## **1. INTRODUCTION**

This document is the System Release Guide (SRG) for the Ultra Mobile Broadband-1 (UMB<sup>1</sup>-1) Release of the 3GPP2 wireless telecommunication system. It is developed and maintained under the auspices of 3GPP2 TSG-S, the Technical Specifications Group (TSG) for Services and Systems Aspects for 3GPP2.

### **1.1 Document Purpose**

The objective of this document is to provide an informative overview for and reference to the UMB-1 of the 3GPP2 wireless telecommunication system (cdma2000®)<sup>2</sup> capabilities, features and services. This document is intended for use by persons and/or companies who are developing or deploying cdma2000 systems or by persons who are otherwise interested in 3GPP2 wireless telecommunications systems.

In order to be compliant with this 3GPP2 system release, mandatory features must be implemented. However, the set of optional features implemented in a given system is decided by the operators and manufacturers. The individual specifications indicate the mandatory and optional nature of features. This system release includes only features and capabilities that are part of a published 3GPP2 specification(s).

### **1.2 UMB-1 Release Summary**

The UMB-1 Release focuses on the following two (2) release critical work items, as identified in blue in Table 1:

#### Enhanced cdma2000 Air Interface (3GPP2-00159)

UMB represents a major break-through in next generation mobile broadband services by enabling the transfer of native IP, variable length, data packets at speeds that are orders of magnitude higher than what is commercially available today. It is the latest member of the family of cdma2000 standards that was designed from the ground up to improve the overall end user experience and strengthen an operator's earnings potential.

UMB is the leading Orthogonal Frequency Division Multiple Access (OFDMA) solution, using sophisticated control and signaling mechanisms, radio resource management (RRM), adaptive reverse link (RL) interference management, and

---

<sup>1</sup> Ultra Mobile Broadband™ and (UMB™) are trade and service marks owned by the CDMA Development Group (CDG).

<sup>2</sup> cdma2000® is a trademark for the technical nomenclature for certain specifications and standards of the Organizational Partners (OPs) of 3GPP2. Geographically (and as of the date of publication), cdma2000® is a registered trademark of the Telecommunications Industry Association (TIA-USA) in the United States.

advanced antenna techniques, such as Multiple Input Multiple Output (MIMO), Space Division Multiple Access (SDMA) and beamforming. The UMB solution universally addresses a large cross-section of advanced mobile broadband services by economically delivering low-rate, low latency voice traffic at one end of the spectrum, just as efficiently as ultra-high-speed, latency insensitive, broadband data traffic at the other. To support ubiquitous and universal access, UMB supports inter-technology hand-offs and seamless operation with existing cdma2000 1X and 1xEV-DO systems.

Integrating and optimizing these and other advanced radio access techniques into a single, open, global standard represents a major technological break-through within the mobile communications industry. Thus, the UMB solution delivers a compelling user experience based on the strongest performance and economic value proposition available within the wireless industry, including:

- High-Speed Data: Peak download and upload speeds of 288 Mbps and 75 Mbps, respectively, in a mobile environment with a 20 MHz bandwidth.
- Increased Data Capacity: Ability to deliver both high-capacity voice and broadband data in all environments; fixed, pedestrian and fully-mobile in excess of 300 km/hr.
- Low Latency: An average round-trip over-the-air latency as low as 14.3 msec to support delay sensitive applications with minimal jitter.
- Increased VoIP Capacity: up to approximately 1400 simultaneous Voice over IP (VoIP) users<sup>3</sup> within a single sector, in a 20 MHz bandwidth mobile environment.
- Large Coverage: Large wide area network (WAN) coverage areas equivalent to existing cellular networks; with either ubiquitous coverage for seamless roaming or non-contiguous coverage for hot zone applications.
- Full Mobility: Robust mobility support with seamless handoffs is inherent in all aspects of the UMB design.
- Converged Access Network: Supports the deployment of a Converged Access Network (CAN), which is an advanced IP-based Radio Access Network (RAN) architecture being developed by 3GPP2 to support multiple access technologies and advanced network capabilities, such as enhanced QoS, with fewer network nodes and lower latencies.
- Multicasting: Support for high-speed multicast of rich multimedia content.
- Deployment Flexibility: Deployable in flexible bandwidth allocations between 1.25 MHz and 20 MHz, using incremental channel bandwidths allocations 153.6 kHz, within all the band classes defined by 3GPP2 in C.S0057.

---

<sup>3</sup> The number of VoIP users depends on various conditions, such as network layout, cell radius, propagation channel modeling, VoIP codec, delay requirements etc.

- **Interoperability:** The UMB radio access network is also designed to interoperate with legacy networks including cdma2000 1X and 1xEV-DO.

Packet Data Access Network Evolution (3GPP2-00145)

The evolved/enhanced architecture provides support of both distributed and centralized architecture and streamlines the network entities and interfaces for Enhanced Packet Data Air Interface (E-PDAI). The new architecture will enhance system performance such as: reduce signaling latency, reduce media transmission delay, improve data transmission efficiency, and improve mobility management. The new architecture will speed up deployment of new services/features by leveraging the existing 3GPP2 and IETF protocols and minimizing the need for 3GPP2 specific network entities.

**2. DOCUMENT REFERENCES**

**2.1 Definitions**

Informative Reference	The most recent version of each report that supports the end-to-end features of the release.
Normative Reference	The most recent version of each specification that supports the end-to-end features of the release.
Supplemental Reference	A supplemental reference refers to the most recent version of each document (specification or report) that has been published since the previous 3GPP2 release, but for which its associated end-to-end feature(s) has not been released.

**2.2 Normative References**

A normative reference refers to the most recent version of each specification that supports the end-to-end features of the release.

### **3. SYSTEM RELEASE CONTENT AND FEATURE DESCRIPTION**

The features and capabilities provided by this cdma2000 system release are listed in Table 1. This release includes new and enhanced features added since the publication of [SC.R2004-002-0 v1.0](#): System Release Guide for the Release 4 of the cdma2000 System Specifications. For the list of features in 3GPP2 System Release 4, please refer to [SC.R2004-002-0 v1.0](#).

**Table 1 – Features Supported by this Release**

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00002	Enhanced Message Service	EMS adds limited support for sending sounds and pictures (icons) and formatted text to the existing SMS (not MMS).	C.S0015-A v1.0, C.S0015-A v2.0, C.S0061-0 v1.0, S.R0051-0 v1.0
00009-A	CDMA Packet Data Services, Phase 1 - Revision A	<p>C-PDS shall allow communication services to access private or public Packet Data Networks (PDNs) (e.g., Internet or Intranet) using an air interface provided by the wireless service provider. C-PDS shall allow movement of a wireless user engaged in a Packet Data session.</p> <p>C-PDS usage requires a wireless user to register both with the wireless service provider and the Packet Data network access provider.</p> <p>C-PDSs are distinguished in two general categories of Quality of Service (QoS), as:</p> <ol style="list-style-type: none"> <li>1. Non-Assured Services Services that are not particularly sensitive to minimum data rate, delay, or error rate.</li> <li>2. Assured Services: Services for which there is a sensitivity to some combination of guaranteed minimum data rate, delay, or data-loss rate.</li> </ol> <p>When there is a packet data capable MS that supports simultaneous services, C-PDS may be supported with simultaneous voice or circuit bearer services. This implies that a user of a circuit service (voice or data) shall be able to establish, maintain, and/or terminate a C-PDS while maintaining the circuit call. A user with an active Packet Data session shall be able to establish, maintain, and or terminate a circuit service (voice or data) while maintaining the packet data session. A user with a circuit call active shall be able to transition a simultaneous packet session between the dormant and active states as managed by the Radio Network (RN).</p>	X.S0001-A v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00019	Revision E Integration	Consolidation of a number of stand-alone standards approved since the publication of N.S0005-0 (ANS-41-D) into a new revision of the document to be published as multipart document in the series X.S0004-NNN-A (ANS-41 Rev E).	X.S0004-E
00022	Location Services	Completes cdma2000 specifications for defining all interfaces between the Position Server it's signaling Reference Points and other Position Servers to provide for location services in the UMB NAM. The functionality of the Position Server and any other network element is beyond the scope of this work item.	C.S0022-A v1.0, C.S0036-0 v1.0, S.R0066-0 v1.0, S.R0110-0 v1.0, X.S0024-0 v1.0
00025	Enhanced Security Services	Defines enhanced security capabilities for wireless networks and mobile stations. The capabilities are Enhanced Subscriber Authentication and Enhanced Subscriber Privacy. From the end user perspective, the enhanced security requirements are air interface independent and applicable to all digital air interfaces.	A.S0011-17-D v1.0, C.S0022-0 v3.0, C.S0022-A v1.0, C.S0039-0 v1.0, C.S0039-0 v2.0, S.S0078-A v1.0, S.S0078-A v3.0, X.S0006-0 v1.0
00027	IP Multimedia Domain (MMD)	Defines network support for services over an all-IP core network for 3rd Generation Mobile Systems.	S.R0058-0 v1.0, S.R0086-0 v1.0, S.R0086-A v1.0, S.S0086-B v1.0, S.S0086-B v2.0, X.S0013-0 v1.0, X.S0013-0 v2.0
00027-A	IP Multimedia Domain (MMD) - Revision A		X.S0013-A v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00027-B	IP Multimedia Domain (MMD) - Revision B		X.S0013-B v1.0
00031	Presence Service	Presence provides the ability for the availability of a subscriber to be made known to a specified audience under careful authenticated control.	S.R0062-0 v1.0, X.S0027-0 v1.0, X.S0027-000-A v1.0
00034	Enhanced Call Recovery	The Enhanced Call Recovery (ECR) feature is a capability to address a standing requirement of reducing dropped calls. The concept is to have the mobile station and network execute a pre-determined procedure to re-establish communication in the event of a call that is in danger of being dropped.	A.S0011-17-D v1.0, C.S000(1-6)-B v1.0, C.S000(1-6)-C v1.0, C.S000(1-6)-D v1.0
00041	Fast Call Set-Up	The feature allows accelerated process in call setup (bearer resource assignment), which is particularly beneficial when a connection is returned from dormancy as a result of a packet arrival to the wireless network. The feature can be considered as falling into the category of standing requirements for network performance improvement.	A.S0011-17-C v1.0, A.S0011-17-C v2.0, C.S0004-D v1.0, C.S0004-D v2.0, C.S0005-D v1.0, C.S0005-D v2.0, C.S0043-0 v1.0, S.R0065-0 v1.0
00043	Enhanced Packet Data Air Interface Security	The Enhanced Packet Data Air Interface Security feature adds support for enhanced encryption, authentication, key management and data integrity to packet data services in cdma2000. It is intended that the security of the packet data air interface be enhanced to the same level as the security services defined in S.R0032 for voice.	A.S0020-0 v1.0, C.S0039-0 v1.0, C.S0039-0 v2.0, S.R0082-0 v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00048	Common Security Algorithms	Support for air interface common security algorithms for cdma2000 1X EV-DV.	A.S0013-C v2.0, C.S000(1-6)-C v1.0, C.S000(1-6)-C v2.0, S.S0055-A v1.0, S.S0055-A v2.0, S.S0055-A v3.0, S.S0078-0 v1.0, S.S0078-A v1.0, S.S0078-A v2.0, S.S0078-A v3.0
00050	End-to-End QoS	Defines the framework for an end-to-end QoS negotiation and resource reservation scheme between the Mobile Station (MS) and the Correspondent Node (CN). The MS or the CN invokes the end-to-end QoS mechanism when an application requires better than best effort QoS. The framework is based on leveraging and extending the standard IETF protocols, including appropriate mapping of IP level QoS values to air-interface specific QoS values applicable to the PDSN, radio access network (RAN) and the air interface.	A.S0008-A v1.0, A.S0008-A v2.0, A.S0008-B v1.0, A.S0009-A v1.0, A.S0009-A v2.0, A.S0009-B v1.0, A.S0011-17-C v1.0, C.S0002-D v1.0, C.S0063-0 v1.0, C.S0063-0 v2.0, C.S0063-A v1.0, C.S0063-A v2.0, S.R0079-0 v1.0, X.S0011-D v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00051	1xEV-DV Capabilities	This feature provides high rate packet data transmission to the mobile station, simultaneously with voice service, at up to 3 Mbps in a single 1.25 MHz CDMA carrier. 1xEV-DV provides simultaneous voice service and packet data services at up to 3 Mbps on the forward link. Services included are: concurrent voice and data services, access authentication, data delivery, session handoff, and status management. The protocol revision of MOB_P_REV 9 defines a mobile station that complies with all the requirements specified in 1xEV-DV, except those pertaining to AKA and Message Integrity. MOB_P_REV 10 complies with all requirements specified in 1xEV-DV.	A.S0009-A v1.0, A.S0009-A v2.0, A.S0009-B v1.0, A.S0011-17-B v1.0, A.S0011-17-C v1.0, A.S0011-17-C v2.0, C.S000(1-6)-C v1.0, C.S000(1-6)-C v2.0, C.S000(1-6)-D v1.0, C.S000(1-6)-D v2.0, C.S0010-C v1.0, C.S0010-C v2.0, C.S0011-C v1.0, C.S0011-C v2.0, C.S0043-0 v1.0, C.S0044-0 v1.0, S.R0026-0 v1.0, X.S0011-C v1.0, X.S0011-D v1.0
00058	Security Framework for Data Services via HRPD	Establishes a security framework for packet data via HRPD. General security requirements are described, including security features supporting authentication, key distribution/management, confidentiality and integrity. Access network security mechanisms based on a security model are also a part of this document and along the lines of 3GPP TS33.102 and other relevant specifications/RFCs.	A.S0008-B v1.0, A.S0009-B v1.0, C.S0024-0 v4.0, C.S0024-A v1.0, C.S0024-A v2.0, C.S0024-A v3.0, C.S0024-B v1.0, C.S0039-0 v1.0, C.S0039-0 v2.0, C.S0054-0 v1.0, C.S0054-0 v2.0, S.R0082-0 v1.0

## 00060 Policy for Tx and Ty Interfaces

The cdma2000 All-IP NAM has to satisfy requirements for end-to-end QoS, authorization of network resource usage and accurate accounting for network resources used. Therefore, policies should be enforced during network resource requests. For example, when a user requests a certain level of QoS for an IP packet flow, policies are applied to ensure that the requested resources lie within the bounds of the allowed resource level established and the available resource 'budget' for the requesting user.

S.R0037-0 v3.0,  
S.R0037-A v1.0,  
X.S0013-0 v2.0,  
X.S0013-B v1.0

To provide protection against fraud and ensure accurate accounting of network resource usage and QoS guarantee, a linkage should be provided between session setup/control and bearer resource setup mechanisms. This work establishes that linkage by defining policy related protocols for two interfaces in the cdma2000 All-IP NAM. The first interface (28/Go) connects the Policy Decision Function (PDF) to the PDSN/AGW and is responsible for bearer resources policy enforcement and accounting correlation exchange. The second interface (mm) connects the PDF to a network entity (e.g., P-CSCF) and is responsible for policy request and decisions. The PDF acts as a Policy Decision Point from the perspective of policy control.

The two interfaces provide:

1. Bearer resources policy enforcement and accounting correlation exchange
2. Resource control to ensure that the use of allocation resources is properly recorded
3. The ability to prevent theft of service
4. The ability to provide IP QoS admission control service, in conjunction with End-to-End QoS
5. The ability for policy control over IP bearer resources and services to evolve separately
6. De-coupling of policy function from IMS entities

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00061	Standardized cdma2000 Performance Measurement Types	Defines standardized network performance measurement types for cdma2000 networks. Identifies measurements types defined by other standards bodies (3GPP, IETF) for re-use in the 3GPP2 context. The performance management types are related to core and radio access network elements. It also includes (end-to-end) measurement types that span multiple network elements.	S.R0017-0 v1.0, S.S0093-0 v1.0, S.S0093-0 v2.0
00067-A	Voice Over IP (VoIP) — Phase II	The VoIP — Phase II identifies cdma2000 network system features and capabilities that enhance the support of voice over Internet Protocol (IP).	A.S0008-B v1.0, A.S0008-C v1.0, A.S0009-A v1.0, A.S0009-A v2.0, A.S0009-B v1.0, A.S0011-17-D v1.0, C.S0002-D v1.0, C.S0024-A v1.0, C.S0024-A v2.0, C.S0024-A v3.0, C.S0024-B v1.0, C.S0063-0 v1.0, S.R0058-0 v1.0, S.R0075-0 v1.0, S.R0079-0 v1.0, S.R0086-0 v1.0, S.R0086-A v1.0, S.S0086-B v1.0, S.S0086-B v2.0, X.S0013-0 v1.0, X.S0013-A v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00073	Support for ISIM on UICC in 3GPP2 Systems	<p>Proposes that the MS-resident IMS support capabilities may be realized by utilizing the 3GPP-specified ISIM and UICC mechanism. This work item aims for the support of the initial release of the 3GPP2 IMS functionality as specified by TSG-X.</p> <p>UICC and ISIM</p> <p>Logically, this work item consists of two components: (1) the support for UICC in 3GPP2 systems, and (2) the support for ISIM on UICC in 3GPP2 systems.</p>	C.S0069-0 v1.0, C.S0073-0 v1.0, C.S0074-0 v1.0, S.R0095-0 v1.0, X.S0013-B v1.0
00074	IOTA Device Management (IOTA-DM)	Extends 3GPP2 IP Based Over-the-Air Handset Configuration Management (IOTA-HCM) capabilities, as specified in C.S0040 IOTA-HCM. The enhancements include, but are not limited to, the following, a. Firmware OTA (FOTA) b. Support for SyncML Device Management (SyncML DM) in addition to MMC [Mobile Management Command] command sets.	C.S0064-0 v1.0, S.R0101-0 v1.0
00076	Press-to-Talk Over Cellular (PoC)	The Press-To-Talk over Cellular (PoC) feature over a wireless IP network enables point-to-point and point to multipoint half-duplex IP-based communications without dialing, together with a rich variety of features including Presence Service.	S.R0100-0 v1.0
00078	Multimedia Messaging Services (MMS) Enhancements	Multimedia Messaging Services (MMS) offers non-real time messaging service that may contain multimedia contents.	C.S0045-0 v1.0, C.S0045-0 v2.0, S.R0064-0 v1.0, S.R0064-A v1.0, X.S0016-0 v1.0, X.S0016-0 v2.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00078-A	Multimedia Message Service (MMS) – Rev A		C.S0045-A v1.0, X.S0016-A v1.0
00082	IMS Conferencing	IMS Conferencing provides the means for a user to create, manage, terminate, join and leave conferences, which are handled by a server within a home network of the conference creator. It also provides the network with the ability to give information about these conferences to the involved parties. Participants to conferences may be internal or external to the home network. The network operator or the user may apply membership and media policies to a conference by using a conference policy control protocol (CPCP).	X.S0029-0 v1.0
00087	Telephone Number Mapping Support (ENUM)	Defines ENUM [TElephone NUmber Mapping] network support. ENUM unifies the telephone numbering system E.164 with the Internet addressing system DNS [Domain Name Service].	S.S0118-0 v1.0
00090	Packet Switched Video Telephony (a.k.a., Multimedia Conversational Services)	End-to-end solution for packet-switched video telephony (also sometimes referred to as multimedia conversational services), which entails the capability to conduct two-way point-to-point and point-to-multipoint real-time video, speech, and signaling transmission between mobile terminals.	A.S0008-A v1.0, A.S0008-A v2.0, A.S0009-A v1.0, A.S0009-A v2.0, C.00055-0 v1.0, S.R0106-0 v1.0, S.R0106-0 v2.0, X.R0039-0 v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00094	HRPD-cdma2000 1X Interoperability for Voice and Data	Addresses HRPD and cdma2000-1X network interoperability by providing flexibility in the selection of the network (cmda2000-1X or HRPD) to support a voice call to/from a Hybrid Access Terminal (HAT). The determination of which network (cdma2000-1X or HRPD) serves the mobile may depend on if the HAT has a dormant or active data session when a voice call is originated/terminated. Also enable voice and data call (including Video Telephony) handoffs between HRPD and cdma2000-1X networks.	A.S0008-A v1.0 , A.S0008-A v2.0, A.S0009-A v1.0, A.S0009-A v2.0, A.S0009-B v1.0, C.S0075-0 v1.0, S.R0037-A v1.0, S.R0108-0 v1.0, S.R0108-0 v2.0, X.S0004-630-E v3.0, X.S0004-641-E v2.0, X.S0042-0 v1.0, X.S0048-0 v1.0
00095	Graceful recovery when Segmentation & Reassembly is not available (GR)	Provides enhancement for graceful recovery when Segmentation & Reassembly is not available.	X.S0004-691-E v2.0, X.S0004-691-E v3.0
00099	Short Message Service (C.S0015-A v2.0) Point Release	Point Release for Short Message Service (C.S0015-A v2.0).	C.S0015-A v2.0
00100	Short Message Service (C.S0015-B v2.0) Point Release	Point Release for Short Message Service (C.S0015-B v2.0).	C.S0015-B v2.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00104-A	Generic Bootstrapping Architecture (GBA) – Version 2	Provides generic architecture providing the possibility to generate a common shared key between the Mobile Station (MS) and the entities affiliated with the network, after the network authenticates the MS.	S.S0109-0 v2.0, S.S0114-0 v2.0
00105	IMS to ISUP Interworking	Defines the principles of interworking between IP Multimedia Subsystem (IMS) and ISDN User Part (ISUP) based Circuit Switched (CS) networks, in order to support basic voice calls.	X.S0050-0 v1.0
00116	cdma2000 application on UICC	Creates a new specification for a cdma2000access application on the UICC platform as specified in ETSI-SCP TS 102 221, supporting all current functionalities available in the R-UIM specification (C.S0023) and serving as a baseline for future evolution.	C.S0065-0 v1.0, S.R0037-A v1.0, S.R0037-B v1.0
00120	Interoperability test specification for cdma2000 Air Interface – Rev A	Interoperability test specification for cdma2000 Air Interface – Rev A.	C.S0044-A v1.0
00129	Guidelines for Evaluating the Quality of VoIP over HRPD Rev A	Creates a Technical Report comprising guidelines for evaluating quality of VoIP over an HRPD Rev A system.	C.R1008-0 v1.0, C.R1009-0 v1.0
00131	Vocoder Enhancements for Voice Quality and System Capacity Improvements	Enhances EVRC for efficient delivery of speech content over circuit-switched and packet-switched networks in cdma2000.	C.R0014-B v1.0, C.S0014-B v1.0, C.R0018-B v1.0, C.S0018-B v1.0

00132	R-UIM Remote Management	Leverages the secured packet architecture & Application Protocol Data Unit (APDU structure defined by ETSI SCP to enable post-issuance remote management of R-UIMs or UICC based applications over the air in cdma2000 network.	C.S0078-0 v1.0, C.S0079-0 v1.0
00138	Revision of Parameter Value Assignments	C.R1001-F incorporates new parameter value assignments to reflect the changes made in other Technical Specifications as well as new proprietary parameter assignments requested by individual member companies.	C.R1001-F v1.0
00141	Alterations to cdma2000 HRPD AN Spurious Emission Minimum Performance Specifications (MPS)	C.S0032-A version update.	C.S0032-A v2.0
00142	Alterations to cdma2000 HRPD AT Spurious Emission Minimum Performance Specifications (MPS)	C.S0033-A version update.	C.S0033-A v2.0
00145	Packet Data Access Network Evolution (PDANE)	Evolves and enhances cdma2000 Packet Data Access Network to allow deploying both distributed and centralized architecture to better support Enhanced Packet Data Air Interface (E-PDAI), to enhance system performance, reduce cost of network operation, enable faster introduction of new feature, and provide better QoS for real time IP services.	A.S0020-0 v1.0, S.R0121-0 v1.0, S.R0124-0 v1.0, X.S0054-000-0 v1.0
00146	Signaling Conformance Specification for the Enhanced Multi-flow Packet Applications	Signaling Conformance Specification for C.S0063.	C.S0081-0 v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00146-A	Signaling Conformance Specification for cdma2000 HRPD Supplemental Services Revision A	Signaling Conformance Specification for C.S0063-A v 1.0.	C.S0038-A v2.0
00147	Simulation Methodology for Multimedia Services	Documents simulation methodologies adopted for evaluating packet-switched multimedia services over cdma2000 networks.	C.R1008-0 v1.0, C.R1009-0 v1.0
00149	A new revision to the AN Minimum Performance Standard to support HRPD Rev. B and BCMCS Rev A access networks	Minimum Performance Specification for C.S0024-B and C.S0054-A access networks.	C.S0032-A v2.0
00150	A new revision to the AT Minimum Performance Standard to support HRPD Rev. B and BCMCS Rev A access terminals	Minimum Performance Specification for C.S0024-B and C.S0054-A access terminals.	C.S0033-A v2.0
00151	Revision B of Test Application Specification for HRPD Rev. B and BCMCS Rev. A.	Test Application Specification for C.S0024-B [HRPD Air Interface] and C.S0054-A [High Rate Broadcast-Multicast Air Interface].	C.S0029-B v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00158	Enhanced Variable Rate Codec – Wideband	The purpose of this work item is to further enhance EVRC for much better voice quality while preserving the existing system capacity over circuit switched and packet switched networks in cdma2000.	C.R0014-C v1.0, C.S0014-C v1.0, C.R0018-C v1.0, C.S0018-C v1.0,
00159	Enhanced cdma2000 Air Interface	Defines enhanced cdma2000 air interface.	A.S0020-0 v1.0, C.S0084-0 v1.0, C.S0084-0 v2.0, S.R0113-0 v1.0, S.R0113-0 v2.0, S.R0124-0 v1.0, X.S0054-0 v1.0
00162	Version update for Enhanced Cryptographic Algorithms and Common Security Algorithms Specifications	1- Version update to S.S0055-A v4.0 2- Version update to S.S0078-A v4.0.	S.S0055-A v4.0, S.S0078-A v4.0
00163	Preferred Cryptographic Profiles	The Preferred Cryptographic Profiles (PCP) contains formal recommendations for preferred cryptographic transports and associated cipher suites to be used to protect security-sensitive IP interfaces and services.	S.R0122-0 v1.0
00164	Version update for CDMA Card Application Toolkit (CCAT) Specification	Version update to C.S0035-A v2.0.	C.S0035-A v2.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00165	Development of a new specification for the HRPD air interface cdma2000 Circuit Services Notification Application	Specification for Notification of availability of cdma2000 1x Circuit-Switched Services on the HRPD air interface.	C.S0082-0 v1.0
00166	GBA Rev A Enhancements	Builds on the Rev 0 versions of the GBA specifications by adding new features.	S.S0109-A v1.0, S.S0114-A v1.0
00169	New revision of CDMA Card Application Toolkit (CCAT) Specification	Enhances the features of CCAT specification according to ETSI TS 102 223 (Card Application Toolkit) Release 7.	C.S0035-A v2.0
00171	MMD Roaming	The MMD Roaming specifies the inter-operator roaming architecture and protocols to allow MMD operators to provide services to their customers when roaming on other networks.	X.R0052-0 v1.0
00174	Signaling Conformance Specification for HRPD Rev A Point Release.	Signaling Conformance Specification for C.S0024-A v3.0.	C.S0038-A v2.0
00175	Over the Air Interoperability Specification for cdma2000 Air Interface	OTA Inter-op Spec. C.S0058-A.	C.S0058-A v 1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
00178	Point Release for cdma2000 High Rate Packet Data Air Interface Specification Revision B	Fixes bugs in cdma2000 High Rate Packet Data Air Interface Specification Revision B	C.S0024-B v2.0
00183	VoIP Codecs and Protocols	Recommends VoIP codecs and protocol configuration for IMS compliant terminals attached via an HRPD access network.	C.S0085-0 v1.0
00184	Point release for cdma2000 High Rate Packet Data Supplemental Services.	Fixes bugs found in C.S0063-A.	C.S0063-A v2.0
00188	Point Release of Ultra Mobile Broadband (UMB) Air Interface Specification	Point Release of C.S0084	C.S0084-0 v2.0
00193	Adding UMB Security Algorithms to S.S0078-B	Adds the security algorithm specification for UMB.	S.S0078-B v1.0
00200	Test Signaling Specification for MEID - Rev A	Updates C.S0073-0 to include bug fixes and test cases to test additional functionality related to MEID.	C.S0073-A v1.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
2000-002	IP Broadcast and IP Multicast	For broadcast and multicast support the information should be sent over-the-air using common channels to avoid message replication and thereby reduce traffic. When a mobile station is otherwise engaged in a transmission and does not have immediate access to the common channel, it may be required that the message be replicated to reach one or more specific mobile stations. If no multicast member is in a particular cell or sector, the information should not be sent.	A.S0019-0 v1.0, A.S0019-0 v2.0, A.S0019-A v1.0, A.S0019-A v2.0, C.S0002-D v1.0, C.S0003-D v1.0, C.S0003-D v2.0, C.S0005-D v1.0, C.S0005-D v2.0, C.S0023-C v1.0, C.S0054-0 v1.0, C.S0054-0 v2.0, C.S0054-A v1.0, S.R0030-0 v3.0, S.R0030-A v1.0, S.R0037-A v1.0, S.S0083-A v1.0, X.S0022-0 v1.0, X.S0022-A v1.0
TSGA-009	Multi RLP Support and Cross Paging		A.S0008-A v1.0, A.S0008-A v2.0, A.S0009-A v1.0, A.S0009-A v2.0, A.S0009-B v1.0
TSGC-019	Forward Link Performance Enhancements		C.S000(1-6)-D v2.0

<b>WI Number</b>	<b>Feature Name</b>	<b>Description</b>	<b>Specs &amp; Reports</b>
TSGC-032	Signaling Conformance Test Specification for Data Services		C.S0062-0 v1.0
TSGC-038	SMS Enhancements		C.S0015-B v1.0, C.S0015-B v2.0
TSGC-061	Vocoder Enhancements for Voice Quality and System Capacity		C.R0014-B v1.0, C.S0014-B v1.0, C.R0018-B v1.0, C.S0018-B v1.0
TSGC-072	3GPP2 Multimedia Services Evaluation Methodology		C.R1008-0 1.0, C.R1009-0 v1.0
TSGC-100	File Formats for Multimedia Services		C.S0050-B v1.0
TSGS-003	OAM&P for cdma2000 (3GPP R5 Delta Specification)		S.S0028-A v1.0, S.S0028-B v1.0, S.S0028-B v2.0, S.S0028-C v1.0, S.S0028-C v2.0

#### 4. ABBREVIATIONS

The abbreviations below are used throughout the system release guide.

BCMCS	Broadcast/Multicast Services
CAN	Converged Access Network
CCAT	CDMA Card Application Toolkit
CDMA	Code Division Multiple Access
CN	Correspondent Node or Core Network
CPCP	Conference Policy Control Protocol
CS	Circuit Switched
DM	Device Management
DNS	Domain Name Service
ECR	Enhanced Call Recovery
EMS	Enhanced Message Service
ENUM	Telephone Numbering Mapping
E-PDAI	Enhanced Packet Data Air Interface
GBA	Generic Bootstrapping Architecture
HAT	Hybrid Access Terminal
HRPD	High Rate Packet Data
IM	IP Multimedia
IMS	IP Multimedia Subsystem
IOS	Interoperability Specification
IOTA	Internet Over-the-Air
IP	Internet Protocol
ISDN	Integrated Services Digital Network
ISIM	IM Services Identity Module
ISUP	ISDN User Part
LAC	Link Access Control
MAC	Medium Access Control
MAP	Mobile Application Part
MEID	Mobile Station Equipment Identifier
MIMO	Multiple Input Multiple Output
MMC	Mobile Management Command

MMD	Multimedia Domain
MMS	Multimedia Messaging Service
MS	Mobile Station
NAM	Network Architecture Model
OA&M	Operations, Administration and Maintenance
OFDMA	Orthogonal Frequency Division Multiple Access
PCP	Preferred Cryptographic Profiles
PDF	Policy Decision Function
PoC	Push-to-talk over Cellular
PSVT	Packet Switched Video Telephony
QoS	Quality of Service
RAN	Radio Access Network
RL	Reverse Link
RRM	Radio Resource Management
SDMA	Space Division Multiple Access
TAS	Test Application Specification
TCAP	Transaction Capabilities Application Part
TSG	Technical Specifications Group
UICC	Universal Integrated Circuit Card
UMB	Ultra Mobile Broadband
VoIP	Voice over IP
WI	Work Item
WIN	Wireless Intelligent Network
WLAN	Wireless Local Area Network
