.2.5.2
T _{74m}	Default value of the slotted timer	0.0s	2.6.4.2
T _{75m}	Default value of the key set-up timer	10 s	2.3.12.5
T _{78m}	Maximum time for the mobile station to receive a Physical Layer PDCH SDU destined for this mobile station when in the <i>Traffic Channel State</i>	30 s	2.6.4.1.8.2

Time Limit	Description	Value	References
T79m	<p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain sufficient signal quality on the forward link when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> and <i>when early reverse link transmission is allowed</i>.</p> <p>When a F-CPCCH is not assigned:</p> <p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain $(N_{5m} \times 20)$ ms of sufficient signal quality on the physical channel corresponding to $FPC_PRI_CHAN_S$ when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>.</p> <p>When a F-CPCCH is assigned:</p> <p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain $(N_{18m} \times 1.25)$ ms of sufficient signal quality on the Forward Common Power Control Subchannel assigned to this mobile station when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>.</p>	0.1s	2.6.4.2
T80m	<p>Maximum time the mobile station is allowed to remain in the <i>Traffic Channel Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> while waiting for the <i>Base Station Acknowledgment Order</i>.</p>	0.1s	3.6.4.2
T81m	<p>Default maximum time the mobile station's transmitter can be disabled before the MAC Layer is to perform Forward Packet Data Channel initialization.</p>	0.1s	2.6.3.3 2.6.3.5
T1b	<p>Maximum period between subsequent transmissions of an overhead message on the Paging Channel by the base station</p>	1.28 s	3.6.2.2
T2b	<p>Maximum time for the base station to send a <i>Release Order</i> after receiving a <i>Release Order</i></p>	0.8 s	3.6.4

Time Limit	Description	Value	References
T3b	Minimum time the base station continues to transmit on a code channel after sending or receiving a <i>Release Order</i>	0.3 s	3.6.4.5
T4b	Maximum time for the base station to respond to a service option request	5 s	3.6.4.1.2.2.1
T5b	Minimum time a base station should wait before assigning a Forward Common Power Control Channel subchannel to another mobile station when the mobile station previously assigned this subchannel did not respond to the Layer 3 message sent to release the call.	10 s	3.6.4.4

1

2

Table D-2. Other Constants

Con-stant	Description	Value	References
N _{2m}	The duration, of insufficient signal quality (e.g. bad frames), in units of 20ms, received on the Forward Traffic Channel before a mobile station must disable its transmitter	12	2.6.4.1.8.1
N _{3m}	The duration, of sufficient signal quality (e.g. good frames), in units of 20ms, received on the Forward Traffic Channel before a mobile station is allowed to re-enable its transmitter after disabling its transmitter	2	2.6.4.1.8.1
N _{4m}	Reserved		
N _{5m}	The duration, of sufficient signal quality (e.g. good frames), in units of 20ms, received on the Forward Traffic Channel before a mobile station is allowed to enable its transmitter after entering the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>	2	2.6.4.2
N _{6m}	Supported Traffic Channel Active Set size	6	2.6.6.2.6.1 3.6.6.2.2.2 3.6.6.2.2.1 0
N _{7m}	Supported Traffic Channel Candidate Set size	10	2.6.6.2.6.2
N _{8m}	Minimum supported Neighbor Set size	40	2.6.2.1.4.1 2.6.2.2.3 2.6.6.2.6.3 3.6.6.2.1.2 3.6.6.2.1.3
N _{9m}	Minimum supported zone list size	7	2.6.5.1.5
N _{10m}	SID/NID list size	4	2.6.5
N _{11m}	The duration, of sufficient signal quality (e.g. good frames), in units of 20ms, received on the Forward Traffic Channel before a mobile station re-enables its transmitter after disabling its transmitter during a CDMA-to-CDMA Hard Handoff	1	2.6.6.2.8
N _{12m}	Number of frames over which the mobile station maintains a running average of the total received power	10	2.6.6.2.8.3
N _{13m}	Maximum number of pilots reported in an Access Channel message	6	2.6.3.1.7 2.7.1.3.1.3

Con-stant	Description	Value	References
N _{16m}	The duration of insufficient signal quality, in units of 1.25ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station must disable its transmitter.	384 (if F-CPCCH rate is 800 bps) 576 (if F-CPCCH rate is 400 bps) 768 (if F-CPCCH rate is 200 bps)	2.6.4.1.8.2
N _{17m}	The duration of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station is allowed to re-enable its transmitter after disabling its transmitter	64 (if F-CPCCH rate is 800 bps) 128 (if F-CPCCH rate is 400 bps) 160 (if F-CPCCH rate is 200 bps)	2.6.4.1.8.2
N _{18m}	The duration of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station is allowed to enable its transmitter after entering the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>	32 (if F-CPCCH rate is 800 bps) 64 (if F-CPCCH rate is 400 bps) 64 (if F-CPCCH rate is 200 bps)	2.6.4.2
N _{19m}	The duration, of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station re-enables its transmitter after disabling its transmitter during a CDMA-to-CDMA Hard Handoff	16 (if F-CPCCH rate is 800 bps) 32 (if F-CPCCH rate is 400 bps) 32 (if F-CPCCH rate is 200 bps)	2.6.6.2.8

1 **Annex E CDMA RETRIEVABLE AND SETTABLE PARAMETERS**

2 This is a normative annex which describes the parameters that can be retrieved and set in
3 the mobile station using the *Retrieve Parameters Message*, the *Parameters Response*
4 *Message*, and the *Set Parameters Message*.

5 PARAMETER_ID values from 0 through 32767 are reserved for definition by this standard
6 and shall not be defined by mobile station manufacturers. PARAMETER_ID values from
7 32768 through 65535 may be defined by mobile station manufacturers.

1 **Annex F MOBILE STATION DATABASE**

2 F.1 Introduction

3 This is an informative annex which lists the numeric indicators that are described by this
4 document and stored in the mobile station's permanent or semi-permanent memory. Some
5 of these indicators are required; other indicators are optional and are so noted.

6 The indicators are organized in this annex according to two categories:

- 7 • Mobile station indicators These indicators are global to the mobile station and
8 independent of the mobile station's NAMs.
- 9 • NAM indicators These indicators specify parameters associated with the
10 mobile station's NAM.

11 The description of each indicator below includes the indicator's name, the number of bits it
12 contains, and the section in this document where it is defined. Permanent indicators are
13 denoted by the "p" subscript; semi-permanent indicators are denoted by the "s-p"
14 subscript.

15

1 F.2 Mobile Station Indicators

2 Mobile station indicators are organized into permanent mobile station indicators and semi-
 3 permanent mobile station indicators.

4 F.2.1 Permanent Mobile Station Indicators

5 Permanent mobile station indicators specify physical station configuration and attributes,
 6 independent of NAM. The indicators are listed in Table F.2.1-1.

7

8 **Table F.2.1-1. Permanent Mobile Station Indicators**

Indicator	Number of Bits	Where Defined	Notes
ESN _p	32	2.3.2.1	See 2.3.14 for special ESN storage and protection requirements. Includes MOB_MFG_CODE _p .
MEID _p	56	2.3.2.2	
ACCOLC _p	4	2.3.5	
SCM _p	8	2.3.3	
SLOT_CYCLE_INDEX _p	4	2.3.11	This is a signed integer that can take the values between -4 and +7 inclusive.
MOB_FIRM_REV _p	16	2.3.14	
MOB_MODEL _p	8	2.3.14	
MOB_MFG_CODE _p	8	2.3.14	
For each band class supported:			
MOB_P_REV _p	8	2.3.14	

9

10

1 F.2.2 Semi-permanent Mobile Station Indicators

2 Semi-permanent mobile station indicators are retained when the mobile station power is
 3 turned off. These indicators are associated with mobile station registration and lock. They
 4 are independent of the NAM in use. CDMA indicators are listed in Table F.2.2-1.

5

6 **Table F.2.2-1. CDMA Semi-permanent Mobile Station Indicators**

Indicator	Number of Bits	Where Defined	Notes
ZONE_LIST _{s-p}		2.3.4	
REG_ZONE _{s-p}	12	2.3.4	
SID _{s-p}	15	2.3.4	
NID _{s-p}	16	2.3.4	
SID_NID_LIST _{s-p}		2.3.4	
SID _{s-p}	15	2.3.4	
NID _{s-p}	16	2.3.4	
BASE_LAT_REG _{s-p}	22	2.3.4	
BASE_LONG_REG _{s-p}	23	2.3.4	
REG_DIST_REG _{s-p}	11	2.3.4	
LCKRSN _P _{s-p}	4	2.3.13	
MAINTRSN _{s-p}	4	2.3.13	

7

8

1 F.3 NAM Indicators

2 Each mobile station contains one or more NAMs. Table F.3-1 lists the permanent and
3 semi-permanent values associated with each NAM.

4

1

Table F.3-1. NAM Indicators

Indicator	Number of Bits	Where Defined	Notes
A_KEY	64	2.3.12.1.5	
SSD_A _{s-p}	64	2.3.12.1.1	Shared Secret Data A
SSD_B _{s-p}	64	2.3.12.1.1	Shared Secret Data B
COUNT _{s-p}	6	2.3.12.1.3	Call History Parameter
IMSI_M_CLASS _p	1	2.3.1	
IMSI_T_CLASS _p	1	2.3.1	
IMSI_M_S _p	34	2.3.1.1	Includes IMSI_M_S1 _p and IMSI_M_S2 _p .
IMSI_T_S _p	34	2.3.1.1	Includes IMSI_T_S1 _p and IMSI_T_S2 _p .
IMSI_M_ADDR_NUM _p	3	2.3.1	Applies to IMSI_M.
IMSI_T_ADDR_NUM _p	3	2.3.1	Applies to IMSI_T.
IMSI_M_11_12 _p	7	2.3.1.2	
IMSI_T_11_12 _p	7	2.3.1.1	
MCC_M _p	10	2.3.1.1	
MCC_T _p	10	2.3.1.1	
MDN _p	See Notes	2.3.1.4	An MDN consists of up to 15 digits based on manufacturer specific coding.
ASSIGNING_TMSI_ZONE_LEN _{s-p}	4	23.15.2	
ASSIGNING_TMSI_ZONE _{s-p}	64	2.3.15.2	
TMSI_CODE _{s-p}	32	2.3.15.2	
TMSI_EXP_TIME _{s-p}	24	2.3.15.2	
SID _p	15	2.3.8	
NID _p	16	2.3.8	
MOB_TERM_HOME _p	1	2.3.8	
MOB_TERM_FOR_SID _p	1	2.3.8	
MOB_TERM_FOR_NID _p	1	2.3.8	

Indicator	Number of Bits	Where Defined	Notes
IMSI_10_Mp	4	2.3.1.1	
IMSI_10_Tp	4	2.3.1.1

1 **Annex G CDMA EXTENDED ENCRYPTION CALL FLOW EXAMPLES**

2 This is an informative annex, which contains examples of extended encryption call flow.

3 The diagrams follow these conventions:

- 4 • All messages are received without error
- 5 • Acknowledgments are not shown

6 For all the call flow diagrams, the following conventions hold:

- 7 • The following message acronyms are defined:

8 RGM: Registration Message

9 ORM: Origination Message

10 CAM: Channel Assignment Message

11 ECAM: Extended Channel Assignment Message

12 SMCM: Security Mode Command Message

- 13 • The following short forms are defined:

14 enc.k1: encrypt the message with key k1

15 csch_enc_req: C_SIG_ENCRYPT_REQ

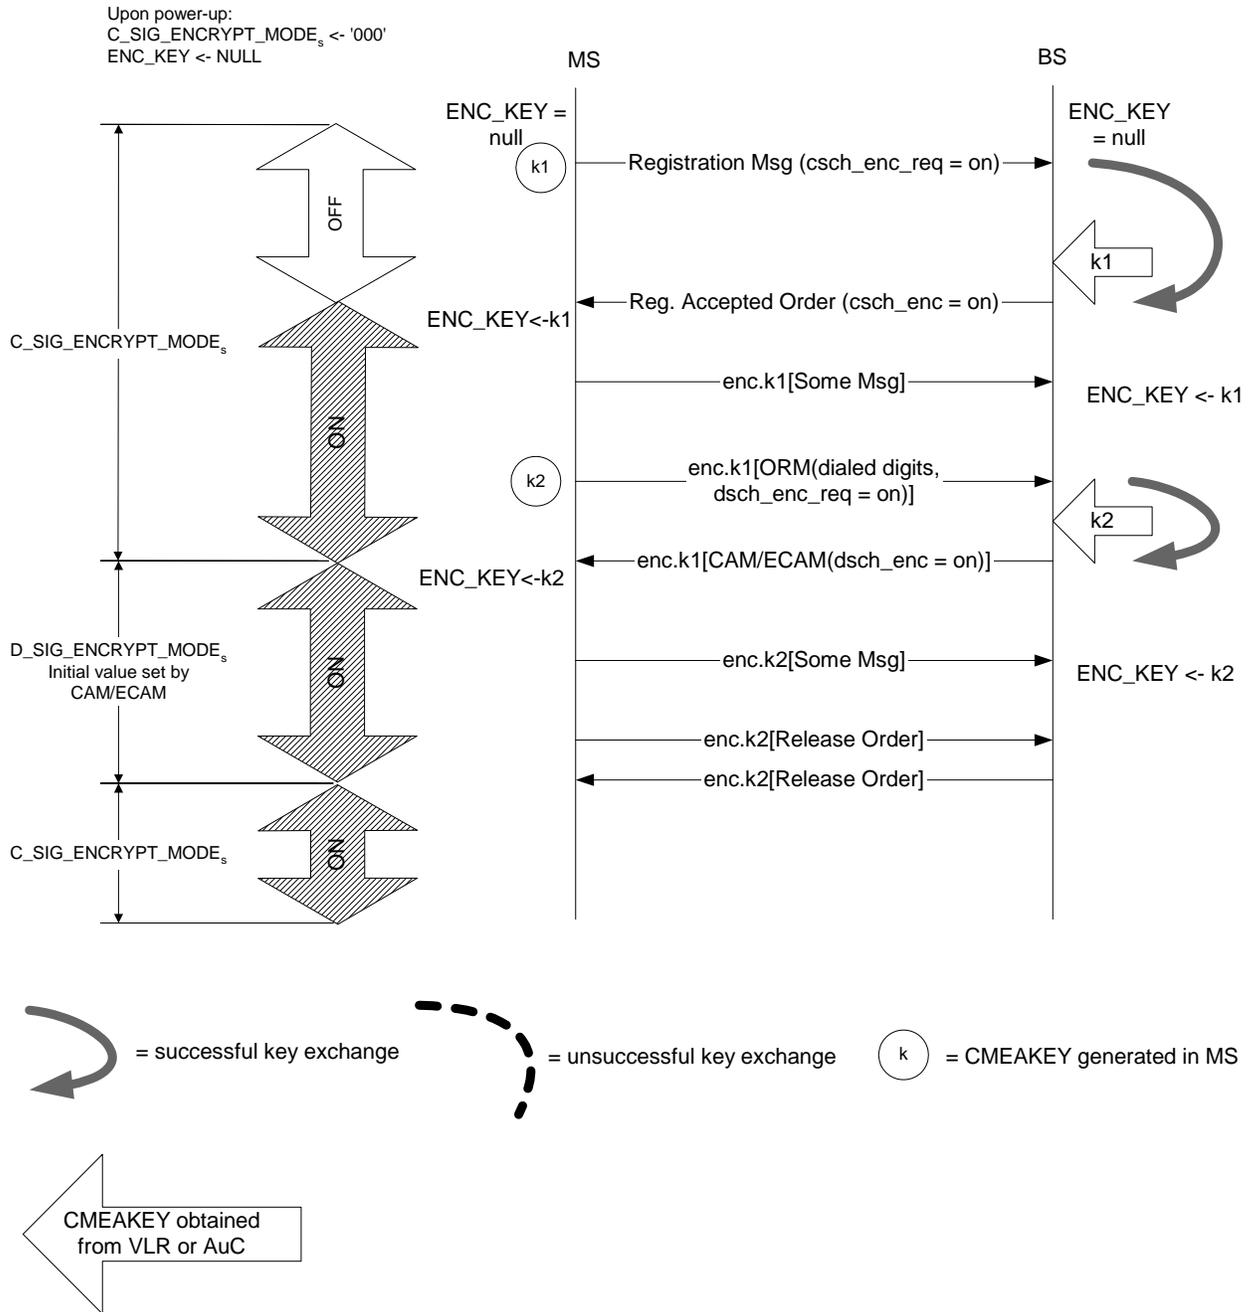

16 dsch_enc_req: D_SIG_ENCRYPT_REQs

17 csch_enc: C_SIG_ENCRYPT_MODE

18 dsch_enc: D_SIG_ENCRYPT_MODE

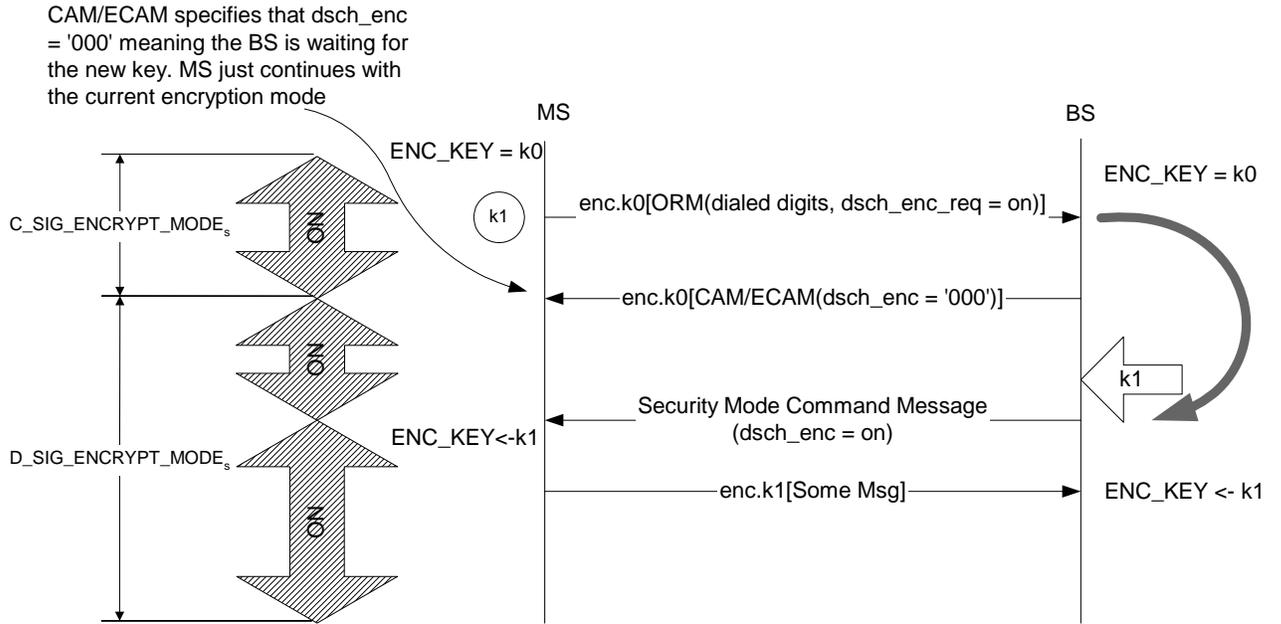

19 A <- B: assign value B to variable A
