 17 and the strength PS, as specified in 2.6.6.2.2, of any Neighbor Set or Remaining  
 18 Set pilot is found to satisfy the following inequality:

$$10 \times \log_{10} PS > \max\left(\frac{\text{SOFT\_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} PS_i + \frac{\text{ADD\_INTERCEPT}_s}{2}, -\frac{T\_ADD_s}{2}\right)$$

20 where the summation is performed over all pilots currently in the Active Set.

- 21 • P\_REV\_IN\_USE<sub>s</sub> is less than or equal to three or SOFT\_SLOPE<sub>s</sub> is equal to  
 22 '000000', the strength of a Candidate Set pilot exceeds the strength of an Active  
 23 Set pilot by T\_COMP<sub>s</sub> × 0.5 dB, and a *Pilot Strength Measurement Message*  
 24 carrying this information has not been sent since the last *Extended Handoff*  
 25 *Direction Message*, *General Handoff Direction Message* or *Universal Handoff*  
 26 *Direction Message* was received.
- 27 • P\_REV\_IN\_USE<sub>s</sub> is greater than three, SOFT\_SLOPE<sub>s</sub> is not equal to '000000',  
 28 and the strength of a Candidate Set pilot exceeds the strength of an Active Set  
 29 pilot by T\_COMP<sub>s</sub> × 0.5 dB and satisfies the following inequality:

$$10 \times \log_{10} PS > \frac{\text{SOFT\_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} PS_i + \frac{\text{ADD\_INTERCEPT}_s}{2}$$

31 where the summation is performed over all pilots currently in the Active Set and  
 32 a *Pilot Strength Measurement Message* or an *Extended Pilot Strength*  
 33 *Measurement Message* carrying this information has not been sent since the  
 34 last *Extended Handoff Direction Message*, *General Handoff Direction Message* or  
 35 *Universal Handoff Direction Message* was received.

- 1       • The handoff drop timer of an Active Set pilot has expired and a *Pilot Strength*  
2       *Measurement Message* or an *Extended Pilot Strength Measurement Message*  
3       carrying this information has not been sent since the last *Extended Handoff*  
4       *Direction Message*, *General Handoff Direction Message*, or *Universal handoff*  
5       *Direction Message* was received.
  - 6       • A Candidate Set pilot has been autonomously promoted to the Active Set (see  
7       2.6.6.2.6.1), and an *Extended Pilot Strength Measurement Message* carrying this  
8       information has not been sent since the last *Extended Handoff Direction*  
9       *Message*, *General Handoff Direction Message*, or *Universal Handoff Direction*  
10      *Message* was received.
- 11      2. *Handoff Completion Message* or *Extended Handoff Completion Message*: The mobile  
12      station shall send a *Handoff Completion Message* if P\_REV\_IN\_USE<sub>s</sub> is less than  
13      seven or an *Extended Handoff Completion Message* if P\_REV\_IN\_USE<sub>s</sub> is equal to or  
14      greater than seven in assured mode as follows:
- 15      • If the handoff message (*Extended Handoff Direction Message*, *General Handoff*  
16      *Direction Message* or *Universal Handoff Direction Message*) specifies a soft  
17      handoff, the mobile station shall send the *Handoff Completion Message* if  
18      P\_REV\_IN\_USE<sub>s</sub> is less than seven or an *Extended Handoff Completion Message*  
19      if P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven within T<sub>56m</sub> seconds after  
20      the action time of the received handoff message.
  - 21      • If the handoff message (*Extended Handoff Direction Message*, *General Handoff*  
22      *Direction Message* or *Universal Handoff Direction Message*) specifies a hard  
23      handoff without return on failure (see 2.6.6.2.8.1), the mobile station shall send  
24      the *Handoff Completion Message* if P\_REV\_IN\_USE<sub>s</sub> is less than seven or an  
25      *Extended Handoff Completion Message* if P\_REV\_IN\_USE<sub>s</sub> is equal to or greater  
26      than seven within T<sub>73m</sub> seconds after the action time of the received handoff  
27      message.
  - 28      • If the handoff message (*General Handoff Direction Message* or *Universal Handoff*  
29      *Direction Message*) specifies a hard handoff with return on failure (see  
30      2.6.6.2.8.2), the mobile station shall send the *Handoff Completion Message* if  
31      P\_REV\_IN\_USE<sub>s</sub> is less than seven or an *Extended Handoff Completion Message*  
32      if P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven within T<sub>56m</sub> seconds after  
33      mobile station declares the handoff to be successful (see 2.6.6.2.8.2).
- 34      3. *Candidate Frequency Search Report Message*: The mobile station shall send a  
35      *Candidate Frequency Search Report Message* in assured mode, whenever any of the  
36      following events occur:
- 37      • RETURN\_IF\_HANDOFF\_FAIL<sub>s</sub> is equal to '1', and a handoff attempt is  
38      unsuccessful (see 2.6.6.2.8.2). In this case, the mobile station shall send a  
39      *Candidate Frequency Search Report Message* within T<sub>56m</sub> seconds after  
40      completing a search of all pilots in the Candidate Frequency Search Set and  
41      resuming the use of the Serving Frequency Active Set (see 2.6.6.2.8.2.1).

- 1       • RETURN\_IF\_HANDOFF\_FAIL<sub>s</sub> is equal to '1', an inter-frequency handoff attempt  
2       is unsuccessful (see 2.6.6.2.8.2), and PERIODIC\_SEARCH<sub>s</sub> is equal to '1'. In  
3       this case, the mobile station shall send a *Candidate Frequency Search Report*  
4       *Message* in a search period if the conditions specified in 2.6.6.2.8.3.2 are met.
- 5       • The mobile station receives a *Candidate Frequency Search Request Message* or  
6       a *Candidate Frequency Search Control Message* with SEARCH\_TYPE set to '01'.  
7       If none of the conditions requiring the mobile station to send a *Mobile Station*  
8       *Reject Order* is true (see 2.6.6.2.5.1), the mobile station shall send a *Candidate*  
9       *Frequency Search Report Message*, as described in 2.6.6.2.8.3.1 and  
10      2.6.6.2.10.1.
- 11      • The mobile station receives a *Candidate Frequency Search Request Message* or  
12      *Candidate Frequency Search Control Message* with SEARCH\_TYPE set to '11',  
13      SEARCH\_MODE<sub>s</sub> is equal to '0000' and the Candidate Frequency Search Set is  
14      not empty. If none of the conditions requiring the mobile station to send a  
15      *Mobile Station Reject Order* is true (see 2.6.6.2.5.1), the mobile station shall  
16      send a *Candidate Frequency Search Report Message* in a search period if the  
17      conditions specified in 2.6.6.2.8.3.2 are met.
- 18      4. *Periodic Pilot Strength Measurement Message*: The mobile station shall send a  
19      *Periodic Pilot Strength Measurement Message* in unassured mode, as specified in  
20      2.6.6.2.5.1 and 2.6.6.2.12.
- 21      5. *Pilot Strength Measurement Mini Message*: If the mobile station supports the Mobile  
22      Assisted Burst operation capability, the mobile station shall send this message  
23      while processing any Supplemental Channel, according to the following:
  - 24      • The mobile station shall transmit a *Pilot Strength Measurement Mini Message* for  
25      a pilot *p* in the Active Set on the r-dsch logical channel whenever all of the  
26      following conditions are true:
    - 27      – ORDER\_FLAG<sub>s</sub> is equal to '1'.
    - 28      – The pilot *p* in the Active Set has a received signal strength that is greater  
29      than the signal strength of another pilot in the Active Set by  
30      PS\_MIN\_DELTA<sub>s</sub>, in units of 0.5 dB, at the current time and has been for  
31      ORDER\_INTERVAL<sub>s</sub> most recent successive 20 ms frame intervals since this  
32      pilot was last reported in a rank order based *Pilot Strength Measurement*  
33      *Mini Message*.
    - 34      – The rank order of pilot *p* has changed.
  - 35      • If PERIODIC\_FLAG<sub>s</sub> is equal to '1', the mobile station shall transmit a *Pilot*  
36      *Strength Measurement Mini Message* within PERIODIC\_INTERVAL<sub>s</sub> 20 ms frame  
37      intervals on the r-dsch for each of the *n* pilots in the Active Set with the largest  
38      signal strengths, where *n* = (min (NUM\_PILOTS, the number of pilots in the  
39      Active Set)), whenever the following condition is true:
    - 40      – The mobile station has not transmitted another *Pilot Strength*  
41      *Measurement Mini Message* for the corresponding pilot during the last  
42      PERIODIC\_INTERVAL<sub>s</sub> 20 ms frame intervals.

- If THRESHOLD\_FLAG<sub>s</sub> is equal to '1', the mobile station shall transmit a *Pilot Strength Measurement Mini Message* for pilot *p* on the r-dsch logical channel whenever all of the following conditions are true:
  - The mobile station has not transmitted a previous *Pilot Strength Measurement Mini Message* for pilot *p* within the most recent THRESHOLD\_INTERVAL<sub>s</sub> 20 ms frames intervals.
  - Pilot *p* is in the Active Set.
  - The signal strength of pilot *p* is greater than PS\_CEILING\_HIGH<sub>s</sub> and the signal strength of pilot *p* was less than or equal to PS\_CEILING\_LOW<sub>s</sub> at any time since the mobile station last sent a *Pilot Strength Measurement Mini Message* for pilot *p*; or the signal strength of pilot *p* is less than PS\_FLOOR\_LOW<sub>s</sub> and the signal strength for pilot *p* was greater than or equal to PS\_FLOOR\_HIGH<sub>s</sub> at any time since the last time that the mobile station sent a *Pilot Strength Measurement Mini Message* for pilot *p*.

#### 2.6.6.2.6 Set Maintenance

##### 2.6.6.2.6.1 Maintenance of the Active Set

The mobile station shall support a maximum Active Set size of N<sub>6m</sub> pilots. The mobile station shall track the pilot strengths of all pilots in the Active Set.

When the mobile station is first assigned Forward Traffic Channels, the mobile station shall initialize the Active Set to contain the pilots associated with the assigned Forward Traffic Channels. When the mobile station processes an *Extended Handoff Direction Message*, a *General Handoff Direction Message* or *Universal Handoff Direction Message*, then at the action time of the message the mobile station shall replace the pilots in the Active Set with the pilots listed in the message.

If the call rescue allowed timer is enabled, then the mobile station shall autonomously add one or more Candidate Set pilots whose strength exceeds T\_ADD<sub>s</sub> to the Active Set, beginning with the strongest, provided that:

- the NGHBR\_RESQ\_CONFIGURED field of the NGHBR\_REC for the corresponding pilot is equal to '1', and
- the resulting Active Set size does not exceed N<sub>6m</sub> pilots.

When autonomously adding Rescue Channel pilots to the Active Set, the mobile station may autonomously drop one or more of the existing pilots in the Active Set, beginning with the weakest, to allow for adding pilots when the Active Set is full.

##### 2.6.6.2.6.2 Maintenance of the Candidate Set

The mobile station shall support a maximum Candidate Set size of N<sub>7m</sub> pilots.

When the mobile station is first assigned a Forward Traffic Channel, the mobile station shall initialize the Candidate Set to contain no pilots. The mobile station shall adjust the Candidate Set whenever any of the following events occur:

- 1 • If the mobile station detects that the strength of a Neighbor Set pilot or a  
2 Remaining Set pilot exceeds  $T\_ADD_S$ , the mobile station shall add the pilot to the  
3 Candidate Set.
- 4 • If the mobile station processes an *Extended Handoff Direction Message*, a *General*  
5 *Handoff Direction Message* or a *Universal Handoff Direction Message* which does  
6 not list a pilot in the current Active Set, and the handoff drop timer corresponding  
7 to that pilot has not expired at the action time of the message, the mobile station  
8 shall add the pilot to the Candidate Set at the action time of the message.
- 9 • If the mobile station autonomously drops an existing pilot in the Active Set (see  
10 2.6.6.2.6.1), and the handoff drop timer corresponding to that pilot has not expired,  
11 the mobile station shall add the pilot to the Candidate Set.
- 12 • If  $P\_REV\_IN\_USE_S$  is greater than three, and  $SOFT\_SLOPE_S$  is not equal to  
13 '000000', the mobile station shall perform the following:
  - 14 – If the mobile station processes a *General Handoff Direction Message* or a  
15 *Universal Handoff Direction Message* which does not list a pilot in the current  
16 Active Set, the handoff drop timer corresponding to that pilot has expired at the  
17 action time of the message, and that pilot is found to be above  $T\_DROP_S$ , the  
18 mobile station shall add the pilot to the Candidate Set at the action time of the  
19 message.
  - 20 – If the mobile station autonomously drops an existing pilot in the Active Set (see  
21 2.6.6.2.6.1), the handoff drop timer corresponding to that pilot has expired, and  
22 that pilot is found to be above  $T\_DROP_S$ , the mobile station shall add the pilot  
23 to the Candidate Set.
- 24 • If the mobile station processes an *Extended Handoff Direction Message*, a *General*  
25 *Handoff Direction Message* or *Universal Handoff Direction Message*, which lists a  
26 pilot in the current Candidate Set, the mobile station shall delete the pilot from the  
27 Candidate Set at the action time of the message.
- 28 • If the handoff drop timer corresponding to a Candidate Set pilot expires, the mobile  
29 station shall delete the pilot from the Candidate Set.
- 30 • If the mobile station autonomously adds a Candidate Set pilot to the Active Set (see  
31 2.6.6.2.6.1), the mobile station shall delete the pilot from the Candidate Set.
- 32 • If the mobile station adds a pilot to the Candidate Set, and the resulting Candidate  
33 Set size exceeds  $N_{7m}$ , the mobile station shall delete from the Candidate Set the  
34 pilot whose handoff drop timer is closest to expiration. If more than one such pilot  
35 exists, the mobile station shall delete one such pilot that has the lowest strength.  
36 If no pilot in the Candidate Set has an enabled handoff drop timer, the mobile  
37 station shall delete from the Candidate Set the pilot that has the lowest strength.

#### 38 2.6.6.2.6.3 Maintenance of the Neighbor Set

39 The mobile station shall support a Neighbor Set size of at least  $N_{8m}$  pilots.

1 When the mobile station is first assigned a Forward Traffic Channel, the mobile station  
 2 shall initialize the Neighbor Set to contain all the pilots specified in the most recently  
 3 received *Neighbor List Message*, *Extended Neighbor List Message* or *General Neighbor List*  
 4 *Message*.

5 The mobile station shall maintain a counter,  $AGE_S$ , for each pilot in the Neighbor Set. The  
 6 mobile station shall initialize this counter to zero when it moves the pilot from the Active  
 7 Set or the Candidate Set to the Neighbor Set. The mobile station shall initialize this  
 8 counter to  $NGHBR\_MAX\_AGE_S$  when it moves the pilot from the Remaining Set to the  
 9 Neighbor Set. The mobile station shall increment  $AGE_S$  for each pilot in the Neighbor Set  
 10 upon receipt of a *Neighbor List Update Message* or an *Extended Neighbor List Update*  
 11 *Message*. When the mobile station is first assigned to a Forward Traffic Channel, the  
 12 mobile station shall set  $AGE_S$  for each pilot in the Neighbor Set to  $NGHBR\_MAX\_AGE_S$ .

13 The mobile station shall adjust the Neighbor Set whenever any of the following events  
 14 occur:

- 15 • If the mobile station receives a *Neighbor List Update Message* or an *Extended*  
 16 *Neighbor List Update Message*, it shall perform the following:
  - 17 – Increment  $AGE_S$  for each pilot in the Neighbor Set.
  - 18 – Delete from the Neighbor Set all pilots whose  $AGE_S$  exceeds  
 19  $NGHBR\_MAX\_AGE_S$ .
  - 20 – Add to the Neighbor Set each pilot named in the message, if it is not already a  
 21 pilot of the Active Set, Candidate Set, or Neighbor Set. If the mobile station can  
 22 store in the Neighbor Set only  $k$  additional pilots, and more than  $k$  new pilots  
 23 were sent in the *Neighbor List Update Message* or the *Extended Neighbor List*  
 24 *Update Message*, the mobile station shall store the first  $k$  new pilots listed in  
 25 the message.
- 26 • If the handoff drop timer of a pilot in the Candidate Set expires, the mobile station  
 27 shall add the pilot to the Neighbor Set.
- 28 • If  $P\_REV\_IN\_USE_S$  is less than or equal to three or  $SOFT\_SLOPE_S$  is equal to  
 29 '000000', the mobile station shall perform the following:
  - 30 – If the mobile station processes an *Extended Handoff Direction Message*, a  
 31 *General Handoff Direction Message*, or a *Universal Handoff Direction Message* in  
 32 which a pilot in the Active Set is not listed, and the handoff drop timer  
 33 corresponding to the pilot has expired, the mobile station shall add the pilot to  
 34 the Neighbor Set.
  - 35 – If the mobile station autonomously drops an existing pilot in the Active Set (see  
 36 2.6.6.2.6.1) and the handoff drop timer corresponding to the pilot has expired,  
 37 the mobile station shall add the pilot to the Neighbor Set.
- 38 • If  $P\_REV\_IN\_USE_S$  is greater than three, and  $SOFT\_SLOPE_S$  is not equal to  
 39 '000000', the mobile station shall perform the following:

- 1       – If the mobile station processes an *Extended Handoff Direction Message*, a  
2       *General Handoff Direction Message*, or a *Universal Handoff Direction Message*  
3       which does not list a pilot in the current Active Set, the handoff drop timer  
4       corresponding to that pilot has expired, and that pilot is found to be below  
5        $T_{DROP_s}$ , the mobile station shall add the pilot to the Neighbor Set.
- 6       – If the mobile station autonomously drops an existing pilot in the Active Set (see  
7       2.6.6.2.6.1), the handoff drop timer corresponding to that pilot has expired, and  
8       that pilot is found to be below  $T_{DROP_s}$ , the mobile station shall add the pilot  
9       to the Neighbor Set.
- 10      • If the mobile station adds a pilot to the Candidate Set, and the resulting Candidate  
11      Set size exceeds the size supported by the mobile station, the mobile station shall  
12      add the deleted Candidate Set pilot to the Neighbor Set (see 2.6.6.2.6.2).
- 13      • If the mobile station detects that the strength of a Neighbor Set pilot exceeds  
14       $T_{ADD_s}$ , the mobile station shall delete the pilot from the Neighbor Set.
- 15      • If the mobile station processes an *Extended Handoff Direction Message*, a *General*  
16      *Handoff Direction Message* or a *Universal Handoff Direction Message* which lists a  
17      pilot in the current Neighbor Set, the mobile station shall delete the pilot from the  
18      Neighbor Set.
- 19      • If the mobile station adds a pilot to the Neighbor Set, and the resulting Neighbor  
20      Set size exceeds the size supported by the mobile station, the mobile station shall  
21      delete from the Neighbor Set the pilot whose  $AGE_s$  is the largest. If more than one  
22      such pilot exists, the mobile station shall delete one such pilot that has the lowest  
23      strength.

#### 24   2.6.6.2.7 Soft Handoff

##### 25   2.6.6.2.7.1 Forward Traffic Channel Processing

26   All Forward Traffic Channels associated with pilots in the Active Set of the mobile station  
27   carry identical modulation symbols with the exception of the power control subchannel  
28   (see [2]).

29   When the Active Set contains more than one pilot, the mobile station should provide  
30   diversity combining of the associated Forward Traffic Channels. The mobile station shall  
31   provide for differential propagation delays from zero to at least 150  $\mu s$ .

##### 32   2.6.6.2.7.2 Reverse Traffic Channel Power Control During Soft Handoff

33   The *Extended Handoff Direction Message*, a *General Handoff Direction Message* or a  
34   *Universal Handoff Direction Message* identifies sets of Forward Fundamental Channels or  
35   Forward Dedicated Control Channels that carry identical closed loop power control  
36   subchannels. A set consists of one or more Forward Fundamental Channels or Forward  
37   Dedicated Control Channels with identical power control information.

38   The *Universal Handoff Direction Message* identifies sets of Forward Common Power Control  
39   Channels that carry identical closed loop power control subchannels. A set consists of one

1 or more Forward Common Power Control Channels with identical power control  
2 information.

3 Each Rescue Channel that has been autonomously promoted to the Active Set as part of  
4 Call Rescue Soft Handoff (see 2.6.6.2.13) shall form its own set. The mobile station shall  
5 not diversity combine the closed loop power control subchannel of any Rescue Channel  
6 with any other Forward Fundamental Channel until directed otherwise by an *Extended*  
7 *Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff*  
8 *Direction Message*.

9 In each power control group containing valid power control bits (see [2]), the mobile station  
10 should provide diversity combining of the identical closed loop power control subchannels  
11 and shall obtain at most one power control bit from each set of identical closed loop power  
12 control subchannels. The mobile station should only combine reliable power control bits  
13 (see [11]) as follows:

- 14 • If the reliable power control bits obtained from all sets are equal to '0', the mobile  
15 station shall increase its power as specified in [2].
- 16 • If the reliable power control bit obtained from any set is equal to '1', the mobile  
17 station shall decrease its power as specified in [2].

#### 18 2.6.6.2.7.3 Starting Periodic Search following Soft Handoff

19 If the PERIODIC SEARCH<sub>S</sub> is equal to '1', a periodic search is not already in progress, and  
20 the Frequency Assignment after handoff is different from the Candidate Frequency  
21 (CDMABAND<sub>S</sub> is not equal to CF\_CDMABAND<sub>S</sub> or CDMACH<sub>S</sub> is not equal to  
22 CF\_CDMACH<sub>S</sub>), the mobile station shall perform the following:

- 23 • The mobile station shall set ALIGN\_TIMING\_USED<sub>S</sub> to '0' and SEARCH\_OFFSET<sub>S</sub> to  
24 '000000'.
- 25 • The mobile station shall start a periodic search as described in 2.6.6.2.8.3.2.

#### 26 2.6.6.2.8 CDMA-to-CDMA Hard Handoff

27 The base station directs the mobile station to perform a CDMA-to-CDMA hard handoff by  
28 sending an *Extended Handoff Direction Message*, a *General Handoff Direction Message* or a  
29 *Universal Handoff Direction Message* in which the mobile station is transitioned between  
30 disjoint sets of base stations, different Frequency Assignments, or different frame offsets.  
31 When the base station uses a *Extended Handoff Direction Message*, a *General Handoff*  
32 *Direction Message*, *MEID Universal Handoff Direction Message* or a *Universal Handoff*  
33 *Direction Message* to direct the mobile to a channel with flexible channel spacing between  
34 the forward and reverse channels, the base station extends these message using the  
35 *General Extension Message* and include channel records that specify the forward and  
36 reverse frequencies to be used by the mobile station for handoff. The mobile station shall  
37 process this message as specified in section 2.6.18. If RETURN\_IF\_HANDOFF\_FAIL<sub>S</sub> is  
38 equal to '0', the mobile station performs the actions described in 2.6.6.2.8.1. If  
39 RETURN\_IF\_HANDOFF\_FAIL<sub>S</sub> is equal to '1', the mobile station performs the actions  
40 described in 2.6.6.2.8.2.

#### 2.6.6.2.8.1 Hard Handoff without Return on Failure

At the action time specified in the *Extended Handoff Direction Message*, the *General Handoff Direction Message* or *Universal Handoff Direction Message* the mobile station shall disable its transmitter, reset the fade timer specified in 2.6.4.1.8, suspend incrementing TOT\_FRAMES<sub>s</sub>, BAD\_FRAMES<sub>s</sub>, DCCH\_TOT\_FRAMES<sub>s</sub>, and DCCH\_BAD\_FRAMES<sub>s</sub> if applicable as specified in 2.6.4.1.1, and tune to the assigned Forward Traffic Channel. The mobile station shall perform acquisition of the pilots in the new Active Set.

If a periodic Serving Frequency pilot report procedure is in progress, the mobile station shall abort it (see 2.6.6.2.12).

The mobile station shall begin monitoring the assigned Forward Traffic Channel within the time specified below:

- If the *Extended Handoff Direction Message*, *General Handoff Direction Message* or *Universal Handoff Direction Message* specifies a CDMA Frequency Assignment different from the Serving Frequency and an Active Set containing pilots with pilot PN sequence offsets identical to those of the pilots in the Serving Frequency Active Set, the mobile station shall begin monitoring the assigned Forward Traffic Channel within T<sub>60m</sub> seconds after the action time.
- If the *Extended Handoff Direction Message*, *General Handoff Direction Message* or *Universal Handoff Direction Message* specifies a CDMA Frequency Assignment different from the Serving Frequency and an Active Set containing a pilot with pilot PN sequence offset not equal to that of any pilot in the Serving Frequency Active Set, the mobile station shall begin monitoring the assigned Forward Traffic Channel within T<sub>61m</sub> seconds after the action time.
- If the *Extended Handoff Direction Message*, *General Handoff Direction Message* or *Universal Handoff Direction Message* specifies a CDMA-to-CDMA hard handoff without changing the CDMA Frequency Assignment, the mobile station shall begin monitoring the assigned Forward Traffic Channel within T<sub>62m</sub> seconds after the action time.

If the Target Frequency is the same as the Candidate Frequency (TF\_CDMABAND<sub>s</sub> is equal to CF\_CDMABAND<sub>s</sub>, and TF\_CDMACH<sub>s</sub> is equal to CF\_CDMACH<sub>s</sub>) and is different from the Serving Frequency (TF\_CDMABAND<sub>s</sub> is not equal to SF\_CDMABAND<sub>s</sub>, or TF\_CDMACH<sub>s</sub> is not equal to SF\_CDMACH<sub>s</sub>), the mobile station shall perform the following:

- If applicable, the mobile station shall replace its Neighbor Set with its Candidate Frequency Neighbor Set, excluding the pilots in its Active Set. When the mobile station adds a pilot from its Candidate Frequency Neighbor Set to its Active Set, it shall maintain SEARCH\_PRIORITY<sub>s</sub>, SRCH\_WIN\_NGHBR<sub>s</sub>, and SRCH\_OFFSET\_NGHBR<sub>s</sub> associated with the pilot.
- The mobile station shall set PILOT\_INC<sub>s</sub> to CF\_PILOT\_INC<sub>s</sub>, SRCH\_WIN\_N<sub>s</sub> to CF\_SRCH\_WIN\_N<sub>s</sub>, and SRCH\_WIN\_R<sub>s</sub> to CF\_SRCH\_WIN\_R<sub>s</sub>.

- The mobile station shall set  $SEARCH\_PRIORITY\_INCL_S$  to  $CF\_SEARCH\_PRIORITY\_INCL_S$ ,  $SRCH\_OFFSET\_INCL_S$  to  $CF\_SRCH\_OFFSET\_INCL_S$ , and  $SRCH\_WIN\_NGHBR\_INCL_S$  to  $CF\_SRCH\_WIN\_NGHBR\_INCL_S$ .

If a F-CPCCH is not assigned, the mobile station shall perform the following:

- After the action time, upon receiving a period of  $(N_{11m} \times 20)$  ms with sufficient signal quality on the physical channel corresponding to  $FPC\_PRI\_CHAN_S$  on the assigned Forward Traffic Channel, the mobile station shall re-enable its transmitter. The mobile station shall transmit the Traffic Channel Preamble, as described in [2], followed by a Handoff Completion Message or Extended Handoff Completion Message.
- After the action time, upon receiving a period of  $(N_{3m} \times 20)$  ms with sufficient signal quality on the physical channel corresponding to  $FPC\_PRI\_CHAN_S$ , the mobile station shall resume incrementing  $TOT\_FRAMES_S$ ,  $BAD\_FRAMES_S$ ,  $DCCH\_TOT\_FRAMES_S$ , and  $DCCH\_BAD\_FRAMES_S$  if applicable as specified in 2.6.4.1.1.

If a F-CPCCH is assigned, the mobile station shall perform the following:

- After the action time, upon receiving a period of  $(N_{19m} \times 1.25)$  ms with sufficient signal quality on the Forward Common Power Control Subchannels assigned to this mobile station, the mobile station shall re-enable its transmitter. The mobile station shall transmit the Traffic Channel Preamble, as described in [2], followed by an *Extended Handoff Completion Message*. The mobile station shall also transmit the Reverse Channel Quality Indicator Channel as described in [2] and [3].

If the  $PERIODIC\_SEARCH_S$  is equal to '1', a periodic search is not already in progress, and the Frequency Assignment after handoff is different from the Candidate Frequency ( $CDMABAND_S$  is not equal to  $CF\_CDMABAND_S$  or  $CDMACH_S$  is not equal to  $CF\_CDMACH_S$ ), the mobile station shall perform the following:

- The mobile station shall set  $ALIGN\_TIMING\_USED_S$  to '0' and  $SEARCH\_OFFSET_S$  to '000000'.
- The mobile station shall start a periodic search as described in 2.6.6.2.8.3.2.

#### 2.6.6.2.8.2 Hard Handoff with Return on Failure

At the action time specified in the *General Handoff Direction Message* or *Universal Handoff Direction Message*, the mobile station shall perform the following:

- The mobile station shall stop processing the Forward Fundamental Channel, the Forward Dedicated Control Channel, the Forward Supplemental Code Channels (if any), and the Forward Supplemental Channels (if any).
- The mobile station shall stop transmitting on the Reverse Fundamental Channel, on the Reverse Dedicated Control Channel, and on the Reverse Supplemental Code Channels (if any), and on the Reverse Supplemental Channels (if any).
- The mobile station shall disable the fade timer (see 2.6.4.1.8) and the handoff drop timers corresponding to the Serving Frequency Active Set and Candidate Set (see 2.6.6.2.3), and shall suspend incrementing  $TOT\_FRAMES_S$ ,  $BAD\_FRAMES_S$ ,  $DCCH\_TOT\_FRAMES_S$ , and  $DCCH\_BAD\_FRAMES_S$  if applicable (see 2.6.4.1.1).

- 1       • The mobile station shall lock the accumulation of valid level changes in the closed  
2       loop mean output power and shall ignore received power control bits related to the  
3       period that the transmitter is disabled (see [2]).
- 4       • If the Serving Frequency is different from the Target Frequency ( $SF\_CDMACH_S$  is  
5       not equal to  $TF\_CDMACH_S$  or  $SF\_CDMABAND_S$  is not equal to  $TF\_CDMABAND_S$ ),  
6       the mobile station shall set  $CDMACH_S$  to  $TF\_CDMACH_S$  and  $CDMABAND_S$  to  
7        $TF\_CDMABAND_S$ , and shall tune to the Target Frequency.

8       The mobile station shall not change its time reference (see [2]) until the handoff is  
9       successfully completed (as described later in this section) or the mobile station resumes  
10      using the Serving Frequency Active Set (as described in 2.6.6.2.8.2.1).

11     The mobile station shall maintain a *handoff* timer. The mobile station shall set the  
12     expiration time for the handoff timer to  $(0.08 \times TF\_WAIT\_TIME_S)$  seconds and enable the  
13     timer at the action time of the *General Handoff Direction Message* or *Universal Handoff*  
14     *Direction Message*.

15     The mobile station shall perform the following actions:

- 16       • If the Target Frequency is different from the Serving Frequency ( $TF\_CDMABAND_S$  is  
17       not equal to  $SF\_CDMABAND_S$ , or  $TF\_CDMACH_S$  is not equal to  $SF\_CDMACH_S$ ), the  
18       mobile station shall measure the mean input power on the Target Frequency  
19       (*target\_freq\_pwr*, in dBm/1.23 MHz) and may use *target\_freq\_pwr* along with the  
20       measurement of the average input power on the Serving Frequency  
21       (*avg\_serving\_freq\_pwr*, in dBm/1.23 MHz) in the handoff procedure. The mobile  
22       station may declare the handoff attempt to be unsuccessful if all of the following  
23       conditions are true:
  - 24          –  $DIFF\_RX\_PWR\_THRESH_S$  is not equal to '00000',
  - 25          – the mobile station has been measuring the received power on the Serving  
26          Frequency for at least the last  $N_{12m}$  frames, and
  - 27          –  $(target\_freq\_pwr - avg\_serving\_freq\_pwr)$  is less than  $(-30 + 2 \times$   
28           $DIFF\_RX\_PWR\_THRESH_S)$  dB.

29       If the mobile station declares the handoff attempt to be unsuccessful, it shall  
30       restore the configuration to what it was before the handoff attempt (see 2.6.6.2.5.1)  
31       and send a *Candidate Frequency Search Report Message* as described in  
32       2.6.6.2.8.2.1.

- 33       • The mobile station shall measure  $E_c/I_0$  for each pilot in the Active Set using the  
34       procedures specified in 2.6.6.2.2, if any of the following conditions is true:
  - 35          – the Target Frequency is the same as the Serving Frequency ( $TF\_CDMABAND_S$  is  
36          equal to  $SF\_CDMABAND_S$ , and  $TF\_CDMACH_S$  is equal to  $SF\_CDMACH_S$ ),
  - 37          – the mobile station does not use the power measurements in the handoff  
38          procedure,
  - 39          –  $DIFF\_RX\_PWR\_THRESH_S$  is equal to '00000',

- 1       – the mobile station has not been measuring the received power on the Serving  
2       Frequency for at least the last  $N_{12m}$  frames, or
- 3       –  $(target\_freq\_pwr - avg\_servng\_freq\_pwr)$  is not less than  $(-30 + 2 \times$   
4        $DIFF\_RX\_PWR\_THRESH_S)$  dB.

5       If the mobile station measures  $E_c/I_o$  for pilots in the Active Set, it shall compare the  
6       sum of the measured  $E_c/I_o$  for all pilots with the minimum total pilot  $E_c/I_o$   
7       threshold ( $MIN\_TOTAL\_PILOT\_EC\_IO_S$ ).

- 8       – If  $MIN\_TOTAL\_PILOT\_EC\_IO_S$  is not equal to '00000', and  $(-20 \times \log_{10}$   
9        $(E_c/I_o)_{total})$  is greater than  $MIN\_TOTAL\_PILOT\_EC\_IO_S$ , where  $(E_c/I_o)_{total}$  is the  
10      sum of the measured  $E_c/I_o$  for the pilots in the Active Set, the mobile station  
11      shall declare the handoff attempt to be unsuccessful, and shall perform the  
12      following:

- 13      + If  $COMPLETE\_SEARCH_S$  is equal to '1', and the Target Frequency is the  
14      same as the Candidate Frequency ( $TF\_CDMABAND_S$  is equal to  
15       $CF\_CDMABAND_S$ , and  $TF\_CDMACH_S$  is equal to  $CF\_CDMACH_S$ ) and is  
16      different from the Serving Frequency ( $TF\_CDMABAND_S$  is not equal to  
17       $SF\_CDMABAND_S$ , or  $TF\_CDMACH_S$  is not equal to  $SF\_CDMACH_S$ ), the  
18      mobile station shall measure the strength of each pilot in its Candidate  
19      Frequency Search Set using the procedures specified in 2.6.6.2.2;  
20      otherwise, the mobile station shall end the search.

- 21      + The mobile station shall then restore its configuration to what it was before  
22      the handoff attempt (see 2.6.6.2.5.1) and send a *Candidate Frequency*  
23      *Search Report Message* as described in 2.6.6.2.8.2.1.

- 24      – If  $MIN\_TOTAL\_PILOT\_EC\_IO_S$  is equal to '00000', or  $(-20 \times \log_{10} (E_c/I_o)_{total})$  is  
25      not less than  $MIN\_TOTAL\_PILOT\_EC\_IO_S$ , where  $(E_c/I_o)_{total}$  is the sum of the  
26      measured  $E_c/I_o$  for the pilots in the Active Set, the mobile station shall attempt  
27      to demodulate the Forward Traffic Channel(s). If the Active Set contains more  
28      than one pilot, the mobile station shall perform the actions specified in  
29      2.6.6.2.7. If the Target Frequency is the same as the Candidate Frequency  
30      ( $TF\_CDMABAND_S$  is equal to  $CF\_CDMABAND_S$ , and  $TF\_CDMACH_S$  is equal to  
31       $CF\_CDMACH_S$ ), and is different from the Serving Frequency ( $TF\_CDMABAND_S$   
32      is not equal to  $SF\_CDMABAND_S$ , or  $TF\_CDMACH_S$  is not equal to  
33       $SF\_CDMACH_S$ ), the mobile station shall measure the strength of each pilot in  
34      its Candidate Frequency Search Set using the procedures specified in 2.6.6.2.2,  
35      and the mobile station shall wait for the first of the following events to occur:

- 36      + If the handoff timer expires, the mobile station shall declare the handoff  
37      attempt to be unsuccessful, and perform the following:

- o If COMPLETE\_SEARCH<sub>S</sub> is equal to '1', and if the Target Frequency is the same as the Candidate Frequency (TF\_CDMABAND<sub>S</sub> is equal to CF\_CDMABAND<sub>S</sub>, and TF\_CDMACH<sub>S</sub> is equal to CF\_CDMACH<sub>S</sub>) and is different from the Serving Frequency (TF\_CDMABAND<sub>S</sub> is not equal to SF\_CDMABAND<sub>S</sub>, or TF\_CDMACH<sub>S</sub> is not equal to SF\_CDMACH<sub>S</sub>), and the mobile station has not completed the search of all pilots in its Candidate Frequency Search Set, then it shall complete the search, i.e., it shall obtain at least one measurement of the strength of each pilot in its Candidate Frequency Search Set, using the search procedures specified in 2.6.6.2.8.3.

- o Otherwise, the mobile station shall end the search.

The mobile station shall then restore its configuration to what it was before the handoff attempt (see 2.6.6.2.5.1) and send a *Candidate Frequency Search Report Message* as described in 2.6.6.2.8.2.1.

- + If a F-CPCCH is not assigned, and the mobile station receives a period of ( $N_{11m} \times 20$ ) ms with sufficient signal quality on the physical channel corresponding to FPC\_PRI\_CHAN<sub>S</sub>, or if a F-CPCCH is assigned, and the mobile station receives a period of ( $N_{19m} \times 1.25$ ) ms with sufficient signal quality on the Forward Common Power Control Subchannels assigned to this mobile station, then, the mobile station shall declare the handoff attempt to be successful, and perform the following:
  - o The mobile station shall disable the handoff timer.
  - o If TF\_RESET\_L2<sub>S</sub> is equal to '1', Layer 3 shall send a L2-Supervision.Request primitive to Layer 2 to reset the acknowledgment procedures as specified in [4].
  - o If TF\_RESET\_FPC<sub>S</sub> is equal to '1', the mobile station shall initialize the Forward Traffic Channel power control counters as specified in 2.6.4.1.1.1.
  - o If the Target Frequency is the same as the Candidate Frequency (TF\_CDMABAND<sub>S</sub> is equal to CF\_CDMABAND<sub>S</sub>, and TF\_CDMACH<sub>S</sub> is equal to CF\_CDMACH<sub>S</sub>) and is different from the Serving Frequency (TF\_CDMABAND<sub>S</sub> is not equal to SF\_CDMABAND<sub>S</sub>, or TF\_CDMACH<sub>S</sub> is not equal to SF\_CDMACH<sub>S</sub>), the mobile station shall perform the following:
    - ◊ If applicable, the mobile station shall replace its Neighbor Set with its Candidate Frequency Neighbor Set, excluding the pilots in its Active Set. When the mobile station adds a pilot from its Candidate Frequency Neighbor Set to its Active Set, it shall maintain SEARCH\_PRIORITY<sub>S</sub>, SRCH\_WIN\_NGHBR<sub>S</sub>, and SRCH\_OFFSET\_NGHBR<sub>S</sub> associated with the pilot.

- 1                   ◇ The mobile station shall set PILOT\_INC<sub>S</sub> to CF\_PILOT\_INC<sub>S</sub>,  
2                   SRCH\_WIN\_N<sub>S</sub> to CF\_SRCH\_WIN\_N<sub>S</sub>, and SRCH\_WIN\_R<sub>S</sub> to  
3                   CF\_SRCH\_WIN\_R<sub>S</sub>.
- 4                   ◇ The mobile station shall set SEARCH\_PRIORITY\_INCL<sub>S</sub> to  
5                   CF\_SEARCH\_PRIORITY\_INCL<sub>S</sub>, SRCH\_OFFSET\_INCL<sub>S</sub> to  
6                   CF\_SRCH\_OFFSET\_INCL<sub>S</sub>, and SRCH\_WIN\_NGHR\_INCL<sub>S</sub> to  
7                   CF\_SRCH\_WIN\_NGHR\_INCL<sub>S</sub>.
- 8                   o The mobile station shall re-enable its transmitter and shall re-enable the  
9                   fade timer (see 2.6.4.1.8) and reset it for T<sub>5m</sub> seconds. Then, the mobile  
10                  station shall transmit the Traffic Channel Preamble, as described in [2],  
11                  followed by a *Handoff Completion Message* if P\_REV\_IN\_USE<sub>S</sub> is less  
12                  than seven or an *Extended Handoff Completion Message* if  
13                  P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven.
- 14                  o If a F-CPCCH is not assigned, after starting the handoff timer, upon  
15                  receiving the first period of (N<sub>3m</sub> × 20) ms with sufficient signal quality  
16                  on the physical channel corresponding to FPC\_PRI\_CHAN<sub>S</sub>, the mobile  
17                  station shall resume incrementing TOT\_FRAMES<sub>S</sub>, BAD\_FRAMES<sub>S</sub>,  
18                  DCCH\_TOT\_FRAMES<sub>S</sub>, and DCCH\_BAD\_FRAMES<sub>S</sub> if applicable as  
19                  specified in 2.6.4.1.1.
- 20                  o If the Target Frequency is same as the Candidate Frequency  
21                  (TF\_CDMABAND<sub>S</sub> is equal to CF\_CDMABAND<sub>S</sub> and TF\_CDMACH<sub>S</sub> is  
22                  equal to CF\_CDMACH<sub>S</sub>), then the mobile station shall set  
23                  PERIODIC\_SEARCH<sub>S</sub> to '0'.
- 24                  o If PERIODIC\_SEARCH<sub>S</sub> is equal to '1', the mobile station shall perform  
25                  the following:
  - 26                  ◇ The mobile station shall set ALIGN\_TIMING\_USED<sub>S</sub> to '0' and  
27                  SEARCH\_OFFSET<sub>S</sub> to '000000'.
  - 28                  ◇ The mobile station shall start a periodic search as described in  
29                  2.6.6.2.8.3.2.
- 30                  o The mobile station shall maintain its pilot sets using the procedures  
31                  described in 2.6.6.2.6.

#### 32 2.6.6.2.8.2.1 Restoring the Configuration

33 If the mobile station declares a handoff attempt to be unsuccessful (see 2.6.6.2.8.2), it  
34 shall perform the following actions:

- 35                  • If the handoff timer is enabled, the mobile station shall disable it.
- 36                  • The mobile station shall restore the following parameters:
  - 37                  – Message encryption mode: If SF\_ENCRYPT\_MODE<sub>S</sub> is equal to '0', the mobile  
38                  station shall turn off message encryption; otherwise, it shall turn on message  
39                  encryption.

- 1       – Service configuration: The mobile station shall use the service configuration  
2       stored in SF\_SERVICE\_CONFIG<sub>S</sub> to process Forward and Reverse Traffic  
3       Channel frames.
- 4       – The mobile station shall restore the list of calls stored in SF\_CALLS<sub>S</sub>.
- 5       – Protocol revision level (P\_REV<sub>S</sub> = SF\_P\_REV<sub>S</sub>)
- 6       – Protocol revision level in use on the serving frequency (P\_REV\_IN\_USE<sub>S</sub> =  
7       SF\_P\_REV\_IN\_USE<sub>S</sub>)
- 8       – Service negotiation type (SERV\_NEG<sub>S</sub> = SF\_SERV\_NEG<sub>S</sub>)
- 9       – Private long code mask: If SF\_PRIVATE\_LCM<sub>S</sub> is set to '1' then the mobile  
10      station shall set PVTLCM\_42 to SF\_PVTLCM\_42<sub>S</sub>.
- 11      – Long code mask: If SF\_PRIVATE\_LCM<sub>S</sub> is equal to '1', the mobile station shall  
12      use the private long code mask; otherwise, it shall use the public long code  
13      mask derived from SF\_PLCM\_TYPE<sub>S</sub> and SF\_PLCM\_39<sub>S</sub> (if any).
- 14      – Search window size for the Active Set and Candidate Set  
15      (SRCH\_WIN\_A<sub>S</sub> = SF\_SRCH\_WIN\_A<sub>S</sub>)
- 16      – Search window size for the Neighbor Set  
17      (SRCH\_WIN\_N<sub>S</sub> = SF\_SRCH\_WIN\_N<sub>S</sub>)
- 18      – Search window size for the Remaining Set  
19      (SRCH\_WIN\_R<sub>S</sub> = SF\_SRCH\_WIN\_R<sub>S</sub>)
- 20      – Pilot detection threshold (T\_ADD<sub>S</sub> = SF\_T\_ADD<sub>S</sub>)
- 21      – Pilot drop threshold (T\_DROP<sub>S</sub> = SF\_T\_DROP<sub>S</sub>)
- 22      – Soft slope for the dynamic add and drop threshold (SOFT\_SLOPE<sub>S</sub> =  
23      SF\_SOFT\_SLOPE<sub>S</sub>)
- 24      – Intercept for the dynamic add threshold (ADD\_INTERCEPT<sub>S</sub> =  
25      SF\_ADD\_INTERCEPT<sub>S</sub>)
- 26      – Intercept for the dynamic drop threshold (DROP\_INTERCEPT<sub>S</sub> =  
27      SF\_DROP\_INTERCEPT<sub>S</sub>)
- 28      – Active Set versus Candidate Set comparison threshold (T\_COMP<sub>S</sub> =  
29      SF\_T\_COMP<sub>S</sub>)
- 30      – Drop timer value (T\_TDROP<sub>S</sub> = SF\_T\_TDROP<sub>S</sub>)
- 31      – Drop timer range value (T\_TDROP\_RANGE<sub>S</sub> = SF\_T\_TDROP\_RANGE<sub>S</sub>)
- 32      – Frame offset (FRAME\_OFFSET<sub>S</sub> = SF\_FRAME\_OFFSET<sub>S</sub>)
- 33      – Nominal power setting (NOM\_PWR<sub>S</sub> = SF\_NOM\_PWR<sub>S</sub>)
- 34      – Extended nominal power setting (NOM\_PWR\_EXT<sub>S</sub> = SF\_NOM\_PWR\_EXT<sub>S</sub>)
- 35      – Power control step (PWR\_CNTL\_STEP<sub>S</sub> = SF\_PWR\_CNTL\_STEP<sub>S</sub>)
- 36      – CDMA band class (CDMABAND<sub>S</sub> = SF\_CDMABAND<sub>S</sub>)

- 1       – Frequency assignment ( $CDMACH_S = SF\_CDMACH_S$ )
- 2       – Active Set (For each pilot in the Serving Frequency Active Set: (PILOT\_REC,
- 3         PWR\_COMB\_IND) )
- 4       – Code channel list ( $CODE\_CHAN\_LIST_S = SF\_CODE\_CHAN\_LIST_S$ )
- 5       • The mobile station shall tune to the Serving Frequency and resume using the
- 6         Serving Frequency Active Set as follows:
  - 7       – If the mobile station was processing the Forward Fundamental Channel prior to
  - 8         tuning to the Candidate Frequency, the mobile station shall resume processing
  - 9         the Forward Fundamental Channel. If the mobile station was transmitting on
  - 10        the Reverse Fundamental Channel prior to tuning to the Candidate Frequency,
  - 11        the mobile station shall resume transmitting on the Reverse Fundamental
  - 12        Channel.
  - 13       – If the mobile station was processing the Forward Dedicated Control Channel
  - 14         prior to tuning to the Candidate Frequency, the mobile station shall resume
  - 15         processing the Forward Dedicated Control Channel. If the mobile station was
  - 16         transmitting on the Reverse Dedicated Control Channel prior to tuning to the
  - 17         Candidate Frequency, the mobile station shall resume transmitting on the
  - 18         Reverse Dedicated Control Channel.
  - 19       – The mobile station shall not resume transmitting on the Reverse Supplemental
  - 20         Code Channels and Reverse Supplemental Channels (if any). The mobile
  - 21         station shall not process on the Forward Supplemental Code Channels and
  - 22         Forward Supplemental Channels (if any).
  - 23       – When the mobile station resumes transmission on the Reverse Traffic Channel,
  - 24         it shall use the following rules to re-enable its transmitter:
    - 25       + If the interval between the time that the mobile station disables its
    - 26         transmitter and the time that it resumes using the Serving Frequency Active
    - 27         Set is equal to or greater than  $(N_{2m} \times 20)$  ms, then:
      - 28           o If a F-CPCCH is not assigned, the mobile station shall wait to receive a
      - 29             period of  $(N_{3m} \times 20)$  ms with sufficient signal quality on the physical
      - 30             channel corresponding to  $FPC\_PRI\_CHAN_S$  before it re-enables its
      - 31             transmitter.
      - 32           o If a F-CPCCH is assigned, the mobile station shall wait to receive a
      - 33             period of  $(N_{17m} \times 1.25)$  ms with sufficient signal quality on the Forward
      - 34             Common Power Control Subchannels assigned to this mobile station
      - 35             before it re-enables its transmitter.

- 1           + Otherwise, after the mobile station tunes to the Serving Frequency, the  
2           mobile station shall re-enable its transmitter no later than  $N_{3m} \times 20$  ms if a  
3           F-CPCCH is not assigned, and no later than  $(N_{17m} \times 1.25)$  ms if a F-CPCCH  
4           is assigned. The mobile station should re-enable its transmitter earlier.  
5           After the mobile station re-enables its transmitter, the mean output power  
6           shall be as specified in [2] for a step change in input power. If the mobile  
7           station re-enables its transmitter earlier than  $(N_{3m} \times 20)$  ms if a F-CPCCH is  
8           not assigned, or earlier than  $(N_{17m} \times 1.25)$  ms if a F-CPCCH is assigned,  
9           after it tunes to the Serving Frequency, the initial mean output power shall  
10          be as specified in [2], where the initial mean input power estimate is either:  
11          o    within 6 dB of the actual mean input power, or  
12          o    equal to the mean input power before the mobile station tuned to the  
13          Target Frequency.
- 14          • The mobile station shall enable the fade timer and the handoff drop timers  
15          corresponding to the pilots in its Active Set and Candidate Set. The mobile station  
16          shall resume incrementing TOT\_FRAMES<sub>s</sub>, BAD\_FRAMES<sub>s</sub>, DCCH\_TOT\_FRAMES<sub>s</sub>,  
17          and DCCH\_BAD\_FRAMES<sub>s</sub> if applicable as specified in 2.6.4.1.1.
- 18          • The mobile station shall send a *Candidate Frequency Search Report Message* within  
19          T<sub>56m</sub> seconds of declaring the handoff attempt to be unsuccessful. The mobile  
20          station shall report the contents of the *Candidate Frequency Search Report*  
21          *Message* as follows:
- 22          – The mobile station shall report the two components of the Target Frequency in  
23          the CDMA\_FREQ and BAND\_CLASS fields.
- 24          – The mobile station shall report the received power on the Target Frequency and  
25          on the Serving Frequency in the CF\_TOTAL\_RX\_PWR and SF\_TOTAL\_RX\_PWR  
26          fields, respectively.
- 27          – For each pilot in the Target Frequency Active Set that measures above  
28          TF\_T\_ADD<sub>s</sub>, the mobile station shall report its phase and strength in the fields  
29          PILOT\_PN\_PHASE and PILOT\_STRENGTH, respectively.
- 30          – If the Target Frequency is the same as the Candidate Frequency  
31          (TF\_CDMABAND<sub>s</sub> is equal to CF\_CDMABAND<sub>s</sub>, and TF\_CDMACH<sub>s</sub> is equal to  
32          CF\_CDMACH<sub>s</sub>), and is different from the Serving Frequency (TF\_CDMABAND<sub>s</sub>  
33          is not equal to SF\_CDMABAND<sub>s</sub> or TF\_CDMACH<sub>s</sub> is not equal to  
34          SF\_CDMACH<sub>s</sub>), the mobile station shall also report the strength of each pilot in  
35          the Candidate Frequency Search Set that measures above CF\_T\_ADD<sub>s</sub>.
- 36          • If the Serving Frequency is the same as the Candidate Frequency (SF\_CDMABAND<sub>s</sub>  
37          is equal to CF\_CDMABAND<sub>s</sub> and SF\_CDMACH<sub>s</sub> is equal to CF\_CDMACH<sub>s</sub>), then  
38          the mobile station shall set PERIODIC\_SEARCH<sub>s</sub> to '0'.
- 39          • If PERIODIC\_SEARCH<sub>s</sub> is equal to '1' and the Candidate Frequency Search Set is  
40          not empty, the mobile station shall perform the following:

- 1       – The mobile station shall set ALIGN\_TIMING\_USED<sub>S</sub> to '0' and
- 2       SEARCH\_OFFSET<sub>S</sub> to '000000'.
- 3       – The mobile station shall carry out the periodic search procedures described in
- 4       2.6.6.2.8.3.2.

#### 5   2.6.6.2.8.3 Search of Pilots on the CDMA Candidate Frequency

6   If SEARCH\_MODE<sub>S</sub> is equal to '0000', the mobile station shall perform the following: If  
 7   PERIODIC\_SEARCH<sub>S</sub> is equal to '0', the mobile station shall search the Candidate  
 8   Frequency Search Set once, as described in 2.6.6.2.8.3.1; otherwise, the mobile station  
 9   shall search the Candidate Frequency Search Set periodically, as described in  
 10   2.6.6.2.8.3.2.

##### 11   2.6.6.2.8.3.1 CDMA Candidate Frequency Single Search

12   The mobile station does a single search of the Candidate Frequency Search Set by  
 13   performing the following actions at the action time of the *Candidate Frequency Search*  
 14   *Control Message* or the *Candidate Frequency Search Request Message* that started the  
 15   search:

- 16       • If ALIGN\_TIMING\_USED<sub>S</sub> is set to '0', the mobile station shall measure the strength
- 17       of all pilots in the Candidate Frequency Search Set in one or more visits to the
- 18       Candidate Frequency, as described in 2.6.6.2.8.3.3.
- 19       • If ALIGN\_TIMING\_USED<sub>S</sub> is set to '1', the mobile station shall measure the strength
- 20       of all pilots in the Candidate Frequency Search Set in one or more scheduled visits
- 21       (see below) to the Candidate Frequency, as described in 2.6.6.2.8.3.3.

22   The mobile station shall schedule visits to the Candidate Frequency only at  
 23    $((0.00125 \times \text{SEARCH\_OFFSET}_S) + k \times (\text{SEARCH\_TIME\_RESOLUTION}_S \times$   
 24   *inter\_visit\_time*)) seconds after the action time of the *Candidate Frequency Search*  
 25   *Request Message* or the *Candidate Frequency Search Control Message* that started  
 26   the search, where

27                     $k =$  an integer between 0 and *max\_num\_visits*, inclusive, where  
 28                    *max\_num\_visits* is the value of MAX\_NUM\_VISITS field of the  
 29                    last *Candidate Frequency Search Response Message* sent by  
 30                    the mobile station,

31   and

32                    *inter\_visit\_time* = the value of the INTER\_VISIT\_TIME field of the last *Candidate*  
 33                    *Frequency Search Response Message* sent by the mobile  
 34                    station.

- 35       • The mobile station shall complete the measurements and send a *Candidate*
- 36       *Frequency Search Report Message* within  $((0.00125 \times \text{SEARCH\_OFFSET}_S) +$   
 37       *freshness\_interval*) seconds after the action time of the *Candidate Frequency Search*  
 38       *Control Message*, or the *Candidate Frequency Search Request Message*, where  
 39       *freshness\_interval* is determined as follows:

- 1       – If the value of the TOTAL\_OFF\_TIME\_FWD field or of the  
2       TOTAL\_OFF\_TIME\_REV field of the last *Candidate Frequency Search Response*  
3       *Message* sent by the mobile station to the base station is greater than or equal  
4       to  $\lceil (T_{70m} - T_{71m}) / \text{SEARCH\_TIME\_RESOLUTION}_S \rceil$ , then

$$\text{freshness\_interval} = (\max(\text{fwd\_time}, \text{rev\_time}) + T_{71m}) \text{ seconds,}$$

6       where

$$\text{fwd\_time} = \text{SEARCH\_TIME\_RESOLUTION}_S \times (\text{value of the} \\ \text{TOTAL\_OFF\_TIME\_FWD field of the last } \textit{Candidate Frequency} \\ \text{Search Response Message sent by the mobile station}),$$

10       and

$$\text{rev\_time} = \text{SEARCH\_TIME\_RESOLUTION}_S \times (\text{value of the} \\ \text{TOTAL\_OFF\_TIME\_REV field of the last } \textit{Candidate Frequency} \\ \text{Search Response Message sent by the mobile station}).$$

- 14       – Otherwise,

$$\text{freshness\_interval} = T_{70m} \text{ seconds.}$$

16       The mobile station shall set the fields of the *Candidate Frequency Search Report*  
17       *Message* as follows:

- 18       – The mobile station shall report the two components of the Candidate Frequency  
19       in the CDMA\_FREQ and BAND\_CLASS fields.
- 20       – The mobile station shall report the received power on the Candidate Frequency  
21       and on the Serving Frequency in the CF\_TOTAL\_RX\_PWR and  
22       SF\_TOTAL\_RX\_PWR fields, respectively.
- 23       – For each pilot in the Candidate Frequency Search Set that measures above  
24       CF\_T\_ADD<sub>S</sub>, the mobile station shall report its phase and strength in the fields  
25       PILOT\_PN\_PHASE and PILOT\_STRENGTH, respectively.

#### 26   2.6.6.2.8.3.2 Candidate Frequency Periodic Search

27   When the mobile station performs a periodic search, it periodically searches the Candidate  
28   Frequency Search Set and reports the results to the base station in the *Candidate*  
29   *Frequency Search Report Message*, as described in this section. The mobile station may  
30   measure all pilots in the Candidate Frequency Search Set in one visit to the Candidate  
31   Frequency, or it may visit the Candidate Frequency several times in a search period, each  
32   time measuring all or some of the pilots in the Candidate Frequency Search Set, as  
33   described in 2.6.6.2.8.3.3.

34   If SF\_TOTAL\_EC\_THRESH<sub>S</sub> is not equal to '11111', while tuned to the Serving Frequency  
35   (specified by CDMACH<sub>S</sub> and CDMABAND<sub>S</sub>), the mobile station shall measure the total  
36   received power spectral density, in mW/1.23 MHz, on the Serving Frequency at least once  
37   every 20 ms frame. The mobile station shall maintain the average of the spectral density  
38   (*spec\_density*) over the last N<sub>12m</sub> frames.

(In the following,  $(E_c/I_o)_{total}$  is the total  $E_c/I_o$  of the pilots in the Active Set, measured as specified in 2.6.6.2.2, and  $total\_ec$  is defined as  $(10 \times \log_{10} ((E_c/I_o)_{total} \times spec\_density))$ .)

The mobile station shall maintain a periodic search timer as follows:

- When the mobile station starts a periodic search, it shall set the periodic search timer to the value in Table 2.6.6.2.8.3.2-1 corresponding to  $SEARCH\_PERIOD_S$  and shall enable the timer.
  - If the periodic search is started by a *Candidate Frequency Search Request Message* or a *Candidate Frequency Search Control Message*, then the mobile station shall start the periodic search ( $0.00125 \times SEARCH\_OFFSET_S$ ) seconds after the action time of the *Candidate Frequency Search Request Message* or the *Candidate Frequency Search Control Message* that started the search.
  - If the periodic search is started following successful or unsuccessful handoff attempt, the mobile station shall start the periodic search:
    - + Upon sending the *Handoff Completion Message* or *Extended Handoff Completion Message*, in the case that the handoff was successful.
    - + Upon sending the *Candidate Frequency Search Report Message*, in the case that the handoff was unsuccessful.
- When the periodic search timer expires, the mobile station shall reset the periodic search timer to the value in Table 2.6.6.2.8.3.2-1 corresponding to  $SEARCH\_PERIOD_S$  and shall re-enable the timer.
- If  $ALIGN\_TIMING\_USED_S$  is set to '0',  $SF\_TOTAL\_EC\_THRESH_S$  is not equal to '11111' and  $SF\_TOTAL\_EC\_IO\_THRESH_S$  is equal to '11111', the mobile station shall perform the following actions once per frame:
  - Disable the periodic search timer if  $total\_ec$  is not less than  $(-120 + 2 \times SF\_TOTAL\_EC\_THRESH_S)$ .
  - Reset the expiration time of the periodic search timer to the value in Table 2.6.6.2.8.3.2-1 corresponding to  $SEARCH\_PERIOD_S$ , and re-enable the timer if the following conditions are true:
    - + the periodic search timer is disabled, and
    - +  $total\_ec$  is less than  $(-120 + 2 \times SF\_TOTAL\_EC\_THRESH_S)$ .
- If  $ALIGN\_TIMING\_USED_S$  is set to '0',  $SF\_TOTAL\_EC\_THRESH_S$  is equal to '11111' and  $SF\_TOTAL\_EC\_IO\_THRESH_S$  is not equal to '11111', the mobile station shall perform the following actions once per frame:
  - Disable the periodic search timer if  $(-20 \times \log_{10} (E_c/I_o)_{total})$  is not greater than  $SF\_TOTAL\_EC\_IO\_THRESH_S$ .
  - Reset the expiration time of the periodic search timer to the value in Table 2.6.6.2.8.3.2-1 corresponding to  $SEARCH\_PERIOD_S$ , and re-enable the timer if the following conditions are true:
    - + the periodic search timer is disabled, and

- 1           +  $(-20 \times \log_{10} (E_c/I_o)_{\text{total}})$  is greater than  $SF\_TOTAL\_EC\_IO\_THRESH_S$ .
- 2       • If  $ALIGN\_TIMING\_USED_S$  is set to '0',  $SF\_TOTAL\_EC\_THRESH_S$  is not equal to  
3       '11111' and  $SF\_TOTAL\_EC\_IO\_THRESH_S$  is not equal to '11111', the mobile station  
4       shall perform the following actions once per frame:
- 5       – Disable the periodic search timer if the following conditions are true:
- 6           +  $total\_ec$  is not less than  $(-120 + 2 \times SF\_TOTAL\_EC\_THRESH_S)$ , and  
7           +  $(-20 \times \log_{10} (E_c/I_o)_{\text{total}})$  is not greater than  $SF\_TOTAL\_EC\_IO\_THRESH_S$ .
- 8       – Reset the expiration time of the periodic search timer to the value in  
9       Table 2.6.6.2.8.3.2-1 corresponding to  $SEARCH\_PERIOD_S$ , and re-enable the  
10       timer if the following conditions are true:
- 11       + the periodic search timer is disabled, and  
12       +  $total\_ec$  is less than  $(-120 + 2 \times SF\_TOTAL\_EC\_THRESH_S)$ , or  $(-20 \times \log_{10}$   
13        $(E_c/I_o)_{\text{total}})$  is greater than  $SF\_TOTAL\_EC\_IO\_THRESH_S$ .
- 14       • The mobile station shall maintain the periodic search timer independent of the total  
15        $E_c$  and the total  $E_c/I_o$  of the pilots in the Serving Frequency Active Set, if any of the  
16       following conditions is true:
- 17       –  $ALIGN\_TIMING\_USED_S$  is set to '1, or  
18       –  $SF\_TOTAL\_EC\_THRESH_S$  is equal to '11111' and  $SF\_TOTAL\_EC\_IO\_THRESH_S$  is  
19       equal to '11111'.

21                                   **Table 2.6.6.2.8.3.2-1. Search Period Values**

<b>SEARCH_PERIOD<sub>S</sub></b>	<b>Search Period (seconds)</b>	<b>SEARCH_PERIOD<sub>S</sub></b>	<b>Search Period (seconds)</b>
0	0.48	8	30
1	0.96	9	40
2	2	10	50
3	2.96	11	60
4	4	12	80
5	4.96	13	100
6	10	14	150
7	20	15	200

22

23       If the periodic search timer is enabled, the mobile station shall perform the following  
24       actions before the timer expires:

- 1 • If ALIGN\_TIMING\_USED<sub>s</sub> is set to '0', the mobile station shall measure the strength  
2 of all pilots in the Candidate Frequency Search Set at least once in one or more  
3 visits to the Candidate Frequency, as described in 2.6.6.2.8.3.3.
- 4 • If ALIGN\_TIMING\_USED<sub>s</sub> is set to '1', the mobile station shall measure the strength  
5 of all pilots in the Candidate Frequency Search Set in one or more scheduled visits  
6 (see below) to the Candidate Frequency, as described in 2.6.6.2.8.3.3.

7 The mobile station shall schedule visits to the Candidate Frequency only at  
8  $((0.00125 \times \text{SEARCH\_OFFSET}_s) + k \times (\text{SEARCH\_TIME\_RESOLUTION}_s \times$   
9  $\text{inter\_visit\_time}))$  seconds after the action time of the *Candidate Frequency Search*  
10 *Request Message* or the *Candidate Frequency Search Control Message* that started  
11 the search, where

12  $k =$  an integer between 0 and  $\text{max\_num\_visits}$ , inclusive, where  
13  $\text{max\_num\_visits}$  is the value of MAX\_NUM\_VISITS field of the  
14 last *Candidate Frequency Search Response Message* sent by  
15 the mobile station,

16 and

17  $\text{inter\_visit\_time} =$  the value of the INTER\_VISIT\_TIME field of the last *Candidate*  
18 *Frequency Search Response Message* sent by the mobile  
19 station.

- 20 – The mobile station shall abort a scheduled visit to the Candidate Frequency if at  
21 the scheduled time, one or both of the following conditions hold:
  - 22 + SF\_TOTAL\_EC\_THRESH<sub>s</sub> is not equal to '1111' and  $\text{total\_ec}$  is not less  
23 than  
24  $(-120 + 2 \times \text{SF\_TOTAL\_EC\_THRESH}_s)$ , or
  - 25 + SF\_TOTAL\_EC\_IO\_THRESH<sub>s</sub> is not equal to '1111' and  $(-20 \times \log_{10}$   
26  $(E_c/I_o)_{\text{total}})$  is not greater than SF\_TOTAL\_EC\_IO\_THRESH<sub>s</sub>.
- 27 – If the mobile station aborts a scheduled visit during a search period, it may  
28 abort all remaining scheduled visits in that search period.
- 29 • The mobile station shall send a *Candidate Frequency Search Report Message* if  
30 MIN\_TOTAL\_PILOT\_EC\_IO<sub>s</sub> is equal to '00000' or if  $(-20 \times \log_{10} (E_c/I_o)_{\text{total}})$  is less  
31 than or equal to MIN\_TOTAL\_PILOT\_EC\_IO<sub>s</sub>, where  $(E_c/I_o)_{\text{total}}$  is the sum of  $E_c/I_o$   
32 for all those pilots that measure above CF\_T\_ADD<sub>s</sub> in the current search period.

33 The mobile station shall report the contents of the *Candidate Frequency Search*  
34 *Report Message* as follows:

- 35 – The mobile station shall report the two components of the Candidate Frequency  
36 in the CDMA\_FREQ and BAND\_CLASS fields.
- 37 – The mobile station shall report the received power on the Candidate Frequency  
38 and on the Serving Frequency in the CF\_TOTAL\_RX\_PWR and  
39 SF\_TOTAL\_RX\_PWR fields, respectively.

- 1       – For each pilot in the Candidate Frequency Search Set that measures above  
2       CF\_T\_ADD<sub>S</sub>, the mobile station shall report its phase and strength in the fields  
3       PILOT\_PN\_PHASE and PILOT\_STRENGTH, respectively.
- 4       • The mobile station shall ensure that the strength measurement for all pilots in the  
5       Candidate Frequency Search Set were obtained within *freshness\_interval* before the  
6       Candidate Frequency Search Report Message is sent, where *freshness\_interval* is  
7       determined as follows:
- 8       – If the value of the TOTAL\_OFF\_TIME\_FWD field or of the TOTAL\_OFF\_TIME\_REV  
9       field of the last *Candidate Frequency Search Response Message* sent by the  
10      mobile station to the base station is greater than or equal to  
11       $\lceil (T_{70m} - T_{71m}) / \text{SEARCH\_TIME\_RESOLUTION}_S \rceil$ , then  
12      
$$\text{freshness\_interval} = (\max(\text{fwd\_time}, \text{rev\_time}) + T_{71m}) \text{ seconds,}$$
- 13      where  
14      
$$\text{fwd\_time} = \text{SEARCH\_TIME\_RESOLUTION}_S \times (\text{value of the}$$
  
15      TOTAL\_OFF\_TIME\_FWD field of the last *Candidate Frequency*  
16      *Search Response Message* sent by the mobile station),
- 17      and  
18      
$$\text{rev\_time} = \text{SEARCH\_TIME\_RESOLUTION}_S \times (\text{value of the}$$
  
19      TOTAL\_OFF\_TIME\_REV field of the last *Candidate Frequency*  
20      *Search Response Message* sent by the mobile station).
- 21      – Otherwise,  
22      
$$\text{freshness\_interval} = T_{70m} \text{ seconds.}$$

#### 23 2.6.6.2.8.3.3 Candidate Frequency Pilot Measurements

24 The mobile station measures the strength of all pilots in the Candidate Frequency Search  
25 Set in one or more visits to the Candidate Frequency. The mobile station shall perform the  
26 following actions each time it visits the Candidate Frequency to measure pilot strengths:

- 27       • If the mobile station is processing the Forward Fundamental Channel, the mobile  
28       station shall stop processing the Forward Fundamental Channel. If the mobile  
29       station is transmitting on the Reverse Fundamental Channel, the mobile station  
30       shall stop transmitting on the Reverse Fundamental Channel.
- 31       • If the mobile station is processing the Forward Dedicated Control Channel, the  
32       mobile station shall stop processing the Forward Dedicated Control Channel. If the  
33       mobile station is transmitting on the Reverse Dedicated Control Channel, the  
34       mobile station shall stop transmitting on the Reverse Dedicated Control Channel.
- 35       • The mobile station shall stop processing the Forward Supplemental Code Channels  
36       and Forward Supplemental Channels (if any). The mobile station shall stop  
37       transmitting on the Reverse Supplemental Code Channels and Reverse  
38       Supplemental Channels (if any).

- 1       • The mobile station shall disable the fade timer (see 2.6.4.1.8) and the handoff drop  
2       timers corresponding to its current Active Set and Candidate Set (see 2.6.6.2.3),  
3       and shall suspend incrementing TOT\_FRAMES<sub>S</sub>, BAD\_FRAMES<sub>S</sub>,  
4       DCCH\_TOT\_FRAMES<sub>S</sub>, DCCH\_BAD\_FRAMES<sub>S</sub>, SCH\_TOT\_FRAMES<sub>S</sub>, and  
5       SCH\_BAD\_FRAMES<sub>S</sub> if applicable (see 2.6.4.1.1).
- 6       • The mobile station shall lock the accumulation of valid level changes in the closed  
7       loop mean output power and shall ignore received power control bits related to the  
8       period that the transmitter is disabled (see [2]).
- 9       • The mobile station shall store the following parameters from its current  
10      configuration:
  - 11      – CDMA band class (SF\_CDMABAND<sub>S</sub> = CDMABAND<sub>S</sub>)
  - 12      – Frequency Assignment (SF\_CDMACH<sub>S</sub> = CDMACH<sub>S</sub>)
  - 13      – Pilot detection threshold (SF\_T\_ADD<sub>S</sub> = T\_ADD<sub>S</sub>)
- 14      • The mobile station shall set the following parameters:
  - 15      – CDMABAND<sub>S</sub> = CF\_CDMABAND<sub>S</sub>
  - 16      – CDMACH<sub>S</sub> = CF\_CDMACH<sub>S</sub>
  - 17      – T\_ADD<sub>S</sub> = CF\_T\_ADD<sub>S</sub>
- 18      The mobile station shall tune to the Candidate Frequency.
- 19      • The mobile station shall not change its time reference (see [2]) until it resumes  
20      using the Serving Frequency Active Set, as described below.
- 21      • The mobile station shall measure the mean input power on the Candidate  
22      Frequency (*cand\_freq\_pwr*, in dBm / 1.23 MHz), and may use *cand\_freq\_pwr* along  
23      with the measurement of the mean input power on the Serving Frequency  
24      (*avg\_serving\_freq\_pwr*, in dBm / 1.23 MHz) in the search procedure as follows:
  - 25      – If DIFF\_RX\_PWR\_THRESH<sub>S</sub> is not equal to '00000', and (*cand\_freq\_pwr* -  
26      *avg\_serving\_freq\_pwr*) is less than  $(-30 + 2 \times \text{DIFF\_RX\_PWR\_THRESH}_S)$  dB, the  
27      mobile station may terminate the search for pilots in the current visit to the  
28      Candidate Frequency.
  - 29      – If DIFF\_RX\_PWR\_THRESH<sub>S</sub> is equal to '00000', the mobile station does not use  
30      the power measurements in the search procedure, or (*cand\_freq\_pwr* -  
31      *avg\_serving\_freq\_pwr*) is not less than  $(-30 + 2 \times \text{DIFF\_RX\_PWR\_THRESH}_S)$  dB,  
32      the mobile station shall measure  $E_c/I_0$  for all or some of the pilots in its  
33      Candidate Frequency Search Set, using the search procedures specified in  
34      2.6.6.2.2.
- 35      • The mobile station shall restore the following parameters:
  - 36      – Pilot detection threshold (T\_ADD<sub>S</sub> = SF\_T\_ADD<sub>S</sub>)
  - 37      – CDMA band class (CDMABAND<sub>S</sub> = SF\_CDMABAND<sub>S</sub>)
  - 38      – Frequency assignment (CDMACH<sub>S</sub> = SF\_CDMACH<sub>S</sub>)

- 1 • The mobile station shall tune to the Serving Frequency and shall resume using the  
2 Serving Frequency Active Set as follows:
  - 3 – If the mobile station was processing the Forward Fundamental Channel prior to  
4 tuning to the Candidate Frequency, the mobile station shall resume processing  
5 the Forward Fundamental Channel. If the mobile station was transmitting on  
6 the Reverse Fundamental Channel prior to tuning to the Candidate Frequency,  
7 the mobile station shall resume transmitting on the Reverse Fundamental  
8 Channel.
  - 9 – If the mobile station was processing the Forward Dedicated Control Channel  
10 prior to tuning to the Candidate Frequency, the mobile station shall resume  
11 processing the Forward Dedicated Control Channel. If the mobile station was  
12 transmitting on the Reverse Dedicated Control Channel prior to tuning to the  
13 Candidate Frequency, the mobile station shall resume transmitting on the  
14 Reverse Dedicated Control Channel.
  - 15 – If the Forward Supplemental Code Channels and Forward Supplemental  
16 Channels assignment has not expired, the mobile station shall resume  
17 processing the Forward Supplemental Code Channels and Forward  
18 Supplemental Channels (if any). If the Reverse Supplemental Code Channel  
19 and Reverse Supplemental Channels assignment has not expired, the mobile  
20 station may resume transmitting on the Reverse Supplemental Code Channels  
21 and Reverse Supplemental Channels (if any).
  - 22 – When the mobile station resumes transmission on the Reverse Traffic Channel,  
23 it shall use the following rules to re-enable its transmitter:
    - 24 + If the interval between the time that the mobile station disables its  
25 transmitter and the time that it resumes using the Serving Frequency Active  
26 Set is equal to or greater than  $(N_{2m} \times 20)$  ms, then the mobile station shall  
27 wait to receive a period of  $(N_{3m} \times 20)$  ms with sufficient signal quality on  
28 the physical channel corresponding to  $FPC\_PRI\_CHAN_S$  before it re-enables  
29 its transmitter.
    - 30 + Otherwise, the mobile station shall re-enable its transmitter no later than  
31  $N_{3m} \times 20$  ms after the mobile station tunes to the Serving Frequency. The  
32 mobile station should re-enable its transmitter earlier. After the mobile  
33 station re-enables its transmitter, the mean output power shall be as  
34 specified in 2.1.2.4.1 for a step change in input power. If the mobile station  
35 re-enables its transmitter earlier than  $N_{3m} \times 20$  ms after it tunes to the  
36 Serving Frequency, the initial mean output power shall be as specified in  
37 [2], where the initial mean input power estimate is either:
      - 38 o within 6 dB of the actual mean input power, or
      - 39 o equal to the mean input power before the mobile station tuned to the  
40 Target Frequency.

- The mobile station shall enable the fade timer and the handoff drop timers corresponding to the pilots in its Active Set and Candidate Set. The mobile station shall resume incrementing TOT\_FRAMES<sub>s</sub>, BAD\_FRAMES<sub>s</sub>, DCCH\_TOT\_FRAMES<sub>s</sub>, DCCH\_BAD\_FRAMES<sub>s</sub>, SCH\_TOT\_FRAMES<sub>s</sub>, and SCH\_BAD\_FRAMES<sub>s</sub> if applicable as specified in 2.6.4.1.8.

#### 2.6.6.2.8.3.4 Aborting CDMA Candidate Frequency Periodic Search

When the mobile station aborts a periodic search, it shall perform the following:

- The mobile station shall cancel any remaining visits to the Candidate Frequency in the current search period, and shall not send a *Candidate Frequency Search Report Message* for the current search period.
- The mobile station shall disable the periodic search timer.

#### 2.6.6.2.9 Reserved

#### 2.6.6.2.10 Reserved

#### 2.6.6.2.11 Processing of Reverse Supplemental Code Channels and Reverse Supplemental Channels

Reverse Supplemental Code Channels are not supported for P\_REV\_IN\_USE<sub>s</sub> greater than or equal to nine.

If USE\_T\_ADD\_ABORT<sub>s</sub> is set to '1', and the strength of a Neighbor Set or Remaining Set pilot is found to be above T\_ADD<sub>s</sub>, then the mobile station shall terminate any active transmission on Reverse Supplemental Code Channels or Reverse Supplemental Channels at the end of the current 20 ms frame. The mobile station shall perform the following:

- Any previously active Reverse Supplemental Code Channel or Reverse Supplemental Channel assignment shall be considered implicitly terminated.
- If active transmission on Reverse Supplemental Code Channels is terminated, the mobile station shall set NUM\_REV\_CODES<sub>s</sub> to '000' and shall set IGNORE\_SCAM<sub>s</sub> to '1'.
- If active transmission on Reverse Supplemental Channels is terminated, the mobile station shall set IGNORE\_ESCAM<sub>s</sub> to '1'.
- The mobile station shall set SCRM\_SEQ\_NUM<sub>s</sub> to (SCRM\_SEQ\_NUM<sub>s</sub> + 1) mod 16.
- The mobile station shall transmit a *Supplemental Channel Request Message* with USE\_SCRM\_SEQ\_NUM set to '1', SCRM\_SEQ\_NUM set to SCRM\_SEQ\_NUM<sub>s</sub>, and SIZE\_OF\_REQ\_BLOB set to '0000'.

#### 2.6.6.2.12 Periodic Serving Frequency Pilot Report Procedure

While the mobile station is tuned to the Serving Frequency (specified by CDMACH<sub>s</sub> and CDMABAND<sub>s</sub>), the mobile station shall measure the total received power spectral density, in mW/1.23 MHz, on the Serving Frequency at least once every 20 ms frame. The mobile station shall maintain the average value of the total received power spectral density,

1 *spec\_density*, over the last  $N_{12m}$  frames. The mobile station shall maintain the PPSMM  
2 timer as follows:

- 3 • When the mobile station starts a Periodic Serving Frequency Pilot Report  
4 Procedure, it shall set the PPSMM timer to  $PPSMM\_PERIOD_S \times 0.08$  seconds and  
5 shall enable the timer.
- 6 • When the PPSMM timer expires, the mobile station shall send a *Periodic Pilot*  
7 *Strength Measurement Message* (2.6.6.2.5.2) to the base station, reset the PPSMM  
8 timer to  $PPSMM\_PERIOD_S \times 0.08$  seconds and shall re-enable the timer.
- 9 • When the mobile station receives an *Extended Handoff Direction Message*, a  
10 *General Handoff Direction Message* or a *Universal Handoff Direction Message*  
11 directing the mobile station to perform a hard handoff (see 2.6.6.2.5.1), it shall  
12 abort the Periodic Serving Frequency Pilot Report Procedure and disable the  
13 PPSMM timer if it is enabled.
- 14 • If  $MIN\_PILOT\_PWR\_THRESH_S$  is not equal to '11111' and  
15  $MIN\_PILOT\_EC\_IO\_THRESH_S$  is equal to '11111', the mobile station shall perform  
16 the following actions once per frame:
  - 17 – Disable the PPSMM timer if the received total energy per PN chip,  $E_c$ , of the  
18 pilots in the Active Set is not less than  $(-120 + 2 \times MIN\_PILOT\_PWR\_THRESH_S)$ ,  
19 where the value of  $E_c$  is computed as  $10 \times \log_{10}(PS \times spec\_density)$  and PS is  
20 the total  $E_c/I_0$  of the pilots in the Active Set measured as specified in 2.6.6.2.2.
  - 21 – Reset the expiration time of the PPSMM timer to  $PPSMM\_PERIOD_S \times 0.08$   
22 seconds and re-enable the timer if the following conditions are true:
    - 23 o the PPSMM timer is disabled, and
    - 24 o the received total energy per PN chip,  $E_c$ , of the pilots in the Active Set is  
25 less than  $(-120 + 2 \times MIN\_PILOT\_PWR\_THRESH_S)$ .
- 26 • If  $MIN\_PILOT\_PWR\_THRESH_S$  is equal to '11111' and  $MIN\_PILOT\_EC\_IO\_THRESH_S$   
27 is not equal to '11111', the mobile station shall perform the following actions once  
28 per frame:
  - 29 – Disable the PPSMM timer if the total pilot strength of the pilots in the Active  
30 Set, PS, satisfies the condition that  $(-20 \times \log_{10}(PS))$  is not greater than  
31  $MIN\_PILOT\_EC\_IO\_THRESH_S$ .
  - 32 – Reset the expiration time of the PPSMM timer to  $PPSMM\_PERIOD_S \times 0.08$   
33 seconds and re-enable the timer if the following conditions are true:
    - 34 o the PPSMM timer is disabled, and
    - 35 o the total pilot strength of the pilots in the Active Set, PS, satisfies the  
36 condition that  $(-20 \times \log_{10}(PS))$  is greater than  
37  $MIN\_PILOT\_EC\_IO\_THRESH_S$ .
- 38 • If  $MIN\_PILOT\_PWR\_THRESH_S$  is not equal to '11111' and  
39  $MIN\_PILOT\_EC\_IO\_THRESH_S$  is not equal to '11111', the mobile station shall  
40 perform the following actions once per frame:

- 1       – Disable the PPSMM timer if the following conditions are true:
  - 2           o the received total energy per PN chip,  $E_c$ , of the pilots in the Active Set is not
  - 3           less than  $(-120 + 2 \times \text{MIN\_PILOT\_PWR\_THRESH}_S)$ , and
  - 4           o the total pilot strength of the pilots in the Active Set,  $PS$ , satisfies the
  - 5           condition that  $(-20 \times \log_{10}(PS))$  is not greater than
  - 6            $\text{MIN\_PILOT\_EC\_IO\_THRESH}_S$ .
- 7       – Reset the expiration time of the PPSMM timer to  $\text{PPSMM\_PERIOD}_S \times 0.08$
- 8       seconds and re-enable the timer if the following conditions are true:
  - 9           o the PPSMM timer is disabled, and
  - 10          o the received total energy per PN chip,  $E_c$ , of the pilots in the Active Set is
  - 11          less than  $(-120 + 2 \times \text{MIN\_PILOT\_PWR\_THRESH}_S)$ , or the total pilot strength
  - 12          of the pilots in the Active Set,  $PS$ , satisfies the condition that  $(-20 \times$
  - 13           $\log_{10}(PS))$  is greater than  $\text{MIN\_PILOT\_EC\_IO\_THRESH}_S$ .
- 14       • If  $\text{MIN\_PILOT\_PWR\_THRESH}_S$  is equal to '11111' and  $\text{MIN\_PILOT\_EC\_IO\_THRESH}_S$
- 15       is equal to '11111', the mobile station shall maintain the PPSMM timer independent
- 16       of the received power and the total  $E_c/I_0$  of the pilots.

#### 17 2.6.6.2.13 Call Rescue Soft Handoff

18 This section presents an overview and mobile station requirements for the support of call  
 19 rescue soft handoff while the mobile station is in the *Mobile Station Control on the Traffic*  
 20 *Channel State*.

##### 21 2.6.6.2.13.1 Overview

22 Support for the call rescue feature is mandatory for the mobile station. The mobile station  
 23 initiates call rescue soft handoff after disabling its transmitter due to:

- 24       • insufficient signal quality on the Forward Traffic Channel (see 2.6.4.1.8)
- 25       • an acknowledgment failure.

26 In order for a pilot to be autonomously added to the Active Set, it must be a valid soft  
 27 handoff candidate on the mobile station's neighbor list, and must also support a Rescue  
 28 Channel. A Rescue Channel is a Fundamental Channel that is used for call rescue soft  
 29 handoff, and has a pre-allocated Walsh Code that is provided to the mobile station as part  
 30 of the *General Neighbor List Message*, *Universal Neighbor List Message*, and *Extended*  
 31 *Neighbor List Update Message*.

32 If the mobile station is eligible to attempt call rescue soft handoff, then it re-enables its  
 33 transmitter and monitors the Rescue Channel (as well as the other Traffic Channels in the  
 34 Active Set) for good frames. Once good frames are received, then the call continues  
 35 normally.

36 Three timers are used as part of call rescue soft handoff: the rescue delay timer, the rescue  
 37 allowed timer, and the rescue attempt timer.

### 2.6.6.2.13.2 Requirements

If the rescue delay timer expires and the interval specified by  $\text{RESQ\_MIN\_PERIOD}_S$  has elapsed since the last successful call rescue, then the mobile station shall enable the rescue allowed timer with an initial value of  $(\text{RESQ\_ALLOWED\_TIME}_S \times 80)$  ms.

While the rescue allowed timer is enabled, if the mobile station is able to promote any new pilots to the Active Set (see 2.6.6.2.6.1), then the mobile station shall perform the following:

- disable the rescue allowed timer,
- update the service configuration as specified in 2.6.6.2.13.3.
- cancel any current and pending Forward or Reverse Supplemental Channel assignments.
- re-enable its transmitter at the last closed-loop power level plus  $\text{RESQ\_POWER\_DELTA}_S$ ,
- enable the rescue attempt timer with an initial value of  $(\text{RESQ\_ATTEMPT\_TIME}_S \times 40)$  ms.
- transmit the Traffic Channel preamble followed by a *Extended Pilot Strength Measurement Message*, where the length of the Traffic Channel preamble is determined as follows:
  - If operating in Radio Configuration 1 or 2, the length of the Traffic Channel preamble is given by  $\text{RESQ\_NUM\_PREAMBLE\_RC1\_RC2}_S \times 20\text{ms}$ .
  - If operating in Radio Configuration greater than 2, the length of the Traffic Channel preamble is given by the duration corresponding to  $\text{RESQ\_NUM\_PREAMBLE}_S$  as specified by the Table 3.7.3.3.2.17-1.

If the rescue allowed timer expires, then the mobile station shall not autonomously promote any new pilots to the Active Set.

While the rescue attempt timer is enabled, the mobile station shall not perform the Forward or Reverse Traffic Channel power control procedures specified in 2.6.4.1.1 and 2.6.6.2.7.2, respectively.

If the rescue attempt timer expires, then the mobile station shall disable its transmitter.

### 2.6.6.2.13.3 Service Configuration Update Due to Call Rescue

The mobile station shall set  $\text{CH\_IND}_S$  to '01'.

The mobile station shall replace the current Logical-to-Physical Mapping with the default Logical-to-Physical Mapping as specified in Table 2.6.4.2-1, where:

- requirement 1 is as follows: The  $\text{SR\_ID}$  field shall be set to the  $\text{SR\_ID}$  corresponding to the services mapped to the Fundamental Channel, and
- requirements 2 and 3 are as follows: the  $\text{PHYSICAL\_RESOURCE}$  field shall be set to '0000'.

1 The mobile station shall replace the current Service Configuration information record with  
 2 a new Service Configuration information record created as follows:

- 3 • The mobile station shall delete all Service Option Connection Records  
 4 corresponding to an SR\_ID that is not listed in the Call Rescue Logical-to-Physical  
 5 Mapping created above and the Layer 3 shall terminate the corresponding call  
 6 control instance (currently existing or pending instantiation).
- 7 • The mobile station shall identify the Call Control instance corresponding to the first  
 8 service option connection listed in this newly created Service Configuration  
 9 information record by the NULL identifier.

10 The mobile station shall set SYNC\_ID<sub>s</sub> to NULL.

### 11 2.6.6.3 Typical Message Exchanges During Handoffs

12 The following examples illustrate typical message exchanges between the mobile station  
 13 and the base station during handoff. Refer to Annex B for examples of call processing  
 14 during handoff.

15 Figure 2.6.6.3-1 shows an example of the messages exchanged between the mobile station  
 16 and the base station during a typical handoff process if P\_REV\_IN\_USE<sub>s</sub> is less than or  
 17 equal to three or SOFT\_SLOPE<sub>s</sub> is equal to '000000'.

18 Figure 2.6.6.3-2 shows an example of the messages exchanged between the mobile station  
 19 and the base station during a typical handoff process if P\_REV\_IN\_USE<sub>s</sub> is greater than  
 20 three and SOFT\_SLOPE<sub>s</sub> is not equal to '000000'.

21 Figure 2.6.6.3-3 illustrates the messaging triggered by a pilot of the Candidate Set as its  
 22 strength gradually rises above the strength of each pilot of the Active Set if  
 23 P\_REV\_IN\_USE<sub>s</sub> is less than or equal to three, or SOFT\_SLOPE<sub>s</sub> is equal to '000000'. Note  
 24 that the mobile station reports that a Candidate Set pilot is stronger than an Active Set  
 25 pilot only if the difference between their respective strengths is at least  $T\_COMP \times 0.5$  dB.

26 Figure 2.6.6.3-4 illustrates the messaging triggered by a pilot of the Candidate Set as its  
 27 strength gradually rises above the strength of each pilot of the Active Set if  
 28 P\_REV\_IN\_USE<sub>s</sub> is greater than three and SOFT\_SLOPE<sub>s</sub> is not equal to '000000'. Note  
 29 that the mobile station reports that a Candidate Set pilot is stronger than an Active Set  
 30 pilot only if the difference between their respective strengths is at least  $T\_COMP \times 0.5$  dB  
 31 and Pilot P<sub>0</sub> strength exceeds  $[(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1 + PS_2) +$   
 32 ADD\_INTERCEPT/2].

1  
2

- 3 (1) Pilot strength exceeds T\_ADD. Mobile station sends a *Pilot Strength Measurement*  
4 *Message* and transfers pilot to the Candidate Set.
- 5 (2) Base station sends an *Extended Handoff Direction Message*, a *General Handoff*  
6 *Direction Message* or a *Universal Handoff Direction Message*.
- 7 (3) Mobile station transfers pilot to the Active Set and sends a *Handoff Completion*  
8 *Message*.
- 9 (4) Pilot strength drops below T\_DROP. Mobile station starts the handoff drop timer.
- 10 (5) Handoff drop timer expires. Mobile station sends a *Pilot Strength Measurement*  
11 *Message*.
- 12 (6) Base station sends an *Extended Handoff Direction Message*, a *General Handoff*  
13 *Direction Message* or a *Universal Handoff Direction Message*.
- 14 (7) Mobile station moves pilot from the Active Set to the Neighbor Set and sends a  
15 *Handoff Completion Message*.

16 **Figure 2.6.6.3-1. Handoff Threshold Example if P\_REV\_IN\_USE<sub>s</sub> is Less Than or**  
17 **Equal to Three, or SOFT\_SLOPE<sub>s</sub> is Equal to '000000'**  
18

- (1) Pilot P<sub>2</sub> strength exceeds T\_ADD. Mobile station transfers the pilot to the Candidate Set.
- (2) Pilot P<sub>2</sub> strength exceeds  $[(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1) + ADD\_INTERCEPT/2]$ . Mobile station sends a *Pilot Strength Measurement Message*.
- (3) Mobile station receives an *Extended Handoff Direction Message*, a *General Handoff Direction Message* or a *Universal Handoff Direction Message*, transfers the pilot P<sub>2</sub> to the Active Set, and sends a *Handoff Completion Message*.
- (4) Pilot P<sub>1</sub> strength drops below  $[(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_2) + DROP\_INTERCEPT/2]$ . Mobile station starts the handoff drop timer.
- (5) Handoff drop timer expires. Mobile station sends a *Pilot Strength Measurement Message*.
- (6) Mobile station receives an *Extended Handoff Direction Message*, a *General Handoff Direction Message* or a *Universal Handoff Direction Message*, transfers the pilot P<sub>1</sub> to the Candidate Set and sends a *Handoff Completion Message*.
- (7) Pilot P<sub>1</sub> strength drops below T\_DROP. Mobile station starts the handoff drop timer.
- (8) Handoff drop timer expires. Mobile station moves the pilot P<sub>1</sub> from the Candidate Set to the Neighbor Set.

**Figure 2.6.6.3-2. Handoff Threshold Example if P\_REV\_IN\_USE<sub>s</sub> is Greater Than Three, and SOFT\_SLOPE<sub>s</sub> is Not Equal to '000000'**

1

2

Candidate Set: Pilot P<sub>0</sub>

3

Active Set: Pilots P<sub>1</sub>, P<sub>2</sub>

4

t<sub>0</sub> – Pilot Strength Measurement Message sent, P<sub>0</sub> > T<sub>ADD</sub>

5

t<sub>1</sub> – Pilot Strength Measurement Message sent, P<sub>0</sub> > P<sub>1</sub> + T<sub>COMP</sub> × 0.5 dB

6

t<sub>2</sub> – Pilot Strength Measurement Message sent, P<sub>0</sub> > P<sub>2</sub> + T<sub>COMP</sub> × 0.5 dB

7

**Figure 2.6.6.3-3. Pilot Strength Measurements Triggered by a Candidate Pilot if  
P<sub>REV\_IN\_USE<sub>s</sub></sub> = 3 or SOFT\_SLOPE<sub>s</sub> = '000000'**

8

9

10

Candidate Set: Pilot P<sub>0</sub>

Active Set: Pilots P<sub>1</sub>, P<sub>2</sub>

*t*<sub>0</sub> – Pilot Strength Measurement Message not sent because

$$[10 \times \log_{10}(PS_0)] < [(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1 + PS_2) + ADD\_INTERCEPT/2]$$

*t*<sub>1</sub> – Pilot Strength Measurement Message not sent because

$P_0 > [P_1 + T\_COMP \times 0.5 \text{ dB}]$  but

$$[10 \times \log_{10}(PS_0)] < [(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1 + PS_2) + ADD\_INTERCEPT/2]$$

*t*<sub>1'</sub> – Pilot Strength Measurement Message sent because

$$[10 \times \log_{10}(PS_0)] > [(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1 + PS_2) + ADD\_INTERCEPT/2]$$

*t*<sub>2</sub> – Pilot Strength Measurement Message sent because

$P_0 > [P_2 + T\_COMP \times 0.5 \text{ dB}]$  and

$$[10 \times \log_{10}(PS_0)] > [(SOFT\_SLOPE/8) \times 10 \times \log_{10}(PS_1 + PS_2) + ADD\_INTERCEPT/2]$$

**Figure 2.6.6.3-4. Pilot Strength Measurements Triggered by a Candidate Pilot if  $P\_REV\_IN\_USE_s > 3$  and  $SOFT\_SLOPE_s$  is Not Equal to '000000'**

## 1 2.6.7 Hash Functions and Randomization

### 2 2.6.7.1 Hash Function

3 Certain procedures require a uniform distribution of mobile stations among N resources.  
 4 The following function returns an integer, using as arguments the mobile station's IMSI,  
 5 the number of resources N, and a modifier DECORR. The modifier serves to decorrelate  
 6 the values obtained for the various applications from the same mobile station.

7 HASH\_KEY shall be equal to the 32 least significant bits of  $(\text{IMSI\_O\_S1} + 2^{24} \times$   
 8  $\text{IMSI\_O\_S2})$ .

9 Define:

- 10 • Word L to be bits 0-15 of HASH\_KEY
- 11 • Word H to be bits 16-31 of HASH\_KEY

12 where bit 0 is the least significant bit of HASH\_KEY.

13 For determining CDMA Band, CDMA Channel Number, Paging Channel Number, Forward  
 14 Common Control Channel Number, Quick Paging Channel Number, and Paging Slot  
 15 Number, the hash value is computed as follows:<sup>41</sup>

$$16 \quad R = \lfloor N \times ((40503 \times (L \oplus H \oplus \text{DECORR})) \bmod 2^{16}) / 2^{16} \rfloor.$$

17 For determining a mobile station's assigned paging indicator bit positions, the hash value  
 18 is computed as follows:

$$19 \quad R_1 = \lfloor N \times ((40503 \times (L \oplus H \oplus \text{DECORR}_1)) \bmod 2^{16}) / 2^{16} \rfloor,$$

20 and

$$21 \quad R_2 = \lfloor (1 - \lfloor (2 \times R_1) / (N+4) \rfloor) \times (N+4) / 2 + \lfloor (2 \times R_1) / (N+4) \rfloor \times ((N+4) / 2 - 4) \times ((40503 \times (L$$
  
 22  $\oplus H \oplus \text{DECORR}_2)) \bmod 2^{16}) / 2^{16} \rfloor + N + 4 + \lfloor (2 \times R_1) / (N+4) \rfloor \times ((N+4) / 2) \text{ for Quick}$   
 23  $\text{Paging Channel indicator rate of 4800 bps, or}$

$$24 \quad R_2 = \lfloor (1 - \lfloor (2 \times R_1) / (N+8) \rfloor) \times (N+8) / 2 + \lfloor (2 \times R_1) / (N+8) \rfloor \times ((N+8) / 2 - 8) \times ((40503$$
  
 25  $\times (L \oplus H \oplus \text{DECORR}_2)) \bmod 2^{16}) / 2^{16} \rfloor + N + 8 + \lfloor (2 \times R_1) / (N+8) \rfloor \times ((N+8) / 2) \text{ for}$   
 26  $\text{Quick Paging Channel indicator rate of 9600 bps.}$

27 The mobile station shall choose the range N and the modifiers DECORR, DECORR<sub>1</sub>, and  
 28 DECORR<sub>2</sub> according to the application as shown in Table 2.6.7.1-1. In the table,  
 29 HASH\_KEY [0...11] denotes the 12 least significant bits of HASH\_KEY.

30

---

<sup>41</sup> This formula is adapted from Knuth, Donald N., *The Art of Computer Programming*, 2 volumes, (Reading, MA, Addison-Wesley, 1998).

1

**Table 2.6.7.1-1. Hash Function Modifier**

<b>Application</b>	<b>N</b>	<b>DECORR</b>	<b>Return Value</b>
CDMA Band Number	Number of band entries	$2 \times \text{HASH\_KEY} [0 \dots 11]$	$R + 1$
CDMA Channel Number	Number of channel entries	0	$R + 1$
Paging Channel Number	PAGE_CHAN <sub>S</sub> from <i>System Parameters Message</i> (up to 7)	$2 \times \text{HASH\_KEY} [0 \dots 11]$	$R + 1$
Quick Paging Channel Number	NUM_QPCH <sub>S</sub> from <i>Extended System Parameters Message</i> or <i>MC-RR Parameters Message</i> (up to 3)	$2 \times \text{HASH\_KEY} [0 \dots 11]$	$R + 1$
Paging Slot Number	2048	$6 \times \text{HASH\_KEY}[0 \dots 11]$	R
Paging Indicator Positions	376 (for 9600 bps), 188 (for 4800 bps)	$\text{DECORR}_1 = \lfloor t / 64 \rfloor \bmod 2^{16},$ $\text{DECORR}_2 = \lfloor t / 64 + 1 \rfloor \bmod 2^{16},$ where t is the System Time in 20ms frames, relative to the beginning of the assigned Quick Paging Channel slot.	$R_1$ and $R_2$
Forward Common Control Channel Number	NUM_FCCCH <sub>S</sub> from <i>MC-RR Parameters Message</i> (up to 7)	$2 \times \text{HASH\_KEY} [0 \dots 11]$	$R + 1$

2

3 **2.6.7.2 Pseudorandom Number Generator**

4 Where pseudorandom numbers are needed, a linear congruential generator shall be used.  
 5 The mobile station shall implement the linear congruential generator defined by:

$$6 \quad z_n = a \times z_{n-1} \bmod m$$

7 where  $a = 7^5 = 16807$  and  $m = 2^{31} - 1 = 2147483647$ .  $z_n$  is the output of the generator.<sup>42</sup>

---

<sup>42</sup> This generator has full period, ranging over all integers from 1 to m-1; the values 0 and m are never produced. Several suitable implementations can be found in Park, Stephen K. and Miller,

(footnote continued on next page)

1 During the *Mobile Station Initialization State*, the mobile station shall seed its generator  
2 with

$$3 \quad z_0 = (\text{ESN} \oplus \text{RANDOM\_TIME}) \bmod m$$

4 where RANDOM\_TIME shall be the least-significant 32-bits of SYS\_TIME<sub>s</sub> stored from the  
5 *Sync Channel Message*. If the initial value so produced is found to be zero, it shall be  
6 replaced with one. The mobile station shall compute a new  $z_n$  for each subsequent use.

7 The mobile station shall use the value  $u_n = z_n / m$  for those applications that require a  
8 binary fraction  $u_n$ ,  $0 < u_n < 1$ .

9 The mobile station shall use the value  $k_n = \lfloor N \times z_n / m \rfloor$  for those applications that require  
10 a small integer  $k_n$ ,  $0 \leq k_n \leq N - 1$ .

### 11 2.6.8 CODE\_CHAN\_LIST<sub>s</sub> Maintenance

12 The CODE\_CHAN\_LIST<sub>s</sub> is a descriptive structure used to manage the Forward  
13 Fundamental Channel and Forward Supplemental Code Channels, if any, associated with  
14 the mobile station's Active Set. Associated with each member of the mobile station's Active  
15 Set, there is an ordered array of code channels. The first entry of the ordered array  
16 specifies the Forward Fundamental Channel associated with the pilot and the subsequent  
17 entries, if any, specify the Forward Supplemental Code Channels associated with the pilot.  
18 The CODE\_CHAN\_LIST<sub>s</sub> is the collection of ordered arrays of code channels for each  
19 member of the mobile station's Active Set. The  $i^{\text{th}}$  entry in every array (of code channels  
20 associated with a member of the Active Set) corresponds to the  $i^{\text{th}}$  code channel.

21 The mobile station shall maintain the CODE\_CHAN\_LIST<sub>s</sub> as follows:

- 22 • When the mobile station is first assigned a Forward Fundamental Channel, it shall  
23 initialize the CODE\_CHAN\_LIST<sub>s</sub> to contain the Forward Fundamental Channel for  
24 each member of the Active Set.
- 25 • When the mobile station processes the *Extended Handoff Direction Message*, the  
26 mobile station shall update the CODE\_CHAN\_LIST<sub>s</sub> as follows:
  - 27 – For each pilot listed in the *Extended Handoff Direction Message* which does not  
28 have a corresponding code channel in the CODE\_CHAN\_LIST<sub>s</sub>, the mobile  
29 station shall add the code channel, CODE\_CHAN, of that pilot to the  
30 CODE\_CHAN\_LIST<sub>s</sub>, as the Forward Fundamental Channel for the pilot.
  - 31 – The mobile station shall delete all information in the CODE\_CHAN\_LIST<sub>s</sub>  
32 associated with a pilot that is not included in the *Extended Handoff Direction*  
33 *Message*.

---

Keith W., "Random Number Generators: Good Ones are Hard to Find," *Communications of the ACM*, vol. 31, no. 10, October 1988, pp. 1192-1201.

- 1       • When the mobile station processes the *General Handoff Direction Message*, the  
2       mobile station shall update the CODE\_CHAN\_LIST<sub>s</sub> to contain the Forward  
3       Fundamental Channel associated with each pilot included in the *General Handoff*  
4       *Direction Message*. The first code channel occurrence associated with each pilot  
5       included in the *General Handoff Direction Message* corresponds to the Forward  
6       Fundamental Channel. The mobile station shall perform the following:
  - 7       – If FOR\_SUP\_CONFIG<sub>r</sub> is included and FOR\_SUP\_CONFIG<sub>r</sub> is equal to '10' or  
8       '11', the mobile station shall perform the following actions:
    - 9       + For each pilot listed in the *General Handoff Direction Message*, the mobile  
10       station shall set the Forward Supplemental Code Channels (associated with  
11       the pilot) in the CODE\_CHAN\_LIST<sub>s</sub> to the Forward Supplemental Code  
12       Channels specified in the *General Handoff Direction Message*.
    - 13       + The mobile station shall delete all information in the CODE\_CHAN\_LIST<sub>s</sub>  
14       associated with a pilot that is not included in the *General Handoff Direction*  
15       *Message*.
  - 16       – If FOR\_SUP\_CONFIG<sub>r</sub> is equal to '00' or '01' or if FOR\_SUP\_CONFIG<sub>r</sub> is not  
17       included in the *General Handoff Direction Message*, the mobile station shall not  
18       update Supplemental Code Channels associated with the pilots included in the  
19       *General Handoff Direction Message*. The mobile station shall perform the  
20       following actions:
    - 21       + For each pilot listed in the *General Handoff Direction Message* which does  
22       not have a corresponding code channel in the CODE\_CHAN\_LIST<sub>s</sub>, the  
23       mobile station shall add the code channel, CODE\_CHAN, of that pilot to the  
24       CODE\_CHAN\_LIST<sub>s</sub>, as the Forward Fundamental Channel for the pilot.
    - 25       + The mobile station shall delete all information in the CODE\_CHAN\_LIST<sub>s</sub>  
26       associated with a pilot that is not included in the *General Handoff Direction*  
27       *Message*.
- 28       • When the mobile station processes the *Supplemental Channel Assignment Message*  
29       it shall follow the following rules:
  - 30       – If FOR\_SUP\_CONFIG<sub>r</sub> is equal to '10' or '11', the mobile station shall update the  
31       Forward Supplemental Code Channels for each pilot in the Active Set.
  - 32       – If the pilot is not listed in the *Supplemental Channel Assignment Message*, the  
33       mobile station shall delete all occurrences of Forward Supplemental Code  
34       Channels associated with the pilot from the Code Channel List.
  - 35       – If a pilot is listed in the *Supplemental Channel Assignment Message*, then the  
36       mobile station shall set the Forward Supplemental Code Channels (associated  
37       with the pilot) in the CODE\_CHAN\_LIST<sub>s</sub> to the Forward Supplemental Code  
38       Channels specified in the *Supplemental Channel Assignment Message*.
  - 39       – If FOR\_SUP\_CONFIG<sub>r</sub> is equal to '00' or '01', the mobile station shall not update  
40       Supplemental Code Channels associated with the pilots included in the  
41       *Supplemental Channel Assignment Message*.

## 1 2.6.9 CDMA Tiered Services

2 This section presents an overview and mobile station requirements for the support of  
3 CDMA Tiered services while the mobile station is in the *Mobile Station Idle State* and in the  
4 *Mobile Station Control on the Traffic Channel State*.

### 5 2.6.9.1 Overview

#### 6 2.6.9.1.1 Definition

7 The mobile station may support Tiered Services based upon User Zones. Tiered Services  
8 provide the user custom services and special features based upon the mobile station  
9 location. Tiered Services also provides private network support. Important to the  
10 operation of CDMA Tiered Services is the concept of User Zones. It is via User Zones by  
11 which the base station offers custom services based upon the mobile station location.

12 User Zones are associated with a set of features and services, plus a geographic area in  
13 which the User Zone features/services are made available to the customers that have  
14 subscribed to that User Zone. The boundary of the User Zone Geographic area may be  
15 established based on the coverage area of a public or private base station or it may be  
16 established independent of RF topology.

17 User Zones may be supported by the public system on the same frequency as the serving  
18 base station, or they may be supported on a private system operating on a different  
19 frequency.

#### 20 2.6.9.1.2 Types of User Zones

21 User Zones may be of two basic types:

- 22 • *Broadcast User Zones*: Broadcast User Zones are identified to the mobile station  
23 using the Paging Channel or the Primary Broadcast Control Channel. In this case,  
24 the base station broadcasts on the Paging Channel or the Primary Broadcast Control  
25 Channel messages identifying the User Zones that fall within the coverage area of  
26 the particular cell/sector. Mobile stations, as part of their monitoring of the Paging  
27 Channel or the Primary Broadcast Control Channel, will identify the presence of a  
28 particular User Zone.
- 29 • *Mobile Specific User Zones*: Mobile Specific User Zones are not broadcast by the base  
30 station. The mobile station may use other overhead message parameters and  
31 compare them with internally stored User Zone parameters to identify the presence  
32 of a particular User Zone. These parameters may include: SID, NID, BASE\_ID,  
33 BASE\_LAT, and BASE\_LONG.

34 *Broadcast User Zones* allow for permanent as well as temporary subscription. Temporary  
35 subscription provides User Zone features and capabilities to users who are not subscribed  
36 to the User Zone. In this case, a mobile station, upon entering a new coverage area, may  
37 detect the presence of a User Zone that it presently does not subscribe to, but one that  
38 supports temporary subscription. The mobile station then queries the network to obtain  
39 the User Zone parameters. Once these parameters are received, the mobile station offers  
40 to the user via the mobile station user interface, the option of subscribing to the particular

1 User Zone.

2 Some User Zones may require active registration (Active User Zones) upon the mobile  
3 station's entry to immediately trigger a change in a feature(s). For others, the implicit  
4 registration at call setup is sufficient (Passive User Zones). Active User Zones are used  
5 where inbound features change as a result of being in the User Zone. During the *Mobile*  
6 *Station Idle State*, a mobile stations needs to register to update the User Zone ID whenever  
7 the User Zone that the mobile station is entering and/or leaving is of the Active type.

8 A mobile station that supports User Zone services may store a list of User Zones, where  
9 each User Zone is identified by a User Zone ID (UZID). Associated with each stored User  
10 Zone, the mobile station may also store a number of determinant parameters used for  
11 identifying User Zones.

## 12 2.6.9.2 Requirements

13 If the mobile station supports User Zone services, it shall maintain and update UZID<sub>S</sub>  
14 according the following rule:

15 If the mobile station selects a User Zone supported by the base station, the mobile station  
16 shall set UZID<sub>S</sub> to the User Zone Identifier associated with the User Zone; otherwise, the  
17 mobile station shall set UZID<sub>S</sub> to '0000000000000000'. The precise process for  
18 determining how to select a User Zone that is supported by the base station is left to the  
19 mobile station manufacturer.

20 If the mobile station does not support User Zone services, the mobile station shall set  
21 UZID<sub>S</sub> to '0000000000000000'.

22 The mobile station may search pilots of private neighbor base stations on other frequencies  
23 and band classes as identified in the *Private Neighbor List Message*. Search performance  
24 criteria are defined [11].

### 25 2.6.9.2.1 User Zone Operation in the Mobile Station Idle State:

26 When a mobile station performs an idle handoff, it selects User Zones based on internally  
27 stored parameters and information broadcast on the Paging Channel or on the Primary  
28 Broadcast Control Channel as described in 2.6.9.1.

29 After the mobile station performs idle handoff, if the mobile station determines that a  
30 change from one Broadcast User Zone to another Broadcast User Zone is required, the  
31 mobile station shall not update UZID<sub>S</sub>, UZ\_EXIT\_IN\_USE<sub>S</sub> and shall not perform User Zone  
32 registration until the pilot strength of the currently serving base station exceeds that of the  
33 base station corresponding to the old User Zone by the value of UZ\_EXIT\_IN\_USE<sub>S</sub>.

34 If the mobile station determines that it needs to change User Zone, and if the difference  
35 between the pilot strengths exceeds UZ\_EXIT\_IN\_USE<sub>S</sub>, then the mobile station shall  
36 perform the following:

- 37 • Perform User Zone registration.
- 38 • Update UZID<sub>S</sub>.
- 39 • Set UZ\_EXIT\_IN\_USE<sub>S</sub> to UZ\_EXIT\_RCVD<sub>S</sub>.

The mobile station may also implement other means to avoid the premature exiting of a User Zone due to rapid changes in signal strength. The exact implementation of such techniques is left to mobile station implementation.

If the mobile station is in the *Mobile Station Idle State* and it receives a *User Zone Reject Message* the mobile station shall perform the following:

- Set REJECT\_ACTION\_INDI<sub>S</sub> to REJECT\_ACTION\_INDI<sub>R</sub>.
- If UZID\_ASSIGN\_INCL<sub>R</sub> = '0', the mobile station shall set UZID<sub>S</sub> to '0000000000000000', otherwise; the mobile station shall set UZID<sub>S</sub> to ASSIGN\_UZID<sub>R</sub>.

If the mobile station is in the *Mobile Station Idle State* and it selects an active User Zone, then the mobile station shall perform User Zone registration (see 2.6.5.1.10) by entering the *System Access State* with a registration indication.

The mobile station should provide the user with a User Zone indication corresponding to the User Zone in service each time UZID<sub>S</sub> is updated.

#### 2.6.9.2.2 User Zone Operation in the Mobile Station Control on the Traffic Channel State

If the mobile station is in the *Traffic Channel Substate* of the *Mobile Station Control on the Traffic Channel State* and if it determines that the User Zone has changed, it shall update UZID<sub>S</sub> and send a *User Zone Update Request Message* to the base station.

If the mobile station is in the *Traffic Channel Substate or Release Substate* of the *Mobile Station Control on the Traffic Channel State* and it receives a *User Zone Update Message*, then the mobile station shall update UZID<sub>S</sub> and set it equal to UZID<sub>R</sub>.

If the mobile station is in the *Traffic Channel Substate or Release Substate* of the *Mobile Station Control on the Traffic Channel State* and it receives a *User Zone Reject Message*, then the mobile station shall perform the following:

- Set REJECT\_ACTION\_INDI<sub>S</sub> to REJECT\_ACTION\_INDI<sub>R</sub>.
- If UZID\_ASSIGN\_INCL<sub>R</sub> = 0, the mobile station shall set UZID<sub>S</sub> to '0', otherwise; the mobile station shall set UZID<sub>S</sub> to ASSIGN\_UZID<sub>R</sub>.

The mobile station should provide the user with a User Zone indication corresponding to the User Zone in service each time UZID<sub>S</sub> is updated.

#### 2.6.10 Call Control Processing

As illustrated in Figure 2.6.10-1, the Call Control consists of the following states:

- *Waiting for Order Substate* - In this substate, the Call Control instance waits for an *Alert With Information Message* or an *Extended Alert With Information Message*.
- *Waiting for Mobile Station Answer Substate* - In this substate, the Call Control instance waits for the user to answer the call.
- *Conversation Substate* - In this substate, the parties involved in this call communicate.

- 1       • *Call Release Substate* - In this substate, the Call Control instance waits for the call
- 2       to be disconnected.
- 3

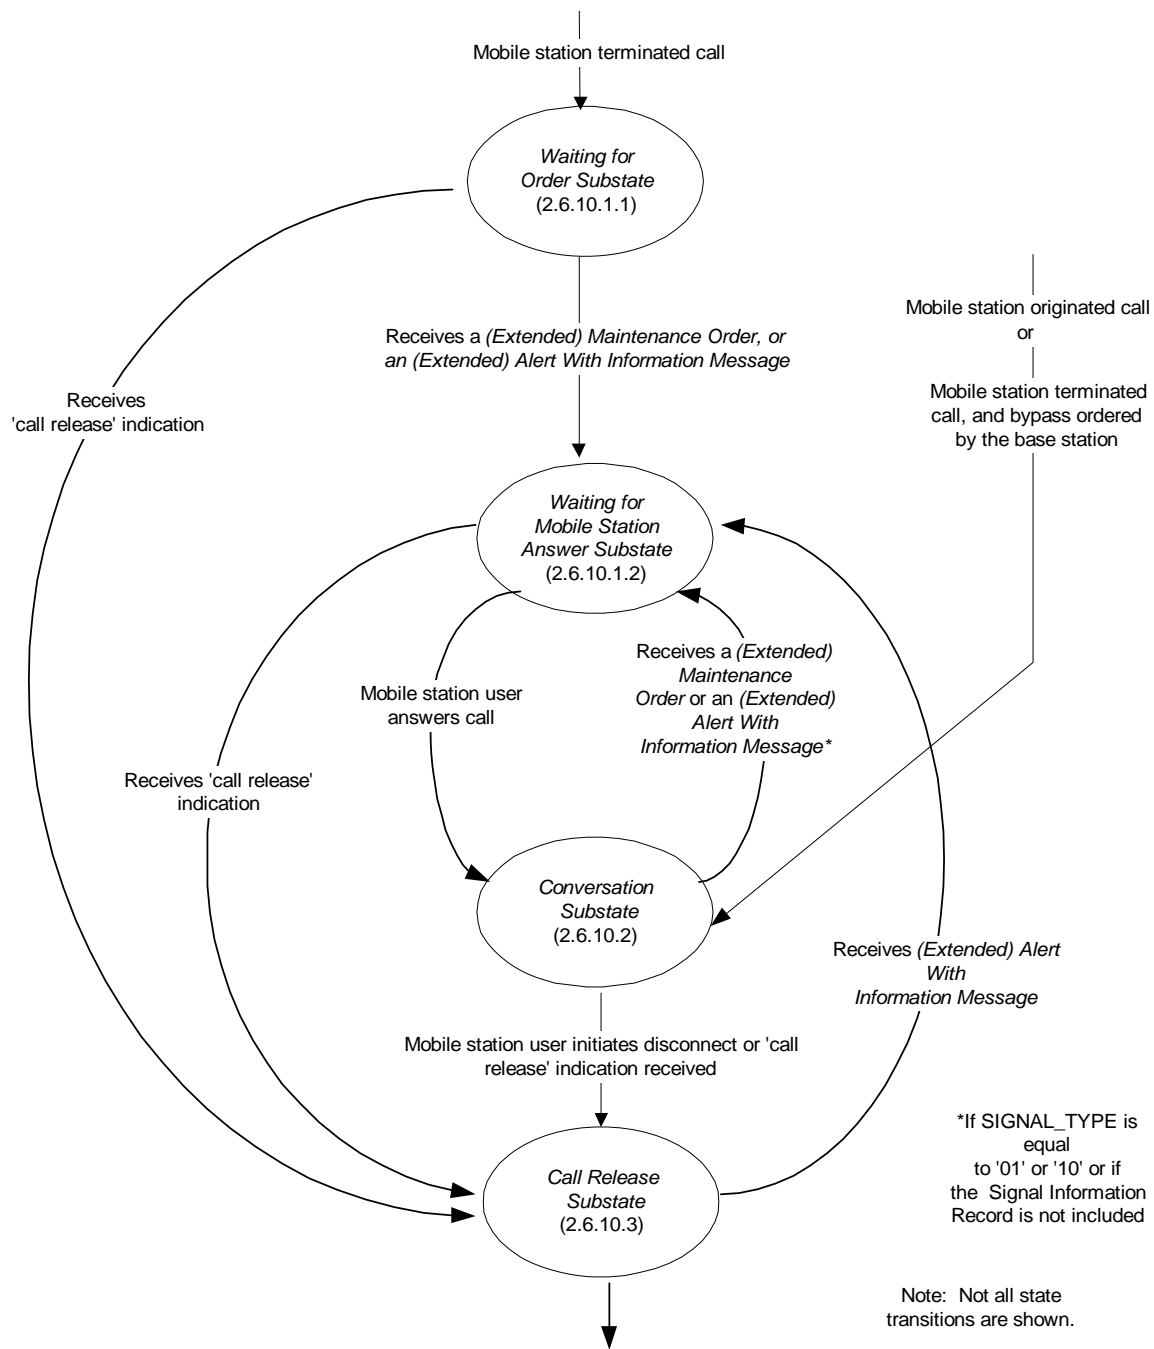

Figure 2.6.10-1. Call Control

1  
2  
3  
4

1 The following messages are processed by the Call Control:

- 2 - *Alert With Information Message*
- 3 - *Extended Alert with Information Message:*
- 4 - *Flash With Information Message*
- 5 - *Extended Flash With Information Message*
- 6 - *Send Burst DTMF Message*
- 7 - *Origination Continuation Message*

8 The following orders are processed by the Call Control:

- 9 - *Continuous DTMF Tone Order*
- 10 - *Maintenance Order*
- 11 - *Connect Order*

12 Upon instantiation, the Call Control instance shall perform the following:

- 13 • If this Call Control instance is instantiated with a 'restore indication', the Call  
14 Control instance shall enter the *Conversation Substate*.
- 15 • If the call is mobile station terminated, and BYPASS\_ALERT\_ANSWER<sub>s</sub> is '1', the  
16 Call Control instance shall perform the following:
  - 17 – The Call Control instance shall enter the *Conversation Substate*.
  - 18 – The mobile station shall not connect the audio input, e.g., the microphone of  
19 the mobile station, to the reverse link without the knowledge of the user.
- 20 • If the call is mobile station terminated and BYPASS\_ALERT\_ANSWER<sub>s</sub> is '0', the  
21 Call Control instance shall enter the *Waiting for Order Substate*.
- 22 • If the call is mobile station originated, the Call Control instance shall enter the  
23 *Conversation Substate*.

#### 24 2.6.10.1 Alerting

##### 25 2.6.10.1.1 Waiting for Order Substate

26 In this substate, the Call Control instance waits for an *Alert With Information Message* or  
27 an *Extended Alert With Information Message*.

28 Upon entering the *Waiting for Order Substate*, the Call Control instance shall set the  
29 substate timer for T<sub>52m</sub> seconds.

1 While in the *Waiting for Order Substate*, the Call Control instance shall perform the  
 2 following:

- 3 • If the substate timer expires, the Call Control instance shall send a “substate timer  
 4 expired indication” to the Layer 3 and shall enter the *Call Release Substate*.
- 5 • If the Call Control instance receives a “reset waiting for order substate timer  
 6 indication” from the Layer 3, the Call Control instance shall reset the substate  
 7 timer for T<sub>52m</sub> seconds.
- 8 • If the Call Control instance receives a “release indication” from the Layer 3, the Call  
 9 Control instance shall enter the *Call Release Substate*.
- 10 • If the Call Control instance receives an indication that the user has originated an  
 11 emergency call (see 2.6.4.3), the mobile station shall send a *Flash With Information*  
 12 *Message* or an *Extended Flash With Information Message* in assured mode with a  
 13 Global Emergency Call Information Record (see 2.7.4.31), as follows:
  - 14 - If this Call Control instance is identified by NULL, the mobile station shall send  
 15 either a *Flash With Information Message* or an *Extended Flash With Information*  
 16 *Message* (with either the CON\_REF\_INCL field of the message set to ‘0’ or the  
 17 CON\_REF\_INCL field set to ‘1’ and the CON\_REF field set to the connection  
 18 reference of the service option connection corresponding to this call); otherwise,  
 19 the mobile station shall send an *Extended Flash With Information Message*, with  
 20 the CON\_REF\_INCL field of the message set to ‘1’ and the CON\_REF field of the  
 21 message set to the connection reference of the service option connection  
 22 corresponding to this call.
- 23 • If the Call Control instance receives a message from the Layer 3 which is included  
 24 in the following list and every message field value is within its permissible range,  
 25 the Call Control instance shall process the message as described below and in  
 26 accordance with the message’s action time (see 2.6.4.1.5).
  - 27 1. *Alert With Information Message*: If the message contains a Signal information  
 28 record, the mobile station should alert the user in accordance with the Signal  
 29 information record; otherwise, the mobile station should use standard alert as  
 30 defined in 3.7.5.5. The Call Control instance shall enter the *Waiting for Mobile*  
 31 *Station Answer Substate* (see 2.6.10.1.2).
  - 32 2. *Extended Alert with Information Message*: If the message contains a Signal  
 33 information record, the mobile station should alert the user in accordance with  
 34 the Signal information record; otherwise, the mobile station should use  
 35 standard alert as defined in 3.7.5.5. The Call Control instance shall enter the  
 36 *Waiting for Mobile Station Answer Substate* (see 2.6.10.1.2).
  - 37 3. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Mobile*  
 38 *Station Answer Substate*.

- If the Call Control instance receives a message that is not included in the above list, cannot be processed, or requires a capability which is not supported, the Call Control instance shall discard the message and send a 'message rejected indication' to the Layer 3, with the reject reason indicated except when the following condition applies.

- If the Call Control instance fails to meet the criteria solely due to receipt of the Extended Record Type – International information record, the information record shall be discarded and the message shall be processed in accordance with the above procedures specified for the applicable message.

#### 2.6.10.1.2 Waiting for Mobile Station Answer Substate

In this substate, the Call Control instance waits for the user to answer the mobile station terminated call or to invoke special treatment.

Upon entering the *Waiting for Mobile Station Answer Substate*, the Call Control instance shall set the substate timer for T<sub>53m</sub> seconds.

While in the *Waiting for Mobile Station Answer Substate*, the Call Control instance shall perform the following:

- If the substate timer expires, the Call Control instance shall send a "substate timer expired indication" to the Layer 3 and shall enter the *Call Release Substate*.
- If the Call Control instance receives a "release indication" from the Layer 3, the Call Control instance shall enter the *Call Release Substate*.
- If the Call Control instance is directed by the user to answer the call, the mobile station shall send a *Connect Order* in assured mode:
  - If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, the mobile station shall perform the following: If this Call Control instance is identified by NULL, the mobile station shall either set the CON\_REF\_INCL field of the message to '0' or set the CON\_REF\_INCL field to '1' and set the CON\_REF field to the connection reference of the service option connection corresponding to this call; otherwise, the mobile station shall set the CON\_REF\_INCL field of the message to '1' and the CON\_REF field of the message to the connection reference of the service option connection corresponding to this call.

The Call Control instance shall enter the *Conversation Substate*.

- If the Call Control instance is directed by the user to forward the incoming call, the mobile station shall send a *Flash With Information Message* or an *Extended Flash With Information Message* in assured mode with a *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility* information record (see 2.7.4.35) with the CHARi field set to a pre-programmed feature code which indicates User Selective Call Forwarding with a pre-registered number, as follows:

- 1       - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
2       *Information Message*.
- 3       - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
4       perform the following: if this Call Control instance is identified by NULL, the  
5       mobile station shall send either a *Flash With Information Message* or an  
6       *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
7       of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
8       field set to the connection reference of the service option connection  
9       corresponding to this call); otherwise, the mobile station shall send an  
10      *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
11      message set to '1' and the CON\_REF field of the message set to the connection  
12      reference of the service option connection corresponding to this call.
- 13      • If the Call Control instance is directed by user to forward the incoming call to a  
14      number stored in the mobile station, the mobile station shall send a *Flash With*  
15      *Information Message* or an *Extended Flash With Information Message* in assured  
16      mode with a *Keypad Facility* information record (see 2.7.4.2) or the *Extended*  
17      *Keypad Facility* information record (see 2.7.4.35) with the CHARi field set to the  
18      following:
- 19          - a pre-programmed feature code which indicates User Selective Call  
20          Forwarding to a number stored in the mobile station as the first digits in  
21          the field and
- 22          - the forwarding to number immediately following the pre-programmed  
23          feature code.
- 24      The mobile station shall send the message as follows:
- 25      - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
26      *Information Message*.
- 27      - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
28      perform the following: if this Call Control instance is identified by NULL, the  
29      mobile station shall send either a *Flash With Information Message* or an  
30      *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
31      of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
32      field set to the connection reference of the service option connection  
33      corresponding to this call); otherwise, the mobile station shall send an  
34      *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
35      message set to '1' and the CON\_REF field of the message set to the connection  
36      reference of the service option connection corresponding to this call.

- 1       • If the Call Control instance is directed by the user to forward the incoming call to  
2       network-based voice mail, the mobile station shall send a *Flash With Information*  
3       *Message* or an *Extended Flash With Information Message* in assured mode with a  
4       *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility*  
5       information record (see 2.7.4.35) with the CHARi field set to a pre-programmed  
6       feature code which indicates User Selective Call Forwarding to voice mail, as  
7       follows:
  - 8       - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
9       *Information Message*.
  - 10      - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
11      perform the following: if this Call Control instance is identified by NULL, the  
12      mobile station shall send either a *Flash With Information Message* or an  
13      *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
14      of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
15      field set to the connection reference of the service option connection  
16      corresponding to this call); otherwise, the mobile station shall send an  
17      *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
18      message set to '1' and the CON\_REF field of the message set to the connection  
19      reference of the service option connection corresponding to this call.
- 20      • If the Call Control instance is directed by the user to activate answer holding, the  
21      mobile station shall send a *Flash With Information Message* or an *Extended Flash*  
22      *With Information Message* in assured mode requiring confirmation of delivery with a  
23      *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility*  
24      information record (see 2.7.4.35) with the CHARi field set to a pre-programmed  
25      feature code which indicates Answer Holding:
  - 26      - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
27      *Information Message*.
  - 28      - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
29      perform the following: if this Call Control instance is identified by NULL, the  
30      mobile station shall send either a *Flash With Information Message* or an  
31      *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
32      of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
33      field set to the connection reference of the service option connection  
34      corresponding to this call); otherwise, the mobile station shall send an  
35      *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
36      message set to '1' and the CON\_REF field of the message set to the connection  
37      reference of the service option connection corresponding to this call.
- 38      After receiving confirmation of delivery of the *Flash With Information Message* or the  
39      *Extended Flash With Information Message*, the mobile station shall send a *Connect*  
40      *Order* in assured mode:

- 1        - If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, the mobile station shall  
 2        perform the following: If this Call Control instance is identified by NULL, the  
 3        mobile station shall either set the CON\_REF\_INCL field of the message to '0' or  
 4        set the CON\_REF\_INCL field to '1' and set the CON\_REF field to the connection  
 5        reference of the service option connection corresponding to this call; otherwise,  
 6        the mobile station shall set the CON\_REF\_INCL field of the message to '1' and  
 7        the CON\_REF field of the message to the connection reference of the service  
 8        option connection corresponding to this call.

9        The Call Control instance shall enter the *Conversation Substate*.

- 10       • If the Call Control instance receives an indication that the user has originated an  
 11       emergency call (see 2.6.4.3), the mobile station shall send a *Flash With Information*  
 12       *Message* or an *Extended Flash With Information Message* in assured mode with a  
 13       Global Emergency Call Information Record (see 2.7.4.31), as follows:
- 14       - If this Call Control instance is identified by NULL, the mobile station shall send  
 15       either a *Flash With Information Message* or an *Extended Flash With Information*  
 16       *Message* (with either the CON\_REF\_INCL field of the message set to '0' or the  
 17       CON\_REF\_INCL field set to '1' and the CON\_REF field set to the connection  
 18       reference of the service option connection corresponding to this call); otherwise,  
 19       the mobile station shall send an *Extended Flash With Information Message*, with  
 20       the CON\_REF\_INCL field of the message set to '1' and the CON\_REF field of the  
 21       message set to the connection reference of the service option connection  
 22       corresponding to this call.
- 23       • If the Call Control instance receives a message from Layer 3 which is included in  
 24       the following list and every message field value is within its permissible range, the  
 25       Call Control instance shall process the message as described below and in  
 26       accordance with the message's action time (see 2.6.4.1.5).
- 27       1. *Alert With Information Message*: The Call Control instance shall reset the  
 28       substate timer for T<sub>53m</sub> seconds. If this message does not contain a Signal  
 29       information record, the mobile station should use standard alert as defined in  
 30       3.7.5.5.
- 31       2. *Extended Alert With Information Message*: The Call Control instance shall reset  
 32       the substate timer for T<sub>53m</sub> seconds. If this message does not contain a Signal  
 33       information record, the mobile station should use standard alert as defined in  
 34       3.7.5.5.
- 35       3. *Maintenance Order*: The mobile station shall reset the substate timer for T<sub>53m</sub>  
 36       seconds.

- If the Call Control instance receives a message that is not included in the above list, cannot be processed, or requires a capability which is not supported, the Call Control instance shall discard the message and send a 'message rejected indication' to the Layer 3, with the reject reason indicated except when the following condition applies.
  - If the Call Control instance fails to meet the criteria solely due to receipt of the Extended Record Type – International information record, the information record shall be discarded and the message shall be processed in accordance with the above procedures specified for the applicable message.

#### 2.6.10.2 Conversation Substate

While in the *Conversation Substate*, the Call Control instance shall perform the following:

- If the Call Control instance receives a "release indication" from the Layer 3, the Call Control instance shall enter the *Call Release Substate*.
- The mobile station shall send an *Origination Continuation Message* in assured mode, within T<sub>54m</sub> seconds after the Call Control instance entering the *Conversation Substate* if any of the following conditions occur:
  - The mobile station originated the call, and did not send all the dialed digits in the *Origination Message*.
  - There is more than one calling party number associated with the mobile station.
  - A calling party subaddress is used in the call.
  - A called party subaddress is used in the call.

If more than one calling party number is associated with the mobile station, the mobile station shall include the calling party number being used in the calling party number information record in the *Origination Continuation Message*. If only one calling party number is associated with the mobile station, the mobile station shall not include the calling party number information record in the *Origination Continuation Message*. If a calling party subaddress is used, the mobile station shall include the calling party subaddress information record in the *Origination Continuation Message*; otherwise, the mobile station shall omit the calling party subaddress information record. If a called party subaddress is used, the mobile station shall include the called party subaddress information record in the *Origination Continuation Message*; otherwise, the mobile station shall omit the called party subaddress information record.

- 1     • If the Call Control instance is directed by the user to issue a flash, the mobile  
2       station shall build a *Flash With Information Message* or an *Extended Flash With*  
3       *Information Message* with the collected digits or characters contained in a *Keypad*  
4       *Facility* information record, if needed, and shall send the message in assured mode,  
5       as follows:
  - 6       - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
7         *Information Message*.
  - 8       - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
9         perform the following: if this Call Control instance is identified by NULL, the  
10        mobile station shall send either a *Flash With Information Message* or an  
11        *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
12        of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
13        field set to the connection reference of the service option connection  
14        corresponding to this call); otherwise, the mobile station shall send an  
15        *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
16        message set to '1' and the CON\_REF field of the message set to the connection  
17        reference of the service option connection corresponding to this call.
- 18    • If the Call Control instance is directed by the user to forward the incoming call, the  
19      mobile station shall send a *Flash With Information Message* or an *Extended Flash*  
20      *With Information Message* in assured mode with a *Keypad Facility* information  
21      record (see 2.7.4.2) or the *Extended Keypad Facility* information record (see  
22      2.7.4.35) with the CHARi field set to a pre-programmed feature code which  
23      indicates User Selective Call Forwarding with a pre-registered number, as follows:
  - 24      - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
25         *Information Message*.
  - 26      - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
27         perform the following: if this Call Control instance is identified by NULL, the  
28         mobile station shall send either a *Flash With Information Message* or an  
29         *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
30         of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
31         field set to the connection reference of the service option connection  
32         corresponding to this call); otherwise, the mobile station shall send an  
33         *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
34         message set to '1' and the CON\_REF field of the message set to the connection  
35         reference of the service option connection corresponding to this call.
- 36    • If the Call Control instance is directed by the user to forward the incoming call to a  
37      number stored in the mobile station, the mobile station shall send a *Flash With*  
38      *Information Message* or an *Extended Flash With Information Message* in assured  
39      mode with a *Keypad Facility* information record (see 2.7.4.2) or the *Extended*  
40      *Keypad Facility* information record (see 2.7.4.35) with the CHARi field set to the  
41      following:

- a pre-programmed feature code which indicates User Selective Call Forwarding to a number stored in the mobile station as the first digits in the field and
- the forwarding to number immediately following the pre-programmed feature code.

The mobile station shall send the message as follows:

- If P\_REV\_IN\_USE<sub>s</sub> is less than seven, the mobile station shall send a *Flash With Information Message*.
- If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven and if this Call Control instance is identified by NULL, the mobile station shall send either a *Flash With Information Message* or an *Extended Flash With Information Message* (with either the CON\_REF\_INCL field of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF field set to the connection reference of the service option connection corresponding to this call). Otherwise, the mobile station shall send an *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the message set to '1' and the CON\_REF field of the message set to the connection reference of the service option connection corresponding to this call.
- If the Call Control instance is directed by the user to forward the incoming call to network-based voice mail, the mobile station shall send a *Flash With Information Message* or an *Extended Flash With Information Message* in assured mode with a *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility* information record (see 2.7.4.35) with the CHARi field set to a pre-programmed feature code which indicates User Selective Call Forwarding to voice mail, as follows:
  - If P\_REV\_IN\_USE<sub>s</sub> is less than seven, the mobile station shall send a *Flash With Information Message*.
  - If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven and if this Call Control instance is identified by NULL, the mobile station shall send either a *Flash With Information Message* or an *Extended Flash With Information Message* (with either the CON\_REF\_INCL field of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF field set to the connection reference of the service option connection corresponding to this call). Otherwise, the mobile station shall send an *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the message set to '1' and the CON\_REF field of the message set to the connection reference of the service option connection corresponding to this call.

- 1       • If the Call Control instance is directed by the user to activate answer holding, the  
2       mobile station shall send a *Flash With Information Message* or an *Extended Flash*  
3       *With Information Message* in assured mode requiring confirmation of delivery with a  
4       *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility*  
5       information record (see 2.7.4.35) with the CHARi field set to a pre-programmed  
6       feature code which indicates Answer Holding, as follows:
  - 7       - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
8       *Information Message*.
  - 9       - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
10       perform the following: if this Call Control instance is identified by NULL, the  
11       mobile station shall send either a *Flash With Information Message* or an  
12       *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
13       of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
14       field set to the connection reference of the service option connection  
15       corresponding to this call); otherwise, the mobile station shall send an  
16       *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
17       message set to '1' and the CON\_REF field of the message set to the connection  
18       reference of the service option connection corresponding to this call.
- 19       • If answer holding is activated and the Call Control instance is directed by the user  
20       to deactivate answer holding, the mobile station shall send a *Flash With Information*  
21       *Message* or an *Extended Flash With Information Message* in assured mode with a  
22       *Keypad Facility* information record (see 2.7.4.2) or the *Extended Keypad Facility*  
23       information record (see 2.7.4.35) with the CHARi field set to a pre-programmed  
24       feature code which indicates Answer Holding, as follows:
  - 25       - If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall send a *Flash With*  
26       *Information Message*.
  - 27       - If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall  
28       perform the following: if this Call Control instance is identified by NULL, the  
29       mobile station shall send either a *Flash With Information Message* or an  
30       *Extended Flash With Information Message* (with either the CON\_REF\_INCL field  
31       of the message set to '0' or the CON\_REF\_INCL field set to '1' and the CON\_REF  
32       field set to the connection reference of the service option connection  
33       corresponding to this call); otherwise, the mobile station shall send an  
34       *Extended Flash With Information Message*, with the CON\_REF\_INCL field of the  
35       message set to '1' and the CON\_REF field of the message set to the connection  
36       reference of the service option connection corresponding to this call.
- 37       • If the Call Control instance is directed by the user to send burst DTMF digits, the  
38       mobile station shall build the *Send Burst DTMF Message* with the dialed digits and  
39       shall send the message in assured mode requiring confirmation of delivery.

- If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, the mobile station shall perform the following: If this Call Control instance is identified by NULL, the mobile station shall set the CON\_REF\_INCL field of the message to '0'; otherwise, the mobile station shall set the CON\_REF\_INCL field of the message to '1' and the CON\_REF field of the message to the connection reference of the service option connection corresponding to this call.

The mobile station sending multiple *Send Burst DTMF Messages* shall preserve relative ordering of these messages (see [4]). The mobile station should attempt to preserve the user timing as much as possible, using recommended values of DTMF\_ON\_LENGTH (see Table 2.7.2.3.2.7-1) and DTMF\_OFF\_LENGTH (see Table 2.7.2.3.2.7-2).

- If the Call Control instance is directed by the user to send a continuous DTMF digit, the mobile station shall build the *Continuous DTMF Tone Order* with the dialed digit and shall send the order in assured mode requiring confirmation of delivery, as follows:

- If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, the mobile station shall perform the following: If this Call Control instance is identified by NULL, the mobile station shall either set the CON\_REF\_INCL field of the message to '0' or set the CON\_REF\_INCL field to '1' and set the CON\_REF field to the connection reference of the service option connection corresponding to this call; otherwise, the mobile station shall set the CON\_REF\_INCL field of the message to '1' and the CON\_REF field of the message to the connection reference of the service option connection corresponding to this call.

When the Call Control instance is directed by the user to cease sending the continuous DTMF digit, the mobile station shall send the *Continuous DTMF Tone Order* (ORDQ = '1111111') in assured mode requiring confirmation of delivery, as follows:

- If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, the mobile station shall perform the following: If this Call Control instance is identified by NULL, the mobile station shall either set the CON\_REF\_INCL field of the message to '0' or set the CON\_REF\_INCL field to '1' and set the CON\_REF field to the connection reference of the service option connection corresponding to this call; otherwise, the mobile station shall set the CON\_REF\_INCL field of the message to '1' and the CON\_REF field of the message to the connection reference of the service option connection corresponding to this call.

The mobile station sending multiple *Continuous DTMF Tone Orders* shall preserve relative ordering of these messages (see [2]). The mobile station shall send the *Continuous DTMF Tone Order* with the ORDQ set to '1111111' indicating the completion of the current continuous DTMF digit before sending the *Continuous DTMF Tone Order* for another digit or the *Send Burst DTMF Message*.

- 1       • If the Call Control instance is directed by the user to disconnect the call, the Call  
2       Control instance shall send a 'call release request' to the Layer 3 and shall enter  
3       the *Call Release Substate*.
- 4       • If the Call Control instance receives an indication that this packet data service  
5       instance has been inactivated, the Call Control instance shall send a "call inactive  
6       indication" to the Layer 3 and shall enter the *Call Release Substate*.
- 7       • If the Call Control instance receives an indication that the user has originated an  
8       emergency call (see 2.6.4.3), the mobile station shall send a *Flash With Information*  
9       *Message* or an *Extended Flash With Information Message* in assured mode with a  
10      Global Emergency Call Information Record (see 2.7.4.31), as follows:
  - 11      – If this Call Control instance is identified by NULL, the mobile station shall send  
12      either a *Flash With Information Message* or an *Extended Flash With Information*  
13      *Message* (with either the CON\_REF\_INCL field of the message set to '0' or the  
14      CON\_REF\_INCL field set to '1' and the CON\_REF field set to the connection  
15      reference of the service option connection corresponding to this call); otherwise,  
16      the mobile station shall send an *Extended Flash With Information Message*, with  
17      the CON\_REF\_INCL field of the message set to '1' and the CON\_REF field of the  
18      message set to the connection reference of the service option connection  
19      corresponding to this call.
- 20      • If the Call Control instance receives a message from the Layer 3 which is included  
21      in the following list and every message field value is within its permissible range,  
22      the Call Control instance shall process the message as described below and in  
23      accordance with the message's action time (see 2.6.4.1.5).
  - 24      1. *Alert With Information Message*: If the message contains a Signal information  
25      record with the SIGNAL\_TYPE field set to '01' or '10', or if the message does not  
26      contain a Signal information record, the Call Control instance shall enter the  
27      *Waiting For Mobile Station Answer Substate*. The mobile station should alert  
28      the user in accordance with the Signal information record. If this message does  
29      not contain a Signal information record, the mobile station should use standard  
30      alert as defined in 3.7.5.5.
  - 31      2. *Continuous DTMF Tone Order*
  - 32      3. *Extended Alert With Information Message*: If the message contains a Signal  
33      information record with the SIGNAL\_TYPE field set to '01' or '10', or if the  
34      message does not contain a Signal information record, the Call Control instance  
35      shall enter the *Waiting For Mobile Station Answer Substate*. The mobile station  
36      should alert the user in accordance with the Signal information record. If this  
37      message does not contain a Signal information record, the mobile station  
38      should use standard alert as defined in 3.7.5.5.
  - 39      4. *Flash With Information Message*

1           5. *Extended Flash With Information Message*

2           6. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Mobile*  
3           *Station Answer Substate*.

4           7. *Send Burst DTMF Message*:

- 5           • If the Call Control instance receives a message that is not included in the above  
6           list, cannot be processed, or requires a capability which is not supported, the Call  
7           Control instance shall discard the message and send a 'message rejected indication'  
8           to the Layer 3, with the reject reason indicated except when the following condition  
9           applies.

- 10          - If the Call Control instance fails to meet the criteria solely due to receipt of the  
11          Extended Record Type – International information record, the information  
12          record shall be discarded and the message shall be processed in accordance  
13          with the above procedures specified for the applicable message.

14   2.6.10.3 Call Release Substate

15   In this substate, the Call Control instance waits for the call to be released.

16   While in the *Call Release Substate*, the Call Control instance shall perform the following:

- 17          • If the Call Control instance receives a message from the Layer 3 which is included  
18          in the following list and every message field value is within its permissible range,  
19          the Call Control instance shall process the message as described below and in  
20          accordance with the message's action time (see 2.6.4.1.5).

21          1. *Alert With Information Message*: The Call Control instance shall send an "enter  
22          traffic channel substate indication" to the Layer 3 and shall enter the *Waiting*  
23          *for Mobile Station Answer Substate*. If this message does not contain a Signal  
24          information record, the mobile station should use standard alert as defined in  
25          3.7.5.5.

26          2. *Extended Alert With Information Message*: The Call Control instance shall send  
27          a "enter traffic channel substate indication" to Layer 3 and shall enter the  
28          *Waiting for Mobile Station Answer Substate*. If this message does not contain a  
29          Signal information record, the mobile station should use standard alert as  
30          defined in 3.7.5.5.

- 31          • If the Call Control instance receives a message that is not included in the above  
32          list, cannot be processed, or requires a capability which is not supported, the Call  
33          Control instance shall discard the message and send a 'message rejected indication'  
34          to the Layer 3, with the reject reason indicated except when the following condition  
35          applies.

- 1        - If the Call Control instance fails to meet the criteria solely due to receipt of the
- 2        Extended Record Type – International information record, the information
- 3        record shall be discarded and the message shall be processed in accordance
- 4        with the above procedures specified for the applicable message.

## 5        2.6.11 Common Procedures for Extended Encryption and Message Integrity

6        This section describes the common procedures for the messages used for extended  
7        encryption and message integrity.

### 8        2.6.11.1 Registration Accepted Order

9        The mobile station shall perform the following procedures in the order listed below.

- 10       • If  $ORDQ_r$  is equal to '00000101', the mobile station shall set  $ROAM\_INDI_s$  to
- 11        $ROAM\_INDI_r$  and should display the roaming condition.
- 12       • If  $ORDQ_r$  is equal to '00000111', the mobile station shall perform the following:
  - 13       – Set  $ROAM\_INDI_s$  to  $ROAM\_INDI_r$  and the mobile station should display the
  - 14       roaming condition.
  - 15       – Set  $C\_SIG\_ENCRYPT\_MODE_s$  to  $C\_SIG\_ENCRYPT\_MODE_r$ .
  - 16       – If  $ENC\_KEY\_SIZE_r$  is included, the mobile station shall set  $ENC\_KEY\_SIZE_s$  to
  - 17        $ENC\_KEY\_SIZE_r$ .
  - 18       – If  $MSG\_INTEGRITY\_SUP_s$  is equal to '0' and  $C\_SIG\_ENCRYPT\_MODE_r$  is not
  - 19       equal to '000', the mobile station shall perform the following:
    - 20       + Set  $TX\_EXT\_SSEQ[0][KEY\_ID]$ ,  $TX\_EXT\_SSEQ[1][KEY\_ID]$ ,
    - 21        $RX\_EXT\_SSEQ[0][KEY\_ID]$ , and  $RX\_EXT\_SSEQ[1][KEY\_ID]$  to  $1 + 256 \times$
    - 22        $NEW\_SSEQ\_H$  included in the *Registration Message*.
    - 23       + Form a 128-bit pattern by concatenating the CMEAKEY with a copy of itself
    - 24       (the most recently generated CMEAKEY is associated with the AUTHR of the
    - 25       *Registration Message*).
    - 26       + Set  $ENC\_KEY[KEY\_ID]$  to the 128-bit pattern.
    - 27       + Set  $INT\_KEY[KEY\_ID]$  to the 128-bit pattern.
    - 28       – If  $MSG\_INTEGRITY\_SUP_s$  is equal to '1', the mobile station shall perform the
    - 29       following:
      - 30       + If  $CHANGE\_KEYS_r$  is equal to '0', the mobile station shall set
      - 31        $RESTORE\_KEY$  to '0'.
      - 32       + If  $CHANGE\_KEYS_r$  is equal to '1', the mobile station shall perform the
      - 33       following:
        - 34       o Set  $KEY\_ID$  to  $SDU\_KEY\_ID$  provided by the LAC Layer (see [4]).

- 1           o Set TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1][KEY\_ID],  
2           RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1][KEY\_ID] to  $1 + 256 \times$   
3           NEW\_SSEQ\_H included in the *Registration Message*.
- 4           o If KEY\_ID is equal to '00' or '01', the mobile station shall perform the  
5           following:
  - 6           ◇ Form a 128-bit pattern by concatenating the CMEAKEY with a copy  
7           of itself (the most recently generated CMEAKEY associated with the  
8           AUTHR of the *Registration Message*).
  - 9           ◇ Set ENC\_KEY[KEY\_ID] to the 128-bit pattern.
  - 10          ◇ Set INT\_KEY[KEY\_ID] to the 128-bit pattern.
  - 11          ◇ Set LAST\_2G\_KEY\_IDS to KEY\_ID.
- 12          o If KEY\_ID is equal to '10' or '11', the mobile station shall perform the  
13          following:
  - 14          ◇ Set ENC\_KEY[KEY\_ID] to the CK generated by AKA.
  - 15          ◇ Set INT\_KEY[KEY\_ID] to the IK generated by AKA.
  - 16          ◇ Set LAST\_3G\_KEY\_IDS to KEY\_ID.
  - 17          ◇ If the mobile station supports R-UIM, then the mobile shall set  
18          USE\_UAK<sub>S</sub> to USE\_UAK<sub>R</sub>; otherwise, the mobile station shall perform  
19          the following:
    - 20          – Set USE\_UAK<sub>S</sub> to '0'.
    - 21          – If USE\_UAK<sub>R</sub> is equal to '1', then the mobile station shall send a  
22          *Mobile Station Reject Order* with ORDQ equal to '00010100' (UAK  
23          not supported).
  - 24          ◇ Set RESTORE\_KEY to '0'.
  - 25          ◇ Send a *Security Mode Completion Order*.
  - 26          ◇ Disable the key setup timer if it is running.
- 27          + Set INTEGRITY\_MODE<sub>S</sub> to the SDU\_INTEGRITY\_ALGO provided by the LAC  
28          Layer (see [4]).
- 29
- 30          – If ENC\_KEY\_SIZE<sub>R</sub> is included and not set to reserved value and if current key  
31          strength is greater than the desired key strength specified by ENC\_KEY\_SIZE<sub>R</sub>  
32          according to table 3.7.4.5-2, mobile station shall perform the key strength  
33          reduction algorithm procedures to reduce the key strength of ENC\_KEY[KEY\_ID]  
34          according to ENC\_KEY\_SIZE<sub>R</sub> as described in 2.3.12.5.4. The current key  
35          strength is 64 bit if KEY\_ID is equal to '00' or '01' and is 128 bit if KEY\_ID is  
36          equal to '10' or '11'.

## 2.6.11.2 Extended Channel Assignment Message

The mobile station shall perform the following procedures in the order listed below.

- If  $P\_REV\_IN\_USE_S$  is less than 10, or  $MSG\_INTEGRITY\_SUP_S$  is equal to '0', the mobile station shall perform the following:
  - If  $ENC\_KEY\_SIZE_R$  is included, the mobile station shall set  $ENC\_KEY\_SIZE_S$  to  $ENC\_KEY\_SIZE_R$ .
  - If  $D\_SIG\_ENCRYPT\_MODE_R$  is included, the mobile station shall perform the following:
    - + If  $D\_SIG\_ENCRYPT\_MODE_R$  is equal to '000', the mobile station shall set  $D\_SIG\_ENCRYPT\_MODE_S$  to  $C\_SIG\_ENCRYPT\_MODE_S$ ; otherwise, the mobile station shall perform the following:
      - o Set  $D\_SIG\_ENCRYPT\_MODE_S$  to  $D\_SIG\_ENCRYPT\_MODE_R$
      - o Form a 128-bit pattern by concatenating the CMEAKEY with a copy of itself (the most recently generated CMEAKEY associated with the AUTHR of the *Origination Message* or *Page Response Message*) and set  $TX\_EXT\_SSEQ[0][KEY\_ID]$ ,  $TX\_EXT\_SSEQ[1][KEY\_ID]$ ,  $RX\_EXT\_SSEQ[0][KEY\_ID]$ , and  $RX\_EXT\_SSEQ[1][KEY\_ID]$  to  $1 + 256 \times NEW\_SSEQ\_H$  included in the *Origination Message* or *Page Response Message*<sup>43</sup>.
      - o Set  $ENC\_KEY[KEY\_ID]$  to the 128-bit pattern.
      - o Set  $INT\_KEY[KEY\_ID]$  to the 128-bit pattern.
  - If  $C\_SIG\_ENCRYPT\_MODE_R$  is included, the mobile station shall set  $C\_SIG\_ENCRYPT\_MODE_S$  to  $C\_SIG\_ENCRYPT\_MODE_R$ .
- If  $P\_REV\_IN\_USE_S$  is equal to or greater than 10 and  $MSG\_INTEGRITY\_SUP_S$  is equal to '1', the mobile station shall perform the following:
  - If the LAC Layer indicates that the message does not contain a valid MACI, the mobile station shall set  $D\_SIG\_ENCRYPT\_MODE_S$  to  $C\_SIG\_ENCRYPT\_MODE_S$ ; otherwise, the mobile station shall perform the following:
    - + Set  $D\_SIG\_ENCRYPT\_MODE_S$  to  $D\_SIG\_ENCRYPT\_MODE_R$ .
    - + If  $C\_SIG\_ENCRYPT\_MODE$  is included, the mobile station shall set  $C\_SIG\_ENCRYPT\_MODE_S$  to  $C\_SIG\_ENCRYPT\_MODE_R$ .
    - + If  $ENC\_KEY\_SIZE_R$  is included, the mobile station shall set  $ENC\_KEY\_SIZE_S$  to  $ENC\_KEY\_SIZE_R$ .

---

<sup>43</sup> If the mobile station is in the *Mobile Station Origination Attempt Substate*, the  $NEW\_SSEQ\_H$  field shall be the one included in the *Origination Message*. If the mobile station is in the *Page Response Substate*, the  $NEW\_SSEQ\_H$  field shall be the one included in the *Page Response Message*.

- 1           + If MSG\_INTEGRITY\_INFO<sub>r</sub> is set to '1', the mobile station shall perform the
- 2           following:
- 3           o If CHANGE\_KEYS<sub>r</sub> is equal to '0', the mobile station shall set
- 4           RESTORE\_KEY to '0'.
- 5           o If CHANGE\_KEYS<sub>r</sub> is equal to '1', the mobile station shall perform the
- 6           following:
- 7           ◇ Set KEY\_ID to SDU\_KEY\_ID provided by the LAC Layer (see [4]).
- 8           ◇ Set TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1][KEY\_ID],
- 9           RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1][KEY\_ID] to 1 + 256
- 10          × NEW\_SSEQ\_H included in the *Origination Message* or *Page*
- 11          *Response Message*.
- 12          ◇ If KEY\_ID is equal to '00' or '01', the mobile station shall perform the
- 13          following:
- 14           – Form a 128-bit pattern by concatenating the CMEAKEY with a
- 15           copy of itself (the most recently generated CMEAKEY associated
- 16           with the AUTHR of the *Origination Message* or *Page Response*
- 17           *Message*).
- 18           – Set ENC\_KEY[KEY\_ID] to the 128-bit pattern.
- 19           – Set INT\_KEY[KEY\_ID] to the 128-bit pattern.
- 20           – Set LAST\_2G\_KEY\_ID<sub>s</sub> to KEY\_ID.
- 21          ◇ If KEY\_ID is equal to '10' or '11', the mobile station shall perform the
- 22          following:
- 23           – Set ENC\_KEY[KEY\_ID] to the CK generated by AKA.
- 24           – Set INT\_KEY[KEY\_ID] to the IK generated by AKA.
- 25           – Set LAST\_3G\_KEY\_ID<sub>s</sub> to KEY\_ID
- 26           – If the mobile station supports R-UIM, then the mobile shall set
- 27           USE\_UAK<sub>s</sub> to USE\_UAK<sub>r</sub>; otherwise, the mobile station shall
- 28           perform the following:
- 29           + Set USE\_UAK<sub>s</sub> to '0'.
- 30           + If USE\_UAK<sub>r</sub> is equal to '1', then the mobile station shall send
- 31           a *Mobile Station Reject Order* with ORDQ equal to '00010100'
- 32           (UAK not supported).
- 33          ◇ Set RESTORE\_KEY to '0'.
- 34          ◇ Send a *Security Mode Completion Order*.
- 35          ◇ Disable the key setup timer if it is running.
- 36          o Set INTEGRITY\_MODE<sub>s</sub> to the SDU\_INTEGRITY\_ALGO delivered by the
- 37          LAC Layer.

1

- 2 • If ENC\_KEY\_SIZE<sub>R</sub> is included and not set to reserved value and if current key  
3 strength is greater than the desired key strength specified by ENC\_KEY\_SIZE<sub>R</sub>  
4 according to table 3.7.4.5-2, mobile station shall perform the key strength  
5 reduction algorithm procedures to reduce the key strength of ENC\_KEY[KEY\_ID]  
6 according to ENC\_KEY\_SIZE<sub>R</sub> as described in 2.3.12.5.4. The current key strength  
7 is 64 bit if KEY\_ID is equal to '00' or '01' and is 128 bit if KEY\_ID is equal to '10' or  
8 '11'.

### 9 2.6.11.3 General Handoff Direction Message and Universal Handoff Direction Message

10 The mobile station shall perform the following procedures in the order listed below at the  
11 action time of the message.

- 12 • If D\_SIG\_ENCRYPT\_MODE<sub>R</sub> is included, the mobile station shall set  
13 D\_SIG\_ENCRYPT\_MODE<sub>S</sub> to D\_SIG\_ENCRYPT\_MODE<sub>R</sub>.
- 14 • If ENC\_KEY\_SIZE<sub>R</sub> is included, the mobile station shall set ENC\_KEY\_SIZE<sub>S</sub> to  
15 ENC\_KEY\_SIZE<sub>R</sub>.
- 16 • If REGISTER\_IN\_IDLE<sub>R</sub> is included, the mobile station shall set  
17 REGISTER\_IN\_IDLE<sub>S</sub> to REGISTER\_IN\_IDLE<sub>R</sub>.
- 18 • If MSG\_INTEGRITY\_SUP<sub>R</sub> is included, the mobile station shall set  
19 MSG\_INTEGRITY\_SUP<sub>S</sub> to MSG\_INTEGRITY\_SUP<sub>R</sub>.
- 20 • If GEN\_2G\_KEY<sub>R</sub> is included and is set to '1', the mobile station shall perform the  
21 following in the order listed below:
  - 22 – Perform the CDMA\_3G\_2G\_Conversion procedure as defined in [44] for 3G to  
23 2G one-way roaming to generate a new CMEAKEY from CK.
  - 24 – Set TX\_EXT\_SSEQ[0]['00'] to TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1]['00']  
25 to TX\_EXT\_SSEQ[1][KEY\_ID], RX\_EXT\_SSEQ[0]['00'] to  
26 RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1]['00'] to  
27 RX\_EXT\_SSEQ[1][KEY\_ID].
  - 28 – Form a 128-bit pattern by concatenating the resultant CMEAKEY with a copy of  
29 itself.
  - 30 – Store the 128-bit pattern in ENC\_KEY['00'] and INT\_KEY['00'].
  - 31 – Set KEY\_ID and LAST\_2G\_KEY\_ID<sub>S</sub> to '00'.
- 32 • If ENC\_KEY\_SIZE<sub>R</sub> is included and not set to reserved value and if current key  
33 strength is greater than the desired key strength specified by ENC\_KEY\_SIZE<sub>R</sub>  
34 according to table 3.7.4.5-2, mobile station shall perform the key strength  
35 reduction algorithm procedures to reduce the key strength of ENC\_KEY[KEY\_ID]  
36 according to ENC\_KEY\_SIZE<sub>R</sub> as described in 2.3.12.5.4. The current key strength  
37 is 64 bit if KEY\_ID is equal to '00' or '01' and is 128 bit if KEY\_ID is equal to '10' or  
38 '11'.

## 2.6.11.4 Security Mode Command Message on f-csch

The mobile station shall perform the following procedures in the order listed below.

- Set C\_SIG\_ENCRYPT\_MODE<sub>S</sub> to C\_SIG\_ENCRYPT\_MODE<sub>R</sub>.
- If ENC\_KEY\_SIZE<sub>R</sub> is included, the mobile station shall set ENC\_KEY\_SIZE<sub>S</sub> to ENC\_KEY\_SIZE<sub>R</sub>.
- If MSG\_INTEGRITY\_SUP<sub>S</sub> is equal to '0', C\_SIG\_ENCRYPT\_MODE<sub>R</sub> is not equal to '000' and the mobile sent a *Security Mode Request Message* with the NEW\_SSEQ\_H\_INCL field equal to '1' prior to receiving this message when C\_SIG\_ENCRYPT\_MODE<sub>S</sub> was not equal to '000', the mobile station shall perform the following:
  - Set TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1][KEY\_ID], RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1][KEY\_ID] to  $1 + 256 \times \text{NEW\_SSEQ\_H}$  included in the *Security Mode Request Message*.
- If MSG\_INTEGRITY\_SUP<sub>S</sub> is equal to '1' and MSG\_INTEGRITY\_INFO<sub>R</sub> is equal to '1', the mobile station shall perform the following:
  - If CHANGE\_KEYS<sub>R</sub> is equal to '0', the mobile station shall set RESTORE\_KEY to '0'.
  - If CHANGE\_KEYS<sub>R</sub> is equal to '1', the mobile station shall perform the following:
    - + Set KEY\_ID to SDU\_KEY\_ID provided by the LAC Layer (see [4]).
    - + If KEY\_ID is equal to '00' or '01', the mobile station shall perform the following:
      - o Set TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1][KEY\_ID], RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1][KEY\_ID] to  $1 + 256 \times \text{NEW\_SSEQ\_H}$  included in the *Security Mode Request Message*.
      - o Form a 128-bit pattern by concatenating the CMEAKEY with a copy of itself (the most recently generated CMEAKEY associated with the AUTHR of the *Registration Message*, *Origination Message*, *Page Response Message* or the CMEAKEY associated with the AUTHU generated during Unique Challenge-Response procedure as described in 2.3.12.1.4).
      - o Set ENC\_KEY[KEY\_ID] to the 128-bit pattern.
      - o Set INT\_KEY[KEY\_ID] to the 128-bit pattern.
      - o Set LAST\_2G\_KEY\_ID<sub>S</sub> to KEY\_ID.
    - + If KEY\_ID is equal to '10' or '11', the mobile station shall perform the following:
      - o Set TX\_EXT\_SSEQ[0][KEY\_ID], TX\_EXT\_SSEQ[1][KEY\_ID], RX\_EXT\_SSEQ[0][KEY\_ID], and RX\_EXT\_SSEQ[1][KEY\_ID] to  $1 + 256 \times \text{NEW\_SSEQ\_H}$  included in the *Authentication Response Message*, or *Security Mode Request Message*.

- 1           o Set ENC\_KEY[KEY\_ID] to the CK generated by AKA.
- 2           o Set INT\_KEY[KEY\_ID] to the IK generated by AKA.
- 3           o Set LAST\_3G\_KEY\_ID<sub>S</sub> to KEY\_ID.
- 4           o If the mobile station supports R-UIM, then the mobile station shall set
- 5           USE\_UAK<sub>S</sub> to USE\_UAK<sub>R</sub>; otherwise, the mobile station shall perform the
- 6           following:
  - 7           ◊ Set USE\_UAK<sub>S</sub> to '0'.
  - 8           ◊ If USE\_UAK<sub>R</sub> is equal to '1', then the mobile station shall send a
  - 9           *Mobile Station Reject Order* with ORDQ equal to '00010100' (UAK not
  - 10           supported).
- 11          + Set RESTORE\_KEY to '0'.
- 12          + Perform the key strength reduction algorithm procedures to reduce the key
- 13          strength of ENC\_KEY[KEY\_ID] according to ENC\_KEY\_SIZE<sub>R</sub> as described in
- 14          2.3.12.5.3.
- 15          + Send a *Security Mode Completion Order*.
- 16          + Disable the key setup timer if it is running.
- 17          – Set INTEGRITY\_MODE<sub>S</sub> to the SDU\_INTEGRITY\_ALGO delivered by the LAC
- 18          Layer.
- 19
- 20          • If ENC\_KEY\_SIZE<sub>R</sub> is included and not set to reserved value and if current key
- 21          strength is greater than the desired key strength specified by ENC\_KEY\_SIZE<sub>R</sub>
- 22          according to table 3.7.4.5-2, mobile station shall perform the key strength
- 23          reduction algorithm procedures to reduce the key strength of ENC\_KEY[KEY\_ID]
- 24          according to ENC\_KEY\_SIZE<sub>R</sub> as described in 2.3.12.5.4. The current key strength
- 25          is 64 bit if KEY\_ID is equal to '00' or '01' and is 128 bit if KEY\_ID is equal to '10' or
- 26          '11'.
- 27      2.6.11.5 Base Station Reject Order on f-csch and f-dsch.
- 28      The mobile station shall perform the following procedures in the order listed below.
- 29          • If ORDQ<sub>R</sub> is equal to '00000000' or if ORDQ<sub>R</sub> is equal to '00000010',
- 30          REJECT\_REASON<sub>R</sub> = '0011', and REJECTED\_L3\_MSG\_TYPE<sub>R</sub> indicates the rejected
- 31          message is an *Origination Message*, the mobile station shall set ENC\_KEY[i] and
- 32          INT\_KEY[i] to NULL, where i ranges from '00' to '11'. The mobile station shall set
- 33          C\_SIG\_ENCRYPT\_MODE<sub>S</sub> to '000'. The mobile station shall re-originate by sending
- 34          a new *Origination Message*.

- If  $ORDQ_r$  is equal to '00000001' or if  $ORDQ_r$  is equal to '00000010' and  $REJECTED\_L3\_MSG\_TYPE_r$  indicates the rejected message is not an *Origination Message*, the mobile station shall send a *Security Mode Request Message*. If  $MSG\_INTEGRITY\_SUP_s$  is equal to '0', the mobile station shall select a 24-bit number and include this number in the  $NEW\_SSEQ\_H$  field in the *Security Mode Request Message*; otherwise, the mobile station shall select a 24-bit number and deliver this number to the LAC Layer along with the *Security Mode Request Message*. If the mobile receives two *Base Station Reject Orders* without successfully decrypting any encrypted message or without successfully validating the MACI of any message between the two orders, the mobile station shall set  $REG\_SECURITY\_RESYNC$  to YES and enter the *System Determination Substate* with an encryption/message integrity failure indication.

#### 2.6.11.6 Mobile Station processing when decryption or MACI check failed

Whenever the mobile station cannot decrypt an encrypted message or validate the MACI of a message that requires MACI validation, the mobile station may send an un-encrypted *Mobile Station Reject Order* indicating the failure condition to the base station.

If the failure to decrypt or to validate MACI persists, the mobile station may attempt to resynchronize the crypto-sync with the base station by sending a *Security Mode Request Message* to the base station as follows:

- If  $MSG\_INTEGRITY\_SUP_s$  is equal to '0', the mobile station shall select a 24-bit number and include this number in the  $NEW\_SSEQ\_H^{44}$  field in the *Security Mode Request Message*; otherwise, the mobile station shall select a 24-bit number and deliver this number to the LAC Layer along with the *Security Mode Request Message*.

The mobile station shall set  $REG\_SECURITY\_RESYNC$  to YES and enter the *System Determination Substate* with an encryption/message integrity failure indication if either of the following conditions are true:

- The mobile station chooses not to perform resynchronization procedure as described above.
- The mobile station still cannot decrypt message or validate the MACI of message from the base station after successfully receiving and processing *Security Mode Command Message* in response to *Security Mode Request Message* sent by mobile station in resynchronization procedure as specified in 2.6.11.4 or 2.6.4.1.14.

#### 2.6.12 Common Procedures for Processing f-csch Messages

This section describes the common procedures for processing messages received on the f-

---

<sup>44</sup> The mobile station should select a different value of  $NEW\_SSEQ\_H$  every time  $NEW\_SSEQ\_H$  is included in a message. This is to prevent the re-use of the same 24 most significant bits of the 32-bit crypto-sync.

1 csch.

## 2 2.6.12.1 Fast Call Setup Order

3 The mobile station shall perform the following procedures in the order listed below:

- 4 • If  $RER\_MODE\_ENABLED_r$  is included and equal to '1', and the mobile station  
5 supports operation in the radio environment reporting mode, the mobile station  
6 shall set  $RER\_MODE\_ENABLED$  to YES,  $RER\_COUNT$  to 0, and shall perform the  
7 following:
  - 8 – The mobile station shall disable the radio environment report timer, if enabled.
  - 9 – The mobile station shall store the following:
    - 10 + Maximum number of *Radio Environment Messages* that the mobile station is  
11 permitted to transmit while in radio environment reporting mode  
12 ( $RER\_MAX\_NUM\_MSG_s = infinity$ , if  $RER\_MAX\_NUM\_MSG\_IDX_r$  is equal to  
13 '111'; otherwise,  $RER\_MAX\_NUM\_MSG_s = 2^{RER\_MAX\_NUM\_MSG\_IDX_r}$ ).
    - 14 + Maximum number of pilots to maintain in  $RER\_PILOT\_LIST$   
15 ( $MAX\_RER\_PILOT\_LIST\_SIZE_s = MAX\_RER\_PILOT\_LIST\_SIZE_r$ ).
    - 16 + System identification for radio environment reporting mode ( $RER\_SID_s =$   
17  $SID_s$ ).
    - 18 + Network identification for radio environment reporting mode ( $RER\_NID_s =$   
19  $NID_s$ ).
  - 20 – The initial radio environment report pilot list ( $RER\_PILOT\_LIST$ ) is generated as  
21 follows:
    - 22 + If  $ORDQ_r$  is equal to '00000001' and the size of the current  $RER\_PILOT\_LIST$   
23 is greater than  $MAX\_RER\_PILOT\_LIST\_SIZE_s$ , the mobile station shall  
24 remove all but the first  $MAX\_RER\_PILOT\_LIST\_SIZE_s$  pilots from  
25  $RER\_PILOT\_LIST$ .
    - 26 + Otherwise, the initial  $RER\_PILOT\_LIST$  is generated according to the  
27 procedures specified in [4].
  - 28 – The mobile station shall enable the radio environment report timer with an  
29 initial value of *infinity* if  $RER\_TIME_r$  is equal to '111'; otherwise, the mobile  
30 station shall enable the radio environment report timer with an initial value of  
31  $2^{RER\_TIME_r}$  seconds if  $RER\_TIME\_UNIT_r$  is equal to '00', or  $2^{RER\_TIME_r}$  minutes if  
32  $RER\_TIME\_UNIT_r$  is equal to '01', or  $2^{RER\_TIME_r}$  hours if  $RER\_TIME\_UNIT_r$  is  
33 equal to '10'.
- 34 • If  $RER\_MODE\_ENABLED_r$  is included and equal to '0', and  $RER\_MODE\_ENABLED$   
35 is equal to YES, the mobile station shall perform the following:
  - 36 – The mobile station shall disable the radio environment report timer and set  
37  $RER\_MODE\_ENABLED$  to NO.
  - 38 – If  $TKZ\_MODE\_PENDING$  is equal to YES, then the mobile station shall set

- 1 TKZ\_MODE\_PENDING to NO.
- 2 • If TKZ\_MODE\_ENABLED<sub>r</sub> is included and equal to '1', and the mobile station  
3 supports tracking zone reporting, the mobile station shall set TKZ\_COUNT to 0 and  
4 perform the following:
- 5 – The mobile station shall disable the tracking zone update timer, if enabled.
  - 6 – The mobile station shall store the following:
    - 7 + Tracking zone list length (TKZ\_LIST\_LEN<sub>s</sub> = TKZ\_LIST\_LEN<sub>r</sub>).
    - 8 + Tracking zone timer (TKZ\_TIMER<sub>s</sub> = TKZ\_TIMER<sub>r</sub>).
    - 9 + Maximum number of *Radio Environment Messages* that the mobile station is  
10 permitted to transmit while in tracking zone mode (TKZ\_MAX\_NUM\_MSG<sub>s</sub> =  
11 *infinity*, if TKZ\_MAX\_NUM\_MSG\_IDX<sub>r</sub> is equal to '111'; otherwise,  
12 TKZ\_MAX\_NUM\_MSG<sub>s</sub> = 2<sup>TKZ\_MAX\_NUM\_MSG\_IDX<sub>r</sub></sup>).
    - 13 + System identification for tracking zone mode (TKZ\_SID<sub>s</sub> = SID<sub>s</sub>).
    - 14 + Network identification for tracking zone mode (TKZ\_NID<sub>s</sub> = NID<sub>s</sub>).
    - 15 + Tracking zone update period (TKZ\_UPDATE\_PRD<sub>s</sub> = TKZ\_UPDATE\_PRD<sub>r</sub>).
  - 16 – If RER\_MODE\_ENABLED is equal to NO, the mobile station shall set  
17 TKZ\_MODE\_ENABLED to YES; otherwise, the mobile station shall set  
18 TKZ\_MODE\_PENDING to YES.
  - 19 – If TKZ\_MODE\_ENABLED is equal to YES, the mobile station shall perform the  
20 following:
    - 21 + Initialize the tracking zone list (TKZ\_LIST) to contain TKZ\_ID<sub>s</sub>.
    - 22 + Enable the tracking zone update timer with an initial value of infinity if  
23 TKZ\_UPDATE\_PRD<sub>s</sub> is equal to '1111'; otherwise, the mobile station shall  
24 enable the tracking zone update timer with an initial value of  
25 2<sup>TKZ\_UPDATE\_PRD<sub>s</sub></sup> + 6 seconds.
- 26 • If TKZ\_MODE\_ENABLED<sub>r</sub> is included and equal to '0', and TKZ\_MODE\_ENABLED  
27 is equal to YES, the mobile station shall perform the following:
- 28 – The mobile station shall disable the tracking zone update timer and set  
29 TKZ\_MODE\_ENABLED to NO.
- 30 If ORDQ<sub>r</sub> is equal to '00000000' (base station request for mobile station to operate in a fast  
31 call setup mode), the mobile station shall respond with a *Fast Call Setup Order* (ORDQ =  
32 '00000001') as follows:
- 33 • If RSC\_MODE\_SUPPORTED<sub>r</sub> is equal to '1' and the mobile station accepts  
34 operation in the reduced slot cycle mode, the mobile station shall set the  
35 RSC\_MODE\_IND field to '1' and perform the following:
    - 36 – Set RSC\_MODE\_ENABLED to YES.
    - 37 – Set the RSC\_END\_TIME\_UNIT and RSC\_END\_TIME\_VALUE fields as specified  
38 in 2.7.3.6, and store the system time specified by these fields as

1 RSC\_END\_TIME. The value of RSC\_END\_TIME shall be no later than the  
 2 system time specified by MAX\_RSC\_END\_TIME\_UNIT<sub>r</sub> and  
 3 MAX\_RSC\_END\_TIME\_VALUE<sub>r</sub>.

4 – Set the RSCI field as specified in 2.7.3.6 and store it as RSCI<sub>s</sub>; if RSCI<sub>s</sub> is equal  
 5 to '0111', set SLOTTED<sub>s</sub> to NO.

6 – Set IGNORE\_QPCH<sub>s</sub> to IGNORE\_QPCH<sub>r</sub>.

7 • Otherwise, the mobile station shall set the RSC\_MODE\_IND field to '0'.

8 If ORDQ<sub>r</sub> is equal to '00000001' (base station response to mobile station's request to  
 9 operate in a fast call setup mode), the mobile station shall perform the following:

10 • If RSC\_MODE\_SUPPORTED<sub>r</sub> is equal to '1', the mobile station shall perform the  
 11 following:– Set RSC\_END\_TIME to the earlier of the current value of  
 12 RSC\_END\_TIME, and the system time specified by MAX\_RSC\_END\_TIME\_UNIT<sub>r</sub>  
 13 and MAX\_RSC\_END\_TIME\_VALUE<sub>r</sub>.

14 – Set IGNORE\_QPCH<sub>s</sub> to IGNORE\_QPCH<sub>r</sub>.

15 • If RSC\_MODE\_SUPPORTED<sub>r</sub> is equal to '0', the mobile station shall set  
 16 RSC\_MODE\_ENABLED to NO and set SLOTTED<sub>s</sub> to YES.

17

## 18 2.6.13 Mobile Station BCMC Operation

19 This section specifies the mobile station requirements for monitoring BCMC flows. If the  
 20 mobile station supports BCMC, the requirements in this section apply in addition to all  
 21 other requirements in the Mobile Station Idle State, System Access State, and Mobile  
 22 Station Control on the Traffic Channel State.

23 The operations performed by a mobile station that supports BCMC are as follows:

24 • Procedures for commencing reception of a BCMC flow while in Mobile Station Idle  
 25 State or System Access State (see 2.6.13.1)

26 • Procedures while monitoring a Forward Supplemental Channel in *Mobile Station*  
 27 *Idle State* or *System Access State* (see 2.6.13.2)

28 • Procedures for BCMC registration while in Mobile Station Idle State or System  
 29 Access State (see 2.6.13.3)

30 • Procedures for Idle Handoff while Monitoring Forward Supplemental Channel while  
 31 in Mobile Station Idle State or System Access State (see 2.6.13.4)

32 • Procedures for stopping reception of a BCMC flow while in Mobile Station Idle State  
 33 or System Access State (see 2.6.13.5)

34 • Procedures for processing *BCMC Service Parameters Message Updates* while in  
 35 Mobile Station Idle State or System Access State (see 2.6.13.6)

36 • Procedures for Browsing BCMC flows while in Mobile Station Idle State or System  
 37 Access State (see 2.6.13.7)

- Procedures for BCMC Operation while in Mobile Station Control on the Traffic Channel State (see 2.6.13.8)
- Procedures for computation of Authorization Signature (see 2.6.13.9)
- Procedures for generating public long code mask for F-SCH *Mobile Station Idle State* or *System Access State* (see 2.6.13.10)

The following primitives can be received by Layer 3 from the BCMC Service Layer:

- *BCMC-Monitor.Request(BCMC\_FLOW\_ID<sup>45</sup>, priority)* - to request Layer 3 to commence monitoring the specified BCMC flow, where
  - *BCMC\_FLOW\_ID* identifies the BCMC flow to monitor.
  - *priority* is to be used when current BCMC flow(s) and the new BCMC flow cannot both be accommodated.
- *BCMC-Browse.Request* - to request Layer 3 to report all BCMC flows currently available.
- *BCMC-Stop-Monitor.Request(BCMC\_FLOW\_ID)* - to request Layer 3 to stop monitoring the specified BCMC flow, where
  - *BCMC\_FLOW\_ID* identifies the BCMC flow to stop monitoring.

The following primitives can be sent by Layer 3 to the BCMC Service Layer:

- *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result, cause, reason\_ind)* - response to the BCMC Service Layer for a request to monitor a BCMC flow or due to mobility, where
  - *BCMC\_FLOW\_ID* identifies the requested BCMC flow.
  - *result* indicates the result of the request and can be one of following:
    - + SUCCESS indicates the request was successful
    - + FAILURE indicates the request was unsuccessful
  - *cause* indicates the reason for failure when the request was unsuccessful and can be one of the following
    - + FLOW\_NOT\_AVAILABLE which indicates the requested BCMC flow is not available in this base station
    - + CANNOT\_ACCOMMODATE which indicates the requested BCMC flow cannot be monitored due to monitoring other higher priority BCMC flow(s)
    - + UNSUPPORTED\_BEARER\_CONFIG which indicates that the requested

---

<sup>45</sup> Although the primitive is modeled to allow the Upper Layer to request for a single BCMC\_FLOW\_ID at a time, this procedure can be implemented such that multiple BCMC\_FLOW\_IDs can be requested simultaneously.

- 1 BCMC flow cannot be monitored due to a physical channel capability
- 2 mismatch
- 3 + FLOW\_NOT\_TRANSMITTED which indicates that the requested BCMC flow
- 4 is not being transmitted by this base station although it is configured for
- 5 transmission.
- 6 + FLOW\_TRANSMITTED\_IN\_IDLE which indicates that the requested BCMC
- 7 flow is being transmitted by this base station in idle state.
- 8 + CALL\_RELEASED which indicates that the call was released.
- 9 - *reason\_ind* is included when the request is unsuccessful and can be one of the
- 10 following
- 11 + CURRENT\_SYS to indicate it occurred in current system
- 12 + MOBILITY to indicate it occurred due to idle handoff
- 13 • *BCMC-Browse.Response(result, {BCMC\_FLOW\_IDs})* - response to the BCMC Service
- 14 Layer for a request to browse for BCMC flows, where
- 15 - *result* indicates the result of the request and can be one of following:
- 16 + SUCCESS indicates current sector is configured to transmit one or more
- 17 BCMC flows and this list of BCMC flows is passed as {BCMC\_FLOW\_IDs}
- 18 + FAILURE indicates current sector is not configured to transmit any BCMC
- 19 flows.

20 The following primitives are sent by Layer 3 to Multiplex sublayer:

- 21 • *BMAC-Start-Deliver.Request(FSCH\_ID, BSR\_ID)* - to request the Multiplex sublayer
- 22 to start delivering the data blocks corresponding to the specified BCMC flow, where
- 23 - *FSCH\_ID* identifies the physical channel on which this BCMC flow is being
- 24 carried
- 25 - *BSR\_ID* identifies the BCMC Service Reference Identifier being used by this
- 26 BCMC flow on this physical channel
- 27 • *BMAC-Stop-Deliver.Request(FSCH\_ID, BSR\_ID)* - to request the Multiplex sublayer to
- 28 stop delivering the data blocks corresponding to the specified BCMC flow, where
- 29 - *FSCH\_ID* identifies the physical channel on which this BCMC flow is being
- 30 carried
- 31 - *BSR\_ID* identifies the BCMC Service Reference Identifier being used by this
- 32 BCMC flow on this physical channel

33 If the mobile station is currently not monitoring a BCMC flow, the mobile station shall

34 perform the following:

- 35 • If Layer 3 receives a *BCMC-Monitor.Request(BCMC\_FLOW\_ID, priority)* from the
- 36 BCMC Service Layer, Layer 3 shall perform the procedures specified in 2.6.13.1 to
- 37 commence reception of the BCMC flow.

- If Layer 3 receives a *BCMC-Browse.Request* from the BCMC Service Layer, Layer 3 shall perform the procedures specified in 2.6.13.7 to determine which BCMC flows are currently available.

#### 2.6.13.1 Procedures for commencing reception of a BCMC Flow

If Layer 3 is requested by the BCMC Service Layer to commence reception of a BCMC flow (see 2.6.13), the mobile station shall perform the following procedures in the order specified:

- If SENDING\_BSPM<sub>s</sub> equals '0', Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause = FLOW\_NOT\_AVAILABLE, reason\_ind = CURRENT\_SYS)* to the BCMC Service Layer and shall not perform the remaining procedures in this section.
- If the stored *BCMC Service Parameters Message* parameters do not include this BCMC\_FLOW\_ID (See section 2.6.13.11) and FULL\_BSPM\_IND = '0', the mobile station shall monitor the overhead channel to receive the *BCMC Service Parameters Message* as specified in 2.6.2.2.18 until its stored *BCMC Service Parameters Message* parameters include this BCMC\_FLOW\_ID, or until FULL\_BSPM\_IND = '1'
- The mobile station shall perform the following:
  - If FLOW\_INFO\_ON\_OTHER\_FREQ equals '1', the mobile station shall perform the following:
    - + If FREQ\_CHG\_REG\_REQUIRED<sub>s</sub> equals '1', the mobile station shall perform BCMC registration procedures as specified in 2.6.13.3 to indicate change in the frequency where the mobile station will reside to receive the *BCMC Service Parameters Message*.
    - + The mobile station shall tune to the frequency specified by BSPM\_CDMA\_FREQ and BSPM\_BAND\_CLASS; the mobile station should tune to the new frequency only after performing BCMC registration specified above (if any). If FREQ\_CHG\_REG\_TIMER<sub>s</sub> is not equal to NULL and the BCMC frequency registration timer for the previous frequency is not enabled or has expired, the mobile station shall start the BCMC frequency registration timer for the previous frequency with a value of FREQ\_CHG\_REG\_TIMER<sub>s</sub>.
    - + The mobile station shall monitor the overhead channel to receive the *BCMC Service Parameters Message* as specified in 2.6.2.2.18, and shall perform the following:
      - o If SENDING\_BSPM<sub>s</sub> equals '0', Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause = FLOW\_NOT\_AVAILABLE, reason\_ind = CURRENT\_SYS)* to the BCMC Service Layer and shall not perform the remaining procedures in this section.

o Otherwise, the mobile station shall perform the remaining procedures in this section.

- If the stored *BCMC Service Parameters Message* parameters do not include this *BCMC\_FLOW\_ID* (See section 2.6.13.11) and *AUTO\_REQ\_ALLOWED\_IND<sub>s</sub>* equals '0', Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause = FLOW\_NOT\_AVAILABLE, reason\_ind = CURRENT\_SYS)* to the BCMC Service Layer and shall not perform the remaining procedures in this section.
- If the *BCMC Service Parameters Message* includes the BCMC flow indicated by *BCMC\_FLOW\_ID*, *BCMC\_FLOW\_ON\_IND* corresponding to this BCMC flow equals '1', and *BCMC\_FLOW\_ON\_TRAFFIC\_IND* corresponding to this BCMC flow equals '1', the mobile station shall either perform Mobile Station Origination Operation as specified in 2.6.2.5 to request this flow in the *Mobile Station Control on the Traffic Channel State* or monitor the flow in the *Mobile Station Idle State* as specified in 2.6.13.2.
- If the stored *BCMC Service Parameters Message* does not include this *BCMC\_FLOW\_ID* (See section 2.6.13.11), *AUTO\_REQ\_ALLOWED\_IND<sub>s</sub>* equals '1' and *BCMC\_ON\_TRAFFIC\_SUP<sub>s</sub>* equals '1'; or the *BCMC Service Parameters Message* includes the BCMC flow indicated by *BCMC\_FLOW\_ID*, *BCMC\_FLOW\_ON\_IND* corresponding to this BCMC flow equals '0', and *BCMC\_FLOW\_ON\_TRAFFIC\_IND* corresponding to this BCMC flow equals '1', the mobile station shall perform the following:
  - + The mobile station shall perform Mobile Station Origination Operation as specified in 2.6.2.5 to request transmission of this BCMC flow. The mobile station shall include the *BCMC\_FLOW\_ID* (See section 2.6.13.11) in the *Origination Message*.
- If the stored *BCMC Service Parameters Message* parameters do not include this *BCMC\_FLOW\_ID* (See section 2.6.13.11), *AUTO\_REQ\_ALLOWED\_IND<sub>s</sub>* equals '1', and *BCMC\_ON\_TRAFFIC\_SUP<sub>s</sub>* equals '0'; or the stored *BCMC Service Parameters Message* parameters include the BCMC flow indicated by *BCMC\_FLOW\_ID*, *BCMC\_FLOW\_ON\_IND* corresponding to this BCMC flow equals '0', and *BCMC\_FLOW\_ON\_TRAFFIC\_IND* corresponding to this BCMC flow equals '0', the mobile station shall perform the following:
  - + The mobile station shall send a *Registration Message* to request transmission of this BCMC flow. Upon receiving conformation of delivery of the *Registration Message*, the mobile station shall enable the BCMC wait timer with a value of *BSPM\_WAIT\_TIME* seconds and shall wait for an updated *BCMC Service Parameters Message*.
  - + If the BCMC wait timer expires, Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause = FLOW\_NOT\_TRANSMITTED, reason\_ind = CURRENT\_SYS)* to the BCMC Service Layer, and shall not perform the remaining procedures in this section.

- 1           + If the mobile station receives a *BCMC Order* from the base station prior to  
2           the expiration of the BCMC wait timer, the mobile station shall perform the  
3           following:
- 4           o If *CLEAR\_ALL\_RETRY\_DELAY<sub>r</sub>* equals '1', the mobile station shall delete  
5           the currently stored BCMC Retry Delay List.
  - 6           o If *CLEAR\_RETRY\_DELAY<sub>r</sub>* equals '1', the mobile station shall delete the  
7           entry in the *BCMC\_RETRY\_DELAY\_LIST<sub>s</sub>[i]* corresponding to  
8           *BCMC\_FLOW\_ID* (See section 2.6.13.11) in this message.
  - 9           o If *ALL\_BCMC\_REASON<sub>r</sub>* or *BCMC\_REASON<sub>r</sub>* equals '0000', Layer 3 shall  
10          send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE,*  
11          *cause = FLOW\_NOT\_AVAILABLE, reason\_ind = CURRENT\_SYS)* for each  
12          of the corresponding *BCMC\_FLOW\_ID* to the BCMC Service Layer, and  
13          shall not perform the remaining procedures in this section for the  
14          corresponding *BCMC\_FLOW\_ID*.
  - 15          o If *ALL\_BCMC\_REASON<sub>r</sub>* or *BCMC\_REASON<sub>r</sub>* equals '0001', Layer 3 shall  
16          send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE,*  
17          *cause = FLOW\_NOT\_TRANSMITTED, reason\_ind = CURRENT\_SYS)* for  
18          each of the corresponding *BCMC\_FLOW\_ID* to the BCMC Service Layer,  
19          and shall not perform the remaining procedures in this section for the  
20          corresponding *BCMC\_FLOW\_ID*.
  - 21          o If *ALL\_BCMC\_REASON<sub>r</sub>* or *BCMC\_REASON<sub>r</sub>* equals '0011', Layer 3 shall  
22          send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = SUCCESS,*  
23          *reason\_ind = REGISTRATION\_ACCEPTED)* for each of the corresponding  
24          *BCMC\_FLOW\_ID* to the BCMC Service Layer and shall not perform the  
25          remaining procedures in this section for the corresponding  
26          *BCMC\_FLOW\_ID*.
  - 27          o If *ALL\_BCMC\_REASON<sub>r</sub>* or *BCMC\_REASON* equals '0100', Layer 3 shall  
28          send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE,*  
29          *cause = AUTHORIZATION\_FAILURE, reason\_ind = CURRENT\_SYS)* for  
30          each of the corresponding *BCMC\_FLOW\_ID* to the BCMC Service Layer,  
31          and shall not perform the remaining procedures in this section for the  
32          corresponding *BCMC\_FLOW\_ID*.
  - 33          o If *ALL\_BCMC\_REASON<sub>r</sub>* or *BCMC\_REASON* equals '0101', the mobile  
34          station shall perform the following:
    - 35              • Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result*  
36              *= FAILURE, cause = RETRY\_LATER, reason\_ind = CURRENT\_SYS)* for  
37              each of the corresponding *BCMC\_FLOW\_ID* to the BCMC Service  
38              Layer.
    - 39              • For each of the corresponding *BCMC\_FLOW\_ID*, if there is a  
40              *BCMC\_RETRY\_DELAY\_LIST<sub>s</sub>[i].BCMC\_FLOW\_ID* which is same as  
41              *BCMC\_FLOW\_ID* (See section 2.6.13.11), the mobile station shall set  
42              *BCMC\_RETRY\_DELAY\_LIST<sub>s</sub>[i].RETRY\_DELAY* to current system

- time plus  $ALL\_BCMC\_RETRY\_DELAY_r / BCMC\_RETRY\_DELAY_r$ ;  
 otherwise, Layer 3 shall add new  $BCMC\_RETRY\_DELAY\_LIST_s[i]$  to  
 the BCMC Retry Delay List and shall set  
 $BCMC\_RETRY\_DELAY\_LIST_s[i].BCMC\_FLOW\_ID$  to  $BCMC\_FLOW\_ID$ ,  
 $BCMC\_RETRY\_DELAY\_LIST_s[i].RETRY\_DELAY$  to current system  
 time plus  $ALL\_BCMC\_RETRY\_DELAY_r / BCMC\_RETRY\_DELAY_r$ .
- The mobile station shall not perform the remaining procedures in  
 this section for the corresponding  $BCMC\_FLOW\_ID$ .
  - o If the BCMC flow corresponding to this  $BCMC\_FLOW\_ID$  (See section  
 2.6.13.11) is included in the stored *BCMC Service Parameters Message*  
 parameters and  $BCMC\_FLOW\_ON\_IND$  corresponding to this BCMC flow  
 changes to '1' prior to the expiration of the BCMC wait timer, the mobile  
 station shall disable the BCMC wait timer and perform the remaining  
 procedures in this section.
  - The mobile station shall determine the Forward Supplemental Channel  
 corresponding to this  $BCMC\_FLOW\_ID$  from  $BCMC\_FLOW\_LIST_s$ . If the BCMC flow  
 corresponding to this  $BCMC\_FLOW\_ID$  is configured for transmission in the mobile  
 station's hash-to-frequency, the mobile station shall choose the mobile station's  
 hash-to-frequency; otherwise, the mobile station shall use the hash algorithm  
 specified in 2.6.7.1 and the number of CDMA channels on which this  
 $BCMC\_FLOW\_ID$  is configured for transmission to choose the frequency to monitor.  
 The mobile station shall perform the following:
    - The mobile station shall determine the Band Class ( $FSCH\_BAND\_CLASS$ ) and  
 the CDMA channel ( $FSCH\_FREQ$ ) corresponding to the selected Forward  
 Supplemental Channel from  $FBSCH\_LIST_s$ . If  $FSCH\_BAND\_CLASS$  is not equal  
 to  $CDMA\_BAND_s$  or  $FSCH\_FREQ$  is not equal to  $CDMACH_s$  and the mobile  
 station is currently monitoring one or more BCMC flows in the current  
 frequency that have a higher priority than the requested BCMC flow, Layer 3  
 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause =*  
*CANNOT\_ACCOMMODATE, reason\_ind = CURRENT\_SYS)* to the BCMC Service  
 Layer, and shall not perform the remaining procedures in this section.
    - If the mobile station will not be able to monitor the Forward Supplemental  
 Channel on which the BCMC flow is being transmitted due to a capability  
 mismatch, Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result*  
*= FAILURE, cause = UNSUPPORTED\_BEARER\_CONFIG, reason\_ind =*  
*CURRENT\_SYS)* to the BCMC Service Layer, and shall not perform the  
 remaining procedures in this section.
  - If  $FSCH\_BAND\_CLASS$  is not equal to  $CDMA\_BAND_s$  or  $FSCH\_FREQ$  is not equal to  
 $CDMACH_s$ , the mobile station shall perform the following:
    - If  $FREQ\_CHG\_REG\_REQUIRED_s$  equals '1', the mobile station shall perform  
 BCMC registration procedures as specified in 2.6.13.3 to indicate change in the  
 frequency where the mobile station will reside while monitoring this BCMC flow.

- 1       – The mobile station shall tune to FSCH\_FREQ in FSCH\_BAND\_CLASS; the  
2       mobile station should tune to the new frequency only after performing BCMC  
3       registration specified above (if any). If FREQ\_CHG\_REG\_TIMER<sub>s</sub> is not equal to  
4       NULL and the BCMC frequency registration timer for the previous frequency is  
5       not enabled or has expired, the mobile station shall start the BCMC frequency  
6       registration timer for the previous frequency with a value of  
7       FREQ\_CHG\_REG\_TIMER<sub>s</sub>.
- 8       – For each BCMC flow in current frequency that can no longer be monitored in  
9       new frequency, the mobile station shall perform the following:
  - 10      + Layer 3 shall send a *BCMC-Monitor.Response*(BCMC\_FLOW\_ID, result =  
11      *FAILURE*, cause = *CANNOT\_ACCOMMODATE*, reason\_ind = *CURRENT\_SYS*)  
12      to the BCMC Service Layer.
  - 13      + Layer 3 shall send a *BMAC-Stop-Deliver.Request*(FSCH\_ID, BSR\_ID) to the  
14      multiplex sublayer where FSCH\_ID and BSR\_ID are the values in  
15      BCMC\_FLOW\_LIST<sub>s</sub> corresponding to this BCMC\_FLOW\_ID.
- 16      • The mobile station shall set the Forward Supplemental Channel parameters as  
17      given in FBSCH\_LIST<sub>s</sub> and shall start to monitor the Forward Supplemental  
18      Channel.
- 19      • The mobile station shall send a *BMAC-Start-Deliver.Request*(FSCH\_ID, BSR\_ID) to  
20      the multiplex sublayer where FSCH\_ID and BSR\_ID are the values in  
21      BCMC\_FLOW\_LIST<sub>s</sub> corresponding to the logical-to-physical mapping selected for  
22      this BCMC\_FLOW\_ID.
- 23      • The mobile station shall send a *BCMC-Monitor.Response*(BCMC\_FLOW\_ID,  
24      result=*SUCCESS*) to the BCMC Service Layer.
- 25      • The mobile station shall perform the procedures as specified in 2.6.13.2 while  
26      monitoring the Forward Supplemental Channel

#### 27   2.6.13.2 Procedures while monitoring an Forward Supplemental Channel

28   While monitoring a Forward Supplemental Channel, the mobile station shall perform the  
29   following:

- 30      • The mobile station shall determine the hash-to frequency based on received CDMA  
31      Channel List Message or the Extended CDMA Channel List Message but shall not  
32      tune to the hash-to frequency. If FREQ\_CHG\_REG\_REQUIRED<sub>s</sub> equals '1' and the  
33      mobile station determines that the hash-to frequency has changed and the mobile  
34      station currently resides in the previous hash-to frequency, the mobile station shall  
35      perform BCMC registration procedures as specified in 2.6.13.3 to indicate current  
36      frequency.
- 37      • If the mobile station performs an idle handoff (see 2.6.2.1.4), the mobile station  
38      shall perform the procedures as specified in 2.6.13.4. If the idle handoff results in  
39      the mobile station residing in a frequency other than the frequency prior to the idle  
40      handoff, the mobile station shall perform the following:

- 1       – If `FREQ_CHG_REG_REQUIREDs` equals '1', the mobile station shall perform
- 2       BCMC registration procedures as specified in 2.6.13.3 to indicate change in the
- 3       frequency where the mobile station will reside while monitoring this BCMC flow.
- 4       If `FREQ_CHG_REG_TIMERs` is not equal to NULL and the BCMC frequency
- 5       registration timer for the previous frequency is not enabled or is enabled and
- 6       has not expired, the mobile station shall start the BCMC frequency registration
- 7       timer for the previous frequency with a value of `FREQ_CHG_REG_TIMERs`.
- 8       • If the `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG` is equal to '1' for any
- 9       BCMC flow being monitored by the mobile station, then the mobile station shall
- 10      perform BCMC registration procedures as specified in 2.6.13.3 if any of the
- 11      following conditions are true:
  - 12      – The mobile station determines that
  - 13      `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG` was set to '0' since the last
  - 14      time the mobile station initiated registration procedures due to
  - 15      `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG`.
  - 16      – The mobile station cannot determine that
  - 17      `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG` was not set to '0' since the
  - 18      last time the mobile station initiated registration procedures due to
  - 19      `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG`.
- 20      • If Layer 3 receives a *BCMC-Stop-Monitor.Request(BCMC\_FLOW\_ID)* from the BCMC
- 21      Service Layer, Layer 3 shall stop monitoring this BCMC flow as specified in
- 22      2.6.13.5.
- 23      • If Layer 3 receives a *BCMC-Monitor.Request(BCMC\_FLOW\_ID, priority)* from the
- 24      BCMC Service Layer, Layer 3 shall perform the procedures specified in 2.6.13.1 to
- 25      commence reception of the BCMC flow.
- 26      • If the mobile station determines that the content of the *BCMC Service Parameters*
- 27      *Message* has changed, Layer 3 shall perform the procedures as specified in
- 28      2.6.13.6.
- 29      • If the BCMC frequency registration timer for the frequency where the mobile station
- 30      is currently residing expires, the mobile station shall perform BCMC registration
- 31      procedures as specified in 2.6.13.3 to indicate current frequency.

### 32   2.6.13.3 Procedures for BCMC Registration

33   If the mobile station is to perform BCMC registration due to the  
 34   `REGISTRATION_REQ_FLAG` indicator being set, the mobile station shall perform the  
 35   following:

- 36      • If this is the first time `BCMC_FLOW_LISTs[i].REGISTRATION_REQ_FLAG` is set to
- 37      '1' for this BCMC flow received after an idle handoff, the mobile station shall
- 38      perform a BCMC registration immediately.
- 39      • Otherwise, if the BCMC registration required timer is not enabled, the mobile
- 40      station shall perform the following:

- 1           – Enable the BCMC registration required timer with the initial value set to a  
2 pseudorandom value between 0 and REGISTRATION\_REQ\_TIMER\_MAX.
- 3           – Subsequently, if the BCMC\_FLOW\_LIST<sub>s[i]</sub>.REGISTRATION\_REQ\_FLAG for all  
4 BCMC flows being monitored by the mobile station are equal to '0', the mobile  
5 station shall disable the BCMC registration required timer.
- 6           – Otherwise, when the BCMC registration required timer expires, the mobile  
7 station shall perform a BCMC registration.

8 If the mobile station is to perform BCMC registration due to a frequency change, layer 3  
9 shall perform the following:

- 10           • If the BCMC frequency registration timer for target frequency is enabled and has  
11 not expired, the mobile station shall not perform the remaining procedures in this  
12 section.
- 13           • Otherwise, the mobile station shall enter the System Access State with a  
14 registration indication.

#### 15 2.6.13.4 Procedures for Idle Handoff while Monitoring Forward Supplemental Channel

16 While monitoring a Forward Supplemental Channel, if the conditions for performing an  
17 idle handoff are detected (see 2.6.2.1.4), the mobile station shall perform an idle handoff as  
18 specified in this section.

19 When the mobile station performs an idle handoff the BCMC registration required timer  
20 shall be disabled.

21 While performing an idle handoff, the mobile station should not begin operating in non-  
22 slotted mode after the idle handoff if all of the following conditions hold:

- 23           • The mobile station supports the Quick Paging Channel;
- 24           • The mobile station has knowledge that the new base station supports configuration  
25 change indicators;
- 26           • The mobile station determines that the Quick Paging Channel configuration change  
27 indicator for the new Quick Paging Channel is set to "OFF" (see 2.6.2.1.2.1); and
- 28           • No more than  $T_{31m}$  seconds have elapsed since the mobile station last received a  
29 valid message on the new Paging Channel or Forward Common Control  
30 Channel/Primary Broadcast Control Channel.

31 Otherwise, the mobile station shall operate in non-slotted mode until the mobile station  
32 has received at least one valid configuration message or mobile station-addressed page on  
33 the new Paging Channel or Forward Common Control Channel/Primary Broadcast Control  
34 Channel. Following the reception of this message the mobile station may resume slotted  
35 mode operation in accordance with 2.6.2.1.1.3. After performing an idle handoff, the  
36 mobile station shall discard all unprocessed messages received on the old Paging Channel  
37 or Forward Common Control Channel/Primary Broadcast Control Channel.

38 If the new base station is listed in NGHBR\_REC\_LIST for the old base station (see  
39 2.6.2.2.3, 2.6.2.2.7, and 2.6.2.1.4.1), the mobile station shall use the corresponding 3-bit

1 NGHBR\_CONFIG field to determine the actions required to transition to the new base  
 2 station. If the new base station is not listed in NGHBR\_REC\_LIST for the old base station,  
 3 the mobile station shall perform the handoff operation using the same procedure as for a  
 4 pilot in NGHBR\_REC\_LIST with the NGHBR\_CONFIG field set to '011'.

5 If the new base station is listed in BCMC\_FLOW\_LIST<sub>s</sub>[i].LPM\_INFO[j].NGHBR\_INFO[k]  
 6 record of the current base station, the mobile station shall use the corresponding 3-bit  
 7 NGHBR\_BCMC\_CONFIG field to determine the actions required to monitor the Forward  
 8 Supplemental Channel of the new base station. If the new base station is not listed in  
 9 BCMC\_FLOW\_LIST<sub>s</sub>[i].LPM\_INFO[j].NGHBR\_INFO[k] record for the current base station,  
 10 the mobile station shall determine the actions required to monitor the Forward  
 11 Supplemental Channel of the new base station using the same procedure as for a pilot in  
 12 BCMC\_FLOW\_LIST<sub>s</sub>[i].LPM\_INFO[j].NGHBR\_INFO[k] record with the  
 13 NGHBR\_BCMC\_CONFIG field set to '000'.

14 If the mobile station is currently monitoring the Paging Channel and selected a neighbor  
 15 base station for idle handoff which supports Primary Broadcast Control Channel, the  
 16 mobile station shall perform the following:

- 17 • If the mobile station has not received parameters for the Primary Broadcast Control  
 18 Channel of the neighbor base station from the *BCMC System ParametersMessage*,  
 19 the mobile station shall enter the System Determination Substate of the Mobile  
 20 Station Initialization State with a new system indication, upon performing idle  
 21 handoff to this neighbor base station.
- 22 – Upon entering the Mobile Station Idle State of the new system, the mobile  
 23 station shall resume monitoring the BCMC flow(s) as specified in 2.6.13.6.
- 24 – The mobile station shall not perform any of the remaining procedures in this  
 25 section.

26 If the NGHBR\_CONFIG field is '011', the mobile station shall perform the following:

- 27 • Enter the System Determination Substate of the Mobile Station Initialization State  
 28 with a new system indication (see 2.6.1.1)
- 29 • Upon entering the Mobile Station Idle State of the new system, the mobile station  
 30 shall resume monitoring the BCMC flow(s) as specified in 2.6.13.6.
- 31 • The mobile station shall not perform any of the remaining procedures in this  
 32 section.

33 If the NGHBR\_BCMC\_CONFIG field is '000' or '011', the mobile station shall perform the  
 34 following:

- 35 • The mobile station shall perform idle handoff according to the procedures in  
 36 2.6.2.1.4.1 just as if the mobile station is currently not monitoring a Forward  
 37 Supplemental Channel.
- 38 • Upon completing the idle handoff, the mobile station shall resume monitoring the  
 39 BCMC flow as specified in 2.6.13.6.

40 If the NGHBR\_BCMC\_CONFIG field is '001' or '010', the mobile station shall perform the

1 following:

- 2 • If the mobile station has monitored the Paging Channel before the idle handoff, or  
3 the mobile station has monitored the Forward Common Control Channel/Primary  
4 Broadcast Control Channel before the idle handoff and NGHBR\_CONFIG field is set  
5 to '001', the mobile station shall perform the following:
  - 6 – The mobile station shall set ACC\_MSG\_SEQ<sub>S</sub> and CURR\_ACC\_MSG\_SEQ to  
7 NULL and shall set PILOT\_PN<sub>S</sub> to the pilot offset index of the base station  
8 transmitting the new Paging Channel.
  - 9 – If the stored information for any of the Paging Channels on the associated  
10 NGHBR\_FSCH\_FREQ of the new base station is current, the mobile station  
11 shall perform the following:
    - 12 + The mobile station shall use the hash algorithm specified in 2.6.7.1 to select  
13 a new Paging Channel number in the range 1 to PAGE\_CHAN<sub>S</sub>, where  
14 PAGE\_CHAN<sub>S</sub> is the value stored for the Paging Channel whose stored  
15 information is current. The mobile station shall store the new Paging  
16 Channel number as PAGECH<sub>S</sub>. The mobile station shall perform the  
17 following:
      - 18 o If the mobile station has not stored configuration parameters for the new  
19 Paging Channel, or if the stored parameters are not current (see 2.6.2.2),  
20 the mobile station shall set CONFIG\_MSG\_SEQ<sub>S</sub>, SYS\_PAR\_MSG\_SEQ<sub>S</sub>,  
21 NGHBR\_LST\_MSG\_SEQ<sub>S</sub>, EXT\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub>,  
22 GEN\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub>, CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
23 EXT\_SYS\_PAR\_MSG\_SEQ<sub>S</sub>, USER\_ZONE\_ID\_MSG\_SEQ<sub>S</sub>,  
24 PRI\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub>, and  
25 EXT\_GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub>, EXT\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
26 FD\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>, and GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub> to  
27 NULL.
      - 28 o If the stored information for the new Paging Channel is current, the  
29 mobile station shall set CONFIG\_MSG\_SEQ<sub>S</sub> to the stored information  
30 for the new Paging Channel and set NGHBR\_REC\_LIST, FBSCCH\_LIST<sub>S</sub>,  
31 and BCMC\_FLOW\_LIST<sub>S</sub> to the stored information for the new Paging  
32 Channel.
    - 33 + If the mobile station has monitored the Forward Common Control  
34 Channel/Primary Broadcast Control Channel before the idle handoff, the  
35 mobile station shall set PRAT<sub>S</sub> = '00'.
    - 36 + If CDMACH<sub>S</sub> is not equal to NGHBR\_FSCH\_FREQ, the mobile station shall  
37 set CDMACH<sub>S</sub> to NGHBR\_FSCH\_FREQ and tune to the new CDMA Channel.  
38 The mobile station shall begin monitoring the new Paging Channel and the  
39 Forward Supplemental Channel of the new base station.

- 1       – If none of the Paging Channel stored information on the associated  
2       NGHBR\_FSCH\_FREQ of the new base station are current, the mobile station  
3       shall perform the following:
  - 4       + The mobile station shall set CONFIG\_MSG\_SEQ<sub>S</sub>, SYS\_PAR\_MSG\_SEQ<sub>S</sub>,  
5       NGHBR\_LST\_MSG\_SEQ<sub>S</sub>, EXT\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub>,  
6       GEN\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub>, CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
7       EXT\_SYS\_PAR\_MSG\_SEQ<sub>S</sub>, GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub>,  
8       EXT\_GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub>, EXT\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
9       FD\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>, USER\_ZONE\_ID\_MSG\_SEQ<sub>S</sub>, and  
10       PRI\_NGHBR\_LST\_MSG\_SEQ<sub>S</sub> to NULL.
  - 11       + If the mobile station has monitored the Forward Common Control  
12       Channel/Primary Broadcast Control Channel before the idle handoff, the  
13       mobile station shall set PRAT<sub>S</sub> = '00'.
  - 14       + The mobile station shall set PAGE\_CHAN<sub>S</sub> to '1' and PAGECH<sub>S</sub> to the  
15       Primary Paging Channel. If CDMACH<sub>S</sub> is not equal to NGHBR\_FSCH\_FREQ,  
16       the mobile station shall set CDMACH<sub>S</sub> to NGHBR\_FSCH\_FREQ and tune to  
17       the new CDMA Channel. The mobile station shall begin monitoring the  
18       Primary Paging Channel and Forward Supplemental Channel of the new  
19       base station.
  - 20       – If PACA<sub>S</sub> is equal to enabled, the mobile station shall enter the *Update*  
21       *Overhead Information Substate* of the *System Access State* (see 2.6.3) with an  
22       origination indication within T<sub>33m</sub> seconds to re-originate the PACA call using  
23       the new base station.
- 24       • If the mobile station has monitored the Forward Common Control Channel/Primary  
25       Broadcast Control Channel before the idle handoff or if the mobile station has  
26       monitored the Paging Channel before the idle handoff, and selected a neighbor base  
27       station for idle handoff which supports Primary Broadcast Control Channel and the  
28       mobile station has received parameters for the Primary Broadcast Control Channel  
29       of the neighbor base station from the *BCMC System Parameters Message*, the  
30       mobile station shall perform the following:
  - 31       – The mobile station shall set ACC\_MSG\_SEQ<sub>S</sub> and CURR\_ACC\_MSG\_SEQ to  
32       NULL and shall set PILOT\_PN<sub>S</sub> to the pilot offset index of the base station  
33       transmitting the new Forward Common Control Channel/Primary Broadcast  
34       Control Channel.
  - 35       – If the stored information for any of the Forward Common Control Channels and  
36       Primary Broadcast Control Channel on the associated NGHBR\_FSCH\_FREQ of  
37       the new base station is current, the mobile station shall perform the following:
    - 38       + The mobile station shall use the hash algorithm specified in 2.6.7.1 to select  
39       a new Forward Common Control Channel number in the range 1 to  
40       NUM\_FCCCH<sub>S</sub>, where NUM\_FCCCH<sub>S</sub> is the stored value. The mobile station  
41       shall store the new Forward Common Control Channel number as  
42       FCCCH\_ID<sub>S</sub>. The mobile station shall perform the following:

- 1           o If the mobile station has not stored configuration parameters for the new  
2 Forward Common Control Channel and Primary Broadcast Control  
3 Channel, or if the stored parameters are not current (see 2.6.2.2), the  
4 mobile station shall set CONFIG\_MSG\_SEQ<sub>S</sub>,  
5 A41\_SYS\_PAR\_MSG\_SEQ<sub>S</sub>, UNI\_NGHR\_LST\_MSG\_SEQ<sub>S</sub>,  
6 MC\_RR\_PAR\_MSG\_SEQ<sub>S</sub>, EXT\_GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub>,  
7 EXT\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>, FD\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
8 USER\_ZONE\_ID\_MSG\_SEQ<sub>S</sub>, and PRI\_NGHR\_LST\_MSG\_SEQ<sub>S</sub> to  
9 NULL.
- 10           o If the stored information for the new Forward Common Control Channel  
11 and Primary Broadcast Control Channel is current, the mobile station  
12 shall set CONFIG\_MSG\_SEQ<sub>S</sub> to the stored information for the new  
13 Forward Common Control Channel and Primary Broadcast Control  
14 Channel and set NGHR\_REC\_LIST to the stored information for the  
15 new Forward Common Control Channel and Primary Broadcast Control  
16 Channel.
- 17           + If CDMACH<sub>S</sub> is not equal to NGHR\_FSCH\_FREQ, the mobile station shall  
18 set CDMACH<sub>S</sub> to NGHR\_FSCH\_FREQ and tune to the new CDMA Channel.  
19 The mobile station shall begin monitoring the new Forward Common  
20 Control Channel/Primary Broadcast Control Channel and the Forward  
21 Supplemental Channel of the new base station.
- 22           – If none of the Forward Common Control Channel and Primary Broadcast  
23 Control Channel stored information on the associated NGHR\_FSCH\_FREQ of  
24 the new base station are current, the mobile station shall perform the following:
- 25           + The mobile station shall set the mobile station shall set  
26 CONFIG\_MSG\_SEQ<sub>S</sub>, A41\_SYS\_PAR\_MSG\_SEQ<sub>S</sub>,  
27 UNI\_NGHR\_LST\_MSG\_SEQ<sub>S</sub>, MC\_RR\_PAR\_MSG\_SEQ<sub>S</sub>,  
28 EXT\_GLOB\_SERV\_REDIR\_MSG\_SEQ<sub>S</sub>, EXT\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>,  
29 FD\_CHAN\_LST\_MSG\_SEQ<sub>S</sub>, USER\_ZONE\_ID\_MSG\_SEQ<sub>S</sub>, and  
30 PRI\_NGHR\_LST\_MSG\_SEQ<sub>S</sub> to NULL.
- 31           + If CDMACH<sub>S</sub> is not equal to NGHR\_FSCH\_FREQ, the mobile station shall  
32 set CDMACH<sub>S</sub> to NGHR\_FSCH\_FREQ and tune to the new CDMA Channel.  
33 The mobile station shall begin monitoring the Primary Broadcast Control  
34 Channel of the new base station, using the same rate, code rate, and code  
35 channel. The mobile station shall begin monitoring the Forward  
36 Supplemental Channel of the new base station.
- 37           – If PACA<sub>S</sub> is equal to enabled, the mobile station shall enter the *Update*  
38 *Overhead Information Substate* of the *System Access State* (see 2.6.3) with an  
39 origination indication within T<sub>33m</sub> seconds to re-originate the PACA call using  
40 the new base station.

### 1 2.6.13.5 Procedures for stopping reception of a BCMC Flow

2 If Layer 3 is requested by the BCMC Service Layer to stop monitoring a BCMC flow given  
3 by BCMC\_FLOW\_ID, the mobile station perform the following:

- 4 • Layer 3 shall send a *BMAC-Stop-Deliver.Request(FSCH\_ID, BSR\_ID)* to the multiplex  
5 sublayer where *FSCH\_ID* and *BSR\_ID* are the values in BCMC\_FLOW\_LIST<sub>s</sub>  
6 corresponding to this BCMC\_FLOW\_ID.
- 7 • If this is the only BCMC flow being monitored on this Forward Supplemental  
8 Channel, the mobile station shall stop monitoring this Forward Supplemental  
9 Channel.
- 10 • If this is the only BCMC flow being monitored on this frequency, the mobile station  
11 shall return to the hash-to frequency as follows:
  - 12 – If the mobile station is currently monitoring the Paging Channel, the mobile  
13 station shall monitor the CDMA Channel List Message or Extended CDMA  
14 Channel List Message to determine the hash-to frequency as specified in  
15 2.6.2.2.4 and 2.6.2.2.12.1 respectively.
  - 16 – If the mobile station is currently monitoring the Primary Broadcast Control  
17 Channel/Forward Common Control Channel, the mobile station shall monitor  
18 the *Extended CDMA Channel List Message* to determine the hash-to frequency  
19 as specified in 2.6.2.2.12.2.
  - 20 – If this results in the mobile station residing in a frequency other than the  
21 frequency prior to stopping BCMC flow reception, the mobile station shall  
22 perform BCMC registration procedures as specified in 2.6.13.3 to indicate  
23 change in the frequency.

### 24 2.6.13.6 Procedures for Handling *BCMC Service Parameters Message* Updates

25 If the mobile station determines that the contents of the *BCMC Service Parameters*  
26 *Message* has changed or that the *BCMC Service Parameters Message* is not being  
27 transmitted anymore, the mobile station shall perform the following:

- 28 • If SENDING\_BSPM<sub>s</sub> equals '0', the mobile station shall perform the following:
  - 29 – For each BCMC flow currently being monitored, Layer 3 shall send a *BCMC-*  
30 *Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause =*  
31 *FLOW\_NOT\_AVAILABLE, reason\_ind)* to the BCMC Service Layer, where  
32 *reason\_ind* is set to MOBILITY if this is due to idle handoff or to CURRENT\_SYS  
33 otherwise.
  - 34 – For each BCMC flow currently being monitored, Layer 3 shall send a *BMAC-*  
35 *Stop-Deliver.Request(FSCH\_ID, BSR\_ID)* to the multiplex sublayer where  
36 *FSCH\_ID* and *BSR\_ID* are the values in the previous BCMC\_FLOW\_LIST  
37 corresponding to this BCMC\_FLOW\_ID.
  - 38 – The mobile station shall not perform the remaining procedures in this section.

- 1       • For each BCMC flow that the mobile station is currently monitoring, if the mobile  
2 station determines that the base station is not transmitting this BCMC flow  
3 anymore, the mobile station shall perform the following:
  - 4       – Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result=FAILURE,*  
5 *cause= FLOW\_NOT\_AVAILABLE, reason\_ind)* to the BCMC Service Layer, where  
6 *reason\_ind* is set to MOBILITY if this is due to idle handoff or to CURRENT\_SYS  
7 otherwise, and shall stop monitoring this BCMC flow as specified in 2.6.13.5.
- 8       • For each BCMC flow that the mobile station is currently monitoring, if the mobile  
9 station determines that this BCMC flow is being transmitted on a different Forward  
10 Supplemental Channel than currently transmitted, the mobile station shall perform  
11 the following:
  - 12       – If more than one BCMC flows that the mobile station is currently monitoring are  
13 still available, then the mobile station shall choose the frequency based on the  
14 BCMC flow with the highest priority; if the BCMC flow is configured for  
15 transmission in the mobile station's hash-to-frequency, the mobile station shall  
16 choose the mobile station's hash-to-frequency; otherwise, the mobile station  
17 shall use the hash algorithm specified in 2.6.7.1 and the number of CDMA  
18 channels on which this BCMC\_FLOW\_ID is configured for transmission to  
19 choose the frequency to monitor.
  - 20       – Layer 3 shall send a *BMAC-Stop-Deliver.Request(FSCH\_ID, BSR\_ID)* to the  
21 multiplex sublayer where *FSCH\_ID* and *BSR\_ID* are the values in the previous  
22 BCMC\_FLOW\_LIST corresponding to this BCMC\_FLOW\_ID.
  - 23       – The mobile station shall determine the band class (*FSCH\_BAND\_CLASS*) and  
24 CDMA channel (*FSCH\_FREQ*) corresponding to the selected Forward  
25 Supplemental Channel from *FBSCH\_LIST<sub>s</sub>*. If *FSCH\_BAND\_CLASS* is not equal  
26 to *CDMA\_BAND<sub>s</sub>* or *FSCH\_FREQ* is not equal to *CDMACH<sub>s</sub>* and the mobile  
27 station is currently monitoring one or more BCMC flows in the current  
28 frequency that have a higher priority than this BCMC flow, Layer 3 shall send a  
29 *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause =*  
30 *CANNOT\_ACCOMMODATE, reason\_ind)* to the BCMC Service Layer, where  
31 *reason\_ind* is set to MOBILITY if this is due to idle handoff or to CURRENT\_SYS  
32 otherwise, and shall not perform the remaining procedures in this section.
  - 33       – If the mobile station will not be able to monitor the Forward Supplemental  
34 Channel on which the BCMC flow is being transmitted due to a capability  
35 mismatch, Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result*  
36 *= FAILURE, cause = UNSUPPORTED\_BEARER\_CONFIG, reason\_ind)* to the  
37 BCMC Service Layer, where *reason\_ind* is set to MOBILITY if this is due to idle  
38 handoff or to CURRENT\_SYS otherwise, and shall not perform the remaining  
39 procedures in this section for this BCMC flow.
  - 40       – If *FSCH\_BAND\_CLASS* is not equal to *CDMA\_BAND<sub>s</sub>* or *FSCH\_FREQ* is not  
41 equal to *CDMACH<sub>s</sub>*, the mobile station shall perform the following:
    - 42       + If *FREQ\_CHG\_REG\_REQUIRED<sub>s</sub>* equals '1', the mobile station shall perform  
43 BCMC registration procedures as specified in 2.6.13.3 to indicate change in

- 1 the frequency where the mobile station will reside while monitoring this  
2 BCMC flow.
- 3 + The mobile station shall tune to FSCH\_FREQ in FSCH\_BAND\_CLASS; the  
4 mobile station should tune to the new frequency only after performing  
5 BCMC registration (if any) specified above. If FREQ\_CHG\_REG\_TIMER<sub>S</sub> is  
6 not equal to NULL and the BCMC frequency registration timer for the  
7 previous frequency is not enabled or is enabled and has not expired, the  
8 mobile station shall start the BCMC frequency registration timer for the  
9 previous frequency with a value of FREQ\_CHG\_REG\_TIMER<sub>S</sub>.
- 10 + For each BCMC flow in current frequency that can no longer be monitored  
11 in new frequency, the mobile station shall perform the following:
- 12 o Layer 3 shall send a *BCMC-Monitor.Response*(BCMC\_FLOW\_ID,  
13 *result=FAILURE*, *cause= CANNOT\_ACCOMMODATE*, *reason\_ind*) to the  
14 BCMC Service Layer, where *reason\_ind* is set to MOBILITY if this is due  
15 to idle handoff or to CURRENT\_SYS otherwise.
- 16 o Layer 3 shall send a *BMAC-Stop-Deliver.Request*(FSCH\_ID, BSR\_ID) to the  
17 multiplex sublayer where FSCH\_ID and BSR\_ID are the values in  
18 BCMC\_FLOW\_LIST<sub>S</sub> corresponding to this BCMC\_FLOW\_ID.
- 19 - The mobile station shall set the Forward Supplemental Channel parameters as  
20 given in FBSCH\_LIST<sub>S</sub> and shall start to monitor the Forward Supplemental  
21 Channel.
- 22 - The mobile station shall send a *BMAC-Start-Deliver.Request*(FSCH\_ID, BSR\_ID)  
23 to the multiplex sublayer where FSCH\_ID and BSR\_ID are the values in  
24 BCMC\_FLOW\_LIST<sub>S</sub> corresponding to the logical-to-physical mapping selected  
25 for this BCMC\_FLOW\_ID.
- 26 • For any BCMC flow that the mobile station is currently monitoring, if the mobile  
27 station determines to monitor this BCMC flow on a traffic channel (e.g.,  
28 BCMC\_FLOW\_ON\_IND corresponding to this BCMC flow equals '0', and  
29 BCMC\_FLOW\_ON\_TRAFFIC\_IND corresponding to this BCMC flow equals '1'), the  
30 mobile station shall perform the following:
- 31 - For each BCMC flow currently being monitored in the *Mobile Station Idle State*,  
32 Layer 3 shall send a *BCMC-Monitor.Response*(BCMC\_FLOW\_ID, *result=FAILURE*,  
33 *cause= CANNOT\_ACCOMMODATE*, *reason\_ind*) to the BCMC Service Layer,  
34 where *reason\_ind* is set to MOBILITY if this is due to idle handoff or to  
35 CURRENT\_SYS otherwise, and shall stop monitoring this BCMC flow as  
36 specified in 2.6.13.5.
- 37 - The mobile station shall perform Mobile Station Origination Operation as  
38 specified in 2.6.2.5 to request monitoring of this BCMC flow on the *Traffic*  
39 *Channel Substate*. The mobile station shall include the BCMC\_FLOW\_ID (See  
40 section 2.6.13.11) in the *Origination Message*.

### 2.6.13.7 Procedures for Browsing BCMC Flows

If Layer 3 is requested by the BCMC Service Layer to report list of all available BCMC flows (see 2.6.13), the mobile station shall perform the following procedures in the order specified:

- If SENDING\_BSPM<sub>s</sub> equals '0', Layer 3 shall send a *BCMC-Browse.Response(result=FAILURE)* to the BCMC Service Layer.
- Otherwise, if FULL\_BSPM\_IND = '0', the mobile station shall monitor the overhead channel to receive the *BCMC Service Parameters Message* as specified in 2.6.2.2.18 or until FULL\_BSPM\_IND = '1', and shall perform the following:
  - Layer 3 shall send a *BCMC-Browse.Response(result = SUCCESS, {BCMC\_FLOW\_IDs})* to the BCMC Service Layer where {BCMC\_FLOW\_IDs} is a list of all unique BCMC flows configured for transmission in this sector as determined from the stored *BCMC Service Parameters Message* parameters.

### 2.6.13.8 Procedures for BCMC Operation while on Traffic Channel

This section specifies the mobile station requirements for BCMC feature while in the Mobile Station Control on the Traffic Channel State.

If Layer 3 is requested by the BCMC Service Layer to commence reception of a BCMC flow (see 2.6.13), the mobile station shall send *Enhanced Origination Message* as specified in 2.6.4.3.

If Layer 3 is requested by the BCMC Service Layer to stop monitoring a BCMC flow (see 2.6.13), the mobile station shall release a BCMC call as specified in 2.6.4.3.

If the mobile station is monitoring BCMC flow on traffic channel, when traffic channel is released and the BCMC Service Layer has not requested to stop monitoring the BCMC flow, the mobile station shall either continue monitoring the BCMC flow in idle state (see 2.6.13) or the Layer 3 shall send a *BCMC-Monitor.Response(BCMC\_FLOW\_ID, result = FAILURE, cause = CALL\_RELEASED)* to the BCMC Service Layer.

### 2.6.13.9 Procedures for Computation of Authorization Signature

For each BCMC flow included in the *Registration Message*, *Origination Message*, *Page Response Message* and *Enhanced Origination Message*, if BCMC\_FLOW\_LIST<sub>s</sub>[i].AUTH\_SIGNATURE\_REQ\_IND equals '1', then the mobile station shall compute the Authorization Signature value for the BCMC flow as follows:

- The mobile station shall create an input working buffer to EHMACSHA as shown in Table 2.6.13.9 1.

**Table 2.6.13.9-1. Subfields of the input working buffer**

Subfield	Length (bits)
TIME_STAMP_LONG	TIME_STAMP_LONG_LENGTH <sub>s</sub>

1

2 **TIME\_STAMP\_LONG** The mobile station shall set this field to the LSBs of the CDMA  
 3 System Time, in units of  $2^{\text{TIME\_STAMP\_UNIT}_s}$  slots, corresponding to a  
 4 time that is not later than when the Physical Layer will begin  
 5 transmission of the *Registration Message*, *Origination Message*,  
 6 *Page Response Message*, or *Enhanced Origination Message* that  
 7 will carry this Authorization Signature. The mobile station shall  
 8 use the same TIME\_STAMP\_LONG field for computing all  
 9 Authorization Signature parameters included in a *Registration*  
 10 *Message*, *Origination Message*, *Page Response Message* or a  
 11 *Enhanced Origination Message*.

- 12 • The mobile terminal shall compute the Authorization Signature value as follows  
 13 using the EHMACHA procedure as specified in [43], section 3.3.
- 14 – The KEY parameter of EHMACHA shall be set to BAK.
- 15 – The L\_KEY parameter of EHMACHA shall be set to 16, identifying the length of  
 16 BAK in octets.
- 17 – The MESSAGE parameter of EHMACHA shall be set to the pointer to the most  
 18 significant bit of the input working buffer.
- 19 – The MESSAGE\_OFFSET parameter of EHMACHA shall be set to 0.
- 20 – The MESSAGE\_LENGTH parameter of EHMACHA shall be set to the number  
 21 of bits of data in the input working buffer
- 22 – The HMAC parameter of EHMACHA shall be set to the pointer to the most  
 23 significant bit of the output buffer that will contain the computed MAC value.
- 24 – The L\_HMAC parameter of EHMACHA shall be set to 4, identifying the length  
 25 of the output in octets.

26 The mobile station shall set the AUTH\_SIGNATURE field to the 32 least significant bits  
 27 of the Message Digest computed MAC value obtained in the previous step.

#### 28 2.6.13.10 Procedures for Public Long Code Mask schemes

##### 29 2.6.13.10.1 Procedures for BCMC Flow ID based autonomous PLCM generation

30 The Public Long Code Mask of the Forward Supplemental Channel to be received in idle  
 31 state is determined as follows:

- 32 • If the first occurrence of the BCMC\_FLOW\_ID (see section 2.6.13.11) in the *BCMC*  
 33 *Service Parameters Message* multiplexed on this Forward Supplemental Channel is  
 34 16bits, FIRST\_FLOW\_ID shall be set as follows.
- 35
- 36 – The 16 MSBs shall be set to sixteen '0's.
- 37 – The 16 LSBs shall be set to the BCMC\_FLOW\_ID.

- 1 • If the first occurrence of the BCMC\_FLOW\_ID (see section 2.6.13.11) in the *BCMC*
- 2 *Service Parameters Message* multiplexed on this Forward Supplemental Channel is
- 3 24bits, FIRST\_FLOW\_ID shall be set as follows.
- 4 - The 8 MSBs shall be set to eight '0's.
- 5 - The 24 LSBs shall be set to the BCMC\_FLOW\_ID.
- 6 • If the first occurrence of the BCMC\_FLOW\_ID (see section 2.6.13.11) in the *BCMC*
- 7 *Service Parameters Message* multiplexed on this Forward Supplemental Channel is
- 8 32bits, FIRST\_FLOW\_ID shall be set to the BCMC\_FLOW\_ID.
- 9 • Set the FIRST\_BSR\_ID to the BSR\_ID corresponding to the FIRST\_FLOW\_ID in the
- 10 *BCMC Service Parameters Message* multiplexed on this Forward Supplemental
- 11 Channel.
- 12 • PLCM\_42 is set as follows.
- 13 - Bits P41 through P35 shall be set to '1100111'.
- 14 - Bits P34 through P3 shall be set to FIRST\_FLOW\_ID.
- 15 - Bits P2 through P0 shall be set to FIRST\_BSR\_ID.

#### 16 2.6.13.10.2 Procedures for index based PLCM generation

17 The Public Long Code Mask of the Forward Supplemental Channel to be received in idle  
18 state is determined as follows:

- 19 • PLCM\_42 is set as follows.
- 20 - Bits P41 through P24 shall be set to '110011100110111000'.
- 21 - Bits P23 through P16 shall be set to FSCH\_PLCM\_INDEX<sub>S</sub>.
- 22 - Bits P15 through P0 shall be set to '0000000000000000'.

#### 23 2.6.13.11 BCMC\_FLOW\_ID generation

24 The BCMC\_FLOW\_ID structure is shown in Figure 2.6.13.11-1.

**Figure 2.6.13.11-1. Structure of BCMC\_FLOW\_ID**

BCMC\_FLOW\_ID is obtained by concatenating the BCMC\_FLOW\_DISCRIMINATOR\_LEN field, the BCMC\_PROGRAM\_ID field, and BCMC\_FLOW\_DISCRIMINATOR fields as follows:

- The exact contents of the 3 bit BCMC\_FLOW\_DISCRIMINATOR\_LEN field,
- The unsigned binary value of the BCMC\_PROGRAM\_ID field padded with '0's on the most significant bits as necessary to satisfy the following:
  - If the sum of the lengths of the BCMC\_FLOW\_DISCRIMINATOR\_LEN, BCMC\_PROGRAM\_ID, and BCMC\_FLOW\_DISCRIMINATOR fields is less than or equal to 16 bits, then the BCMC\_FLOW\_ID shall be of 16 bits length.
  - If the sum of the lengths of the BCMC\_FLOW\_DISCRIMINATOR\_LEN, BCMC\_PROGRAM\_ID, and BCMC\_FLOW\_DISCRIMINATOR fields is less than or equal to 24 bits but greater than 16 bits, then the BCMC\_FLOW\_ID shall be of 24 bits length.
  - If the sum of the lengths of the BCMC\_FLOW\_DISCRIMINATOR\_LEN, BCMC\_PROGRAM\_ID, and BCMC\_FLOW\_DISCRIMINATOR fields is less than or equal to 32 bits but greater than 24 bits, then the BCMC\_FLOW\_ID shall be of 32 bits length.
- and the exact content of the BCMC\_FLOW\_DISCRIMINATOR field, where the length of this field is specified by the value of BCMC\_FLOW\_DISCRIMINATOR\_LEN.

The length of a BCMC\_FLOW\_ID shall be 16, 24, or 32 bits.

#### 2.6.13.12 BCMC TDM

Base station may multiplex multiple BCMC flows on a single F-SCH. Time Division Multiplexing (TDM) is an optional feature that supports BCMC. When multiple flows are multiplexed on a single F-SCH, the base station may include TDM related parameters. Mobile station can use TDM related parameters to save battery, by waking up only when BCMC\_FLOW that MS is interested in is transmitted.

TDM related parameters are included in *BCMC Service Parameters Message*. TDM related parameters are TDM\_STRUCTURE\_IND, TDM\_SLOT\_LENGTH, TDM\_SUPER\_PERIOD\_MASK\_LEN, TDM\_MEGA\_PERIOD\_MASK\_LEN, TDM\_USED\_IND, TDM\_MASK, TDM\_SUPER\_PERIOD\_MASK\_INCL, TDM\_SUPER\_PERIOD\_MASK, TDM\_MEGA\_PERIOD\_MASK\_INCL, TDM\_MEGA\_PERIOD\_MASK.

TDM parameters include 3 levels TDM masks TDM\_MASK, TDM\_SUPER\_PERIOD\_MASK and TDM\_MEGA\_PERIOD\_MASK. These masks indicate BCMC flow to F-SCH time slot mapping.

Each bit of TDM\_MASK indicates presence of a flow on a slot. Length of a slot is defined by TDM\_SLOT\_LENGTH. Each bit of TDM\_SUPER\_PERIOD\_MASK indicates presence of a flow on a super slot. Super slot length is equal to slot length multiplied by number of bits in TDM\_MASK. Each bit of TDM\_MEGA\_PERIOD\_MASK indicates presence of a flow on a mega slot. Super slot length is equal to super slot length multiplied by number of bits in TDM\_SUPER\_PERIOD\_MASK.

When outer coding is used TDM\_SUPER\_PERIOD\_MASK length is always 16 bits, but only partial mask (first part) is included in the *BCMC Service Parameters Message*. Remaining bits in the mask that are not included in the *BCMC Service Parameters Message* are “don’t care” bits, and the mobile station can decide if remaining slots need to be received based on outer coding algorithm.

Subsection 2.6.13.12.1 defines how TDM period is aligned with system time.

#### 2.6.13.12.1 BCMC TDM period alignment requirement

Each TDM period for a BCMC flow on a particular Forward Supplemental Channel starts when the system time (t) in 20 ms units satisfies the following equation:

- If outer coding is used for the FSCH where this BCMC flow is transmitted (i.e. FSCH\_OUTER\_CODE\_INCL for the FSCH is equal to ‘1’)

$$t \bmod (\text{TDM period}) = \text{FSCH\_OUTERCODE\_OFFSET}$$

where FSCH\_OUTERCODE\_OFFSET is the outer coding buffer offset for the FSCH where this BCMC flow is transmitted

- Otherwise

$$t \bmod (\text{TDM period}) = 0$$

Here, TDM period is calculated as following:

- If TDM\_MEGA\_PERIOD\_MASK\_INCL for the BCMC flow on this particular Forward Supplemental Channel is equal to ‘1’

$$\text{TDM period} = (\text{duration of mega slot in 20 ms units}) \times (\text{length of TDM\_MEGA\_PERIOD\_MASK in bits})$$

- Otherwise

$$\text{TDM period} = \text{duration of mega slot in 20 ms units}$$

#### 2.6.14 Common Procedures for Processing r-csch Messages

This section describes the common procedures for processing messages sent on the r-csch.

##### 2.6.14.1 Reporting Band Class – Band Subclass Capabilities

If the FD\_CHAN\_LST\_IND<sub>s</sub> is set to ‘0’ and CAND\_BAND\_INFO\_REQ<sub>r</sub> is set to ‘1’ in the *Extended System Parameters Message* or in the *MC-RR Parameters Message*, the mobile station shall report band subclass capabilities via the *Registration Message*, *Origination Message* or *Page Response Message*. If the FD\_CHAN\_LST\_IND<sub>s</sub> is set to ‘1’ and CAND\_BAND\_INFO\_REQ<sub>r</sub> is set to ‘1’ the mobile station shall use *General Extension Message* to carry the the *Registration Message*, *Origination Message* or *Page Response Message* and include Supported Band Class - Subclass Record. The mobile station shall perform the following procedures when reporting band class:

- In the procedures below, the following assumptions apply:

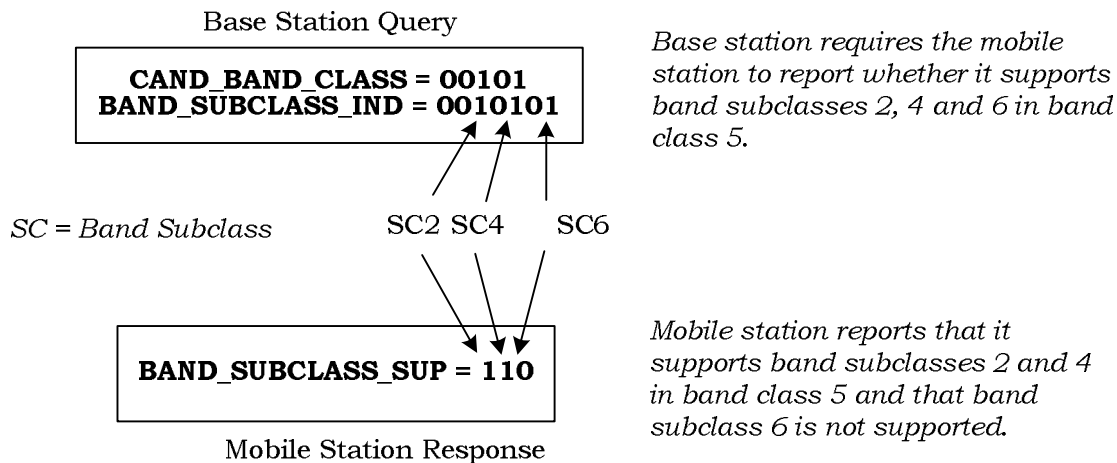

- 1       – For band classes defined with multiple band subclasses, the mobile station
- 2       shall indicate support of this band class if at least one band subclass is
- 3       supported.
- 4       – If the mobile station supports a candidate band class but it is not aware of any
- 5       band subclass definition for that band class, the mobile station shall report its
- 6       capabilities as if it supports band subclass 0 of that band class.
- 7       • If the mobile station supports at least one band class and band subclass (if
- 8       applicable) combination queried by the base station, the mobile station shall set
- 9       BAND\_SUB\_REP\_INCL to '1'; otherwise, the mobile station shall set this field to '0'
- 10      and shall not perform the remaining procedures.
- 11      • The mobile station shall initialize NUM\_BAND\_SUBCLASS to '0000'.
- 12      • If the mobile station supports all candidate band class and band subclass (if
- 13      applicable) combinations queried by the base station, the mobile station shall not
- 14      perform the remaining procedures; otherwise, for i = 1 to
- 15      NUM\_CAND\_BAND\_CLASSES, the mobile station shall perform the following:
- 16      – If CAND\_BAND\_CLASS\_REC[i]. SUBCLASS\_INFO\_INCL is equal to '0', the
- 17      mobile station shall perform the following:
- 18          + The mobile station shall include one instance of the BAND\_SUBCLASS\_SUP
- 19          field and set it as follows. If the mobile station supports the candidate band
- 20          class CAND\_BAND\_CLASS\_REC[i].CAND\_BAND\_CLASS, the mobile station
- 21          shall set this field to '1'; otherwise, it shall set it to '0'.
- 22          + The mobile station shall increment NUM\_BAND\_SUBCLASS by 1.
- 23      – Otherwise, for j = 0 to CAND\_BAND\_CLASS\_REC[i].SUBCLASS\_REC\_LEN, if
- 24      CAND\_BAND\_CLASS\_REC[i].BAND\_SUBCLASS\_IND\_REC[j] is equal to '1', the
- 25      mobile station shall perform the following:
- 26          + The mobile station shall include one instance of the BAND\_SUBCLASS\_SUP
- 27          field and set it as follows. If the mobile station supports the band subclass
- 28          CAND\_BAND\_CLASS\_REC[i].BAND\_SUBCLASS\_IND\_REC[j], the mobile
- 29          station shall set this field to '1'; otherwise, it shall set it to '0'.
- 30          + The mobile station shall increment NUM\_BAND\_SUBCLASS by 1.

31      Figure 2.6.14.1-1 illustrates the relationship between the base station

32      CAND\_BAND\_CLASS, BAND\_SUBCLASS\_IND fields and the mobile station

33      BAND\_SUBCLASS\_SUP fields for one possible scenario.

**Figure 2.6.14.1-1. Illustration of Band Class - Band Subclass Reporting**

#### 2.6.15 MEID procedures when communicating with P\_REV 6, 7, 8, 10 Base Stations

The mobile station shall conform to the requirements in [47] when communicating with a P\_REV 6, 7, 8, or 10 base station.

#### 2.6.16 Initialization of RC parameters

The mobile station shall initialize the RC parameters as follows:

- The mobile station shall set FOR\_FCH\_ACK\_MASK\_RL\_BLANKING<sub>S</sub> to '0001 1001 1001 1000' and set FOR\_FCH\_ACK\_MASK\_NO\_RL\_BLANKING<sub>S</sub> to '0000 1010 1010 1010'.
- The mobile station shall set REV\_FCH\_ACK\_MASK<sub>S</sub> to '0000 1010 1010 1010'.
- The mobile station shall set FOR\_SCH\_ACK\_MASK\_RL\_BLANKING<sub>S</sub> to '0000 0000 0001 1000' and set FOR\_SCH\_ACK\_MASK\_NO\_RL\_BLANKING<sub>S</sub> to '0000 0000 0010 1000'.
- The mobile station shall set REV\_SCH\_ACK\_MASK<sub>S</sub> to '0000 0000 0010 1010'.
- The mobile station shall set FOR\_N2M\_IND<sub>S</sub> to '001' (4 bad frames).
- The mobile station shall set RPC\_MODE<sub>S</sub> to '00' (200 to 400 bps).
- The mobile station shall set PWR\_CNTL\_STEP\_ZERO\_RATE<sub>S</sub> to '000' (1 dB).
- The mobile station shall set FOR\_FCH\_BLANKING\_DUTYCYCLE<sub>S</sub> to '001' (N=4).
- The mobile station shall set REV\_FCH\_BLANKING\_DUTYCYCLE<sub>S</sub> to '001' (N=4).
- The mobile station shall set \_FCH\_BLANKING\_DUTYCYCLE\_IN\_USE to '001' (N=4).
- The mobile station shall set REV\_ACKCH\_GAIN\_ADJ\_ACS1<sub>S</sub> to '0000 000'.
- The mobile station shall set REV\_ACKCH\_GAIN\_ADJ\_ACS2PLUS<sub>S</sub> to '0000 000'.

- The mobile station shall initialize RC\_PARAMS\_RECORD<sub>s</sub> to have entry RC\_PARAMS\_RECORD<sub>s</sub>[i] for each of the PILOT\_PNs assigned to mobile and initialize corresponding fields of each of the RC\_PARAMS\_RECORD<sub>s</sub>[i] record as follows:
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].QOF\_SET\_IN\_USE set to '000'.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_CH\_WALSH[00] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_BIT[00] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_CH\_WALSH[01] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_BIT[01] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].FOR\_FCH\_CCSH\_INTERLEAVER\_TYPE to '0'.

#### 2.6.17 RC\_PARAMS\_RECORD update procedures

The mobile station shall update RC\_PARAMS\_RECORD in Traffic Channel Substate as follows:

- When a pilot is added to the active set for which there is no entry present in RC\_PARAMS\_RECORD<sub>s</sub>, the mobile station shall update RC\_PARAMS\_RECORD<sub>s</sub> to add an entry RC\_PARAMS\_RECORD<sub>s</sub>[i] and perform the following:
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].PILOT\_PN to the PILOT\_PN of the added pilot.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].QOF\_SET\_IN\_USE to '000'.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_CH\_WALSH[00] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_BIT[00] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_CH\_WALSH[01] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].REV\_SCH\_ACK\_BIT[01] to NULL.
  - Set RC\_PARAMS\_RECORD<sub>s</sub>[i].FOR\_FCH\_CCSH\_INTERLEAVER\_TYPE to '0'.
- When a pilot is removed from the active set for which there was an entry present in RC\_PARAMS\_RECORD<sub>s</sub>, the mobile station shall update RC\_PARAMS\_RECORD<sub>s</sub> to remove the entry.
- When an *Radio Configuration Parameters Message* is received, the mobile station shall update RC\_PARAMS\_RECORD<sub>s</sub> as described in section 2.6.4.3.

#### 2.6.18 Processing of General Extension Message

The base station may extend layer 3 messages with additional fields using the *General Extension Message*. The mobile station shall process this message at the action time:

- Explicitly specified in the message carried in the MESSAGE\_REC field, or

- At the action time explicitly specified in the general extension record when the message carried in the MESSAGE\_REC field does not carry action time explicitly, or
- implicitly specified by the message carried in the MESSAGE\_REC field when action time is not carried explicitly in the general extension record or the message carried in the MESSAGE\_REC field

The mobile station shall process this message as follows:

- The mobile station shall store the *i*th occurrence of the GE\_REC\_TYPE<sub>r</sub> in GE\_REC\_TYPE<sub>s</sub>[*i*].
- The mobile station shall store the *i*th occurrence of the GE\_REC\_LEN<sub>r</sub> in GE\_REC\_LEN<sub>s</sub>[*i*].
- If any General Extension Record type is not supported, the mobile station shall send a *Mobile Station Reject Order* with ORDQ equal to 00011101.
- If any field value in any of the General Extension Records is outside its permissible range, the mobile station shall send a *Mobile Station Reject Order* with ORDQ equal to 00011110.
- If any field value in any of the General Extension Records is not supported, the mobile station shall send a *Mobile Station Reject Order* with ORDQ equal to 00011111.
- The mobile station shall store the *i*th occurrence of the GE\_REC<sub>r</sub> as follows.
  - If GE\_REC\_TYPE<sub>s</sub>[*i*] is equal to '00000000' the mobile station shall store the BAND\_CLASS<sub>r</sub> field in the GE\_REC<sub>r</sub> as BAND\_CLASS<sub>s</sub> and REV\_CHAN<sub>r</sub> field in the GE\_REC<sub>r</sub> as REV\_CHAN<sub>s</sub>. The mobile station shall use the REV\_CHAN<sub>s</sub> channel number of BAND\_CLASS<sub>s</sub> as the associated reverse link for the channel carried in the message carried by the MESSAGE\_REC field.
  - If GE\_REC\_TYPE<sub>s</sub>[*i*] is equal to '00000001' the mobile station shall store and use the fields included in the Radio Configuration Parameters Record at the action time. If the USE\_TIME field in the Radio Configuration Parameters Record is set to '0', the mobile station shall process the message contained in the MESSAGE\_REC and then update the RC\_PARAMS\_RECORDs by the values of the fields included in the Radio Configuration Parameters Record.
- The mobile station shall use the MESSAGE\_TYPE field as specified in [4] and process the reception of layer 3 message carried in the MESSAGE\_REC field.

## 1    2.7 PDU Formats for Mobile Stations

2    This section describes the formats of the PDUs corresponding to the messages sent by the  
3    mobile station.

4    In any multi-bit field in the following messages, the most significant bit (MSB) shall be  
5    transmitted first.

6    Some bits in the PDUs are marked as RESERVED. These bits allow extension of the PDUs  
7    for future features and capabilities. The mobile station sets all reserved bits to '0'. Some  
8    fields include values marked as reserved. The mobile station shall not set a field to a value  
9    that is marked as reserved.

10

1    2.7.1 r-csch

2    This section describes the messages and their PDU formats sent by the mobile station on  
3    the r-csch.

4    2.7.1.1 Reserved

5    2.7.1.2 Reserved

6    2.7.1.3 PDU Formats on r-csch

7    The messages sent on the r-csch are summarized in Table 2.7.1.3-1.

8

REG\_TYPE – Registration type.

This field indicates which type of event generated the registration attempt.

The mobile station shall set this field to the REG\_TYPE value shown in Table 2.7.1.3.2.1-1 corresponding to the event that caused this registration to occur (see 2.6.5.1).

1

**Table 2.7.1.3.2.1-1. Registration Type (REG\_TYPE) Codes**

<b>REG_TYPE (binary)</b>	<b>Type of Registration</b>
0000	Timer-based (see 2.6.5.1.3)
0001	Power-up (see 2.6.5.1.1)
0010	Zone-based (see 2.6.5.1.5)
0011	Power-down (see 2.6.5.1.2)
0100	Parameter-change (see 2.6.5.1.6)
0101	Ordered (see 2.6.5.1.7)
0110	Distance-based (see 2.6.5.1.4)
0111	User Zone-based (see 2.6.5.1.10)
1000	Encryption Re-sync required (see 2.6.5.1.11)
1001	BCMC Registration (see 2.6.13.3)
All other REG_TYPE values are reserved.	

2

3 SLOT\_CYCLE\_INDEX

- Slot cycle index.

4

5

6

If P\_REV\_IN\_USE<sub>s</sub> is less than 11, or if MIN\_SLOT\_CYCLE\_INDEX is equal to '0', the mobile station shall perform the following:

7

8

9

10

- If the mobile station is configured for slotted mode operation, the mobile station shall set this field to max (0, SLOT\_CYCLE\_INDEX<sub>p</sub>) (see 2.6.2.1.1). Otherwise, the mobile station shall set this field to '000'.

11

Otherwise, the mobile station shall perform the following:

12

13

14

15

16

17

18

19

- If the mobile station is configured for slotted mode operation, the mobile station shall set this field to the absolute value of the preferred slot cycle index, SLOT\_CYCLE\_INDEX<sub>p</sub> (see 2.6.2.1.1); otherwise, the mobile station shall set this field to '000'. The sign of the preferred slot cycle index, SLOT\_CYCLE\_INDEX<sub>p</sub>, is specified in the SIGN\_SLOT\_CYCLE\_INDEX field of this message (see Table 2.7.1.3.2.1-8).

20

MOB\_P\_REV

- Protocol revision of the mobile station.

21

The mobile station shall set this field to '00001100'.

22

SCM

- Station class mark.

23

The mobile station shall set this field to its station class mark. See 2.3.3.

24

**MOB\_TERM** – Mobile terminated calls accepted indicator.

If the mobile station is configured to accept mobile terminated calls while operating with the current roaming status (see 2.6.5.3), the mobile station shall set this bit to '1'. Otherwise, the mobile station shall set this bit to '0'.

**RETURN\_CAUSE** – Reason of the mobile station registration or access.

The mobile station shall set this field to the RETURN\_CAUSE value shown in Table 2.7.1.3.2.1-2 corresponding to the service redirection failure condition (see 2.6.1.1).

**Table 2.7.1.3.2.1-2. RETURN\_CAUSE Codes**

<b>RETURN_CAUSE (binary)</b>	<b>Redirect Failure Condition</b>
0000	Normal access.
0001	Service redirection failed as a result of system not found.
0010	Service redirection failed as a result of protocol mismatch.
0011	Service redirection failed as a result of registration rejection.
0100	Service redirection failed as a result of wrong SID.
0101	Service redirection failed as a result of wrong NID.
All other RETURN_CAUSE values are reserved.	

**QPCH\_SUPPORTED** – Quick Paging Channel supported indicator.

If P\_REV\_IN\_USE<sub>s</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station supports the Quick Paging Channel, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**ENHANCED\_RC** – Enhanced radio configuration supported indicator.

If P\_REV\_IN\_USE<sub>s</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station supports any radio configuration in the Radio Configuration Class 2 (see 1.1.1), the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

1	UZID_INCL	-	User Zone Identifier included indicator.
2			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
3			omit this field; otherwise, the mobile station shall include
4			this field and set it as follows.
5			If the message is to contain the User Zone Identifier, the
6			mobile station shall set this field to '1'; otherwise, the mobile
7			station shall set this field to '0'.
8	UZID	-	User Zone Identifier.
9			If the UZID_INCL is included in the message and is set to '1',
10			the mobile station shall include this field and set it to UZID <sub>S</sub> ;
11			otherwise, the mobile station shall omit this field.
12	GEO_LOC_INCL	-	Geo-location included indicator.
13			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
14			omit this field; otherwise, the mobile station shall include
15			this field and set it as follows.
16			If the message is to contain the GEO_LOC_TYPE field, the
17			mobile station shall set this field to '1'; otherwise, the mobile
18			station shall set this field to '0'.
19	GEO_LOC_TYPE	-	Geo-Location Type.
20			If GEO_LOC_INCL is included in the message and is set to '1',
21			the mobile station shall include this field and shall set it to
22			the value shown in Table 2.7.1.3.2.4-7; otherwise, the mobile
23			station shall omit this field.
24	OTD_SUPPORTED	-	Orthogonal Transmit Diversity supported.
25			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
26			omit this field; otherwise, the mobile station shall include
27			this field and set it as follows.
28			The mobile station shall set this field to '1' if Orthogonal
29			Transmit Diversity is supported; otherwise, the mobile station
30			shall set this field to '0'.
31	STS_SUPPORTED	-	Space Time Spreading Transmit Diversity supported.
32			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
33			omit this field; otherwise, the mobile station shall include
34			this field and set it as follows.
35			The mobile station shall set this field to '1', if Space Time
36			Spreading Transmit Diversity is supported; otherwise, the
37			mobile station shall set this field to '0'.
38	3X_CCH_SUPPORTED	-	3X Common Channels supported.

If P\_REV\_IN\_USE<sub>s</sub> is less than seven, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

The mobile station shall set this field to '1' if the mobile station supports the Spreading Rate 3 common channels (3X BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile station shall set this field to '0'.

WLL\_INCL – WLL information included indicator.

If P\_REV\_IN\_USE<sub>s</sub> is less than seven, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station is a Wireless Local Loop device, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

WLL\_DEVICE\_TYPE – WLL device type indicator.

If WLL\_INCL is not included, or if WLL\_INCL is included and is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall set this field as follows.

The mobile station shall set this field to the WLL\_DEVICE\_TYPE value shown in Table 2.7.1.3.2.1-3 corresponding to the mobile station device type.

**Table 2.7.1.3.2.1-3. WLL Device Types**

<b>WLL_DEVICE_TYPE (binary)</b>	<b>Description</b>
000	Wireless Local Loop terminal with no mobility
001	Wireless Local Loop terminal with limited mobility
010	Wireless Local Loop terminal with full mobility
011 - 111	Reserved

HOOK\_STATUS – WLL terminal hook status.

If WLL\_INCL is not included, or if WLL\_INCL is included and is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall set this field to the value shown in Table 2.7.1.3.2.1-4 corresponding to the hook state.

1

**Table 2.7.1.3.2.1-4. Hook Status Values**

<b>HOOK_STATUS (binary)</b>	<b>Description</b>
0000	Subscriber terminal is on-hook
0001	Subscriber terminal is off-hook
0010	Subscriber terminal is stuck off-hook
0011 – 1111	Reserved

2

3

ENC\_INFO\_INCL – Encryption fields included.

4

5

6

If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

7

8

9

10

11

12

The mobile station shall set this field to '1' if the encryption related fields are included; otherwise the mobile station shall set this field to '0'. The mobile station shall set this field to '0' if the base station does not support encryption or the mobile station does not support any of the encryption modes supported by the base station.

13

SIG\_ENCRYPT\_SUP – Signaling encryption supported indicator.

14

15

16

17

18

If ENC\_INFO\_INCL is included and is set to '1', the mobile station shall include this field; otherwise, the mobile station shall omit this field. If this field is included, the mobile station shall set this field to indicate which signaling encryption algorithms are supported by the mobile station.

This field consists of the subfields shown in Table 2.7.1.3.2.1-5.

**Table 2.7.1.3.2.1-5. Encoding of the SIG\_ENCRYPT\_SUP Field**

Subfield	Length (bits)	Subfield Description
CMEA	1	Support of Cellular Message Encryption Algorithm
ECMEA	1	Support of Enhanced Cellular Message Encryption Algorithm
REA	1	Support of the Rijndael Encryption Algorithm
RESERVED	5	Reserved bits

If this field is included, the mobile station shall set the subfields as follows:

The mobile station shall set the CMEA subfield to '1'.

The mobile station shall set each other subfield to '1' if the corresponding signaling encryption algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

The mobile station shall set the RESERVED subfield to '00000'.

**C\_SIG\_ENCRYPT\_REQ** – Common Channel signaling message encryption request indicator.

If ENC\_INFO\_INCL is included and is set to '1', the mobile station shall include this field; otherwise, the mobile station shall omit this field. If this field is included, the mobile station shall set this field to '1' to request signaling encryption to be turned on for signaling messages sent on f-csch and r-csch, and to '0' to request signaling encryption to be turned off for signaling messages sent on f-csch and r-csch.

**NEW\_SSEQ\_H** – The 24-bit value used to initialize the 24 MSB of the crypto-sync.

If SIG\_ENCRYPT\_SUP is included and the ECMEA or REA subfield in SIG\_ENCRYPT\_SUP is set to '1', the mobile station shall include this field; otherwise, the mobile station shall omit this field. If this field is included, the mobile station shall set this field to a 24-bit value that will be used as the initial value of the 24 MSB of the crypto-sync for both forward and reverse link message encryption and integrity (if message integrity is performed).

**NEW\_SSEQ\_H\_SIG** – The signature of NEW\_SSEQ\_H

1			If NEW_SSEQ_H is included, the mobile station shall include
2			this field; otherwise, the mobile station shall omit this field. If
3			this field is included, the mobile station shall set this field to
4			the digital signature of the NEW_SSEQ_H computed as
5			described in 2.3.12.4.5.
6	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
7			If ENC_INFO_INCL is included and is set to '1', the mobile
8			station shall include this field; otherwise, the mobile station
9			shall omit this field. If this field is included, the mobile
10			station shall set this field to indicate the supported user
11			information encryption algorithms.
12			This field consists of the subfields shown in Table
13			2.7.1.3.2.4-9.
14			The mobile station shall set each subfield to '1' if the
15			corresponding user information encryption algorithm is
16			supported by the mobile station; otherwise, the mobile
17			station shall set the subfield to '0'.
18			The mobile station shall set the RESERVED subfield to
19			'000000'.
20	MSG_INT_INFO_INCL	-	Signaling message integrity information included indicator.
21			If P_REV_IN_USE <sub>S</sub> is less than nine, the mobile station shall
22			omit this field; otherwise, the mobile station shall include
23			this field and set it as follows.
24			If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '0', the mobile station
25			shall set this field to '0'; otherwise, the mobile station shall
26			set this field to '1'.
27	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included
28			indicator.
29			If MSG_INT_INFO_INCL is included and is set to '1', the
30			mobile station shall include this field and set it as follows;
31			otherwise, the mobile station shall omit this field.
32			If the mobile station supports other integrity algorithm(s) in
33			addition to the default integrity algorithm, the mobile station
34			shall set this field to '1'; otherwise, the mobile station shall
35			set this field to '0'.
36	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the mobile station.
37			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
38			mobile station shall set this field as follows; otherwise, the
39			mobile station shall omit this field.
40			The mobile station shall set this field to indicate the
41			supported message integrity algorithms in addition to the
42			default integrity algorithm.

This field consists of the subfields shown in Table 2.7.1.3.2.1-6.

The mobile station shall set each subfield to '1' if the corresponding message integrity algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

**Table 2.7.1.3.2.1-6. Encoding of the SIG\_INTEGRITY\_SUP Field**

Subfield	Length (bits)	Subfield Description
RESERVED	8	Reserved bits

The mobile station shall set the RESERVED subfield to '00000000'.

**SIG\_INTEGRITY\_REQ** - Signaling message integrity algorithm requested by the mobile station.

If SIG\_INTEGRITY\_SUP\_INCL is included and is set to '1', the mobile station shall set this field as follows; otherwise, the mobile station shall omit this field.

The mobile station shall include this field and set it to the value corresponding to the message integrity algorithm requested as shown in Table 2.7.1.3.2.1-7.

**Table 2.7.1.3.2.1-7. Encoding of the SIG\_INTEGRITY\_REQ Field**

SIG_INTEGRITY_REQ	Value	Description
DEFAULT_UIA	'000'	Default message integrity algorithm
RESERVED	'001' - '111'	Reserved

**NEW\_KEY\_ID** - New key identifier.

If MSG\_INT\_INFO\_INCL is included and is set to '1', the mobile station shall include this field and set it as follows; otherwise, the mobile station shall omit this field.

The mobile station shall set this field as follows:

- If LAST\_2G\_KEY\_ID equals '00', the mobile station shall set this field to '01'.

- If LAST\_2G\_KEY\_ID equals '01', the mobile station shall set this field to '00'.

**NEW\_SSEQ\_H\_INCL** - The 24-bit value used to initialize the 24 MSB of crypto-sync.

If MSG\_INT\_INFO\_INCL is included and is set to '1', the mobile station shall include this field and set it as follows; otherwise, the mobile station shall omit this field.

The mobile station shall set this field to '0' if any of the following is true:

1

**Table 2.7.1.3.2.1-8. Slot Cycle Index Values**

<b>Slot Cycle Index Value</b>	<b>SIGN_SLOT _ CYCLE_INDEX</b>	<b>SLOT_CYCLE_INDEX</b>	<b>RSCI, REQ_RSCI</b>	<b>Slot Cycle Length</b>
-7	N/A	N/A	0111	Non-slotted
-4	0	100	0100	0.08s (1 slot)
-3	0	011	0011	0.16s (2 slots)
-2	0	010	0010	0.32s (4 slots)
-1	0	001	0001	0.64s (8 slots)
0	omitted	000	0000	1.28s (16 slots)
1	1	001	1001	2.56s (32 slots)
2	1	010	1010	5.12s (64 slots)
3	1	011	1011	10.24s (128 slots)
4	1	100	1100	20.48s (256 slots)
5	1	101	1101	40.96s (512 slots)
6	1	110	1110	81.92s (1024 slots)
7	1	111	N/A	163.84s (2048 slots)
All other values reserved.				

2

3

1	BCMC_FREQ_INFO_INCL-	BCMC frequency information included indicator.
2		If the REG_TYPE field is not set to '1001', the mobile station
3		shall omit this field; otherwise, the mobile station shall
4		include this field and set it as follows:
5		If the BCMC band class and frequency fields are included in
6		this message, the mobile station shall set this field to '1';
7		otherwise, the mobile station shall set this field to '0'.
8		If this Registration Message is being sent only to request
9		transmission of BCMC flows, the mobile station shall set this
10		field to '0'.
11	BCMC_BAND_CLASS-	BCMC Band Class.
12		If the BCMC_FREQ_INFO_INCL field is not included or is
13		included and is set to '0', the mobile station shall omit this
14		field; otherwise, the mobile station shall include this field and
15		set it as follows:
16		The mobile station shall set this field to the CDMA band
17		class, as specified in [30], corresponding to the CDMA
18		frequency assignment for the CDMA Channel containing the
19		Forward Broadcast Supplemental Channel that the mobile
20		station will tune to upon receiving confirmation of delivery of
21		this message.
22	BCMC_CDMA_FREQ-	BCMC Frequency.
23		If the BCMC_FREQ_INFO_INCL field is not included or is
24		included and is set to '0', the mobile station shall omit this
25		field; otherwise, the mobile station shall include this field and
26		set it as follows:
27		The mobile station shall set this field to the CDMA Channel
28		number corresponding to the CDMA frequency assignment
29		for the CDMA Channel containing the Forward Broadcast
30		Supplemental Channel that the mobile station will tune to
31		upon receiving confirmation of delivery of this message.
32	NUM_BCMC_PROGRAMS	- Number of BCMC programs being registered.
33		If the REG_TYPE field is not set to '1001', the mobile station
34		shall omit this field; otherwise, the mobile station shall
35		include this field and set it as follows:
36		The mobile station shall set this field to the number of BCMC
37		programs included in this message.
38	AUTH_SIGNATURE_INCL	- Authorization signature included indication.

1		If the REG_TYPE field is not set to '1001', the mobile station
2		shall omit this field; otherwise, the mobile station shall
3		include this field and set it as follows:
4		The mobile station shall set this field to '1' to indicate that
5		the authorization signature is included in this message for
6		some of the BCMC flows included in this message; otherwise,
7		the mobile station shall set this field to '0'.
8	TIME_STAMP_SHORT_LENGTH	- Length of time stamp included in this message.
9		If the AUTH_SIGNATURE_INCL field is not included or is
10		included and is set to '0', the mobile station shall omit this
11		field; otherwise, the mobile station shall include this field and
12		set it as follows:
13		The mobile station shall set this field to the length of the time
14		stamp, in units of bits, included in this message.
15	TIME_STAMP_SHORT	- Time stamp short.
16		If the AUTH_SIGNATURE_INCL field is not included or is
17		included and is set to '0', the mobile station shall omit this
18		field; otherwise, the mobile station shall include this field and
19		set it as follows:
20		The mobile station shall set this field to the
21		TIME_STAMP_SHORT_LENGTH least significant bits of the
22		time stamp parameter used to generate the Authorization
23		signature included in this message.
24	The mobile station shall include NUM_BCMC_PROGRAMS occurrences of the following	
25	fields:	
26	BCMC_PROGRAM_ID_LEN	- Length of BCMC_PROGRAM_ID field
27		The mobile station shall set this field to one less than the
28		length, in bits, of the BCMC_PROGRAM_ID of this program.
29	BCMC_PROGRAM_ID	- BCMC program Identifier
30		The length of this field shall be one more than the value of
31		BCMC_PROGRAM_ID_LEN bits.
32		The mobile station shall set this field to the identifier of the
33		BCMC program corresponding to one or more flows that the
34		mobile station will continue to monitor or start to monitor
35		upon receiving confirmation of delivery of this message or is
36		requesting transmission.

1	BCMC_FLOW_DISCRIMINATOR_LEN	-	Length of BCMC_FLOW_DISCRIMINATOR field
2			The mobile station shall set this field to the length, in bits, of
3			the BCMC_FLOW_DISCRIMINATOR of this program. To
4			request all flows associated with this BCMC_PROGRAM_ID,
5			the mobile station may set this field to '000'.
6	NUM_FLOW_DISCRIMINATOR	-	Number of BCMC flow discriminators.
7			The length of this field shall be determined by the value of the
8			BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
9			BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
10			is omitted; otherwise, the length of this field shall be
11			BCMC_FLOW_DISCRIMINATOR_LEN bits.
12			The mobile station shall set this field to the number of flow
13			discriminators included for this program minus one.
14	If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include		
15	NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;		
16	otherwise, the mobile station shall include 1 occurrence of the following variable length		
17	record:		
18	BCMC_FLOW_DISCRIMINATOR	-	BCMC Flow discriminator.
19			The length of this field shall be determined by the value of the
20			BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
21			BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
22			is omitted; otherwise, the length of this field shall be
23			BCMC_FLOW_DISCRIMINATOR_LEN bits.
24			The mobile station shall set this field to the discriminator of
25			the BCMC flow that the mobile station will continue to
26			monitor or start to monitor upon receiving confirmation of
27			delivery of this message or is requesting transmission.
28	AUTH_SIGNATURE_IND	-	Authorization signature indicator.
29			If the AUTH_SIGNATURE_INCL field is not included or is
30			included and is set to '0', the mobile station shall omit this
31			field; otherwise, the mobile station shall include this field and
32			set it as follows:
33			The mobile station shall set this field to '1' to indicate that
34			the authorization signature is included in this message for
35			this BCMC flow; otherwise, the mobile station shall set this
36			field to '0'.
37	AUTH_SIGNATURE_SAME_IND	-	Authorization signature same as previous BCMC
38			flow indicator.

1			If the AUTH_SIGNATURE_IND field is not included or is
2			included and is set to '0', the mobile station shall omit this
3			field; otherwise, the mobile station shall include this field and
4			set it as follows:
5			The mobile station shall set this field to '1' to indicate that
6			the authorization signature generated for this BCMC flow is
7			the same as the one generated for the BCMC flow listed prior
8			to this BCMC flow in this message; otherwise, the mobile
9			station shall set this field to '0'.
10			For the first BCMC flow listed in this message, the mobile
11			station shall set this field to '0'.
12	BAK_ID	-	BAK identifier.
13			If the AUTH_SIGNATURE_SAME_IND field is not included or
14			is included and is set to '1', the mobile station shall omit this
15			field; otherwise, the mobile station shall include this field and
16			set it as follows:
17			The mobile station shall set this field to BAK identifier used
18			to generate the Authorization signature included in this
19			message.
20	AUTH_SIGNATURE	-	Authorization signature.
21			If the AUTH_SIGNATURE_SAME_IND field is not included or
22			is included and is set to '1', the mobile station shall omit this
23			field; otherwise, the mobile station shall include this field and
24			set it as follows:
25			The mobile station shall set this field to the Authorization
26			signature computed for this BCMC flow as specified in
27			2.6.13.9.
28	BAND_SUB_REP_INCL	-	Band class - band subclass report included
29			If P_REV_IN_USE <sub>S</sub> is less than eleven, the mobile station
30			shall omit this field; otherwise, the mobile station shall
31			include this field and set it as follows:
32			If CAND_BAND_INFO_REQ <sub>S</sub> is equal to '1' and the mobile
33			station supports at least 1 band class and band subclass (if
34			applicable) combination queried by the base station, the
35			mobile station shall set this field to '1'; otherwise, the mobile
36			station shall set this field to '0'.
37			

1    NUM\_BAND\_SUBCLASS – Number of band class - band subclass capabilities reported  
2                                    If BAND\_SUB\_REP\_INCL is set to '0' or is not included, this  
3                                    field shall be omitted; otherwise, the mobile station shall  
4                                    include this field and set it as follows:  
5                                    If the mobile station supports all candidate band class and  
6                                    band subclass (if applicable) combinations queried by the  
7                                    base station, the mobile station shall set this field to '0000';  
8                                    otherwise, the mobile station shall set this field to the  
9                                    number of band class-band subclass capabilities reported.

10   If the NUM\_BAND\_SUBCLASS field is included in this message, the mobile station shall  
11   include NUM\_BAND\_SUBCLASS occurrences of the BAND\_SUBCLASS\_SUP field:

12   BAND\_SUBCLASS\_SUP – Band class - Band subclass supported indicator  
13                                    The mobile station shall set this field as specified in section  
14                                    2.6.14.1.

15   ADD\_GEO\_LOC\_INCL – Additional Geo-location included indicator.  
16                                    If P\_REV\_IN\_USE<sub>S</sub> is less than twelve, the mobile station shall  
17                                    omit this field; otherwise, the mobile station shall include  
18                                    this field and set it as follows.  
19                                    If the message is to contain the ADD\_GEO\_LOC\_TYPE field,  
20                                    the mobile station shall set this field to '1'; otherwise, the  
21                                    mobile station shall set this field to '0'.

22   ADD\_GEO\_LOC\_TYPE\_LEN\_IND – Additional Geo-Location Type Length Indicator.  
23                                    If ADD\_GEO\_LOC\_INCL is included in the message and is set  
24                                    to '1', the mobile station shall include this field and shall set  
25                                    it as described below; otherwise, the mobile station shall omit  
26                                    this field.  
27                                    The mobile station shall set this field to '0' to indicate length  
28                                    of the ADD\_GEO\_LOC\_TYPE field is 16 bits. The mobile  
29                                    station shall set this field to '1' to indicate length of the  
30                                    ADD\_GEO\_LOC\_TYPE field is 24 bits.

31   ADD\_GEO\_LOC\_TYPE – Additional Geo-Location Type.  
32                                    If ADD\_GEO\_LOC\_INCL is included in the message and is set  
33                                    to '1', the mobile station shall include this field and shall set  
34                                    it as described below; otherwise, the mobile station shall omit  
35                                    this field.  
36                                    This field consists of the subfields shown in 2.7.4.46-1.  
37                                    The mobile station shall set each subfield to '1' if the  
38                                    corresponding capability is supported by the mobile station;  
39                                    otherwise, the mobile station shall set the subfield to '0'.  
40  
41  
42

## 1 2.7.1.3.2.2 Order Message

2 MSG\_TAG: ORDM

3

Field	Length (bits)
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	$8 \times \text{ADD\_RECORD\_LEN}$

4

5 ORDER – Order code.

6 The mobile station shall set this field to the ORDER code  
7 (see 2.7.3) for this type of *Order Message*.

8 ADD\_RECORD\_LEN – Additional record length.

9 The mobile station shall set this field to the number of octets  
10 in the order-specific fields included in this message.

11 order-specific fields – Order-specific fields.

12 The mobile station shall include order-specific fields as  
13 specified in 2.7.3.  
14

## 1 2.7.1.3.2.3 Data Burst Message

2 MSG\_TAG: DBM

3

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	8
-------------------	---

} (NUM\_FIELDS)

4

5 MSG\_NUMBER - Message number within the data burst stream.

6 The mobile station shall set this field to the number of this  
7 message within the data burst stream.

8 BURST\_TYPE - Data burst type.

9 The mobile station shall set the value of this field for the type  
10 of this data burst as defined in [30]. If the mobile station sets  
11 this field equal to '111110', it shall set the first two CHAR<sub>i</sub>  
12 fields of this message equal to  
13 EXTENDED\_BURST\_TYPE\_INTERNATIONAL as described in  
14 the definition of CHAR<sub>i</sub> below. If the mobile station sets this  
15 field equal to '111111', it shall set the first two CHAR<sub>i</sub> fields of  
16 this message equal to the EXTENDED\_BURST\_TYPE as  
17 described in the definition of CHAR<sub>i</sub> below.

18 NUM\_MSGS - Number of messages in the data burst stream.

19 The mobile station shall set this field to the number of  
20 messages within this data burst stream.

21 NUM\_FIELDS - Number of characters in this message.

22 The mobile station shall set this field to the number of CHAR<sub>i</sub>  
23 fields included in this message.

24 CHAR<sub>i</sub> - Character.

25 The mobile station shall include NUM\_FIELDS occurrences of  
26 this field. The mobile station shall set these fields to the  
27 corresponding octet of the data burst stream.

If the BURST\_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED\_BURST\_TYPE\_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC). Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED\_BURST\_TYPE\_INTERNATIONAL field shall specify the COUNTRY\_BURST\_TYPE. The mobile station shall set the value of the COUNTRY\_BURST\_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

If the BURST\_TYPE field of this message is equal to '111111', the first two CHARi octets shall represent a single, 16 bit, EXTENDED\_BURST\_TYPE field, as shown below. The mobile station shall set the value of the EXTENDED\_BURST\_TYPE according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

ADD_GEO_LOC_TYPE_LEN_IND	0 or 1
ADD_GEO_LOC_TYPE	0 or 16 or 24

- 1
- 2           **MOB\_TERM**    – Mobile terminated calls accepted indicator.
- 3                        If the mobile station is configured to accept mobile
- 4                        terminated calls while operating with the current roaming
- 5                        status (see 2.6.5.3), the mobile station shall set this bit to '1';
- 6                        otherwise, the mobile station shall set this bit to '0'.
- 7           **SLOT\_CYCLE\_INDEX**   – Slot cycle index.
- 8                        If P\_REV\_IN\_USE<sub>s</sub> is less than 11, or if
- 9                        MIN\_SLOT\_CYCLE\_INDEX is equal to '0', the mobile station
- 10                      shall perform the following:
- 11                      • If the mobile station is configured for slotted mode
- 12                      operation, the mobile station shall set this field to max (0,
- 13                      SLOT\_CYCLE\_INDEX<sub>p</sub>) (see 2.6.2.1.1). Otherwise, the
- 14                      mobile station shall set this field to '000'.
- 15                      Otherwise, the mobile station shall perform the following:
- 16                      • If the mobile station is configured for slotted mode
- 17                      operation, the mobile station shall set this field to the
- 18                      absolute value of the preferred slot cycle index,
- 19                      SLOT\_CYCLE\_INDEX<sub>p</sub> (see 2.6.2.1.1); otherwise, the
- 20                      mobile station shall set this field to '000'. The sign of the
- 21                      preferred slot cycle index, SLOT\_CYCLE\_INDEX<sub>p</sub>, is
- 22                      specified in the SIGN\_SLOT\_CYCLE\_INDEX field of this
- 23                      message (see Table 2.7.1.3.2.1-8).
- 24           **MOB\_P\_REV**    – Protocol revision of the mobile station.
- 25                        The mobile station shall set this field to '00001100'.
- 26                        **SCM**    – Station class mark.
- 27                        The mobile station shall set this field to the station class
- 28                        mark of the mobile station. See 2.3.3.
- 29           **REQUEST\_MODE**   – Requested mode code.

The mobile station shall set this field to the value shown in Table 2.7.1.3.2.4-1 corresponding to its current configuration.

**Table 2.7.1.3.2.4-1. REQUEST\_MODE Codes**

Value (binary)	Requested Mode
000	Reserved
001	CDMA only
010	Reserved (Previously: Wide analog only)
011	Reserved (Previously: Either wide analog or CDMA only)
100	Reserved (Previously: Narrow analog only)
101	Reserved (Previously: Either narrow analog or CDMA only)
110	Reserved (Previously: Either narrow analog or wide analog only)
111	Reserved (Previously: Narrow analog or wide analog or CDMA)

**SPECIAL\_SERVICE** – Special service option indicator.

To request a special service option, the mobile station shall set this field to '1'. To request the default service option (Service Option 1), the mobile station shall set this field to '0'.

**SERVICE\_OPTION** – Requested service option for this origination.

If the SPECIAL\_SERVICE field is set to '1', the mobile station shall set this field to the value specified in [30], corresponding to the requested service option. If the SPECIAL\_SERVICE field is set to '0', the mobile station shall omit this field.

**PM** – Privacy mode indicator.

To request voice privacy, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**DIGIT\_MODE** – Digit mode indicator.

This field indicates whether the dialed digits are 4-bit DTMF codes or 8-bit ASCII codes using a specified numbering plan.

To originate the call using the binary representation of DTMF digits (i.e., CHARi fields are represented in Table 2.7.1.3.2.4-4), the mobile station shall set this field to '0'. To originate the call using ASCII characters, the mobile station shall set this field to '1'.

NUMBER\_TYPE – Type of number.

The mobile station shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the number as defined in [7], Section 4.5.9. If the DIGIT\_MODE field is set to '0' and P\_REV\_IN\_USE<sub>s</sub> is less than 11, the mobile station shall omit this field.

If this field is included and the mobile station determines that the user has entered an international number (for example, with a leading "+" as specified in [39] for Plus Code Dialing or an international access code), the mobile station should set this field to '001'.

**Table 2.7.1.3.2.4-2. Number Types**

Description	NUMBER_TYPE (binary)
Unknown	000
International number	001
National number	010
Network-specific number	011
Subscriber number	100
Reserved	101
Abbreviated number	110
Reserved for extension	111

NUMBER\_PLAN – Numbering plan.

If the DIGIT\_MODE field is set to '1', the mobile station shall set this field to the NUMBER\_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the requested numbering plan as defined in [7], Section 4.5.9. If the DIGIT\_MODE field is set to '0', the mobile station shall omit this field.

1

**Table 2.7.1.3.2.4-3. Numbering Plan Identification**

<b>Description</b>	<b>NUMBER_PLAN (binary)</b>
Unknown	0000
ISDN/Telephony numbering plan ([17] and [16])	0001
Data numbering plan ([20])	0011
Telex numbering plan ([19])	0100
Private numbering plan	1001
Reserved for extension	1111
All other NUMBER_PLAN codes are reserved.	

2

3

**MORE\_FIELDS** – More dialed digits indicator.

4

5

This field indicates whether additional dialed digits will be sent in a later *Origination Continuation Message*.

6

7

8

If all dialed digits will fit into this message, the mobile station shall set this field to '0'. If not, the mobile station shall set this field to '1'.

9

**NUM\_FIELDS** – Number of dialed digits in this message.

10

11

The mobile station shall set this field to the number of dialed digits included in this message.

12

**CHARi** – A dialed digit or character.

13

14

15

16

17

18

19

20

The mobile station shall include NUM\_FIELDS occurrences of this field. If the DIGIT\_MODE field is set to '0', the mobile station shall set each occurrence of this field to the code value shown in Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the DIGIT\_MODE field is set to '1', the mobile station shall set each occurrence of this field to the ASCII representation corresponding to the dialed digit, as specified in [9], with the most significant bit set to '0'.

21

**Table 2.7.1.3.2.4-4. Representation of DTMF Digits**

<b>Digit</b>	<b>Code (binary)</b>	<b>Digit</b>	<b>Code (binary)</b>
1	0001	7	0111
2	0010	8	1000
3	0011	9	1001
4	0100	0	1010
5	0101	*	1011
6	0110	#	1100
All other codes are reserved.			

**NAR\_AN\_CAP** – Narrow analog capability.

If the mobile station is capable of narrow analog operation, the mobile station shall set this bit to '1'; otherwise, the mobile station shall set this bit to '0'. The mobile station shall set this bit to '0'.

**PACA\_REORIG** – PACA re-origination.

If this is a user directed origination, the mobile station shall set this field to '0'. If this is a PACA re-origination, the mobile station shall set this field to '1'.

**RETURN\_CAUSE** – Reason for the mobile station registration or access.

The mobile station shall set this field to the RETURN\_CAUSE value shown in Table 2.7.1.3.2.1-2 corresponding to the service redirection failure condition (see 2.6.1.1).

**MORE\_RECORDS** – More records indicator.

This field indicates whether information records will be sent in a later *Origination Continuation Message*. If information records will be sent, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**ENCRYPTION\_SUPPORTED** – Encryption algorithms supported by the mobile station.

If P\_REV\_IN\_USE<sub>s</sub> is greater than or equal to seven or AUTH\_MODE is equal to '00', the mobile station shall omit the ENCRYPTION\_SUPPORTED field. If P\_REV\_IN\_USE<sub>s</sub> is less than seven and AUTH\_MODE is not equal to '00', the mobile station shall set this field as specified in Table 2.7.1.3.2.4-5.

1

**Table 2.7.1.3.2.4-5. Encryption Algorithms Supported**

<b>Description</b>	<b>ENCRYPTION_SUPPORTED (binary)</b>
Basic encryption supported	0000
Basic and Enhanced encryption supported	0001
Reserved	0010 - 1111

2

3

PACA\_SUPPORTED – CDMA PACA support indication.

4

5

This field identifies the mobile station's support for PACA in CDMA mode. The mobile station shall set this field to '1'.

6

NUM\_ALT\_SO – Number of alternative service options.

7

8

9

10

11

If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall set this field to the number of alternative service options it supports other than the one specified in the SERVICE\_OPTION field. The mobile station shall set this field to a value less than or equal to MAX\_NUM\_ALT\_SO<sub>S</sub>.

12

13

14

15

16

17

18

19

If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall set this field to the number of alternate service options, which either have no service option group number assigned or do not belong to the same service option group whose bitmap is being included. The alternate service option numbers are other than the one specified in the SERVICE\_OPTION field. The mobile station shall set this field to a value less than or equal to MAX\_NUM\_ALT\_SO<sub>S</sub>.

20

ALT\_SO – Alternative service option.

21

22

23

24

25

If P\_REV\_IN\_USE<sub>S</sub> is less than 7, the mobile station shall include NUM\_ALT\_SO occurrences of this field. The mobile station shall set this field to the value specified in [30], corresponding to the alternative service option supported by the mobile station.

26

27

28

29

30

31

32

If P\_REV\_IN\_USE<sub>S</sub> is equal to or greater than seven, the mobile station shall include NUM\_ALT\_SO occurrences of this field. The mobile station shall set this field to the service option number defined in [30] corresponding to the alternate service options which either have no service option group number assigned or do not belong to the same service option group whose bitmap is included in this message.

33

DRS – Data Ready to Send.

34

35

36

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the service instance corresponding to SR\_ID has data to send, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**UZID\_INCL** – User Zone Identifier included indicator.

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the message is to contain the User Zone Identifier, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**UZID** – User Zone Identifier.

If the UZID\_INCL field is included in the message and is set to '1', the mobile station shall include this field and set it to UZID<sub>S</sub>; otherwise, the mobile station shall omit this field.

**CH\_IND** – Channel indicator.

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it, as shown in Table 2.7.1.3.2.4-6, to request physical resources.

**Table 2.7.1.3.2.4-6. Channel Indicator**

<b>CH_IND (binary)</b>	<b>Channel(s) Requested</b>
00	Refer to EXT_CH_IND
01	Fundamental Channel
10	Dedicated Control Channel
11	Fundamental Channel and Dedicated Control Channel

1	SR_ID	-	Service reference identifier.
2			If P_REV_IN_USE <sub>s</sub> is less than six, the mobile station shall
3			omit this field; otherwise, the mobile station shall include
4			this field and set it as follows:
5			If the SYNC_ID_INCL field is not included or is included and
6			is set to '0', the mobile station shall set this field as follows:
7		o	If the service instance provides a service reference
8			identifier, the mobile station shall set this field to the
9			service reference identifier specified by the service
10			instance. If the service instance does not provide a service
11			reference identifier, the mobile station shall set this field
12			to the smallest unused service reference identifier value
13			between 1 and 6 (inclusive).
14			Otherwise, the mobile station shall set this field as follows:
15		o	If the mobile station requests the restoration of a single
16			service option connection from the stored service
17			configuration, the mobile station shall set this field to the
18			corresponding service reference identifier.
19		o	If the mobile station requests the restoration of more than
20			one but not all service option connections from the stored
21			service configuration, the mobile station shall set this
22			field to the service reference identifier corresponding to
23			one of the service option connections to be restored.
24		o	Otherwise (that is, the mobile station requests the
25			restoration of all the service option connections from the
26			stored service configuration), the mobile station shall set
27			this field to '111'.
28	OTD_SUPPORTED	-	Orthogonal Transmit Diversity supported indicator.
29			If P_REV_IN_USE <sub>s</sub> is less than six, the mobile station shall
30			omit this field; otherwise, the mobile station shall include
31			this field and set it as follows.
32			If the mobile station supports orthogonal transmit diversity, it
33			shall set this field to '1'; otherwise, the mobile station shall
34			set this field to '0'.
35	QPCH_SUPPORTED	-	Quick Paging Channel supported indicator.
36			If P_REV_IN_USE <sub>s</sub> is less than six, the mobile station shall
37			omit this field; otherwise, the mobile station shall include
38			this field and set it as follows.

1			If the mobile station supports the Quick Paging Channel, the
2			mobile station shall set this field to '1'; otherwise, the mobile
3			station shall set this field to '0'.
4	ENHANCED_RC	-	Enhanced radio configuration supported indicator.
5			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
6			omit this field; otherwise, the mobile station shall include
7			this field and set it as follows.
8			If the mobile station supports any radio configuration in the
9			Radio Configuration Class 2 (see 1.1.1), the mobile station
10			shall set this field to '1'; otherwise, the mobile station shall
11			set this field to '0'.
12	FOR_RC_PREF	-	Forward Radio Configuration preference.
13			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
14			omit this field; otherwise, the mobile station shall include
15			this field and set this field as follows.
16			The mobile station shall set this field to its preferred Radio
17			Configuration for the Forward Fundamental Channel and/or
18			Forward Dedicated Control Channel.
19	REV_RC_PREF	-	Reverse Radio Configuration Preference.
20			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
21			omit this field; otherwise, the mobile station shall include
22			this field and set it as follows.
23			The mobile station shall set this field to its preferred Radio
24			Configuration for the Reverse Fundamental Channel and/or
25			Reverse Dedicated Control Channel.
26	FCH_SUPPORTED	-	Fundamental Channel supported indicator.
27			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
28			omit this field; otherwise, the mobile station shall include
29			this field and set it as follows.
30			The mobile station shall set this field to '1' if the mobile
31			station supports Fundamental Channel; otherwise, the
32			mobile station shall set this field to '0'.
33	FCH Capability		
34	Type-specific fields	-	Fundamental Channel capability information.
35			If the FCH_SUPPORTED field is included and is set to '1', the
36			mobile station shall include this field and set it as defined in
37			2.7.4.27.1; otherwise, the mobile station shall omit this field.
38	DCCH_SUPPORTED	-	Dedicated Control Channel supported indicator.
39			If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
40			omit this field; otherwise the mobile station shall include this
41			field and set it as follows.
42			The mobile station shall set this field to '1' if the mobile
43			station supports Dedicated Control Channel; otherwise, the
44			mobile station shall set this field to '0'.

## 1        DCCH Capability

2        Type specific fields    -    Dedicated Control Channel capability information.

3        If the DCCH\_SUPPORTED field is included and is set to '1',  
 4        the mobile station shall include this field and set it as defined  
 5        in 2.7.4.27.2; otherwise, the mobile station shall omit this  
 6        field.

7        GEO\_LOC\_INCL    -    Geo-location included indicator.

8        If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall  
 9        omit this field. If P\_REV\_IN\_USE<sub>S</sub> is equal to six, the mobile  
 10       station shall set this field to '0'. Otherwise, the mobile station  
 11       shall include this field and set it as follows.

12       If the message is to contain the GEO\_LOC\_TYPE field, the  
 13       mobile station shall set this field to '1'; otherwise, the mobile  
 14       station shall set this field to '0'.

15       GEO\_LOC\_TYPE    -    Geo-Location Type.

16       If GEO\_LOC\_INCL is included in the message and is set to '1',  
 17       the mobile station shall include this field and shall set it to  
 18       the value shown in Table 2.7.1.3.2.4-7; otherwise, the mobile  
 19       station shall omit this field.

20

**Table 2.7.1.3.2.4-7. Geo-location Types**

<b>GEO_LOC_ TYPE (binary)</b>	<b>Type of Geo-location</b>
000	No mobile station assisted geo-location capabilities
001	IS-801 capable (Advanced Forward Link Triangulation only (AFLT))
010	IS-801 capable (Advanced Forward Link Triangulation and Global Positioning Systems)
011	Global Positioning Systems only
All other GEO_LOC_TYPE values are reserved.	

21       REV\_FCH\_GATING\_REQ -    Reverse Fundamental Channel eighth gating mode request  
 22       indicator.

23       If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall  
 24       omit this field; otherwise, the mobile station shall include  
 25       this field and set it as follows:

26       If the mobile station requests to turn on the reverse  
 27       Fundamental Traffic Channel gating mode in Radio  
 28       Configurations 3, 4, 5, and 6, the mobile station shall set this  
 29       field to '1'; otherwise, the mobile station shall set this field to  
 30       '0'.

31       ORIG\_REASON    -    Re-Origination reason indicator.

If P\_REV\_IN\_USE<sub>s</sub> is less than or equal to six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

The mobile station shall set this field to '1' if the mobile station initiates a silent-retry, i.e. an autonomous access re-attempt to re-originate this call without user interaction, after the mobile station received an access attempt failure from the ARQ Sublayer for a user initiated origination; otherwise, the mobile station shall set this field to '0'.

ORIG\_COUNT - Re-Origination count.

If P\_REV\_IN\_USE<sub>s</sub> is less than or equal to six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the ORIG\_REASON is set to '1', the mobile station shall set this field to the number of consecutive silent-retry, i.e. an autonomous access re-attempt that were made to re-originate the call, without user interaction, that were due to the mobile receiving an access attempt failure from the ARQ Sublayer. If the number of consecutive silent-retry is greater than three, the mobile station shall set this field to '11'.

If the ORIG\_REASON is set to '0', the mobile station shall set this field according to Table 2.7.1.3.2.4-8 depending on the number of autonomous re-connection attempts for the desired service (specified by SERVICE\_OPTION) that have failed since the last successful connection of that desired service<sup>2</sup>. The count shall only include attempts since the last power-up.

**Table 2.7.1.3.2.4-8. ORIG\_COUNT field for ORIG\_REASON = '0'**

Number of autonomous re-origination attempts for the desired service that have failed since the last successful connection	ORIG_COUNT (binary)
0	'00'
1, 2, 3 or 4	'01'
5, 6, 7 or 8	'10'
9 or more	'11'

STS\_SUPPORTED - STS supported indicator.

<sup>2</sup> For example, if the mobile station requests SO<sub>x</sub> in the *Origination Message* and SO<sub>y</sub> is granted by the base station, the counter associated with SO<sub>x</sub> is reset.

1			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
2			omit this field; otherwise, the mobile station shall include
3			this field and set it as follows.
4			The mobile station shall set this field to '1' if the mobile
5			station supports Space Time Spreading Transmit Diversity;
6			otherwise, the mobile station shall set this field to '0'.
7	3X_CCH_SUPPORTED	-	3X Common Channels supported.
8			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
9			omit this field; otherwise, the mobile station shall include
10			this field and set it as follows.
11			The mobile station shall set this field to '1' if the mobile
12			station supports the Spreading Rate 3 common channels (3X
13			BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile
14			station shall set this field to '0'.
15	WLL_INCL	-	WLL information included indicator.
16			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
17			omit this field; otherwise, the mobile station shall include
18			this field and set it as follows.
19			If the mobile station is a Wireless Local Loop device, the
20			mobile station shall set this field to '1'; otherwise, the mobile
21			station shall set this field to '0'.
22	WLL_DEVICE_TYPE	-	WLL device type indicator.
23			If WLL_INCL is not included, or if WLL_INCL is included and
24			is set to '0', the mobile station shall omit this field; otherwise,
25			the mobile station shall set this field as follows.
26			The mobile station shall set this field to the
27			WLL_DEVICE_TYPE value shown in Table 2.7.1.3.2.1-3
28			corresponding to the mobile station device type.
29	GLOBAL_EMERGENCY_CALL	-	Global Emergency Call indicator.
30			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
31			omit this field; otherwise, the mobile station shall include
32			this field and shall set it as follows:
33			The mobile station shall set this field to '1' if the mobile
34			station recognizes that this is an emergency call; otherwise,
35			the mobile station shall set this field to '0'.
36	MS_INIT_POS_LOC_IND	-	Mobile Initiated Position Location Session indicator.
37			If the GLOBAL_EMERGENCY_CALL field is not included in
38			this message or is included but is set to '0', the mobile station
39			shall omit this field; otherwise, the mobile station shall
40			include this field and shall set it as follows:
41			The mobile station shall set this field to '1' if
42			MS_INIT_POS_LOC_SUP_IND <sub>S</sub> is equal to '1' and if the mobile
43			station is to initiate a position location session associated
44			with this emergency call; otherwise, the mobile station shall
45			set this field to '0'.

1	QOS_PARMS_INCL	-	Presence indicator for the QoS parameters.
2			If P_REV_IN_USE <sub>s</sub> is less than seven, the mobile station shall
3			omit this field; otherwise the mobile station shall include this
4			field and set it as follows.
5			The mobile station shall set this field to '1', if QoS parameters
6			are included in the message for the service instance
7			corresponding to SR_ID; otherwise the mobile station shall
8			set this field to '0'. The mobile station shall not set this field
9			to '1', if MOB_QOS <sub>s</sub> is set to '0' or if the inclusion of the QoS
10			parameters would prevent the inclusion of all the dialed digits
11			in the message.
12	QOS_PARMS_LEN	-	Length of the block of QoS parameters.
13			If QOS_PARMS_INCL is included and is set to '1', the mobile
14			station shall include this field; otherwise, the mobile station
15			shall omit this field. If this field is included, the mobile
16			station shall set this field to the combined length in octets, of
17			the QOS_PARMS field and the immediately following
18			QOS_RESERVED field.
19	QOS_PARMS	-	QoS parameters block.
20			If QOS_PARMS_INCL is included and is set to '1', the mobile
21			station shall include this field; otherwise, the mobile station
22			shall omit this field. If this field is included, the mobile
23			station shall set it to the set of QoS parameter values as
24			defined in accordance with the requirements for the
25			requested service option and/or for the user, per
26			subscription.
27	QOS_RESERVED	-	QoS reserved bits.
28			If QOS_PARMS_INCL is included and is set to '1', the mobile
29			station shall include the minimum number of bits of '0', such
30			that the combined length of the QOS_PARMS field and of this
31			field is an integer number of octets; otherwise, the mobile
32			station shall omit this field.

- 1        ENC\_INFO\_INCL    -    Encryption fields included.
- 2        If P\_REV\_IN\_USE<sub>S</sub> is less than seven, the mobile station shall
- 3        omit this field; otherwise, the mobile station shall include
- 4        this field and set it as follows.
- 5        The mobile station shall set this field to '1' if the encryption
- 6        related fields are included; otherwise the mobile station shall
- 7        set this field to '0'. The mobile station shall set this field to '0'
- 8        if the base station does not support encryption or the mobile
- 9        station does not support any of the encryption modes
- 10       supported by the base station.
- 11       SIG\_ENCRYPT\_SUP    -    Signaling encryption supported indicator.
- 12       If ENC\_INFO\_INCL is included and is set to '1', the mobile
- 13       station shall include this field; otherwise, the mobile station
- 14       shall omit this field. If this field is included, this field
- 15       indicates which signaling encryption algorithms are
- 16       supported by the mobile station.
- 17       This field consists of the subfields shown in Table
- 18       2.7.1.3.2.1-5.
- 19       If this field is included, the mobile station shall set the
- 20       subfields as follows:
- 21       The mobile station shall set the CMEA subfield to '1'.
- 22       The mobile station shall set each other subfield to '1' if the
- 23       corresponding signaling encryption algorithm is supported by
- 24       the mobile station; otherwise, the mobile station shall set the
- 25       subfield to '0'.
- 26       The mobile station shall set the RESERVED subfield to
- 27       '00000'.
- 28       D\_SIG\_ENCRYPT\_REQ    -    Dedicated channel signaling encryption request indicator.
- 29       If ENC\_INFO\_INCL is included and is set to '1', the mobile
- 30       station shall include this field; otherwise, the mobile station
- 31       shall omit this field. If this field is included, the mobile
- 32       station shall set this field to '1' to request signaling
- 33       encryption to be turned on for signaling messages sent on f-
- 34       dsch and r-dsch, and to '0' to request signaling encryption to
- 35       be turned off for signaling messages sent on f-dsch and r-
- 36       dsch.
- 37       C\_SIG\_ENCRYPT\_REQ    -    Common channel signaling encryption request indicator.
- 38       If ENC\_INFO\_INCL is included and is set to '1', the mobile
- 39       station shall include this field; otherwise, the mobile station
- 40       shall omit this field. If this field is included, the mobile
- 41       station shall set this field to '1' to request signaling
- 42       encryption to be turned on for signaling messages sent on f-
- 43       csch and r-csch, and to '0' to request signaling encryption to
- 44       be turned off for signaling messages sent on f-csch and r-
- 45       csch.

1	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
2			sync.
3			If SIG_ENCRYPT_SUP is included and the ECMEA or REA
4			subfield in SIG_ENCRYPT_SUP is set to '1', the mobile station
5			shall include this field; otherwise, the mobile station shall
6			omit this field. If this field is included, the mobile station
7			shall set this field to a 24-bit value that will be used as the
8			initial value of the 24 MSB of the crypto-sync for both forward
9			and reverse link message encryption and integrity (if message
10			integrity is performed).
11	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
12			If NEW_SSEQ_H is included, the mobile station shall include
13			this field; otherwise, the mobile station shall omit this field. If
14			this field is included, the mobile station shall set this field to
15			the digital signature of the NEW_SSEQ_H as described in
16			2.3.12.4.5.
17	UI_ENCRYPT_REQ	-	Request for user information encryption on the traffic
18			channel indicator.
19			If ENC_INFO_INCL is included and is set to '1', the mobile
20			station shall include this field; otherwise, the mobile station
21			shall omit this field. If this field is included, the mobile
22			station shall set this field to '1' to request user information
23			encryption, and to '0' to request no user information
24			encryption.
25	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
26			If ENC_INFO_INCL is included and is set to '1', the mobile
27			station shall include this field; otherwise, the mobile station
28			shall omit this field. If this field is included, the mobile
29			station shall set this field to indicate the supported user
30			information encryption algorithms.

This field consists of the subfields shown in Table 2.7.1.3.2.4-9.

**Table 2.7.1.3.2.4-9. Encoding of the UI\_ENCRYPT\_SUP Field**

Subfield	Length (bits)	Subfield Description
ORYX	1	Support for ORYX encryption algorithm
REA	1	Support for the Rijndael encryption algorithm used in extended encryption
RESERVED	6	Reserved bits

The mobile station shall set each subfield to '1' if the corresponding user information encryption algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

The mobile station shall set the RESERVED subfield to '000000'.

**SYNC\_ID\_INCL** - Service Configuration synchronization identifier included indicator.

If  $P\_REV\_IN\_USE_s$  is less than seven, the mobile station shall omit this field; otherwise, the mobile station shall include this field and shall set it as follows:

The mobile station shall set this field to '1' if the SYNC\_ID field is included in this message; otherwise, the mobile station shall set this field to '0'.

If  $SYNC\_ID\_SUPPORTED_s$  is equal to '0', the mobile station shall set this field to '0'.

**SYNC\_ID\_LEN** - Service Configuration synchronization identifier length indicator.

If the SYNC\_ID\_INCL field is not included or is included and is set to '0', the mobile station shall omit this field; otherwise the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the length of the SYNC\_ID field included in this message.

**SYNC\_ID** - Service Configuration synchronization identifier.

If the SYNC\_ID\_INCL field is not included, or is included but is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as

1		follows:
2		The mobile station shall set this field to the Service
3		Configuration synchronization identifier corresponding to a
4		stored service configuration.
5	PREV_SID_INCL	- Previous System Identification (SID) included indicator.
6		If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
7		omit this field; otherwise, the mobile station shall include
8		this field and set it as follows:
9		The mobile station shall set this field to '1' if:
10		- The mobile station determines that the SID has been
11		changed after a packet data dormant handoff, and
12		- This message includes the main service instance (see
13		[42]).
14		Otherwise, the mobile station shall set this field to '0'.
15	PREV_SID	- Previous System Identification.
16		If PREV_SID_INCL is not included, or is included but is set to
17		'0', the mobile station shall omit this field; otherwise, the
18		mobile station shall include this field and set it as follows:
19		The mobile station shall set this field to the previous SID.
20	PREV_NID_INCL	- Previous Network Identification (NID) included indicator.
21		If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
22		omit this field; otherwise, the mobile station shall include
23		this field and set it as follows:
24		The mobile station shall set this field to '1' if:
25		- The mobile station determines that NID has been changed
26		after a packet data dormant handoff, and
27		- This message includes the main service instance (see
28		[42]).
29		Otherwise, the mobile station shall set this field to '0'.
30	PREV_NID	- Previous Network Identification.
31		If PREV_NID_INCL is not included, or is included but is set to
32		'0', the mobile station shall omit this field; otherwise, the
33		mobile station shall include this field and set it as follows:
34		The mobile station shall set this field to the previous NID.
35	PREV_PZID_INCL	- Previous Packet Zone ID (PZID) included indicator.
36		If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
37		omit this field; otherwise, the mobile station shall include
38		this field and set it as follows:

The mobile station shall set this field to '1' if:

- The mobile station determines that the Packet Zone ID has been changed after a packet data dormant handoff, and
- This message includes the main service instance (see [42]).

Otherwise, the mobile station shall set this field to '0'.

PREV\_PZID - Previous Packet Zone ID.

If PREV\_PZID\_INCL is not included, or is included but is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the previous PZID.

SO\_BITMAP\_IND - Service option bitmap indicator.

If P\_REV\_IN\_USE<sub>s</sub> is less than 7, the mobile station shall omit this field; otherwise, the mobile station shall set this field as defined in Table 2.7.1.3.2.4-10.

**Table 2.7.1.3.2.4-10. Encoding of the SO\_BITMAP\_IND Field**

SO_BITMAP_IND	Size of bitmap (in bits) included
00	0 bit (i.e., No bitmap included)
01	4 bits
10	8 bits
11	16 bits

SO\_GROUP\_NUM - Service option group number.

If SO\_BITMAP\_IND is included and not set to '00', the mobile station shall include this field and set this field to service option group number defined in [30], of the bitmap to be included in this message; otherwise, the mobile station shall omit this field.

SO\_BITMAP - Service option bitmap.

If the field SO\_BITMAP\_IND is included and is not set to '00', the mobile station shall include the bitmap of the service option group (SO\_GROUP\_NUM); otherwise, the mobile station shall omit this field.

When the service option bitmap is included, if there are more than  $(2^{(1+SO\_BITMAP\_IND)})$  service options defined in [30] for the service option group [SO\_GROUP\_NUM], the mobile station shall include the bitmap containing the least significant bits  $(2^{(1+SO\_BITMAP\_IND)})$  for the service option group.

1		The mobile station shall set a bit in this bitmap to '1', if the
2		mobile station is capable of supporting the service option for
3		which the bit represents; otherwise, the mobile station shall
4		set a bit in this bitmap to '0'.
5	SDB_DESIRED_ONLY	- Short Data Burst Desired Only.
6		If P_REV_IN_USE <sub>S</sub> is less than eight, the mobile station shall
7		omit this field; otherwise, the mobile station shall include
8		this field and set it as follows:
9		If the mobile station desires to exchange user data using only
10		Short Data Bursts on common channels, it shall set this field
11		to '1'; otherwise, it shall set this field to '0'.
12	ALT_BAND_CLASS_SUP	- Alternate band class support indicator.
13		If P_REV_IN_USE <sub>S</sub> is less than eight, then the mobile station
14		shall omit this field; otherwise, the mobile station shall
15		include this field and set it as follows:
16		If BAND_CLASS_INFO_REQ <sub>S</sub> is equal to '1' and the mobile
17		station supports the CDMA band class specified by
18		ALT_BAND_CLASS <sub>S</sub> , then the mobile station shall set this
19		field to '1'; otherwise, the mobile station shall set this field to
20		'0'.
21	MSG_INT_INFO_INCL	- Signaling message integrity information included indicator.
22		If P_REV_IN_USE <sub>S</sub> is less than nine, the mobile station shall
23		omit this field; otherwise, the mobile station shall include
24		this field and set it as follows.
25		If MSG_INTEGRITY_SUP <sub>S</sub> is set to '0', the mobile station shall
26		set this field to '0'; otherwise, the mobile station shall set this
27		field to '1'.
28	SIG_INTEGRITY_SUP_INCL	- Signaling message integrity information included
29		indicator.
30		If MSG_INT_INFO_INCL is included and is set to '1', the
31		mobile station shall include this field and set it as follows;
32		otherwise, the mobile station shall omit this field.
33		If the mobile station supports other integrity algorithm(s) in
34		addition to the default integrity algorithm, the mobile station
35		shall set this field to '1'; otherwise, the mobile station shall
36		set this field to '0'.
37	SIG_INTEGRITY_SUP	- Signaling integrity algorithm supported by the mobile station.
38		If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
39		mobile station shall set this field as follows; otherwise, the
40		mobile station shall omit this field.
41		The mobile station shall set this field to indicate the
42		supported message integrity algorithms in addition to the
43		default integrity algorithm.

1			This field consists of the subfields shown in Table
2			2.7.1.3.2.1-6.
3			The mobile station shall set each subfield to '1' if the
4			corresponding message integrity algorithm is supported by
5			the mobile station; otherwise, the mobile station shall set the
6			subfield to '0'.
7			The mobile station shall set the RESERVED subfield to
8			'00000000'.
9	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm requested by the
10			mobile station.
11			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
12			mobile station shall set this field as follows; otherwise, the
13			mobile station shall omit this field.
14			The mobile station shall include this field and set it to the
15			value corresponding to the message integrity algorithm
16			requested as shown in Table 2.7.1.3.2.1-7.
17	NEW_KEY_ID	-	New key identifier.
18			If MSG_INT_INFO_INCL is included and is set to '1', the
19			mobile station shall include this field and set it as follows;
20			otherwise, the mobile station shall omit this field.
21			The mobile station shall set this field as follows:
22		-	If LAST_2G_KEY_ID equals '00', the mobile station shall
23			set this field to '01'.
24		-	If LAST_2G_KEY_ID equals '01', the mobile station shall
25			set this field to '00'.
26	NEW_SSEQ_H_INCL	-	The include indicator of the 24 MSB of the security sequence
27			number.
28			If MSG_INT_INFO_INCL is included and is set to '1', the
29			mobile station shall include this field and set it as follows;
30			otherwise, the mobile station shall omit this field.
31			The mobile station shall set this field to '0' if any of the
32			following is true:
33		-	If SIG_ENCRYPT_SUP is included and the ECMEA or REA
34			subfield in SIG_ENCRYPT_SUP is set to '1'
35		-	RESTORE_KEYS is equal to '1'.
36			In all other cases, the mobile station shall set this field to '1'.
37	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
38			sync.
39			If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
40			station shall include this field and set this field as follows;
41			otherwise, the mobile station shall omit this field.
42			The mobile station shall set this field to a 24-bit value that
43			will be used as the initial value of the 24 MSB of the crypto-
44			sync for both forward and reverse link message integrity.

1	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
2			If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
3			station shall include this field and set this field as follows;
4			otherwise, the mobile station shall omit this field.
5			The mobile station shall set this field to the digital signature
6			of the NEW_SSEQ_H computed as described in 2.3.12.4.5.
7	FOR_PDCH_SUPPORTED	-	Forward Packet Data Channel supported indicator.
8			If P_REV_IN_USE <sub>s</sub> is less than nine, the mobile station shall
9			omit this field; otherwise, the mobile station shall include
10			this field and set it as follows.
11			If the mobile station supports the Forward Packet Data
12			Channel, then the mobile station shall set this field to '1';
13			otherwise, the mobile station shall set this field to '0'.
14	FOR_PDCH Capability		
15	Type-specific fields	-	Forward Packet Data Channel capability information.
16			If the FOR_PDCH_SUPPORTED field is included and is set to
17			'1', the mobile station shall include this field and set it as
18			defined in 2.7.4.27.5; otherwise, the mobile station shall omit
19			this field.
20	EXT_CH_IND	-	Extended Channel Indicator.
21			If the CH_IND field is not included or is included but is not
22			set to '00', the mobile station shall omit this field; otherwise,
23			the mobile station shall include this field and set it as
24			follows.
25			The mobile station shall set this field as shown in Table
26			2.7.1.3.2.4-11 to request a physical resource.
27			

1

**Table 2.7.1.3.2.4-11. Extended Channel Indicator**

<b>EXT_CH _IND (Binary)</b>	<b>Physical Resource(s) Requested</b>
00000	Reserved
00001	F-PDCH + F-CPCCH + R-FCH
00010	F-PDCH + F-CPCCH + R-DCCH
00011	F-PDCH + F-FCH + R-FCH
00100	F-PDCH + F-DCCH + R-DCCH
00101	F-PDCH + F-FCH + R-FCH + R-DCCH
00110	F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH
00111	Reserved
01000	F-PDCH + R-PDCH + F-CPCCH
01001	F-PDCH + R-PDCH + F-CPCCH + R-FCH
01010	F-PDCH + R-PDCH + F-CPCCH + R-DCCH
01011	F-PDCH + R-PDCH + F-FCH + R-FCH
01100	F-PDCH + R-PDCH + F-DCCH + R-DCCH
01101	F-PDCH + R-PDCH + F-FCH + R-FCH + R-DCCH
01110	F-PDCH + R-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH

<b>EXT_CH _IND (Binary)</b>	<b>Physical Resource(s) Requested</b>
01111	F-PDCH + F-FCH + F-DCCH + R-DCCH
10000	F-PDCH + F-CPCCH + F-DCCH + R-DCCH
10001	F-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH
10010	F-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH
10011	F-PDCH + R-PDCH + F-FCH + F-DCCH + R-DCCH
10100	F-PDCH + R-PDCH + F-CPCCH + F-DCCH + R-DCCH
10101	F-PDCH + R-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH
10110	F-PDCH + R-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH
10111 ~11111	Reserved

1    **SIGN\_SLOT\_CYCLE\_INDEX** – Sign of the slot cycle index.

2 If P\_REV\_IN\_USE<sub>S</sub> is less than 11, or if the  
3 SLOT\_CYCLE\_INDEX field is set to '000', the mobile station  
4 shall omit this field; otherwise, the mobile station shall  
5 include this field and set it as follows:

6 The mobile station shall set this field as specified in Table  
7 2.7.1.3.2.1-8 to the sign of the preferred slot cycle index,  
8 SLOT\_CYCLE\_INDEX<sub>p</sub> (see 2.6.2.1.1). The absolute value of  
9 the preferred slot cycle index, SLOT\_CYCLE\_INDEX<sub>p</sub>, is  
0 specified in the SLOT\_CYCLE\_INDEX field of this message.

- 1    **ADD\_SERV\_INSTANCE\_INCL** - Additional service instances included indicator.
- 2                                If P\_REV\_IN\_USE<sub>s</sub> is less than 11 or if SR\_ID is included and
- 3                                set to '111', the mobile station shall omit this field; otherwise,
- 4                                the mobile station shall include this field and set it as
- 5                                follows:
- 6                                If at least one occurrence of the ADD\_SR\_ID field is included
- 7                                in this message, the mobile station shall set this field to '1';
- 8                                otherwise, the mobile station shall set this field to '0'.
- 9                                If SYNC\_ID\_INCL is equal to '0' and
- 10                                MAX\_ADD\_SERV\_INSTANCE<sub>s</sub> is equal to '0', the mobile
- 11                                station shall set this field to '0'.
- 12    **NUM\_ADD\_SERV\_INSTANCE** - Number of additional service instances included.
- 13                                If ADD\_SERV\_INSTANCE\_INCL is not included or is included
- 14                                and set to '0', the mobile station shall omit this field;
- 15                                otherwise, the mobile station shall include this field and set it
- 16                                to the number of additional service instances included in this
- 17                                message.
- 18                                If SYNC\_ID\_INCL is equal to '0', the mobile station shall set
- 19                                this field to a value less than or equal to
- 20                                MAX\_ADD\_SERV\_INSTANCE<sub>s</sub>.
- 21    If ADD\_SERV\_INSTANCE\_INCL is included and set to '1', the mobile station shall include
- 22    NUM\_ADD\_SERV\_INSTANCE occurrences of the following variable-field record:
- 23                    **ADD\_SR\_ID** - Additional service reference identifier.
- 24                                If SYNC\_ID\_INCL is set to '0', the mobile station shall set this
- 25                                field as follows:
- 26                                o If the service instance provides a service reference
- 27                                identifier, the mobile station shall set this field to the
- 28                                service reference identifier specified by the service
- 29                                instance. If the service instance does not provide a service
- 30                                reference identifier, the mobile station shall set this field
- 31                                to the smallest unused service reference identifier value
- 32                                between 1 and 6 (inclusive).
- 33                                Otherwise, the mobile station shall set this field to the service
- 34                                reference identifier corresponding to the service option
- 35                                connection that the mobile station requests to be restored
- 36                                from the stored service configuration.
- 37                    **ADD\_DRS** - Additional Data Ready to Send indicator.
- 38                                If the service instance corresponding to the ADD\_SR\_ID field
- 39                                of this record has data to send, the mobile station shall set
- 40                                this field to '1'; otherwise, the mobile station shall set this
- 41                                field to '0'.
- 42    **ADD\_SERVICE\_OPTION\_INCL** - Additional service option included indicator.

1		If SYNC_ID_INCL is set to '1', the mobile station shall omit
2		this field; otherwise, the mobile station shall include this field
3		and set it as follows:
4		The mobile station shall set this field to '0' if the requested
5		service option number of the service instance corresponding
6		to the ADD_SR_ID field of this record is the same as
7		SERVICE_OPTION; otherwise, the mobile station shall set
8		this field to '1'.
9	ADD_SERVICE_OPTION	- Additional service option number.
10		If the ADD_SERVICE_OPTION_INCL field of this record is not
11		included or is included and set to '0', the mobile station shall
12		omit this field; otherwise, the mobile station shall include
13		this field and set it to the value specified in [30],
14		corresponding to the requested service option number of the
15		service instance corresponding to the ADD_SR_ID field of this
16		record.
17	ADD_QOS_PARMS_INCL	- Additional QoS parameters included indicator.
18		If SYNC_ID_INCL is set to '1', the mobile station shall omit
19		this field; otherwise, the mobile station shall include this field
20		and set it as follows:
21		If QoS parameters for the service instance corresponding to
22		the ADD_SR_ID field of this record are included in this
23		message, the mobile station shall set this field to '1';
24		otherwise, the mobile station shall set this field to '0'.
25		The mobile station shall not set this field to '1' if MOB_QOS <sub>s</sub>
26		is set to '0'.
27	ADD_QOS_PARMS_LEN	- Additional Length of the block of QoS parameters.
28		If the ADD_QOS_PARMS_INCL field of this record is not
29		included or is included and is set to '0', the mobile station
30		shall omit this field; otherwise, the mobile station shall
31		include this field and set it to the combined length of the
32		ADD_QOS_PARMS field and the ADD_QOS_RESERVED field
33		of this record, in octets.
34	ADD_QOS_PARMS	- Additional QoS parameters block.
35		If the ADD_QOS_PARMS_INCL field of this record is not
36		included or is included and is set to '0', the mobile station
37		shall omit this field; otherwise, the mobile station shall
38		include this field and set it to the set of QoS parameter values
39		as defined in accordance with the requirements for the
40		requested service option and/or for the user, per
41		subscription.
42	ADD_QOS_RESERVED	- Additional QoS reserved bits.

1 If the ADD\_QOS\_PARMS\_INCL field of this record is not  
2 included or is included and is set to '0', the mobile station  
3 shall omit this field; otherwise, the mobile station shall  
4 include the minimum number of bits of '0', such that the  
5 combined length of the QOS\_PARMS field and of this field is  
6 an integer number of octets.

7 BCMC\_INCL - BCMC information included indicator

8 If the P\_REV\_IN\_USE<sub>s</sub> is less than eleven, the mobile station  
9 shall omit this field; otherwise, the mobile station shall  
10 include this field and set it as follows:

11 The mobile station shall set this field to '1' if one or more  
12 BCMC\_PROGRAM\_IDs are included in the message;  
13 otherwise, the mobile station shall set this field to '0'.

14 BCMC\_ORIG\_ONLY\_IND - BCMC origination only indicator

15 If the BCMC\_INCL field is not included or is included and is  
16 set to '0', the mobile station shall omit this field; otherwise,  
17 the mobile station shall include this field and set it as  
18 follows:

19 The mobile station shall set this field to '1' to indicate that  
20 this origination is only for BCMC and no point to point call is  
21 requested in this message; otherwise the mobile station shall  
22 set this field to '0'.

23 FUNDICATED\_BCMC\_SUPPORTED - Fundicated BCMC capability type-specific  
24 supported indicator.

25 If the BCMC\_INCL field is not included or is included and is  
26 set to '0', the mobile station shall omit this field; otherwise,  
27 the mobile station shall include this field and set it as  
28 follows.

29 If the mobile station supports Fundicated BCMC channel  
30 configurations, the mobile station shall set this field to '1';  
31 otherwise, the mobile station shall set this field to '0'.

32 FUNDICATED\_BCMC Capability

33 Type-specific fields - FUNDICATED\_BCMC capability information.

34 If the FUNDICATED\_BCMC\_SUPPORTED field is included  
35 and is set to '1', the mobile station shall include this field and  
36 set it as defined in 2.7.4.27.7; otherwise, the mobile station  
37 shall omit this field.

38 AUTH\_SIGNATURE\_INCL - Authorization signature included indication.

39 If the BCMC\_INCL field is not included or is included and is  
40 set to '0', the mobile station shall omit this field; otherwise,  
41 the mobile station shall include this field and set it as  
42 follows.

1		The mobile station shall set this field to '1' to indicate that
2		the authorization signature is included in this message for
3		some of the BCMC flows included in this message; otherwise,
4		the mobile station shall set this field to '0'.
5	TIME_STAMP_SHORT_LENGTH	- Length of time stamp included in this message.
6		If the AUTH_SIGNATURE_INCL field is not included or is
7		included and is set to '0', the mobile station shall omit this
8		field; otherwise, the mobile station shall include this field and
9		set it as follows:
10		The mobile station shall set this field to the length of the time
11		stamp, in units of bits, included in this message.
12	TIME_STAMP_SHORT	- Time stamp short.
13		If the AUTH_SIGNATURE_INCL field is not included or is
14		included and is set to '0', the mobile station shall omit this
15		field; otherwise, the mobile station shall include this field and
16		set it as follows:
17		The mobile station shall set this field to the
18		TIME_STAMP_SHORT_LENGTH least significant bits of the
19		time stamp parameter used to generate the Authorization
20		signature included in this message.
21	NUM_BCMC_PROGRAMS	- Number of BCMC Programs
22		If the BCMC_INCL field is not included or is included and is
23		set to '0', the mobile station shall omit this field; otherwise,
24		the mobile station shall include this field and set it as
25		follows:
26		The mobile station shall set this field to the number of BCMC
27		programs included in this message minus 1.
28	The mobile station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following	
29	variable length record:	
30	BCMC_PROGRAM_ID_LEN	- Length of BCMC_PROGRAM_ID field
31		The mobile station shall set this field to one less than the
32		length, in bits, of the BCMC_PROGRAM_ID of this program.
33	BCMC_PROGRAM_ID	- BCMC program Identifier
34		The length of this field shall be one more than the value of
35		BCMC_PROGRAM_ID_LEN bits.
36		The mobile station shall set this field to the identifier of the
37		BCMC program corresponding to one or more flows that the
38		mobile station will continue to monitor or start to monitor
39		upon receiving confirmation of delivery of this message or is
40		requesting transmission.

1	BCMC_FLOW_DISCRIMINATOR_LEN	-	Length of BCMC_FLOW_DISCRIMINATOR field
2			The mobile station shall set this field to the length, in bits, of
3			the BCMC_FLOW_DISCRIMINATOR of this program. To
4			request all flows associated with this BCMC_PROGRAM_ID,
5			the mobile station may set this field to '000'.
6	NUM_FLOW_DISCRIMINATOR	-	Number of BCMC flow discriminators
7			The length of this field shall be determined by the value of the
8			BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
9			BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
10			is omitted; otherwise, the length of this field shall be
11			BCMC_FLOW_DISCRIMINATOR_LEN bits.
12			The mobile station shall set this field to the number of flow
13			discriminators included for this program minus one.
14	If NUM_FLOW_DISCRIMINATOR field is included, the mobile station shall include		
15	NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;		
16	otherwise, the mobile station shall include 1 occurrence of the following variable length		
17	record:		
18	BCMC_FLOW_DISCRIMINATOR	-	BCMC Flow discriminator.
19			The length of this field shall be determined by the value of the
20			BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
21			BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
22			is omitted; otherwise, the length of this field shall be
23			BCMC_FLOW_DISCRIMINATOR_LEN bits.
24			The mobile station shall set this field to the BCMC flow
25			discriminator requested.
26	AUTH_SIGNATURE_IND	-	Authorization signature indicator.
27			If the AUTH_SIGNATURE_INCL field is not included or is
28			included and is set to '0', the mobile station shall omit this
29			field; otherwise, the mobile station shall include this field and
30			set it as follows:
31			The mobile station shall set this field to '1' to indicate that
32			the authorization signature is included in this message for
33			this BCMC flow; otherwise, the mobile station shall set this
34			field to '0'.
35	AUTH_SIGNATURE_SAME_IND	-	Authorization signature same as previous BCMC
36			flow indicator.
37			If the AUTH_SIGNATURE_IND field is not included or is
38			included and is set to '0', the mobile station shall omit this
39			field; otherwise, the mobile station shall include this field and
40			set it as follows:

1		The mobile station shall set this field to '1' to indicate that
2		the authorization signature generated for this BCMC flow is
3		the same as the one generated for the BCMC flow listed prior
4		to this BCMC flow in this message; otherwise, the mobile
5		station shall set this field to '0'.
6		For the first BCMC flow listed in this message, the mobile
7		station shall set this field to '0'.
8	BAK_ID	- BAK identifier.
9		If the AUTH_SIGNATURE_SAME_IND field is not included or
10		is included and is set to '1', the mobile station shall omit this
11		field; otherwise, the mobile station shall include this field and
12		set it as follows:
13		The mobile station shall set this field to BAK identifier used
14		to generate the Authorization signature included in this
15		message.
16	AUTH_SIGNATURE	- Authorization signature.
17		If the AUTH_SIGNATURE_SAME_IND field is not included or
18		is included and is set to '1', the mobile station shall omit this
19		field; otherwise, the mobile station shall include this field and
20		set it as follows:
21		The mobile station shall set this field to the Authorization
22		signature computed for this BCMC flow as specified in
23		2.6.13.9.
24	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
25		If P_REV_IN_USE <sub>s</sub> is less than 11 or
26		FOR_PDCH_SUPPORTED is not included or is included and
27		is set to '0', the mobile station shall omit this field; otherwise,
28		the mobile station shall include this field and set it as
29		follows.
30		If the mobile station supports the Reverse Packet Data
31		Channel (R-PDCH), the mobile station shall set this field to
32		'1'; otherwise, the mobile station shall set this field to '0'.
33	REV_PDCH Capability	
34	Type-specific fields	- Reverse Packet Data Channel capability information.
35		If the REV_PDCH_SUPPORTED field is included and is set to
36		'1', the mobile station shall include this field and set it as
37		defined in 2.7.4.27.6; otherwise, the mobile station shall omit
38		this field.
39	BAND_SUB_REP_INCL	- Band class – band subclass report included

- 1 If P\_REV\_IN\_USE<sub>S</sub> is less than eleven, the mobile station  
 2 shall omit this field; otherwise, the mobile station shall  
 3 include this field and set it as follows:
- 4
- 5 If CAND\_BAND\_INFO\_REQ<sub>S</sub> is equal to '1' and the mobile  
 6 station supports at least 1 band class and band subclass (if  
 7 applicable) combination queried by the base station, the  
 8 mobile station shall set this field to '1'; otherwise, the mobile  
 9 station shall set this field to '0'.
- 10 NUM\_BAND\_SUBCLASS - Number of band class - band subclass capabilities reported
- 11 If BAND\_SUB\_REP\_INCL is set to '0' or is not included, this  
 12 field shall be omitted; otherwise, the mobile station shall  
 13 include this field and set it as follows:
- 14 If the mobile station supports all candidate band class and  
 15 band subclass (if applicable) combinations queried by the  
 16 base station, the mobile station shall set this field to '0000';  
 17 otherwise, the mobile station shall set this field to the  
 18 number of band class-band subclass capabilities reported.
- 19 If the NUM\_BAND\_SUBCLASS field is included in this message, the mobile station shall  
 20 include NUM\_BAND\_SUBCLASS occurrences of the BAND\_SUBCLASS\_SUP field:
- 21 BAND\_SUBCLASS\_SUP - Band class-band subclass supported indicator
- 22 The mobile station shall set this field as specified in section  
 23 2.6.14.1.
- 24 ADD\_GEO\_LOC\_INCL - Additional Geo-location included indicator.
- 25 If P\_REV\_IN\_USE<sub>S</sub> is less than twelve, the mobile station shall  
 26 omit this field; otherwise, the mobile station shall include  
 27 this field and set it as follows.
- 28 If the message is to contain the ADD\_GEO\_LOC\_TYPE field,  
 29 the mobile station shall set this field to '1'; otherwise, the  
 30 mobile station shall set this field to '0'.
- 31 ADD\_GEO\_LOC\_TYPE\_LEN\_IND - Additional Geo-Location Type Length Indicator.
- 32 If ADD\_GEO\_LOC\_INCL is included in the message and is set  
 33 to '1', the mobile station shall include this field and shall set  
 34 it as described below; otherwise, the mobile station shall omit  
 35 this field.
- 36 The mobile station shall set this field to '0' to indicate length  
 37 of the ADD\_GEO\_LOC\_TYPE field is 16 bits. The mobile  
 38 station shall set this field to '1' to indicate length of the  
 39 ADD\_GEO\_LOC\_TYPE field is 24 bits.
- 40 ADD\_GEO\_LOC\_TYPE - Additional Geo-Location Type.

1 If ADD\_GEO\_LOC\_INCL is included in the message and is set  
2 to '1', the mobile station shall include this field and shall set  
3 it as described below; otherwise, the mobile station shall omit  
4 this field.  
5 This field consists of the subfields shown in 2.7.4.46-1.  
6 The mobile station shall set each subfield to '1' if the  
7 corresponding capability is supported by the mobile station;  
8 otherwise, the mobile station shall set the subfield to '0'.  
9

NUM\_BAND\_SUBCLASS occurrences of the following field:

{ (NUM\_BAND\_SUBCLASS)

BAND_SUBCLASS_SUP	1
-------------------	---

} (NUM\_BAND\_SUBCLASS)

- 1
- 2            MOB\_TERM    –   Mobile terminated calls accepted indicator.
- 3                            If the mobile station is configured to accept mobile
- 4                            terminated calls while operating with the current roaming
- 5                            status (see 2.6.5.3), the mobile station shall set this bit to '1'.
- 6                            Otherwise, the mobile station shall set this bit to '0'.
- 7            SLOT\_CYCLE\_INDEX    –   Slot cycle index.
- 8                            If P\_REV\_IN\_USE<sub>s</sub> is less than 11, or if
- 9                            MIN\_SLOT\_CYCLE\_INDEX is equal to '0', the mobile station
- 10                           shall perform the following:
- 11                           • If the mobile station is configured for slotted mode
- 12                           operation, the mobile station shall set this field to max (0,
- 13                           SLOT\_CYCLE\_INDEX<sub>p</sub>) (see 2.6.2.1.1). Otherwise, the
- 14                           mobile station shall set this field to '000'.
- 15                           Otherwise, the mobile station shall perform the following:
- 16                           • If the mobile station is configured for slotted mode
- 17                           operation, the mobile station shall set this field to the
- 18                           absolute value of the preferred slot cycle index,
- 19                           SLOT\_CYCLE\_INDEX<sub>p</sub> (see 2.6.2.1.1); otherwise, the
- 20                           mobile station shall set this field to '000'. The sign of
- 21                           SLOT\_CYCLE\_INDEX<sub>p</sub> is specified in the
- 22                           SIGN\_SLOT\_CYCLE\_INDEX field of this message (see
- 23                           Table 2.7.1.3.2.1-8).
- 24            MOB\_P\_REV    –   Protocol revision of the mobile station.
- 25                           The mobile station shall set this field to '00001100'.

1	SCM	-	Station class mark.
2			The mobile station shall set this field to the station class
3			mark of the mobile station. See 2.3.3.
4	REQUEST_MODE	-	Requested mode code. The mobile station shall set this field
5			to the value shown in Table 2.7.1.3.2.4-1 corresponding to its
6			current configuration.
7	SERVICE_OPTION	-	Service option.
8			If the mobile station accepts the service option specified by
9			the mobile-station-addressed page, it shall set this field as
10			follows:
11		•	If the page record to which the mobile station is
12			responding contained a SERVICE_OPTION field, the
13			mobile station shall set this field to the service option
14			number specified in the SERVICE_OPTION field of the
15			page record to which the mobile station is responding.
16		•	If the page record to which the mobile station is
17			responding did not contain a SERVICE_OPTION field, the
18			mobile station shall set this field to the default option
19			number '0000000000000001'.
20			If the mobile station does not accept the service option
21			specified by the mobile-station-addressed page to which the
22			mobile station is responding and the mobile station has an
23			alternative service option to request, the mobile station shall
24			set this field to the service option code specified in [30]
25			corresponding to the alternative service option.
26			If the mobile station does not accept the service option
27			specified by the mobile-station-addressed page to which the
28			mobile station is responding and the mobile station does not
29			have an alternative service option to request, the mobile
30			station shall set this field to '0000000000000000' to reject
31			the service option specified by the page record of the <i>General</i>
32			<i>Page Message</i> or <i>Universal Page Message</i> to which the mobile
33			station is responding.
34			If the mobile station is not responding to a page and the
35			service option for this call setup is not known, the mobile
36			station shall set this field to '0000000000000001' to indicate
37			the base station is not to use this field <sup>3</sup> .
38	PM	-	Privacy mode indicator.
39			To request voice privacy, the mobile station shall set this field
40			to '1'; otherwise, the mobile station shall set this field to '0'.
41	NAR_AN_CAP	-	Narrow analog capability.

---

<sup>3</sup> This scenario could occur only in a Direct Channel Assignment call setup.

1		If the mobile station is capable of narrow analog operation,
2		the mobile station shall set this bit to '1'; otherwise, the
3		mobile station shall set this bit to '0'. The mobile station shall
4		set this bit to '0'.
5	ENCRYPTION_SUPPORTED	- Encryption algorithms supported by the mobile station.
6		If P_REV_IN_USE <sub>S</sub> is greater than or equal to seven or
7		AUTH_MODE is equal to '00', the mobile station shall omit
8		this field. If P_REV_IN_USE <sub>S</sub> is less than seven and
9		AUTH_MODE is not equal to '00', then the mobile station
10		shall set this field as specified in table 2.7.1.3.2.4-5.
11	NUM_ALT_SO	- Number of alternative service options.
12		If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
13		set this field to the number of alternative service options it
14		supports other than the one specified in the
15		SERVICE_OPTION field. The mobile station shall set this
16		field to a value less than or equal to MAX_NUM_ALT_SO <sub>S</sub> .
17		If P_REV_IN_USE <sub>S</sub> is equal to or greater than seven, the
18		mobile station shall set this field to the number of alternate
19		service options, which either have no service option group
20		number assigned or do not belong to the same service option
21		group whose bitmap is being included. The alternate service
22		option numbers are other than the one specified in the
23		SERVICE_OPTION field. The mobile station shall set this field
24		to a value less than or equal to MAX_NUM_ALT_SO <sub>S</sub> .
25	ALT_SO	- Alternative service option.
26		The mobile station shall include NUM_ALT_SO occurrences of
27		this field. The mobile station shall set this field to the value
28		specified in [30], corresponding to the alternative service
29		option supported by the mobile station.
30		If P_REV_IN_USE <sub>S</sub> is equal to or greater than seven, the
31		mobile station shall include NUM_ALT_SO occurrences of in
32		this field. The mobile station shall set this field to the service
33		option number defined in [30] corresponding to the alternate
34		service options which either have no service option group
35		number assigned or do not belong to the same service option
36		group whose bitmap is included in this message.
37	UZID_INCL	- User Zone Identifier included indicator.
38		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
39		omit this field; otherwise, the mobile station shall include
40		this field and set it as follows.
41		If the message is to contain the User Zone Identifier, the
42		mobile station shall set this field to '1'; otherwise, the mobile
43		station shall set this field to '0'.
44	UZID	- User Zone Identifier.

If the UZID\_INCL field is included in the message and is set to '1', the mobile station shall include this field and set it to UZID<sub>S</sub>; otherwise, the mobile station shall omit this field.

**CH\_IND** – Channel Indicator.

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it, as shown in Table 2.7.1.3.2.5-1, to request physical resources.

**Table 2.7.1.3.2.5-1. Channel indicator**

<b>CH_IND (binary)</b>	<b>Channel(s) Requested</b>
00	Refer to EXT_CH_IND
01	Fundamental Channel
10	Dedicated Control Channel
11	Fundamental Channel and Dedicated Control Channel

**OTD\_SUPPORTED** – Orthogonal transmit diversity supported indicator

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station supports orthogonal transmit diversity, it shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**QPCH\_SUPPORTED** – Quick Paging Channel supported indicator.

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station supports the Quick Paging Channel, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**ENHANCED\_RC** – Enhanced radio configuration supported indicator.

If P\_REV\_IN\_USE<sub>S</sub> is less than six, the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows.

If the mobile station supports any radio configuration in the Radio Configuration Class 2 (see 1.1.1), the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

**FOR\_RC\_PREF** – Forward Radio Configuration preference.

1		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
2		omit this field; otherwise, the mobile station shall include
3		this field and set it as follows.
4		The mobile station shall set this field to its preferred Radio
5		Configuration for the Forward Fundamental Channel and/or
6		Forward Dedicated Control Channel.
7	REV_RC_PREF	- Reverse Radio Configuration preference.
8		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
9		omit this field; otherwise, the mobile station shall include
10		this field and set it as follows.
11		The mobile station shall set this field to its preferred Radio
12		Configuration for the Reverse Fundamental Channel and/or
13		Reverse Dedicated Control Channel.
14	FCH_SUPPORTED	- Fundamental Channel supported indicator.
15		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
16		omit this field; otherwise, the mobile station shall include
17		this field and set it as follows.
18		The mobile station shall set this field to '1' if the mobile
19		station supports Fundamental Channel; otherwise, the
20		mobile station shall set this field to '0'.
21	FCH Capability Type specific fields	- Fundamental Channel capability information.
22		If the FCH_SUPPORTED field is included and is set to '1', the
23		mobile station shall include this field and set it as described
24		in 2.7.4.27.1; otherwise, the mobile station shall omit this
25		field.
26	DCCH_SUPPORTED	- Dedicated Control Channel supported indicator.
27		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
28		omit this field; otherwise, the mobile station shall include
29		this field and set it as follows.
30		The mobile station shall set this field to '1' if the mobile
31		station supports Dedicated Control Channel; otherwise, the
32		mobile station shall set this field to '0'.
33	DCCH Capability Type specific fields	- Dedicated Control Channel capability
34		information.
35		If DCCH_SUPPORTED is included and is set to '1', the mobile
36		station shall include this field and set it as defined in
37		2.7.4.27.2; otherwise, the mobile station shall omit this field.
38	REV_FCH_GATING_REQ	- Reverse Fundamental Channel eighth gating mode request
39		indicator.
40		If P_REV_IN_USE <sub>S</sub> is less than six, the mobile station shall
41		omit this field; otherwise, the mobile station shall include
42		this field and set it as follows:

1			If the mobile station requests to turn on the reverse
2			Fundamental Traffic Channel gating mode in Radio
3			Configurations 3, 4, 5, and 6, the mobile station shall set this
4			field to '1'; otherwise, the mobile station shall set this field to
5			'0'.
6	STS_SUPPORTED	-	STS supported indicator.
7			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
8			omit this field; otherwise, the mobile station shall include
9			this field and set it as follows.
10			The mobile station shall set this field to '1' if the mobile
11			station supports Space Time Spreading Transmit Diversity;
12			otherwise, the mobile station shall set this field to '0'.
13	3X_CCH_SUPPORTED	-	3X Common Channels supported.
14			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
15			omit this field; otherwise, the mobile station shall include
16			this field and set it as follows.
17			The mobile station shall set this field to '1' if the mobile
18			station supports the Spreading Rate 3 common channels (3X
19			BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile
20			station shall set this field to '0'.
21	WLL_INCL	-	WLL information included indicator.
22			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
23			omit this field; otherwise, the mobile station shall include this
24			field and set it as follows.
25			If the mobile station is a Wireless Local Loop device, the
26			mobile station shall set this field to '1'; otherwise, the mobile
27			station shall set this field to '0'.
28	WLL_DEVICE_TYPE	-	WLL device type indicator.
29			If WLL_INCL is not included, or if WLL_INCL is included and
30			is set to '0', the mobile station shall omit this field; otherwise,
31			the mobile station shall set this field as follows.
32			The mobile station shall set this field to the
33			WLL_DEVICE_TYPE value shown in Table 2.7.1.3.2.1-3
34			corresponding to the mobile station device type.
35	HOOK_STATUS	-	WLL terminal hook status.
36			If WLL_INCL is not included, or if WLL_INCL is included and
37			is set to '0', the mobile station shall omit this field; otherwise,
38			the mobile station shall set this field to the value shown in
39			Table 2.7.1.3.2.1-4 corresponding to the hook state.

1	ENC_INFO_INCL	-	Encryption fields included.
2			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
3			omit this field; otherwise, the mobile station shall include
4			this field and set it as follows:
5			The mobile station shall set this field to '1' if the encryption
6			related fields are included; otherwise the mobile station shall
7			set this field to '0'. The mobile station shall set this field to '0'
8			if the base station does not support encryption or the mobile
9			station does not support any of the encryption modes
10			supported by the base station.
11	SIG_ENCRYPT_SUP	-	Signaling encryption supported indicator.
12			If ENC_INFO_INCL is included and is set to '1', the mobile
13			station shall include this field; otherwise, the mobile station
14			shall omit this field. If this field is included, the mobile
15			station shall set this field to indicate which signaling
16			encryption algorithms are supported by the mobile station.
17			This field consists of the subfields shown in Table
18			2.7.1.3.2.1-5.
19			If this field is included, the mobile station shall set the
20			subfields as follows:
21			The mobile station shall set the CMEA subfield to '1'.
22			The mobile station shall set each other subfield to '1' if the
23			corresponding signaling encryption algorithm is supported by
24			the mobile station; otherwise, the mobile station shall set the
25			subfield to '0'.
26			The mobile station shall set the RESERVED subfield to
27			'00000'.
28	D_SIG_ENCRYPT_REQ	-	Dedicated channel signaling encryption request indicator.
29			If ENC_INFO_INCL is included and is set to '1', the mobile
30			station shall include this field; otherwise, the mobile station
31			shall omit this field. If this field is included, the mobile
32			station shall set this field to '1' to request signaling
33			encryption to be turned on for signaling messages sent on f-
34			dsch and r-dsch, and to '0' to request signaling encryption to
35			be turned off for signaling messages sent on f-dsch and r-
36			dsch.
37	C_SIG_ENCRYPT_REQ	-	Common channel signaling encryption request indicator.
38			If ENC_INFO_INCL is included and is set to '1', the mobile
39			station shall include this field; otherwise, the mobile station
40			shall omit this field. If this field is included, the mobile
41			station shall set this field to '1' to request signaling
42			encryption to be turned on for signaling messages sent on f-
43			csch and r-csch, and to '0' to request signaling encryption to
44			be turned off for signaling messages sent on f-csch and r-
45			csch.

1	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
2			sync.
3			If SIG_ENCRYPT_SUP is included and the ECMEA or REA
4			subfield in SIG_ENCRYPT_SUP is set to '1', the mobile station
5			shall include this field; otherwise, the mobile station shall
6			omit this field. If this field is included, the mobile station
7			shall set this field to a 24-bit value that will be used as the
8			initial value of the 24 MSB of the crypto-sync for both forward
9			and reverse link message encryption and integrity (if message
10			integrity is performed).
11	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
12			If the NEW_SSEQ_H field is included in the message, the
13			mobile station shall set this field to the digital signature of
14			the NEW_SSEQ_H as described in 2.3.12.4.5; otherwise, the
15			mobile station shall omit this field.
16	UI_ENCRYPT_REQ	-	Request for user information encryption on the traffic
17			channel indicator.
18			If ENC_INFO_INCL is included and is set to '1', the mobile
19			station shall include this field; otherwise, the mobile station
20			shall omit this field. If this field is included, the mobile
21			station shall set this field to '1' to request user information
22			encryption, and to '0' to request no user information
23			encryption.
24	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
25			If ENC_INFO_INCL is included and is set to '1', the mobile
26			station shall include this field; otherwise, the mobile station
27			shall omit this field. If this field is included, the mobile
28			station shall set this field to indicate the supported user
29			information encryption algorithms.
30			This field consists of the subfields shown in Table
31			2.7.1.3.2.4-9.
32			The mobile station shall set each subfield to '1' if the
33			corresponding user information encryption algorithm is
34			supported by the mobile station; otherwise, the mobile
35			station shall set the subfield to '0'.
36			The mobile station shall set the RESERVED subfield to
37			'000000'.
38	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
39			indicator.
40			If P_REV_IN_USE <sub>S</sub> is less than seven, the mobile station shall
41			omit this field; otherwise, the mobile station shall include
42			this field and set it as follows.
43			The mobile station shall set this field to '1' if the SYNC_ID
44			field is included in this message; otherwise, the mobile
45			station shall set this field to '0'.

1			If SYNC_ID_SUPPORTED <sub>s</sub> is equal to '0', the mobile station
2			shall set this field to '0'.
3	SYNC_ID_LEN	-	Service Configuration synchronization identifier length
4			indicator.
5			If the SYNC_ID_INCL field is not included or is included and
6			is set to '0', the mobile station shall omit this field; otherwise
7			the mobile station shall include this field and set it as
8			follows:
9			The mobile station shall set this field to the length of the
10			SYNC_ID field included in this message.
11	SYNC_ID	-	Service Configuration synchronization identifier.
12			If the SYNC_ID_INCL field is not included, or is included and
13			is set to '0', the mobile station shall omit this field; otherwise,
14			the mobile station shall include this field and set it as
15			follows:
16			The mobile station shall set this field to the Service
17			Configuration synchronization identifier corresponding to the
18			stored service configuration.
19	SO_BITMAP_IND	-	SO bitmap indicator.
20			If P_REV_IN_USE <sub>s</sub> is less than 7, the mobile station shall
21			omit this field; otherwise, the mobile station shall include
22			this field and set this field as defined in Table 2.7.1.3.2.4-10.
23	SO_GROUP_NUM	-	The service option group number.
24			If SO_BITMAP_IND is included and not set to '00', the mobile
25			station shall include this field and set this field to service
26			option group number of the bitmap to be included in this
27			message; otherwise, the mobile station shall omit this field.
28	SO_BITMAP	-	Service option bitmap.
29			If the field SO_BITMAP_IND field is included and is not set to
30			'00', the mobile station shall include the bitmap of the service
31			option group (SO_GROUP_NUM); otherwise, the mobile
32			station shall omit this field.
33			When the service option bitmap is included, if there are more
34			than $(2^{(1+SO\_BITMAP\_IND)})$ service options defined for the
35			service option group, the mobile station shall include the
36			bitmap containing the least significant bits $(2^{(1+SO\_BITMAP\_IND)})$
37			of the service option group.
38			The mobile station shall set a bit in this bitmap to '1', if the
39			mobile station is capable of supporting the service option for
40			which the bit represents; otherwise, the mobile station shall
41			set a bit in this bitmap to '0'.
42	ALT_BAND_CLASS_SUP	-	Alternate band class support indicator.

1			If P_REV_IN_USE <sub>S</sub> is less than eight, then the mobile station
2			shall omit this field; otherwise, the mobile station shall
3			include this field and set it as follows:
4			If BAND_CLASS_INFO_REQ <sub>S</sub> is equal to '1' and the mobile
5			station supports the CDMA band class specified by
6			ALT_BAND_CLASS <sub>S</sub> , then the mobile station shall set this
7			field to '1'; otherwise, the mobile station shall set this field to
8			'0'.
9	MSG_INT_INFO_INCL	-	Signaling message integrity information included indicator.
10			If P_REV_IN_USE <sub>S</sub> is less than nine, the mobile station shall
11			omit this field; otherwise, the mobile station shall include
12			this field and set it as follows.
13			If MSG_INTEGRITY_SUP <sub>S</sub> is set to '0', the mobile station shall
14			set this field to '0'; otherwise, the mobile station shall set this
15			field to '1'.
16	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included
17			indicator.
18			If MSG_INT_INFO_INCL is included and is set to '1', the
19			mobile station shall include this field and set it as follows;
20			otherwise, the mobile station shall omit this field.
21			If the mobile station supports other integrity algorithm(s) in
22			addition to the default integrity algorithm, the mobile station
23			shall set this field to '1'; otherwise, the mobile station shall
24			set this field to '0'.
25	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the mobile station.
26			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
27			mobile station shall set this field as follows; otherwise, the
28			mobile station shall omit this field.
29			The mobile station shall set this field to indicate the
30			supported message integrity algorithms in addition to the
31			default integrity algorithm.

1			This field consists of the subfields shown in Table
2			2.7.1.3.2.1-6.
3			The mobile station shall set each subfield to '1' if the
4			corresponding message integrity algorithm is supported by
5			the mobile station; otherwise, the mobile station shall set the
6			subfield to '0'.
7			The mobile station shall set the RESERVED subfield to
8			'00000000'.
9	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm requested by the
10			mobile station.
11			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
12			mobile station shall set this field as follows; otherwise, the
13			mobile station shall omit this field.
14			The mobile station shall include this field and set it to the
15			value corresponding to the message integrity algorithm
16			requested as shown in Table 2.7.1.3.2.1-7.
17	NEW_KEY_ID	-	New key identifier.
18			If MSG_INT_INFO_INCL is included and is set to '1', the
19			mobile station shall include this field and set it as follows;
20			otherwise, the mobile station shall omit this field.
21			The mobile station shall set this field as follows:
22		-	If LAST_2G_KEY_ID equals '00', the mobile station shall
23			set this field to '01'.
24		-	If LAST_2G_KEY_ID equals '01', the mobile station shall
25			set this field to '00'.
26	NEW_SSEQ_H_INCL	-	The include indicator of the 24 MSB of the security sequence
27			number.
28			If MSG_INT_INFO_INCL is included and is set to '1', the
29			mobile station shall include this field and set it as follows;
30			otherwise, the mobile station shall omit this field.
31			The mobile station shall set this field to '0' if any of the
32			following is true:
33		-	If SIG_ENCRYPT_SUP is included and the ECMEA or REA
34			subfield in SIG_ENCRYPT_SUP is set to '1'
35		-	RESTORE_KEYS is equal to '1'.
36			In all other cases, the mobile station shall set this field to '1'.
37	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
38			sync.
39			If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
40			station shall include this field and set this field as follows;
41			otherwise, the mobile station shall omit this field.
42			The mobile station shall set this field to a 24-bit value that
43			will be used as the initial value of the 24 MSB of the crypto-
44			sync for both forward and reverse link message integrity.

1	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
2			If NEW_SSEQ_H_INCL is included and is set to '1', the mobile
3			station shall include this field and set this field as follows;
4			otherwise, the mobile station shall omit this field.
5			The mobile station shall set this field to the digital signature
6			of the NEW_SSEQ_H computed as described in 2.3.12.4.5.
7	FOR_PDCH_SUPPORTED	-	Forward Packet Data Channel supported indicator.
8			If P_REV_IN_USE <sub>s</sub> is less than nine, the mobile station shall
9			omit this field; otherwise, the mobile station shall include
10			this field and set it as follows.
11			If the mobile station supports the Forward Packet Data
12			Channel, then the mobile station shall set this field to '1';
13			otherwise, the mobile station shall set this field to '0'.
14	FOR_PDCH Capability		
15	Type-specific fields	-	Forward Packet Data Channel capability information.
16			If the FOR_PDCH_SUPPORTED field is included and is set to
17			'1', the mobile station shall include this field and set it as
18			defined in 2.7.4.27.5; otherwise, the mobile station shall omit
19			this field.
20	EXT_CH_IND	-	Extended Channel Indicator.
21			If the CH_IND field is not included or is included but is not
22			set to '00', the mobile station shall omit this field; otherwise,
23			the mobile station shall include this field and set it as
24			follows.
25			The mobile station shall set this field as shown in Table
26			2.7.1.3.2.4-11 to request a physical resource.
27	SIGN_SLOT_CYCLE_INDEX	-	Sign of the slot cycle index.
28			If P_REV_IN_USE <sub>s</sub> is less than 11, or if the
29			SLOT_CYCLE_INDEX field is set to '000', the mobile station
30			shall omit this field; otherwise, the mobile station shall
31			include this field and set it as follows:
32			The mobile station shall set this field as specified in Table
33			2.7.1.3.2.1-8 to the sign of the preferred slot cycle index,
34			SLOT_CYCLE_INDEX <sub>p</sub> (see 2.6.2.1.1). The absolute value of
35			the preferred slot cycle index, SLOT_CYCLE_INDEX <sub>p</sub> , is
36			specified in the SLOT_CYCLE_INDEX field of this message.
37	BCMC_INCL	-	BCMC information included indicator
38			If the P_REV_IN_USE <sub>s</sub> is less than 11, the mobile station
39			shall omit this field; otherwise, the mobile station shall
40			include this field and set it as follows:

1		The mobile station shall set this field to '1' if one or more
2		BCMC_PROGRAM_IDs are included in the message;
3		otherwise, the mobile station shall set this field to '0'.
4	BCMC_PREF_INCL	- BCMC preference included indicator
5		If the BCMC_INCL field is not included or is included and is
6		set to '0', the mobile station shall omit this field; otherwise,
7		the mobile station shall include this field and set it as
8		follows:
9		The mobile station shall set this field to '1' if BCMC
10		preference information is included in this message;
11		otherwise, the mobile station shall set this field to '0'.
12	FUNDICATED_BCMC_SUPPORTED	- Fundicated BCMC capability type-specific
13		supported indicator.
14		If the BCMC_INCL field is not included or is included and is
15		set to '0', the mobile station shall omit this field; otherwise,
16		the mobile station shall include this field and set it as
17		follows.
18		If the mobile station supports Fundicated BCMC channel
19		configurations, the mobile station shall set this field to '1';
20		otherwise, the mobile station shall set this field to '0'.
21	FUNDICATED_BCMC Capability	
22	Type-specific fields	- FUNDICATED_BCMC capability information.
23		If the FUNDICATED_BCMC_SUPPORTED field is included
24		and is set to '1', the mobile station shall include this field and
25		set it as defined in 2.7.4.27.7; otherwise, the mobile station
26		shall omit this field.
27	AUTH_SIGNATURE_INCL	- Authorization signature included indication.
28		If the BCMC_INCL field is not included or is included and is
29		set to '0', the mobile station shall omit this field; otherwise,
30		the mobile station shall include this field and set it as
31		follows.
32		The mobile station shall set this field to '1' to indicate that
33		the authorization signature is included in this message for
34		each of the BCMC flows included in this message; otherwise,
35		the mobile station shall set this field to '0'.
36	TIME_STAMP_SHORT_LENGTH	- Length of time stamp included in this message.
37		If the AUTH_SIGNATURE_INCL field is not included or is
38		included and is set to '0', the mobile station shall omit this
39		field; otherwise, the mobile station shall include this field and
40		set it as follows:
41		The mobile station shall set this field to the length of the time
42		stamp, in units of bits, included in this message.
43	TIME_STAMP_SHORT	- Time stamp short.

1		If the AUTH_SIGNATURE_INCL field is not included or is
2		included and is set to '0', the mobile station shall omit this
3		field; otherwise, the mobile station shall include this field and
4		set it as follows:
5		The mobile station shall set this field to the
6		TIME_STAMP_SHORT_LENGTH least significant bits of the
7		time stamp parameter used to generate the Authorization
8		signature included in this message.
9	NUM_BCMC_PROGRAMS	- Number of BCMC Programs
10		If the BCMC_INCL field is not included or is included and is
11		set to '0', the mobile station shall omit this field; otherwise,
12		the mobile station shall include this field and set it as
13		follows:
14		The mobile station shall set this field to the number of BCMC
15		programs included in this message minus 1.
16	The mobile station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following	
17	variable length record:	
18	BCMC_PROGRAM_ID_LEN	- Length of BCMC_PROGRAM_ID field
19		The mobile station shall set this field to one less than the
20		length, in bits, of the BCMC_PROGRAM_ID of this program.
21	BCMC_PROGRAM_ID	- BCMC program Identifier
22		The length of this field shall be one more than the value of
23		BCMC_PROGRAM_ID_LEN bits.
24		The mobile station shall set this field to the identifier of the
25		BCMC program corresponding to one or more flows that the
26		mobile station is requesting.
27	BCMC_FLOW_DISCRIMINATOR_LEN	- Length of BCMC_FLOW_DISCRIMINATOR field
28		The mobile station shall set this field to the length, in bits, of
29		the BCMC_FLOW_DISCRIMINATOR of this program. To
30		request all flows associated with this BCMC_PROGRAM_ID,
31		the mobile station may set this field to '000'.
32	NUM_FLOW_DISCRIMINATOR	- Number of BCMC flow discriminators
33		The length of this field shall be determined by the value of the
34		BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
35		BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
36		is omitted; otherwise, the length of this field shall be
37		BCMC_FLOW_DISCRIMINATOR_LEN bits.
38		The mobile station shall set this field to the number of flow
39		discriminators included for this program minus one.

1 If NUM\_FLOW\_DISCRIMINATOR field is included, the mobile station shall include  
 2 NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
 3 otherwise, the mobile station shall include 1 occurrence of the following variable length  
 4 record:

5 BCMC\_FLOW\_DISCRIMINATOR - BCMC Flow discriminator.

6 The length of this field shall be determined by the value of the  
 7 BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
 8 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
 9 is omitted; otherwise, the length of this field shall be  
 10 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

11 The mobile station shall set this field to the BCMC flow  
 12 discriminator requested.

13 BCMC\_PREF - BCMC preference indicator

14 If the BCMC\_PREF\_INCL field is not included or is included  
 15 and is set to '0', the mobile station shall omit this field;  
 16 otherwise, the mobile station shall include this field and set it  
 17 as follows:

18 The mobile station shall set this field to '1' to indicate that  
 19 the mobile station has higher preference for this BCMC flow  
 20 than the incoming call for which this message is sent;  
 21 otherwise, the mobile station shall set this field to '0'.

22 AUTH\_SIGNATURE\_IND - Authorization signature indicator.

23 If the AUTH\_SIGNATURE\_INCL field is not included or is  
 24 included and is set to '0', the mobile station shall omit this  
 25 field; otherwise, the mobile station shall include this field and  
 26 set it as follows:

27 The mobile station shall set this field to '1' to indicate that  
 28 the authorization signature is included in this message for  
 29 this BCMC flow; otherwise, the mobile station shall set this  
 30 field to '0'.

31 AUTH\_SIGNATURE\_SAME\_IND - Authorization signature same as previous BCMC  
 32 flow indicator.

33 If the AUTH\_SIGNATURE\_IND field is not included or is  
 34 included and is set to '0', the mobile station shall omit this  
 35 field; otherwise, the mobile station shall include this field and  
 36 set it as follows:

37 The mobile station shall set this field to '1' to indicate that  
 38 the authorization signature generated for this BCMC flow is  
 39 the same as the one generated for the BCMC flow listed prior  
 40 to this BCMC flow in this message; otherwise, the mobile  
 41 station shall set this field to '0'.

42 For the first BCMC flow listed in this message, the mobile  
 43 station shall set this field to '0'.

1	BAK_ID	- BAK identifier.
2		If the AUTH_SIGNATURE_SAME_IND field is not included or
3		is included and is set to '1', the mobile station shall omit this
4		field; otherwise, the mobile station shall include this field and
5		set it as follows:
6		The mobile station shall set this field to BAK identifier used
7		to generate the Authorization signature included in this
8		message.
9	AUTH_SIGNATURE	- Authorization signature.
10		If the AUTH_SIGNATURE_SAME_IND field is not included or
11		is included and is set to '1', the mobile station shall omit this
12		field; otherwise, the mobile station shall include this field and
13		set it as follows:
14		The mobile station shall set this field to the Authorization
15		signature computed for this BCMC flow as specified in
16		2.6.13.9.
17	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
18		If P_REV_IN_USE <sub>S</sub> is less than 11 or
19		FOR_PDCH_SUPPORTED is not included or is included and
20		is set to '0', the mobile station shall omit this field; otherwise,
21		the mobile station shall include this field and set it as
22		follows.
23		If the mobile station supports the Reverse Packet Data
24		Channel (R-PDCH), the mobile station shall set this field to
25		'1'; otherwise, the mobile station shall set this field to '0'.
26	REV_PDCH Capability Type-specific fields	- Reverse Packet Data Channel capability
27		information.
28		If the REV_PDCH_SUPPORTED field is included and is set to
29		'1', the mobile station shall include this field and set it as
30		defined in 2.7.4.27.6; otherwise, the mobile station shall omit
31		this field.
32	BAND_SUB_REP_INCL	- Band class – band subclass report included
33		If P_REV_IN_USE <sub>S</sub> is less than eleven, the mobile station
34		shall omit this field; otherwise, the mobile station shall
35		include this field and set it as follows:
36		If CAND_BAND_INFO_REQ <sub>S</sub> is equal to '1' and the mobile
37		station supports at least 1 band class and band subclass ( if
38		applicable) combination queried by the base station, the
39		mobile station shall set this field to '1'; otherwise, the mobile
40		station shall set this field to '0'.
41		

- 1    NUM\_BAND\_SUBCLASS – Number of band class - band subclass capabilities reported  
2  
3                    If BAND\_SUB\_REP\_INCL is set to '0' or is not included, this  
4                    field shall be omitted; otherwise, the mobile station shall  
5                    include this field and set it as follows:  
6  
7                    If the mobile station supports all candidate band class and  
8                    band subclass (if applicable) combinations queried by the  
9                    base station, the mobile station shall set this field to '0000';  
10                   otherwise, the mobile station shall set this field to the  
11                   number of band class-band subclass capabilities reported.
- 10   If the NUM\_BAND\_SUBCLASS field is included in this message, the mobile station shall  
11   include NUM\_BAND\_SUBCLASS occurrences of the BAND\_SUBCLASS\_SUP field:
- 12   BAND\_SUBCLASS\_SUP – Band class-band subclass supported indicator  
13  
14                    The mobile station shall set this field as specified in section  
15                    2.6.14.1.

1 2.7.1.3.2.6 Authentication Challenge Response Message

2 MSG\_TAG: AUCRM

3

Field	Length (bits)
AUTHU	18

4 AUTHU – Authentication challenge response.

5 The mobile station shall set this field as specified in  
6 2.3.12.1.4.

7

## 1 2.7.1.3.2.7 Status Response Message

2 MSG\_TAG: STRPM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL\_INFO\_LEN}$

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD\_LEN}$

}

4 QUAL\_INFO\_TYPE - Qualification information type.  
 5 The mobile station shall set this field to the  
 6 QUAL\_INFO\_TYPE field in the corresponding *Status Request*  
 7 *Message*.

8 QUAL\_INFO\_LEN - Qualification information length.  
 9 The mobile station shall set this field to the QUAL\_INFO\_LEN  
 10 field in the corresponding *Status Request Message*.

11 Type-specific fields - Type-specific fields.  
 12 The mobile station shall set these fields to the qualification  
 13 information in the corresponding *Status Request Message*.

14 The mobile station shall include all the records requested in the corresponding *Status*  
 15 *Request Message*. The mobile station shall include one occurrence of the following fields  
 16 for each information record to be included:

17 RECORD\_TYPE - Information record type.  
 18 The mobile station shall set this field to the record type value  
 19 shown in Table 2.7.4-1 corresponding to the type of this  
 20 information record.

21 RECORD\_LEN - Information record length.  
 22 The mobile station shall set this field to the number of octets  
 23 included in the type-specific fields of this information record.

24 Type-specific fields - Type-specific fields.  
 25 The mobile station shall set these fields to the information as  
 26 specified in 2.7.4 for the specific type of records. The mobile  
 27 station shall only specify the information corresponding to  
 28 the included qualification information.  
 29

- 1 2.7.1.3.2.8 TMSI Assignment Completion Message
- 2 MSG\_TAG: TACM
- 3 There are no Layer 3 fields associated with this message.

- 4

## 1 2.7.1.3.2.10 Extended Status Response Message

2 MSG\_TAG: ESTRPM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL\_INFO\_LEN}$
NUM_INFO_RECORDS	4

NUM\_INFO\_RECORDS occurrences of the following record:

{ (NUM\_INFO\_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD\_LEN}$

} (NUM\_INFO\_RECORDS)

4

5 QUAL\_INFO\_TYPE – Qualification information type.

6 The mobile station shall set this field to the  
7 QUAL\_INFO\_TYPE field in the corresponding *Status Request*  
8 *Message*.

9 QUAL\_INFO\_LEN – Qualification information length.

10 The mobile station shall set this field to the QUAL\_INFO\_LEN  
11 field in the corresponding *Status Request Message*.

12 Type-specific fields – Type-specific fields.

13 The mobile station shall set these fields to the qualification  
14 information in the corresponding *Status Request Message*.

15 NUM\_INFO\_RECORDS – Number of information records included.

16 The mobile station shall set this field to the number of  
17 information records which are included. The mobile station  
18 shall include all the records requested in the corresponding  
19 *Status Request Message*.

20 The mobile station shall include one occurrence of the following fields for each information  
21 record which is included:

22 RECORD\_TYPE – Information record type.

23 The mobile station shall set this field to the record type value  
24 shown in Table 2.7.4-1 corresponding to the type of this  
25 information record.

26 RECORD\_LEN – Information record length.

1		The mobile station shall set this field to the number of octets
2		included in the type-specific fields of this information record.
3	Type-specific fields	– Type-specific fields.
4		The mobile station shall set these fields to the information as
5		specified in 2.7.4 for the specific type of records. The mobile
6		station shall only specify the information corresponding to
7		the included qualification information.
8		

## 1 2.7.1.3.2.11 Device Information Message

2 MSG\_TAG: DIM

3

Field	Length (bits)
WLL_DEVICE_TYPE	3
NUM_INFO_RECORDS	5

NUM\_INFO\_RECORDS occurrences of the following record:

{ (NUM\_INFO\_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM\_INFO\_RECORDS)

4

5 WLL\_DEVICE\_TYPE – WLL device type indicator.

6 The mobile station shall set this field to the  
 7 WLL\_DEVICE\_TYPE value shown in Table 2.7.1.3.2.1-3  
 8 corresponding to the mobile station device type.

9 NUM\_INFO\_RECORDS – Number of information records included.

10 The mobile station shall set this field to the number of  
 11 information records which are included.

12 The mobile station shall include one occurrence of the following fields for each information  
 13 record which is included:

14 RECORD\_TYPE – Information record type.

15 The mobile station shall set this field to the record type code  
 16 shown in Table 2.7.4-1 corresponding to the type of this  
 17 information record.

18 RECORD\_LEN – Information record length.

19 The mobile station shall set this field to the number of octets  
 20 in the type-specific fields of this record.

21 Type-specific fields – Type-specific fields.

22 The mobile station shall set these fields as specified in 2.7.4  
 23 for this type of information record.

24

## 1 2.7.1.3.2.12 Security Mode Request Message

2 MSG\_TAG: SMRM

3

Field	Length (bits)
UI_ENC_INCL	1
UI_ENCRYPT_SUP	0 or 8
SIG_ENC_INCL	1
SIG_ENCRYPT_SUP	0 or 8
C_SIG_ENCRYPT_REQ	0 or 1
NEW_SSEQ_H_INCL	1
NEW_SSEQ_H	0 or 24
NEW_SSEQ_H_SIG	0 or 8
MSG_INT_INFO_INCL	1
SIG_INTEGRITY_SUP_INCL	0 or 1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3

4

5 UI\_ENC\_INCL – User information encryption fields included.

6 The mobile station shall set this field to '1' if the user  
 7 information encryption related fields are included in this  
 8 message; otherwise, the mobile station shall set this field to  
 9 '0'.

10 UI\_ENCRYPT\_SUP – User information encryption supported indicator.

11 If UI\_ENC\_INCL is equal to '1', the mobile station shall  
 12 include this field; otherwise, the mobile station shall omit  
 13 this field. If this field is included, the mobile station shall set  
 14 this field to indicate the supported user information  
 15 encryption algorithms.

16 This field consists of the subfields shown in Table  
 17 2.7.1.3.2.4-9.

18 The mobile station shall set each subfield to '1' if the  
 19 corresponding user information encryption algorithm is  
 20 supported by the mobile station; otherwise, the mobile  
 21 station shall set the subfield to '0'.

22 The mobile station shall set the RESERVED subfield to  
 23 '000000'.

24 SIG\_ENC\_INCL – Signaling encryption fields included.

1			The mobile station shall set this field to '1' if the following two
2			fields related to signaling encryption fields are included in
3			this message; otherwise, the mobile station shall set this field
4			to '0'.
5	SIG_ENCRYPT_SUP	-	Signaling encryption supported indicator.
6			If SIG_ENC_INCL is equal to '1', the mobile station shall
7			include this field; otherwise, the mobile station shall omit
8			this field. If this field is included, the mobile shall set this
9			field to indicate the supported signaling encryption
10			algorithms supported by the mobile station.
11			This field consists of the subfields shown in Table
12			2.7.1.3.2.1-5.
13			If this field is included, the mobile station shall set the
14			subfields as follows:
15			The mobile station shall set the CMEA subfield to '1'.
16			The mobile station shall set each other subfield to '1' if the
17			corresponding signaling encryption algorithm is supported by
18			the mobile station; otherwise, the mobile station shall set the
19			subfield to '0'.
20			The mobile station shall set the RESERVED subfield to
21			'00000'.
22	C_SIG_ENCRYPT_REQ	-	Common channel signaling encryption request indicator.
23			If SIG_ENC_INCL is equal to '1', the mobile station shall
24			include this field; otherwise, the mobile station shall omit
25			this field. If this field is included, the mobile station shall set
26			this field to '1' to request signaling encryption to be turned on
27			for signaling messages sent on f-csch and r-csch, and to '0' to
28			request signaling encryption to be turned off for signaling
29			messages sent on f-csch and r-csch.
30	NEW_SSEQ_H_INCL	-	The NEW_SSEQ included indicator.
31			The mobile station shall set this field to '1' if NEW_SSEQ_H is
32			included in this message; otherwise, the mobile station shall
33			set this field to '0'.
34			If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '0', the mobile station
35			shall set this field to '1' if the mobile station is to include the
36			NEW_SSEQ_H and NEW_SSEQ_H_SIG fields.
37			If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '1', the mobile station
38			shall set this field to '0'.
39	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of crypto-sync.
40			If NEW_SSEQ_H_INCL is set to '1', the mobile station shall
41			include this field; otherwise, the mobile station shall omit
42			this field. If this field is included, the mobile station shall set
43			this field to a 24-bit value that will be used as the initial
44			value of the 24 MSB of the crypto-sync for both forward and
45			reverse link message encryption and integrity.

1	NEW_SSEQ_H_SIG	-	The signature of NEW_SSEQ_H
2			If NEW_SSEQ_H is included, the mobile station shall include
3			this field; otherwise, the mobile station shall omit this field. If
4			this field is included, the mobile station shall set this field to
5			the digital signature of the NEW_SSEQ_H computed as
6			described in 2.3.12.4.5.
7	MSG_INT_INFO_INCL	-	Signaling message integrity information included indicator.
8			If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '0', the mobile station
9			shall set this field to '0'; otherwise, the mobile station shall
10			set this field to '1'.
11	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included
12			indicator.
13			If MSG_INT_INFO_INCL is set to '0', the mobile station shall
14			omit this field; otherwise, the mobile station shall include
15			this field and set it as follows:
16			If the mobile station supports other integrity algorithm(s) in
17			addition to the default integrity algorithm, the mobile station
18			shall set this field to '1'; otherwise, the mobile station shall
19			set this field to '0'.
20	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the mobile station.
21			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
22			mobile station shall set this field as follows; otherwise, the
23			mobile station shall omit this field.
24			The mobile station shall set this field to indicate the
25			supported message integrity algorithm in addition to the
26			default integrity algorithm.
27			This field consists of the subfields shown in Table
28			2.7.1.3.2.1-6.
29			The mobile station shall set each subfield to '1' if the
30			corresponding message integrity algorithm is supported by
31			the mobile station; otherwise, the mobile station shall set the
32			subfield to '0'.
33			The mobile station shall set the RESERVED subfield to
34			'00000000'.
35	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm requested by the
36			mobile station.
37			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
38			mobile station shall set this field as follows; otherwise, the
39			mobile station shall omit this field.
40			The mobile station shall include this field and set it to the
41			value corresponding to the message integrity algorithm
42			requested as shown in Table 2.7.1.3.2.1-7.
43			

## 2.7.1.3.2.13 Authentication Response Message

MSG\_TAG: AURSPM

Field	Length (bits)
RES	128
SIG_INTEGRITY_SUP_INCL	1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3
NEW_KEY_ID	2
NEW_SSEQ_H	24

RES – The output, RES, of the User Authentication Function.

The mobile station shall set this field to the output, RES, of the function as specified in Figure 2.3.12.5.2-2. If the UIM returns a RES value with length smaller than 128, the mobile station shall store the RES value in the most significant bits of the RES field and pad the least significant bits with '0's.

SIG\_INTEGRITY\_SUP\_INCL – Signaling message integrity information included indicator.

If the mobile station supports other integrity algorithm(s) in addition to the default integrity algorithm, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

1			
2	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported indicator.
3			If SIG_INTEGRITY_SUP_INCL is set to '1', the mobile station
4			shall set this field as follows; otherwise, the mobile station
5			shall omit this field.
6			The mobile station shall set this field to indicate the
7			supported message integrity algorithms in addition to the
8			default integrity algorithm.
9			This field consists of the subfields shown in Table
10			2.7.1.3.2.1-6.
11			The mobile station shall set each subfield to '1' if the
12			corresponding message integrity algorithm is supported by
13			the mobile station; otherwise, the mobile station shall set the
14			subfield to '0'.
15			The mobile station shall set the RESERVED subfield to
16			'00000000'.
17	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm requested by the
18			mobile station.
19			If SIG_INTEGRITY_SUP_INCL is set to '1', the mobile station
20			shall set this field as follows; otherwise, the mobile station
21			shall omit this field.
22			The mobile station shall include this field and set it to the
23			value corresponding to the message integrity algorithm
24			requested as shown in Table 2.7.1.3.2.1-7.
25	NEW_KEY_ID	-	New key identifier.
26			The mobile station shall set this field as follows:
27		-	If LAST_3G_KEY_ID equals '10', the mobile station shall
28			set this field to '11'.
29		-	If LAST_3G_KEY_ID equals '11', the mobile station shall
30			set this field to '10'.
31	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
32			sync.
33			The mobile station shall set this field to a 24-bit value that
34			will be used as the initial value of the 24 MSB of the crypto-
35			sync for both forward and reverse link message integrity.
36			

## 2.7.1.3.2.14 Authentication Resynchronization Message

MSG\_TAG: AURSYNM

Field	Length (bits)
CON_MS_SQN	48
MAC_S	64

CON\_MS\_SQN – The concealed sequence number of the authentication vector.  
The mobile station shall set this field to the output, CON\_MS\_SQN, of the function as specified in Figure 2.3.12.5.2-3.

MAC\_S – Message authentication code for resynchronization.  
The mobile station shall set this field to the output, MAC\_S, of the function as specified in Figure 2.3.12.5.2-3.

## 1 2.7.1.3.2.15 Reconnect Message

2 MSG\_TAG: RCNM

3

Field	Length (bits)
ORIG_IND	1
SYNC_ID_INCL	1
SYNC_ID_LEN	0 or 4
SYNC_ID	0 or (8 × SYNC_ID_LEN)
SERVICE_OPTION	0 or 16
SR_ID	0 or 3
ADD_SERV_INSTANCE_INCL	0 or 1
NUM_ADD_SERV_INSTANCE	0 or 3

NUM\_ADD\_SERV\_INSTANCE occurrences of the following record:

{ (NUM\_ADD\_SERV\_INSTANCE)

ADD_SR_ID	3
-----------	---

} (NUM\_ADD\_SERV\_INSTANCE)

SDB_INCL	0 or 1
NUM_FIELDS	0 or 8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	8
-------------------	---

} (NUM\_FIELDS)

4 ORIG\_IND – Origination indicator

5 If this message is being sent in place of an *Origination*  
6 *Message*, the mobile station shall set this field to '1'; if this  
7 message is being sent in place of a *Page Response Message*,  
8 the mobile station shall set this field to '0'.

9 SYNC\_ID\_INCL – Service Configuration synchronization identifier included  
10 indicator.

11 The mobile station shall set this field to '1' if the SYNC\_ID  
12 field is included in this message; otherwise, the mobile  
13 station shall set this field to '0'.

14 If SYNC\_ID\_SUPPORTED<sub>s</sub> is equal to '0', the mobile station  
15 shall set this field to '0'.

1	SYNC_ID_LEN	-	Service Configuration synchronization identifier length indicator.
2			
3			If the SYNC_ID_INCL field is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:
4			
5			
6			The mobile station shall set this field to the length of the SYNC_ID field included in this message.
7			
8	SYNC_ID	-	Service Configuration synchronization identifier.
9			If the SYNC_ID_INCL field is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:
10			
11			
12			The mobile station shall set this field to the Service Configuration synchronization identifier corresponding to the stored service configuration.
13			
14			
15	SERVICE_OPTION	-	Service option number.
16			If the SYNC_ID_INCL field is set to '1', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:
17			
18			
19			If the ORIG_IND field is set to '1', the mobile station shall set this field to the service option number corresponding to the service being reconnected.
20			
21			
22			If the ORIG_IND field is set to '0', the mobile station shall set this field as follows:
23			
24			
25			• If the mobile station accepts the service option specified by the mobile-station-addressed page, the mobile station shall set this field to the service option number specified in the SERVICE OPTION field of the page record to which the mobile station is responding.
26			
27			
28			
29			
30			▪ If the mobile station does not accept the service option specified by the mobile-station-addressed page to which the mobile station is responding and the mobile station has an alternative service option to request, the mobile station shall set this field to the service option code specified in [30] corresponding to the alternative service option.
31			
32			
33			
34			
35			
36			
37			▪ If the mobile station does not accept the service option specified by the mobile-station-addressed page to which the mobile station is responding and the mobile station does not have an alternative service option to request, the mobile station shall set this field to '0000000000000000' to reject the service option specified by the page record of
38			
39			
40			
41			
42			

1 the *General Page Message* or *Universal Page Message* to  
 2 which the mobile station is responding.

3 SR\_ID – Service reference identifier.

4 If the ORIG\_IND field is set to '0', the mobile station shall  
 5 omit this field; otherwise, the mobile station shall include  
 6 this field and set it as follows.

7 If the SYNC\_ID\_INCL field is set to '0', the mobile station shall  
 8 set this field as follows:

9 o If the service instance provides a service reference  
 10 identifier, the mobile station shall set this field to the  
 11 service reference identifier specified by the service  
 12 instance. If the service instance does not provide a service  
 13 reference identifier, the mobile station shall set this field  
 14 to the smallest unused service reference identifier value  
 15 between 1 and 6 (inclusive).

16 Otherwise, the mobile station shall set this field as follows:

17 o If the mobile station requests the restoration of a single  
 18 service option connection from the stored service  
 19 configuration, the mobile station shall set this field to the  
 20 corresponding service reference identifier

21 o If the mobile station requests the restoration of more than  
 22 one but not all service option connections from the stored  
 23 service configuration, the mobile station shall set this  
 24 field to the service reference identifier corresponding to  
 25 one of the service option connections to be restored.

26 o Otherwise (that is, the mobile station requests the  
 27 restoration of all the service option connections from the  
 28 stored service configuration), the mobile station shall set  
 29 this field to '111'.

30 ADD\_SERV\_INSTANCE\_INCL- Additional service instances included indicator.

31 If the ORIG\_IND field is set to '0' or P\_REV\_IN\_USE<sub>s</sub> is less  
 32 than 11 or if SYNC\_ID\_INCL is set to '0' or if SR\_ID is  
 33 included and set to '111', the mobile station shall omit this  
 34 field; otherwise, the mobile station shall include this field and  
 35 set it as follows:

1 If at least one occurrence of the ADD\_SR\_ID field is included  
2 in this message, the mobile station shall set this field to '1';  
3 otherwise, the mobile station shall set this field to '0'.

4 NUM\_ADD\_SERV\_INSTANCE - Number of additional service instances included.  
5 If ADD\_SERV\_INSTANCE\_INCL is not included or is included  
6 and set to '0', the mobile station shall omit this field;  
7 otherwise, the mobile station shall include this field and set it  
8 to the number of additional service instances included in this  
9 message.

10 If ADD\_SERV\_INSTANCE\_INCL is included and set to '1', the mobile station shall include  
11 NUM\_ADD\_SERV\_INSTANCE occurrences of the following record:

12 ADD\_SR\_ID - Additional service reference identifier.  
13 The mobile station shall set this field to the service reference  
14 identifier corresponding to the service option connection that  
15 the mobile station requests to be restored from the stored  
16 service configuration.

17 SDB\_INCL - Short Data Burst included indicator.  
18 If P\_REV\_IN\_USE<sub>s</sub> is less than eleven, the mobile station  
19 shall omit this field; otherwise, the mobile station shall  
20 include this field and set it as follows:  
21 If a Short Data Burst (i.e., data burst message with burst type  
22 equal to '000110', see [30]) is being included in this message,  
23 the mobile station shall set this field to '1'; otherwise, the  
24 mobile station shall set this field to '0'.  
25 The mobile station shall set this field to '0' if  
26 SDB\_IN\_RCNM\_IND<sub>s</sub> or SDB\_SUPPORTED<sub>s</sub> is equal to '0'.

27 NUM\_FIELDS - Number of characters in this message.  
28 If SDB\_INCL is set to '0', the mobile station shall omit this  
29 field; otherwise, the mobile station shall include this field and  
30 set it as follows:  
31 The mobile station shall set this field to the number of CHAR<sub>i</sub>  
32 fields included in this message.

33 If SDB\_INCL is included and set to '1', the mobile station shall include NUM\_FIELDS  
34 occurrences of the following record:

35 CHAR<sub>i</sub> - Character.  
36 The mobile station shall set these fields to the corresponding  
37 octet of the data burst stream.  
38  
39

## 1 2.7.1.3.2.16 Radio Environment Message

2 MSG\_TAG: REM

Field	Length (bits)
MODE_DISABLED	1
TKZ_MODE_IND	1

3 MODE\_DISABLED - Mode disabled indicator.

4 The mobile station shall set this field to '1' if any of the  
5 following conditions is true:

- 6 • RER\_COUNT is equal to (RER\_MAX\_NUM\_MSG<sub>S</sub> - 1) and  
7 the TKZ\_MODE\_IND field in this message is set to '0', or  
8 • TKZ\_COUNT is equal to (TKZ\_MAX\_NUM\_MSG<sub>S</sub> - 1) and  
9 the TKZ\_MODE\_IND field in this message is set to '1'.

10 Otherwise, the mobile station shall set this field to '0'.

11 TKZ\_MODE\_IND - Tracking zone mode indicator.

12 The mobile station shall set this field to '1' if the *Radio*  
13 *Environment Message* is sent for tracking zone mode;  
14 otherwise, the mobile station shall set this field to '0'.

15

- 1 2.7.1.3.2.17 Call Recovery Request Message
- 2 MSG\_TAG: CRRM
- 3 There are no Layer 3 fields associated with this message.
- 4

## 1 2.7.1.3.2.18 General Extension Message

2 MSG\_TAG: GEM

Field	Length (bits)
NUM_GE_REC	8

NUM\_GE\_REC occurrences of the following record:

{ (NUM\_GE\_REC)

GE_REC_TYPE	8
GE_REC_LEN	8
GE_REC	8 x GE_REC_LEN

} (NUM\_GE\_REC)

MESSAGE_TYPE	8
MESSAGE_REC	variable

3 NUM\_GE\_REC - Number of General Extension Records included in this message.

4 The mobile station shall set this field to the number of general  
 5 extension records included in this message. Mobile station shall  
 6 set this field to a value greater than 0.

7 GE\_REC\_TYPE - Type of General Extension Record.

8 The mobile station shall set this field based on the type of record  
 9 as specified in Table 2.7.1.3.2.17-1.

10 **Table 2.7.1.3.2.17-1. General Extension Record Type**  
 11 **values**

GE_REC_TYPE (binary)	Description
00000000	Supported Band Class - Subclass
00000001-11111111	Reserved

12 GE\_REC\_LEN - Length of the General Extension Record.

13 The mobile station shall set this field to the length in octets of  
 14 the general extension record following the GE\_REC\_LEN field.

15 GE\_REC - General Extension Record.

16 The mobile station shall set this field according to the previous  
 17 occurrence of the GE\_REC\_TYPE in this message. If the  
 18 GE\_REC\_TYPE is set to '00000000' then the mobile station shall  
 19 set the GE\_REC to the following:

20

NUM_BAND_SUBCLASS	0 or 4
-------------------	--------

NUM\_BAND\_SUBCLASS occurrences of the following field:

{ (NUM\_BAND\_SUBCLASS)

BAND_SUBCLASS_SUP	1
-------------------	---

} (NUM\_BAND\_SUBCLASS)

Reserved	0-7
----------	-----

- 1 NUM\_BAND\_SUBCLASS – Number of band class - band subclass capabilities reported
- 2 If the mobile station supports all candidate band class and
- 3 band subclass (if applicable) combinations queried by the
- 4 base station, the mobile station shall set this field to '0000';
- 5 otherwise, the mobile station shall set this field to the
- 6 number of band class-band subclass capabilities reported.
- 7 If the NUM\_BAND\_SUBCLASS field is included in this message, the mobile station shall
- 8 include NUM\_BAND\_SUBCLASS occurrences of the BAND\_SUBCLASS\_SUP field:
- 9 BAND\_SUBCLASS\_SUP – Band class - Band subclass supported indicator
- 10 The mobile station shall set this field as specified in section
- 11 2.6.14.1.
- 12 RESERVED – Reserved bits.
- 13 This field shall contain the number of bits required to make
- 14 the entire GE\_REC field an integer number of octets in
- 15 length. All bits of this field shall be set to zeros.
- 16 MESSAGE\_TYPE – Message type of the message included in the *General*
- 17 *Extension Message*.
- 18 This field shall contain the message type value for the
- 19 message following this field. When transmitting the general
- 20 extension message over r-csch, then mobile station shall set
- 21 the first 2 MSB of this field to '00'. The mobile station shall
- 22 set this field according to [4].
- 23 MESSAGE\_REC – Message extended through the General Extension message.
- 24 The mobile station shall set this field to the message that is
- 25 being extended using the *General Extension Message*.
- 26
- 27

1 2.7.2 r-dsch

2 During Traffic Channel operation, the mobile station sends signaling messages to the base  
3 station using the r-dsch.

4 2.7.2.1 Reserved

5 2.7.2.2 Reserved

6 2.7.2.3 PDU Formats for Messages on r-dsch

7 The messages sent on the r-dsch are summarized in Table 2.7.2.3-1.

8 **Table 2.7.2.3-1. Messages on r-dsch (Part 1 of 2)**

- 3

## 1 2.7.2.3.2.1 Order Message

2 MSG\_TAG: ORDM

3

Field	Length (bits)
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	$8 \times \text{ADD\_RECORD\_LEN}$
CON_REF_INCL	0 or 1
CON_REF	0 or 8

4

5 ORDER – Order code.

6 The mobile station shall set this field to the ORDER code.  
7 See 2.7.3.

8 ADD\_RECORD\_LEN – Additional record length.

9 The mobile station shall set this field to the number of octets  
10 in the order-specific fields included in this message.

11 Order-specific fields – Order-specific fields.

12 The mobile station shall include order-specific fields as  
13 specified in 2.7.3.

14 CON\_REF\_INCL – Connection reference included indicator.

15 If the order carried by this message is not a Call Control order  
16 (2.6.10), the mobile station shall omit this field; otherwise,  
17 the mobile station shall include this field and set it as  
18 follows:19 The mobile station shall set this field to '1' if the connection  
20 reference field is included in this message; otherwise, it shall  
21 set this field to '0'.

22 CON\_REF – Connection reference.

23 If the CON\_REF\_INCL field is not included, or is included but  
24 is set to '0', the mobile station shall omit this field; otherwise,  
25 the mobile station shall include this field and shall set it to  
26 the value of the connection reference assigned to the service  
27 option connection of the call, to which this message  
28 corresponds.  
29

1    2.7.2.3.2.2 Authentication Challenge Response Message

2    MSG\_TAG: AUCRM

3

Field	Length (bits)
AUTHU	18

4

5            AUTHU    –    Authentication challenge response.

6                            The mobile station shall set this field as specified in

7                            2.3.12.1.4.

8

## 1 2.7.2.3.2.3 Flash With Information Message

2 MSG\_TAG: FWIM

3

Field	Length (bits)
-------	---------------

Zero or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD\_LEN}$

}

4

5 The mobile station shall include one occurrence of the following record for each  
6 information record to be included:

7 RECORD\_TYPE – Information record type.

8 The mobile station shall set this field to the record type code  
9 shown in Table 2.7.4-1 corresponding to the type of this  
10 information record.

11 RECORD\_LEN – Information record length.

12 The mobile station shall set this field to the number of octets  
13 in the type-specific fields of this record.

14 Type-specific fields – Type-specific fields.

15 The mobile station shall set these fields as specified in 2.7.4  
16 for this type of information record.

17

## 1 2.7.2.3.2.4 Data Burst Message

2 MSG\_TAG: DBM

3

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	8
-------------------	---

} (NUM\_FIELDS)

4

5 MSG\_NUMBER – Message number within the data burst stream.

6 The mobile station shall set this field to the number of this  
7 message within the data burst stream.

8 BURST\_TYPE – Data burst type.

9 The mobile station shall set the value of this field for the type  
10 of this data burst as defined in [30]. If the mobile station sets  
11 this field equal to '111110', it shall set the first two CHAR<sub>i</sub>  
12 fields of this message equal to  
13 EXTENDED\_BURST\_TYPE\_INTERNATIONAL as described in  
14 the definition of CHAR<sub>i</sub> below. If the mobile station sets this  
15 field equal to '111111', it shall set the first two CHAR<sub>i</sub> fields of  
16 this message equal to the EXTENDED BURST TYPE as  
17 described in the definition of CHAR<sub>i</sub> below.

18 NUM\_MSGS – Number of messages in the data burst stream.

19 The mobile station shall set this field to the number of  
20 messages within this data burst stream.

21 NUM\_FIELDS – Number of characters in this message.

22 The mobile station shall set this field to the number of CHAR<sub>i</sub>  
23 fields included in this message.

24 CHAR<sub>i</sub> – Character.

25 The mobile station shall include NUM\_FIELDS occurrences of  
26 this field. The mobile station shall set these fields to the  
27 corresponding octet of the data burst stream.

If the BURST\_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED\_BURST\_TYPE\_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED\_BURST\_TYPE\_INTERNATIONAL field shall specify the COUNTRY\_BURST\_TYPE. The mobile station shall set the value of the COUNTRY\_BURST\_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

If the BURST TYPE field of this message is equal to '111111', the first two CHARi octets shall represent a single, 16 bit, EXTENDED BURST TYPE field, as shown below. The mobile station shall set the value of the EXTENDED BURST TYPE according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

## 2.7.2.3.2.5 Pilot Strength Measurement Message

MSG\_TAG: PSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1

Zero or more occurrences of the following record:

{

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1

}

REF\_PN – Time reference PN sequence offset.

The mobile station shall set this field to the PN sequence offset of the pilot used by the mobile station to derive its time reference, relative to the zero offset pilot PN sequence in units of 64 PN chips.

PILOT\_STRENGTH – Pilot strength in dB.

The mobile station shall set this field to

$$\lfloor -2 \times 10 \log_{10} PS \rfloor,$$

where PS is the strength of the pilot used by the mobile station to derive its time reference (see [2]), measured as specified in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0, the mobile station shall set this field to '000000'. If this value is greater than '111111', the mobile station shall set this field to '111111'.

KEEP – Keep pilot indicator.

If the handoff drop timer (see 2.6.6.2.3) corresponding to the pilot used by the mobile station to derive its time reference (see [2]) has expired, the mobile station shall set this field to '0'; otherwise, the mobile station shall set this field to '1'.

If P\_REV\_IN\_USE<sub>s</sub> is less than or equal to three, the mobile station shall include one occurrence of the three-field record given below for each pilot in the Active Set and for each Candidate Set pilot reported (the number of Candidate Set pilots reported shall not exceed 5), other than the pilot identified by the REF\_PN field. If P\_REV\_IN\_USE<sub>s</sub> is greater than

three and  $\text{SOFT\_SLOPE}_s$  is equal to '000000', the mobile station shall include one occurrence of the three-field record given below for each pilot in the Active Set and for each pilot in the Candidate Set, other than the pilot identified by the REF\_PN field. If  $\text{P\_REV\_IN\_USE}_s$  is greater than three and  $\text{SOFT\_SLOPE}_s$  is not equal to '000000', the mobile station shall include one occurrence of the three-field record given below for each pilot in the Active Set, for each pilot in the Candidate Set whose strength exceeds  $\text{T\_ADD}$ , and shall also include one occurrence of the three-field record given below for each pilot in the Candidate Set whose strength satisfies the following inequality:

$$10 \times \log_{10} \text{PS} > \frac{\text{SOFT\_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} \text{PS}_i + \frac{\text{ADD\_INTERCEPT}_s}{2}$$

where the summation is performed over all pilots currently in the Active Set. The mobile station shall not include these fields for the pilot identified by the REF\_PN field.

The mobile station shall order any occurrences of the three-field record given below which correspond to pilots in the Active Set such that they occur before any occurrences of the three-field record given below which correspond to pilots in the Candidate Set.

**PILOT\_PN\_PHASE** – Pilot measured phase.

The mobile station shall set this field to the phase of the pilot PN sequence relative to the zero offset pilot PN sequence of this pilot, in units of one PN chip, as specified in 2.6.6.2.4.

**PILOT\_STRENGTH** – Pilot strength in dB.

The mobile station shall set this field to

$$\lfloor -2 \times 10 \log_{10} \text{PS} \rfloor,$$

where PS is the strength of this pilot, measured as specified in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} \text{PS} \rfloor$ ) is less than 0, the mobile station shall set this field to '000000'. If this value is greater than '111111', the mobile station shall set this field to '111111'.

**KEEP** – Keep pilot indicator.

If the handoff drop timer (see 2.6.6.2.3) corresponding to this pilot has expired, the mobile station shall set this field to '0'; otherwise, the mobile station shall set this field to '1'.

## 1 2.7.2.3.2.6 Power Measurement Report Message

2 MSG\_TAG: PMRM

3

Field	Length (bits)
ERRORS_DETECTED	5
PWR_MEAS_FRAMES	10
LAST_HDM_SEQ	2
NUM_PILOTS	4

NUM\_PILOTS occurrences of the following field:

{ (NUM\_PILOTS)

PILOT_STRENGTH	6
----------------	---

} (NUM\_PILOTS)

DCCH_PWR_MEAS_INCL	1
DCCH_PWR_MEAS_FRAMES	0 or 10
DCCH_ERRORS_DETECTED	0 or 5
SCH_PWR_MEAS_INCL	1
SCH_ID	0 or 1
SCH_PWR_MEAS_FRAMES	0 or 16
SCH_ERRORS_DETECTED	0 or 10

4

5 ERRORS\_DETECTED – Number of detected bad frames.

6 When the Forward Fundamental Channel is assigned, the  
 7 mobile station shall set this field to the number of bad frames  
 8 detected (BAD\_FRAMES<sub>S</sub>, see 2.6.4.1.1] on the Forward  
 9 Fundamental Channel.

10 If P\_REV\_IN\_USE<sub>S</sub> is greater than or equal to six and only the  
 11 Forward Dedicated Control Channel is assigned, the mobile  
 12 station shall set this field to the number of bad frames  
 13 detected on the Forward Dedicated Control Channel  
 14 (DCCH\_BAD\_FRAMES<sub>S</sub>, see 2.6.4.1.1].

15 If the number of bad frames received on this channel within  
 16 the measurement period is less than or equal to 31, the  
 17 mobile station shall set this field to that number. If that  
 18 number exceeds 31, the mobile station shall set this field to  
 19 '11111'.

1	PWR_MEAS_FRAMES	-	Number of power measurement frames.
2			When the Forward Fundamental Channel is assigned, the
3			mobile station shall set this field to the number of frames
4			received on the Forward Fundamental Channel within the
5			measurement period (TOT_FRAMES <sub>S</sub> , see 2.6.4.1.1).
6			If P_REV_IN_USE <sub>S</sub> is greater than or equal to six and only the
7			Dedicated Control Channel is assigned, the mobile station
8			shall set this field to the number of frames received on the
9			Dedicated Control Channel (DCCH_TOT_FRAMES <sub>S</sub> , see
10			2.6.4.1.1).
11	LAST_HDM_SEQ	-	<i>Extended Handoff Direction Message</i> or a <i>General Handoff</i>
12			<i>Direction Message</i> , or <i>Universal Handoff Direction Message</i>
13			sequence number.
14			If an <i>Extended Handoff Direction Message</i> , a <i>General Handoff</i>
15			<i>Direction Message</i> , or <i>Universal Handoff Direction Message</i>
16			has been received during this call, the mobile station shall
17			set this field to the value of the HDM_SEQ field from the
18			<i>Extended Handoff Direction Message</i> , the <i>General Handoff</i>
19			<i>Direction Message</i> or the <i>Universal Handoff Direction Message</i>
20			that determined the current Active Set. If no <i>Extended</i>
21			<i>Handoff Direction Message</i> , <i>General Handoff Direction</i>
22			<i>Message</i> , or <i>Universal Handoff Direction Message</i> has been
23			received during this call, the mobile station shall set this field
24			to '11'.
25	NUM_PILOTS	-	Number of pilots reported.
26			The mobile station shall set this field to the number of pilots
27			in the current Active Set.
28	PILOT_STRENGTH	-	Pilot strength in dB.
29			The mobile station shall include one occurrence of this field
30			for each pilot in the Active Set. If the Active Set contains
31			more than one pilot, the mobile station shall include the pilot
32			strengths in the same order as in the <i>Extended Channel</i>
33			<i>Assignment Message</i> , <i>Extended Handoff Direction Message</i> ,
34			<i>General Handoff Direction Message</i> or the <i>Universal Handoff</i>
35			<i>Direction Message</i> that determined the current Active Set.
36			The mobile station shall set each occurrence of this field to
37			$\lfloor -2 \times 10 \log_{10} PS \rfloor$ ,
38			where PS is the strength of the pilot, measured as specified in
39			2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0, the
40			mobile station shall set this field to '000000'. If this value is
41			greater than '111111', the mobile station shall set this field to
42			'111111'.
43	DCCH_PWR_MEAS_INCL	-	Forward Dedicated Control Channel power measurement
44			included.

1		If both Forward Fundamental Channel and Forward
2		Dedicated Control Channel are assigned, the mobile station
3		shall set this field equal to '1'; otherwise, the mobile shall set
4		this field to '0'.
5	DCCH_PWR_MEAS_FRAMES	- Number of received Dedicated Control Channel
6		frames.
7		If DCCH_PWR_MEAS_INCL is set to '0', the mobile station
8		shall omit this field; otherwise, the mobile station shall set
9		this field to the number of frames received on the Dedicated
10		Control Channel within the measurement period
11		(DCCH_TOT_FRAMES <sub>s</sub> , see 2.6.4.1.1).
12	DCCH_ERRORS_DETECTED	- Number of detected bad Dedicated Control Channel
13		frames.
14		If DCCH_PWR_MEAS_INCL is set to '0', the mobile station
15		shall omit this field; otherwise, the mobile station shall set
16		this field to the number of bad frames
17		(DCCH_BAD_FRAMES <sub>s</sub> ) detected on the Forward Dedicated
18		Control Channel.
19		If DCCH_BAD_FRAMES <sub>s</sub> exceeds 31, the mobile station shall
20		set this field to '11111'; otherwise, the mobile station shall set
21		this field to DCCH_BAD_FRAMES <sub>s</sub> [see 2.6.4.1.1).
22	SCH_PWR_MEAS_INCL	- Supplemental Channel power measurement included
23		indicator.
24		If FOR_SCH_FER_REP <sub>s</sub> is set to '1' and this message is to
25		report the frame counts at the end of the burst on an
26		assigned Supplemental Channel, the mobile station shall set
27		this field to '1'; otherwise, the mobile station shall set this
28		field to
29	SCH_ID	- Forward Supplemental Channel identifier.
30		If the SCH_PWR_MEAS_INCL is set to '0', the mobile station
31		shall omit this field; otherwise, the mobile shall set this field
32		to the Identifier of the Forward Supplemental Channel of
33		which the frame counts are being reported in this message.
34	SCH_PWR_MEAS_FRAMES	- Number of received Supplemental Channel frames.
35		If SCH_PWR_MEAS_INCL is set to '0', the mobile station shall
36		omit this field; otherwise, the mobile station shall set this
37		field to the total number of frames (SCH_TOT_FRAMES <sub>s</sub> )
38		received during the burst duration on the Supplemental
39		Channel specified by SCH_ID. If this measurement is greater
40		than or equal to 2 <sup>16</sup> - 1, the mobile station shall set this field
41		to '1111111111111111'.
42	SCH_ERRORS_DETECTED	- Number of detected bad Supplemental Channel frames.

1 If SCH\_PWR\_MEAS\_INCL is set to '0', the mobile station shall  
2 omit this field; otherwise, the mobile station shall set this  
3 field to the number of bad frame detected on the Forward  
4 Supplemental Channel of the SCH\_ID for the duration of the  
5 forward burst on this channel.  
6  
7 If the number of bad frames (SCH\_BAD\_FRAMES<sub>S</sub>) detected  
8 on the SCH\_ID Supplemental Channel during the burst is  
9 greater than 1023, the mobile station shall set this field to  
10 '111111111'.

## 1 2.7.2.3.2.7 Send Burst DTMF Message

2 MSG\_TAG: BDTMFM

3

Field	Length (bits)
NUM_DIGITS	8
DTMF_ON_LENGTH	3
DTMF_OFF_LENGTH	3

NUM\_DIGITS occurrences of the following field:

{ (NUM\_DIGITS)

DIGIT <sub>i</sub>	4
--------------------	---

} (NUM\_DIGITS)

CON_REF_INCL	1
CON_REF	0 or 8

4

5 NUM\_DIGITS – Number of DTMF digits.

6 The mobile station shall set this field to the number of DTMF  
7 digits included in this message.

8 DTMF\_ON\_LENGTH – DTMF pulse width code.

9 The mobile station shall set this field to the  
10 DTMF\_ON\_LENGTH value shown in Table 2.7.2.3.2.7-1  
11 corresponding to the requested width of DTMF pulses to be  
12 generated by the base station.

13 **Table 2.7.2.3.2.7-1. Recommended DTMF Pulse Width**

DTMF_ON_LENGTH Field (binary)	Recommended Pulse Width
000	95 ms
001	150 ms
010	200 ms
011	250 ms
100	300 ms
101	350 ms
All other DTMF_ON_LENGTH codes are reserved.	

14

DTMF\_OFF\_LENGTH – DTMF inter-digit interval code.  
 The mobile station shall set this field to the DTMF\_OFF\_LENGTH value shown in Table 2.7.2.3.2.7-2 corresponding to the requested minimum interval between DTMF pulses to be generated by the base station.

**Table 2.7.2.3.2.7-2. Recommended Minimum Inter-digit Interval**

DTMF_OFF_LENGTH Field (binary)	Recommended Minimum Inter-digit Interval
000	60 ms
001	100 ms
010	150 ms
011	200 ms
All other DTMF_OFF_LENGTH codes are reserved.	

DIGIT<sub>i</sub> – DTMF digit.  
 The mobile station shall include one occurrence of this field for each DTMF digit to be generated by the base station. The mobile station shall set each occurrence of this field to the code value shown in Table 2.7.1.3.2.4-4 corresponding to the dialed digit.

CON\_REF\_INCL – Connection reference included indicator.  
 The mobile station shall set this field to '1' if the connection reference field is included in this message; otherwise, it shall set this field to '0'.

CON\_REF – Connection reference.  
 If the CON\_REF\_INCL field is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and shall set it to the value of the connection reference assigned to the service option connection of the call, to which this message corresponds.

1    2.7.2.3.2.8 Status Message

2    MSG\_TAG: STM

3

Field	Length (bits)
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

4

5            RECORD\_TYPE    –    Information record type.  
6                                    The mobile station shall set this field to the record type value  
7                                    shown in Table 2.7.4-1 corresponding to the type of this  
8                                    information record.

9            RECORD\_LEN    –    Information record length.  
10                                   The mobile station shall set this field to the number of octets  
11                                   included in the type-specific fields of this information record.

12          Type-specific fields    –    Type-specific fields.  
13                                   The mobile station shall set these fields as specified in 2.7.4  
14                                   for this type of record.  
15

## 2.7.2.3.2.9 Origination Continuation Message

MSG\_TAG: ORCM

Field	Length (bits)
DIGIT_MODE	1
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	4 or 8
-------------------	--------

} (NUM\_FIELDS)

Zero or more occurrences of the following record:

{

RECORD TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

DIGIT\_MODE – Digit mode indicator.

The mobile station shall set this field to the DIGIT\_MODE value from the *Origination Message* for which this message is a continuation.

NUM\_FIELDS – Number of dialed digits in this message.

The mobile station shall set this field to the number of dialed digits included in this message.

CHAR<sub>i</sub> – A dialed digit or character.

The mobile station shall include NUM\_FIELDS occurrences of this field. The mobile station shall include occurrences of this field for all dialed digits after those sent in the *Origination Message* of which this message is a continuation. If the DIGIT\_MODE field is set to '0', the mobile station shall set each occurrence of this field to the code value shown in Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the DIGIT\_MODE field is set to '1', the mobile station shall set each occurrence of this field to the ASCII representation corresponding to the dialed digit, as specified in [9], with the most significant bit set to '0'.

If the MORE\_RECORDS field in the last *Origination Message*, of which this message is a continuation, is set to '1', the mobile station shall include one or more occurrences of the following three-field record; otherwise, the mobile station shall not include the following record.

1	RECORD_TYPE	-	Information record type.
2			The mobile station shall set this field to the record type value
3			shown in Table 2.7.4-1.
4			The mobile station shall not include the record type for QoS
5			Parameters information record if MOB_QOS <sub>S</sub> is equal to '0'.
6	RECORD_LEN	-	Information record length.
7			The mobile station shall set this field to the number of octets
8			in the type-specific fields included in this record.
9	Type-specific fields	-	Type-specific fields.
10			The mobile station shall include type-specific fields as
11			specified in 2.7.4.
12			

2.7.2.3.2.10 Handoff Completion Message

MSG\_TAG: HOCM

Field	Length (bits)
LAST_HDM_SEQ	2

One or more occurrences of the following field:

{

PILOT_PN	9
----------	---

}

LAST\_HDM\_SEQ – *Extended Handoff Direction Message, General Handoff Direction Message, or Universal Handoff Direction Message* sequence number.

The mobile station shall set this field to the value of the HDM\_SEQ field from the *Extended Handoff Direction Message, General Handoff Direction Message, or the Universal Handoff Direction Message* that determined the current Active Set.

PILOT\_PN – Pilot PN sequence offset.

The mobile station shall include one occurrence of this field for each pilot in the current Active Set. The mobile station shall set this field to the pilot PN sequence offset, relative to the zero offset pilot PN sequence in units of 64 PN chips, for this pilot. If the Active Set contains more than one pilot, the mobile station shall include the pilot offsets in the same order as in the *Extended Handoff Direction Message, the General Handoff Direction Message, or the Universal Handoff Direction Message* that determined the current Active Set.

## 1 2.7.2.3.2.11 Parameters Response Message

2 MSG\_TAG: PRSM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following record:

{

PARAMETER_ID	16
PARAMETER_LEN	10
PARAMETER	0 or PARAMETER_LEN + 1

}

4

5 The mobile station shall include one occurrence of the following three-field record for each  
6 occurrence of the PARAMETER\_ID field in the Forward Traffic Channel *Retrieve Parameters*  
7 *Message* to which this message is a response. See Annex E.

8       PARAMETER\_ID    – Parameter identification.

9                        The mobile station shall set this field to the value of the  
10       PARAMETER\_ID field for this parameter from the *Retrieve*  
11       *Parameters Message* to which this message is a response.

12       PARAMETER\_LEN   – Parameter length.

13                        The mobile station shall set this field to the length shown in  
14       Table E-1 corresponding to this PARAMETER\_ID.

15                        If the mobile station is unable to return the value of this  
16       parameter, or if the parameter identification is unknown, the  
17       mobile station shall set this field to '11111111'.

18       PARAMETER       – Parameter value.

19                        The mobile station shall set this field equal to the value of the  
20       parameter shown in Table E-1 corresponding to the  
21       PARAMETER\_ID field of the record.

22                        If the mobile station is unable to return the value of this  
23       parameter, or if the parameter identification is unknown, the  
24       mobile station shall omit this field.

25

## 2.7.2.3.2.12 Service Request Message

MSG\_TAG: SRQM

Field	Length (bits)
SERV_REQ_SEQ	3
REQ_PURPOSE	4
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

SERV\_REQ\_SEQ – Service request sequence number.

The mobile station shall set this field to the service request sequence number pertaining to this request message as specified in 2.6.4.1.2.1.1.

REQ\_PURPOSE – Request purpose.

The mobile station shall set this field to the appropriate REQ\_PURPOSE code from Table 2.7.2.3.2.12-1 to indicate the purpose of the message.

**Table 2.7.2.3.2.12-1. REQ\_PURPOSE Codes**

REQ_PURPOSE (binary)	Meaning
0000	Indicates that the purpose of the message is to accept a proposed service configuration.
0001	Indicates that the purpose of the message is to reject a proposed service configuration.
0010	Indicates that the purpose of the message is to propose a service configuration.
All other REQ_PURPOSE codes are reserved.	

1		
2	RECORD_TYPE	- Information record type.
3		If the REQ_PURPOSE code is set to '0010', the mobile station
4		shall include this field and set it as follows; otherwise, the
5		mobile station shall omit this field.
6		The mobile station shall set this field to the record type value
7		shown in Table 2.7.4-1 corresponding to the Service
8		Configuration information record.
9	RECORD_LEN	- Information record length.
10		If the REQ_PURPOSE code is set to '0010', the mobile station
11		shall include this field and set it as follows; otherwise, the
12		mobile station shall omit this field.
13		The mobile station shall set this field to the number of octets
14		included in the type-specific fields of the Service
15		Configuration information record.
16	Type-specific fields	- Type-specific fields.
17		If the REQ_PURPOSE code is set to '0010', the mobile station
18		shall include this field and set it as follows; otherwise, the
19		mobile station shall omit this field.
20		The mobile station shall set these fields as specified in 3.7.5.7
21		for the Service Configuration information record.
22		

## 2.7.2.3.2.13 Service Response Message

MSG\_TAG: SRPM

Field	Length (bits)
SERV_REQ_SEQ	3
RESP_PURPOSE	4
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

SERV\_REQ\_SEQ – Service request sequence number.

The mobile station shall set this field to the value of the SERV\_REQ\_SEQ field of the *Service Request Message* to which it is responding.

RESP\_PURPOSE – Response purpose.

The mobile station shall set this field to the appropriate RESP\_PURPOSE code from Table 2.7.2.3.2.13-1 to indicate the purpose of the message.

**Table 2.7.2.3.2.13-1. RESP\_PURPOSE Codes**

RESP_PURPOSE (binary)	Meaning
0000	Indicates that the purpose of the message is to accept a proposed service configuration.
0001	Indicates that the purpose of the message is to reject a proposed service configuration.
0010	Indicates that the purpose of the message is to propose a service configuration.
All other RESP_PURPOSE codes are reserved.	

1			
2	RECORD_TYPE	-	Information record type.
3			If the RSP_PURPOSE code is set to '0010', the mobile station
4			shall include this field and set it as follows; otherwise, the
5			mobile station shall omit this field.
6			The mobile station shall set this field to the record type value
7			shown in Table 2.7.4-1 corresponding to the Service
8			Configuration information record.
9	RECORD_LEN	-	Information record length.
10			If the RSP_PURPOSE code is set to '0010', the mobile station
11			shall include this field and set it as follows; otherwise, the
12			mobile station shall omit this field.
13			The mobile station shall set this field to the number of octets
14			included in the type-specific fields of the Service
15			Configuration information record.
16	Type-specific fields	-	Type-specific fields.
17			If the RSP_PURPOSE code is set to '0010', the mobile station
18			shall include this field and set it as follows; otherwise, the
19			mobile station shall omit this field.
20			The mobile station shall set these fields as specified in 3.7.5.7
21			for the Service Configuration information record.
22			

## 1 2.7.2.3.2.14 Service Connect Completion Message

2 MSG\_TAG: SCCM

3

Field	Length (bits)
RESERVED	1
SERV_CON_SEQ	3

4

5 RESERVED Reserved bit.

6 The mobile station shall set this field to '0'.

7 SERV\_CON\_SEQ – Service connect sequence number.

8 The mobile station shall set this field to the value of the  
9 SERV\_CON\_SEQ field of the *Service Connect Message* to  
10 which it is responding.

11

1 2.7.2.3.2.15 Service Option Control Message

2 MSG\_TAG: SOCM

3

Field	Length (bits)
CON_REF	8
SERVICE_OPTION	16
RESERVED	7
CTL_REC_LEN	8
Type-specific fields	8 × CTL_REC_LEN

4

5           CON\_REF    –   Service option connection reference.  
6                            The mobile station shall set this field to the reference for the  
7                            target service option (see 2.6.4.1.2).

8           SERVICE\_OPTION   –   Service option.  
9                            The mobile station shall set this field to the service option in  
10                           use with the service option connection.

11           RESERVED   –   Reserved bits.  
12                            The mobile station shall set this field to '00000000'.

13           CTL\_REC\_LEN   –   Control record length.  
14                            The mobile station shall set this field to the number of octets  
15                           included in the type-specific fields of this service option  
16                           control record.

17           Type-specific fields   –   Type-specific fields.  
18                            The mobile station shall set these fields as specified by the  
19                           requirements for the service option.  
20

## 2.7.2.3.2.16 Status Response Message

MSG\_TAG: STRPM

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields.	$8 \times \text{QUAL\_INFO\_LEN}$

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD\_LEN}$

}

QUAL\_INFO\_TYPE – Qualification information type.

The mobile station shall set this field to the QUAL\_INFO\_TYPE field in the corresponding *Status Request Message*.

QUAL\_INFO\_LEN – Qualification information length.

The mobile station shall set this field to the QUAL\_INFO\_LEN field in the corresponding *Status Request Message*.

Type-specific fields – Type-specific fields.

The mobile station shall set these fields to the qualification information in the corresponding *Status Request Message*.

The mobile station shall include all the records requested in the corresponding *Status Request Message*. The mobile station shall include one occurrence of the following fields for each information record that is included:

RECORD\_TYPE – Information record type.

The mobile station shall set this field to the record type value shown in Table 2.7.4-1 corresponding to the type of this information record.

RECORD\_LEN – Information record length.

The mobile station shall set this field to the number of octets included in the type-specific fields of this information record.

- 1       Type-specific fields    –   Type-specific fields.  
2  
3       The mobile station shall set these fields as specified in 2.7.4  
4       for this type of record, according to the mobile station's  
5       capabilities under the qualification information included in  
6       this message.

## 1 2.7.2.3.2.18 Supplemental Channel Request Message

2 MSG\_TAG: SCRM

3

Field	Length (bits)
SIZE_OF_REQ_BLOB	4
REQ_BLOB	$8 \times \text{SIZE\_OF\_REQ\_BLOB}$
USE_SCRM_SEQ_NUM	1
SCRM_SEQ_NUM	0 or 4
REF_PN	0 or 9
PILOT_STRENGTH	0 or 6
NUM_ACT_PN	0 or 3

NUM\_ACT\_PN occurrences of the following record:

{ (NUM\_ACT\_PN)

ACT_PN_PHASE	15
ACT_PILOT_STRENGTH	6

} (NUM\_ACT\_PN)

NUM_NGHBR_PN	0 or 3
--------------	--------

NUM\_NGHBR\_PN occurrences of the following record:

{ (NUM\_NGHBR\_PN)

NGHBR_PN_PHASE	15
NGHBR_PILOT_STRENGTH	6

} (NUM\_NGHBR\_PN)

REF_PILOT_REC_INCL	0 or 1
REF_PILOT_REC_TYPE	0 or 3

(continues on next page)

4

**1**

Field	Length (bits)
REF_RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

NUM\_ACT\_PN occurrences of the following record:

$\{ (NUM\_ACT\_PN)$

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

} (NUM\_ACT\_PN)

NUM\_NGHR\_PN occurrences of the following record:

$\{ (NUM\_NGHBR\_PN)$

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

} (NUM\_NGHR\_PN)

2

3     **SIZE\_OF\_REQ\_BLOB**     –     Size of the request information block of bytes (REQ\_BLOB).  
4  
5     The mobile station shall set this field to the number of bytes  
6     in the Reverse Supplemental Code Channel or the Reverse  
   Supplemental Channel request block of bytes (REQ\_BLOB).

7	REQ_BLOB	–	Reverse Supplemental Code Channel	or	Reverse
8	Supplemental Channel request block of bytes.				

9                   The mobile station shall include information in this field  
10                  containing the parameters that specify the characteristics of  
11                  the Reverse Supplemental Code Channels or the Reverse  
12                  Supplemental Channel request. The mobile station shall set  
13                  this field in accordance with the connected Service Option.

14 USE\_SCRM\_SEQ\_NUM - Use *Supplemental Channel Request Message* sequence  
15 number indicator.

16 The mobile station shall set this field to '1' if the  
17 *Supplemental Channel Request Message* sequence number is  
18 included in this message; otherwise, the mobile station shall  
19 set this field to '0'.

20      SCRM\_SEQ\_NUM      –      *Supplemental Channel Request Message* sequence number.

1			If USE_SCRM_SEQ_NUM is set to '1', the mobile station shall
2			set this field to the <i>Supplemental Channel Request Message</i>
3			sequence number that the base station is to include in a
4			<i>Supplemental Channel Assignment Message</i> or <i>Extended</i>
5			<i>Supplemental Channel Assignment Message</i> which is in
6			response to this message; otherwise, the mobile station shall
7			omit this field.
8	REF_PN	-	Time reference PN sequence offset.
9			If SIZE_OF_REQ_BLOB is set to '0000' and
10			USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
11			omit this field; otherwise, the mobile station shall set this
12			field to the PN sequence offset of the pilot used by the mobile
13			station to derive its time reference, relative to the zero offset
14			pilot PN sequence in units of 64 PN chips.
15	PILOT_STRENGTH	-	Reference pilot strength in dB.
16			If SIZE_OF_REQ_BLOB is set to '0000' and
17			USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
18			omit this field; otherwise, the mobile station shall set this
19			field to
20			$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$
21			where PS is the strength of the pilot used by the mobile
22			station to derive its time reference (see [2]), measured as
23			specified in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less
24			than 0, the mobile station shall set this field to '000000'. If
25			this value is greater than '111111', the mobile station shall
26			set this field to '111111'.
27	NUM_ACT_PN	-	Number of reported pilots in the Active Set.
28			If SIZE_OF_REQ_BLOB is set to '0000' and
29			USE_SCRM_SEQ_NUM is set to '0', the mobile station shall
30			omit this field; otherwise, the mobile station shall set this
31			field to the number of reported pilots in the Active Set other
32			than the pilot identified by the REF_PN field.
33	If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile		
34	station shall not include any occurrence of the following record; otherwise, the mobile		
35	station shall include one occurrence of the following two-field record for each pilot in the		
36	Active Set other than the pilot identified by the REF_PN field:		
37	ACT_PN_PHASE	-	Active pilot measured phase.
38			The mobile station shall set this field to the phase of this pilot
39			PN sequence relative to the zero offset pilot PN sequence, in
40			units of one PN chip, as specified in 2.6.6.2.4.
41	ACT_PILOT_STRENGTH	-	Active pilot strength in dB.
42			The mobile station shall set this field to
43			$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$

1		where PS is the strength of this pilot, measured as specified
2		in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0,
3		the mobile station shall set this field to '000000'. If this value
4		is greater than 63, the mobile station shall set this field to
5		'111111'.
6	NUM_NGHBR_PN	- Number of reported neighbor pilots in the Candidate Set and
7		the Neighbor Set.
8		If SIZE_OF_REQ_BLOB is set to '0000', the mobile station
9		shall omit this field; otherwise, the mobile station shall set
10		this field as follows:
11		The mobile station shall set this field to the number of
12		reported pilots which are not in the Active Set and have
13		measurable strength that exceeds ( $T_{ADD_S} - T_{MULCHAN_S}$ ).
14		(NUM_ACT_PN + NUM_NGHBR_PN) shall not exceed 8. If
15		there are more than (8 - NUM_ACT_PN) pilots not in the
16		Active Set with strength exceeding ( $T_{ADD_S} - T_{MULCHAN_S}$ ),
17		the mobile station shall set NUM_NGHBR_PN to
18		(8 - NUM_ACT_PN) and report the NUM_NGHBR_PN strongest
19		pilots not in the Active Set.
20		If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile
21		station shall not include any occurrence of the following record; otherwise, the mobile
22		station shall include one occurrence of the following two-field record for each of the
23		NUM_NGHBR_PN reported pilots.
24	NGHBR_PN_PHASE	- Neighbor pilot measured phase.
25		The mobile station shall set this field to the phase of this pilot
26		PN sequence relative to the zero offset pilot PN sequence, in
27		units of one PN chip, as specified in 2.6.6.2.4.
28	NGHBR_PILOT_STRENGTH	- Neighbor pilot strength.
29		The mobile station shall set this field to
30		$\lfloor -2 \times 10 \times \log_{10} PS \rfloor$ ,
31		where PS is the strength of this pilot, measured as specified
32		in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0,
33		the mobile station shall set this field to '000000'. If this value
34		is greater than 63, the mobile station shall set this field to
35		'111111'.
36	REF_PILOT_REC_INCL	- Additional pilot information included indicator.
37		If SIZE_OF_REQ_BLOB is set to '0000', the mobile station
38		shall omit this field; otherwise, the mobile station shall
39		include this field and set it as follows:
40		The mobile station shall set this field to '1' if additional
41		reference pilot information listed in the
42		REF_PILOT_REC_TYPE and REF_RECORD_LEN fields are
43		included. The mobile station shall set this field to '0' if the
44		corresponding pilot is the common pilot and there is no
45		additional pilot information included.
46	REF_PILOT_REC_TYPE	- Reference pilot record type.

1 If REF\_PILOT\_REC\_INCL is included and set to '0', the mobile  
 2 station shall omit this field. If REF\_PILOT\_REC\_INCL is  
 3 included and set to '1', the mobile station shall set this field  
 4 to the REF\_PILOT\_REC\_TYPE value shown in Table  
 5 2.7.2.3.2.34-1 corresponding to the type of Pilot Record  
 6 specified by this record.

7 REF\_RECORD\_LEN – Pilot record length for the reference pilot.

8 If REF\_PILOT\_REC\_INCL is included and set to '0', the mobile  
 9 station shall omit this field. If REF\_PILOT\_REC\_INCL is  
 10 included and set to '1', the mobile station shall set this field  
 11 to the number of octets in the type-specific fields of this pilot  
 12 record.

13 Type-specific fields – Pilot record type-specific fields for the reference pilot.

14 If REF\_PILOT\_REC\_INCL is included and set to '0', the mobile  
 15 station shall omit this field. If REF\_PILOT\_REC\_INCL is  
 16 included and set to '1', the mobile station shall include type-  
 17 specific fields based on the REF\_PILOT\_REC\_TYPE of this  
 18 pilot record.

19

20 If REF\_PILOT\_REC\_TYPE is equal to '000', the mobile station shall include the following  
 21 fields:

22

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
PILOT_WALSH	(WALSH_LENGTH + 6)
RESERVED	0 to 7 (as needed)

23

24 QOF – Quasi-orthogonal function index.

25 The mobile station shall set this field to the index of the  
 26 Quasi-orthogonal function of the corresponding Auxiliary  
 27 Pilot.

28 WALSH\_LENGTH – Length of the Walsh code for the reference pilot.

29 The mobile station shall set this field to the WALSH\_LENGTH  
 30 value shown in Table 2.7.2.3.2.34-2 corresponding to the  
 31 length of the Walsh code for the pilot that is used as the  
 32 Auxiliary Pilot.

33 PILOT\_WALSH – Walsh code for the Auxiliary Pilot used by the mobile station  
 34 to derive its time reference.

35 The mobile station shall set this field to the Walsh code  
 36 corresponding to the Auxiliary Pilot.

1	RESERVED	-	Reserved bits.
2			The mobile station shall set all the bits of this field to '0' to
3			make the entire record octet-aligned.
4	If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile		
5	station shall not include any occurrence of the following record; otherwise, the mobile		
6	station shall include one occurrence of the following record for each pilot in the Active Set		
7	other than the pilot identified by the REF_PN field:		
8	PILOT_REC_INCL	-	Additional pilot information included indicator.
9			The mobile station shall set this field to '1' if additional pilot
10			information listed in the PILOT_REC_TYPE and
11			RECORD_LEN fields are included. The mobile station shall
12			set this field to '0' if the corresponding pilot is the common
13			pilot and there is no additional pilot information included.
14	PILOT_REC_TYPE	-	Reference pilot record type.
15			If PILOT_REC_INCL is set to '0', the mobile station shall omit
16			this field; otherwise, the mobile station shall set this field to
17			the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
18			corresponding to the type of Pilot Record specified by this
19			record.
20	RECORD_LEN	-	Pilot record length.
21			If PILOT_REC_INCL is set to '0', the mobile station shall omit
22			this field; otherwise, the mobile station shall set this field to
23			the number of octets in the type-specific fields of this pilot
24			record.
25	Type-specific fields	-	Pilot record type-specific fields.
26			If PILOT_REC_INCL is set to '0', the mobile station shall omit
27			this field; otherwise, the mobile station shall include type-
28			specific fields based on the PILOT_REC_TYPE of this pilot
29			record as described in 3.7.6.1.
30			
31	If SIZE_OF_REQ_BLOB is set to '0000' and USE_SCRM_SEQ_NUM is set to '0', the mobile		
32	station shall not include any occurrence of the following record; otherwise, the mobile		
33	station shall include one occurrence of the following record for each of the		
34	NUM_NGHR_PN reported pilots.		
35	PILOT_REC_INCL	-	Additional pilot information included indicator.
36			The mobile station shall set this field to '1' if additional pilot
37			information listed in the PILOT_REC_TYPE and
38			RECORD_LEN fields are included. The mobile station shall
39			set this field to '0' if the corresponding pilot is the common
40			pilot and there is no additional pilot information included.
41	PILOT_REC_TYPE	-	Reference pilot record type.

1			If PILOT_REC_INCL is set to '0', the mobile station shall omit
2			this field; otherwise, the mobile station shall set this field to
3			the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
4			corresponding to the type of Pilot Record specified by this
5			record.
6	RECORD_LEN	-	Pilot record length.
7			If PILOT_REC_INCL is set to '0', the mobile station shall omit
8			this field; otherwise, the mobile station shall set this field to
9			the number of octets in the type-specific fields of this pilot
10			record.
11	Type-specific fields	-	Pilot record type-specific fields.
12			If PILOT_REC_INCL is set to '0', the mobile station shall omit
13			this field; otherwise, the mobile station shall include type-
14			specific fields based on the PILOT_REC_TYPE of this pilot
15			record as described in 3.7.6.1.
16			
17			

## 1 2.7.2.3.2.19 Candidate Frequency Search Response Message

2 MSG\_TAG: CFSRSM

3

Field	Length (bits)
LAST_CFSRM_SEQ	2
TOTAL_OFF_TIME_FWD	6
MAX_OFF_TIME_FWD	6
TOTAL_OFF_TIME_REV	6
MAX_OFF_TIME_REV	6
PCG_OFF_TIMES	1
ALIGN_TIMING_USED	1
MAX_NUM_VISITS	0 or 5
INTER_VISIT_TIME	0 or 6

4

5 LAST\_CFSRM\_SEQ - *Candidate Frequency Search Request Message* sequence  
6 number.

7 The mobile station shall set this field to the value of the  
8 CFSRM\_SEQ field from the *Candidate Frequency Search*  
9 *Request Message* to which this message is a response.

10 TOTAL\_OFF\_TIME\_FWD - Total time that the mobile station is off the Forward Traffic  
11 Channel.

12 The mobile station shall set this field to the mobile station's  
13 estimate of the total number of frames or power control  
14 groups for which the mobile station will need to suspend its  
15 current Forward Traffic Channel processing in order to tune  
16 to the Candidate Frequency, to perform the requested search,  
17 and to re-tune to the Serving Frequency. If the mobile station  
18 requires multiple visits to the Candidate Frequency to  
19 complete the requested search, the mobile station shall set  
20 this field to the total number of frames (if PCG\_OFF\_TIME is  
21 set to '0') or power control groups (if PCG\_OFF\_TIME is set to  
22 '1') for all visits to the Candidate Frequency in a search  
23 period.

24 MAX\_OFF\_TIME\_FWD - Maximum time the mobile station is away from the Forward  
25 Traffic Channel.

1			The mobile station shall set this field to the mobile station's
2			estimate of the maximum number of frames (if
3			PCG_OFF_TIME is set to '0') or power control groups (if
4			PCG_OFF_TIME is set to '1') for which the mobile station will
5			need to suspend its current Forward Traffic Channel
6			processing during a visit to the Candidate Frequency, to
7			perform a part of the requested search, and to re-tune to the
8			Serving Frequency.
9	TOTAL_OFF_TIME_REV	-	Total time that the mobile station is away from the Reverse
10			Traffic Channel.
11			The mobile station shall set this field to the mobile station's
12			estimate of the total number of frames or power control
13			groups for which the mobile station will need to suspend its
14			current Reverse Traffic Channel processing in order to tune to
15			the Candidate Frequency, to perform the requested search,
16			and to re-tune to the Serving Frequency. If the mobile station
17			requires multiple visits to the Candidate Frequency to
18			complete the requested search, the mobile station shall set
19			this field to the total number of frames or power control
20			groups for all visits to the Candidate Frequency in a search
21			period.
22	MAX_OFF_TIME_REV	-	Maximum time the mobile station is away from the Reverse
23			Traffic Channel.
24			The mobile station shall set this field to the mobile station's
25			estimate of the maximum number of frames or power control
26			groups for which the mobile station will need to suspend its
27			current Forward Traffic Channel processing during a visit to
28			the Candidate Frequency, to perform a part of the requested
29			search, and to re-tune to the Serving Frequency.
30	PCG_OFF_TIMES	-	Indicator if off times are expressed in units of power control
31			groups.
32			If P_REV_IN_USE <sub>s</sub> is less than six, the mobile station shall
33			set this field to '0'; otherwise, the mobile station shall set this
34			field as follows:
35			The mobile station shall set this field to '1' if it expresses
36			TOTAL_OFF_TIME_FWD, MAX_OFF_TIME_FWD,
37			TOTAL_OFF_TIME_REV, and MAX_OFF_TIME_REV in units
38			of power control groups; otherwise, the mobile station shall
39			set this field to '0' so that TOTAL_OFF_TIME_FWD,
40			MAX_OFF_TIME_FWD, TOTAL_OFF_TIME_REV, and
41			MAX_OFF_TIME_REV are expressed in units of frames.
42	ALIGN_TIMING_USED	-	Alignment timing used indicator.
43			The mobile station shall set this field to '1' if it will align the
44			times of its visits away from the Serving Frequency, as
45			requested by the base station; otherwise, the mobile station
46			shall set this field to '0'.
47	MAX_NUM_VISITS	-	Maximum number of visits per search period.

1 If the ALIGN\_TIMING\_USED field is set to '0', the mobile  
2 station shall omit this field; otherwise, the mobile station  
3 shall include this field and set it to the maximum number of  
4 visits per search period minus one.

5 INTER\_VISIT\_TIME – Inter-visit time.

6 If the mobile station includes the MAX\_NUM\_VISITS field and  
7 sets it to a value other than 0, the mobile station shall  
8 include this field and set it as described below; otherwise, the  
9 mobile station shall omit this field.

10 The mobile station shall set INTER\_VISIT\_TIME to

11  $\min ( 63, \lceil inter\_visit\_time / search\_time\_resolution \rceil )$

12 where

13 *search\_time\_resolution* is equal to 0.02 if the mobile  
14 station sets PCG\_OFF\_TIMES to '0'; otherwise,  
15 *search\_time\_resolution* is equal to 0.00125,

16 and

17 *inter\_visit\_time* is the mobile station's estimate of the  
18 time, in seconds, between the beginning of consecutive  
19 visits away from the Serving Frequency.  
20

## 1 2.7.2.3.2.20 Candidate Frequency Search Report Message

2 MSG\_TAG: CFSRPM

3

Field	Length (bits)
LAST_SRCH_MSG	1
LAST_SRCH_MSG_SEQ	2
SEARCH_MODE	4
MODE_SPECIFIC_LEN	8
Mode-specific fields	8 × MODE_SPECIFIC_LEN

4

5 LAST\_SRCH\_MSG – Indicator for the type of message that started the search  
6 being reported.

7 If this message is being sent to report the results of a single  
8 search or a periodic search started by a *Candidate Frequency*  
9 *Search Control Message* or by a *Candidate Frequency Search*  
10 *Request Message*, the mobile station shall set this field to '0';  
11 otherwise, the mobile station shall set this field to '1'.

12 LAST\_SRCH\_MSG\_SEQ – Sequence number received in the message that started the  
13 search being reported.

14 If this message is being sent in response to a *Candidate*  
15 *Frequency Search Control Message*, the mobile station shall  
16 set this field to the value of the CFSCM\_SEQ field from the  
17 *Candidate Frequency Search Control Message*.

18 If this message is being sent in response to a *Candidate*  
19 *Frequency Search Request Message*, the mobile station shall  
20 set this field to the value of the CFSRM\_SEQ field from the  
21 *Candidate Frequency Search Request Message*.

22 If this message is being sent in response to a *General Handoff*  
23 *Direction Message* or a *Universal Handoff Direction Message*,  
24 the mobile station shall set this field to the value of the  
25 HDM\_SEQ field from the *General Handoff Direction Message*  
26 or the *Universal Handoff Direction Message*.

27 SEARCH\_MODE – Search mode.  
28 The mobile station shall set this field to the SEARCH\_MODE  
29 value shown in Table 3.7.3.3.2.27-2 corresponding to the  
30 type of search specified by the *Candidate Frequency Search*  
31 *Request Message* that specified the search parameters.

32 MODE\_SPECIFIC\_LEN – Length of mode-specific fields included in this message.

33 Mode-specific fields – Search mode-specific fields.

The mobile station shall include mode-specific fields based on the SEARCH\_MODE of this message.

If SEARCH\_MODE is equal to '0000', the mobile station shall include the following fields:

Field	Length (bits)
BAND_CLASS	5
CDMA_FREQ	11
SF_TOTAL_RX_PWR	5
CF_TOTAL_RX_PWR	5
NUM_PILOTS	6

NUM\_PILOTS occurrences of the following record:

{ (NUM\_PILOTS)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
RESERVED_1	3

} (NUM\_PILOTS)

NUM\_PILOTS occurrences of the following record:

{ (NUM\_PILOTS)

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

} (NUM\_PILOTS)

**BAND\_CLASS** - Band class.

If this message is being sent to report an unsuccessful hard handoff attempt, the mobile station shall set this field to the CDMA band class corresponding to the CDMA Frequency Assignment for the Target Frequency, as specified in [30]. If this message is being sent to report measurements on a Candidate Frequency, the mobile station shall set this field to the CDMA band class corresponding to the CDMA Frequency Assignment for the Candidate Frequency, as specified in [30].

**CDMA\_FREQ** - Frequency assignment.

1			If this message is being sent to report an unsuccessful hard
2			handoff attempt, the mobile station shall set this field to the
3			CDMA Channel number, in the specified CDMA band class,
4			corresponding to the CDMA Frequency Assignment for the
5			Target Frequency, as specified in [2]. If this message is being
6			sent to report measurements on a Candidate Frequency, the
7			mobile station shall set this field to the CDMA Channel
8			number, in the specified CDMA band class, corresponding to
9			the CDMA Frequency Assignment for the Candidate
10			Frequency, as specified in [2].
11	SF_TOTAL_RX_PWR	-	Total received power on the Serving Frequency.
12			The mobile station shall set this field to
13			$\min(31, \lceil (10 \times \log_{10}(\text{total\_received\_power}) + 110) / 2 \rceil)$
14			where <i>total_received_power</i> is the mean input power received
15			by the mobile station on the Serving Frequency, in mW/1.23
16			MHz.
17	CF_TOTAL_RX_PWR	-	Indicates the total received power on the Target Frequency or
18			the Candidate Frequency.
19			If this message is being sent to report an unsuccessful hard
20			handoff attempt, the mobile station shall include the total
21			received power on the Target Frequency; if this message is
22			being sent to report measurements on a Candidate
23			Frequency, the mobile station shall include the total received
24			power on the Candidate Frequency.
25			The mobile station shall set this field to
26			$\min(31, \lceil (10 \times \log_{10}(\text{total\_received\_power}) + 110) / 2 \rceil)$
27			where <i>total_received_power</i> is the mean input power received
28			by the mobile station on the Target Frequency or the
29			Candidate Frequency, in mW/1.23 MHz.
30	NUM_PILOTS	-	Number of pilots.
31			The mobile station shall set this field to the number of pilots
32			included in this message. The mobile station shall set this
33			field to a value from 0 to $N_{8m}$ , inclusive.
34	The mobile station shall include NUM_PILOTS occurrences of the following three-field		
35	record:		
36	PILOT_PN_PHASE	-	Pilot measured phase.
37			The mobile station shall set this field to the phase of the pilot
38			PN sequence relative to the zero offset pilot PN sequence of
39			this pilot, in units of one PN chip, as specified in 2.6.6.2.4.
40	PILOT_STRENGTH	-	Pilot strength in dB.
41			The mobile station shall set this field to
42			$\lfloor -2 \times 10 \times \log_{10} \text{PS} \rfloor$ ,

1 where PS is the strength of this pilot, measured as specified  
2 in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0,  
3 the mobile station shall set this field to '000000'. If this value  
4 is greater than 63, the mobile station shall set this field to  
5 '111111'.

6 RESERVED\_1 – Reserved bits.  
7 The mobile station shall set this field to '000'.

8 The mobile station shall include NUM\_PILOTS occurrences of the following record in the  
9 same order as the pilots listed above.

10 PILOT\_REC\_INCL – Additional pilot information included indicator.  
11 The mobile station shall set this field to '1' if additional pilot  
12 information listed in the PILOT\_REC\_TYPE and  
13 RECORD\_LEN fields are included. The mobile station shall  
14 set this field to '0' if the corresponding pilot is the common  
15 pilot and there is no additional pilot information included.

16 PILOT\_REC\_TYPE – Reference Pilot record type  
17 If PILOT\_REC\_INCL is set to '0', the mobile station shall omit  
18 this field; otherwise, the mobile station shall set this field to  
19 the PILOT\_REC\_TYPE value shown in Table 2.7.2.3.2.34-1  
20 corresponding to the type of Pilot Record specified by this  
21 record.

22 RECORD\_LEN – Pilot record length.  
23 If PILOT\_REC\_INCL is set to '0', the mobile station shall omit  
24 this field; otherwise, the mobile station shall set this field to  
25 the number of octets in the type-specific fields of this pilot  
26 record.

27 Type-specific fields – Pilot record type-specific fields.  
28 If PILOT\_REC\_INCL is set to '0', the mobile station shall omit  
29 this field; otherwise, the mobile station shall include type-  
30 specific fields based on the PILOT\_REC\_TYPE of this pilot  
31 record as described in 3.7.6.1.  
32

## 1 2.7.2.3.2.21 Periodic Pilot Strength Measurement Message

2 MSG\_TAG: PPSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1
SF_RX_PWR	5
NUM_PILOT	4

NUM\_PILOT occurrences of the following record:

{ (NUM\_PILOT)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1

} (NUM\_PILOT)

NUM\_PILOT occurrences of the following record:

{ (NUM\_PILOT)

PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

} (NUM\_PILOT)

SETPT_INCL	1
FCH_INCL	0 or 1
FPC_FCH_CURR_SETPT	0 or 8
DCCH_INCL	0 or 1
FPC_DCCH_CURR_SETPT	0 or 8
NUM_SUP	0 or 2

NUM\_SUP occurrences of the following fields:

{ (NUM\_SUP)

SCH_ID	1
FPC_SCH_CURR_SETPT	8

} (NUM\_SUP)

3

4 REF\_PN - Time reference PN sequence offset.

1			The mobile station shall set this field to the PN sequence
2			offset of the pilot used by the mobile station to derive its time
3			reference, relative to the zero offset pilot PN sequence in units
4			of 64 PN chips.
5	PILOT_STRENGTH	-	Pilot strength in dB.
6			The mobile station shall set this field to
7			$\lfloor -2 \times 10 \times \log_{10} PS \rfloor$ ,
8			where PS is the strength of the pilot used by the mobile
9			station to derive its time reference (see [2]), measured as
10			specified in 2.6.6.2.2. If this value is less than 0, the mobile
11			station shall set this field to '000000'. If this value is greater
12			than '111111', the mobile station shall set this field to
13			'111111'.
14	KEEP	-	Keep pilot indicator.
15			If the handoff drop timer (see 2.6.6.2.3) corresponding to the
16			pilot used by the mobile station to derive its time reference
17			(see [2]) has expired, the mobile station shall set this field to
18			'0'; otherwise, the mobile station shall set this field to '1'.
19	SF_RX_PWR	-	The received power spectral density of the Serving Frequency.
20			The mobile station shall set this field to
21			$\min(31, \lceil (10 \times \log_{10}(\text{spec\_density}) + 120) / 2 \rceil)$
22			where <i>spec_density</i> is the mobile station received power
23			spectral density of the Serving Frequency, in mW/1.23MHz.
24			If this value is less than 0, the mobile station shall set this
25			field to '00000'.
26	NUM_PILOT	-	Number of Pilots.
27			The mobile station shall set this field to the number of other
28			reported pilots of the Active Set and the Candidate Set.
29	The mobile station shall include NUM_PILOT occurrences of the following three-field		
30	record, one for each pilot in the Active Set and one for each pilot in the Candidate Set,		
31	other than the pilot identified by the REF_PN field.		
32	PILOT_PN_PHASE	-	Pilot measured phase.
33			The mobile station shall set this field to the phase of the pilot
34			PN sequence relative to the zero offset pilot PN sequence of
35			this pilot, in units of one PN chip, as specified in 2.6.6.2.4.
36	PILOT_STRENGTH	-	Pilot strength in dB.
37			The mobile station shall set this field to
38			$\lfloor -2 \times 10 \times \log_{10} PS \rfloor$ ,
39			where PS is the strength of this pilot, measured as specified
40			in 2.6.6.2.2. If this value is less than 0, the mobile station
41			shall set this field to '000000'. If this value is greater than
42			'111111', the mobile station shall set this field to '111111'.

1	KEEP	-	Keep pilot indicator.
2			If the handoff drop timer (see 2.6.6.2.3) corresponding to this
3			pilot has expired, the mobile station shall set this field to '0';
4			otherwise, the mobile station shall set this field to '1'.
5	The mobile station shall include NUM_PILOTS occurrences of the following record in the		
6	same order as the pilots listed above.		
7	PILOT_REC_INCL	-	Additional pilot information included indicator.
8			The mobile station shall set this field to '1' if additional pilot
9			information listed in the PILOT_REC_TYPE and
10			RECORD_LEN fields are included. The mobile station shall
11			set this field to '0' if the corresponding pilot is the common
12			pilot and there is no additional pilot information included.
13	PILOT_REC_TYPE	-	Reference Pilot record type
14			If PILOT_REC_INCL is set to '0', the mobile station shall omit
15			this field; otherwise, the mobile station shall set this field to
16			the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
17			corresponding to the type of Pilot Record specified by this
18			record.
19	RECORD_LEN	-	Pilot record length.
20			If PILOT_REC_INCL is set to '0', the mobile station shall omit
21			this field; otherwise, the mobile station shall set this field to
22			the number of octets in the type-specific fields of this pilot
23			record.
24	Type-specific fields	-	Pilot record type-specific fields.
25			If PILOT_REC_INCL is set to '0', the mobile station shall omit
26			this field; otherwise, the mobile station shall include type-
27			specific fields based on the PILOT_REC_TYPE of this pilot
28			record as described in 2.7.2.3.2.34.
29	SETPT_INCL	-	Setpoint information included indicator.
30			The mobile station shall set this field to '1' if setpoint
31			information is included in this message; otherwise, the
32			mobile station shall set this field to '0'.
33	FCH_INCL	-	Fundamental Channel included indicator.
34			If SETPT_INCL is equal to '1', the mobile station shall include
35			this field and set it as follows; otherwise, the mobile station
36			shall omit this field.
37			If P_REV_IN_USE <sub>s</sub> is less than nine, the mobile station shall
38			do the following:
39			The mobile station shall set this field to '1' if
40			FPC_PRI_CHAN <sub>s</sub> is equal to '0'; otherwise, the mobile
41			station shall set this field to '0'.
42			If P_REV_IN_USE <sub>s</sub> is greater than or equal to nine, the mobile
43			station shall do the following:

1		The mobile station shall set this field to '1' if a
2		Fundamental Channel is assigned; otherwise, the
3		mobile station shall set this field to '0'.
4	FPC_FCH_CURR_SETPT	- The outer loop $E_b/N_t$ setpoint of the Fundamental Channel.
5		If SETPT_INCL is equal to '1' and if FCH_INCL is set to '1', the
6		mobile station shall set this field to the value of the $E_b/N_t$
7		setpoint, in units of 0.125 dB, currently in use in the
8		Fundamental Channel power control outer loop estimation;
9		otherwise, the mobile station shall omit this field.
10	DCCH_INCL	- Dedicated Control Channel included indicator.
11		If SETPT_INCL is equal to '1', the mobile station shall include
12		this field and set it as follows; otherwise, the mobile station
13		shall omit this field.
14		If P_REV_IN_USE <sub>s</sub> is less than nine, the mobile station shall
15		do the following:
16		The mobile station shall set this field to '1' if
17		FPC_PRI_CHAN <sub>s</sub> is equal to '1'; otherwise, the mobile
18		station shall set this field to '0'.
19		If P_REV_IN_USE <sub>s</sub> is greater than or equal to nine, the mobile
20		station shall do the following:
21		The mobile station shall set this field to '1' if a
22		Dedicated Control Channel is assigned; otherwise, the
23		mobile station shall set this field to '0'.
24	FPC_DCCH_CURR_SETPT	- The outer loop $E_b/N_t$ setpoint of the Forward Dedicated
25		Channel.
26		If SETPT_INCL is equal to '1', and if DCCH_INCL is set to '1',
27		the mobile station shall set this field to the value of the $E_b/N_t$
28		setpoint, in units of 0.125 dB, currently in use in the
29		Dedicated Channel power control outer loop estimation;
30		otherwise, the mobile station shall omit this field.
31	NUM_SUP	- The number of Supplemental Channels.
32		If SETPT_INCL is equal to '1', the mobile station shall include
33		this field and set it as follows; otherwise, the mobile station
34		shall omit this field.
35		The mobile station shall set this field to the total number of
36		the Supplemental Channels reported by this message.
37	The mobile station shall include NUM_SUP occurrences of the following two fields:	
38	SCH_ID	- The Supplemental Channel index.
39		The mobile station shall set this field to the Supplemental
40		Channel index to indicate the Forward Supplemental
41		Channel that is to be reported.

- 1    FPC\_SCH\_CURR\_SETPT -    The supplemental channel outer loop  $E_b/N_t$  setpoint.  
2  
3                                The mobile station shall set this field to the value of the  
4                                power control outer loop  $E_b/N_t$  setpoint, in units of 0.125 dB,  
5                                currently in use in the Channel specified by SCH\_ID.  
6

## 2.7.2.3.2.22 Outer Loop Report Message

MSG\_TAG: OLRM

Field	Length (bits)
FCH_INCL	1
FPC_FCH_CURR_SETPT	0 or 8
DCCH_INCL	1
FPC_DCCH_CURR_SETPT	0 or 8
NUM_SUP	2

NUM\_SUP occurrences of the following fields:

{ (NUM\_SUP)

SCH_ID	1
FPC_SCH_CURR_SETPT	8

} (NUM\_SUP)

FCH\_INCL – Fundamental Channel included indicator.

The mobile station shall set this field to '1' if FPC\_FCH\_CURR\_SETPT is included; otherwise the mobile station shall set this field to '0'.

FPC\_FCH\_CURR\_SETPT – The outer loop  $E_b/N_t$  setpoint of the Fundamental Channel.

If FCH\_INCL is set to '1', the mobile station shall set this field to the value of the  $E_b/N_t$  setpoint, in units of 0.125 dB, currently in use in the Fundamental Channel power control outer loop estimation; otherwise, the mobile station shall omit this field.

DCCH\_INCL – Dedicated Control Channel included indicator.

The mobile station shall set this field to '1' if the FPC\_DCCH\_CURR\_SETPT field is included; otherwise the mobile station shall set this field to '0'.

FPC\_DCCH\_CURR\_SETPT – The outer loop  $E_b/N_t$  setpoint of the Forward Dedicated Channel.

If DCCH\_INCL is set to '1', the mobile station shall set this field to the value of the  $E_b/N_t$  setpoint, in units of 0.125 dB, currently in use in the Dedicated Channel power control outer loop estimation; otherwise, the mobile station shall omit this field.

- 1                    NUM\_SUP    -    The number of Supplemental Channels.  
2                                    The mobile station shall set this field to the total number of  
3                                    the Supplemental Channels reported by this message.  
4    The mobile station shall in NUM\_SUP occurrences of the following two fields:  
5                    SCH\_ID    -    The Supplemental Channel index.  
6                                    The mobile station shall set this field to the Supplemental  
7                                    Channel index to indicate the Forward Supplemental  
8                                    Channel that to be reported  
9    FPC\_SCH\_CURR\_SETPT -    The supplemental outer loop  $E_b/N_t$  setpoint.  
10                                   The mobile station shall set this field to the value of the  
11                                   power control outer loop  $E_b/N_t$  setpoint, in units of 0.125 dB,  
12                                   currently in use in the Channel specified by SCH\_ID.  
13

## 1 2.7.2.3.2.23 Resource Request Message

2 MSG\_TAG: RRM

3

Field	Length (bits)
CH_IND_INCL	1
CH_IND	0 or 2
EXT_CH_IND	0 or 5

4 CH\_IND\_INCL – Channel indicator inclusion bit.

5 The mobile station shall set this field to '1' if the mobile  
6 station is requesting a channel configuration; otherwise, the  
7 mobile station shall set this field to '0'.

8 CH\_IND – Channel indicator.

9 If CH\_IND\_INCL is set to '0', the mobile station shall omit this  
10 field; otherwise, the mobile station shall include this field and  
11 set it as shown in Table 2.7.1.3.2.4-6 to request a new  
12 physical channel configuration.

13 EXT\_CH\_IND - Extended Channel Indicator.

14 If the CH\_IND field is not included, or is included and not set  
15 to '00', the mobile station shall omit this field; otherwise, the  
16 mobile station shall include this field and set it as shown in  
17 Table 2.7.1.3.2.4-11 to request a new physical channel  
18 configuration.

2 MSG\_TAG: RRMM

3

Field	Length (bits)
CH_IND_INCL	1
CH_IND	0 or 2
EXT_CH_IND	0 or 5

4 CH\_IND\_INCL – Channel indicator inclusion bit.  
5 The mobile station shall set this field to ‘1’ if the mobile  
6 station is requesting a channel configuration; otherwise, the  
7 mobile station shall set this field to ‘0’.

8 CH\_IND – Channel indicator.  
9 If CH\_IND\_INCL is set to ‘0’, the mobile station shall omit this  
10 field; otherwise, the mobile station shall include this field and  
11 set it as shown in Table 2.7.1.3.2.4-6 to request a new  
12 physical channel configuration.

13 EXT\_CH\_IND - Extended Channel Indicator.  
14 If the CH\_IND field is not included, or is included and not set  
15 to ‘00’, the mobile station shall omit this field; otherwise, the  
16 mobile station shall include this field and set it as shown in  
17 Table 2.7.1.3.2.4-11 to request a new physical channel  
18 configuration.

## 1 2.7.2.3.2.25 Extended Release Response Message

2 MSG\_TAG: ERRM

Field	Length (bits)
RSC_MODE_IND	1
RSCI	0 or 4
RSC_END_TIME_UNIT	0 or 2
RSC_END_TIME_VALUE	0 or 4

3

4 RSC\_MODE\_IND – Reduced slot cycle mode indicator.

5 The mobile station shall set this field to '1' to indicate that it  
6 will operate in the reduced slot cycle mode following release  
7 of the traffic channel; otherwise, the mobile station shall set  
8 this field to '0'.

9 RSCI – Reduced slot cycle index.

10 If RSC\_MODE\_IND is equal to '1', the mobile station shall  
11 include this field and set it to the value of the reduced slot  
12 cycle index, as specified in Table 2.7.1.3.2.1-8; otherwise, the  
13 mobile station shall omit this field.

14 The mobile station shall set this field to a value less than the  
15 registered slot cycle index, SLOT\_CYCLE\_INDEX\_REG.

16 RSC\_END\_TIME\_UNIT – Reduced slot cycle mode end time unit.

17 If RSC\_MODE\_IND is equal to '0', the mobile station shall  
18 omit this field; otherwise, the mobile station shall set this  
19 field according to Table 2.7.3.5-1 to indicate the units of the  
20 RSC\_END\_TIME\_VALUE field.

21 RSC\_END\_TIME\_VALUE – Reduced slot cycle mode end time value.

22 If RSC\_MODE\_IND is equal to '0', the mobile station shall  
23 omit this field; otherwise, the mobile station shall include  
24 this field and set it as follows:

25 The mobile station shall set this field to the system time, in  
26 units of time specified by RSC\_END\_TIME\_UNIT(modulo 16),  
27 at which the mobile station is to exit the reduced slot cycle  
28 mode.

## 2.7.2.3.2.27 Pilot Strength Measurement Mini Message

MSG\_TAG: PSM MM

Field	Length (bits)
PSMM_POS	3
PILOT_STRENGTH	6
RANK	3

PSMM\_POS – *Pilot Strength Measurement Message* position.

The mobile station shall set this field to an index corresponding to the position, within the last sent *Pilot Strength Measurement Message* (see 2.7.2.3.2.5) or *Extended Pilot Strength Measurement Message* (see 2.7.2.3.2.34), of the Active-Set pilot whose strength is being reported. The mobile station shall use a value of 0 to report the pilot represented by the REF\_PN field in the last sent *Pilot Strength Measurement Message* or *Extended Pilot Strength Measurement Message*. The mobile station shall use a value of n, where n is an integer greater than 0, to report the pilot represented by the n<sup>th</sup> occurrence of the PILOT\_PN\_PHASE field in the last sent *Pilot Strength Measurement Message* or *Extended Pilot Strength Measurement Message*.

PILOT\_STRENGTH – Pilot strength in dB.

The mobile station shall set this field to

$$\lfloor -2 \times 10 \times \log_{10} PS \rfloor,$$

where PS is the strength of this Active-Set pilot, measured as specified in [2]. If this value is less than 0, the mobile station shall set this field to '000000'. If this value is greater than '111111', the mobile station shall set this field to '111111'.

RANK – Rank order.

The mobile station shall set this field to the rank order of the pilot whose strength is being reported, relative to all other pilots in the current Active Set. The mobile station shall use a value of 0 to report the strongest pilot in the current Active Set.

1 2.7.2.3.2.28 Supplemental Channel Request Mini Message

2 MSG\_TAG: SCRMM

3

Field	Length (bits)
REQ_BLOB	16

4

5 REQ\_BLOB – Reverse Supplemental Channel request block of bytes.

6 The mobile station shall include information in this field  
7 containing the parameters that specify the characteristics of  
8 the Reverse Supplemental Channels request. The mobile  
9 station shall set this field in accordance with the connected  
10 Service Options.

11

## 1 2.7.2.3.2.29 Resource Release Request Message

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN
-------------------------	-----------------------------

*} (NUM\_FLOW\_DISCRIMINATOR+1) or 1*

*} (0 or NUM\_BCMC\_PROGRAMS)*

4

1	GATING_DISCONNECT_IND	-	Reverse pilot gating or service disconnect indicator.
2			If the mobile station requests that reverse pilot gating
3			operation to be performed, the mobile station shall set this
4			field to '1'; otherwise (if the mobile station requests that the
5			service option connection specified by CON_REF to be
6			released), the mobile station shall set this field to '0'.
7	CON_REF	-	Connection reference.
8			If the GATING_DISCONNECT_IND field is set to '1', the mobile
9			station shall omit this field; otherwise, the mobile station
10			shall include this field and set it as follows:
11			To request the release of a service option connection, the
12			mobile station shall set this field to the connection reference
13			corresponding to one of the service option connections
14			requested to be released; otherwise the mobile station shall
15			set this field to '00000000'.
16	PURGE_SERVICE	-	Purge service instance indicator.
17			If the GATING_DISCONNECT_IND field is set to '1', the mobile
18			station shall omit this field; otherwise, the mobile station
19			shall include this field and set it as follows:
20			If the CON_REF is not set to '00000000' and if the packet
21			data service instance identified by CON_REF has been
22			inactivated, the mobile station shall set this field to '1';
23			otherwise, the mobile station shall set this field to '0'. When
24			CON_REF is set to '00000000', this field does not have any
25			significance.
26	ADD_CON_REF_INCL	-	Additional connection reference included indicator.
27			If the GATING_DISCONNECT_IND field is set to '1', the mobile
28			station shall omit this field; otherwise, the mobile station
29			shall include this field and set it as follows:
30			If at least one occurrence of the ADD_CON_REF field is
31			included in this message, then the mobile station shall set
32			this field to '1'; otherwise, the mobile station shall set this
33			field to '0'.
34	NUM_ADD_CON_REF	-	Number of additional connection references.
35			If the ADD_CON_REF_INCL field is included and set to '1', the
36			mobile station shall include this field and set it to one less
37			than the number of occurrences of the ADD_CON_REF field
38			included in this message; otherwise, the mobile station shall
39			omit this field.

1	ADD_CON_REF	-	Additional connection reference.
2			The mobile station shall set this field to the connection
3			reference corresponding to a service option connection that is
4			requested to be released.
5	ADD_PURGE_SERVICE	-	Additional purge service instance indicator.
6			If the packet data service instance identified by the
7			ADD_CON_REF field has been inactivated, the mobile station
8			shall set this field to '1'; otherwise, the mobile station shall
9			set this field to '0'.
10	BCMC_INFO_INCL	-	BCMC information includes indicator.
11			If the mobile station includes BCMC related fields in this
12			message, the mobile station shall set this field to '1';
13			otherwise, the mobile station shall set this field to '0'.
14	NUM_BCMC_PROGRAMS	-	Number of BCMC Programs
15			If the BCMC_INFO_INCL field is set to '0', the mobile station
16			shall omit this field; otherwise, the mobile station shall
17			include this field and set it as follows:
18			If the mobile station is requesting the release of all the BCMC
19			programs being monitored, the mobile station shall set this
20			field to '000000'; otherwise, the mobile station shall set this
21			field to the number of BCMC programs included in this
22			message.
23	The mobile station shall include NUM_BCMC_PROGRAMS occurrences of the following		
24	variable length record:		
25	BCMC_PROGRAM_ID_LEN	-	Length of BCMC_PROGRAM_ID field
26			The mobile station shall set this field to one less than the
27			length, in bits, of the BCMC_PROGRAM_ID of this program.
28	BCMC_PROGRAM_ID	-	BCMC program Identifier
29			The length of this field shall be one more than the value of
30			BCMC_PROGRAM_ID_LEN bits.
31			The mobile station shall set this field to the identifier of the
32			BCMC program corresponding to one or more flows that the
33			mobile station is requesting to release.
34	BCMC_FLOW_DISCRIMINATOR_LEN	-	Length of BCMC_FLOW_DISCRIMINATOR field
35			The mobile station shall set this field to the length, in bits, of
36			the BCMC_FLOW_DISCRIMINATOR of this program. To
37			request release of all flows associated with this
38			BCMC_PROGRAM_ID, the mobile station may set this field to
39			'000'.

1    NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators

2                                    The length of this field shall be determined by the value of the  
3                                    BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
4                                    BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
5                                    is omitted; otherwise, the length of this field shall be  
6                                    BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

7                                    The mobile station shall set this field to the number of flow  
8                                    discriminators included for this program minus one.

9    If NUM\_FLOW\_DISCRIMINATOR field is included, the mobile station shall include  
10    NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
11    otherwise, the mobile station shall include 1 occurrence of the following variable length  
12    record:

13    BCMC\_FLOW\_DISCRIMINATOR - BCMC Flow discriminator.

14                                   The length of this field shall be determined by the value of the  
15                                   BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
16                                   BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
17                                   is omitted; otherwise, the length of this field shall be  
18                                   BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

19                                   The mobile station shall set this field to the BCMC flow  
20                                   discriminator that is requested to be released.

21

## 2.7.2.3.2.30 Resource Release Request Mini Message

MSG\_TAG: RRRMM

Field	Length (bits)
GATING_DISCONNECT_IND	1
CON_REF	0 or 8
PURGE_SERVICE	0 or 1

**GATING\_DISCONNECT\_IND** - Reverse pilot gating or service disconnect indicator.

If the mobile station requests that reverse pilot gating operation to be performed, the mobile station shall set this field to '1'; otherwise (if the mobile station requests that the service option connection specified by CON\_REF to be released), the mobile station shall set this field to '0'.

**CON\_REF** - Connection reference.

If the GATING\_DISCONNECT\_IND field is set to '1', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the connection reference corresponding to the service option connection that is requested to be released.

**PURGE\_SERVICE** - Purge service instance indicator.

If the GATING\_DISCONNECT\_IND field is set to '1', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

If the packet data service instance identified by CON\_REF has been inactivated, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

011	Reserved.
100	Continuous Reverse Pilot Channel.
101	Fundamental Channel and Continuous Reverse Pilot Channel.
110	Reserved.
111	Refer to EXT_CH_IND.

2

3

EXT\_CH\_IND - Extended Channel Indicator.

4

If CH\_IND is set to '111, then the mobile station shall set this field as shown in Table 2.7.1.3.2.4-11; otherwise, the mobile station shall omit this field.

5

6

- 1                   SR\_ID    –   Service reference identifier.
- 2                               If the SYNC\_ID\_INCL field is set to '0', the mobile station shall
- 3                               set this field as follows:
- 4                               o   If the service instance provides a service reference
- 5                                    identifier, the mobile station shall set this field to the
- 6                                    service reference identifier specified by the service
- 7                                    instance. If the service instance does not provide a
- 8                                    service reference identifier, the mobile station shall set
- 9                                    this field to the smallest unused service reference
- 10                                  identifier value between 1 and 6 (inclusive).
- 11                               Otherwise, the mobile station shall set this field as follows:
- 12                               o   If the mobile station requests the restoration of a single
- 13                                    service option connection from the stored service
- 14                                    configuration, the mobile station shall set this field to the
- 15                                    corresponding service reference identifier.
- 16                               o   If the mobile station requests the restoration of more than
- 17                                    one but not all service option connections from the stored
- 18                                    service configuration, the mobile station shall set this
- 19                                    field to the service reference identifier corresponding to
- 20                                    one of the service option connections to be restored.
- 21                               o   Otherwise (that is, the mobile station requests the
- 22                                    restoration of all remaining service option connections
- 23                                    from the stored service configuration), the mobile station
- 24                                    shall set this field to '111'.
- 25   GLOBAL\_EMERGENCY\_CALL   –   Global emergency call indicator.
- 26                               The mobile station shall set this field to '1', if the mobile
- 27                               station recognizes that this is an emergency call; otherwise,
- 28                               the mobile station shall set this field to '0'.
- 29   MS\_INIT\_POS\_LOC\_IND   –   Mobile Initiated Position Location Session indicator.
- 30                               If the GLOBAL\_EMERGENCY\_CALL field is set to '0', the
- 31                               mobile station shall omit this field; otherwise, the mobile
- 32                               station shall include this field and shall set it as follows:
- 33                               The mobile station shall set this field to '1' if
- 34                               MS\_INIT\_POS\_LOC\_SUP\_IND<sub>s</sub> is equal to '1' and if the mobile
- 35                               station is to initiate a position location session associated
- 36                               with this emergency call; otherwise, the mobile station shall
- 37                               set this field to '0'.

1	NEW_SINFO_INCL	-	Encryption fields included.
2			The mobile station shall set this field to '1' if the encryption
3			related fields are included; otherwise the mobile station shall
4			set this field to '0'. The mobile station shall set this field to '0'
5			if the base station does not support encryption or the mobile
6			station does not support any of the encryption modes
7			supported by the base station.
8	UI_ENCRYPT_REQ	-	Request for user information encryption on the traffic
9			channel indicator.
10			If NEW_SINFO_INCL is set to '1', the mobile station shall
11			include this field; otherwise, the mobile station shall omit
12			this field. If this field is included, the mobile station shall set
13			this field to '1' to request user information encryption, and to
14			'0' to request no user information encryption.
15	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
16			If NEW_SINFO_INCL is set to '1', the mobile station shall
17			include this field; otherwise, the mobile station shall omit
18			this field. If this field is included, the mobile station shall set
19			this field to indicate the supported user information
20			encryption algorithms.
21			This field consists of the subfields shown in Table
22			2.7.1.3.2.4-9.
23			The mobile station shall set each subfield to '1' if the
24			corresponding user information encryption algorithm is
25			supported by the mobile station; otherwise, the mobile
26			station shall set the subfield to '0'.
27			The mobile station shall set the RESERVED subfield to
28			'000000'.
29	SERVICE_OPTION	-	Requested service option for this origination.
30			The mobile station shall set this field to the value specified in
31			[30], corresponding to the requested service option.
32	MORE_SO_INFO_INCL	-	More service option information included.
33			If MAX_NUM_ALT_SO <sub>S</sub> is equal to '000', the mobile station
34			shall set this field to '0'; otherwise, the mobile station shall set
35			this field as follows:
36			If any alternate service option number or/and service option
37			bitmap is to be included in this message, the mobile station
38			shall set this field to '1', otherwise, the mobile station shall
39			set this field to '0'. In other words, MORE_SO_INFO_INCL is
40			set to '1', if NUM_ALT_SO is included and not set to '000'
41			or/and SO_BITMAP_IND is included and not set to '00'.
42	NUM_ALT_SO	-	Number of alternative service options.

1 If MORE\_SO\_INFO\_INCL is set to '0', the mobile station shall  
 2 omit this field; otherwise, the mobile station shall set this  
 3 field to the number of supported alternative service options  
 4 which either have no service option group number assigned  
 5 or do not belong to the same service option group whose  
 6 bitmap is include in the message.

7 The mobile station shall include NUM\_ALT\_SO occurrences of the following field:

8 ALT\_SO – Alternative service option.

9 The mobile station shall set this field to the value specified in  
 10 [30], corresponding to the alternative service option  
 11 supported by the mobile station. These alternate service  
 12 options are either have not service option group number  
 13 assigned or do not belong to the same service option group  
 14 whose bitmap is included in this message.

15 SO\_BITMAP\_IND – SO bitmap indicator.

16 If MORE\_SO\_INFO\_INCL is set to '0', the mobile station shall  
 17 omit this field; otherwise, the mobile station shall include  
 18 this field and set it as defined in Table 2.7.1.3.2.4-10.

19 SO\_GROUP\_NUM – Service option group number.

20 If the field SO\_BITMAP\_IND is included and not set to '00',  
 21 the mobile station shall include this field and set this field to  
 22 the service option group number of which the bitmap is to be  
 23 included; otherwise, the mobile station shall omit this field.

24 SO\_BITMAP – Service option bitmap.

25 If the field SO\_BITMAP\_IND is included and not set to '00',  
 26 the mobile station shall include the bitmap of size  $2^{(1+SO\_BITMAP\_IND)}$  bits of the service option group number  
 27 (SO\_GROUP\_NUM); otherwise, the mobile station shall omit  
 28 this field;  
 29

30 When the service option bitmap is included, if there are more  
 31 than  $(2^{(1+SO\_BITMAP\_IND)})$  service options defined for the  
 32 service option group, the mobile station shall include the  
 33 bitmap containing the least significant bits  $(2^{(1+SO\_BITMAP\_IND)})$  of the service option group.  
 34

35 The mobile station shall set a bit in this bitmap to '1', if the  
 36 mobile station supports the service option for which this bit  
 37 represents; otherwise, the mobile station shall set a bit in this  
 38 bitmap to '0'.

39 DRS – Data ready to send indicator.

40 If the service instance corresponding to SR\_ID has data to  
 41 send, the mobile station shall set this field to '1'; otherwise,  
 42 the mobile station shall set this field to '0'.

1	PREV_SID_INCL	-	Previous System Identification (SID) included indicator.
2			The mobile station shall set this field to '1' if:
3		-	The mobile station determines that the SID has been
4			changed after a packet data dormant handoff, and
5		-	This message includes the main service instance (see
6			[42]).
7			Otherwise, the mobile station shall set this field to '0'.
8	PREV_SID	-	Previous System Identification.
9			If PREV_SID_INCL is set to '0', the mobile station shall omit
10			this field; otherwise, the mobile station shall include this field
11			and set it as follows:
12			The mobile station shall set this field to the previous SID.
13	PREV_NID_INCL	-	Previous Network Identification (NID) included indicator.
14			The mobile station shall set this field to '1' if:
15		-	The mobile station determines that NID has been changed
16			after a packet data dormant handoff, and
17		-	This message includes the main service instance (see
18			[42]).
19			Otherwise, the mobile station shall set this field to '0'.
20	PREV_NID	-	Previous Network Identification.
21			If PREV_NID_INCL is set to '0', the mobile station shall omit
22			this field; otherwise, the mobile station shall include this field
23			and set it as follows:
24			The mobile station shall set this field to the previous NID.
25	PREV_PZID_INCL	-	Previous Packet Zone ID (PZID) included indicator.
26			The mobile station shall set this field to '1' if:
27		-	The mobile station determines that the Packet Zone ID
28			has been changed after a packet data dormant handoff,
29			and
30		-	This message includes the main service instance (see
31			[42]).
32			Otherwise, the mobile station shall omit this field.
33	PREV_PZID	-	Previous Packet Zone ID.
34			If PREV_PZID_INCL is set to '0', the mobile station shall omit
35			this field; otherwise, the mobile station shall include this field
36			and set it as follows:
37			The mobile station shall set this field to the previous PZID.
38	DIALED_DIGS_INCL	-	Dialed digits included indicator.

1			The mobile station shall set this field to '1' if the dialed digits
2			related fields are included in this message; otherwise, the
3			mobile station shall set this field to '0'.
4	DIGIT_MODE	-	Digit mode indicator.
5			If the DIALED_DIGS_INCL field is set to '0', the mobile station
6			shall omit this field; otherwise, the mobile station shall
7			include this field and shall set it as follows:
8			This field indicates whether the dialed digits are 4-bit DTMF
9			codes or 8-bit ASCII codes using a specified numbering plan.
10			To originate the call using the binary representation of DTMF
11			digits (i.e., CHARi fields are represented in Table 2.7.1.3.2.4-
12			4), the mobile station shall set this field to '0'. To originate
13			the call using ASCII characters, the mobile station shall set
14			this field to '1'.
15	NUMBER_TYPE	-	Type of number.
16			If the DIALED_DIGS_INCL field is set to '0', or if
17			P_REV_IN_USE <sub>s</sub> < 11 and DIGIT_MODE is set to '0', the
18			mobile station shall omit this field; otherwise, the mobile
19			station shall include this field and shall set it as follows:
20			The mobile station shall set this field to the NUMBER_TYPE
21			value shown in Table 2.7.1.3.2.4-2 corresponding to the type
22			of the number as defined in [7], Section 4.5.9.
23			If this field is included and the mobile station determines that
24			the user has entered an international number (for example,
25			with a leading "+" as specified in [39] for Plus Code Dialing or
26			an international access code), the mobile station should set
27			this field to '001'.
28	NUMBER_PLAN	-	Numbering plan.
29			If the DIALED_DIGS_INCL field is set to '0' or if the
30			DIGIT_MODE field is set to '0', the mobile station shall omit
31			this field; otherwise, the mobile station shall include this field
32			and shall set it as follows:
33			The mobile station shall set this field to the NUMBER_PLAN
34			value shown in Table 2.7.1.3.2.4-3 corresponding to the
35			requested numbering plan as defined in [7], Section 4.5.9.
36	NUM_FIELDS	-	Number of dialed digits in this message.

- 1 If the DIALED\_DIGS\_INCL field is set to '0', the mobile station  
 2 shall omit this field; otherwise, the mobile station shall  
 3 include this field and shall set it as follows:
- 4 The mobile station shall set this field to the number of dialed  
 5 digits included in this message.
- 6 The mobile station shall include NUM\_FIELDS occurrences of the following field:
- 7           CHARi    – A dialed digit or character.
- 8 If the DIGIT\_MODE field is set to '0', the mobile station shall  
 9 set each occurrence of this field to the code value shown in  
 10 Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the  
 11 DIGIT\_MODE field is set to '1', the mobile station shall set  
 12 each occurrence of this field to the ASCII representation  
 13 corresponding to the dialed digit, as specified in [9], with the  
 14 most significant bit set to '0'.
- 15           NUM\_RECS   – Number of records.
- 16 The mobile station shall set this field to the number of  
 17 information records included with this message.
- 18 The mobile station shall include NUM\_RECS occurrences of the following three-field  
 19 record.
- 20           RECORD\_TYPE   – Information record type.
- 21 The mobile station shall set this field to the record type value  
 22 shown in Table 2.7.4-1.
- 23 The mobile station shall not include the record type for QoS  
 24 Parameters information record if MOB\_QOS<sub>s</sub> is equal to '0'.
- 25           RECORD\_LEN   – Information record length.
- 26 The mobile station shall set this field to the number of octets  
 27 in the type-specific fields included in this record.
- 28           Type-specific fields   – Type-specific fields.
- 29 The mobile station shall include type-specific fields as  
 30 specified in 2.7.4.

1	SYNC_ID_INCL	-	Service Configuration synchronization identifier included indicator.
2			
3			The mobile station shall set this field to '1' if the SYNC_ID
4			field is included in this message; otherwise, the mobile
5			station shall set this field to '0'.
6			If SYNC_ID_SUPPORTED <sub>s</sub> is equal to '0', the mobile station
7			shall set this field to '0'.
8	SYNC_ID_LEN	-	Service Configuration synchronization identifier length
9			indicator.
10			If the SYNC_ID_INCL field is set to '0', the mobile station shall
11			omit this field; otherwise the mobile station shall include this
12			field and set it as follows:
13			The mobile station shall set this field to the length of the
14			SYNC_ID field included in this message.
15	SYNC_ID	-	Service Configuration synchronization identifier.
16			If the SYNC_ID_INCL field is set to '0', the mobile station shall
17			omit this field; otherwise, the mobile station shall include
18			this field and set it as follows:
19			The mobile station shall set this field to the Service
20			Configuration synchronization identifier corresponding to the
21			stored service configuration.
22	ADD_SERV_INSTANCE_INCL	-	Additional service instances included indicator.
23			If SR_ID is included and set to '111', the mobile station shall
24			omit this field; otherwise, the mobile station shall include
25			this field and set it as follows:
26			If at least one occurrence of the ADD_SR_ID field is included
27			in this message, the mobile station shall set this field to '1';
28			otherwise, the mobile station shall set this field to '0'.
29			If SYNC_ID_INCL is equal to '0' and
30			MAX_ADD_SERV_INSTANCE <sub>s</sub> is equal to '0', the mobile
31			station shall set this field to '0'.
32	NUM_ADD_SERV_INSTANCE	-	Number of additional service instances included.
33			If ADD_SERV_INSTANCE_INCL is set to '0', the mobile station
34			shall omit this field; otherwise, the mobile station shall
35			include this field and set it to the number of additional
36			service instances included in this message.

1                   If SYNC\_ID\_INCL is equal to '0', the mobile station shall set  
2                   this field to a value less than or equal to  
3                   MAX\_ADD\_SERV\_INSTANCE<sub>s</sub>.

4   If ADD\_SERV\_INSTANCE\_INCL is set to '1', the mobile station shall include  
5   NUM\_ADD\_SERV\_INSTANCE occurrences of the following variable-field record:

6           ADD\_SR\_ID    -   Additional service reference identifier.

7                   If SYNC\_ID\_INCL is set to '0', the mobile station shall set this  
8                   field as follows:

9                   o   If the service instance provides a service reference  
10                    identifier, the mobile station shall set this field to the  
11                    service reference identifier specified by the service  
12                    instance. If the service instance does not provide a service  
13                    reference identifier, the mobile station shall set this field  
14                    to the smallest unused service reference identifier value  
15                    between 1 and 6 (inclusive).

16                   Otherwise, the mobile station shall set this field to the service  
17                   reference identifier corresponding to the service option  
18                   connection that the mobile station requests to be restored  
19                   from the stored service configuration.

20           ADD\_DRS    -   Additional Data Ready to Send indicator.

21                   If the service instance corresponding to the ADD\_SR\_ID field  
22                   of this record has data to send, the mobile station shall set  
23                   this field to '1'; otherwise, the mobile station shall set this  
24                   field to '0'.

25           ADD\_TAG    -   Additional call initiation transaction identifier.

26                   The mobile station shall set this field to the identifier for the  
27                   transaction corresponding to the ADD\_SR\_ID field of this  
28                   record.

29   ADD\_SERVICE\_OPTION\_INCL   -   Additional service option included indicator.

30                   If SYNC\_ID\_INCL is set to '1', the mobile station shall omit  
31                   this field; otherwise, the mobile station shall include this field  
32                   and set it as follows:

33                   The mobile station shall set this field to '0' if the requested  
34                   service option number of the service instance corresponding  
35                   to the ADD\_SR\_ID field of this record is the same as  
36                   SERVICE\_OPTION; otherwise, the mobile station shall set  
37                   this field to '1'.

- 1     **ADD\_SERVICE\_OPTION**    –   Additional service option number.
- 2                                If the **ADD\_SERVICE\_OPTION\_INCL** field of this record is not
- 3                                included or is included and is set to '0', the mobile station
- 4                                shall omit this field; otherwise, the mobile station shall
- 5                                include this field and set it to the value specified in [30],
- 6                                corresponding to the requested service option number of the
- 7                                service instance corresponding to the **ADD\_SR\_ID** field of this
- 8                                record.
- 9     **ADD\_NUM\_RECS**        –   Additional number of records.
- 10                              The mobile station shall set this field to the number of
- 11                              information records included in this record for the service
- 12                              instance corresponding to the **ADD\_SR\_ID** field in this record.
- 13   The mobile station shall include **ADD\_NUM\_RECS** occurrences of the following three-field
- 14   record.
- 15   **ADD\_RECORD\_TYPE**     –   Additional information record type.
- 16                              The mobile station shall set this field to the record type value
- 17                              shown in Table 2.7.4-1.
- 18                              The mobile station shall not include the record type for QoS
- 19                              Parameters information record if **MOB\_QOS<sub>S</sub>** is equal to '0'.
- 20   **ADD\_RECORD\_LEN**     –   Additional information record length.
- 21                              The mobile station shall set this field to the number of octets
- 22                              in the type-specific fields included in this record.
- 23   **Type-specific fields**   –   Type-specific fields.
- 24                              The mobile station shall include type-specific fields as
- 25                              specified in 2.7.4.
- 26
- 27   **BCMC\_INCL**         –   BCMC information included indicator
- 28                              If the **P\_REV\_IN\_USE<sub>S</sub>** is less than 11, the mobile station
- 29                              shall omit this field; otherwise, the mobile station shall
- 30                              include this field and set it as follows:
- 31                              The mobile station shall set this field to '1' if one or more
- 32                              **BCMC\_PROGRAM\_IDs** are included in the message;
- 33                              otherwise, the mobile station shall set this field to '0'.

1	BCMC_ORIG_ONLY_IND - BCMC origination only indicator	
2		If the BCMC_INCL field is not included or is included and is
3		set to '0', the mobile station shall omit this field; otherwise,
4		the mobile station shall include this field and set it as
5		follows:
6		The mobile station shall set this field to '1' to indicate that
7		this origination is only for BCMC and no point to point call is
8		requested in this message; otherwise the mobile station shall
9		set this field to '0'.
10	AUTH_SIGNATURE_INCL	- Authorization signature included indication.
11		If the BCMC_INCL field is not included or is included and is
12		set to '0', the mobile station shall omit this field; otherwise,
13		the mobile station shall include this field and set it as
14		follows:
15		The mobile station shall set this field to '1' to indicate that
16		the authorization signature is included in this message for
17		some of the BCMC flows included in this message; otherwise,
18		the mobile station shall set this field to '0'.
19	TIME_STAMP_SHORT_LENGTH	- Length of time stamp included in this message.
20		If the AUTH_SIGNATURE_INCL field is not included or is
21		included and is set to '0', the mobile station shall omit this
22		field; otherwise, the mobile station shall include this field and
23		set it as follows:
24		The mobile station shall set this field to the length of the time
25		stamp, in units of bits, included in this message.
26	TIME_STAMP_SHORT	- Time stamp short.
27		If the AUTH_SIGNATURE_INCL field is not included or is
28		included and is set to '0', the mobile station shall omit this
29		field; otherwise, the mobile station shall include this field and
30		set it as follows:
31		The mobile station shall set this field to the
32		TIME_STAMP_SHORT_LENGTH least significant bits of the
33		time stamp parameter used to generate the Authorization
34		signature included in this message.
35	NUM_BCMC_PROGRAMS	- Number of BCMC Programs
36		If the BCMC_INCL field is not included or is included and is
37		set to '0', the mobile station shall omit this field; otherwise,
38		the mobile station shall include this field and set it as
39		follows:
40		The mobile station shall set this field to the number of BCMC
41		programs included in this message minus 1.

- 1 The mobile station shall include NUM\_BCMC\_PROGRAMS+1 occurrences of the following  
 2 variable length record:
- 3 BCMC\_PROGRAM\_ID\_LEN - Length of BCMC\_PROGRAM\_ID field
- 4 The mobile station shall set this field to one less than the  
 5 length, in bits, of the BCMC\_PROGRAM\_ID of this program.
- 6 BCMC\_PROGRAM\_ID - BCMC program Identifier
- 7 The length of this field shall be one more than the value of  
 8 BCMC\_PROGRAM\_ID\_LEN bits.
- 9 The mobile station shall set this field to the identifier of the  
 10 BCMC program corresponding to one or more flows that the  
 11 mobile station will continue to monitor or start to monitor  
 12 upon receiving confirmation of delivery of this message or is  
 13 requesting transmission.
- 14 BCMC\_FLOW\_DISCRIMINATOR\_LEN - Length of BCMC\_FLOW\_DISCRIMINATOR field
- 15 The mobile station shall set this field to the length, in bits, of  
 16 the BCMC\_FLOW\_DISCRIMINATOR of this program. To  
 17 request all flows associated with this BCMC\_PROGRAM\_ID,  
 18 the mobile station may set this field to '000'.
- 19 NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators
- 20 The length of this field shall be determined by the value of the  
 21 BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
 22 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
 23 is omitted; otherwise, the length of this field shall be  
 24 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.
- 25 The mobile station shall set this field to the number of flow  
 26 discriminators included for this program minus one.
- 27 If NUM\_FLOW\_DISCRIMINATOR field is included, the mobile station shall include  
 28 NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
 29 otherwise, the mobile station shall include 1 occurrence of the following variable length  
 30 record:
- 31 BCMC\_FLOW\_DISCRIMINATOR - BCMC Flow discriminator.
- 32 The length of this field shall be determined by the value of the  
 33 BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
 34 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
 35 is omitted; otherwise, the length of this field shall be  
 36 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.
- 37 The mobile station shall set this field to the BCMC flow  
 38 discriminator requested.
- 39 AUTH\_SIGNATURE\_IND - Authorization signature indicator.

1		If the AUTH_SIGNATURE_INCL field is not included or is
2		included and is set to '0', the mobile station shall omit this
3		field; otherwise, the mobile station shall include this field and
4		set it as follows:
5		The mobile station shall set this field to '1' to indicate that
6		the authorization signature is included in this message for
7		this BCMC flow; otherwise, the mobile station shall set this
8		field to '0'.
9	AUTH_SIGNATURE_SAME_IND	- Authorization signature same as previous BCMC
10		flow indicator.
11		If the AUTH_SIGNATURE_IND field is not included or is
12		included and is set to '0', the mobile station shall omit this
13		field; otherwise, the mobile station shall include this field and
14		set it as follows:
15		The mobile station shall set this field to '1' to indicate that
16		the authorization signature generated for this BCMC flow is
17		the same as the one generated for the BCMC flow listed prior
18		to this BCMC flow in this message; otherwise, the mobile
19		station shall set this field to '0'.
20		For the first BCMC flow listed in this message, the mobile
21		station shall set this field to '0'.
22	BAK_ID	- BAK identifier.
23		If the AUTH_SIGNATURE_SAME_IND field is not included or
24		is included and is set to '1', the mobile station shall omit this
25		field; otherwise, the mobile station shall include this field and
26		set it as follows:
27		The mobile station shall set this field to BAK identifier used
28		to generate the Authorization signature included in this
29		message.
30	AUTH_SIGNATURE	- Authorization signature.
31		If the AUTH_SIGNATURE_SAME_IND field is not included or
32		is included and is set to '1', the mobile station shall omit this
33		field; otherwise, the mobile station shall include this field and
34		set it as follows:
35		The mobile station shall set this field to the Authorization
36		signature computed for this BCMC flow as specified in
37		2.6.13.9.
38		

1

## 2 2.7.2.3.2.33 Extended Flash With Information Message

3 MSG\_TAG: EFWIM

4

Field	Length (bits)
CON_REF_INCL	1
CON_REF	0 or 8
NUM_REC	4

NUM\_REC occurrences of the following record:

{ (NUM\_REC)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM\_REC)

5

6 CON\_REF\_INCL – Connection reference included indicator.

7 The mobile station shall set this field to '1' if the connection  
8 reference field is included in this message; otherwise, it shall  
9 set this field to '0'.

10 CON\_REF – Connection reference.

11 If the CON\_REF\_INCL field is set to '0', the mobile station  
12 shall omit this field; otherwise, the mobile station shall  
13 include this field and shall set it to the value of the  
14 connection reference assigned to the service option  
15 connection of the call, to which this message corresponds.

16 NUM\_REC – Number of records.

17 The mobile station shall set this field to the number of  
18 information records included with this message.

19 The mobile station shall include NUM\_REC occurrence of the following three-field record:

1	RECORD_TYPE	–	Information record type.
2			The mobile station shall set this field to the record type code
3			shown in Table 2.7.4-1 corresponding to the type of this
4			information record.
5	RECORD_LEN	–	Information record length.
6			The mobile station shall set this field to the number of octets
7			in the type-specific fields of this record.
8	Type-specific fields	–	Type-specific fields.
9			The mobile station shall set these fields as specified in 2.7.4
10			for this type of information record.
11			

## 1 2.7.2.3.2.34 Extended Pilot Strength Measurement Message

2 MSG\_TAG: EPSMM

Field	Length (bits)
REF_PN	9
PILOT_STRENGTH	6
KEEP	1
REF_PILOT_REC_INCL	1
REF_PILOT_REC_TYPE	0 or 3
REF_RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times$ REF_RECORD_LEN
SF_RX_PWR	5
NUM_PILOTS	4

NUM\_PILOTS occurrences of the following record:

{ (NUM\_PILOTS)

PILOT_PN_PHASE	15
PILOT_STRENGTH	6
KEEP	1
PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times$ RECORD_LEN

} (NUM\_PILOTS)

RESQ_IND_INCL	1
---------------	---

NUM\_PILOTS occurrences of the following record :

{ (0 or NUM\_PILOTS)

RESQ_IND	1
----------	---

} (0 or NUM\_PILOTS)

3

4

REF\_PN – Time reference PN sequence offset.

5

6

7

8

The mobile station shall set this field to the PN sequence offset of the pilot used by the mobile station to derive its time reference, relative to the zero offset pilot PN sequence in units of 64 PN chips.

- 1      **PILOT\_STRENGTH**    -    Pilot strength in dB.  
2      The mobile station shall set this field to  
3       $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ,  
4      where PS is the strength of the pilot used by the mobile  
5      station to derive its time reference (see [2]), measured as  
6      specified in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less  
7      than 0, the mobile station shall set this field to '000000'. If  
8      this value is greater than '111111', the mobile station shall  
9      set this field to '111111'.  
10      **KEEP**    -    Keep pilot indicator.  
11      If the handoff drop timer (see 2.6.6.2.3) corresponding to the  
12      pilot used by the mobile station to derive its time reference  
13      (see [2]) has expired, the mobile station shall set this field to  
14      '0'; otherwise, the mobile station shall set this field to '1'.  
15      **REF\_PILOT\_REC\_INCL**    -    Reference pilot information included indicator.  
16      The mobile station shall set this field to '1' if additional  
17      reference pilot information listed in the  
18      **REF\_PILOT\_REC\_TYPE** and **REF\_RECORD\_LEN** fields are  
19      included. The mobile station shall set this field to '0' if the  
20      corresponding pilot is the common pilot and there is no  
21      additional pilot information included.  
22      **REF\_PILOT\_REC\_TYPE** -    Reference pilot record type.  
23      If **REF\_PILOT\_REC\_INCL** is set to '1', the mobile station shall  
24      set this field to the **REF\_PILOT\_REC\_TYPE** value shown in  
25      Table 2.7.2.3.2.34-1 corresponding to the type of Pilot Record  
26      specified by this record.

**Table 2.7.2.3.2.34-1. Pilot Record Types**

<b>Description</b>	<b>REF_PILOT_REC_TYPE PILOT_REC_TYPE (binary)</b>
Auxiliary Pilot	000
All other <b>REF_PILOT_REC_TYPE</b> or <b>PILOT_REC_TYPE</b> values are reserved	

- 29  
30      If **REF\_PILOT\_REC\_INCL** is set to '0', the mobile station shall  
31      omit this field.  
32      **REF\_RECORD\_LEN**    -    Reference pilot record length.  
33      If **REF\_PILOT\_REC\_INCL** is set to '1', the mobile station shall  
34      set this field to the number of octets in the type-specific fields  
35      of this pilot record.

1 If REF\_PILOT\_REC\_INCL is set to '0', the mobile station shall  
2 omit this field.

3 Type-specific fields - Pilot record type-specific fields.

4 If REF\_PILOT\_REC\_INCL is set to '1', the mobile station shall  
5 include type-specific fields based on the  
6 REF\_PILOT\_REC\_TYPE of this pilot record.

7 If REF\_PILOT\_REC\_INCL is set to '0', the mobile station shall  
8 omit this field.

9

10 If REF\_PILOT\_REC\_TYPE is equal to '000', the mobile station shall include the following  
11 fields:

12

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
PILOT_WALSH	(WALSH_LENGTH + 6)
RESERVED	0 to 7 (as needed)

13

14 QOF - Quasi-orthogonal function index.

15 The mobile station shall set this field to the index of the  
16 Quasi-orthogonal function of the corresponding Auxiliary  
17 Pilot.

18 WALSH\_LENGTH - Length of the Walsh code for the reference pilot.

19 The mobile station shall set this field to the WALSH\_LENGTH  
20 value shown in Table 2.7.2.3.2.34-2 corresponding to the  
21 length of the Walsh code for the pilot that is used as the  
22 Auxiliary Pilot.

23

**Table 2.7.2.3.2.34-2. Walsh Code Length**

WALSH_LENGTH (binary)	Length of the Walsh Code
'000'	64
'001'	128
'010'	256
'011'	512
'100' - '111'	Reserved

24

25 PILOT\_WALSH - Walsh code for the Auxiliary Pilot used by the mobile station  
26 to derive its time reference.

1		The mobile station shall set this field to the Walsh code
2		corresponding to the Auxiliary Pilot.
3	RESERVED	- Reserved bits.
4		The mobile station shall set all the bits of this field to '0' to
5		make the entire record octet-aligned.
6		
7	SF_RX_PWR	- The received power spectral density of the Serving Frequency.
8		The mobile station shall set this field to
9		$\lceil (10 \times \log_{10}(\text{spec\_density}) + 120) / 2 \rceil$
10		where <i>spec_density</i> is the mobile station received power
11		spectral density of the Serving Frequency, in mW/1.23MHz,
12		averaged over the last $N_{12m}$ frames (see 2.6.6.2.5.1).
13		If this value is less than 0, the mobile station shall set this
14		field to '00000'.
15	NUM_PILOTS	- Number of pilots reported.
16		The mobile station shall set this field to the number of pilots
17		being reported other than the reference pilot.
18	The mobile station shall include NUM_PILOTS occurrences of the following record: one	
19	occurrence for each pilot in the Active Set, for each pilot in the Candidate Set whose	
20	strength exceeds T_ADD, and for each pilot in the Candidate Set whose strength satisfies	
21	the following inequality:	
22	$10 \times \log_{10} PS > \frac{\text{SOFT\_SLOPE}_s}{8} \times 10 \times \log_{10} \sum_{i \in A} PS_i + \frac{\text{ADD\_INTERCEPT}_s}{2}$	
23	where the summation is performed over all pilots currently in the Active Set. The mobile	
24	station shall not include these fields for the pilot identified by the REF_PN field.	
25	The mobile station shall order any occurrences of the following record which correspond to	
26	pilots in the Active Set such that they occur before any occurrences of the following record	
27	which correspond to pilots in the Candidate Set.	
28	PILOT_PN_PHASE	- Pilot measured phase.
29		The mobile station shall set this field to the phase of the pilot
30		PN sequence relative to the zero offset pilot PN sequence of
31		this pilot, in units of one PN chip, as specified in 2.6.6.2.4.
32	PILOT_STRENGTH	- Pilot strength in dB.
33		The mobile station shall set this field to
34		$\lfloor -2 \times 10 \log_{10} PS \rfloor$ ,
35		where PS is the strength of this pilot, measured as specified
36		in 2.6.6.2.2. If this value ( $\lfloor -2 \times 10 \log_{10} PS \rfloor$ ) is less than 0,
37		the mobile station shall set this field to '000000'. If this value
38		is greater than '111111', the mobile station shall set this field
39		to '111111'.

1	KEEP	-	Keep pilot indicator.
2			If the handoff drop timer (see 2.6.6.2.3) corresponding to this
3			pilot has expired, the mobile station shall set this field to '0';
4			otherwise, the mobile station shall set this field to '1'.
5	PILOT_REC_INCL	-	Additional pilot information included indicator.
6			The mobile station shall set this field to '1' if additional pilot
7			information listed in the PILOT_REC_TYPE and
8			RECORD_LEN fields are included. The mobile station shall
9			set this field to '0' if the corresponding pilot is the common
10			pilot and there is no additional pilot information included.
11	PILOT_REC_TYPE	-	Reference pilot record type.
12			If PILOT_REC_INCL is set to '1', the mobile station shall set
13			this field to the PILOT_REC_TYPE value shown in Table
14			2.7.2.3.2.34-1 corresponding to the type of Pilot Record
15			specified by this record.
16			If PILOT_REC_INCL is set to '0', the mobile station shall omit
17			this field.
18	RECORD_LEN	-	Pilot record length.
19			If PILOT_REC_INCL is set to '1', the mobile station shall set
20			this field to the number of octets in the type-specific fields of
21			this pilot record.
22			If PILOT_REC_INCL is set to '0', the mobile station shall omit
23			this field.
24	Type-specific fields	-	Pilot record type-specific fields.
25			If PILOT_REC_INCL is set to '1', the mobile station shall
26			include type-specific fields based on the PILOT_REC_TYPE of
27			this pilot record as described in 3.7.6.1.
28			If PILOT_REC_INCL is set to '0', the mobile station shall omit
29			this field.
30	RESQ_IND_INCL	-	Call rescue flag included indicator.
31			The mobile station shall set this field to '1' if a pilot in the
32			mobile station's Active Set was autonomously promoted since
33			the last <i>Extended Handoff Direction Message</i> , <i>General</i>
34			<i>Handoff Direction Message</i> , or <i>Universal Handoff Direction</i>
35			<i>Message</i> was received; otherwise, the mobile station shall set
36			this field to '0'.
37	If RESQ_IND_INCL is set to '1', the mobile station shall include NUM_PILOTS occurrences		
38	of the following one-field record in the same order as the pilots listed above.		
39	RESQ_IND	-	Call rescue flag.

1  
2  
3  
4  
5  
6  
7  
8

The mobile station shall set this field to '1' if the corresponding pilot was autonomously promoted to the Active Set since the last *Extended Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message* was received; otherwise, the mobile station shall set this field to '0'.

## 1 2.7.2.3.2.35 Extended Handoff Completion Message

2 MSG\_TAG: EHOCM

3

Field	Length (bits)
LAST_HDM_SEQ	2
NUM_PILOTS	4

NUM\_PILOTS occurrences of the following record:

{ (NUM\_PILOTS)

PILOT_PN	9
PILOT_REC_INCL	1
PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$

} (NUM\_PILOTS)

4

5 LAST\_HDM\_SEQ - *Extended Handoff Direction Message, General Handoff*  
6 *Direction Message, or Universal Handoff Direction Message*  
7 *sequence number.*

8 The mobile station shall set this field to the value of the  
9 HDM\_SEQ field from the *Extended Handoff Direction*  
10 *Message, General Handoff Direction Message, or the Universal*  
11 *Handoff Direction Message* that determined the current Active  
12 Set.

13 NUM\_PILOTS - Number of pilots reported.

14 The mobile station shall set this field to the number of pilots  
15 in the current Active Set.

16 The mobile station shall include NUM\_PILOTS occurrences of the following record: one  
17 occurrence for each pilot in the Active Set. If the Active Set contains more than one pilot,  
18 the mobile station shall include the pilot information in the same order as in the *Extended*  
19 *Handoff Direction Message, the General Handoff Direction Message, or the Universal*  
20 *Handoff Direction Message* that determined the current Active Set.

21 PILOT\_PN - Pilot PN sequence offset.

22 The mobile station shall set this field to the pilot PN sequence  
23 offset, relative to the zero offset pilot PN sequence in units of  
24 64 PN chips, for this pilot.

25 PILOT\_REC\_INCL - Additional pilot information included indicator.

1			The mobile station shall set this field to '1' if additional pilot
2			information listed in the PILOT_REC_TYPE and
3			RECORD_LEN fields are included. The mobile station shall
4			set this field to '0' if the corresponding pilot is the common
5			pilot and there is no additional pilot information included.
6	PILOT_REC_TYPE	-	Reference pilot record type.
7			If PILOT_REC_INCL is set to '0', the mobile station shall omit
8			this field; otherwise, the mobile station shall set this field to
9			the PILOT_REC_TYPE value shown in Table 2.7.2.3.2.34-1
10			corresponding to the type of Pilot Record specified by this
11			record.
12	RECORD_LEN	-	Pilot record length.
13			If PILOT_REC_INCL is set to '0', the mobile station shall omit
14			this field; otherwise, the mobile station shall set this field to
15			the number of octets in the type-specific fields of this pilot
16			record.
17	Type-specific fields	-	Pilot record type-specific fields.
18			If PILOT_REC_INCL is set to '0', the mobile station shall omit
19			this field; otherwise, the mobile station shall include type-
20			specific fields based on the PILOT_REC_TYPE of this pilot
21			record as described in 2.7.2.3.2.34.
22			
23			
24			

## 1 2.7.2.3.2.36 Security Mode Request Message

2 MSG\_TAG: SMRM

3

Field	Length (bits)
UI_ENC_INCL	1
UI_ENCRYPT_SUP	0 or 8
NUM_RECS	0 or 3

NUM\_RECS + 1 occurrences of the following two field record  
 { (NUM\_RECS + 1)

CON_REF	0 or 8
UI_ENCRYPT_REQ	0 or 1

} (NUM\_RECS + 1)

SIG_ENC_INCL	1
SIG_ENCRYPT_SUP	0 or 8
D_SIG_ENCRYPT_REQ	0 or 1
NEW_SSEQ_H_INCL	1
NEW_SSEQ_H	0 or 24
NEW_SSEQ_H_SIG	0 or 8
MSG_INT_INFO_INCL	1
SIG_INTEGRITY_SUP_INCL	0 or 1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3

4

5 UI\_ENC\_INCL – User information encryption fields included.

6 The mobile station shall set this field to '1' if the user  
 7 information encryption related fields are included in this  
 8 message; otherwise, the mobile station shall set this field to  
 9 '0'.

10 UI\_ENCRYPT\_SUP – User information encryption supported indicator.

11 If UI\_ENC\_INCL is equal to '1', the mobile station shall  
 12 include this field; otherwise, the mobile station shall omit  
 13 this field. If this field is included, the mobile station shall set  
 14 this field to indicate the supported user information  
 15 encryption algorithms.

1		This field consists of the subfields shown in Table
2		2.7.1.3.2.4-9.
3		The mobile station shall set each subfield to '1' if the
4		corresponding user information encryption algorithm is
5		supported by the mobile station; otherwise, the mobile
6		station shall set the subfield to '0'.
7		The mobile station shall set the RESERVED subfield to
8		'000000'
9	NUM_REC	- Number of user information encryption records.
10		If UI_ENC_INCL is equal to '1', the mobile station shall
11		include this field; otherwise, the mobile station shall omit
12		this field. If this field is included, the mobile station shall set
13		this field to number of user information encryption records
14		included in this message minus 1.
15	The mobile station shall include NUM_REC + 1 occurrences of the following two field	
16	record	
17	CON_REF	- Connection reference corresponding to the service instance
18		requesting for encryption.
19		If UI_ENC_INCL is equal to '1', the mobile station shall
20		include this field; otherwise, the mobile station shall omit
21		this field. If this field is included, the mobile station shall set
22		this field to the connection reference of the service option
23		connection corresponding to this user information encryption
24		request record.
25	UI_ENCRYPT_REQ	- Request for user information encryption on the traffic
26		channel indicator.
27		The mobile station shall set this field to '1' to request user
28		information encryption for the user information
29		corresponding to the service option connection identified by
30		CON_REF; otherwise, the mobile station shall set this field to
31		'0'.
32	SIG_ENC_INCL	- Signaling encryption fields included.
33		The mobile station shall set this field to '1' if the following two
34		fields related to signaling encryption fields are included in
35		this message. Otherwise, the mobile station shall set this
36		field to '0'.
37	SIG_ENCRYPT_SUP	- Signaling encryption supported indicator.
38		If SIG_ENC_INCL is equal to '1', the mobile station shall
39		include this field; otherwise, the mobile station shall omit
40		this field. If this field is included, the mobile shall set this
41		field to indicate the supported signaling encryption
42		algorithms supported by the mobile station.

1		This field consists of the subfields shown in Table
2		2.7.1.3.2.1-5.
3		If this field is included, the mobile station shall set the
4		subfields as follows:
5		The mobile station shall set the CMEA subfield to '1'.
6		The mobile station shall set each other subfield to '1' if the
7		corresponding signaling encryption algorithm is supported by
8		the mobile station; otherwise, the mobile station shall set the
9		subfield to '0'.
10		The mobile station shall set the RESERVED subfield to
11		'00000'.
12	D_SIG_ENCRYPT_REQ	- Dedicated channel signaling encryption request indicator.
13		If SIG_ENC_INCL is equal to '1', the mobile station shall
14		include this field; otherwise, the mobile station shall omit
15		this field. If included the mobile station shall set this field to
16		'1' to request signaling encryption to be turned on for
17		signaling messages sent on f-dsch and r-dsch, and to '0' to
18		request signaling encryption to be turned off for signaling
19		messages sent on f-dsch and r-dsch.
20	NEW_SSEQ_H_INCL	- The NEW_SSEQ included indicator.
21		The mobile station shall set this field to '1' if NEW_SSEQ_H is
22		included in this message; otherwise, the mobile station shall
23		set this field to '0'.
24		If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '0', the mobile station
25		shall set this field to '1' if the mobile station is to include the
26		NEW_SSEQ_H and NEW_SSEQ_H_SIG fields.
27		If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '1', the mobile station
28		shall set this field to '0'.
29	NEW_SSEQ_H	- The 24-bit value used to initialize the 24 MSB of crypto-sync.
30		If NEW_SSEQ_H_INCL is set to '1', the mobile station shall
31		include this field; otherwise, the mobile station shall omit
32		this field. If this field is included, the mobile station shall set
33		this field to a 24-bit value that will be used as the initial
34		value of the 24 MSB of the crypto-sync for both forward and
35		reverse link message integrity.
36	NEW_SSEQ_H_SIG	- The signature of NEW_SSEQ_H
37		If NEW_SSEQ_H is included, the mobile station shall include
38		this field; otherwise, the mobile station shall omit this field. If
39		this field is included, the mobile station shall set this field to
40		the digital signature of the NEW_SSEQ_H computed as
41		described in 2.3.12.4.5.

1	MSG_INT_INFO_INCL	-	Signaling message integrity information included indicator.
2			If MSG_INTEGRITY_SUP <sub>S</sub> is equal to '0', the mobile station
3			shall set this field to '0'; otherwise, the mobile station shall
4			set this field to '1'.
5	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included
6			indicator.
7			If MSG_INT_INFO_INCL is set to '0', the mobile station shall
8			omit this field; otherwise, the mobile station shall include
9			this field and set it as follows:
10			If the mobile station supports other integrity algorithm(s) in
11			addition to the default integrity algorithm, the mobile station
12			shall set this field to '1'; otherwise, the mobile station shall
13			set this field to '0'.
14	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the mobile station.
15			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
16			mobile station shall set this field as follows; otherwise, the
17			mobile station shall omit this field.
18			The mobile station shall set this field to indicate the
19			supported message integrity algorithm in addition to the
20			default integrity algorithm.
21			This field consists of the subfields shown in Table
22			2.7.1.3.2.1-6.
23			The mobile station shall set each subfield to '1' if the
24			corresponding message integrity algorithm is supported by
25			the mobile station; otherwise, the mobile station shall set the
26			subfield to '0'.
27			The mobile station shall set the RESERVED subfield to
28			'00000000'.
29	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm request indicator.
30			If SIG_INTEGRITY_SUP_INCL is included and is set to '1', the
31			mobile station shall set this field as follows; otherwise, the
32			mobile station shall omit this field.
33			The mobile station shall include this field and set it to the
34			value corresponding to the message integrity algorithm
35			requested as shown in Table 2.7.1.3.2.1-7.
36			

## 1 2.7.2.3.2.37 Call Cancel Message

2 MSG\_TAG: CLCM

3

Field	Length (bits)
TAG	4
ADD_TAG_INCL	1
NUM_ADD_TAG	0 or 3

NUM\_ADD\_TAG occurrences of the following field:

{ (NUM\_ADD\_TAG)

ADD_TAG	4
---------	---

} (NUM\_ADD\_TAG)

4

5 TAG - Transaction identifier.

6 The mobile station shall set this field to the TAG value in the  
7 list TAG\_OUTSTANDING\_LIST in the *Enhanced Origination*  
8 *Message* sent to originate this call.

9 ADD\_TAG\_INCL - Additional call initiation transaction identifiers included  
10 indicator.

11 If at least one occurrence of the ADD\_TAG field is included in  
12 this message, the mobile station shall set this field to '1';  
13 otherwise, the mobile station shall set this field to '0'.

14 NUM\_ADD\_TAG - Number of additional call initiation transaction identifiers  
15 included.

16 If ADD\_TAG\_INCL is set to '0', the mobile station shall omit  
17 this field; otherwise, the mobile station shall include this field  
18 and set it to the number of occurrences of the ADD\_TAG field  
19 included in this message.

20 If ADD\_TAG\_INCL is set to '1', the mobile station shall include NUM\_ADD\_TAG  
21 occurrences of the following field:

22 ADD\_TAG - Additional call initiation transaction identifier.

23 The mobile station shall set this field to the TAG value in the  
24 *Enhanced Origination Message*.

25

## 1 2.7.2.3.2.38 Device Information Message

2 MSG\_TAG: DIM

3

Field	Length (bits)
WLL_DEVICE_TYPE	3
NUM_INFO_RECORDS	5

NUM\_INFO\_RECORDS occurrences of the following record:

{ (NUM\_INFO\_RECORDS)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM\_INFO\_RECORDS)

4

5 WLL\_DEVICE\_TYPE – WLL device type indicator.

6 The mobile station shall set this field to the  
 7 WLL\_DEVICE\_TYPE value shown in Table 2.7.1.3.2.1-3  
 8 corresponding to the mobile station device type.

9 NUM\_INFO\_RECORDS – Number of information records included.

10 The mobile station shall set this field to the number of  
 11 information records which are included.

12 The mobile station shall include one occurrence of the following fields for each information  
 13 record which is included:

14 RECORD\_TYPE – Information record type.

15 The mobile station shall set this field to the record type code  
 16 shown in Table 2.7.4-1 corresponding to the type of this  
 17 information record.

18 RECORD\_LEN – Information record length.

19 The mobile station shall set this field to the number of octets  
 20 in the type-specific fields of this record.

21 Type-specific fields – Type-specific fields.

22 The mobile station shall set these fields as specified in 2.7.4  
 23 for this type of information record.

24

## 1 2.7.2.3.2.39 Base Station Status Request Message

2 MSG\_TAG: BSSREQM

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL\_INFO\_LEN}$
NUM_RECORD	4

NUM\_RECORD occurrences of the following record:

{ (NUM\_RECORD)

RECORD_TYPE	8
RECORD_LENGTH	8
Record type specific fields	variable
RESERVED	0-7 (as required)

} (NUM\_RECORD)

3 QUAL\_INFO\_TYPE - Qualification information type.

4 The mobile station shall set this field to the value shown in  
5 Table 3.7.2.3.2.15-1 to show the inclusion of qualification  
6 information in the type-specific fields.

7 QUAL\_INFO\_LEN - Qualification information length.

8 The mobile station shall set this field to the number of octets  
9 included in the type-specific fields of the qualification  
10 information.

11 Type-specific fields - Type-specific fields.

12 The mobile station shall set these fields to the qualification  
13 information according to the QUAL\_INFO\_TYPE field.

14 If QUAL\_INFO\_TYPE is equal to '00000000', the type-specific  
15 fields are omitted.

16 If QUAL\_INFO\_TYPE is equal to '00000001', the mobile  
17 station shall use the following fixed-length format for the  
18 type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
RESERVED	3

19

20 If QUAL\_INFO\_TYPE is equal to '00000010', the mobile  
21 station shall use the following fixed-length format for the  
22 type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
OP_MODE	8
RESERVED	3

- 1
- 2       BAND\_CLASS   -   Band class.
- 3                   The mobile station shall set this field to the CDMA band
- 4                   class, as specified in [30].
- 5       OP\_MODE    -   Operating mode.
- 6                   The mobile station shall set this field as shown in
- 7                   Table 3.7.2.3.2.15-3 to specify the operating mode
- 8                   qualification information.
- 9       RESERVED   -   Reserved bits.
- 10                   The mobile station shall set this field to '000'.
- 11       NUM\_RECORD   -   Number of requested record fields in this message.
- 12                   The mobile station shall set this field to the number of
- 13                   occurrences of RECORD\_TYPE field in this message.
- 14   The mobile station shall include NUM\_RECORD occurrences of the following variable-
- 15   length record, one for each information record that is requested:
- 16       RECORD\_TYPE   -   Information record type.
- 17                   The mobile station shall set this field to the record type value
- 18                   shown in Table 2.7.2.3.2.39-1 corresponding to the
- 19                   information record requested.

**Table 2.7.2.3.2.39-1. Base Station Status Request Information Record Types**

Information Record Requested	Record Type
Pilot Information	00000000
Reserved	00000001- 11111111

- 21       RECORD\_LENGTH   -   Information record length.
- 22                   The mobile station shall set this field to the length, in octets,
- 23                   of the record type specific fields included in this record.
- 24   Record type specific
- 25       fields       -   Record type specific fields
- 26                   The mobile station shall set this field to the type specific
- 27                   fields corresponding to this record type.
- 28                   If the RECORD\_TYPE field is set to '00000000', the mobile
- 29                   station shall set the record type specific field as follows:

Field	Length (bits)
NUM_PILOTS	4
SID_NID_REQ	1

NUM\_PILOTS occurrences of the following one field record:

{ NUM\_PILOTS)

PILOT_PN	9
----------	---

}( NUM\_PILOTS)

LAT_LONG_REQ	1
--------------	---

- 1            NUM\_PILOTS - Number of Pilots reported.
- 2            The mobile station shall set this field to the number of pilots
- 3            whose information is requested in this message.
- 4            The mobile station shall set this field to a number equal or
- 5            greater than one.
- 6            SID\_NID\_REQ - SID, NID information requested indicator.
- 7            The mobile station shall set this field to '1' if it also requests
- 8            the SID and NID information for these pilots; otherwise, the
- 9            mobile station shall set this field to '0'.
- 10          The mobile station shall include NUM\_PILOTS occurrences of the following one-
- 11          field record:
- 12          PILOT\_PN - Pilot PN sequence offset index.
- 13          The mobile station shall set this field to the pilot PN sequence
- 14          offset for the base station, in units of 64 PN chips, whose
- 15          Base Station identification number information is being
- 16          requested.
- 17          LAT\_LONG\_REQ - Base station LAT/LONG information requested indicator.
- 18          The mobile station shall set this field to '1' if it also requests
- 19          the LAT/LONG information for these pilots; otherwise, the
- 20          mobile station shall set this field to '0'.
- 21          RESERVED - Reserved bits.
- 22          The mobile station shall add reserved bits as needed in order
- 23          to make the length of the record equal to an integer number
- 24          of octets. The mobile station shall set these bits to '0'.

1  
2

## 1 2.7.2.3.2.40 CDMA Off Time Report Message

2 MSG\_TAG: COTRM

Field	Length (bits)
CDMA_OFF_TIME_ENABLE	1
CDMA_OFF_TIME_START	0 or 6
CDMA_OFF_TIME_UNIT	0 or 2
CDMA_OFF_TIME_MODE	0 or 1
CDMA_OFF_TIME	0 or 4
CDMA_OFF_TIME_PERIOD	0 or 6

3

4 CDMA\_OFF\_TIME\_ENABLE - Off time reporting enable

5 The mobile station shall set this field to '1' if the mobile  
6 station plans to suspend its CDMA Traffic Channel  
7 processing. The mobile station shall set this field to '0' to  
8 cancel a previously reported CDMA Traffic Channel  
9 processing suspension.

10 CDMA\_OFF\_TIME\_START - The start time when the mobile station moves away from  
11 the CDMA Traffic Channel.

12 If CDMA\_OFF\_TIME\_ENABLE is set to '0', the mobile station  
13 shall omit this field; otherwise, the mobile station shall  
14 include this field and set it as follows:

15 The mobile station shall set this field to the System Time, in  
16 units of 80 ms (modulo 64), at which the mobile station plans  
17 to go away from the CDMA Traffic Channel.

18 CDMA\_OFF\_TIME\_UNIT - Time unit used in CDMA\_OFF\_TIME

19 If CDMA\_OFF\_TIME\_ENABLE is set to '0', the mobile station  
20 shall omit this field; otherwise, the mobile station shall  
21 include this field and set it as follows:

22 The mobile station shall set this field to the time unit used in  
23 CDMA\_OFF\_TIME, as specified in Table 2.7.2.3.2.40-1

24

**Table 2.7.2.3.2.40-1. CDMA Off Time Unit**

<b>CDMA_OFF_TIME_UNIT (binary)</b>	<b>Time Unit (decimal)</b>
00	80 ms
01	0.5 sec
10	1 sec
11	RESERVED

**CDMA\_OFF\_TIME\_MODE** – CDMA off time mode

If CDMA\_OFF\_TIME\_ENABLE is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to '1' if CDMA\_OFF\_TIME is periodic; otherwise, the mobile station shall set this field to '0'.

**CDMA\_OFF\_TIME** – The total time that the mobile station plans to be away from the CDMA Traffic Channel.

If CDMA\_OFF\_TIME\_ENABLE is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to one less than the mobile station's estimate of the total time it is off the CDMA Traffic Channel, in units of CDMA\_OFF\_TIME\_UNIT.

**CDMA\_OFF\_TIME\_PERIOD** – The time between CDMA\_OFF\_TIME

If CDMA\_OFF\_TIME\_MODE is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the time minus 10 seconds, in units of 10 seconds, between the beginning of successive CDMA\_OFF\_TIME.

## 1 2.7.2.3.2.41 Authentication Response Message

2 MSG\_TAG: AURSPM

3

Field	Length (bits)
RES	128
SIG_INTEGRITY_SUP_INCL	1
SIG_INTEGRITY_SUP	0 or 8
SIG_INTEGRITY_REQ	0 or 3
NEW_KEY_ID	2
NEW_SSEQ_H	24

4

5 RES – The output, RES, of the User Authentication Function.

6 The mobile station shall set this field to the output, RES, of  
7 the function as specified in Figure 2.3.12.5.2-2. If the UIM  
8 returns a RES value with length smaller than 128, the mobile  
9 station shall store the RES value in the most significant bits  
10 of the RES field and pad the least significant bits with '0's.

11 SIG\_INTEGRITY\_SUP\_INCL – Signaling message integrity information included  
12 indicator.

13 If the mobile station supports other integrity algorithm(s) in  
14 addition to the default integrity algorithm, the mobile station  
15 shall set this field to '1'; otherwise, the mobile station shall  
16 set this field to '0'.

17 SIG\_INTEGRITY\_SUP – Signaling integrity algorithm supported by the mobile station.  
18 If SIG\_INTEGRITY\_SUP\_INCL is set to '1', the mobile station  
19 shall set this field as follows; otherwise, the mobile station  
20 shall omit this field.

21 The mobile station shall set this field to indicate the  
22 supported message integrity algorithms in addition to the  
23 default integrity algorithm.

24 This field consists of the subfields shown in Table  
25 2.7.1.3.2.1-6.

26 The mobile station shall set each subfield to '1' if the  
27 corresponding message integrity algorithm is supported by  
28 the mobile station; otherwise, the mobile station shall set the  
29 subfield to '0'.

30 The mobile station shall set the RESERVED subfield to  
31 '00000000'.

32

1	SIG_INTEGRITY_REQ	-	Signaling message integrity algorithm requested by the
2			mobile station.
3			If SIG_INTEGRITY_SUP_INCL is set to '1', the mobile station
4			shall set this field as follows; otherwise, the mobile station
5			shall omit this field.
6			The mobile station shall include this field and set it to the
7			value corresponding to the message integrity algorithm
8			requested as shown in Table 2.7.1.3.2.1-7.
9	NEW_KEY_ID	-	New key identifier.
10			The mobile station shall set this field as follows:
11		-	If LAST_3G_KEY_ID equals '10', the mobile station shall
12			set this field to '11'.
13		-	If LAST_3G_KEY_ID equals '11', the mobile station shall
14			set this field to '10'.
15	NEW_SSEQ_H	-	The 24-bit value used to initialize the 24 MSB of the crypto-
16			sync.
17			The mobile station shall set this field to a 24-bit value that
18			will be used as the initial value of the 24 MSB of the crypto-
19			sync for both forward and reverse link message integrity.
20			

1 2.7.2.3.2.42 Authentication Resynchronization Message

2 MSG\_TAG: AURSYNM

3

Field	Length (bits)
CON_MS_SQN	48
MAC_S	64

4

5 CON\_MS\_SQN – The concealed sequence number of the authentication vector.  
6 The mobile station shall set this field to the output,  
7 CON\_MS\_SQN, of the function as specified in Figure  
8 2.3.12.5.2-3.

9 MAC\_S – Message authenticaion code for resynchronization.  
10 The mobile station shall set this field to the output, MAC\_S,  
11 of the function as specified in Figure 2.3.12.5.2-3.

12

## 1 2.7.2.3.2.43 ITBSPM Request Message

## 2 MSG\_TAG: ITBSPMRM

Field	Length (bits)
BCMC_REQ_TYPE	4
NUM_BCMC_PROGRAMS	0 or 8

If NUM\_BCMC\_PROGRAMS field is included,  
NUM\_BCMC\_PROGRAMS+1 occurrences of the following  
record

*{ (NUM\_BCMC\_PROGRAMS+1)*

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	Variable (Value of BCMC_PROGRAM_ID_LEN + 1)
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN

NUM\_FLOW\_DISCRIMINATOR+1 or 1 occurrences of the  
following variable length record:

*{ (NUM\_FLOW\_DISCRIMINATOR+1) or 1*

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN
-------------------------	-----------------------------

*} (NUM\_FLOW\_DISCRIMINATOR+1) or 1*

*} (NUM\_BCMC\_PROGRAMS+1)*

3

4 BCMC\_REQ\_TYPE – BCMC Request Type.

5 The mobile station shall set this field as specified in Table  
6 2.7.2.3.2.43-1 to request transmission of ITBSPM over traffic  
7 channel.

1

**Table 2.7.2.3.2.43-1 BCMC Request Type**

<b>Value (binary)</b>	<b>BCMC Request</b>
0000	Request information for all BCMC_FLOW_IDs
0001	Request information for Traffic Channel BCMC_FLOW_IDs
0010	Request information for BCMC_FLOW_IDs (See section 2.6.13.11) specified in this message
0011- 1111	Reserved

2

3    **NUM\_BCMC\_PROGRAMS**    -    Number of BCMC programs included.

4                                If BCMC\_REQ\_TYPE is not set to '0010', the mobile station  
5                                shall omit this field; otherwise, the mobile station shall  
6                                include this field and set it as follows.

7                                The mobile station shall set this field to the number of BCMC  
8                                programs included in this message minus 1.

9    If the NUM\_BCMC\_PROGRAMS field is included, the mobile station shall include  
10    NUM\_BCMC\_PROGRAMS+1 occurrences of the following record:

11    **BCMC\_PROGRAM\_ID\_LEN**    - Length of BCMC\_PROGRAM\_ID field

12                                The mobile station shall set this field to one less than the  
13                                length, in bits, of the BCMC\_PROGRAM\_ID of this program.

14    **BCMC\_PROGRAM\_ID**    -    BCMC program Identifier

15                                The length of this field shall be one more than the value of  
16                                BCMC\_PROGRAM\_ID\_LEN bits.

17                                The mobile station shall set this field to the identifier of the  
18                                BCMC program corresponding to one or more flows that the  
19                                mobile station will continue to monitor or start to monitor  
20                                upon receiving confirmation of delivery of this message or is  
21                                requesting transmission.

22    **BCMC\_FLOW\_DISCRIMINATOR\_LEN**    -    Length of BCMC\_FLOW\_DISCRIMINATOR field

23                                The mobile station shall set this field to the length, in bits, of  
24                                the BCMC\_FLOW\_DISCRIMINATOR of this program. To  
25                                request all flows associated with this BCMC\_PROGRAM\_ID,  
26                                the mobile station may set this field to '000'.

1 NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators

2 The length of this field shall be determined by the value of the  
3 BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
4 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
5 is omitted; otherwise, the length of this field shall be  
6 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

7 The mobile station shall set this field to the number of flow  
8 discriminators included for this program minus one.

9 If NUM\_FLOW\_DISCRIMINATOR field is included, the mobile station shall include  
10 NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
11 otherwise, the mobile station shall include 1 occurrence of the following variable length  
12 record:

13 BCMC\_FLOW\_DISCRIMINATOR - BCMC Flow Discriminator.

14 The length of this field shall be determined by the value of the  
15 BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
16 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
17 is omitted; otherwise, the length of this field shall be  
18 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

19 The mobile station shall set this field to the discriminator of  
20 the BCMC flow.

21  
22

## 1 2.7.2.3.2.44 Handoff Supplementary Information Notification Message

2 MSG\_TAG: HOSINM

Field	Length (bits)
NUM_HO_SUP_REC	8

NUM\_HO\_SUP\_REC occurrences of the following three-field record:

{

HO_SUP_REC_TYPE	3
HO_SUP_REC_LEN	5
HO_SUP_REC	8 x HO_SUP_REC_LEN

}

3 NUM\_HO\_SUP\_REC - Number of handoff supplementary information record.

4 The mobile station shall set this field based on the number of  
5 handoff supplementary information record included in this  
6 message. If the mobile station does not have any handoff  
7 supplementary handoff information to report, then the mobile  
8 station shall set this field to zero.

9 HO\_SUP\_REC\_TYPE - Handoff supplementary information record type.

10 The mobile station shall set this field based on the type of the  
11 HO\_SUP\_REC field included in this message.

12 HO\_SUP\_REC\_LEN - Handoff supplementary information record length.

13 The mobile station shall set this field to the number of octets  
14 in the fields included in this record following this field.

15 HO\_SUP\_REC - Handoff supplementary record.

16 The handoff supplementary record fields are determined by  
17 the value of HO\_SUP\_REC\_TYPE, as described below.

18 If HO\_SUP\_REC\_TYPE = '000', the HO\_SUP\_REC field shall be:

19

PILOT_PN	9
AP_ID_LEN	4
AP_ID	16 x AP_ID_LEN
IOS_MSC_ID	24
IOS_CELL_ID	16
RESERVED	0-7 (as required)

20

1	If HO_SUP_REC_TYPE field is set to '000', the base station shall include the following sub-		
2	fields in HO_SUP_REC field:		
3	PILOT_PN	-	Pilot PN sequence offset index.
4			The mobile station shall set this field to the pilot PN sequence
5			offset of a base station, in units of 64 PN chips.
6	AP_ID_LEN	-	Access Point identification length.
7			The base station shall set this field to the length of the access
8			point identification in units of 16 bits.
9	AP_ID	-	AP_ID of a base station.
10			The mobile station shall set this field to AP_ID value
11			(see 2.6.2.2.19) corresponding to the PILOT_PN reported in
12			this record.
13	IOS_MSC_ID	-	MSC_ID of a base station.
14			The mobile station shall set this field to MSC_ID value
15			(see 2.6.2.2.19) corresponding to the PILOT_PN reported in
16			this record.
17	IOS_CELL_ID	-	CELL_ID of a base station.
18			The mobile station shall set this field to CELL_ID value (see
19			2.6.2.2.19) corresponding to the PILOT_PN reported in this
20			record.
21	RESERVED	-	Reserved bits.
22			The mobile station shall set all the bits of this field to '0' to
23			make entire record octet aligned.
24			

1    2.7.2.3.2.45 General Extension Message

2    MSG\_TAG: GEM

3    The format of this message is the same as when transmitted on r-csch. Please see section  
4    2.7.1.3.2.18.

5

6

### 2.7.3 Orders

*Order Messages* are sent by the mobile station on the r-csch and on the r-dsch. The general PDU format used on the r-csch is defined in 2.7.1.3.2.2, and the general PDU format used on the r-dsch is defined in 2.7.2.3.2.1. There are many specific types of *Order Messages*, as shown in Table 2.7.3-1.

The mobile station may send on the r-csch any type of order shown in Table 2.7.3-1 with a 'Y' in the first column, but shall not send on the r-csch any type of order with an 'N' in the first column. The mobile station may send on the r-dsch any type of order shown in Table 2.7.3-1 with a 'Y' in the second column, but shall not send on the r-dsch any type of order with an 'N' in the second column. The mobile station shall be capable of sending all types of orders shown in Table 2.7.3-1 with a 'Y' in the sixth column.

An order consists of a 6-bit order code and zero or more order-specific fields. The mobile station shall set the ORDER field in the *Order Message* to the order code shown in Table 2.7.3-1 corresponding to the type of order being sent.

If the order qualification code in the fourth column of Table 2.7.3-1 is '00000000' and there are no other additional fields as shown by an 'N' in the fifth column, the mobile station shall include no order qualification code or other order-specific fields in the *Order Message*. The order qualification code of such a message is implicitly '00000000'.

If the order qualification code is not '00000000' and there are no other additional fields as shown in Table 2.7.3-1 by an 'N' in the fifth column, the mobile station shall include the order qualification code as the only order-specific field in the *Order Message*.

If there are other additional fields as shown in Table 2.7.3-1 by a 'Y' in the fifth column, the mobile station shall include order-specific fields as specified in the corresponding subsection of this section.

1 **Table 2.7.3-1. Order and Order Qualification Codes Used on the r-dsch and the r-csch**  
 2 **(Part 1 of 6)**

<b>r-csch Order</b>	<b>r-dsch Order</b>	<b>Order Code, ORDER (binary)</b>	<b>Order Qualificati on Code, ORDQ (binary)</b>	<b>More Fields other than ORDQ</b>	<b>Support Req'd</b>	<b>P_REV_I N_USE<sup>5</sup></b>	<b>Name/Function</b>
Y	Y	000010	00000000	Y	Y	All	<i>Base Station Challenge Order</i> (see 2.7.3.1)
Y	Y	000011	00000000	N	Y	All	<i>SSD Update Confirmation Order</i>
Y	Y	000011	00000001	N	Y	All	<i>SSD Update Rejection Order</i>
N	Y	000101	0000nnnn	N	Y	All	<i>Parameter Update Confirmation Order</i> (where 'nnnn' is the Request Number)
-	-	001011	00000000	-	-	-	<i>Reserved (Previously: Request Wide Analog Service Order)</i>
		001011	00000001				<i>Reserved (Previously: Request Narrow Analog Service Order)</i>
		001011	00000010				<i>Reserved (Previously: Request Analog Service Order)</i>
Y	Y	010000	00000000	N	Y	All	<i>Mobile Station Acknowledgment Order</i> (see [4])
N	Y	010011	00000000	Y	N	< 7	<i>Service Option Request Order</i> (Band Class 0 only; see 2.7.3.2)
N	Y	010100	00000000	Y	Y	< 7	<i>Service Option Response Order</i> (Band Class 0 only; see 2.7.3.3)
Y	Y	010101	00000000	N	Y	All	<i>Release Order</i> (normal release)

<sup>5</sup> P\_REV\_IN\_USE equal to "All" implies all values applicable to the Band Class.

Y	Y	010101	00000001	N	Y	All	<i>Release Order</i> (with power-down indication)
---	---	--------	----------	---	---	-----	---

Y	Y	100001	00000000	N	Y	$\geq 10$	<i>Security Mode Completion Order</i>
Y	N	100010	00000000	Y	N	$\geq 11$	<i>Fast Call Setup Order</i> (indicates mobile station request to operate in a fast call setup mode, see 2.7.3.6)
Y	N	100010	00000001	Y	N	$\geq 11$	<i>Fast Call Setup Order</i> (indicates mobile station response to operate in a fast call setup mode, see 2.7.3.6)
N	Y	100011	00000000	N	Y	$\geq 11$	<i>Shared Channel Configuration Order</i> (requests R-FCH assignment)
N	Y	100011	00000001	N	Y	$\geq 11$	<i>Shared Channel Configuration Order</i> (requests R-FCH release)
All other codes are reserved.							

3

## 1 2.7.3.1 Base Station Challenge Order

2

Order-Specific Field	Length (bits)
ORDQ	8
RANDBS	32

3

4           ORDQ    –   Order qualification code.

5                           The mobile station shall set this field to '00000000'.

6           RANDBS   –   Random challenge data.

7                           The mobile station shall set this field as specified in  
8                           2.3.12.1.5.

9

1     2.7.3.2 Service Option Request Order

2

Order-Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

3

- 4                    ORDQ     –    Order qualification code.
- 5                                    The mobile station shall set this field to '00000000'.
- 6           SERVICE\_OPTION   –    Service option.
- 7                                    The mobile station shall set this field to the service option
- 8                                    code specified in [30], corresponding to the requested or
- 9                                    alternative service option.

10

## 2.7.3.3 Service Option Response Order

Order-Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

ORDQ – Order qualification code.

The mobile station shall set this field to '00000000'.

SERVICE\_OPTION – Service option.

The mobile station shall set this field to the service option code specified in [30], corresponding to the accepted service option, or to '0000000000000000' to reject the proposed service option. See 2.6.4.1.2.2.1.

## 1 2.7.3.4 Mobile Station Reject Order

2

Order-Specific Field	Length (bits)
ORDQ	8
REJECTED_TYPE	8

If the order is sent on the Access Channel or Enhanced Access Channel and

REJECTED\_TYPE is '00000111',  
or if the order is sent on the Reverse Traffic Channel and  
REJECTED\_TYPE is '00000001',  
the order-specific fields also include the following two fields:

RESERVED_1	2
REJECTED_ORDER	6
REJECTED_ORDQ	8

If the order is sent on the Reverse Traffic Channel and  
REJECTED\_TYPE is '00001100',  
the order-specific fields also include the following field:

REJECTED_PARAM_ID	16
-------------------	----

If the order is sent on the Access Channel or Enhanced Access Channel and

REJECTED\_TYPE is '00001100',  
or if the order is sent on the Reverse Traffic Channel and  
REJECTED\_TYPE is '00000011', '00101000',  
'00001110', or '00101010',  
the order-specific fields also include the following field:

REJECTED_RECORD	8
-----------------	---

If the ORDQ is '00010000', '00010001', or '00010010', the  
order-specific fields also include the following fields:

CON_REF	8
---------	---

If the ORDQ is '00010011', the order-specific fields also  
include the following fields:

CON_REF	8
TAG	4

REJECTED_PDU_TYPE	0 or 2
RESERVED_2	0 - 7 (as needed)

3

1	ORDQ	-	Order qualification code.
2			The mobile station shall set this field to the ORDQ value
3			shown in Table 2.7.3-1 corresponding to the reason for
4			rejecting the message.
5	REJECTED_TYPE	-	Message type of rejected message.
6			The mobile station shall set this field to the value of the
7			MSG_TYPE or the MSG_ID (see [4]) field of the message being
8			rejected.
9			If the MSG_TYPE or the MSG_ID (see [4]) field is not 8 bits,
10			the mobile station shall set the least significant bits of this
11			field to the value of the MSG_TYPE field and set all the
12			remaining bits to '0'.
13	RESERVED_1	-	Reserved bits.
14			The mobile station shall set this field to '00'.
15	REJECTED_ORDER	-	Order type of rejected message.
16			If the rejected message was an <i>Order Message</i> , the mobile
17			station shall set this field to the value of the ORDER field in
18			the rejected message.
19			Otherwise, the mobile station shall omit this field.
20	REJECTED_ORDQ	-	Order qualification code of rejected message.
21			If the rejected message was an <i>Order Message</i> including an
22			ORDQ field, the mobile station shall set this field to the value
23			of the ORDQ field in the rejected message. If the rejected
24			message was an <i>Order Message</i> not including an ORDQ field,
25			the mobile station shall set this field to '00000000'.
26			Otherwise, the mobile station shall omit this field.
27	REJECTED_PARAM_ID	-	Parameter identification of the rejected parameter.
28			If the rejected message was a <i>Set Parameters Message</i> , the
29			mobile station shall set this field to the PARAMETER_ID of
30			the first parameter for which the requested operation could
31			not be completed.
32			Otherwise, the mobile station shall omit this field.
33	REJECTED_RECORD	-	Record type of the rejected information record.
34			If the rejected message was a <i>Feature Notification Message</i> , an
35			<i>Alert With Information Message</i> , <i>Extended Alert With</i>
36			<i>Information Message</i> , <i>Extended Flash With Information</i>
37			<i>Message</i> , or a <i>Flash With Information Message</i> , the mobile
38			station shall set this field to the RECORD_TYPE field of the
39			first information record that could not be accepted.
40			Otherwise, the mobile station shall omit this field.
41	CON_REF	-	Connection reference.

1 The mobile station shall set this field to the value of the  
2 connection reference of the service option connection  
3 corresponding to the call.

4 TAG - Transaction identifier.

5 The mobile station shall set this field to the transaction  
6 identifier (received from the base station) of the call  
7 assignment being rejected.

8 REJECTED\_PDU\_TYPE - PDU type of the rejected message.

9 If P\_REV\_IN\_USE<sub>s</sub> is less than six, the mobile station shall  
10 omit this field; otherwise, the mobile station shall set this  
11 field to the REJECTED\_PDU\_TYPE code shown in Table  
12 2.7.3.4-1 corresponding to the PDU type of the message being  
13 rejected.

14

15 **Table 2.7.3.4-1. REJECTED\_PDU\_TYPE codes**

REJECTED_PDU_ TYPE (binary)	Description
00	20 ms regular message
01	5 ms mini message
01	Reserved
11	Reserved

16 RESERVED\_2 - Reserved bits.

17 The mobile station shall add reserved bits as needed in order  
18 to make the total length of this record containing order-  
19 specific fields equal to an integer number of octets. The  
20 mobile station shall set these bits to '0'.

21

## 2.7.3.5 Release Order

Order-Specific Field	Length (bits)
ORDQ	8

If the ORDQ is '00000011', the mobile station shall include the following order-specific record:

RSC_MODE_IND	1
RSCI	0 or 4
RSC_END_TIME_UNIT	0 or 2
RSC_END_TIME_VALUE	0 or 4

ORDQ – Order qualification code.

The mobile station shall set this field to the order qualification code, in accordance with Table 2.7.3-1.

RSC\_MODE\_IND – Reduced slot cycle mode indicator.

If ORDQ is equal to '00000011', the mobile station shall include this field and set it as specified below; otherwise, the mobile station shall omit this field.

The mobile station shall set this field to '1' to indicate that it will operate in the reduced slot cycle mode following release of the traffic channel; otherwise, the mobile station shall set this field to '0'.

RSCI – Reduced slot cycle index.

If RSC\_MODE\_IND is included and equal to '1', the mobile station shall include this field and set it to the value of the reduced slot cycle index, as specified in Table 2.7.1.3.2.1-8; otherwise, the mobile station shall omit this field.

1 The mobile station shall set this field to a value less than the  
2 registered slot cycle index, SLOT\_CYCLE\_INDEX\_REG.

3 RSC\_END\_TIME\_UNIT – Reduced slot cycle mode end time unit.

4 If RSC\_MODE\_IND is equal to '0', the mobile station shall  
5 omit this field; otherwise, the mobile station shall set this  
6 field according to Table 2.7.3.5-1 to indicate the units of the  
7 RSC\_END\_TIME\_VALUE field.

8 **Table 2.7.3.5-1. RSC\_END\_TIME\_UNIT and**  
9 **MAX\_RSC\_END\_TIME\_UNIT values**

Field (binary)	Description
00	unit is 4 seconds
01	unit is 20 seconds
10	unit is 100 seconds
11	RESERVED

10 RSC\_END\_TIME\_VALUE – Reduced slot cycle mode end time value.

11 If RSC\_MODE\_IND is equal to '0', the mobile station shall  
12 omit this field; otherwise, the mobile station shall include  
13 this field and set it as follows:

14 The mobile station shall set this field to the system time, in  
15 units of time specified by RSC\_END\_TIME\_UNIT(modulo 16),  
16 at which the mobile station is to exit the reduced slot cycle  
17 mode.

18

19

## 2.7.3.6 Fast Call Setup Order

Order-Specific Field	Length (bits)
ORDQ	8
RSC_MODE_IND	1
RSCI	0 or 4
RSC_END_TIME_UNIT	0 or 2
RSC_END_TIME_VALUE	0 or 4

ORDQ – Order qualification code.

The mobile station shall set this field to the ORDQ value shown in Table 2.7.3-1.

RSC\_MODE\_IND – Reduced slot cycle mode indicator.

The mobile station shall set this field to '1' to indicate that it will operate in the reduced slot cycle mode; otherwise, the mobile station shall set this field to '0'.

RSCI – Reduced slot cycle index.

If RSC\_MODE\_IND is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it to the value of the reduced slot cycle index, as specified in Table 2.7.1.3.2.1-8.

The mobile station shall set this field to a value less than the registered slot cycle index, SLOT\_CYCLE\_INDEX\_REG.

RSC\_END\_TIME\_UNIT – Reduced slot cycle mode end time unit.

If RSC\_MODE\_IND is equal to '0', the mobile station shall omit this field; otherwise, the mobile station shall set this field according to Table 2.7.3.5-1 to indicate the units of the RSC\_END\_TIME\_VALUE field.

RSC\_END\_TIME\_VALUE – Reduced slot cycle mode end time value.

If RSC\_MODE\_IND is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to the system time, in units of time specified by RSC\_END\_TIME\_UNIT(modulo 16), at which the mobile station is to exit the reduced slot cycle mode.

#### 2.7.4 Information Records

On the r-csch, information records may be included in the *Status Response Message*, the *Extended Status Response Message*, and the *Device Information Message*. On the r-dsch, information records may be included in the *Origination Continuation Message*, the *Enhanced Origination Message*, the *Flash With Information Message*, the *Extended Flash With Information Message*, the *Service Request Message*, the *Service Response Message*, the *Status Message*, and the *Status Response Message*. Table 2.7.4-1 lists the information record type values that may be used with each message type. The following sections describe the contents of each of the record types in detail.

1

**Table 2.7.4-1. Information Record Types (Part 1 of 3)**

<b>Information Record</b>	<b>Record Type (binary)</b>	<b>QUAL_INFO_TYPE (binary)</b>	<b>Message Type</b>	<b>r-csch</b>	<b>r-dsch</b>	<b>P_REV_IN_USE<sup>6</sup></b>
Reserved	00000001	-	None	-	-	-
Reserved for Obsolete Identification	00000010	-				-
Keypad Facility	00000011	-	Flash	N	Y	All
Called Party Number	00000100	-	Flash	N	Y	All
Calling Party Number	00000101	-	Flash	N	Y	All
		-	Origination Continuation	N	Y	
		-	Enhanced Origination Message	N	Y

Extended Record Type — International	11111110	-	Country-Specific			1, ≥ 4

All other record type values are reserved.

“Flash” refers to either the *Flash With Information Message* or the *Extended Flash With Information Message*.

“DIM” refers to the *Device Information Message*.

[1] This information record may be included in a *Status Message*, a *Status Response Message*, or an *Extended Status Response Message*.

[2] This information record may be included in a *Status Response Message* or an *Extended Status Response Message*.

2

1 2.7.4.1 Reserved  
2

## 2.7.4.2 Keypad Facility

This information record can be included in a *Flash With Information Message* and allows the user to send characters entered via a keyboard or other such terminal.

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

CHAR<sub>i</sub> – Character.

The mobile station shall include one occurrence of this field for each character entered. The mobile station shall set each occurrence of this field to the ASCII representation corresponding to the character entered, as specified in [9], with the most significant bit set to '0'.

### 2.7.4.3 Called Party Number

This information record identifies the called party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	1
----------	---

3

4       NUMBER\_TYPE    –   Type of number.

5                       The mobile station shall set this field to the NUMBER\_TYPE  
6                       value shown in Table 2.7.1.3.2.4-2 corresponding to the type  
7                       of the called number, as defined in [7], Section 4.5.9.

8                       If the mobile station determines that the user has entered an  
9                       international number (for example, with a leading “+” as  
10                      specified in [39] for Plus Code Dialing or an international  
11                      access code), the mobile station should set this field to ‘001’.

12       NUMBER\_PLAN   –   Numbering plan.

13                      The mobile station shall set this field to the NUMBER\_PLAN  
14                      value shown in Table 2.7.1.3.2.4-3 corresponding to the  
15                      numbering plan used for the called number, as defined in [7],  
16                      Section 4.5.9.

17               CHARi   –   Character.

18                      The mobile stations shall include one occurrence of this field  
19                      for each character in the called number. The mobile station  
20                      shall set each occurrence of this field to the ASCII  
21                      representation corresponding to the character, as specified in  
22                      [9], with the most significant bit set to ‘0’.

23       RESERVED       –   Reserved bit.

24                      The mobile station shall set this field to ‘0’.

25

## 2.7.4.4 Calling Party Number

This information record can be included in a *Flash With Information Message* and identifies the calling party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{	
CHARi	8
}	
RESERVED	5

**NUMBER\_TYPE** – Type of number.

The mobile station shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the calling number, as defined in [7], Section 4.5.9.

If the mobile station determines that this number is an international number (for example, with a leading “+” as specified in [39] for Plus Code Dialing or an international access code), the mobile station should set this field to ‘001’.

**NUMBER\_PLAN** – Numbering plan.

The mobile station shall set this field to the NUMBER\_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the calling number, as defined in [7], Section 4.5.9.

**PI** – Presentation indicator.

This field indicates whether or not the calling number should be displayed.

The mobile station shall set this field to the PI value shown in Table 2.7.4.4-1 corresponding to the presentation indicator, as defined in [7], Section 4.5.9.

1

**Table 2.7.4.4-1. Presentation Indicators**

<b>Description</b>	<b>PI (binary)</b>
Presentation allowed	00
Presentation restricted	01
Number not available	10
Reserved	11

2

3

SI – Screening indicator.

4

This field indicates how the calling number was screened.

5

6

7

The mobile station shall set this field to the SI value shown in Table 2.7.4.4-2 corresponding to the screening indicator value, as defined in [7], Section 4.5.9.

8

9

**Table 2.7.4.4-2. Screening Indicators**

<b>Description</b>	<b>SI (binary)</b>
User-provided, not screened	00
User-provided, verified and passed	01
User-provided, verified and failed	10
Network-provided	11

10

11

CHARi – Character.

12

13

14

15

16

The mobile stations shall include one occurrence of this field for each character in the calling number. The mobile station shall set each occurrence of this field to the ASCII representation corresponding to the character, as specified in [9], with the most significant bit set to '0'.

17

RESERVED – Reserved bits.

18

The mobile station shall set this field to '00000'.

19

1 2.7.4.5 Reserved

2

3

#### 1 2.7.4.6 Call Mode

2 This information record can be included in a *Status Message* or a *Status Response*  
3 *Message* to return the mobile station's preferred call mode and call-related information.

4 If P\_REV\_IN\_USE<sub>s</sub> is equal to or greater than seven, this information record will not be  
5 requested by the base station (see 3.7.2.3.2.15 & 3.7.4.4).

6

Type-Specific Field	Length (bits)
ORIG_MODE	1
PRI_SERVICE	16
SEC_SERVICE	16
RESERVED	7

7

8 ORIG\_MODE – Origination mode indicator.

9 If the current call is a mobile-originated call, the mobile  
10 station shall set this field to '0'. If the current call is a  
11 mobile-terminated call, the mobile station shall set this field  
12 to '1'.

13 PRI\_SERVICE – Primary service option.

14 The mobile station shall set this field to the value specified in  
15 [30], corresponding to the current primary service option. If  
16 no primary service option is active, the mobile station shall  
17 set this field to '0000000000000000'.

18 SEC\_SERVICE – Secondary service option.

19 The mobile station shall set this field to the value specified in  
20 [30], corresponding to the current secondary service option.  
21 If no secondary service option is active, the mobile station  
22 shall set this field to '0000000000000000'.

23 RESERVED – Reserved bits.

24 The mobile station shall set this field to '0000000'.

25

## 2.7.4.7 Terminal Information

This information record can be included in a *Status Message*, a *Status Response Message*, or an *Extended Status Response Message* to return configuration information about the mobile station.

Type-Specific Field	Length (bits)
MOB_P_REV	8
MOB_MFG_CODE	8
MOB_MODEL	8
MOB_FIRM_REV	16
SCM	8
LOCAL_CTRL	1
SLOT_CYCLE_INDEX	3

One or more occurrences of the following field:

{

SERVICE_OPTION	16
----------------	----

}

SIGN_SLOT_CYCLE_INDEX	0 or 1
RESERVED	0 – 7 (as needed)

**MOB\_P\_REV** – Protocol revision of the mobile station.

If the status request does not specify a band class, the mobile station shall set this field to '00001100'; otherwise, the mobile station shall set this field to the MOB\_P\_REV associated with the requested band class and operating mode.

**MOB\_MFG\_CODE** – Manufacturer code.

This field identifies the manufacturer of the mobile station.

The mobile station shall set this field to the manufacturer code assigned to its manufacturer.

**MOB\_MODEL** – Model number.

This number is assigned by the manufacturer for a particular model.

The mobile station shall set this field to the model number assigned by the manufacturer for this mobile station.

1	MOB_FIRM_REV	-	Firmware revision number.
2			This number is assigned by the manufacturer for a particular
3			firmware version.
4			The mobile station shall set this field to the revision number
5			assigned by the manufacturer for the firmware version
6			running in this mobile station.
7	SCM	-	Station class mark.
8			The mobile station shall set this field to its station class
9			mark. See 2.3.3.
10	LOCAL_CTRL	-	Local control indicator.
11			If local control is enabled, the mobile station shall set this
12			field to '1'. If local control is disabled, the mobile station shall
13			set this field to '0'. See [6].
14	SLOT_CYCLE_INDEX	-	Slot cycle index.
15			If the requested operating mode is not CDMA or the mobile
16			station is not configured for slotted mode operation, the
17			mobile station shall set this field to '000'; otherwise, the
18			mobile station shall set this field as follows.
19			If P_REV_IN_USE <sub>s</sub> is less than eleven, the mobile station
20			shall set this field to max (0, SLOT_CYCLE_INDEX_REG) (see
21			2.6.2.1.1).
22			If P_REV_IN_USE <sub>s</sub> is greater or equal to eleven, the mobile
23			station shall set this field to the absolute value of the
24			registered slot cycle index, SLOT_CYCLE_INDEX_REG (see
25			2.6.2.1.1). The sign of the registered slot cycle,
26			SLOT_CYCLE_INDEX_REG, is specified in the
27			SIGN_SLOT_CYCLE_INDEX field of this message (see Table
28			2.7.1.3.2.1-8).
29	SERVICE_OPTION	-	Supported service option.
30			If the requested operating mode is CDMA, the mobile station
31			shall include one occurrence of this field for each service
32			option supported by the mobile station (see [30]); otherwise,
33			the mobile station shall include one occurrence of this field
34			with the value set to '0000000000000000'.
35	SIGN_SLOT_CYCLE_INDEX	-	Sign of the slot cycle index.
36			If the SLOT_CYCLE_INDEX field is set to '000', the mobile
37			station shall omit this field; otherwise, the mobile station
38			shall include this field and set it as follows:
39			The mobile station shall set this field as specified in Table
40			2.7.1.3.2.1-8 to the sign of the registered slot cycle index,
41			SLOT_CYCLE_INDEX_REG (see 2.6.2.1.1). The absolute value
42			of the registered slot cycle index, SLOT_CYCLE_INDEX_REG,
43			is specified in the SLOT_CYCLE_INDEX field of this message.

1	RESERVED	-	Reserved bits.
2			
3			The mobile station shall add reserved bits as needed in order
4			to make the length of the entire information record equal to
5			an integer number of octets. The mobile station shall set
6			these bits to '0'.

#### 2.7.4.8 Roaming Information

This information record can be included in a *Status Message*, a *Status Response Message*, or an *Extended Status Response Message* to return roaming information about the mobile station.

Type-Specific Field	Length (bits)
ACCOLC	4
MOB_TERM_HOME	1
MOB_TERM_FOR_SID	1
MOB_TERM_FOR_NID	1

Zero or more occurrences of the following record:

{

SID	15
NID	16

}

RESERVED	0 - 7 (as needed)
----------	-------------------

5

6            ACCOLC    –    Overload class.

7                            The mobile station shall set this field to the access overload  
8                            class assigned to the mobile station.

9            MOB\_TERM\_HOME    –    Home (non-roaming) registration enable indicator.

10                           If the mobile station is configured to receive mobile station  
11                           terminated calls when not roaming, the mobile station shall  
12                           set this field to '1'; otherwise, the mobile station shall set this  
13                           field to '0'. See 2.6.5.3.

14           MOB\_TERM\_FOR\_SID    –    Foreign SID roaming registration enable indicator.

15                           If the mobile station is configured to receive mobile station  
16                           terminated calls when it is a foreign SID roamer, the mobile  
17                           station shall set this field to '1'; otherwise, the mobile station  
18                           shall set this field to '0'. See 2.6.5.3.

19           MOB\_TERM\_FOR\_NID    –    Foreign NID roaming registration enable indicator.

20                           If the mobile station is configured to receive mobile station  
21                           terminated calls when it is a foreign NID roamer, the mobile  
22                           station shall set this field to '1'; otherwise, the mobile station  
23                           shall set this field to '0'. See 2.6.5.3.

24

1 The mobile station shall include one occurrence of the following two-field record for each  
2 home (non-roaming) (SID, NID) pair (see 2.6.5.2):

3                   SID    –   System identification.

4                               The mobile station shall set this field to the SID value for this  
5                               (SID, NID) pair.

6                   NID    –   Network identification.

7                               The mobile station shall set this field to the NID value for this  
8                               (SID, NID) pair.

9           RESERVED   –   Reserved bits.

10                           The mobile station shall add reserved bits as needed in order  
11                           to make the length of the entire information record equal to  
12                           an integer number of octets. The mobile station shall set  
13                           these bits to '0'.  
14

#### 2.7.4.9 Security Status

This information record can be included in a *Status Message* or a *Status Response Message* to return the authentication, encryption, and voice privacy modes of the mobile station.

Type-Specific Field	Length (bits)
AUTH_MODE	2
ENCRYPT_MODE	2
PRIVATE_LCM	1
RESERVED	3

**AUTH\_MODE** – Authentication mode.

If the mobile station provided standard authentication information at the initiation of this call, the mobile station shall set this field to '01'; otherwise, the mobile station shall set this field to '00'. All other values are reserved.

**ENCRYPT\_MODE** – Message encryption mode.

The mobile station shall set this field to the value shown in Table 3.7.2.3.2.8-2 corresponding to the message encryption mode currently in use for this call.

**PRIVATE\_LCM** – Private long code mask indicator.

If the mobile station is using the private long code mask for this call, the mobile station shall set this field to '1'. If the mobile station is using the public long code mask for this call, the mobile station shall set this field to '0'.

**RESERVED** – Reserved bits.

The mobile station shall set this field to '000'.

## 1 2.7.4.10 Connected Number

2 This information record can be included in a *Flash With Information Message* to identify  
 3 the responding party to a call.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

4 NUMBER\_TYPE – Type of number.

5 The mobile station shall set this field to the NUMBER\_TYPE  
 6 value shown in Table 2.7.1.3.2.4-2 corresponding to the type  
 7 of the connected number as defined [7], Section 4.5.9.

8 If the mobile station determines that this number is an  
 9 international number (for example, with a leading “+” as  
 10 specified in [39] for Plus Code Dialing or an international  
 11 access code), the mobile station should set this field to ‘001’.

12 NUMBER\_PLAN – Numbering plan.

13 The mobile station shall set this field to the NUMBER\_PLAN  
 14 value shown in Table 2.7.1.3.2.4-3 corresponding to the  
 15 numbering plan used for the connected number, as defined,  
 16 in [7], Section 4.5.9.

17 PI – Presentation indicator.

18 This field indicates whether or not the connected number  
 19 should be displayed. The mobile station shall set this field to  
 20 the PI value shown in Table 2.7.4.4-1 corresponding to the  
 21 presentation indicator, as defined in [7], Section 4.5.9.

22 SI – Screening indicator.

23 This field indicates how the connected number was screened.  
 24 The mobile station shall set this field to the SI value shown in  
 25 Table 2.7.4.4-2 corresponding to the screening indicator  
 26 value, as defined in [7], Section 4.5.9.

- 1                   CHARi    -   Character.
- 2                               The mobile station shall include one occurrence of this field
- 3                               for each character in the connected number. The mobile
- 4                               station shall set each occurrence of this field to the ASCII
- 5                               representation corresponding to the character, as specified in
- 6                               [9], with the most significant bit set to '0'.
- 7                   RESERVED   -   Reserved bits.
- 8                               The mobile station shall set this field to '00000'.
- 9

## 1 2.7.4.11 IMSI

2 This information record can be included in a *Status Message*, a *Status Response Message*,  
 3 or an *Extended Status Response Message* to return the mobile station's operational IMSI.

Type-Specific Field	Length (bits)
IMSI_CLASS	1
IMSI_ADDR_NUM	3
MCC_O	10
IMSI_O_11_12	7
IMSI_O_S	34
RESERVED	1

- 4
- 5           IMSI\_CLASS    – If IMSI\_O is a class 0 IMSI, the mobile station shall set this  
 6                           field to '0'; otherwise, the mobile station shall set this field to  
 7                           '1'.
- 8           IMSI\_ADDR\_NUM – Number of IMSI\_O address digits.  
 9                           If IMSI\_O is a class 1 IMSI, the mobile station shall set this  
 10                          field to four less than the number of digits in the NMSI;  
 11                          otherwise, the mobile station shall set this field to '000'.
- 12           MCC\_O        – Mobile Country Code of the operational IMSI.  
 13                           The mobile station shall set this field to MCC\_O<sub>S</sub>. (see 2.3.1).
- 14           IMSI\_O\_11\_12 – The 11th and 12th digits of the operational IMSI.  
 15                           The mobile station shall set this field to IMSI\_O\_11\_12<sub>S</sub>.  
 16                           (see 2.3.1).
- 17           IMSI\_O\_S     – Last ten digits of the operational IMSI.  
 18                           The mobile station shall set this field to IMSI\_O\_S. (see  
 19                           2.3.1.)
- 20           RESERVED    – Reserved bit.  
 21                           The mobile station shall set this field to '0'.  
 22

1    2.7.4.12 ESN

2    This information record can be included in a *Status Message*, a *Status Response Message*,  
3    or an *Extended Status Response Message* to return the mobile station ESN.

Type-Specific Field	Length (bits)
ESN	32

4

5                    ESN    –    Mobile station electronic serial number.

6                    If the mobile station has a R-UIM which indicates that UIM ID  
7                    is to be used, the mobile station shall set this field to UIM ID  
8                    (see [40]); otherwise, the mobile station shall set this field to  
9                    its ESN<sub>p</sub> (see 2.3.2).

10

### 2.7.4.13 Band Class Information

This information record can be included in a *Status Response Message*, or an *Extended Status Response Message* to return band class information about the mobile station.

Type-Specific Field	Length (bits)
BAND_CLASS_INFO	$8 \times \text{RECORD\_LEN}$

**BAND\_CLASS\_INFO** – Band class information.

This field indicates which band classes are supported by the mobile station.

The mobile station shall set the Nth most significant bit of this field to '1' if the Nth band class defined in [45] is supported by the mobile station; otherwise, the mobile station shall set the Nth most significant bit of this field to '0'. Example of this field coding is shown in Figure 2.7.4.13-1.

**Figure 2.7.4.13-1. BAND\_CLASS\_INFO field coding**

The mobile station shall add reserved bits as needed in order to make the length of the entire information record equal to an integer number of octets. The mobile station shall set these bits to '0'.

#### 2.7.4.14 Power Class Information

This information record can be included in a *Status Response Message*, or an *Extended Status Response Message* to return power class information about the mobile station.

Type-Specific Field	Length (bits)
MAX_EIRP	8

MAX\_EIRP – Maximum effective isotropic radiated power (EIRP).

The mobile station shall set this field to the minimum EIRP at maximum output (in dBW) for the mobile station plus 60 (see [11]). When the mobile station output power is expressed in ERP, it may be converted to EIRP by adding 2 dB to the ERP value.<sup>7</sup>

---

<sup>7</sup> For example, if a mobile station has a minimum ERP at maximum output of -4 dBW, then the mobile station sets this field to 58.

## 2.7.4.15 Operating Mode Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return operating mode information about the mobile station.

Type-Specific Field	Length (bits)
OP_MODE_INFO	$8 \times \text{RECORD\_LEN}$

OP\_MODE\_INFO – Operating mode information.

This field indicates which operating modes are supported by the mobile station in the band class for which information is requested.

This field currently consists of the following subfields which are included in the information record in the order shown in Table 2.7.4.15-1 for P\_REV\_IN\_USE<sub>S</sub> less than or equal to three and in Table 2.7.4.15-2 for P\_REV\_IN\_USE<sub>S</sub> greater than three.

**Table 2.7.4.15-1. OP\_MODE for P\_REV\_IN\_USE<sub>S</sub> Less Than or Equal to Three**

Subfield	Length (bits)	Subfield Description
OP_MODE0	1	CDMA mode in Band Class 1 and Band Class 4
OP_MODE1	1	CDMA mode in Band Class 0 and Band Class 3
OP_MODE2	1	Reserved (Previously: Analog mode)
OP_MODE3	1	Reserved (Previously: wide analog mode)
OP_MODE4	1	Reserved (Previously: narrow analog mode)
RESERVED	3	Reserved Bits

**Table 2.7.4.15-2. OP\_MODE for P\_REV\_IN\_USE<sub>s</sub> Greater Than Three**

Subfield	Length (bits)	Subfield Description	Standards
OP_MODE0	1	CDMA mode	
OP_MODE1	1	CDMA mode <sup>8</sup>	
OP_MODE2	1	Reserved (Previously: Analog mode)	
OP_MODE3	1	Reserved (Previously: Wide analog mode)	
OP_MODE4	1	Reserved (Previously: Narrow analog mode)	
OP_MODE5	1	DS-41	[32]
OP_MODE6	1	MC-MAP	[31]
RESERVED	1	–	–

The mobile station shall set each subfield to ‘1’, if the corresponding operating mode is supported by the mobile station; otherwise, the mobile station shall set the subfield to ‘0’.

**RESERVED** – Reserved bits.

The mobile station shall set each bit in this field to ‘0’.

When more operating modes are defined, the reserved bits will be used for the new corresponding subfields. Sufficient octets will also be added to this field to accommodate the corresponding new subfields. All the undefined bits in an additional octet will be reserved bits.

If all bits are set to ‘0’ in an octet and all succeeding octets, the mobile station shall omit the octet and the succeeding octets.

<sup>8</sup> The mobile station shall set OP\_MODE1 the same as OP\_MODE0.

## 2.7.4.16 Service Option Information

This information record can be included in a *Status Response Message*, or an *Extended Status Response Message* to return service option information about the mobile station.

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following field:

{

RESERVED	6
FORWARD_SUPPORT	1
REVERSE_SUPPORT	1
SERVICE_OPTION	16

}

The mobile station shall include one occurrence of the following record for each service option supported:

RESERVED – Reserved bits.

The mobile station shall set this field to '000000'.

FORWARD\_SUPPORT – Support indicator for Forward Traffic Channel.

The mobile station shall set this field to '1' if the service option specified in the SERVICE\_OPTION field is supported on the Forward Traffic Channel.

REVERSE\_SUPPORT – Support indicator for Reverse Traffic Channel.

The mobile station shall set this field to '1' if the service option specified in the SERVICE\_OPTION field is supported on the Reverse Traffic Channel.

SERVICE\_OPTION – Service option.

The mobile station shall set this field to the value specified in [30] for the service option supported.

#### 2.7.4.17 Multiplex Option Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return multiplex option information about the mobile station. The mobile station shall include at least one, and not more than six, instances of the record within the type-specific field according to the following rules:

- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 1. If this instance is included, the mobile station shall support Multiplex Option 1 for forward and reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 2. If this instance is included, the mobile station shall support Multiplex Option 2 for forward and reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 3, 5, 7, 9, 11, 13, or 15 and with FOR\_NUM\_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX\_OPTION to the highest numbered multiplex option from the set {3, 5, 7, 9, 11, 13, 15} which the mobile station supports for reverse operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX\_OPTION from that set for reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 4, 6, 8, 10, 12, 14, or 16 and with FOR\_NUM\_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX\_OPTION to the highest numbered multiplex option from the set {4, 6, 8, 10, 12, 14, 16} which the mobile station supports for reverse operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX\_OPTION from that set for reverse operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 3, 5, 7, 9, 11, 13, or 15 and with REV\_NUM\_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX\_OPTION to the highest numbered multiplex option from the set {3, 5, 7, 9, 11, 13, 15} which the mobile station supports for forward operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX\_OPTION from that set for forward operation.
- Within the type-specific field, the mobile station may include one instance of a record in which MULTIPLEX\_OPTION is set to 4, 6, 8, 10, 12, 14, or 16 and with REV\_NUM\_BITS set to '00000000'. If this instance is included, the mobile station shall set MULTIPLEX\_OPTION to the highest numbered multiplex option from the set {4, 6, 8, 10, 12, 14, 16} which the mobile station supports for forward operation, and the mobile station shall support all multiplex options less than or equal to MULTIPLEX\_OPTION from that set for forward operation.
- Within the type-specific field, the mobile station shall include at least one instance of a record in which FOR\_NUM\_BITS is set to a value other than '00000000'.

- Within the type-specific field, the mobile station shall include at least one instance of a record in which REV\_RATES is set to a value other than '00000000'.

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following record:

{

MULTIPLEX_OPTION	16
FOR_NUM_BITS	8
REV_NUM_BITS	8

}

The mobile station shall include one occurrence of the following record for each specified multiplex option according to the previously stated rules:

**MULTIPLEX\_OPTION** – Supported multiplex option.

The mobile station shall set this field to the number of the supported multiplex option from the set {1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16} (e.g., 1 corresponds to Multiplex Option 1).

**FOR\_NUM\_BITS** – Forward Traffic Channel number of bits per frame.

If FOR\_NUM\_BITS = '00000000', then the specified multiplex option in this record shall indicate the supported multiplex option for the Reverse Traffic Channel only. In this case, no further interpretation of the FOR\_NUM\_BITS field shall be made. The mobile station shall not set both FOR\_NUM\_BITS and REV\_NUM\_BITS equal to '00000000' in the same information record.

If MULTIPLEX\_OPTION is equal to 1, 3, 5, 7, 9, 11, 13, or 15, this field consists of the subfields specified in Table 2.7.4.17-1 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-1 refer to the number of bits per frame supported on the Fundamental Channel of the Forward Traffic Channel.

**Table 2.7.4.17-1. Forward Fundamental Traffic Channel  
Number of Bits per Frame for Forward Multiplex Option 1**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
RS1_9600_FOR	1	172 bits per F-FCH frame
RS1_4800_FOR	1	80 bits per F-FCH
RS1_2400_FOR	1	40 bits per F-FCH frame
RS1_1200_FOR	1	16 bits per F-FCH frame
RESERVED	4	Reserved Bits

If MULTIPLEX\_OPTION is equal to 2, 4, 6, 8, 10, 12, 14, or 16, this field consists of the subfields specified in Table 2.7.4.17-2 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-2 refer to the number of bits per frame supported on the Fundamental Channel of the Forward Traffic Channel.

**Table 2.7.4.17-2. Forward Fundamental Traffic Channel  
Number of Bits per Frame for Forward Multiplex Option equal  
to 2**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
RS2_14400_FOR	1	267 bits per F-FCH frame
RS2_7200_FOR	1	125 bits per F-FCH frame
RS2_3600_FOR	1	55 bits per F-FCH frame
RS2_1800_FOR	1	21 bits per F-FCH frame
RESERVED	4	Reserved Bits

The mobile station shall set the subfields specified in Tables 2.7.4.17-1 and 2.7.4.17-2, corresponding to the Forward Traffic Channel number of bits per frame supported by the mobile station for this multiplex option to '1', and shall set the remaining subfields to '0'. The mobile station shall set RESERVED to '0000'.

REV\_NUM\_BITS – Reverse Traffic Channel transmission rates.

If REV\_NUM\_BITS is equal to '00000000', then the specified multiplex option in this record indicate the supported multiplex option for the Forward Traffic Channel only. In this case, no further interpretation of the REV\_NUM\_BITS field shall be made. The mobile station shall not set both FOR\_NUM\_BITS and REV\_NUM\_BITS equal to '00000000' in the same information record.

If MULTIPLEX\_OPTION is equal to 1, 3, 5, 7, 9, 11, 13, or 15, this field consists of the subfields specified in Table 2.7.4.17-3 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-3 refer to the number of bits per frame supported on the Fundamental Channel of the Reverse Traffic Channel.

**Table 2.7.4.17-3. Reverse Fundamental Traffic Channel  
Number of Bits per Frame for Reverse Multiplex Option equal  
to 1**

Subfield	Length (bits)	Subfield Description
RS1_9600_REV	1	172 bits per R-FCH frame
RS1_4800_REV	1	80 bits per R-FCH frame
RS1_2400_REV	1	40 bits per R-FCH frame
RS1_1200_REV	1	16 bits per R-FCH frame
RESERVED	4	Reserved Bits

If MULTIPLEX\_OPTION is equal to 2, 4, 6, 8, 10, 12, 14, or 16, this field consists of the subfields specified in Table 2.7.4.17-4 which are included in the information record in the order shown in the table. The subfields in Table 2.7.4.17-4 refer to the number of bits per frame supported on the Fundamental Channel of the Reverse Traffic Channel.

**Table 2.7.4.17-4. Reverse Fundamental Traffic Channel  
Number of Bits per Frame for Reverse Multiplex Option equal  
to 2**

Subfield	Length (bits)	Subfield Description
RS2_14400_REV	1	267 bits per R-FCH frame
RS2_7200_REV	1	125 bits per R-FCH frame
RS2_3600_REV	1	55 bits per R-FCH frame
RS2_1800_REV	1	21 bits per R-FCH frame
RESERVED	4	Reserved Bits

The mobile station shall set the subfields specified in Table 2.7.4.17-3 and Table 2.7.4.17-4 corresponding to the Reverse Traffic Channel transmission number of bits per frame supported by the mobile station for this multiplex option to '1', and shall set the remaining subfields to '0'. The mobile station shall set RESERVED to '0000'.

1    2.7.4.18 Service Configuration

2    The format of the Service Configuration information record is defined in 3.7.5.7.

3

4

## 2.7.4.19 Called Party Subaddress

This information record identifies the called party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

**EXTENSION\_BIT** – The extension bit.

The mobile station shall set this field to '1'.

**SUBADDRESS\_TYPE** – Type of subaddress.

The mobile station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.8.

**Table 2.7.4.19-1. Subaddress Types**

Description	SUBADDRESS TYPE (binary)
NSAP (see [34])	000
User specified	010
Reserved	others

**ODD/EVEN\_INDICATOR** – The indicator of odd/even bits.

The mobile station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.8. This field is only used when the type of subaddress is "User specified" and the coding is BCD.

1

**Table 2.7.4.19-2. Odd/Even Indicator**

<b>Description</b>	<b>ODD/EVEN INDICATOR (binary)</b>
Even number of address signals	0
Odd number of address signals	1

2

3

RESERVED    -    Reserved bits.

4

The mobile station shall set this field to '000'.

5

CHARi    -    Character.

6

The mobile station shall include one occurrence of this field for each character in the called party subaddress.

7

8

When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

9

10

11

When the SUBADDRESS\_TYPE field is set to '010', the user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with CCITT Recommendation X.25 networks, BCD coding should be applied.

12

13

14

15

16

## 2.7.4.20 Calling Party Subaddress

This information record identifies the calling party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

**EXTENSION\_BIT** – The extension bit.

The mobile station shall set this field to '1'.

**SUBADDRESS\_TYPE** – Type of subaddress.

The mobile station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.10.

**ODD/EVEN\_INDICATOR** – The indicator of odd/even bits.

The mobile station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.10. It is only used when the type of subaddress is "User specified" and the coding is BCD.

**RESERVED** – Reserved bits.

The mobile station shall set this field to '000'.

**CHAR<sub>i</sub>** – Character.

The mobile station shall include one occurrence of this field for each character in the calling party subaddress.

When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

When the SUBADDRESS\_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

## 2.7.4.21 Connected Subaddress

This information record identifies the subaddress of the responding party.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

- EXTENSION\_BIT** – The extension bit.  
The mobile station shall set this field to '1'.
- SUBADDRESS\_TYPE** – Type of subaddress.  
The mobile station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.14.
- ODD/EVEN\_INDICATOR** – The indicator of odd/even bits.  
The mobile station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.14. It is only used when the type of subaddress is "User specified" and the coding is BCD.
- RESERVED** – Reserved bits.  
The mobile station shall set this field to '000'.
- CHAR<sub>i</sub>** – Character.  
The mobile station shall include one occurrence of this field for each character in the connected subaddress.  
When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].  
When the SUBADDRESS\_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

## 1 2.7.4.24 IMSI\_T

2 This information record can be included in a *Status Response Message*, or an *Extended*  
 3 *Status Response Message* to return the mobile station's IMSI\_T.

Type-Specific Field	Length (bits)
IMSI_T_CLASS	1
IMSI_T_ADDR_NUM	3
MCC_T	10
IMSI_T_11_12	7
IMSI_T_S	34
RESERVED	1

4

5 IMSI\_T\_CLASS – IMSI\_T Class assignment of the mobile station.

6 If the mobile station's IMSI\_T is a class 0 IMSI, the mobile  
 7 station shall set this field to '0'; otherwise, the mobile station  
 8 shall set this field to '1'.

9 IMSI\_T\_ADDR\_NUM – Number of IMSI\_T<sub>p</sub> address digits.

10 If the mobile station's IMSI\_T is a class 1 IMSI, the mobile  
 11 station shall set this field to four less than the number of  
 12 digits in the NMSI; otherwise, the mobile station shall set this  
 13 field to '000'.

14 MCC\_T – Mobile Country Code of the IMSI\_T.

15 The mobile station shall set this field to the MCC\_T<sub>p</sub>.  
 16 See 2.3.1.

17 IMSI\_T\_11\_12 – The 11th and 12th digits of the IMSI\_T<sub>p</sub>.

18 The mobile station shall set this field to IMSI\_T\_11\_12<sub>p</sub>.  
 19 See 2.3.1.

20 IMSI\_T\_S – Last ten digits of the IMSI\_T<sub>p</sub>.

21 The mobile station shall set this field to IMSI\_T\_S<sub>p</sub>. See  
 22 2.3.1.

23 RESERVED – Reserved bit.

24 The mobile station shall set this field to '0'.

25

1 2.7.4.25 Capability Information

2 This information record identifies whether the following optional or MOB\_P\_REV  
3 dependent features are supported by the mobile station.

4

Type-Specific Field	Length (bits)
ACCESS_ENTRY_HO	1
ACCESS_PROBE_HO	1
ANALOG_SEARCH	1
HOPPING_BEACON	1
MAHHO	1
PUF	1

F_SCH_EARLY_TERM_SUPPORTED	1
POWER_CONTROL_MODE_01_SUPPORTED	1
RESERVED	0 - 7 (as needed)

2

3 ACCESS\_ENTRY\_HO - Access Entry Handoff Support.

4 This field identifies the mobile station's support for access  
5 entry handoff (see 2.6.2.3). The mobile station shall set this  
6 field to '1' if access entry handoff is supported; otherwise, the  
7 mobile station shall set this field to '0'.

8 ACCESS\_PROBE\_HO - Access Probe Handoff Support.

1			This field identifies the mobile station's support for access
2			probe handoff (see 2.6.3.1.3.3). The mobile station shall set
3			this field to '1' if access probe handoff is supported;
4			otherwise, the mobile station shall set this field to '0'.
5	ANALOG_SEARCH	-	Analog Search Support.
6			This field identifies the mobile station's support for analog
7			searching (see 2.6.6.2.10). The mobile station shall set this
8			field to '1' if analog searching is supported; otherwise, the
9			mobile station shall set this field to '0'. The mobile station
10			shall set this field to '0'.
11	HOPPING_BEACON	-	Hopping Beacon Support.
12			This field identifies the mobile station's support for hopping
13			pilot beacons. The mobile station shall set this field to '1' if
14			hopping pilot beacons are supported; otherwise, this field shall
15			be set to '0'.
16	MAHHO	-	Mobile Assisted Hard Handoff Support.
17			This field identifies the mobile station's support for mobile
18			assisted hard handoff. The mobile station shall set this field to
19			'1'.
20	PUF	-	Location Power Up Function Support.
21			This field identifies the mobile station's support for location
22			power up function (see 2.6.4.1.7).
23			If MOB_P_REV <sub>p</sub> is equal to '00000101', the mobile station shall
24			set this field to '1'; otherwise the mobile station shall set this
25			field as follows:
26			If the mobile station supports location power up function, the
27			mobile station shall set this field to '1', otherwise, the mobile
28			station shall set this field to '0'.
29	ANALOG_553A	-	Analog Support.
30			This field identifies the mobile station's compatibility with [12].
31			The mobile station shall set this field to '0'.
32	QPCCH	-	Quick Paging Channel Support.
33			This field identifies the mobile station's support for the Quick
34			Paging Channel. The mobile station shall set this field to '1' if
35			the Quick Paging Channel is supported; otherwise, the mobile
36			station shall set this field to '0'.
37	SLOTTED_TIMER	-	Slotted Timer Support.
38			This field identifies the mobile station's support for the Slotted
39			Timer. The mobile station shall set this field to '1' if the Slotted
40			Timer is supported; otherwise, the mobile station shall set this
41			field to '0'.
42	CHM_SUPPORTED	-	Control Hold Mode supported indicator.

The mobile station shall set this field to '1' to indicate that the mobile station supports the Control Hold Mode; otherwise, the mobile station shall set this field to '0'.

**GATING\_RATE\_SET** – Set of supported Reverse Pilot gating rates.

If CHS\_SUPPORTED is included and is set to '1', the mobile station shall set this field to value shown in Table 2.7.4.25-1 corresponding to the set of supported reverse pilot gating rates; otherwise the mobile station shall omit this field.

**Table 2.7.4.25-1. Set of Supported Reverse Pilot Gating Rates**

<b>GATING_RATE_SET field (binary)</b>	<b>Gating Rates Capability</b>
00	Gating rates 1
01	Gating rates 1 and ½
10	Gating rates 1, ½ and ¼
11	Reserved

**EXT\_CAP\_INCLUDED** – Extended Capabilities Included indicator.

The mobile station shall set this field to '1' to indicate that extended capability indicators are included in this record; otherwise, the mobile station shall set this field to '0'.

**MABO** – Mobile Assisted Burst Operation capability indicator.

If EXT\_CAP\_INCLUDED is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to '1' if it supports the Mobile Assisted Burst Operation capability; otherwise, the mobile station shall set this field to '0'.

**SDB** – Short Data Burst supported indicator.

If EXT\_CAP\_INCLUDED is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

If MOB\_P\_REV<sub>p</sub> is greater or equal to 11 and if the mobile station supports packet data service as specified in [42], the mobile station shall set this field to '1'<sup>9</sup>.

---

<sup>9</sup> Short Data Burst Capability support is mandatory for the mobile station with MOB\_P\_REV<sub>p</sub> greater than or equal to 11 that supports packet data service as specified in [42]

1 Otherwise, the mobile station shall set this field to '1' if it  
 2 supports Short Data Burst capability; otherwise, the mobile  
 3 station shall set this field to '0'.

4 RLP\_INFO\_LEN - RLP capability information length.

5 The mobile station shall set this field to '000' if the  
 6 RLP\_BLOB field is not included in this record; otherwise, it  
 7 shall set this field to the size of the RLP\_BLOB field in integer  
 8 number of octets.

9 RLP\_BLOB - Radio Link Protocol information block of bits.

10 If the RLP\_INFO\_LEN field is set to '000', the mobile station  
 11 shall omit this field; otherwise, the mobile station shall set  
 12 this field as follows:

13 If P\_REV\_IN\_USE<sub>S</sub> is equal or greater than seven<sup>10</sup>, the  
 14 mobile station shall set this field to the Radio Link Protocol  
 15 information block of bits (see [42]).

16 If P\_REV\_IN\_USE<sub>S</sub> equals six, the mobile station shall set this  
 17 field to the Radio Link Protocol capability information block of  
 18 bits, as shown in Table 2.7.4.25-2.

19 **Table 2.7.4.25-2. RLP Capability Information Block**

Subfields	Length
MAX_MS_NAK_ROUNDS_FWD	3
MAX_MS_NAK_ROUNDS_REV	3
RESERVED	2

20

21 MAX\_MS\_NAK\_ROUNDS\_FWD - Maximum number of RLP NAK rounds supported by  
 22 the mobile station on the forward traffic channel.

23 The mobile station shall set this field to the maximum  
 24 number of NAK round(s) it supports on the forward traffic  
 25 channel (BS RLP transmitting function) (see [42]).

26 MAX\_MS\_NAK\_ROUNDS\_REV - Maximum number of RLP NAK rounds supported by  
 27 the mobile station on the reverse traffic channel.

28 The mobile station shall include this field and set it to the  
 29 maximum number of NAK round(s) it supports on the reverse  
 30 traffic channel (MS RLP transmitting function) (see [42]).

31 FLEX\_SUPPORTED - Flexible rate feature supported indicator.

---

<sup>10</sup> P\_REV\_IN\_USE<sub>S</sub> >= 7 can not work with TIA/EIA/IS-707-A

1		The mobile station shall set this field to '1' if it supports the
2		flexible rate feature (the capability to support a non-listed
3		frame format) on any of the forward or reverse Fundamental,
4		Supplemental or Dedicated Control channels; otherwise, the
5		mobile station shall set this field to '0'.
6	F_FCH_FLEX_SUPPORTED	- Forward Fundamental channel flexible rate feature
7		supported indicator.
8		The mobile station shall include this field only if
9		FLEX_SUPPORTED is equal to '1'. If this field is included, the
10		mobile station shall set this field to '1' if it supports the
11		flexible rate feature for the Forward Fundamental Channel;
12		otherwise, the mobile station shall set this field to '0'.
13	R_FCH_FLEX_SUPPORTED	- Reverse Fundamental channel flexible rate feature
14		supported indicator.
15		The mobile station shall include this field only if
16		FLEX_SUPPORTED is equal to '1'. If this field is included, the
17		mobile station shall set this field to '1' if it supports the
18		flexible rate feature for the Reverse Fundamental Channel;
19		otherwise, the mobile station shall set this field to '0'.
20	F_DCCH_FLEX_SUPPORTED	- Forward Dedicated Control channel flexible rate
21		feature supported indicator.
22		The mobile station shall include this field only if
23		FLEX_SUPPORTED is equal to '1'. If this field is included, the
24		mobile station shall set this field to '1' if it supports the
25		flexible rate feature for the Forward Dedicated Control
26		Channel; otherwise, the mobile station shall set this field to
27		'0'.
28	R_DCCH_FLEX_SUPPORTED	- Reverse Dedicated Control channel flexible rate
29		feature supported indicator.
30		The mobile station shall include this field only if
31		FLEX_SUPPORTED is equal to '1'. If this field is included, the
32		mobile station shall set this field to '1' if it supports the
33		flexible rate feature for the Reverse Dedicated Control
34		Channel; otherwise, the mobile station shall set this field to
35		'0'.
36	F_SCH_FLEX_SUPPORTED	- Forward Supplemental channel flexible rate feature
37		supported indicator.
38		The mobile station shall include this field only if
39		FLEX_SUPPORTED is equal to '1'. If this field is included, the
40		mobile station shall set this field to '1' if it supports the
41		flexible rate feature for the Forward Supplemental Channel;
42		otherwise, the mobile station shall set this field to '0'.
43	R_SCH_FLEX_SUPPORTED	- Reverse Supplemental channel flexible rate feature
44		supported indicator.

1		The mobile station shall include this field only if
2		FLEX_SUPPORTED is equal to '1'. If this field is included, the
3		mobile station shall set this field to '1' if it supports the
4		flexible rate feature for the Reverse Supplemental Channel;
5		otherwise, the mobile station shall set this field to '0'.
6	VAR_SUPPORTED	- Variable rate feature supported indicator.
7		The mobile station shall set this field to '1' if it supports the
8		variable rate feature (the capability to support rate
9		determination) on any of the forward or reverse Supplemental
10		channels; otherwise, the mobile station shall set this field to
11		'0'.
12	F_SCH_VAR_SUPPORTED	- Forward Supplemental Channel Variable Rate supported
13		indicator.
14		The mobile station shall include this field only if
15		VAR_SUPPORTED is equal to '1'. If this field is included, the
16		mobile station shall set this field to '1' if it supports the
17		variable rate feature on the Forward Supplemental Channels.
18	R_SCH_VAR_SUPPORTED	- Reverse Supplemental Channel Variable Rate supported
19		indicator.
20		The mobile station shall include this field only if
21		VAR_SUPPORTED is equal to '1'. If this field is included, the
22		mobile station shall set this field to '1' if it supports the
23		variable rate feature on the Reverse Supplemental Channels.
24	MAX_SUM_NUM_BITS_C	- Maximum sum of number of bits corresponding to
25		Convolutional rates in the variable rate set.
26		The mobile station shall include this field only if
27		F_SCH_VAR_SUPPORTED is equal to '1'. If this field is
28		included, the mobile station shall set this field to the
29		maximum of the sum of possible information bits per 20 ms
30		corresponding to the Convolutional Code rates in the Variable
31		Rate Set for a Forward Supplemental Channel below which
32		the mobile station is capable of performing rate determination
33		on the forward supplemental channel when Convolutional
34		coding is used.
35	MAX_SUM_NUM_BITS_T	- Maximum sum of number of bits corresponding to Turbo
36		Code rates in the variable rate set
37		The mobile station shall include this field only if
38		F_SCH_VAR_SUPPORTED is equal to '1'. If this field is
39		included, the mobile station shall set this field to the
40		maximum of the sum of possible information bits per 20 ms
41		corresponding to the Turbo Code rates in the Variable Rate
42		Set for a Forward Supplemental Channel below which the
43		mobile station is capable of performing rate determination on
44		the forward supplemental channel when Turbo coding is
45		used.

1	CS_SUPPORTED	-	Concurrent Services supported indicator.
2			If the mobile station supports concurrent services, the mobile
3			station shall set this field to '1'; otherwise, the mobile station
4			shall set this field to '0'.
5	F_SCH_LTU_TAB_SUPPORTED	-	Forward Supplemental Channel Downloadable LTU
6			tables supported indicator.
7			If the mobile station supports downloadable LTU Tables for
8			Forward Supplemental Channel, the mobile station shall set
9			this field to '1'; otherwise, the mobile station shall set this
10			field to '0'.
11	R_SCH_LTU_TAB_SUPPORTED	-	Reverse Supplemental Channel Downloadable LTU
12			tables supported indicator.
13			If the mobile station supports downloadable LTU Tables for
14			Reverse Supplemental Channel, the mobile station shall set
15			this field to '1'; otherwise, the mobile station shall set this
16			field to '0'.
17	ERAM_SUPPORTED	-	Enhanced Rate Adaptation Mode supported indicator.
18			If FLEX_SUPPORTED or VAR_SUPPORTED is set to '1', the
19			mobile station shall include this field; otherwise, the mobile
20			station shall omit this field. If included, the mobile station
21			shall set this field to '1' if the mobile station supports the
22			Enhanced Rate Adaptation Mode; otherwise, the mobile
23			station shall set this field to '0'.
24	PDCH_CHM_SUPPORTED	-	PDCH Control Hold Mode supported indicator.
25			The mobile station shall set this field to '1' to indicate that the
26			mobile station supports the PDCH Control Hold Mode;
27			otherwise, the mobile station shall set this field to '0'.
28	REV_FCH_GATING_SUPPORTED	-	Reverse Fundamental eighth gating mode
29			supported indicator.
30			If the Reverse Fundamental Traffic Channel gating mode is
31			supported, the mobile station shall set this field to '1';
32			otherwise, the mobile station shall set this field to '0'.
33	RER_MODE_SUPPORTED	-	Radio environment reporting mode supported indicator.
34			The mobile station shall set this field to '1' if it supports radio
35			environment reporting mode; otherwise, the mobile station
36			shall set this field to '0'.
37	ADD_NUM_SYNC_ID_INCL	-	Additional number of synchronization identifiers included
38			indicator.
39			If this record is to contain the ADD_NUM_SYNC_ID field, the
40			mobile station shall set this field to '1'; otherwise, the mobile
41			station shall set this field to '0'.
42	ADD_NUM_SYNC_ID	-	Additional <u>n</u> umber of synchronization identifiers.

1		If ADD_NUM_SYNC_ID_INCL field is set to '1', the mobile
2		station shall include this field and set it to the number of
3		SYNC_ID's supported minus 5; otherwise it shall omit this
4		field.
5	RSC_MODE_SUPPORTED	- Reduced Slot Cycle Mode supported indicator.
6		The mobile station shall set this field to '1' if it supports the
7		reduced slot cycle mode; otherwise, the mobile station shall
8		set this field to '0'.
9	TKZ_MODE_SUPPORTED	- Tracking zone mode supported indicator.
10		The mobile station shall set this field to '1' if it supports
11		tracking zone mode; otherwise, the mobile station shall set
12		this field to '0'.
13	F_SCH_EARLY_TERM_SUPPORTED	- Forward Supplemental Channel early termination
14		supported indicator.
15		The mobile station shall set this field to '1' if the mobile
16		station supports early termination for Forward Supplemental
17		Channel; otherwise, the mobile station shall set this field to
18		'0'.
19	POWER_CONTROL_MODE_01_SUPPORTED	- Power Control Mode 01 supported
20		indicator.
21		The mobile station shall set this field to '1' if the mobile
22		station supports power control mode '01' for RC11 and RC12;
23		otherwise, the mobile station shall set this field to '0'.
24	RESERVED	- Reserved bits.
25		The mobile station shall add reserved bits as needed in order
26		to make the length of the entire information record equal to
27		an integer number of octets. The mobile station shall set
28		these bits to '0'.
29		

1    2.7.4.26 Extended Record Type - International

2    The use of this record type is country-specific. The first ten bits of the type-specific fields  
3    shall include the Mobile Country Code (MCC) associated with the national standards  
4    organization administering the use of the record type. Encoding of the MCC shall be as  
5    specified in 2.3.1.3. The remaining six bits of the first two octets of the type-specific fields  
6    shall be used to specify the country-specific record type.

7

#### 2.7.4.27 Channel Configuration Capability Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return channel configuration capability information about the mobile station.

Type-Specific Field	Length (bits)
OTD_SUPPORTED	1
FCH_SUPPORTED	1
FCH Type-specific fields	0 or Variable
DCCH_SUPPORTED	1
DCCH Type-specific fields	0 or Variable
FOR_SCH_SUPPORTED	1
FOR_SCH Type-specific fields	0 or Variable
REV_SCH_SUPPORTED	1
REV_SCH Type-specific fields	0 or Variable
RESERVED_1	0 or 2
STS_SUPPORTED	1
3X_CCH_SUPPORTED	1
CCSH_SUPPORTED	0 or 1
FOR_PDCH_SUPPORTED	1
FOR_PDCH Capability Type-specific fields	0 or variable
FOR_PDCH_SCH_SUPPORTED	0 or 1
REV_PDCH_SUPPORTED	0 or 1
REV_PDCH Capability Type-specific fields	0 or variable
FUNDICATED_BCNC_SUPPORTED	1
FUNDICATED_BCNC Type-specific fields	0 or variable
SCH_BCNC_SUPPORTED	1
RESERVED	0 - 7 (as needed)

OTD\_SUPPORTED – OTD supported indicator.

The mobile station shall set this field to '1' if the mobile station supports orthogonal transmission diversity; otherwise, the mobile station shall set this field to '0'.

1	FCH_SUPPORTED	-	Fundamental Channel supported indicator.
2			The mobile station shall set this field to '1', if the mobile
3			station supports the Fundamental Channel; otherwise, the
4			mobile station shall set this field to '0'.
5	FCH Type-specific fields	-	Fundamental Channel configuration capability information.
6			If the FCH_SUPPORTED field is set to '1', the mobile station
7			shall include this field and set it as described in 2.7.4.27.1;
8			otherwise the mobile station shall omit this field.
9	DCCH_SUPPORTED	-	Dedicated Control Channel supported indicator.
10			The mobile station shall set this field to '1' if the mobile
11			station supports the Dedicated Control Channel; otherwise,
12			the mobile station shall set this field to '0'.
13	DCCH Type specific fields	-	Fundamental Channel configuration capability
14			information.
15			If the DCCH_SUPPORTED field is set to '1', the mobile station
16			shall include this field and set it as described in 2.7.4.27.2;
17			otherwise the mobile station shall omit this field.
18	FOR_SCH_SUPPORTED	-	Forward Supplemental Channel supported indicator.
19			The mobile station shall set this field to '1' if the mobile
20			station supports the Forward Supplemental Channel;
21			otherwise, the mobile station shall set this field to '0'.
22	FOR_SCH Type-		
23	specific fields	-	Forward Supplemental Channel Configuration Capability
24			Information.
25			If the FOR_SCH_SUPPORTED field is set to '1', the mobile
26			station shall include this field and set it as described in
27			2.7.4.27.3; otherwise the mobile station shall omit this field.
28	REV_SCH_SUPPORTED	-	Reverse Supplemental Channel supported indicator.
29			The mobile station shall set this field to '1' if the mobile
30			station supports the Reverse Supplemental Channel;
31			otherwise, the mobile station shall set this field to '0'.
32	REV_SCH Type-		
33	specific fields	-	Reverse Supplemental Channel Configuration capability
34			information.
35			If the REV_SCH_SUPPORTED field is set to '1', the mobile
36			station shall include this field and set it as described in
37			2.7.4.27.4; otherwise the mobile station shall omit this field.
38	RESERVED_1	-	Reserved bits.
39			If both the FOR_SCH_SUPPORTED and
40			REV_SCH_SUPPORTED fields are set to '0', the mobile station
41			shall omit this field. Otherwise, the mobile station shall
42			include this field and set this field to '00'.
43	STS_SUPPORTED	-	STS supported indicator.

1		The mobile station shall set this field to '1' if the mobile
2		station supports Space Time Spreading Transmit Diversity;
3		otherwise, the mobile station shall set this field to '0'.
4	3X_CCH_SUPPORTED	- 3X Common Channel supported.
5		The mobile station shall set this field to '1' if the mobile
6		station supports the Spreading Rate 3 common channels (3X
7		BCCH, 3X F-CCCH, and 3X R-EACH); otherwise, the mobile
8		station shall set this field to '0'.
9	CCSH_SUPPORTED	- CCSH supported indicator.
10		If the FOR_SCH_SUPPORTED field is set to '0', the mobile
11		station shall omit this field; otherwise the mobile station shall
12		include this field and set it as follows.
13		If the mobile station supports Code Combining Soft Handoff,
14		the mobile station shall set this field to '1'; otherwise, the
15		mobile station shall set this field to '0'.
16	FOR_PDCH_SUPPORTED	- Forward Packet Data Channel supported indicator.
17		If the mobile station supports the Forward Packet Data
18		Channel, then the mobile station shall set this field to '1';
19		otherwise, the mobile station shall set this field to '0'.
20	FOR_PDCH Capability	
21	Type-specific fields	- Forward Packet Data Channel capability information.
22		If the FOR_PDCH_SUPPORTED field is set to '1', the mobile
23		station shall include this field and set it as described in
24		2.7.4.27.5; otherwise the mobile station shall omit this field.
25	FOR_PDCH_SCH_SUPPORTED	- Simultaneous support of F-PDCH and F-SCH indicator.
26		If FOR_PDCH_SUPPORTED is set to '0', or
27		FOR_SCH_SUPPORTED is set to '0', the mobile station shall
28		omit this field; otherwise, the mobile station shall include this
29		field and set it as follows:
30		The mobile station shall set this field to '1' if it supports the
31		simultaneous assignment of F-PDCH and F-SCH; otherwise,
32		the mobile station shall set this field to '0'.
33	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
34		If FOR_PDCH_SUPPORTED is set to '0', the mobile station
35		shall omit this field; otherwise, the mobile station shall
36		include this field and set it as follows.
37		If the mobile station supports the Reverse Packet Data
38		Channel (R-PDCH), the mobile station shall set this field to
39		'1'; otherwise, the mobile station shall set this field to '0'.
40	REV_PDCH Capability	
41	Type-specific fields	- Forward Packet Data Channel capability information.

1		If the REV_PDCH_SUPPORTED field included and is set to '1',
2		the mobile station shall include this field and set it as
3		described in 2.7.4.27.6; otherwise the mobile station shall
4		omit this field.
5	FUNDICATED_BCMC_SUPPORTED	- Fundicated Channel BCMC supported indicator.
6		The mobile station shall set this field to '1' to indicate that the
7		mobile station supports the BCMC reception on shared Forward
8		Fundicated Channels in <i>Mobile Station Control on the Traffic</i>
9		<i>Channel State</i> ; otherwise, the mobile station shall set this field
10		to '0'.
11	FUNDICATED_BCMC Type-specific fields	- Fundicated Channel BCMC capability
12		information.
13		If the FUNDICATED_BCMC_SUPPORTED field is set to '0', the
14		mobile station shall omit this field; otherwise, the mobile
15		station shall include this field and set it as described in
16		2.7.4.27.7.
17	SCH_BCMC_SUPPORTED	- Supplemental Channel BCMC supported indicator.
18		The mobile station shall set this field to '1' to indicate that the
19		mobile station supports the BCMC reception on shared Forward
20		Supplemental Channels in <i>Mobile Station Control on the Traffic</i>
21		<i>Channel State</i> ; otherwise, the mobile station shall set this field
22		to '0'.
23	RESERVED	- Reserved bits.
24		The mobile station shall add reserved bits as needed in order
25		to make the length of the entire information record equal to
26		an integer number of octets. The mobile station shall set
27		these bits to '0'.
28		
29		

#### 2.7.4.27.1 FCH Type-specific Fields

The Fundamental Channel configuration capability information included in the FCH Type-specific fields contains the following subfields:

FCH_FRAME_SIZE	1
FOR_FCH_LEN	3
FOR_FCH_RC_MAP	$3 \times \text{FOR\_FCH\_LEN}$
REV_FCH_LEN	3
REV_FCH_RC_MAP	$3 \times \text{REV\_FCH\_LEN}$

**FCH\_FRAME\_SIZE** – Fundamental Channel Frame Size capability indicator.

If in addition to the 20 ms frame size the mobile station also supports the 5 ms frame size on the Fundamental Channel, the mobile station shall set this field to '1'; otherwise, the mobile station shall set this field to '0'.

FOR\_FCH\_LEN – Forward Fundamental Channel Configuration information length.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR FCH RC MAP field.

**FOR\_FCH\_RC\_MAP** – Forward Fundamental Radio Configuration information.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2] Table 3.1.3.1-1) are supported by the mobile station on the Forward Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Forward Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

1           **Table 2.7.4.27.1-1. Forward Channel Radio Configurations Supported**

Subfield	Length (bits)	Subfield Description
RC1	1	Radio Configuration 1
RC2	1	Radio Configuration 2
RC3	1	Radio Configuration 3
RC4	1	Radio Configuration 4
RC5	1	Radio Configuration 5
RC6	1	Radio Configuration 6
RC7	1	Radio Configuration 7
RC8	1	Radio Configuration 8
RC9	1	Radio Configuration 9
RC11	1	Radio Configuration 11
RC12	1	Radio Configuration 12

2  
3           REV\_FCH\_LEN    – Reverse Fundamental Channel Configuration information  
4                                   length.

5                                   The mobile station shall set this field to the number of 3 bit units  
6                                   required to specify the length, in bits, of the  
7                                   REV\_FCH\_RC\_MAP field.

8           REV\_FCH\_RC\_MAP   – Reverse Fundamental Radio Configuration information.

9                                   The mobile station shall set this field as described below to  
10                                  indicate which Radio Configurations (see [2] Table 2.1.3.1-1)  
11                                  are supported by the mobile station on the Reverse  
12                                  Fundamental Channel.

13                               This field consists of the sequence of 1-bit indicators, each  
14                               indicating the mobile station support for specific Radio  
15                               Configuration. Bit positions of these indicators in the field  
16                               and corresponding Radio Configurations are specified in  
17                               Table 2.7.4.27.1-2.

18                               The mobile station shall set each indicator to '1' if the  
19                               corresponding Radio Configuration on the Reverse  
20                               Fundamental Channel is supported by the mobile station;  
21                               otherwise, the mobile station shall set the indicator to '0'.  
22                               The mobile station shall set any unused bits in the field to '0'.  
23

1                   **Table 2.7.4.27.1-2. Reverse Channel Radio Configurations Supported**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
RC1	1	Radio Configuration 1
RC2	1	Radio Configuration 2
RC3	1	Radio Configuration 3
RC4	1	Radio Configuration 4
RC5	1	Radio Configuration 5
RC6	1	Radio Configuration 6
RC8	1	Radio Configuration 8

2

## 2.7.4.27.2 DCCH Type-Specific Fields

The Dedicated Control Channel configuration capability information included in the DCCH Type-specific fields contains the following subfields:

DCCH_FRAME_SIZE	2
FOR_DCCH_LEN	3
FOR_DCCH_RC_MAP	$3 \times \text{FOR\_DCCH\_LEN}$
REV_DCCH_LEN	3
REV_DCCH_RC_MAP	$3 \times \text{REV\_DCCH\_LEN}$

**DCCH\_FRAME\_SIZE** – Frame Size supported indicator on the Dedicated Control Channel.

The mobile station shall set this field to the frame size supported for the forward and reverse DCCH, as shown in Table 2.7.4.27.2-1.

**Table 2.7.4.27.2-1. DCCH Frame Size Supported**

<b>DCCH_FRAME_SIZE (binary)</b>	<b>Description</b>
00	Either 5 ms or 20 ms frame sizes (not dynamically switchable)
01	20 ms frame size only
10	5 ms frame size only
11	Both 5 ms and 20 ms frame sizes (Dynamically switchable)

**FOR\_DCCH\_LEN** – Forward Dedicated Control Channel Configuration information length.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR\_DCCH\_RC\_MAP field.

**FOR\_DCCH\_RC\_MAP** – Forward Dedicated Channel Radio Configuration information.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Forward Dedicated Control Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

1			The mobile station shall set each indicator to '1' if the
2			corresponding Radio Configuration on the Forward Dedicated
3			Control Channel is supported by the mobile station;
4			otherwise, the mobile station shall set the indicator to '0'.
5			The mobile station shall set any unused bits in the field to '0'.
6	REV_DCCH_LEN	-	Reverse Dedicated Control Channel Configuration
7			information length.
8			The mobile station shall set this field to the number of 3 bit
9			units required to specify the length, in bits, of the
10			REV_DCCH_RC_MAP field.
11	REV_DCCH_RC_MAP	-	Reverse Dedicated Control Channel Radio Configuration
12			information.
13			The mobile station shall set this field as described below to
14			indicate which Radio Configurations (see [2]) are supported
15			by the mobile station on the Reverse Dedicated Control
16			Channel.
17			This field consists of the sequence of 1-bit indicators, each
18			indicating the mobile station support for specific Radio
19			Configuration. Bit positions of these indicators in the field
20			and corresponding Radio Configurations are specified in
21			Table 2.7.4.27.1-2.
22			The mobile station shall set each indicator to '1' if the
23			corresponding Radio Configuration on the Reverse Dedicated
24			Control Channel is supported by the mobile station;
25			otherwise, the mobile station shall set the indicator to '0'.
26			The mobile station shall set any unused bits in the field to '0'.
27			

## 2.7.4.27.3 FOR\_SCH Type-Specific Fields

The Forward Supplemental Channel configuration capability information included in the FOR\_SCH Type-specific fields contains the following subfields:

FOR_SCH_LEN	3
FOR_SCH_RC_MAP	$3 \times \text{FOR\_SCH\_LEN}$
FOR_SCH_NUM	2

FOR\_SCH\_NUM occurrences of the following fields:

{ (FOR\_SCH\_NUM)

FOR_TURBO_SUPPORTED	1
FOR_MAX_TURBO_BLOCK_SIZE	0 or 4
FOR_CONV_SUPPORTED	1
FOR_MAX_CONV_BLOCK_SIZE	0 or 4
FOR_FRAME_40_SUPPORTED	1
FOR_FRAME_80_SUPPORTED	1
FOR_MAX_RATE	4

} (FOR\_SCH\_NUM)

FOR\_SCH\_LEN – Forward Supplemental Channel information length in units of 3 bits.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the FOR\_SCH\_RC\_MAP field.

FOR\_SCH\_RC\_MAP – Forward Supplemental Channel Radio Configuration capability.

The mobile station shall set this field as described below to indicate which Radio Configurations (see [2] Table 3.1.3.1-1) are supported by the mobile station on the Forward Supplemental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Forward Supplemental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

- |    |                          |   |   |
|----|--------------------------|---|---|
| 1  | FOR_SCH_NUM              | - | Number of Forward Supplemental Channels.                          |
| 2  |                          |   | The mobile station shall set this field to the number of          |
| 3  |                          |   | Forward Supplemental Channels supported by the mobile             |
| 4  |                          |   | station.  |
| 5  |                          |   | If the FOR_SCH_NUM field is greater than zero, the mobile         |
| 6  |                          |   | station shall include one occurrence of the following 8 fields    |
| 7  |                          |   | for each Forward Supplemental Channel supported by the            |
| 8  |                          |   | mobile station. The first occurrence is SCH0 related              |

## 2.7.4.27.4 REV\_SCH Type-Specific Fields

The Reverse Supplemental Channel configuration capability information included in the REV\_SCH Type-specific fields contains the following subfields:

REV_SCH_LEN	3
REV_SCH_RC_MAP	3 ×x REV_SCH_LEN
REV_SCH_NUM	2

REV\_SCH\_NUM occurrences of the following fields:

{ (REV\_SCH\_NUM)

REV_TURBO_SUPPORTED	1
REV_MAX_TURBO_BLOCK_SIZE	0 or 4
REV_CONV_SUPPORTED	1
REV_MAX_CONV_BLOCK_SIZE	0 or 4
REV_FRAME_40_SUPPORTED	1
REV_FRAME_80_SUPPORTED	1
REV_MAX_RATE	4

} (REV\_SCH\_NUM)

REV\_SCH\_LEN – Reverse Supplemental Channel information length in units of 3 bits.

The mobile station shall set this field to the number of 3 bit units required to specify the length, in bits, of the REV\_SCH\_RC\_MAP field.

REV\_SCH\_RC\_MAP – Reverse Supplemental Channel Radio Configuration capability.

The mobile station shall set this field as described below to indicate which Radio Configurations (See [2] Table 2.1.3.1-1) are supported by the mobile station on the Reverse Supplemental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific Radio Configuration. Bit positions of these indicators in the field and corresponding Radio Configurations are specified in Table 2.7.4.27.1-2.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Reverse Supplemental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

1	REV_SCH_NUM	-	Number of Reverse Supplemental Channels
2			The mobile station shall set this field to the number of
3			Reverse Supplemental Channels supported by the mobile
4			station.
5			If the REV_SCH_NUM field is greater than zero, the mobile
6			station shall include one occurrence of the following 8 fields
7			for each Reverse Supplemental Channel supported by the
8			mobile station. The first occurrence is SCH0 related
9			information. The second occurrence (if any) is SCH1 related
10			information.
11	REV_TURBO_SUPPORTED	-	Reverse Turbo Coding supported indicator.
12			If the mobile station supports Turbo Coding on this Reverse
13			Supplemental Channel, it shall set this field to '1'; otherwise,
14			the mobile station shall set this field to '0'.
15	REV_MAX_TURBO_BLOCK_SIZE	-	Reverse maximum Turbo Coding block size.
16			If the field REV_TURBO_SUPPORTED is set to '0', the mobile
17			station shall omit this field; otherwise the mobile station shall
18			include this field and set it to the maximum block size
19			allowed for Turbo coding (see Table 2.7.4.27.3-1).
20	REV_CONV_SUPPORTED	-	Reverse Convolutional Coding supported indicator.
21			If the mobile station supports Convolutional Coding on this
22			Reverse Supplemental Channel, it shall set this field to '1';
23			otherwise, the mobile station shall set this field to '0'.
24	REV_MAX_CONV_BLOCK_SIZE	-	Reverse maximum Convolutional Coding block size.
25			If the field REV_CONV_SUPPORTED is set to '0', the mobile
26			station shall omit this field; otherwise the mobile station shall
27			include this field and set it to the maximum block size
28			allowed for Convolutional coding (see Table 2.7.4.27.3-1).
29	REV_FRAME_40_SUPPORTED	-	Reverse 40ms frame indicator.
30			If the mobile station supports 40 ms frames on this Reverse
31			Supplemental Channel, it shall set this field to '1'; otherwise,
32			the mobile station shall set this field to '0'.
33	REV_FRAME_80_SUPPORTED	-	Reverse 80ms frame indicator.
34			If the mobile station supports 80 ms frames on this Reverse
35			Supplemental Channel, it shall set this field to '1'; otherwise,
36			the mobile station shall set this field to '0'.
37	REV_MAX_RATE	-	Maximum reverse supplemental channels rate
38			The mobile station shall set this field according to Table
39			2.7.4.27.3-2 to indicate the maximum reverse supplemental
40			channel frame rate supported.
41			
42			

## 2.7.4.27.5 FOR\_PDCH Type-specific Fields

The Forward Packet Data Channel configuration capability information included in the FOR\_PDCH Type-specific fields contains the following subfields:

ACK_DELAY	1
NUM_ARQ_CHAN	2
FOR_PDCH_LEN	2
FOR_PDCH_RC_MAP	$3 \times (\text{FOR\_PDCH\_LEN} + 1)$
CH_CONFIG_SUP_MAP_LEN	2
CH_CONFIG_SUP_MAP	$3 \times (\text{CH\_CONFIG\_SUP\_MAP\_LEN} + 1)$

**ACK\_DELAY** – Delay for the acknowledgment sent on the Reverse Acknowledgment Channel.

If the mobile station requires a 2-slot delay to send an acknowledgment on the R-ACKCH, then the mobile station shall set this subfield to '1'; otherwise (the mobile station requires a 1-slot delay), the mobile station shall set this subfield to '0'.

**NUM\_ARQ\_CHAN** – Number of Physical Layer ARQ Channels supported.

The mobile station shall set this subfield to the number of Physical Layer ARQ Channels that it supports, minus two.

The mobile station shall not set this field to '11'.

**FOR\_PDCH\_LEN** – Forward Packet Data Channel Configuration information length.

The mobile station shall set this subfield to one less than the number of 3 bit units required to specify the length of the FOR\_PDCH\_RC\_MAP subfield.

**FOR\_PDCH\_RC\_MAP** – Forward Packet Data Channel Radio Configuration information.

The mobile station shall set this subfield as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Forward Packet Data Channel.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific Radio Configuration. Bit positions of these indicators in the subfield and corresponding Radio Configurations are specified in Table 2.7.4.27.5-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Forward Packet Data Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the subfield to '0'.

**Table 2.7.4.27.5-1. Forward Packet Data Channel Radio Configurations Supported**

Subfield	Length (bits)	Subfield Description
RC10	1	Radio Configuration 10
Reserved	$3 \times (\text{FOR\_PDCH\_LEN} + 1) - 1$	Reserved

**CH\_CONFIG\_SUP\_MAP\_LEN** – Channel Configuration Supported Bitmap length.

The mobile station shall set this field to one less than the number of 3 bit units required to specify the length, in bits, of the CH\_CONFIG\_SUP\_MAP field.

**CH\_CONFIG\_SUP\_MAP** – Channel Configuration Supported Bitmap.

The mobile station shall set this subfield as described below to indicate which physical channel configurations are supported by the mobile station.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific channel configuration. Bit positions of these indicators in the subfield and corresponding channel configurations are specified in Table 2.7.4.27.5-2.

The mobile station shall set each indicator to '1' if the corresponding channel configuration is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

The mobile station shall set the subfield F-PDCH\_1 to '1', or the subfield F-PDCH\_2 to '1', or the subfields F-PDCH\_1 and F-PDCH\_2 to '1'.

The mobile station shall set the subfields F-PDCH\_1 and F-PDCH\_3 to the same value.

The mobile station shall set the subfields F-PDCH\_2 and F-PDCH\_4 to the same value.

1

**Table 2.7.4.27.5-2. F-PDCH Channel Configurations Supported**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
F-PDCH_1	1	F-PDCH + F-CPCCH + R-FCH
F-PDCH_2	1	F-PDCH + F-CPCCH + R-DCCH
F-PDCH_3	1	F-PDCH + F-FCH + R-FCH
F-PDCH_4	1	F-PDCH + F-DCCH + R-DCCH
F-PDCH_5	1	F-PDCH + F-FCH + R-FCH + R-DCCH
F-PDCH_6	1	F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH

2

#### 2.7.4.27.6 REV\_PDCH Type-specific Fields

The Reverse Packet Data Channel configuration capability information included in the REV\_PDCH Type-specific fields contains the following subfields:

REV_PDCH_LEN	2
REV_PDCH_RC_MAP	$3 \times (\text{REV\_PDCH\_LEN} + 1)$
REV_PDCH_CH_CONFIG_SUP_MAP_LEN	2
REV_PDCH_CH_CONFIG_SUP_MAP	$3 \times (\text{REV\_CH\_CONFIG\_SUP\_MAP\_LEN} + 1)$
REV_PDCH_MAX_SIZE_SUPPORTED_ENCODE R_PACKET	2

**REV\_PDCH\_LEN** – Reverse Packet Data Channel Configuration information length.

The mobile station shall set this subfield to one less than the number of 3 bit units required to specify the length of the REV\_PDCH\_RC\_MAP subfield.

**REV\_PDCH\_RC\_MAP** – Reverse Packet Data Channel Radio Configuration information.

The mobile station shall set this subfield as described below to indicate which Radio Configurations (see [2]) are supported by the mobile station on the Reverse Packet Data Channel.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific Radio Configuration. Bit positions of these indicators in the subfield and corresponding Radio Configurations are specified in Table 2.7.4.27.6-1.

The mobile station shall set each indicator to '1' if the corresponding Radio Configuration on the Reverse Packet Data Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the subfield to '0'.

**Table 2.7.4.27.6-1. Reverse Packet Data Channel Radio Configurations Supported**

Subfield	Length (bits)	Subfield Description
RC7	1	Radio Configuration 7
Reserved	$3 \times (\text{REV\_PDCH\_LEN} + 1) - 1$	Reserved

1 REV\_PDCH\_CH\_CONFIG\_SUP\_MAP\_LEN - Reverse Packet Data Channel Channel  
2 Configuration Supported Bitmap length.  
3 The mobile station shall set this field to one less than the  
4 number of 3 bit units required to specify the length, in bits, of  
5 the REV\_PDCH\_CH\_CONFIG\_SUP\_MAP field.

6 REV\_PDCH\_CH\_CONFIG\_SUP\_MAP - Reverse Packet Data Channel Channel  
7 Configuration Supported Bitmap.  
8 The mobile station shall set this subfield as described below  
9 to indicate which physical channel configurations are  
10 supported by the mobile station.  
11 This subfield consists of the sequence of 1-bit indicators,  
12 each indicating the mobile station support for a specific  
13 channel configuration. Bit positions of these indicators in  
14 the subfield and corresponding channel configurations are  
15 specified in Table 2.7.4.27.6-2.  
16 The mobile station shall set each indicator to '1' if the  
17 corresponding channel configuration is supported by the  
18 mobile station; otherwise, the mobile station shall set the  
19 indicator to '0'. The mobile station shall set any unused bits  
20 in the field to '0'. The mobile station shall set the  
21 indicator corresponding to the channel configuration F/R-  
22 PDCH\_0 to '1'.  
23 The mobile station shall set the subfield F/R-PDCH\_1 to '1',  
24 or the subfield F/R-PDCH\_2 to '1', or the subfields F/R-  
25 PDCH\_1 and F/R-PDCH\_2 to '1'.  
26 The mobile station shall set the subfields F/R-PDCH\_1 and  
27 F/R-PDCH\_3 to the same value.  
28 The mobile station shall set the subfields F/R-PDCH\_2 and  
29 F/R-PDCH\_4 to the same value.

1

**Table 2.7.4.27.6-2. F/R-PDCH Channel Configurations Supported**

<b>Subfield of F/R-PDCH Channel Configurations</b>	<b>Length (bits)</b>	<b>Subfield Description</b>

#### 2.7.4.27.7 FUNDICATED\_BCMC Type-specific Fields

The Fundicated Channel BCMC capability information included in the FUNDICATED\_BCMC Type-specific fields contains the following subfields:

FUNDICATED_BCMC_CH_SUP_MAP_LEN	2
FUNDICATED_BCMC_CH_SUP_MAP	3 × (FUNDICATED_B CMC_CH_SUP_M AP_LEN +1)

FUNDICATED\_BCMC\_CH\_SUP\_MAP\_LEN – Fundicated Channel BCMC channel configurations supported bitmap length.

The mobile station shall set this field to one less than the number of 3 bit units required to specify the length, in bits, of the FUNDICATED\_BCMC\_CH\_SUP\_MAP field.

FUNDICATED\_BCMC\_CH\_SUP\_MAP – Fundicated Channel BCMC channel configurations supported bitmap.

The mobile station shall set this subfield as described below to indicate which physical channel configurations are supported by the mobile station.

This subfield consists of the sequence of 1-bit indicators, each indicating the mobile station support for a specific channel configuration. Bit positions of these indicators in the subfield and corresponding channel configurations are specified in Table 2.7.4.27.7-1.

The mobile station shall set each indicator to '1' if the corresponding channel configuration is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'. The mobile station shall set any unused bits in the field to '0'.

The mobile station shall not set all the indicators in this subfield to '0'.

1      **Table 2.7.4.27.7-1. Fundicated BCMC Channel Configurations Supported**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
Fundicated BCMC Channel Configuration 1	1	a) F-FCH + F-DCCH + R-DCCH b) F-PDCH + F-FCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 2	1	a) F-FCH + R-FCH + F-DCCH + R-DCCH b) F-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 3	1	a) F-CPCCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-DCCH + R-DCCH, if F-PDCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 4	1	a) F-CPCCH + F-FCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-FCH + F-DCCH + R-DCCH, if R-PDCH is supported
Fundicated BCMC Channel Configuration 5	1	a) F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH b) F-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH is supported c) F-PDCH + R-PDCH + F-CPCCH + F-FCH + R-FCH + F-DCCH + R-DCCH, if R-PDCH is supported

RESERVED	0 - 7 (as needed)
----------	-------------------

- 1
- 2     NUM\_MO\_FOR\_FCH   –   Number of Forward Fundamental Channel Multiplex Options.
- 3     The mobile station shall set this field to the number of the
- 4     Forward Fundamental Channel Multiplex Options supported
- 5     by the mobile station.
- 6     If NUM\_MO\_FOR\_FCH is not equal to '0000', the mobile
- 7     station shall include NUM\_MO\_FOR\_FCH occurrences of the
- 8     following two fields for each supported Forward Fundamental
- 9     Channel multiplex option:
- 10       MO\_FOR\_FCH   –   Forward Fundamental Channel multiplex option.
- 11     The mobile station shall set this field to the Forward
- 12     Fundamental Channel multiplex option.
- 13   FOR\_NUM\_BITS\_FCH–   Forward Fundamental Channel number of bits per frame.
- 14     The mobile station shall set this field as described below to
- 15     indicate which number of bits per frame are supported by the
- 16     mobile station on the Forward Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for specific number of bits per frame. Bit positions of these indicators in the field and corresponding number of bits per frame are specified in Table 2.7.4.28-1 if MO\_FOR\_FCH is equal to 1, Table 2.7.4.28-2 if MO\_FOR\_FCH is equal to 2, and Table 2.7.4.28-3 if MO\_FOR\_FCH is equal to 0x704.

The mobile station shall set each indicator to '1' if the corresponding number of bits per frame on the Forward Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'.

**Table 2.7.4.28-1. Forward Fundamental Channel Number of Bits per Frame for MO\_FOR\_FCH equal to 1**

Subfield	Length (bits)	Subfield Description
RS1_9600_FOR	1	172 bits per F-FCH frame
RS1_4800_FOR	1	80 bits per F-FCH frame
RS1_2400_FOR	1	40 bits per F-FCH frame
RS1_1200_FOR	1	16bits per F-FCH frame
RESERVED	4	Reserved Bits

**Table 2.7.4.28-2. Forward Fundamental Channel Number of Bits per Frame for MO\_FOR\_FCH equal to 2**

Subfield	Length (bits)	Subfield Description
RS2_14400_FOR	1	267 bits per F-FCH frame
RS2_7200_FOR	1	125 bits per F-FCH frame
RS2_3600_FOR	1	55 bits per F-FCH frame
RS2_1800_FOR	1	21 bits per F-FCH frame
RESERVED	4	Reserved Bits

**Table 2.7.4.28-3. Forward Fundamental Channel Number of Bits per Frame for MO\_FOR\_FCH equal to 0x704**

Subfield	Length (bits)	Subfield Description
R1	1	Highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0000])
R2	1	Second highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0001])
R3	1	Third highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0010])
R4	1	Forth highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0011])
R5	1	Fifth Second highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0100])
R6	1	Sixth highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0101])
R7	1	Seventh highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0110])
R8	1	Eighth highest possible number of bits on F-FCH (specified by NUM_BITS <sub>S</sub> [FFCH_NBIT_TABLE_ID][0111])

NUM\_MO\_REV\_FCH – Number of Reverse Fundamental Channel Multiplex Options.

The mobile station shall set this field to the number of the Reverse Fundamental Channel Multiplex Options supported by the mobile station.

If NUM\_MO\_REV\_FCH is not equal to '0000', the mobile station shall include NUM\_MO\_REV\_FCH occurrences of the following two fields for each supported Reverse Fundamental Channel multiplex option:

MO\_REV\_FCH – Reverse Fundamental Channel multiplex option.

The mobile station shall set this field to the Reverse Fundamental Channel multiplex option.

REV\_NUM\_BITS\_FCH– Reverse Fundamental Channel number of bits per frame.

The mobile station shall set this field as described below to indicate which number of bits per frame are supported by the mobile station on the Reverse Fundamental Channel.

This field consists of the sequence of 1-bit indicators, each indicating the mobile station support for number of bits per frame. Bit positions of these indicators in the field and corresponding number of bits per frame are specified in Table 2.7.4.28-4 if MO\_REV\_FCH is equal to 1, Table 2.7.4.28-5 if MO\_REV\_FCH is equal to 2, and Table 2.7.4.28-6 if MO\_REV\_FCH is equal to 0x704.

The mobile station shall set each indicator to '1' if the corresponding number of bits per frame on the Reverse Fundamental Channel is supported by the mobile station; otherwise, the mobile station shall set the indicator to '0'.

**Table 2.7.4.28-4. Reverse Fundamental Channel Number of Bits per Frame for MO\_REV\_FCH equal to 1**

Subfield	Length (bits)	Subfield Description
RS1_9600_REV	1	172 bits per R-FCH frame
RS1_4800_REV	1	80 bits per R-FCH frame
RS1_2400_REV	1	40 bits per R-FCH frame
RS1_1200_REV	1	16 bits per R-FCH frame
RESERVED	4	Reserved Bits

**Table 2.7.4.28-5. Reverse Fundamental Channel Number of Bits per Frame for MO\_REV\_FCH equal to 2**

Subfield	Length (bits)	Subfield Description
RS2_14400_REV	1	267 bits per R-FCH frame
RS2_7200_REV	1	125 bits per R-FCH frame
RS2_3600_REV	1	55 bits per R-FCH frame
RS2_1800_REV	1	21 bits per R-FCH frame
RESERVED	4	Reserved Bits

**Table 2.7.4.28-6. Reverse Fundamental Channel Number of Bits per Frame for MO\_REV\_FCH equal to 0x704**

Subfield	Length (bits)	Subfield Description
R1	1	Highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0000])
R2	1	Second highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0001])
R3	1	Third highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0010])
R4	1	Forth highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0011])
R5	1	Fifth Second highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0100])
R6	1	Sixth highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0101])
R7	1	Seventh highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0110])
R8	1	Eighth highest possible number of bits on R-FCH (specified by NUM_BITS <sub>S</sub> [RFCH_NBIT_TABLE_ID][0111])

NUM\_MO\_FOR\_DCCH – Number of Forward Dedicated Control Channel Multiplex Options.

The mobile station shall set this field to the number of the Forward Dedicated Control Channel Multiplex Options supported by the mobile station.

If NUM\_MO\_FOR\_DCCH is not equal to '0000', the mobile station shall include NUM\_MO\_FOR\_DCCH occurrence of the following one field for each supported Forward Dedicated Control Channel multiplex option:

MO\_FOR\_DCCH – Forward Dedicated Control Channel multiplex option.

The mobile station shall set this field to the Forward Dedicated Control Channel multiplex option.

1	NUM_MO_REV_DCCH	-	Number of Reverse Dedicated Control Channel Multiplex Options.
2			
3			The mobile station shall set this field to the number of the
4			Reverse Dedicated Control Channel Multiplex Options
5			supported by the mobile station.
6			If NUM_MO_REV_DCCH is not equal to '0000', the mobile
7			station shall include NUM_MO_REV_DCCH occurrence of the
8			following one field for each supported Reverse Dedicated
9			Control Channel multiplex option:
10	MO_REV_DCCH	-	Reverse Dedicated Control Channel multiplex option.
11			The mobile station shall set this field to the Reverse
12			Dedicated Control Channel multiplex option.
13	NUM_MO_FOR_SCH	-	Number of Forward Supplemental Channel Multiplex Options.
14			
15			The mobile station shall set this field to the number of
16			Forward Supplemental Channel Multiplex Options supported
17			by the mobile station included in this message. The mobile
18			station shall include the multiplex option associated with the
19			highest data rate it supports for each combination of
20			MuxPDU type, rate set, and block size <sup>11</sup> .
21			If NUM_MO_FOR_SCH is not equal to '0000', the mobile
22			station shall include NUM_MO_FOR_SCH occurrence of the
23			following two fields:
24	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
25			The mobile station shall set this field to specify the Forward
26			Supplemental Channel to which the Forward Supplemental
27			multiplex option supported by the mobile station
28			corresponds.
29	MO_FOR_SCH	-	Forward Supplemental Channel multiplex option.
30			The mobile station shall set this field to the Forward
31			Supplemental Channel multiplex option associated with the
32			maximum data rate (see [3]) that the mobile station
33			supports <sup>12</sup> .
34	NUM_MO_REV_SCH	-	Number of Reverse Supplemental Channel Multiplex Options.

---

<sup>11</sup> If any Rate Set 1 multiplex option is included, then mobile station support of MuxPDU Type 1 is implied and the mobile station is not required to include multiplex option 0x03. If any Rate Set 2 multiplex option is included, then mobile station support of MuxPDU Type 2 is implied and the mobile station is not required to include multiplex option 0x04 (see [3]).

<sup>12</sup> If the mobile station supports the multiplex option associated with the maximum data rate, the mobile station shall support all lower data rates as specified in [3].

- 1 The mobile station shall set this field to the number of  
 2 Reverse Supplemental Channel Multiplex Options included in  
 3 this message. The mobile station shall include the multiplex  
 4 option associated with the highest data rate it supports for  
 5 each combination of MuxPDU type, rate set, and block size<sup>13</sup>.
- 6 If NUM\_MO\_REV\_SCH is not equal to '0000', the mobile  
 7 station shall include NUM\_MO\_REV\_SCH occurrence of the  
 8 following two fields:
- 9       REV\_SCH\_ID    – Reverse Supplemental Channel identifier.
- 10       The mobile station shall set this field to specify the Reverse  
 11 Supplemental Channel to which the Reverse Supplemental  
 12 multiplex option supported by the mobile station  
 13 corresponds.
- 14       MO\_REV\_SCH    – Reverse Supplemental Channel multiplex option.
- 15       The mobile station shall set this field to the Reverse  
 16 Supplemental Channel multiplex option associated with the  
 17 maximum data rate (see [3]) that the mobile station  
 18 supports<sup>14</sup>.
- 19 NUM\_MO\_FOR\_PDCH   – Number of Forward Packet Data Channel multiplex options.
- 20       The mobile station shall set this field to the number of  
 21 Forward Packet Data Channel Multiplex Options supported  
 22 by the mobile station.
- 23 If NUM\_MO\_FOR\_PDCH is not equal to '0000', the mobile station shall include  
 24 NUM\_MO\_FOR\_PDCH occurrences of the following one-field record:
- 25       MO\_FOR\_PDCH   – Forward Packet Data Channel multiplex option.
- 26       The mobile station shall set this field to the Forward Packet  
 27 Data Channel multiplex option.
- 28 NUM\_MO\_REV\_PDCH   – Number of Reverse Packet Data Channel multiplex options.
- 29       The mobile station shall set this field to the number of  
 30 Reverse Packet Data Channel Multiplex Options supported by  
 31 the mobile station.
- 32 If NUM\_MO\_REV\_PDCH is not equal to '0000', the mobile station shall include  
 33 NUM\_MO\_REV\_PDCH occurrences of the following one-field record:

---

<sup>13</sup> If any Rate Set 1 multiplex option is included, then mobile station support of MuxPDU Type 1 is implied and the mobile station is not required to include multiplex option 0x03. If any Rate Set 2 multiplex option is included, then mobile station support of MuxPDU Type 2 is implied and the mobile station is not required to include multiplex option 0x04 (see [3]).

<sup>14</sup> If the mobile station supports the multiplex option associated with the maximum data rate, the mobile station shall support all lower data rates as specified in [3].

- 1           MO\_REV\_PDCH    -   Reverse Packet Data Channel multiplex option.  
2                            The mobile station shall set this field to the Reverse Packet  
3                            Data Channel multiplex option (see [3]).  
4           RESERVED       -   Reserved bits.  
5                            The mobile station shall add reserved bits as needed in order  
6                            to make the length of the entire information record equal to  
7                            an integer number of octets. The mobile station shall set  
8                            these bits to '0'.  
9

## 2.7.4.29 Geo-Location Capability

This information record identifies the geo-location capabilities of the mobile station. The mobile station shall use the following fixed-length format for the type-specific fields:

Type-Specific Field	Length (bits)
GEO_LOC	3
RESERVED	5

GEO\_LOC – Geo-location.

The mobile station shall set this field to the value shown in Table 2.7.4. 29-1.

**Table 2.7.4.29-1. Geo-location Codes**

GEO_LOC (binary)	Type of Wireless Assisted GPS Identifiers
000	No mobile station assisted geo-location capabilities
001	IS-801 capable (Advanced Forward Link Triangulation only)
010	IS-801 capable (Advanced Forward Link Triangulation and Global Positioning Systems)
011	Global Positioning Systems only
All other GEO_LOC_TYPE values are reserved.	

RESERVED – Reserved bit.

The mobile station shall set this field to '00000'.

#### 2.7.4.30 Band Subclass Information

This information record can be included in a *Status Response Message*, or an *Extended Status Response Message* to return band subclass information about the mobile station.

Type-Specific Field	Length (bits)
BAND_SUBCLASS_INFO	$8 \times \text{RECORD\_LEN}$

**BAND\_SUBCLASS\_INFO** – Band subclass information.

This field indicates which band subclasses are supported by the mobile station.

The mobile station shall set this field to the band subclass information corresponding to the BAND\_CLASS specified in the *Status Request Message*.

The mobile station shall set this field as follows:

- If the mobile station does support the BAND\_CLASS specified in the the *Status Request Message* but there is no subclass defined for this band class, the mobile station shall set this field to '10000000' and set the RECORD LEN field for this record to '00000001'.

Otherwise, the mobile station shall set the Nth most significant bit of this field to '1' if the Nth sub-band class defined in [45] corresponding to the BAND\_CLASS specified in the *Status Request Message* is supported by the mobile station; otherwise, the mobile station shall set the Nth most significant bit of this field to '0'. Example of this field coding is shown in Figure 2.7.4.30-1.

**Figure 2.7.4.30-1. BAND\_SUBCLASS\_INFO field coding**

The mobile station shall add reserved bits as needed in order to make the length of the entire information record equal to an integer number of octets. The mobile station shall set these bits to '0'.

## 2.7.4.31 Global Emergency Call

This information record identifies that an emergency call is being originated. This record may be included in a *Flash With Information Message* or an *Extended Flash With Information Message* and allows the user to originate an emergency call.

Type-Specific Field	Length (bits)
NUM_INCL	1
DIGIT_MODE	0 or 1
NUMBER_TYPE	0 or 3
NUMBER_PLAN	0 or 4
NUM_CHAR	0 or 8

NUM\_CHAR occurrences of the following field:

{ ( NUM\_CHAR)

CHAR <sub>i</sub>	4 or 8
-------------------	--------

} (NUM\_CHAR)

MS_ORIG_POS_LOC_IND	1
RESERVED	0 to 7 (as needed)

NUM\_INCL – Dialed number included indicator.

The mobile station shall set this field to '1' to indicate that the dialed digits are included in this information record; otherwise, the mobile station shall set this field to '0'.

DIGIT\_MODE – Digit mode indicator.

If NUM\_INCL is set to '1', the mobile station shall set this field to indicate whether the dialed digits are 4-bit DTMF codes or 8-bit ASCII codes using a specified numbering plan; otherwise, the mobile station shall omit this field.

To originate the call using the binary representation of DTMF digits, the mobile station shall set this field to '0'. To originate the call using ASCII characters, the mobile station shall set this field to '1'.

NUMBER\_TYPE – Type of number.

If NUM\_INCL is set to '1' and the DIGIT\_MODE field is set to '1', the mobile station shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the called number, as defined in [7], Section 4.5.9; otherwise, the mobile station shall omit this field.

NUMBER\_PLAN – Numbering plan.

1			If NUM_INCL is set to '1' and the DIGIT_MODE field is set to
2			'1', the mobile station shall set this field to the
3			NUMBER_PLAN value shown in Table 2.7.1.3.2.4-3
4			corresponding to the numbering plan used for the called
5			number, as defined in [7], Section 4.5.9; otherwise, the
6			mobile station shall omit this field.
7	NUM_CHAR	-	Number of characters.
8			If NUM_INCL is set to '1', the mobile station shall set this field
9			to the number of characters included in this record;
10			otherwise, the mobile station shall omit this field.
11	CHARi	-	Character.
12			If the NUM_INCL is set to '1', the mobile stations shall include
13			NUM_CHAR occurrences of this field.
14			If the DIGIT_MODE field is set to '0', the mobile station shall
15			set each occurrence of this field to the code value shown in
16			Table 2.7.1.3.2.4-4 corresponding to the dialed digit. If the
17			DIGIT_MODE field is set to '1', the mobile station shall set
18			each occurrence of this field to the ASCII representation
19			corresponding to the character, as specified in [9], with the
20			most significant bit set to '0'.
21	MS_INIT_POS_LOC_IND	-	Mobile Initiated Position Location Session indicator.
22			The mobile station shall set this field to '1' if
23			MS_INIT_POS_LOC_SUP_IND <sub>s</sub> is equal to '1' and if the mobile
24			station is to initiate a position location session associated
25			with this emergency call; otherwise, the mobile station shall
26			set this field to '0'.
27	RESERVED	-	Reserved bits.
28			The mobile station shall add reserved bits as needed in order
29			to make the length of the entire information record equal to
30			an integer number of octets. The mobile station shall set
31			these bits to '0'.
32			

## 1 2.7.4.32 Hook Status

2 This information record shall indicate the status of the hook switch in Wireless Local Loop  
3 mobile stations. The mobile station shall use the following fixed-length format for the  
4 type-specific fields:

5

Type-Specific Field	Length (bits)
HOOK_STATUS	4
RESERVED	4

6

7 HOOK\_STATUS – WLL terminal hook status.

8 The mobile station shall set this sub-field to the value shown  
9 in Table 2.7.1.3.2.1-4 corresponding to the hook state.

10 RESERVED – Reserved bits.

11 The mobile station shall set this field to '0000'.

12

1    2.7.4.33 QoS Parameters

2    This information record conveys to the user the QoS parameters associated with the  
3    service to be provided:

Type-Specific Field	Length (bits)
QoS Parameters	variable
RESERVED	0 - 7 (as needed)

4

5            QoS Parameters    -    Block containing the QoS Parameters.

6                                    The mobile station shall set this field to the QoS parameters  
7                                    associated with the user (per subscription), service type (e.g.,  
8                                    assured vs. non-assured services) and the service option.  
9                                    The details of the QoS parameters may be found in  
10                                   documents describing the service options.

11            RESERVED    -    Reserved bits for octet alignment.

12                                   The mobile station shall add the minimum number of bits  
13                                   necessary to make the record length in bits an integral  
14                                   multiple of 8. The mobile station shall set these bits to '0'.  
15

## 2.7.4.34 Encryption Capability

This information record identifies the encryption capability of the mobile station.

Type-Specific Field	Length (bits)
SIG_ENCRYPT_SUP	8
UI_ENCRYPT_SUP	8

**SIG\_ENCRYPT\_SUP** – Signaling Encryption supported indicator.

The mobile station shall set this field to indicate which signaling encryption algorithms are supported by the mobile station, as shown in Table 2.7.1.3.2.1-5.

The mobile station shall set the subfields as follows:

The mobile station shall set the CMEA subfield to '1'.

The mobile station shall set each subfield to '1' if the corresponding signaling encryption algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

The mobile station shall set the RESERVED subfield to '00000'.

**UI\_ENCRYPT\_SUP** – User information encryption supported indicator.

The mobile station shall set this field to indicate the supported user information encryption algorithms, as shown in Table 2.7.1.3.2.4-9.

The mobile station shall set each subfield to '1' if the corresponding user information encryption algorithm is supported by the mobile station; otherwise, the mobile station shall set the subfield to '0'.

The mobile station shall set the RESERVED subfield to '000000'.

1    2.7.4.35 Signaling Message Integrity Capability

2    This information record identifies the signaling message integrity capability of the mobile  
3    station.

4

Type-Specific Field	Length (bits)
SIG_INTEGRITY_SUP	8

5

6    SIG\_INTEGRITY\_SUP    -    Signaling message integrity supported by the mobile station.

7                            The mobile station shall set this field to indicate the  
8                            supported message integrity algorithm in addition to the  
9                            default integrity algorithm.

10                          This field consists of the subfields shown in Table  
11                          2.7.1.3.2.1-6.

12                          The mobile station shall set each subfield to '1' if the  
13                          corresponding message integrity algorithm is supported by  
14                          the mobile station; otherwise, the mobile station shall set the  
15                          subfield to '0'.

16                          The mobile station shall set the RESERVED subfield to  
17                          '00000000'.

18

19

## 1 2.7.4.36 UIM\_ID

2 This information record can be included in a *Status Response Message* or an *Extended*  
 3 *Status Response Message* to return the mobile station UIM\_ID.

4

Type-Specific Field	Length (bits)
UIM_ID_LEN	4
UIM_ID	$8 \times \text{UIM\_ID\_LEN}$
RESERVED	0 - 7 (as needed)

5

6 UIM\_ID\_LEN – The length of mobile station User Identity Module identifier.

7 The mobile station shall set this field to the length, in units of  
 8 octets, of its User Identity Module identifier. If the mobile  
 9 station does not have a User Identity Module identifier, the  
 10 mobile station shall set this field to '0000'.

11 UIM\_ID – Mobile station User Identity Module identifier.

12 The mobile station shall set this field to its User Identity  
 13 Module identifier (see [40]).

14 RESERVED – Reserved bits for octet alignment.

15 The mobile station shall add the minimum number of bits  
 16 necessary to make the record length in bits an integral  
 17 multiple of 8. The mobile station shall set these bits to '0'.

18

1 2.7.4.37 ESN\_ME

2 This information record can be included in a *Status Response Message* or an *Extended*  
3 *Status Response Message* to return the mobile station ESN\_ME.

4

Type-Specific Field	Length (bits)
ESN_ME_LEN	4
ESN_ME	$8 \times \text{ESN\_ME\_LEN}$
RESERVED	0 - 7 (as needed)

5

6 ESN\_ME\_LEN – The length of mobile equipment electronic serial number.  
7 The mobile station shall set this field to the length, in units of  
8 octets, of its mobile equipment electronic serial number.

9 ESN\_ME<sup>15</sup> – Mobile equipment electronic serial number.  
10 The mobile station shall set this field to ESN<sub>p</sub> (see 2.3.2).

11 RESERVED – Reserved bits for octet alignment.  
12 The mobile station shall add the minimum number of bits  
13 necessary to make the record length in bits an integral  
14 multiple of 8. The mobile station shall set these bits to '0'.  
15

---

<sup>15</sup> The ESN\_ME field is always set to ESN<sub>p</sub> and never carries UIM ID value.

## 1 2.7.4.38 MEID

2 This information record can be included in a *Status Response Message* or an *Extended*  
 3 *Status Response Message* to return the mobile station MEID.

Type-Specific Field	Length (bits)
MEID_LEN	4
MEID	$8 \times \text{MEID\_LEN}$
RESERVED	0 - 7 (as needed)

4

5 MEID\_LEN - The length of MEID.

6 The mobile station shall set this field to the length, in units of  
 7 octets, of the MEID field in this record.

8 MEID - Mobile Equipment Identifier.

9 If the mobile station has a R-UIM which indicates that  
 10 SF\_EUIMID is to be used in place of MEID, the mobile station  
 11 shall set this field to SF\_EUIMID (see [40]); otherwise, the  
 12 mobile station shall set this field to its MEID<sub>p</sub> (see 2.3.2).

13 RESERVED - Reserved bits for octet alignment.

14 The mobile station shall add the minimum number of bits  
 15 necessary to make the record length in bits an integral  
 16 multiple of 8. The mobile station shall set these bits to '0'.

17

#### 2.7.4.39 Extended Keypad Facility

This information record can be included in a *Flash With Information Message* and allows the user to send characters entered via a keyboard or other such terminal.

Type-Specific Field	Length (bits)
NUMBER_INFO_INCL	1
NUMBER_TYPE	0 or 3
NUMBER_PLAN	0 or 4
NUM_FIELDS	6

NUM\_FIELDS occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

RESERVED	0 - 7 (as needed)
----------	-------------------

- NUMBER\_INFO\_INCL – Number included indicator.  
The mobile station shall set this field to '1' if NUMBER\_TYPE and NUMBER\_PLAN fields are included in this record; otherwise, the mobile station shall set this field to '0'.
- NUMBER\_TYPE – Type of number.  
If NUMBER\_INFO\_INCL is set to '0', the mobile station shall omit this field; otherwise, the mobile shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the characters included in this record, as defined in [7], Section 4.5.9.  
If the mobile station determines that this number is an international number (for example, with a leading "+" or as specified in [39] for Plus Code Dialing or an international access code), the mobile station should set this field to '001'.
- NUMBER\_PLAN – Numbering plan.  
If NUMBER\_INFO\_INCL is set to '0', the mobile station shall omit this field; otherwise, the mobile station shall set this field to the NUMBER\_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the characters in this record, as defined in [7], Section 4.5.9.
- NUM\_FIELDS – Number of characters in this message.  
The mobile station shall set this field to the number of CHAR<sub>i</sub> fields in this message.
- CHAR<sub>i</sub> – Character.

1			The mobile station shall include one occurrence of this field
2			for each character entered. The mobile station shall set each
3			occurrence of this field to the ASCII representation
4			corresponding to the character entered, as specified in [9],
5			with the most significant bit set to '0'.
6	RESERVED	-	Reserved bits for octet alignment.
7			The mobile station shall add the minimum number of bits
8			necessary to make the record length in bits an integral
9			multiple of 8. The mobile station shall set these bits to '0'.
10			

## 2.7.4.40 SYNC\_ID

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return the SYNC\_IDs corresponding to stored service configurations.

Type-Specific Field	Length (bits)
NUM_SYNC_ID	5
SID	0 or 15
NID	0 or 16

NUM\_SYNC\_ID occurrences of the following fields:

{ (NUM\_SYNC\_ID)

SYNC_ID_LEN	4
SYNC_ID	(8 x SYNC_ID_LEN)

} (NUM\_SYNC\_ID)

RESERVED	0 - 7 (as needed)
----------	-------------------

NUM\_SYNC\_ID - The number of SYNC\_IDs included in this message.

The mobile station shall set this field to the number of SYNC\_IDs, corresponding to the stored service configurations associated with SID<sub>s</sub> and NID<sub>s</sub>, included in this message. If the mobile station does not have any stored service configuration associated with SID<sub>s</sub> and NID<sub>s</sub>, the mobile station shall set this field to '00000'.

SID - System identification.

If the NUM\_SYNC\_ID field is set to '00000', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to SID<sub>s</sub>.

NID - Network identification.

If the NUM\_SYNC\_ID field is set to '00000', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set it as follows:

The mobile station shall set this field to NID<sub>s</sub>.

1 The mobile station shall include NUM\_SYNC\_ID occurrences of the following variable  
2 length record:

3       SYNC\_ID\_LEN    -   Service Configuration synchronization identifier length.

4                        The mobile station shall set this field to the length (in octets)  
5                        of the SYNC\_ID field included in this message. The mobile  
6                        station shall set this field to a value larger than zero.

7       SYNC\_ID       -   Service Configuration synchronization identifier.

8                        The mobile station shall set this field to the synchronization  
9                        identifier corresponding to a stored service configuration  
10                       associated with SID and NID included in this message.

11       RESERVED     -   Reserved bits for octet alignment.

12                        The mobile station shall add the minimum number of bits  
13                        necessary to make the record length in bits an integral  
14                        multiple of 8. The mobile station shall set these bits to '0'.  
15  
16

1 2.7.4.41 Extended Terminal Information

- 2 This information record can be included in a *Status Response Message*, or an *Extended*  
 3 *Status Response Message* to return configuration information about the mobile station.

Type-Specific Field	Length (bits)
MOB_P_REV	8
MOB_MFG_CODE	8
MOB_MODEL	8
MOB_FIRM_REV	16
SCM	8
LOCAL_CTRL	1
SLOT_CYCLE_INDEX	3
SIGN_SLOT_CYCLE_INDEX	0 or 1
SO_INCL	1
NUM_SO	0 or 6
{(NUM_SO + 1)}	
SERVICE_OPTION	16
}(NUM_SO+ 1)	
SO_GROUP_INCL	1
NUM_SO_GROUP	0 or 5
{ (NUM_SO_GROUP + 1)	
SO_BITMAP_IND	2
SO_GROUP_NUM	0 or 5
SO_BITMAP	0 or 2^(1+ SO_BITMAP_IND)
} (NUM_SO_GROUP + 1)	
RESERVED	0 to 7 (as needed)

4

5 MOB\_P\_REV – Protocol revision of the mobile station.

6 If the status request does not specify a band class, the mobile  
 7 station shall set this field to '00001100'; otherwise, the  
 8 mobile station shall set this field to the MOB\_P\_REV  
 9 associated with the requested band class and operating  
 10 mode.

1	MOB_MFG_CODE	-	Manufacturer code.
2			This field identifies the manufacturer of the mobile station.
3			The mobile station shall set this field to the manufacturer
4			code assigned to its manufacturer.
5	MOB_MODEL	-	Model number.
6			This number is assigned by the manufacturer for a particular
7			model.
8			The mobile station shall set this field to the model number
9			assigned by the manufacturer for this mobile station.
10	MOB_FIRM_REV	-	Firmware revision number.
11			This number is assigned by the manufacturer for a particular
12			firmware version.
13			The mobile station shall set this field to the revision number
14			assigned by the manufacturer for the firmware version
15			running in this mobile station.
16	SCM	-	Station class mark.
17			The mobile station shall set this field to its station class
18			mark. See 2.3.3.
19	LOCAL_CTRL	-	Local control indicator.
20			If local control is enabled, the mobile station shall set this
21			field to '1'. If local control is disabled, the mobile station shall
22			set this field to '0'. See [6].
23	SLOT_CYCLE_INDEX	-	Slot cycle index.
24			If the requested operating mode is CDMA and the mobile
25			station is configured for slotted mode operation, the mobile
26			station shall set this field to the absolute value of the
27			registered slot cycle index, SLOT_CYCLE_INDEX_REG (see
28			2.6.2.1.1); otherwise, the mobile station shall set this field to
29			'000'. The sign of the registered slot cycle,
30			SLOT_CYCLE_INDEX_REG, is specified in the
31			SIGN_SLOT_CYCLE_INDEX field of this message (see Table
32			2.7.1.3.2.1-8).
33	SIGN_SLOT_CYCLE_INDEX	-	Sign of the slot cycle index.
34			If the SLOT_CYCLE_INDEX field is set to '000', the mobile
35			station shall omit this field; otherwise, the mobile station
36			shall include this field and set it as follows:
37			The mobile station shall set this field as specified in Table
38			2.7.1.3.2.1-8 to the sign of the registered slot cycle index,
39			SLOT_CYCLE_INDEX_REG (see 2.6.2.1.1). The absolute value
40			of the registered slot cycle index, SLOT_CYCLE_INDEX_REG,
41			is specified in the SLOT_CYCLE_INDEX field of this message.
42	SO_INCL	-	Service option inclusion indicator.

1			If there is a service option supported by the mobile station
2			which does not belong to any service option group assigned
3			(see [30]), the mobile station shall set this field '1'; otherwise,
4			the mobile station shall set this field to '0'.
5	NUM_SO	-	Number of service option included indicator.
6			If the SO_INCL is set to '0', the mobile station shall omit this
7			field; otherwise, the mobile station shall set this field to the
8			number of service option to be included minus one.
9	If SO_INCL is set to '1', the mobile station shall include NUM_SO + 1 occurrences of the		
10	following variable-field record:		
11	SERVICE_OPTION	-	Supported service option.
12			If the SO_INCL is set to '0', the mobile station shall omit this
13			field; otherwise, the mobile station shall set this field as
14			follow:
15			If the requested operating mode is CDMA, the mobile station
16			shall includes one occurrence of this field for each service
17			option supported by the mobile station (see [30]) which has
18			no service option group number assigned.
19	SO_GROUP_INCL	-	Service option group inclusion indicator.
20			If the requested operating mode is CDMA, the mobile station
21			shall set this field to '1' if any of the supported service option
22			belongs to a service option group; otherwise, the mobile
23			station shall set this field to '0'.
24	NUM_SO_GROUP	-	Number of service option group included indicator.
25			If the SO_GROUP_INCL is set to '0', the mobile station shall
26			omit this field; otherwise, the mobile station shall set this
27			field to the number of service option groups to be included
28			minus one.
29	If SO_GROUP_INCL is set to '1', the mobile station shall include NUM_SO_GROUP + 1		
30	occurrences of the following variable-field record:		
31	SO_BITMAP_IND	-	Service option bitmap indicator.
32			The mobile station shall set this field as defined in Table
33			2.7.1.3.2.4-10.
34	SO_GROUP_NUM	-	Service option group number.
35			If SO_BITMAP_IND is included and not set to '00', the mobile
36			station shall include this field and set this field to service
37			option group number defined in [30], of the bitmap to be
38			included in this message; otherwise, the mobile station shall
39			omit this field.
40	SO_BITMAP	-	Service option bitmap.
41			If SO_BITMAP_IND is included and is not set to '00', the
42			mobile station shall include the bitmap of the service option
43			group (SO_GROUP_NUM); otherwise, the mobile station shall
44			omit this field.

1				When the service option bitmap is included, if there are more
2				than $(2^{(1+SO\_BITMAP\_IND)})$ service options defined in [30]
3				for the service option group [SO\_GROUP\_NUM], the mobile
4				station shall include the bitmap containing the least
5				significant bits $(2^{(1+SO\_BITMAP\_IND)})$ for the service option
6				group.
7	RESERVED	–	Reserved bits.	
8				The mobile station shall set this field to '0' to make the entire
9				record octet-aligned.
10				

#### 2.7.4.42 Extended Service Option Information

This information record can be included in a *Status Response Message* or an *Extended Status Response Message* to return service option information about the mobile station or the service option group information requested by the base station.

Type-Specific Field	Length (bits)
SO_GROUP_INCL	1
NUM_SO_GROUP	0 or 5

{ (NUM\_SO\_GROUP+1)

SO_BITMAP_IND	2
SO_GROUP_NUM	0 or 5
REV_BITMAP_INCL	0 or 1
FOR_SUP_SO_BITMAP	0 or $2^{(1+SO\_BITMAP\_IND)}$
REV_SUP_SO_BITMAP	0 or $2^{(1+SO\_BITMAP\_IND)}$

} (NUM\_SO\_GROUP + 1)

SO_INCL	1
NUM_SO	0 or 6
REVERSE_SUPPORT_INCL	0 or 1

{ (NUM\_SO + 1)

FORWARD_SUPPORT	1
REVERSE_SUPPORT	0 or 1
SERVICE_OPTION	16

} (NUM\_SO + 1)

RESERVED	0 - 7 (as needed)
----------	-------------------

6

7 SO\_GROUP\_INCL - Service option group inclusion indicator.

8 If the requested operating mode is CDMA, the mobile station  
9 shall set this field to '1' if any of the supported service option  
10 belongs to a service option group; otherwise, the mobile  
11 station shall set this field to '0'.

12 NUM\_SO\_GROUP - Number of service option group included indicator.

1                   If the SO\_GROUP\_INCL is set to '0', the mobile station shall  
2                   omit this field; otherwise, the mobile station shall set this  
3                   field to the number of service option groups to be included  
4                   minus one.

5   If SO\_GROUP\_INCL is set to '1', the mobile station shall include NUM\_SO\_GORUP +1  
6   occurrences of the following variable-field record:

7           SO\_BITMAP\_IND   -   Service option bitmap indicator.  
8                                The mobile station shall set this field as defined in Table  
9                                2.7.1.3.2.4-10.

10          SO\_GROUP\_NUM   -   Service option group number.  
11                               If SO\_BITMAP\_IND is included and not set to '00', the mobile  
12                               station shall include this field and set this field to service  
13                               option group number defined in [30], of the bitmap to be  
14                               included in this message; otherwise, the mobile station shall  
15                               omit this field.

16          REV\_BITMAP\_INCL -   Reverse traffic channel bitmap included indicator.  
17                               If SO\_BITMAP\_IND is included and set to '00', the mobile  
18                               station shall omit this field; otherwise the mobile station shall  
19                               set this field as follow:  
20                               The mobile station shall set this field to '0' to indicate  
21                               FOR\_SUP\_SO\_BITMAP is used to specify the service option  
22                               supports for both forward traffic channel and reverse traffic  
23                               channel; otherwise the mobile station shall set this field to '1'.

24          FOR\_SUP\_SO\_BITMAP -   Support bitmap indicator for Forward Traffic Channel.  
25                               If SO\_BITMAP\_IND is included and set to '00', the mobile  
26                               station shall omit this field; otherwise the mobile station shall  
27                               include the bitmap of the service option group  
28                               (SO\_GROUP\_NUM) as follow:

29                               If REV\_BITMAP\_INCL is set to '1':

30                               •   If the service option specified by FOR\_SUP\_SO\_BITMAP is  
31                               supported on forward traffic channel, the mobile station  
32                               shall set the corresponding bit to '1'; otherwise, the  
33                               mobile station shall set this bit to '0'.

34                               Otherwise,

35                               •   If the service option specified by FOR\_SUP\_SO\_BITMAP is  
36                               supported on forward traffic channel and on reverse traffic  
37                               channel, the mobile station shall set the corresponding  
38                               bit to '1'; otherwise, the mobile station shall set this bit to  
39                               '0'.

40          REV\_SUP\_SO\_BITMAP -   Support bitmap indicator for Reverse Traffic Channel.

1			If REV_BITMAP_INCL is included and set to '0', the mobile
2			station shall omit this field; otherwise the mobile station shall
3			include the bitmap of the service option group
4			(SO_GROUP_NUM) as follow:
5			If the service option specified by REV_SUP_SO_BITMAP is
6			supported on reverse traffic channel, the mobile station shall
7			set the corresponding bit to '1'; otherwise, the mobile station
8			shall set this bit to '0'.
9	SO_INCL	-	Service option inclusion indicator.
10			If there is a service option supported by the mobile station
11			which does not belong to any service option group assigned
12			(see [30]), the mobile station shall set this field '1'; otherwise,
13			the mobile station shall set this field to '0'.
14	NUM_SO	-	Number of service option included indicator.
15			If the SO_INCL is set to '0', the mobile station shall omit this
16			field; otherwise, the mobile station shall set this field to the
17			number of service option to be included minus one.
18	REVERSE_SUPPORT_INCL	-	Reverse service option support included indicator.
19			If the SO_INCL is set to '0', the mobile station shall omit this
20			field; otherwise, the mobile station shall include this field and
21			set it as follow:
22			The mobile station shall set this field to '0' to indicate
23			FORWARD_SUPPORT is used to specify the service option
24			supports for both forward traffic channel and reverse traffic
25			channel; otherwise the mobile station shall set this field to '1'.
26	If SO_INCL is set to '1', the mobile station shall include NUM_SO + 1 occurrences of the		
27	following variable-field record:		
28	FORWARD_SUPPORT	-	Support indicator for Forward Traffic Channel.
29			The mobile station shall set this field as follow:
30			If REVERSE_SUPPORT_INCL is set to '1', the mobile station
31			shall set this field to '1' if the service option specified in the
32			SERVICE_OPTION field is supported on the Forward Traffic
33			Channel.
34			If REVERSE_SUPPORT_INCL is set to '0', the mobile station
35			shall set this field to '1' if the service option specified in the
36			SERVICE_OPTION field is supported on the forward traffic
37			channel and on reverse traffic channel
38	REVERSE_SUPPORT	-	Support indicator for Reverse Traffic Channel.
39			If REVERSE_SUPPORT_INCL field is not included or is set to
40			'0', the mobile station shall omit this field; otherwise the
41			mobile station shall include this field and set it as follows:

1			The mobile station shall set this field to '1' if the service
2			option specified in the SERVICE_OPTION field is supported
3			on the Reverse Traffic Channel.
4	SERVICE_OPTION	–	Service option.
5			If the requested operating mode is CDMA, the mobile station
6			shall includes one occurrence of this field for each service
7			option supported by the mobile station (see [30]) which has
8			no service option group number assigned.
9	RESERVED	–	Reserved bits.
10			The mobile station shall set all the bits of this field to '0' to
11			make the entire record octet-aligned.
12			
13			

#### 2.7.4.43 Band Class and Band Subclass Information

When this information record is included in a *Status Response Message* or an *Extended Status Response Message*, the mobile station shall include all the band classes and band subclasses that it supports.

Type-Specific Field	Length (bits)
NUM_BAND_CLASS	3

NUM\_BAND\_CLASS + 1 occurrences of the following record:

{ (NUM\_BAND\_CLASS + 1)

BAND_CLASS_REC_LEN	5
BAND_CLASS	5
SUBCLASS_INFO_INCL	1
SUBCLASS_REC_LEN	0 or 5

SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS\_REC\_LEN + 1)

SUBCLASS_SUP	1
--------------	---

} (SUBCLASS\_REC\_LEN + 1)

BAND_CLASS_RESERVED	0 – 7 (as needed)
---------------------	-------------------

} (NUM\_BAND\_CLASS + 1)

RESERVED	0 – 7 (as needed)
----------	-------------------

NUM\_BAND\_CLASS – Number of band classes.

The mobile station shall set this field to the number of band classes included in the record minus one.

The mobile station shall include NUM\_BAND\_CLASS + 1 occurrences of the following record:

BAND\_CLASS\_REC\_LEN – Band class information record length.

The mobile station shall set this field to the number of octets included in this record starting from this field and ending with BAND\_CLASS\_RESERVED.

BAND\_CLASS – Band class

This field specifies a band class supported by the mobile station. The mobile station shall set this field according to the values defined in [45].

SUBCLASS\_INFO\_INCL – Band subclass information included

1		The mobile station shall set this field to '0' when it is not
2		aware of any band subclasses associated with the
3		BAND_CLASS field above; otherwise, the base station shall
4		set this field to '1'.
5	SUBCLASS_REC_LEN	- Band subclass subrecord length
6		If SUBCLASS_INFO_INCL is set to '0', the base station shall
7		omit this field; otherwise, the mobile station shall set this
8		field to the number of band subclass supported indicator
9		fields included in the subrecord minus 1.
10	If the SUBCLASS_REC_LEN field is included, the mobile station shall include	
11	SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included	
12	corresponds to band subclass '0' and the N <sup>th</sup> field included corresponds to band subclass	
13	'N-1'.	
14	SUBCLASS_SUP	- Band subclass supported indicator
15		The mobile station shall set this field to '1' if the
16		corresponding band subclass is supported for the associated
17		BAND_CLASS; otherwise, the mobile station shall set this
18		field to '0'.
19	BAND_CLASS_RESERVED	- Reserved bits.
20		The mobile station shall add reserved bits as needed in order
21		to make the length of the record equal to an integer number
22		of octets. The mobile station shall set each of these bits to '0'.
23	RESERVED	- Reserved bits.
24		The mobile station shall add reserved bits as needed in order
25		to make the length of the entire record equal to an integer
26		number of octets. The mobile station shall set each of these
27		bits to '0'.
28		
29		

1 2.7.4.44 EXT\_UIM\_ID

2 This information record can be included in a *Status Response Message* or an *Extended*  
3 *Status Response Message* to return the mobile station EXT\_UIM\_ID.

4

Type-Specific Field	Length (bits)
EXT_UIM_ID_LEN	4
EXT_UIM_ID	$8 \times \text{EXT\_UIM\_ID\_LEN}$
RESERVED	0 - 7 (as needed)

5

6 EXT\_UIM\_ID\_LEN - The length of mobile station Extended User Identity Module  
7 identifier.

8 The mobile station shall set this field to the length, in units of  
9 octets, of its Extended User Identity Module identifier. If the  
10 mobile station does not have an Extended User Identity  
11 Module identifier, the mobile station shall set this field to  
12 '0000'.

13 EXT\_UIM\_ID - Mobile station Extended User Identity Module identifier.  
14 The mobile station shall set this field to its Extended User  
15 Identity Module identifier (see [40]).

16 RESERVED - Reserved bits for octet alignment.  
17 The mobile station shall add the minimum number of bits  
18 necessary to make the record length in bits an integral  
19 multiple of 8. The mobile station shall set these bits to '0'.

20

21

## 1 2.7.4.45 MEID\_ME

2 This information record can be included in a *Status Response Message* or an *Extended*  
 3 *Status Response Message* to return the mobile station MEID\_ME.

4

Type-Specific Field	Length (bits)
MEID_ME_LEN	4
MEID_ME	$8 \times \text{MEID\_ME\_LEN}$
RESERVED	0 - 7 (as needed)

5

6 MEID\_ME\_LEN – The length of MEID\_ME.

7 The mobile station shall set this field to the length, in units of  
 8 octets, of the MEID\_ME field. If the mobile station does not  
 9 have an MEID\_ME, the mobile station shall set this field to  
 10 '0000'.

11 MEID\_ME<sup>16</sup> – Mobile equipment MEID.

12 The mobile station shall set this field to MEID<sub>p</sub> (see 2.3.2).

13 RESERVED – Reserved bits for octet alignment.

14 The mobile station shall add the minimum number of bits  
 15 necessary to make the record length in bits an integral  
 16 multiple of 8. The mobile station shall set these bits to '0'.

17

---

<sup>16</sup> The MEID\_ME field is always set to MEID<sub>p</sub> and never carries EUIM ID value.

#### 2.7.4.46 Additional Geo-Location Capability

This information record identifies the additional geo-location capabilities of the mobile station. The mobile station shall use the following fixed-length format for the type-specific fields:

Type-Specific Field	Length (bits)
ADD_GEO_LOC_LEN	4
ADD_GEO_LOC	$8 \times$ ADD_GEO_LOC_LEN
RESERVED	4

ADD_GEO_LOC_LEN	<p>– The length of Additional Geo-location.</p> <p>The mobile station shall set this field to the length, in units of octets, of the ADD_GEO_LOC field.</p>
ADD_GEO_LOC	<p>– Additional Geo-location.</p> <p>The mobile station shall set this field to indicate which geo-location capabilities are supported by the mobile station.</p> <p>This field consists of the subfields shown in 2.7.4.46-1.</p> <p>The mobile station shall set each subfield to ‘1’ if the corresponding capability is supported by the mobile station; otherwise, the mobile station shall set the subfield to ‘0’.</p>

1

**Table 2.7.4.46-1. Encoding Additional Geo-location Codes<sup>17</sup>**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
QZSS	1	Support of QZSS
GLONASS	1	Support of GLONASS
Galileo	1	Support Galileo
Compass / BeiDou	1	Support of COMPASS_BEIDOU
WAAS	1	Support of WAAS
EGNOS	1	Support of EGNOS
MSAS	1	Support of MSAS
HRPD	1	Support of HRPD
UMB	1	Support of UMB
RESERVED	7	Reserved bits

2

RESERVED - Reserved bits for octet alignment.

3

The mobile station shall set these bits to '0'.

4

5

---

<sup>17</sup> Additional values for this field can be defined in [30].

### 1    **3. REQUIREMENTS FOR BASE STATION CDMA OPERATION**

2    This section defines requirements that are specific to CDMA base station equipment and  
3    operation.

#### 4    **3.1 Reserved**

#### 5    **3.2 Reserved**

#### 6    **3.3 Security and Identification**

##### 7    3.3.1 Authentication

8    The base station may be equipped with a database that includes unique mobile station  
9    authentication keys, shared secret data, or both for each registered mobile station in the  
10   system. This database is used for authentication of mobile stations that are equipped for  
11   authentication operation.

12   If the base station supports mobile station authentication, it shall provide the following  
13   capabilities: The base station shall send and receive authentication messages and perform  
14   the authentication calculations described in 2.3.12.1.

##### 15   3.3.2 Encryption

16   If the base station supports mobile station authentication (see 3.3.1), it may also support  
17   message encryption by providing the capability to send encryption control messages and  
18   the ability to perform the operations of encryption and decryption as specified in 2.3.12.2.

##### 19   3.3.3 Voice Privacy

20   If the base station supports mobile station authentication (see 3.3.1), it may also support  
21   voice privacy using the private long code mask, as specified in 2.3.12.3.

##### 22   3.3.4 Extended-Encryption

23   If the base station supports mobile station authentication (see 3.3.1), it may also support  
24   Extended-Encryption for Signaling Messages and User Information as specified in 2.3.12.4.

##### 25   3.3.5 Message Integrity

26   If the base station supports message integrity, it shall provide the message integrity  
27   capability as specified in 2.3.12.5.5.

#### 28   **3.4 Supervision**

##### 29   3.4.1 Access Channel or Enhanced Access Channel

30   The base station shall continually monitor each active Access Channel or Enhanced  
31   Access Channel or both. The base station should provide control in cases of overload by  
32   using either the *Access Parameters Message* or the *Enhanced Access Parameters Message*.

### 3.4.2 Reverse Traffic Channel

The base station shall continually monitor each active Reverse Traffic Channel to determine if the call is active. If the base station detects that the call is no longer active, the base station shall declare loss of Reverse Traffic Channel continuity (see 3.6.4).

## 3.5 Reserved

## 3.6 Layer 3 Processing

This section describes base station Layer 3 processing. It contains frequent references to the messages that flow between the base station and the mobile station. While reading this section, it may be helpful to refer to the message formats (see 2.7 and 3.7), and to the call flow examples (see Annex B and Annex C). The values for the time and numeric constants used in this section (e.g.,  $T_{1b}$  and  $N_{4m}$ ) are specified in Annex D.

Base station processing consists of the following types of processing:

- *Pilot and Sync Channel Processing* - During *Pilot and Sync Channel Processing*, the base station transmits the Pilot Channel and Sync Channel which the mobile station uses to acquire and synchronize to the CDMA system while the mobile station is in the *Mobile Station Initialization State*.
- *Common Channel Processing* - During *Common Channel Processing*, the base station transmits the Paging Channel and/or the Forward Common Control Channel/Broadcast Control Channel which the mobile station monitors to receive messages while the mobile station is in the *Mobile Station Idle State* and the *System Access State*.
- *Access Channel and Enhanced Access Channel Processing* - During *Access Channel and Enhanced Access Channel Processing*, the base station monitors the Access Channel and/or the Enhanced Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.
- *Traffic Channel Processing* - During *Traffic Channel Processing*, the base station uses the Forward and Reverse Traffic Channels to communicate with the mobile station while the mobile station is in the *Mobile Station Control on the Traffic Channel State*.

### 3.6.1 Pilot and Sync Channel Processing

During *Pilot and Sync Channel Processing*, the base station transmits the Pilot and Sync Channels which the mobile station uses to acquire and synchronize to the CDMA system while the mobile station is in the *Mobile Station Initialization State*.

#### 3.6.1.1 Preferred Set of CDMA Channels

The preferred set of frequency assignments are the CDMA Channels on which the mobile station attempts to acquire the CDMA system (see [2]).

The base station shall support at least one member of the preferred set of frequency assignments. The base station may support additional CDMA Channels.

### 1 3.6.1.2 Pilot Channel Operation

2 The Pilot Channel (see [2]) is a reference channel which the mobile station uses for  
3 acquisition, timing, and as a phase reference for coherent demodulation.

4 The base station shall continually transmit a Pilot Channel for every CDMA Channel  
5 supported by the base station, unless the base station is classified as a hopping pilot  
6 beacon.

### 7 3.6.1.3 Sync Channel Operation

8 The Sync Channel (see [2]) provides the mobile station with system configuration and  
9 timing information.

10 The base station shall transmit at most one Sync Channel for each supported CDMA  
11 Channel. The base station shall support a Sync Channel on at least one member of the  
12 preferred set of frequency assignments that it supports. The base station should support a  
13 Sync Channel on every member of the preferred set of frequency assignments that it  
14 supports.

15 If the base station operates in Band Class 0 or Band Class 3, and supports the Primary  
16 CDMA Channel, then the base station shall transmit a Sync Channel on the Primary  
17 CDMA Channel.

18 The base station shall continually send the *Sync Channel Message* on each Sync Channel  
19 that the base station transmits.

## 20 3.6.2 Common Channel Processing

### 21 3.6.2.1 Paging Channel and Forward Common Control Channel Procedures

22 During *Common Channel Processing*, the base station transmits the Paging Channel or the  
23 Forward Common Control Channel (see [2]) which the mobile station monitors to receive  
24 messages while the mobile station is in the *Mobile Station Idle State* and the *System Access*  
25 *State*.

26 The base station may transmit up to seven Paging Channels on each supported CDMA  
27 Channel. The base station may transmit up to seven Forward Common Control Channels  
28 and one Primary Broadcast Control Channel on each supported CDMA Channel.

29 For each Paging Channel that the base station transmits, the base station shall  
30 continually send valid Paging Channel messages (see 3.7.2), which may include the *Null*  
31 *Message* (see [4]).

32 The base station shall not send any message which is not completely contained within two  
33 consecutive Paging Channel or Forward Common Control Channel slots, unless the  
34 processing requirements for the message explicitly specify a different size limitation.<sup>1</sup>

---

<sup>1</sup>See, for example, [14] which specifies processing requirements for the *Data Burst Message*.

### 3.6.2.1.1 CDMA Channel Determination

The base station may send the *CDMA Channel List Message Extended CDMA Channel List Message* and the *Flex Duplex CDMA Channel List Message* on the Paging Channel. When the base station supports Broadcast Control Channel, the base station shall send the *Extended CDMA Channel List Message* and may send the *Flex Duplex CDMA Channel List Message* on the Primary Broadcast Control Channel.

When the base station sends a *CDMA Channel List Message* or an *Extended CDMA Channel List Message* or a *Flex Duplex CDMA Channel List Message* on the Paging Channel or on the Primary Broadcast Control Channel, the base station shall determine the assigned band and CDMA Channel using the mobile station hashing procedures for the corresponding P\_REV\_IN\_USE.

### 3.6.2.1.2 Common Channel Determination

To determine the mobile station's assigned Paging Channel or Forward Common Control Channel, the base station shall use the hash function specified in 2.6.7.1 with the following inputs:

- IMSI\_S based on the IMSI with which the mobile station registered (see 2.3.1)
- Number of Paging Channels or Forward Common Control Channels which the base station transmits on the mobile station's assigned CDMA Channel.

### 3.6.2.1.3 Paging Slot Determination

To determine the assigned Paging Channel or Forward Common Control Channel slots for a mobile station with a given slot cycle index, the base station shall select a number PGSLOT using the hash function specified in 2.6.7.1 with the following inputs:

- IMSI\_S based on the IMSI with which the mobile station registered (see 6.3.1)
- Maximum number of Paging Channel or Forward Common Control Channel slots (2048).

The assigned Paging Channel or Forward Common Control Channel slots for the mobile station are those slots for which

$$(\lfloor t/4 \rfloor - \text{PGSLOT}) \bmod (16 \times T) = 0,$$

where  $t$  is the System Time in 20ms frames, and  $T$  is the slot cycle length in units of 1.28 seconds given by

$$T = 2^i,$$

where  $i$  is the slot cycle index which can take the values -4, -3, -2, -1, 0, 1, 2, 3, 4, 5, 6, and 7.

When the base station is able to determine that the mobile station is operating in the slotted mode and is able to determine the mobile station's preferred slot cycle index, the base station determines the slot cycle index to use for the mobile station as follows:

- 1       • If the base station is able to determine that the mobile station is operating in the  
2       reduced slot cycle mode, the base station uses min(reduced slot cycle index,  
3       preferred slot cycle index, maximum slot cycle index) for the mobile station's slot  
4       cycle index.
- 5       • Otherwise:
  - 6           – If the base station supports negative values of slot cycle index, the base station  
7           uses min(preferred slot cycle index, maximum slot cycle index) for the mobile  
8           station's slot cycle index.
  - 9           – Otherwise, the base station uses max(0, min(preferred slot cycle index,  
10          maximum slot cycle index)) for the mobile station's slot cycle index.

11   When the base station is not able to determine whether the mobile station is operating in  
12   the slotted mode, or the base station is not able to determine the mobile station's preferred  
13   slot cycle index, the base station uses for the mobile station's slot cycle index the smaller  
14   of the maximum slot cycle index and 1.

#### 15   3.6.2.1.4 Message Transmission and Acknowledgment Procedures

16   The Paging Channel or Forward Common Control Channel acknowledgment procedures  
17   facilitate the reliable exchange of messages between the base station and the mobile  
18   station on the f-csch and r-csch. The acknowledgment procedures and requirements are  
19   described in [4].

#### 20   3.6.2.2 Overhead Information

21   The base station sends overhead messages to provide the mobile station with the  
22   information that it needs to operate with the base station. If the base station supports the  
23   Primary Broadcast Control Channel for overhead messages and is not a pilot beacon, it  
24   shall support the Forward Common Control Channel for all other general page  
25   information.

26   The base station with a P\_REV greater than six that supports Broadcast Control Channel  
27   shall send overhead messages on the Primary Broadcast Control Channel. The base  
28   station with a P\_REV greater than six that does not support the Broadcast Control  
29   Channel shall send overhead messages on each Paging Channel. The overhead messages  
30   sent on the Primary Broadcast Control Channel are:

- 31       1. *ANSI-41 System Parameters Message*
- 32       2. *User Zone Identification Message*
- 33       3. *Private Neighbor List Message*
- 34       4. *Extended Global Service Redirection Message*
- 35       5. *Extended CDMA Channel List Message*
- 36       6. *MC-RR Parameters Message*
- 37       7. *Universal Neighbor List Message*
- 38       8. *Enhanced Access Parameters Message*

- 1        9. *ANSI-41 RAND Message*
- 2        10. *BCMC Service Parameters Message*
- 3        11. *Access Point Identification Message*
- 4        12. *Access Point Identification Text Message*
- 5        13. *Access Point Pilot Information Message*
- 6        14. *General Overhead Information Message*
- 7        15. *Flex Duplex CDMA Channel List Message*
- 8        16. *Alternative Technologies Information Message*

9        The overhead messages on the Paging Channel are:

- 10       1. *System Parameters Message*
- 11       2. *Neighbor List Message* (Band Class 0 only)
- 12       3. *Access Parameters Message*
- 13       4. *CDMA Channel List Message*
- 14       5. *Extended System Parameters Message*
- 15       6. *Extended Neighbor List Message* (band classes other than Band Class 0)
- 16       7. *General Neighbor List Message*
- 17       8. *Global Service Redirection Message*
- 18       9. *User Zone Identification Message*
- 19       10. *Private Neighbor List Message*
- 20       11. *Extended Global Service Redirection Message*
- 21       12. *Extended CDMA Channel List Message*
- 22       13. *BCMC Service Parameters Message*
- 23       14. *Access Point Identification Message*
- 24       15. *Access Point Identification Text Message*
- 25       16. *Access Point Pilot Information Message*
- 26       17. *General Overhead Information Message*
- 27       18. *Flex Duplex CDMA Channel List Message*
- 28       19. *Alternative Technologies Information Message*

29       The base station shall maintain a configuration sequence number (CONFIG\_SEQ) for  
30       configuration messages transmitted on the Paging Channel, and shall increment  
31       CONFIG\_SEQ modulo 64 whenever the base station modifies the following messages:

- 32       1. *System Parameters Message*
- 33       2. *Neighbor List Message* (Band Class 0 only)

- 1        3. *CDMA Channel List Message*
- 2        4. *Extended System Parameters Message*
- 3        5. *Extended Neighbor List Message* (band classes other than Band Class 0)
- 4        6. *General Neighbor List Message*
- 5        7. *Global Service Redirection Message*
- 6        8. *User Zone Identification Message*
- 7        9. *Private Neighbor List Message*
- 8        10. *Extended Global Service Redirection Message*
- 9        11. *Extended CDMA Channel List Message*
- 10       12. *Access Point Identification Message*
- 11       13. *Access Point Identification Text Message*
- 12       14. *Access Point Pilot Information Message*
- 13       15. *General Overhead Information Message*
- 14       16. *Flex Duplex CDMA Channel List Message*
- 15       17. *Alternative Technologies Information Message*

The base station shall maintain a configuration sequence number (CONFIG\_SEQ) for configuration messages transmitted on the Primary Broadcast Control Channel, and shall increment CONFIG\_SEQ modulo 64 whenever the base station modifies the following messages:

- 20       1. *ANSI-41 System Parameters Message*
- 21       2. *User Zone Identification Message*
- 22       3. *Private Neighbor List Message*
- 23       4. *Extended Global Service Redirection Message*
- 24       5. *Extended CDMA Channel List Message*
- 25       6. *MC-RR Parameters Message*
- 26       7. *Universal Neighbor List Message*
- 27       8. *Access Point Identification Message*
- 28       9. *Access Point Identification Text Message*
- 29       10. *Access Point Pilot Information Message*
- 30       11. *General Overhead Information Message*
- 31       12. *Flex Duplex CDMA Channel List Message*
- 32       13. *Alternative Technologies Information Message*

The base station shall maintain an access configuration sequence number (ACC\_CONFIG\_SEQ) for the Access Channel, and shall increment ACC\_CONFIG\_SEQ modulo 64 whenever the base station modifies the *Access Parameters Message*.

The base station shall maintain an access configuration sequence number (ACC\_CONFIG\_SEQ) for the Enhanced Access Channel, and shall increment ACC\_CONFIG\_SEQ modulo 64 whenever the base station modifies the *Enhanced Access Parameters Message*.

On each Primary Broadcast Control Channel which the base station transmits, the base station shall send each of the following system overhead messages at least once per  $T_{1b}$  seconds:

1. *Extended CDMA Channel List Message*
2. *ANSI-41 System Parameters Message*
3. *MC-RR Parameters Message*
4. *Enhanced Access Parameters Message*
5. *Universal Neighbor List Message*

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *ANSI-41 RAND Message*, it shall send it at least once per  $T_{1b}$  seconds.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *Access Point Pilot Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{APPIM\_PERIOD\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *Access Point Identification Message*, it shall send it at least once per  $T_{1b}$  seconds.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *Access Point Identification Text Message*, it shall send it at least once per  $T_{1b}$  seconds.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *General Overhead Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{GEN\_OVHD\_CYCLE\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *Alternative Technologies Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{ATIM\_CYCLE\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms.

If the base station supports Primary Broadcast Control Channels, and the base station is sending the *Flex Duplex CDMA Channel List Message*, it shall send it at least once per  $T_{1b}$  seconds.

On each of the Paging Channels the base station transmits, the base station shall send each of the following system overhead messages at least once per  $T_{1b}$  seconds:

1. *Access Parameters Message*
2. *CDMA Channel List Message*
3. *Extended System Parameters Message*
4. *System Parameters Message*

For the messages sent on the Paging Channel, if the base station is operating in Band Class 1, Band Class 3, or Band Class 4 and MIN\_P\_REV is less than seven, the base station shall send the *Extended Neighbor List Message*, and may also send the *General Neighbor List Message*. If the base station is operating in Band Class 0 and MIN\_P\_REV is less than seven, the base station shall send the *Neighbor List Message*, and may also send the *General Neighbor List Message*. If the base station is sending the *Neighbor List Message*, it shall send it at least once per  $T_{1b}$  seconds. If the base station is sending the *Extended Neighbor List Message*, it shall send it at least once per  $T_{1b}$  seconds. If the base station is sending the *General Neighbor List Message*, it shall send it at least once per  $T_{1b}$  seconds. If the base station is sending *Access Point Pilot Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{APPIM\_PERIOD\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms. If the base station is sending *Access Point Identification Message* and *Access Point Identification Text Message*, it shall send these messages at least once per  $T_{1b}$  seconds. If the base station is sending the *General Overhead Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{GEN\_OVHD\_CYCLE\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms. If the base station is sending the *Alternative Technologies Information Message*, it shall send it completely at least once during every 16 paging slot interval that satisfies the following:

$\lfloor \text{SYS\_TIME}_s / 16 \rfloor \bmod 2^{\text{ATIM\_CYCLE\_INDEX}} = 0$ , where  $\text{SYS\_TIME}_s$  is the system time in units of 80 ms.

Overhead Messages sent on the Primary Broadcast Control Channel shall be transmitted on a continuous basis, consecutively.

If the base station uses addressing modes requiring use of only the IMSI\_M\_S, independent of values of the IMSI\_M\_11\_12 and MCC\_M, the base station shall set IMSI\_T\_SUPPORTED to '0', MCC to '111111111', and IMSI\_11\_12 to '1111111' in the *Extended System Parameters Message*, *MC-RR Parameters Message*, and *ANSI-41 System Parameters Message*.

If the base station sets IMSI\_T\_SUPPORTED to '1', the base station shall not set PREF\_MSID\_TYPE to '00' in the *Extended System Parameters Message* and *ANSI-41 System Parameters Message*.

The base station may send a *Global Service Redirection Message* on any given Paging Channel. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds.

If  $P\_REV$  is greater than or equal to six, the base station may send an *Extended Global Service Redirection Message*. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds. The base station may send this message to redirect only those mobile stations with  $MOB\_P\_REV$  equal to or greater than six.

When both the *Global Service Redirection Message* and the *Extended Global Service Redirection Message* are sent, the base station shall use the *Global Service Redirection Message* for mobile stations with  $MOB\_P\_REV$  less than six, and shall use the *Extended Global Service Redirection Message* for mobile stations with  $MOB\_P\_REV$  equal to or greater than six. When only the *Global Service Redirection Message* is sent and this message is for mobile station with  $MOB\_P\_REV$  less than six, the base station shall set  $EXCL\_P\_REV\_MS$  to '1'.

If only the *Global Service Redirection Message* is sent and this message is for redirecting all mobile stations, the base station shall set  $EXCL\_P\_REV\_MS$  to '0'.

The base station may send a *User Zone Identification Message*. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds.

The base station may send a *Private Neighbor List Message*. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds.

The base station may send an *Extended CDMA Channel List Message*. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds.

The base station may send a *Flex Duplex CDMA Channel List Message*. If the message is sent, the base station shall send it at least once per  $T_{1b}$  seconds.

### 3.6.2.3 Mobile Station Directed Messages

The base station may send the following messages directed to a mobile station on the f-csch. If the base station sends a message, the base station shall comply with the specified requirements for sending the message, if any:

1. *Abbreviated Alert Order*
2. *Audit Order*
3. *Authentication Challenge Message*
4. *Base Station Challenge Confirmation Order*
5. *Channel Assignment Message* (if  $P\_REV\_IN\_USE < \text{eight}$ )
6. *Data Burst Message*
7. *Extended Channel Assignment Message*
8. *Fast Call Setup Order*
9. *Feature Notification Message*

- 1        10. *General Page Message*
- 2        11. *Intercept Order*
- 3        12. *Local Control Order*
- 4        13. *Lock Until Power-Cycled Order*
- 5        14. *Maintenance Required Order*
- 6        15. *PACA Message*
- 7        16. *Registration Accepted Order*
- 8        17. *Registration Rejected Order*
- 9        18. *Registration Request Order*
- 10       19. *Release Order*
- 11       20. *Reorder Order*
- 12       21. *Retry Order*
- 13       22. *Security Mode Command Message*
- 14       23. *Service Redirection Message*
- 15       24. *Slotted Mode Order*
- 16       25. *SSD Update Message*
- 17       26. *Status Request Message*
- 18       27. *TMSI Assignment Message*
- 19       28. *Universal Page Message* (Forward Common Control Channel Only)
- 20       29. *Unlock Order*
- 21       30. *User Zone Reject Message*
- 22       31. *General Extension Message*

23       The base station shall not send the *Channel Assignment Message* if P\_REV\_IN\_USE is  
 24       greater than or equal to nine.

25       The base station should send at least one *General Page Message* in each Paging Channel  
 26       slot. The base station shall not omit a *General Page Message* in two adjacent Paging  
 27       Channel slots.

28       The base station should send at least one *General Page Message* or *Universal Page*  
 29       *Message* in each Forward Common Control Channel slot. The base station shall not omit  
 30       both a *General Page Message* and a *Universal Page Message* in two adjacent slots.

#### 31       3.6.2.3.1 Processing when the General Page Message is Used

32       The base station shall use the following rules for selecting the Paging Channel or Forward  
 33       Common Control Channel slot in which to send a message to a mobile station:

- 1       • If the base station is able to determine that the mobile station is operating in the  
2       non-slotted mode, the base station may send the message to the mobile station in  
3       any Paging Channel or Forward Common Control Channel slot.
- 4       • If the base station is able to determine that the mobile station is operating in the  
5       slotted mode and is able to determine the mobile station's slot cycle index (see  
6       2.6.2.1.1.3), the base station shall send the message at least once in an assigned  
7       Paging Channel slot for the mobile station (see 3.6.2.1.3), with the position within  
8       the slot subject to the following limitations:
  - 9       – If the mobile station has registered with a class 0 IMSI, the base station shall  
10       not send the message in the assigned Paging Channel slot after sending a  
11       *General Page Message* with CLASS\_0\_DONE set to '1' in that slot.
  - 12       – If the mobile station has registered with a class 1 IMSI, the base station shall  
13       not send the message in the assigned Paging Channel slot after sending a  
14       *General Page Message* with CLASS\_1\_DONE set to '1' in that slot.
  - 15       – If the mobile station has been assigned a TMSI, the base station shall not send  
16       the message in the assigned Paging Channel slot after sending a *General Page*  
17       *Message* with TMSI\_DONE set to '1' in that slot.
- 18       • If the base station is able to determine that the mobile station is operating in the  
19       slotted mode and that the mobile station is not waiting for a priority access channel  
20       assignment and that the slotted timer in the mobile station is not active, and the  
21       base station is able to determine the mobile station's slot cycle index (see  
22       2.6.2.1.1.3), the base station shall send the message at least once in an assigned  
23       Forward Common Control Channel slot for the mobile station (see 3.6.2.1.3), with  
24       the position within the slot subject to the following limitations:
  - 25       – If the mobile station has registered with a class 0 IMSI, the base station shall  
26       not send the message in the assigned Forward Common Control Channel slot  
27       after sending a *General Page Message* with CLASS\_0\_DONE set to '1' in that  
28       slot.
  - 29       – If the mobile station has registered with a class 1 IMSI, the base station shall  
30       not send the message in the assigned Forward Common Control Channel slot  
31       after sending a *General Page Message* with CLASS\_1\_DONE set to '1' in that  
32       slot.
  - 33       – If the mobile station has been assigned a TMSI, the base station shall not send  
34       the message in the assigned Forward Common Control Channel slot after  
35       sending a *General Page Message* with TMSI\_DONE set to '1' in that slot.
- 36       • If the base station is able to determine that the mobile station is operating in the  
37       slotted mode and that the mobile station is waiting for a priority access channel  
38       assignment, or that the slotted timer in the mobile station is active, the base  
39       station may send the message to the mobile station in any Forward Common  
40       Control Channel slot with the position within the slot subject to the following  
41       limitation:

- 1       – If the mobile station has registered with a class 0 IMSI, the base station shall  
2       not send the message in any Forward Common Control Channel slot after  
3       sending a *General Page Message* with CLASS\_0\_DONE set to '1' in that slot.
- 4       – If the mobile station has registered with a class 1 IMSI, the base station shall  
5       not send the message in any Forward Common Control Channel slot after  
6       sending a *General Page Message* with CLASS\_1\_DONE set to '1' in that slot.
- 7       – If the mobile station has been assigned a TMSI, the base station shall not send  
8       the message in any Forward Common Control Channel slot after sending a  
9       *General Page Message* with TMSI\_DONE set to '1' in that slot.
- 10      • If the base station is not able to determine whether the mobile station is operating  
11      in the non-slotted mode, or the base station is not able to determine the mobile  
12      station's slot cycle index, the base station shall assume that the mobile station is  
13      operating in the slotted mode with a slot cycle index which is the smaller of  
14      MAX\_SLOT\_CYCLE\_INDEX and 1. The base station shall send the message at least  
15      once in an assigned Paging Channel or Forward Common Control Channel slot for  
16      the mobile station (see 3.6.2.1.3), with the position within the slot subject to the  
17      following limitations:
  - 18      – If the mobile station has registered with a class 0 IMSI, the base station shall  
19      not send the message in the assigned Paging Channel or Forward Common  
20      Control Channel slot after sending a *General Page Message* with  
21      CLASS\_0\_DONE set to '1' in that slot.
  - 22      – If the mobile station has registered with a class 1 IMSI, the base station shall  
23      not send the message in the assigned Paging Channel or Forward Common  
24      Control Channel slot after sending a *General Page Message* with  
25      CLASS\_1\_DONE set to '1' in that slot.
  - 26      – If the mobile station has been assigned a TMSI, the base station shall not send  
27      the message in the assigned Paging Channel or Forward Common Control  
28      Channel slot after sending a *General Page Message* with TMSI\_DONE set to '1'  
29      in that slot.

30      The base station should send messages directed to mobile stations operating in the slotted  
31      mode as the first messages in the slot.

32      If the base station sends a *General Page Message* with ORDERED\_TMSIS set to '1' in a  
33      slot, the base station shall order page records with PAGE\_CLASS equal to '10' in ascending  
34      order such that if a particular TMSI\_CODE value for one page record is greater than the  
35      TMSI\_CODE value for another page record, the page record with the greater TMSI\_CODE  
36      value is sent later in the slot.

### 37      3.6.2.3.2 Processing when the Universal Page Message is Used

38      The base station shall use the following rules for selecting the Forward Common Control  
39      Channel slot in which to send a message to a mobile station:

- 1       • If the base station is able to determine that the mobile station is operating in the  
2       non-slotted mode, the base station may send the message to the mobile station in  
3       any Forward Common Control Channel slot.
- 4       • If the base station is able to determine that the mobile station is capable of  
5       operating in the slotted mode and that the mobile station is waiting for a priority  
6       access channel assignment, or that the slotted timer in the mobile station is active,  
7       the base station may send the message to the mobile station in any Forward  
8       Common Control Channel slot with the position within the slot subject to the  
9       following limitation:
  - 10      – The base station shall not send the message later in the slot than a *Universal*  
11      *Page Message* which lacks a mobile station-directed message announcement  
12      and which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that  
13      mobile station.
- 14      • If the base station is able to determine that the mobile station is operating in the  
15      slotted mode and that the mobile station is not waiting for a priority access channel  
16      assignment and that the slotted timer in the mobile station is not active and the  
17      base station is able to determine the mobile station's slot cycle index (see  
18      2.6.2.1.1.3.3), the base station shall send the message at least once in an assigned  
19      Forward Common Control Channel slot for the mobile station (see 3.6.2.1.3) or in  
20      the following slot, with the position within these two slots subject to the following  
21      limitation:
  - 22      – The base station shall not send the message later in the slot than a *Universal*  
23      *Page Message* that lacks a mobile station-directed message announcement and  
24      which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that mobile  
25      station.
- 26      • If the base station is not able to determine whether the mobile station is operating  
27      in the non-slotted mode, or the base station is not able to determine the mobile  
28      station's slot cycle index, the base station shall assume that the mobile station is  
29      operating in the slotted mode with a slot cycle index which is the smaller of  
30      MAX\_SLOT\_CYCLE\_INDEX and 1. The base station shall send the message at least  
31      once in an assigned Forward Common Control Channel slot for the mobile station  
32      (see 3.6.2.1.3), or in the following slot, with the position within these two slots  
33      subject to the following limitation:
  - 34      – The base station shall not send the message later in the slot than a *Universal*  
35      *Page Message* that lacks a mobile station-directed message announcement and  
36      which lacks a mobile station-addressed page (see 3.7.2.3.2.36) for that mobile  
37      station.

38   The base station should send messages directed to both mobile stations operating in the  
39   slotted mode and mobile stations operating in the non-slotted mode later in the slot than  
40   the *Universal Page Message*.

### 1 3.6.2.4 Broadcast Messages

#### 2 3.6.2.4.1 Broadcast Messages Sent on the Paging Channel

3 The base station may transmit *Data Burst Messages* directed to broadcast addresses.  
 4 When transmitting broadcast messages that are to be received by mobile stations  
 5 operating in the slotted mode, the base station may use broadcast page records (see  
 6 3.7.2.3.2.17) in accordance with the broadcast procedures specified in 3.6.2.4.1 to  
 7 announce the presence of broadcast *Data Burst Messages* on the Paging Channel. The  
 8 base station should use the rules specified in 3.6.2.4.1.1 for selecting the Paging Channel  
 9 slot in which to send a broadcast *Data Burst Message*.

#### 10 3.6.2.4.1.1 Broadcast Procedures for Slotted Mode

11 The base station may announce the presence of broadcast *Data Burst Messages* on the  
 12 Paging Channel by paging, using a broadcast address with PAGE\_CLASS equal to '11' and  
 13 PAGE\_SUBCLASS equal to '00'.

##### 14 3.6.2.4.1.1.1 General Overview

15 The base station may transmit *Data Burst Messages* directed to broadcast addresses.  
 16 Since mobile stations operating in slotted mode do not constantly monitor a Paging  
 17 Channel, it is necessary to use special procedures to ensure that mobile stations operating  
 18 in the slotted mode are able to receive the message. The base station may either send a  
 19 broadcast message in many slots, or may send a broadcast message in a predetermined  
 20 paging slot. This single transmission of the pending broadcast message may be  
 21 announced by a preceding "broadcast page". A broadcast page is a *General Page Message*  
 22 record with the PAGE\_CLASS field set to '11'.

23 If pending transmission of the broadcast message is announced by the broadcast page,  
 24 mobile stations use the BC\_ADDR and the BURST\_TYPE fields of the broadcast page  
 25 record to determine whether or not to receive the announced broadcast message. The base  
 26 station sets the value of the BC\_ADDR according to the requirements of the standards  
 27 related to the BURST\_TYPE. There is a predetermined timing relationship between the  
 28 sending of the broadcast page and the sending of the related broadcast message. This  
 29 timing relationship allows mobile stations to determine which slot to monitor in order to  
 30 receive the broadcast message.

31 To reduce the overhead for sending broadcast pages or broadcast messages, a base station  
 32 may use periodic broadcast paging (see 3.6.2.4.1.1.2.1.2). When periodic broadcast paging  
 33 is enabled, broadcast pages or broadcast messages are sent only once during a broadcast  
 34 paging cycle. Mobile stations that are operating in the slotted mode and are configured to  
 35 receive broadcast messages monitor the paging channel during the slot in which the  
 36 broadcast pages or broadcast messages are sent. For the purpose of periodic broadcast  
 37 paging, system time is divided into broadcast paging cycles, each having a duration of (**B** +  
 38 3) Paging Channel slots, where **B** is a power of two. In each broadcast paging cycle, the  
 39 first paging slot may contain broadcast pages or broadcast messages.

## 3.6.2.4.1.1.2 Requirements for Sending Broadcast Messages

### 3.6.2.4.1.1.2.1 Broadcast Delivery Options

When transmitting broadcast messages that are to be received by mobile stations operating in the slotted mode and monitoring the Paging Channel, the base station shall use one of the two following procedures to transmit a broadcast message.

#### 3.6.2.4.1.1.2.1.1 Method 1: Multi-Slot Broadcast Message Transmission

The base station may send a broadcast message using this method without regard to whether periodic broadcast paging is enabled or disabled (see 3.6.2.4.1.1.2.3).

When using this method, the base station shall send the broadcast message in a sufficient number of paging slots such that it may be received by any mobile station that is operating in the slotted mode. For example, the base station may send the broadcast message in **M** successive paging slots where **M** is the number of slots in a maximum paging cycle as defined in 2.6.2.1.1.3.3.

#### 3.6.2.4.1.1.2.1.2 Method 2: Periodic Broadcast Paging

If the base station sends a broadcast message using this method, then the base station shall enable periodic broadcast paging (see 3.6.2.4.1.1.2.3).

To deliver a broadcast message using this method, the base station should perform the following:

- If the number and size of the broadcast messages waiting to be sent are such that the messages can be sent in a single slot, the base station should send the broadcast messages in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3).
- If there is a single broadcast message waiting to be sent, the base station should send the broadcast message beginning in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3).
- Otherwise, the base station should first include a broadcast page for each broadcast message to be sent, in a *General Page Message* that is sent in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3). The base station should then send the related broadcast messages in the paging slots specified in 3.6.2.4.1.1.2.4.

#### 3.6.2.4.1.1.2.2 Duplicate Broadcast Message Transmission

If the base station sends a broadcast message or a broadcast page and an associated broadcast message more than once when periodic broadcast paging is enabled (see 3.6.2.4.1.1.2.3), then all repetitions of the broadcast message or the broadcast page and the associated broadcast message should be sent within  $4 \times (\mathbf{B} + 3)$  paging slots of the paging slot in which the broadcast message or broadcast page was first sent. (**B** + 3 is the duration of the broadcast paging cycle as defined in 2.6.2.1.1.3.3).

1 When a base station sends a broadcast message or a broadcast page when periodic  
 2 broadcast paging is enabled (see 3.6.2.4.1.1.2.3), and the base station has a second,  
 3 different broadcast message to send which contains identical BURST\_TYPE and BC\_ADDR  
 4 fields, then the base station shall wait  $4 \times (\mathbf{B} + 3)$  paging slots after the first slot of the  
 5 broadcast paging cycle containing the final sending of the first broadcast message or  
 6 broadcast page before sending the second, different broadcast message or related  
 7 broadcast page.

#### 8 3.6.2.4.1.1.2.3 Periodic Broadcast Paging

9 The base station uses the BCAST\_INDEX field of the *Extended System Parameters Message*  
 10 to specify the current state of periodic broadcast paging to all mobile stations.

11 To enable periodic broadcast paging, the base station shall set the BCAST\_INDEX field of  
 12 the *Extended System Parameters Message* to an unsigned 3-bit number in the range 1-7,  
 13 equal to the broadcast slot cycle index as defined in 2.6.2.1.1.3.3. The value of the  
 14 BCAST\_INDEX field may exceed the value of the MAX\_SLOT\_CYCLE\_INDEX field sent in  
 15 the *System Parameters Message*.

16 To indicate that periodic broadcast paging is either disabled or is not supported by the  
 17 base station, the base station shall set the BCAST\_INDEX field to '000'.

#### 18 3.6.2.4.1.1.2.4 Broadcast Message Slot Determination

19 When a base station uses broadcast paging, it shall determine the slot in which to send  
 20 the corresponding broadcast message using the following procedures:

- 21 • The base station shall consider a broadcast page to have been sent in the paging  
 22 slot in which the *General Page Message* containing the broadcast page began.
- 23 • The reference slot is defined as the paging slot in which the broadcast page was  
 24 sent.
- 25 • Let n represent the ordinal number of the broadcast page relative to other  
 26 broadcast pages that are contained in the same *General Page Message* ( $n = 1, 2,$   
 27  $3, \dots$ ). The base station shall send the broadcast message announced by broadcast  
 28 page n in the paging slot that occurs  $n \times 3$  paging slots after the reference slot.

#### 3.6.2.4.2 Broadcast Messages Sent on the Broadcast Control Channel

The base station may transmit *Data Burst Messages* directed to broadcast addresses when NUM\_BCCH\_BCAST<sub>s</sub> does not equal '000'. When transmitting broadcast messages that are to be received by mobile stations operating in the slotted mode, the base station may use enhanced broadcast pages (see 3.7.2.3.2.17 and 3.7.2.3.2.36) in accordance with the broadcast procedures specified in 3.6.2.4.2 to announce the presence of broadcast *Data Burst Messages* on the Broadcast Control Channel. The base station should use the rules specified in 3.6.2.4.2.1 for selecting the Broadcast Control Channel slot in which to send a broadcast *Data Burst Message*.

##### 3.6.2.4.2.1 Broadcast Procedures for Slotted Mode

The base station may announce the presence of broadcast *Data Burst Messages* on the Broadcast Control Channel by sending an enhanced broadcast page.

##### 3.6.2.4.2.1.1 General Overview

The base station may transmit *Data Burst Messages* directed to broadcast addresses. Since mobile stations operating in slotted mode do not constantly monitor a Broadcast Control Channel, it is necessary to use special procedures to ensure that mobile stations operating in the slotted mode are able to receive the message. The base station may either send an enhanced broadcast page in many Forward Common Control Channel slots, directing the mobile station to the appropriate Broadcast Control Channel slot, or the base station may also send an enhanced broadcast page in a predetermined slot, called a broadcast slot, on the Forward Common Control Channel, directing the mobile station to a specified Broadcast Control Channel slot.

If pending transmission of the broadcast message is announced by the enhanced broadcast page, mobile stations use the BC\_ADDR and the BURST\_TYPE fields of the enhanced broadcast page record to determine whether or not to receive the announced broadcast message. The base station sets the value of the BC\_ADDR according to the requirements of the standards related to the BURST\_TYPE. The timing relationship between the sending of the enhanced broadcast page and the sending of the related broadcast message is specified in the enhanced broadcast page. This timing relationship allows mobile stations to determine which Broadcast Control Channel slot to monitor in order to receive the broadcast message.

To reduce the overhead for sending broadcast pages or broadcast messages, a base station may use Periodic Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.1.2). When Periodic Enhanced Broadcast Paging is enabled, enhanced broadcast pages are sent only once during a broadcast paging cycle. Mobile stations that are operating in the slotted mode and are configured to receive broadcast messages monitor the Forward Common Control Channel during the broadcast slot in which the enhanced broadcast pages are sent. For the purpose of Periodic Enhanced Broadcast Paging, system time is divided into broadcast paging cycles, each having a duration of (**B** + 7) Forward Common Control Channel slots, where **B** is a power of two. In each broadcast paging cycle, the first Forward Common Control Channel slot may contain enhanced broadcast pages.

## 1 3.6.2.4.2.1.2 Requirements for Sending Broadcast Messages

### 2 3.6.2.4.2.1.2.1 Broadcast Delivery Options

3 When transmitting broadcast messages that are to be received by mobile stations  
 4 operating in the slotted mode and monitoring the Forward Common Control  
 5 Channel/Broadcast Control Channel, the base station shall use one of the two following  
 6 procedures to transmit a broadcast message.

#### 7 3.6.2.4.2.1.2.1.1 Method 1: Multi-Slot Enhanced Broadcast Paging

8 The base station may send a broadcast message using this method without regard to  
 9 whether Periodic Enhanced Broadcast Paging is enabled or disabled (see 3.6.2.4.2.1.2.3).

10 When using this method, the base station shall send the enhanced broadcast page in a  
 11 sufficient number of Forward Common Control Channel slots such that it may be received  
 12 by any mobile station that is operating in the slotted mode. The enhanced broadcast page  
 13 then directs mobile stations to a subsequent Broadcast Control Channel slot.

14 The base station shall not send an enhanced broadcast page that directs a mobile station  
 15 to receive a broadcast message on the Primary Broadcast Control Channel.

16 The base station shall not send a broadcast message on the Forward Common Control  
 17 Channel.

#### 18 3.6.2.4.2.1.2.1.2 Method 2: Periodic Enhanced Broadcast Paging

19 If the base station sends a broadcast message using this method, then the base station  
 20 shall enable Periodic Enhanced Broadcast Paging (see 3.6.2.4.2.1.2.3).

21 To deliver a broadcast message using this method, the base station should perform the  
 22 following:

- 23 • The base station should first include an enhanced broadcast page for each  
 24 broadcast message to be sent, in a page that is sent on the Forward Common  
 25 Control Channel in the first slot of the next broadcast paging cycle (see  
 26 2.6.2.1.1.3.3). The base station should then send the corresponding broadcast  
 27 messages in the Broadcast Control Channel slots specified in 3.6.2.4.2.1.2.4.

28 The base station shall not send an enhanced broadcast page that directs a mobile station  
 29 to receive a broadcast message on the Primary Broadcast Control Channel.

30 The base station shall not send a broadcast message on the Forward Common Control  
 31 Channel.

### 32 3.6.2.4.2.1.2.2 Duplicate Broadcast Message Transmission

33 If the base station sends an enhanced broadcast page and an associated broadcast  
 34 message more than once when Periodic Enhanced Broadcast Paging is enabled (see  
 35 3.6.2.4.2.1.2.3), then all repetitions of the enhanced broadcast page should be sent within  
 36  $4 \times (\mathbf{B} + 7)$  slots of the slot in which the enhanced broadcast page was first sent. ( $\mathbf{B} + 7$  is  
 37 the duration of the broadcast paging cycle as defined in 2.6.2.1.1.3.3).

1 When a base station sends an enhanced broadcast page when Periodic Enhanced  
2 Broadcast Paging is enabled (see 3.6.2.4.2.1.2.3), and the base station has a second,  
3 different broadcast message to send which contains identical BURST\_TYPE and BC\_ADDR  
4 fields, then the base station shall wait  $4 \times (\mathbf{B} + 7)$  paging slots after the first slot of the  
5 broadcast paging cycle containing the final sending of the first broadcast message or  
6 enhanced broadcast page before sending the second, different enhanced broadcast page.

#### 7 3.6.2.4.2.1.2.3 Periodic Enhanced Broadcast Paging

8 The base station uses the BCAST\_INDEX fields of the *MC-RR Parameters Message* to  
9 specify the current state of Periodic Enhanced Broadcast Paging to all mobile stations.

10 To enable Periodic Enhanced Broadcast Paging, the base station shall set the  
11 BCAST\_INDEX field to a non-zero unsigned 3-bit number equal to the broadcast slot cycle  
12 index as defined in 2.6.2.1.1.3.3.

13 To indicate that Periodic Enhanced Broadcast Paging is either disabled or is not supported  
14 by the base station, the base station shall set the BCAST\_INDEX field to '000'.

#### 15 3.6.2.4.2.1.2.4 Broadcast Message Slot Determination

16 When a base station uses broadcast message announcement, it shall determine the slot in  
17 which to send the corresponding broadcast message using the following procedures:

- 18 • The base station shall consider an enhanced broadcast page to have been sent in  
19 the Forward Common Control Channel slot in which the page message containing  
20 the enhanced broadcast page began.
- 21 • The reference slot is defined as the Forward Common Control Channel slot in  
22 which the enhanced broadcast page was sent.
- 23 • The base station shall send a first transmission of the broadcast message  
24 announced by the enhanced broadcast page in the Broadcast Control Channel slot  
25 which begins  $40 \text{ ms} \times (1 + \text{TIME\_OFFSET})$  later than the beginning of the slot in  
26 which the page message containing the enhanced broadcast page began. The base  
27 station may send a repetition of the broadcast message announced by the  
28 enhanced broadcast page in the Broadcast Control Channel slot which begins  $40$   
29  $\text{ms} \times (1 + \text{REPEAT\_TIME\_OFFSET})$  later than the Broadcast Control Channel slot in  
30 which the first transmission began.

### 3.6.2.4.3 Broadcast Messages Sent on the Forward Common Control Channel

The Forward Common Control Channel is used for transmission of broadcast messages only when there is not a secondary Broadcast Control Channel allocated, i.e., NUM\_BCCH\_BCAST equals '000'. The base station may transmit *Data Burst Messages* directed to broadcast addresses. When transmitting broadcast messages that are to be received by mobile stations operating in the slotted mode, the base station may use enhanced broadcast page records (see 3.7.2.3.2.17 and 3.7.2.3.2.36) in accordance with the broadcast procedures specified in 3.6.2.4.3 to announce the presence of broadcast *Data Burst Messages* on the Forward Common Control Channel. The base station shall send the broadcast messages on the Forward Common Control Channel where the enhanced broadcast page is sent. The base station should use the rules specified in 3.6.2.4.3.1 for selecting the Forward Common Control Channel slot in which to send a broadcast *Data Burst Message*.

#### 3.6.2.4.3.1 Broadcast Procedures for Slotted Mode

The base station may announce the presence of broadcast *Data Burst Messages* on the Forward Common Control Channel by sending an enhanced broadcast page.

##### 3.6.2.4.3.1.1 General Overview

The base station may transmit *Data Burst Messages* directed to broadcast addresses. Since mobile stations operating in slotted mode do not constantly monitor a Forward Common Control Channel, it is necessary to use special procedures to ensure that mobile stations operating in the slotted mode are able to receive the message. The base station may either send a broadcast message in many Forward Common Control Channel slots, or may send a broadcast message in a predetermined Forward Common Control slot. This single transmission of the pending broadcast message may be announced by a preceding "enhanced broadcast page".

If pending transmission of the broadcast message is announced by the enhanced broadcast page, mobile stations use the BC\_ADDR and the BURST\_TYPE fields of the enhanced broadcast page record to determine whether or not to receive the announced broadcast message. The base station sets the value of the BC\_ADDR according to the requirements of the standards related to the BURST\_TYPE. There is a predetermined timing relationship between the sending of the enhanced broadcast page and the sending of the related broadcast message. This timing relationship allows mobile stations to determine which Forward Common Control Channel slot to monitor in order to receive the broadcast message.

To reduce the overhead for sending enhanced broadcast pages or broadcast messages, a base station may use periodic enhanced broadcast paging (see 3.6.2.4.3.1.2.1.2). When periodic enhanced broadcast paging is enabled, enhanced broadcast pages or broadcast messages are sent only once during a broadcast paging cycle. Mobile stations that are operating in the slotted mode and are configured to receive broadcast messages monitor the Forward Common Control Channel during the Forward Common Control Channel slot in which the enhanced broadcast pages or broadcast messages are sent. For the purpose of periodic enhanced broadcast paging, system time is divided into broadcast paging

cycles, each having a duration of  $(\mathbf{B} + 7)$  Forward Common Control Channel slots, where  $\mathbf{B}$  is a power of two. In each broadcast paging cycle, the first Forward Common Control Channel slot may contain enhanced broadcast pages or broadcast messages.

#### 3.6.2.4.3.1.2 Requirements for Sending Broadcast Messages

##### 3.6.2.4.3.1.2.1 Broadcast Delivery Options

When transmitting broadcast messages that are to be received by mobile stations operating in the slotted mode and monitoring the Forward Common Control Channel, the base station shall use one of the two following procedures to transmit a broadcast message.

##### 3.6.2.4.3.1.2.1.1 Method 1: Multi-Slot Broadcast Message Transmission

The base station may send a broadcast message using this method without regard to whether periodic enhanced broadcast paging is enabled or disabled (see 3.6.2.4.3.1.2.3).

When using this method, the base station shall send the broadcast message in a sufficient number of Forward Common Control Channel slots such that it may be received by any mobile station that is operating in the slotted mode. For example, the base station may send the broadcast message in  $\mathbf{M}$  successive paging slots where  $\mathbf{M}$  is the number of slots in a maximum paging cycle as defined in 2.6.2.1.1.3.3.

##### 3.6.2.4.3.1.2.1.2 Method 2: Periodic Enhanced Broadcast Paging

If the base station sends a broadcast message using this method, then the base station shall enable periodic enhanced broadcast paging (see 3.6.2.4.3.1.2.3).

To deliver a broadcast message using this method, the base station should perform the following:

- If the number and size of the broadcast messages waiting to be sent are such that the messages can be sent in a single slot, the base station should send the broadcast messages in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3).
- If there is a single broadcast message waiting to be sent, the base station should send the broadcast message beginning in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3).
- Otherwise, the base station should first include an enhanced broadcast page for each broadcast message to be sent, in a *General Page Message* or a *Universal Page Message* that is sent in the first slot of the next broadcast paging cycle (see 2.6.2.1.1.3.3). The base station should then send the related broadcast messages in the Forward Common Control Channel slots specified in 3.6.2.4.3.1.2.4.

##### 3.6.2.4.3.1.2.2 Duplicate Broadcast Message Transmission

If the base station sends a broadcast message or an enhanced broadcast page and an associated broadcast message more than once when periodic enhanced broadcast paging is enabled (see 3.6.2.4.3.1.2.3), then all repetitions of the broadcast message or the

enhanced broadcast page and the associated broadcast message should be sent within  $4 \times (\mathbf{B} + 7)$  slots of the Forward Common Control Channel slot in which the broadcast message or enhanced broadcast page was first sent.  $(\mathbf{B} + 7)$  is the duration of the broadcast paging cycle as defined in 2.6.2.1.1.3.3).

When a base station sends a broadcast message or an enhanced broadcast page when periodic enhanced broadcast paging is enabled (see 3.6.2.4.3.1.2.3), and the base station has a second, different broadcast message to send which contains identical BURST\_TYPE and BC\_ADDR fields, then the base station shall wait  $4 \times (\mathbf{B} + 7)$  Forward Common Control Channel slots after the first slot of the enhanced broadcast paging cycle containing the final sending of the first broadcast message or enhanced broadcast page before sending the second, different broadcast message or related enhanced broadcast page.

#### 3.6.2.4.3.1.2.3 Periodic Enhanced Broadcast Paging

The base station uses the BCAST\_INDEX field of the *MC-RR Parameters Message* to specify the current state of periodic enhanced broadcast paging to all mobile stations.

To enable periodic enhanced broadcast paging, the base station shall set the BCAST\_INDEX field of the *MC-RR Parameters Message* to an unsigned 3-bit number in the range 1-7, equal to the broadcast slot cycle index as defined in 2.6.2.1.1.3.3. The value of the BCAST\_INDEX field may exceed the value of the MAX\_SLOT\_CYCLE\_INDEX field sent in the *System Parameters Message*.

To indicate that periodic enhanced broadcast paging is either disabled or is not supported by the base station, the base station shall set the BCAST\_INDEX field to '000'.

#### 3.6.2.4.3.1.2.4 Broadcast Message Slot Determination

When a base station uses enhanced broadcast paging, it shall determine the slot in which to send the corresponding broadcast message using the following procedures:

- The base station shall consider an enhanced broadcast page to have been sent in the Forward Common Control Channel slot in which the *General Page Message* or the *Universal Page Message* containing the enhanced broadcast page began.
- The reference slot is defined as the Forward Common Control Channel slot in which the enhanced broadcast page was sent.
- The base station shall send a first transmission of the broadcast message announced by the enhanced broadcast page in the Forward Common Control Channel slot which begins  $40 \text{ ms} \times (1 + \text{TIME\_OFFSET})$  later than the beginning of the slot in which the page message containing the enhanced broadcast page began. The base station may send a repetition of the broadcast message announced by the enhanced broadcast page in the Forward Common Control Channel slot which begins  $40 \text{ ms} \times (1 + \text{REPEAT\_TIME\_OFFSET})$  later than the Forward Common Control Channel slot in which the first transmission began.

#### 3.6.2.5 Quick Paging Channel Processing

The base station may support a Quick Paging Channel. The base station may transmit up to three Quick Paging Channels on each supported CDMA Channel.

1 When a Quick Paging Channel is supported, the base station shall transmit paging  
 2 indicators to the mobile station in the assigned positions in the assigned Quick Paging  
 3 Channel slot. The base station shall set the paging indicators to “ON” if the mobile station  
 4 is operating in the slotted mode and is to receive the Paging Channel or Forward Common  
 5 Control Channel in the assigned Paging Channel or Forward Common Control Channel  
 6 slot following its assigned Quick Paging Channel slot.

7 When the base station changes CONFIG\_MSG\_SEQ, the base station should set the paging  
 8 indicators for all mobile stations to “ON” for each Quick Paging Channel slot for a time  
 9 interval T (in units of 1.28 seconds), such that

$$T = N \times 2^{\text{MAX\_SLOT\_CYCLE\_INDEX}},$$

11 where N is an integer greater than or equal to one.

12 If the base station supports configuration change indicators on the Quick Paging Channel,  
 13 when the base station changes CONFIG\_MSG\_SEQ, the base station shall set all  
 14 configuration change indicators to “ON” for each Quick Paging Channel slot for a time  
 15 interval of  $T_{31m}$  seconds. At all other times, the base station shall set all configuration  
 16 change indicators to “OFF”.

17 If the base station does not support configuration change indicators on the Quick Paging  
 18 Channel, then the base station shall set all configuration change indicators to “OFF”.

19 When the base station sends a broadcast message using Multi-Slot Broadcast Message  
 20 Transmission (see 3.6.2.4.1.1.2.1.1), the base station should set all paging indicators to  
 21 “ON” for the Quick Paging Channel slot which begins 100 ms prior to the beginning of the  
 22 Paging Channel slot in which the broadcast message begins.

23 When the base station sends an enhanced broadcast page using Multi-Slot Enhanced  
 24 Broadcast Paging (see 3.6.2.4.2.1.2.1.1), the base station should set all paging indicators  
 25 to “ON” for the Quick Paging Channel slot which begins 100 ms prior to the beginning of  
 26 the Forward Common Control Channel slot in which the message containing the enhanced  
 27 broadcast page begins.

28 When the base station sends an enhanced broadcast page using Periodic Enhanced  
 29 Broadcast Paging (see 3.6.2.4.2.1.2.1.2), the base station should set all broadcast  
 30 indicators to “ON” for the Quick Paging Channel broadcast slot which begins 100 ms prior  
 31 to the beginning of the Forward Common Control Channel slot in which the message  
 32 containing the enhanced broadcast page begins. At all other times, the base station shall  
 33 set all broadcast indicators for a Quick Paging Channel broadcast slot to “OFF”.

34 When the base station sends a broadcast page using Periodic Broadcast Paging (see  
 35 3.6.2.4.1.1.2.1.2), the base station should set all broadcast indicators to “ON” for the  
 36 Quick Paging Channel broadcast slot which begins 100 ms prior to the beginning of the  
 37 Paging Channel slot in which the message containing the broadcast page begins. At all  
 38 other times, the base station shall set all broadcast indicators for a Quick Paging Channel  
 39 broadcast slot to “OFF”.

40 The base station shall set all reserved indicators to “OFF”.

#### 1 3.6.2.5.1 Quick Paging Channel Determination

2 To determine the mobile station's assigned Quick Paging Channel, the base station shall  
3 use the hash function specified in 2.6.7.1 with the following inputs:

- 4 • IMSI\_S based on the IMSI with which the mobile station registered (see 2.3.1)
- 5 • Number of Quick Paging Channels which the base station transmits on the mobile  
6 station's assigned CDMA Channel.

#### 7 3.6.2.5.2 Quick Paging Channel Slot Determination

8 The mobile station's assigned Quick Paging Channel slots are those slots for which

$$9 \quad (\lfloor (t+5)/4 \rfloor - \text{PGSLOT}) \bmod (16 \times T) = 0,$$

10 where t is the System Time in 20ms frames, PGSLOT is selected in the range 0 to 2047 by  
11 using the hash function specified in 2.6.7.1, and T is the slot cycle length in units of 1.28  
12 seconds such that

$$13 \quad T = 2^i,$$

14 and i is the slot cycle index which can take the values -4, -3, -2, -1, 0, 1, 2, 3, 4, 5, 6, and  
15 7.

#### 16 3.6.2.5.3 Paging Indicator Position Determination

17 To determine the mobile station's assigned paging indicators, the base station shall use  
18 the same formula as used by the mobile station (see 2.6.2.1.2.2).

#### 19 3.6.2.5.4 Configuration Change Indicator Position Determination

20 Configuration change indicators are transmitted on the first Quick Paging Channel.

21 If the Quick Paging Channel data rate is 2400 bps (indicator rate is 4800 bps), the bit  
22 positions of the first pair of configuration change indicators in a Quick Paging Channel  
23 slot shall be the last two bits in the first 40 ms half of the Quick Paging Channel slot. The  
24 bit positions of the second pair of configuration change indicators in a Quick Paging  
25 Channel slot shall be the last two bits in the Quick Paging Channel slot.

26 If the Quick Paging Channel data rate is 4800 bps (indicator rate is 9600 bps), the bit  
27 positions of the first four configuration change indicators in a Quick Paging Channel slot  
28 shall be the last four bits in the first 40 ms half of the Quick Paging Channel slot. The bit  
29 position of the second four configuration change indicators in a Quick Paging Channel slot  
30 shall be the last four bits in the Quick Paging Channel slot.

#### 31 3.6.2.5.5 Broadcast Indicator Position Determination

32 Broadcast indicators are transmitted on the first Quick Paging Channel.

33 On the first Quick Paging Channel, if the Quick Paging Channel data rate is 2400 bps  
34 (indicator rate is 4800 bps), the broadcast indicator positions are described as follows:

- 35 • The two Quick Paging Channel bit positions prior to the last two bits in the first 40  
36 ms half of a Quick Paging Channel broadcast slot are broadcast indicators. The

two Quick Paging Channel bit positions prior to the last two bits in a Quick Paging Channel broadcast slot are also broadcast indicators.

On the first Quick Paging Channel, if the Quick Paging Channel data rate is 4800 bps (indicator rate is 9600 bps), the broadcast indicator positions are described as follows:

- The four Quick Paging Channel bit positions prior to the last four bits in the first 40 ms half of a Quick Paging Channel broadcast slot are broadcast indicators. The four Quick Paging Channel bit positions prior to the last four bits in a Quick Paging Channel broadcast slot are also broadcast indicators.

#### 3.6.2.5.6 Reserved Indicator Positions

On the first Quick Paging Channel, if the Quick Paging Channel data rate is 2400 bps (indicator rate is 4800 bps), the reserved indicator positions are described as follows:

- The two Quick Paging Channel bit positions prior to the last two bits in the first 40 ms half of a Quick Paging Channel slot that is not a Quick Paging Channel Broadcast slot are reserved. The two Quick Paging Channel bit positions prior to the last two bits in a Quick Paging Channel slot that is not a Quick Paging Channel Broadcast slot are also reserved.

On the first Quick Paging Channel, if the Quick Paging Channel data rate is 4800 bps (indicator rate is 9600 bps), the reserved indicator positions are described as follows:

- The four Quick Paging Channel bit positions prior to the last four bits in the first 40 ms half of a Quick Paging Channel slot that is not a Quick Paging Channel Broadcast slot are reserved. The four Quick Paging Channel bit positions prior to the last four bits in a Quick Paging Channel slot that is not a Quick Paging Channel Broadcast slot are also reserved.

On Quick Paging Channels other than the first Quick Paging Channel, if the Quick Paging Channel data rate is 2400 bps (indicator rate is 4800 bps), the reserved indicator positions are described as follows:

- The last four Quick Paging Channel bit positions in the first 40 ms half of a Quick Paging Channel slot are reserved. The last four Quick Paging Channel bit positions in a Quick Paging Channel slot are also reserved.

On Quick Paging Channels other than the first Quick Paging Channel, if the Quick Paging Channel data rate is 4800 bps (indicator rate is 9600 bps), the reserved indicator positions are described as follows:

- The last eight Quick Paging Channel bit positions in the first 40 ms half of a Quick Paging Channel slot are reserved. The last eight Quick Paging Channel bit positions in a Quick Paging Channel slot are also reserved.

#### 3.6.3 Access Channel and Enhanced Access Channel Processing

During *Access Channel Processing*, the base station monitors the Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.

Each Access Channel is associated with a Paging Channel. Up to 32 Access Channels can be associated with a Paging Channel. The number of Access Channels associated with a particular Paging Channel is specified in the *Access Parameters Message* sent on that Paging Channel.

If the base station supports Access Channels, the base station shall continually monitor all Access Channels associated with each Paging Channel that the base station transmits.

If the base station supports Enhanced Access Channels, then during *Enhanced Access Channel Processing*, the base station monitors the Enhanced Access Channel to receive messages which the mobile station sends while the mobile station is in the *System Access State*.

Each Enhanced Access Channel is associated with a Forward Common Control Channel. Up to 32 Enhanced Access Channels can be associated with a Forward Common Control Channel. The number of Enhanced Access Channels associated with a particular Forward Common Control Channel is specified in the *Enhanced Access Parameters Message* sent on the Primary Broadcast Control Channel.

If the base station supports Enhanced Access Channel, the base station shall continually monitor all Enhanced Access Channels associated with each Forward Common Control Channel that the base station transmits.

3.6.3.1 Reserved

3.6.3.2 Reserved

3.6.3.3 Response to Page Response Message and Reconnect Message

If the base station receives a *Page Response Message* or a *Reconnect Message* with the ORIG\_IND field set to '0', the base station should send a *Channel Assignment Message* (if in response to a *Page Response Message*), an *Extended Channel Assignment Message*, or a *Release Order*. The base station may also start authentication procedures (see 2.3.12), start TMSI assignment procedures (see 2.3.15), send a *Data Burst Message*, or request status information records with the *Status Request Message*.

If the base station sends the *Extended Channel Assignment Message*, the base station may include more than one pilot to be in the Active Set.

If the base station sends a *Channel Assignment Message* or an *Extended Channel Assignment Message*, the base station shall perform the following:

- If the message directs the mobile station to a CDMA Traffic Channel, the base station shall begin *Traffic Channel Processing* (see 3.6.4) for the mobile station.
- If the reverse channel corresponding to forward channel included in this message is separated by flexible channel spacing, the base station shall extend this message using the General Extension Message and include a Reverse Channel Information Record that specifies the reverse frequency to be used by the mobile station for the traffic channel.

- Layer 3 shall send a *mobile station inactive on common channel* indication to Layer 2 (see [4]).

The base station may instruct the mobile station to use the stored service configuration (that is, both the Service Configuration information record and the Non-negotiable Service Configuration information record) by setting the GRANTED\_MODE field of the *Extended Channel Assignment Message* to '11'.

#### 3.6.3.4 Response to Orders

No requirements.

#### 3.6.3.5 Response to Origination Message and Reconnect Message

If the base station receives an *Origination Message*, *Call Recovery Request Message* or a *Reconnect Message* with the ORIG\_IND field set to '1', the base station should send a *Channel Assignment Message* (if in response to an *Origination Message*), an *Extended Channel Assignment Message*, an *Intercept Order*, a *Reorder Order*, a *Release Order*, a *Retry Order*, a *PACA Message*, a *Service Redirection Message* or a *Service Status Order*. The base station may also commence authentication procedures (see 2.3.12) or TMSI assignment procedures (see 2.3.15). The base station may also request status information records with the *Status Request Message*.

If the base station sends the *Extended Channel Assignment Message*, the base station may include more than one pilot to be in the Active Set.

If the base station sends a *Channel Assignment Message* or an *Extended Channel Assignment Message*, the base station shall perform the following:

- If the message directs the mobile station to a CDMA Traffic Channel, the base station shall begin *Traffic Channel Processing* (see 3.6.4) for the mobile station.
- If the reverse channel corresponding to forward channel included in this message is separated by flexible channel spacing, the base station shall extend this message using the General Extension Message and include a Reverse Channel Information Record that specifies the reverse frequency to be used by the mobile station for the traffic channel.
- The base station shall raise a *mobile station inactive on common channel* indication for the mobile station.

If the base station sends a *Channel Assignment Message*, the base station shall not set RESPOND equal to '0' when ASSIGN\_MODE = '001', ASSIGN\_MODE = '010', or ASSIGN\_MODE = '101'. If the base station sends an *Extended Channel Assignment Message*, the base station shall not set RESPOND equal to '0' when ASSIGN\_MODE = '001' or ASSIGN\_MODE = '010'.

The base station may instruct the mobile station to use the stored service configuration (that is, both the Service Configuration information record and the Non-negotiable Service Configuration information record) by setting the GRANTED\_MODE field of the *Extended Channel Assignment Message* to '11'.

If the base station receives an *Origination Message* and the GLOBAL\_EMERGENCY\_CALL

indicator is set to '1' and the service associated with this origination is a voice service, the base station shall recognize this as an emergency call and should process the message using an implementation-dependent procedure which may include ignoring the dialed digits. If the base station receives an *Origination Message* and the GLOBAL\_EMERGENCY\_CALL indicator is set to '1' and the service associated with this origination is not a voice service, the base station may recognize this as an emergency call and should process the message using an implementation-dependent procedure which may include ignoring the dialed digits.

#### 3.6.3.6 Response to Registration Message

If the base station receives a *Registration Message*, the base station may send a *Registration Accepted Order*, a *Registration Rejected Order*, or a *Service Redirection Message*. The base station may also start authentication procedures (see 2.3.12), may start TMSI assignment procedures (see 2.3.15), or may request status information records with the *Status Request Message*.

If the *Registration Message* specifies a power-down registration, Layer 3 shall send a *mobile station inactive on common channel* indication to Layer 2 (see [4]).

When responding to a *Registration Message* that requests extended encryption, if the base station decides to turn on extended encryption and the CMEAKEY is available at the base station, the base station shall send a *Registration Accepted Order* with encryption information. Before the CMEAKEY is available, the base station may send a *Registration Accepted Order* without any encryption information. When the CMEAKEY becomes available, if the base station decides to turn on extended encryption, the base station shall send a *Registration Accepted Order* with encryption information.

#### 3.6.3.7 Response to Data Burst Message

If the base station receives a *Data Burst Message* with BURST\_TYPE indicating Short Data Burst (see [30]), the base station may send a *Retry Order*.

#### 3.6.3.8 Reserved

#### 3.6.3.9 Reserved

#### 3.6.3.10 Service Redirection

If the base station sends a *Service Redirection Message* to the mobile station, Layer 3 shall send a *mobile station inactive on common channel* indication to Layer 2 (see [4]).

#### 3.6.3.11 Response to General Extension Message

If the base station receives a message that is extended through *General Extension Message* the base station shall store the records and process the message as specified in section 3.6.3.1-3.6.3.8.

### 3.6.4 Traffic Channel Processing

During *Traffic Channel Processing*, the base station uses the Forward and Reverse Traffic Channels to communicate with the mobile station while the mobile station is in the *Mobile Station Control on the Traffic Channel State*.

Traffic Channel processing consists of the following substates:

- *Traffic Channel Initialization Substate* - In this substate, the base station begins transmitting on the Forward Traffic Channel and receiving on the Reverse Traffic Channel.
- *Traffic Channel Substate* - In this substate, the base station exchanges Traffic Channel frames with the mobile station in accordance with the current service configuration. While in this substate, one or more Call Control instances can be activated (see 3.6.8).
- *Release Substate* - In this substate, the base station disconnects the calls and the physical channels.

#### 3.6.4.1 Special Functions and Actions

The base station performs the following special functions and actions in one or more of the Traffic Channel processing substates:

##### 3.6.4.1.1 Forward Traffic Channel Power Control

Forward Traffic Channel Power Control procedures do not apply to Forward Packet Data Channel.

When the base station enables Forward Traffic Channel power control, the mobile station reports frame error rate statistics to the base station using the *Power Measurement Report Message*.

The base station may enable Forward Traffic Channel power control using the *System Parameters Message* sent on the Paging Channel and the *Power Control Parameters Message* sent on the Forward Traffic Channel. The base station may enable Forward Traffic Channel power control using the *MC-RR Parameters Message* sent on the Primary Broadcast Control Channel and the *Power Control Parameters Message* sent on the Forward Traffic Channel. The base station may enable periodic reporting which causes the mobile station to report frame error rate statistics at specified intervals. The base station may also enable threshold reporting which causes the mobile station to report frame error rate statistics when the frame error rate reaches a specified threshold.<sup>2</sup>

The base station may use the reported frame error rate statistics to adjust the transmit power of the Forward Traffic Channel.

---

<sup>2</sup>In this section the term base station may imply multiple cells or sectors.

### 3.6.4.1.2 Service Configuration and Negotiation

During Traffic Channel operation, the mobile station and base station communicate through the exchange of Forward and Reverse Traffic Channel Configurations. The mobile station and base station use a common set of attributes for building and interpreting Traffic Channel frames. This set of attributes, referred to as a service configuration, consists of both negotiable and non-negotiable parameters.

The set of negotiable service configuration parameters consists of the following:

1. **Forward and Reverse Multiplex Options:** These control the way in which the information bits of the Forward and Reverse Traffic Channel frames, respectively, are divided into various types of traffic, such as signaling traffic, primary traffic and secondary traffic. A multiplex option together with a radio configuration specifies the frame structures and transmission rates (see [3]). The Multiplex Options which support Supplemental Code Channel transmission and Supplemental Channel transmission on the Forward and Reverse Traffic Channels are included in [3]. Invocation of Supplemental Code Channel operation on the Forward or Reverse Traffic Channels occurs by transmission of the *Supplemental Channel Request Message*, the *Supplemental Channel Assignment Message*, and the *General Handoff Direction Message*. The Multiplex Options which support Supplemental Code Channel transmission and Supplemental Channel transmission on the Forward and Reverse Traffic Channels are included in [3]. The multiplex option used for the Forward Traffic Channel can be the same as that used for the Reverse Traffic Channel, or it can be different.
2. **Forward and Reverse Traffic Channel Configurations:** These include the radio configurations and other necessary attributes for the Forward and Reverse Traffic Channels. The Traffic Channel Configuration used can be different for the Forward and Reverse Traffic Channels or it can be the same.
3. **Forward and Reverse Traffic Channel Transmission Rates:** These are the transmission rates actually used for the Forward and Reverse Traffic Channels, respectively. The transmission rates for the Forward Traffic Channel can include all of the transmission rates supported by the radio configuration associated with the Forward Traffic Channel multiplex option, or a subset of the supported rates. Similarly, the transmission rates used for the Reverse Traffic Channel can include all rates supported by the radio configuration associated with the Reverse Traffic Channel multiplex option, or a subset of the supported rates. The transmission rates used for the Forward Traffic Channel can be the same as those used for the Reverse Traffic Channel, or they can be different.
4. **Service Option Connections:** These are the services in use on the Traffic Channel. There can be multiple service option connections. It is also possible that there is no service option connection, in which case the base station uses the Forward Traffic Channel as follows:
  - Sends signaling traffic and null traffic on the Forward Fundamental Channel.

- Sends signaling traffic on the Forward Dedicated Control Channel.
- If F-CPCCH is assigned, sends power control bits on the F-CPCCH; otherwise, sends power control bits on the Forward Fundamental Channel if FPC\_PRI\_CHAN is set to '0'; sends power control bits on the Forward Dedicated Control Channel if FPC\_PRI\_CHAN is set to '1'.

Associated with each service option connection are a service option, a Forward Traffic Channel traffic type, a Reverse Traffic Channel traffic type, and a service option connection reference. The associated service option formally defines the way in which traffic bits are processed by the mobile station and base station. The associated Forward and Reverse Traffic Channel traffic types specify the types of traffic used to support the service option. A service option can require the use of a particular type of traffic, such as primary or secondary, or it can accept more than one traffic type. A service option can be one-way, in which case it can be supported on the Forward Traffic Channel only or the Reverse Traffic Channel only. Alternatively, a service option can be two-way, in which case it can be supported on the Forward and Reverse Traffic Channels simultaneously. Connected service options can also invoke operation on Supplemental Code Channels in either one or both of the Forward and Reverse Traffic Channels by negotiating a multiplex option that supports operation on Supplemental Code Channels (see [3] for Multiplex Options applicable to Supplemental Code Channels), and by using the appropriate Supplemental Code Channel related messages (i.e., the *Supplemental Channel Request Message*, the *Supplemental Channel Assignment Message*, and the *General Handoff Direction Message*). After Supplemental Code Channels have been assigned by the base station, the connected service option can transmit primary and/or secondary traffic on Supplemental Code Channels. Connected service options can also invoke operation on Supplemental Channels in either one or both of the Forward and Reverse Traffic Channels by negotiating a multiplex option that supports operation on Supplemental Channels (see [3] for Multiplex Options applicable to Supplemental Channels) and by using the appropriate Supplemental Channel related messages (i.e., the *Supplemental Channel Request Message*, the *Universal Handoff Direction Message*, the *Supplemental Channel Request Mini Message*, the *Extended Supplemental Channel Assignment Message*, the *Forward Supplemental Channel Assignment Mini Message*, and the *Reverse Supplemental Channel Assignment Mini Message*). After Supplemental Channels have been assigned by the base station, the connected service option can transmit primary and/or secondary traffic on Supplemental Channels. The associated service option connection reference provides a means for uniquely identifying the service option connection. The reference serves to resolve ambiguity when there are multiple service option connections in use.

The non-negotiable service configuration parameters are sent from the base station to the mobile stations only, and consist of the following:

- 1       1. *Reverse Pilot Gating Rate*: This controls the way in which the reverse pilot is gated  
2       on the Reverse Pilot Channel. The base station specifies the reverse pilot gating rate  
3       to be used in the *Service Connect Message*, the *General Handoff Direction Message*,  
4       and the *Universal Handoff Direction Message*.
- 5       2. *Forward and Reverse Power Control Parameters*: These consist of forward power  
6       control operation mode, outer loop power control parameters (e.g. target frame error  
7       rate, minimum  $E_b/N_t$  setpoint, and maximum  $E_b/N_t$  setpoint) for the Forward  
8       Fundamental Channel and Forward Dedicated Control Channel, and Power Control  
9       Subchannel indicator which indicates where the mobile station is to perform the  
10      primary inner loop estimation and the base station is to multiplex the Power  
11      Control Subchannel.
- 12      3. *Logical to Physical Mapping*: This is a table of logical to physical mapping entries,  
13      consisting of service reference identifier, logical resource, physical resource,  
14      forward flag, reverse flag, and priority.
- 15      4. *Partition Table*: The base station may include this table to specify the number of  
16      bits allocated for each service in the Fundamental Channel or Dedicated Control  
17      Channel.
- 18      5. *SCH LTU Size Table*: The base station may include this table to specify the number  
19      of bits per supplemental channel LTU.
- 20      6. Information related to Variable Rate feature (the capability to support rate  
21      determination) on Forward and Reverse Supplemental Channels
- 22      7. Information related to Flexible Rate feature (the capability to support non-listed  
23      rates) on Forward and Reverse Fundamental Channel, Dedicated Control Channel,  
24      and Supplemental Channels

25      The mobile station can request a default service configuration associated with a service  
26      option at call origination, and can request new service configurations during Traffic  
27      Channel operation. A requested service configuration can differ greatly from its  
28      predecessor or it can be very similar. For example, the mobile station can request a service  
29      configuration in which all of the service option connections are different from those of the  
30      existing configuration; or the mobile station can request a service configuration in which  
31      the existing service option connections are maintained with only minor changes, such as a  
32      different set of transmission rates or a different mapping of service option connections to  
33      Forward and Reverse Traffic Channel traffic types.

34      If the mobile station requests a service configuration that is acceptable to the base station,  
35      they both begin using the new service configuration. If the mobile station requests a  
36      service configuration that is not acceptable to the base station, the base station can reject  
37      the requested service configuration or propose an alternative service configuration. If the  
38      base station proposes an alternative service configuration, the mobile station can accept or  
39      reject the base station's proposed service configuration, or propose yet another service  
40      configuration. This process, called service negotiation, ends when the mobile station and  
41      base station find a mutually acceptable service configuration, or when either the mobile  
42      station or base station rejects a service configuration proposed by the other.

It is also possible for the base station to request a default service configuration, associated with a service option, when paging the mobile station and to request new service configurations during Traffic Channel operation. The service negotiation proceeds as described above, but with the roles of the mobile station and base station reversed.

For CDMA mode operation in Band Class 0, the mobile station and base station can also use an alternative method for negotiating a service configuration known as service option negotiation. Service option negotiation is similar to service negotiation, but offers less flexibility for specifying the attributes of the service configuration. During service option negotiation, the base station or mobile station specifies only which service option is to be used. There is no facility for explicitly specifying the multiplex options, traffic types or transmission rates to be used on the Forward and Reverse Traffic Channels in conjunction with the service option. Instead, implicit service configuration attributes are assumed. In particular, the Forward and Reverse Multiplex Options and transmission rates are assumed to be the default multiplex options and transmission rates associated with the requested service option, and the traffic type for both the Forward and Reverse Traffic Channels is assumed to be primary traffic. Furthermore, a service configuration established using service option negotiation is restricted to having only a single service option connection.

At mobile station origination and termination, the type of negotiation to use, either service negotiation or service option negotiation, is indicated in the *Channel Assignment Message*. Service negotiation is always used with the *Extended Channel Assignment Message*. If a CDMA-to-CDMA hard handoff occurs during the call, the type of negotiation to use following the handoff is indicated in the *Extended Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message*.

For CDMA mode operation in band classes other than Band Class 0, only service negotiation is to be used.

The following messages are used to support service negotiation:

1. *Service Request Message*: The mobile station can use this message to propose a service configuration, or to accept or reject a service configuration proposed in a *Service Response Message*. The base station can use this message to propose a service configuration, or to reject a service configuration proposed in a *Service Response Message*.
2. *Service Response Message*: The mobile station can use this message to accept or reject a service configuration proposed in a *Service Request Message*, or to propose an alternative service configuration. The base station can use this message to reject a service configuration proposed in a *Service Request Message*, or to propose an alternative service configuration.
3. *Service Connect Message*: The base station can use this message to accept a service configuration proposed in a *Service Request Message* or *Service Response Message*, and instruct the mobile station to begin using the service configuration. The base station may use this message to instruct the mobile station to use the stored service configuration (that is, both the Service Configuration information record and the Non-negotiable Service Configuration information record) based on

the value of the SYNC\_ID that the mobile station has reported in the *Origination Message* or *Page Response Message*. If P\_REV\_IN\_USE is greater than or equal to 11, the base station can use this message to instruct the mobile station to use the stored service configuration (that is, both the Service Configuration information record and the Non-negotiable Service Configuration information record) based on the value of the SYNC\_ID that the base station has included in this message.

4. *Service Connect Completion Message*: The mobile station can use this message to acknowledge the transition to a new service configuration.

5. *Service Option Control Message*: The mobile station and base station can use this message to invoke service option specific functions.

6. *Extended Channel Assignment Message*: The base station can use this message to accept or reject the initial service configuration proposed by the mobile station in an *Origination Message* or a *Page Response Message*.

The following messages are used to support service option negotiation:

1. *Service Option Request Order*: The mobile station and base station can use this message either to request a service option or suggest an alternative service option.

2. *Service Option Response Order*: The mobile station and base station can use this message to accept or reject a service option request.

3. *Service Option Control Order*: The mobile station and base station can use this message to invoke service option specific functions.

The following messages are used to support both service negotiation and service option negotiation:

1. *Origination Message*: The mobile station can use this message to propose an initial service configuration.

2. *Channel Assignment Message*: The base station can use this message to accept or reject the initial service configuration proposed by the mobile station in an *Origination Message* or a *Page Response Message*, and to indicate which type of negotiation, either service negotiation or service option negotiation, is to be used during the call.

3. *Extended Handoff Direction Message*: The base station can use this message to indicate which type of negotiation, either service negotiation or service option negotiation, is to be used following a CDMA-to-CDMA hard handoff.

4. *General Handoff Direction Message*: The base station can use this message to indicate which type of negotiation, either service negotiation or service option negotiation, is to be used following a CDMA-to-CDMA hard handoff. The base station can use this message to accept a service configuration proposed in a *Service Request Message* or *Service Response Message*. The base station can also use this message to instruct the mobile station to begin using the service configuration.

5. *General Page Message* or *Universal Page Message*: The base station can use a mobile-station-addressed page in a *General Page Message* or *Universal Page Message* to propose an initial service configuration.
6. *Page Response Message*: The mobile station can use this message to accept or reject the initial service configuration proposed by the base station in a mobile-station-addressed page, or to propose an alternative initial service configuration.
7. *Status Request Message*: The base station can use this message to request service capability information from the mobile station.
8. *Status Response Message*: The mobile station can use this message to return the service capability information requested by the base station in a *Status Request Message*.
9. *Extended Status Response Message*: The mobile station can use this message to return the service capability information requested by the base station in a *Status Request Message*.
10. *Universal Handoff Direction Message*: The base station can use this message to indicate which type of negotiation, either service negotiation or service option negotiation, is to be used following a CDMA-to-CDMA hard handoff. The base station can use this message to accept a service configuration proposed in a *Service Request Message* or *Service Response Message*. The base station can also use this message to instruct the mobile station to begin using the service configuration.

#### 3.6.4.1.2.1 Use of Variables

##### 3.6.4.1.2.1.1 Maintaining the Service Request Sequence Number

The base station shall maintain a service request sequence number variable, `SERV_REQ_NUM`, for use with service negotiation. Upon beginning Traffic Channel processing, the base station shall set `SERV_REQ_NUM` to 0. Each time the base station sends a new *Service Request Message*, it shall set the `SERV_REQ_SEQ` field of the message to the current value of `SERV_REQ_NUM` and shall then set `SERV_REQ_NUM` equal to  $(\text{SERV\_REQ\_NUM} + 1) \text{ modulo } 8$ .

##### 3.6.4.1.2.1.2 Maintaining the Service Connect Sequence Number

The base station shall maintain a service connect sequence number variable, `SERV_CON_NUM`, for use with service negotiation. Upon beginning Traffic Channel processing, the base station shall set `SERV_CON_NUM` to 0. Each time the base station sends a new *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message* containing a service configuration record, it shall set the `SERV_CON_SEQ` field of the message to the current value of `SERV_CON_NUM` and shall then set `SERV_CON_NUM` equal to  $(\text{SERV\_CON\_NUM} + 1) \text{ modulo } 8$ .

#### 3.6.4.1.2.1.3 Assigning Service Option Connection References

When the base station assigns a service option connection reference for use in identifying a new service option connection during service negotiation, the base station shall use the following criteria:

1. The base station shall not assign a reference equal to '00000000'; and
2. The base station shall not assign a reference that is associated with a service option connection of the current service configuration; and
3. If there was a previous service configuration, the base station shall not assign a reference that was associated with a service option connection of the previous service configuration.

#### 3.6.4.1.2.1.4 Maintaining the Service Negotiation Indicator Variable

The base station shall maintain a service negotiation indicator variable, SERV\_NEG, to indicate which type of negotiation to use, either service negotiation or service option negotiation. The base station shall set SERV\_NEG to enabled whenever service negotiation is to be used, and shall set SERV\_NEG to disabled whenever service option negotiation is to be used. The precise rules for setting SERV\_NEG are specified in 3.6.4.2 and 3.6.6.2.2.2.

For CDMA operation in band classes other than Band Class 0, the base station shall set SERV\_NEG to enabled.

#### 3.6.4.1.2.1.5 Maintaining the Service Option Request Number

The base station shall maintain a service option request number variable, SO\_REQ, for use with service option negotiation. The base station shall set SO\_REQ to a special value, NULL, if the base station does not have an outstanding service option request. If the base station has an outstanding service option request, the base station shall set SO\_REQ to the number of the service option associated with the outstanding request.

#### 3.6.4.1.2.2 Service Subfunctions

As illustrated in Figure 3.6.4.1.2.2-1, the base station supports service configuration and negotiation by performing the following set of service subfunctions.

- *Normal Service Subfunction* - While this subfunction is active, the base station processes service configuration requests from the mobile station and sends service configuration requests to the mobile station.
- *Waiting for Service Request Message Subfunction* - While this subfunction is active, the base station waits to receive a *Service Request Message*.
- *Waiting for Service Response Message Subfunction* - While this subfunction is active, the base station waits to receive a *Service Response Message*.
- *Waiting for Service Action Time Subfunction* - While this subfunction is active, the base station waits for the action time associated with a new service configuration.

- 1       • *Waiting for Service Connect Completion Message Subfunction* - While this  
2       subfunction is active, the base station waits to receive a *Service Connect Completion*  
3       *Message*, a *Handoff Completion Message*, or an *Extended Handoff Completion*  
4       *Message*.
- 5       • *SO Negotiation Subfunction* - While this subfunction is active and the base station  
6       is operating in Band Class 0, the base station supports service option negotiation  
7       with the mobile station.

8       The *SO Negotiation Subfunction* supports service option negotiation. All of the other  
9       service subfunctions support service negotiation.

10      At any given time during Traffic Channel processing, only one of the service subfunctions  
11      is active. For example, when the base station first begins Traffic Channel processing,  
12      either the *Normal Service Subfunction* or the *SO Negotiation Subfunction* is active. Each of  
13      the other service subfunctions may become active in response to various events which  
14      occur during the Traffic Channel substates. Typically, the base station processes events  
15      pertaining to service configuration and negotiation in accordance with the requirements  
16      for the active service subfunction. However, some Traffic Channel substates do not allow  
17      for the processing of certain events pertaining to service configuration and negotiation, or  
18      specify requirements for processing such events which supersede the requirements of the  
19      active service subfunction.

20

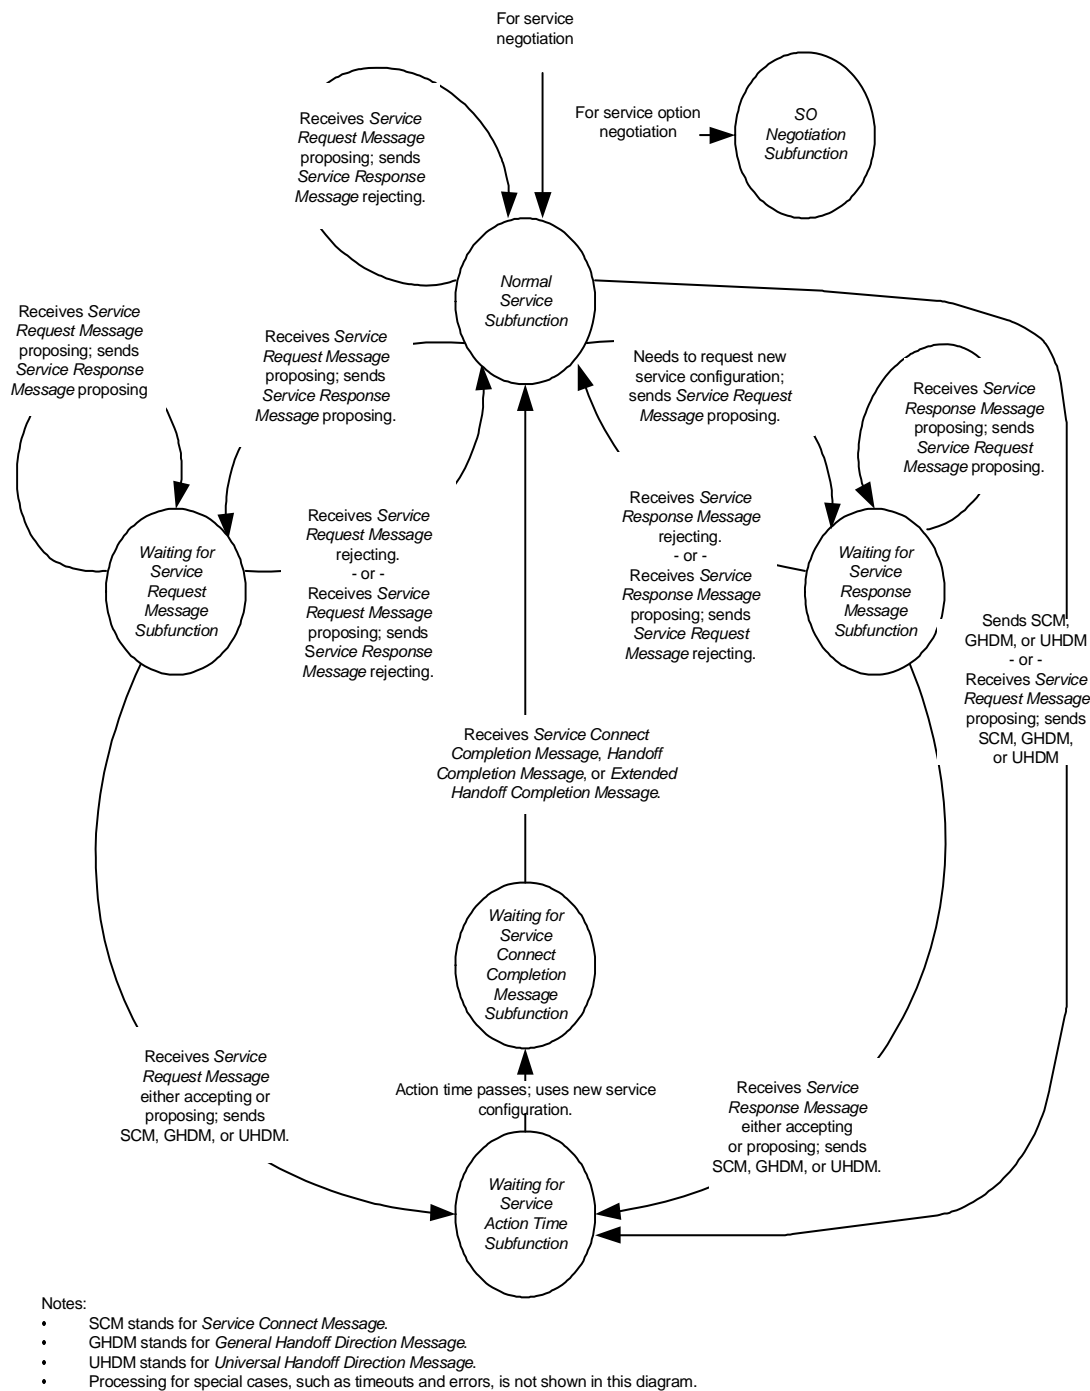

Figure 3.6.4.1.2.2-1. Base Station Service Subfunctions

#### 3.6.4.1.2.2.1 Normal Service Subfunction

While this subfunction is active, the base station processes service configuration requests from the mobile station and sends service configuration requests to the mobile station.

While the *Normal Service Subfunction* is active, the base station shall perform the following:

- The base station shall process Forward and Reverse Traffic Channel frames in accordance with the current service configuration. The base station shall discard any Reverse Traffic Channel frame which has a format that is not supported by the base station. The base station may discard any type of Reverse Traffic Channel traffic that is not signaling traffic and is not part of the current service configuration.
- To initiate service negotiation for a new service configuration, the base station shall send a *Service Request Message* to propose the new service configuration and shall activate the *Waiting for Service Response Message Subfunction*.
- For any service option connection that is part of the current service configuration, the base station may send a *Service Option Control Message* to invoke a service option specific function in accordance with the requirements for the associated service option.
- The base station may send a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message* containing a service configuration record. If the base station sends this message, the base station shall activate the *Waiting for Service Action Time Subfunction*.
- If SERV\_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- If the base station receives one of the following service negotiation messages, the base station shall process the message according to the specified requirements, if any:
  1. *Service Connect Completion Message*
  2. *Service Option Control Message*: If the service option connection specified by the message is part of the current service configuration, and the service option specified by the message is the same as the service option associated with the service option connection, the base station shall process the message in accordance with the requirements for the service option.
  3. *Service Request Message*: The base station shall process the message as follows:
    - If the purpose of the message is to propose a service configuration, the base station shall process the message as follows:

- If the base station accepts the proposed service configuration, the base station shall send a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message* containing a service configuration record and shall activate the *Waiting for Service Action Time Subfunction*.
- If the base station does not accept the proposed service configuration and does not have an alternative service configuration to propose, the base station shall send a *Service Response Message* to reject the proposed service configuration.
- If the base station does not accept the proposed service configuration and has an alternative service configuration to propose, the base station shall perform one of the following actions:
  - Send a *Service Response Message* to propose the alternative service configuration and shall activate the *Waiting for Service Request Message Subfunction*, or
  - Send a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message* containing a service configuration record and shall activate the *Waiting for Service Action Time Subfunction*

#### 4. *Service Response Message*

- If the base station receives one of the following service option negotiation messages, the base station shall process the message according to the specified requirements, if any:
  1. *Service Option Request Order*
  2. *Service Option Response Order*
  3. *Service Option Control Order*

#### 3.6.4.1.2.2.2 *Waiting for Service Request Message Subfunction*

While this subfunction is active, the base station waits to receive a *Service Request Message*.

While the *Waiting for Service Request Message Subfunction* is active, the base station shall perform the following:

- If the base station does not receive a *Service Request Message*, the base station shall activate the *Normal Service Subfunction*.

- 1       • The base station shall process Forward and Reverse Traffic Channel frames in  
2       accordance with the current service configuration. The base station shall discard  
3       any Reverse Traffic Channel frame which has a format that is not supported by the  
4       base station. The base station may discard any type of Reverse Traffic Channel  
5       traffic that is not signaling traffic and is not part of the current service  
6       configuration.
- 7       • For any service option connection that is part of the current service configuration,  
8       the base station may send a *Service Option Control Message* to invoke a service  
9       option specific function in accordance with the requirements for the associated  
10      service option.
- 11      • If SERV\_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and  
12      3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 13      • If the base station receives one of the following service negotiation messages, the  
14      base station shall process the message according to the specified requirements, if  
15      any:
  - 16      1. *Service Connect Completion Message*
  - 17      2. *Service Option Control Message*: If the service option connection specified by  
18      the message is part of the current service configuration, and the service option  
19      specified by the message is the same as the service option associated with the  
20      service option connection, the base station shall process the message in  
21      accordance with the requirements for the service option.
  - 22      3. *Service Request Message*: The base station shall process the message as  
23      follows:
    - 24      • If the purpose of the message is to accept a proposed service configuration,  
25      the base station shall perform one of the following actions:
      - 26      – The base station shall send a *Service Connect Message*, *General Handoff*  
27      *Direction Message*, or *Universal Handoff Direction Message* and shall  
28      activate the *Waiting for Service Action Time Subfunction*.
      - 29      – The base station shall send a *Service Request Message* to propose an  
30      alternative service configuration and shall activate the *Waiting for*  
31      *Service Response Message Subfunction*.
    - 32      • If the purpose of the message is to reject a proposed service configuration,  
33      the base station shall activate the *Normal Service Subfunction*.
    - 34      • If the purpose of the message is to propose a service configuration, the base  
35      station shall process the message as follows:
      - 36      – If the base station accepts the proposed service configuration, the base  
37      station shall send a *Service Connect Message*, a *General Handoff*  
38      *Direction Message*, or a *Universal Handoff Direction Message* containing  
39      a service configuration record and shall activate the *Waiting for Service*  
40      *Action Time Subfunction*.

- 1                   – If the base station does not accept the proposed service configuration  
2                   and does not have an alternative service configuration to propose, the  
3                   base station shall send a *Service Response Message* to reject the  
4                   proposed service configuration. The base station shall activate the  
5                   *Normal Service Subfunction*.
- 6                   – If the base station does not accept the proposed service configuration  
7                   and has an alternative service configuration to propose, the base station  
8                   shall perform one of the following actions:
  - 9                   o Send a *Service Response Message* to propose the alternative service  
10                   configuration, or
  - 11                   o Send a *Service Connect Message*, a *General Handoff Direction*  
12                   *Message*, or a *Universal Handoff Direction Message* containing a  
13                   service configuration record and shall activate the *Waiting for Service*  
14                   *Action Time Subfunction*

#### 15           4. *Service Response Message*

- 16           • If the base station receives one of the following service option negotiation messages,  
17           the base station shall process the message according to the specified requirements,  
18           if any:
  - 19           1. *Service Option Request Order*
  - 20           2. *Service Option Response Order*
  - 21           3. *Service Option Control Order*

#### 22   3.6.4.1.2.2.3 *Waiting for Service Response Message Subfunction*

23   While this subfunction is active, the base station waits to receive a *Service Response*  
24   *Message*.

25   While the *Waiting for Service Response Message Subfunction* is active, the base station  
26   shall perform the following:

- 27           • If the base station does not receive a *Service Response Message*, the base station  
28           shall activate the *Normal Service Subfunction*.
- 29           • The base station shall process Forward and Reverse Traffic Channel frames in  
30           accordance with the current service configuration. The base station shall discard  
31           any Reverse Traffic Channel frame which has a format that is not supported by the  
32           base station. The base station may discard any type of Reverse Traffic Channel  
33           traffic that is not signaling traffic and is not part of the current service  
34           configuration.
- 35           • For any service option connection that is part of the current service configuration,  
36           the base station may send a *Service Option Control Message* to invoke a service  
37           option specific function in accordance with the requirements for the associated  
38           service option.

- 1 • If SERV\_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and  
2 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 3 • If the base station receives one of the following service negotiation messages, the  
4 base station shall process the message according to the specified requirements, if  
5 any:
  - 6 1. *Service Connect Completion Message*
  - 7 2. *Service Option Control Message*: If the service option connection specified by  
8 the message is part of the current service configuration, and the service option  
9 specified by the message is the same as the service option associated with the  
10 service option connection, the base station shall process the message in  
11 accordance with the requirements for the service option.
  - 12 3. *Service Request Message*: The base station should not process the Layer 3  
13 fields of the message.
  - 14 4. *Service Response Message*: The base station shall process the message as  
15 follows:
    - 16 • If the service request sequence number (SERV\_REQ\_SEQ) from the message  
17 does not match the sequence number of the *Service Request Message* for  
18 which the base station is expecting a response, the base station shall not  
19 process the Layer 3 fields of the message.
    - 20 • If the purpose of the message is to accept a proposed service configuration,  
21 the base station shall perform one of the following actions:
      - 22 – The base station shall send a *Service Connect Message*, a *General*  
23 *Handoff Direction Message*, or a *Universal Handoff Direction Message*  
24 containing a service configuration record and shall activate the *Waiting*  
25 *for Service Action Time Subfunction*. Or
      - 26 – The base station shall send a *Service Request Message* to propose an  
27 alternative service configuration.
    - 28 • If the purpose of the message is to reject a proposed service configuration,  
29 the base station shall activate the *Normal Service Subfunction*.
    - 30 • If the purpose of the message is to propose a service configuration, the base  
31 station shall process the message as follows:
      - 32 – If the base station accepts the proposed service configuration, the base  
33 station shall send a *Service Connect Message*, a *General Handoff*  
34 *Direction Message*, or a *Universal Handoff Direction Message* containing  
35 a service configuration record and shall activate the *Waiting for Service*  
36 *Action Time Subfunction*.

- 1                   – If the base station does not accept the proposed service configuration  
2                   and does not have an alternative service configuration to propose, the  
3                   base station shall send a *Service Request Message* to reject the proposed  
4                   service configuration. The base station shall activate the *Normal Service*  
5                   *Subfunction*.
- 6                   – If the base station does not accept the proposed service configuration  
7                   and has an alternative service configuration to propose, the base station  
8                   shall perform one of the following actions:
  - 9                   o Send a *Service Request Message* to propose the alternative service  
10                   configuration, or
  - 11                   o Send a *Service Connect Message*, a *General Handoff Direction*  
12                   *Message*, or a *Universal Handoff Direction Message* containing a  
13                   service configuration record and shall activate the *Waiting for Service*  
14                   *Action Time Subfunction*
- 15           • If the base station receives one of the following service option negotiation messages,  
16           the base station shall process the message according to the specified requirements,  
17           if any:
  - 18           1. *Service Option Request Order*
  - 19           2. *Service Option Response Order*
  - 20           3. *Service Option Control Order*

#### 21   3.6.4.1.2.2.4 Waiting for Service Action Time Subfunction

22   While this subfunction is active, the base station waits for the action time associated with  
23   a new service configuration.

24   While the *Waiting for Service Action Time Subfunction* is active, the base station shall  
25   perform the following:

- 26           • Prior to the action time associated with the *Service Connect Message*, a *General*  
27           *Handoff Direction Message*, or *Universal Handoff Direction Message* containing a  
28           service configuration record, the base station shall process Forward and Reverse  
29           Traffic Channel frames in accordance with the current service configuration. The  
30           base station shall discard any Reverse Traffic Channel frame which has a format  
31           that is not supported by the base station. The base station may discard any type of  
32           Reverse Traffic Channel traffic that is not signaling traffic and is not part of the  
33           current service configuration.

- At the action time associated with the *Service Connect Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message* containing a service configuration record, the base station shall begin to use the service configuration specified by the *Service Connect Message*, the *General Handoff Direction Message*, or the *Universal Handoff Direction Message* containing a service configuration record, as the current service configuration and shall begin to process Forward and Reverse Traffic Channel frames accordingly. The base station shall activate the *Waiting for Service Connect Completion Message Subfunction*.
- If SERV\_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- If the base station receives one of the following service negotiation messages, the base station shall process the message according to the specified requirements, if any:
  1. *Service Connect Completion Message*
  2. *Service Option Control Message*: If the service option connection specified by the message is part of the current or pending service configuration, and the service option specified by the message is the same as the service option associated with the service option connection, the base station shall process the message in accordance with the requirements for the service option.
  3. *Service Request Message*
  4. *Service Response Message*
- If the base station receives one of the following service option negotiation messages, the base station shall process the message according to the specified requirements, if any:
  1. *Service Option Request Order*
  2. *Service Option Response Order*
  3. *Service Option Control Order*

#### 3.6.4.1.2.2.5 Waiting for Service Connect Completion Message Subfunction

While this subfunction is active, the base station waits to receive a *Service Connect Completion Message*, a *Handoff Completion Message*, or an *Extended Handoff Completion Message*.

While the *Waiting for Service Connect Completion Message Subfunction* is active, the base station shall perform the following:

- If the base station has sent a *Service Connect Message* and does not receive a *Service Connect Completion Message*, or if the base station has sent a *General Handoff Direction Message* or a *Universal Handoff Direction Message* containing a Service Configuration record and does not receive a *Handoff Completion Message*, or an *Extended Handoff Completion Message*, the base station shall activate the *Normal Service Subfunction*.

- 1 • The base station shall process Forward and Reverse Traffic Channel frames in  
2 accordance with the current service configuration. The base station shall discard  
3 any Reverse Traffic Channel frame which has a format that is not supported by the  
4 base station. The base station may discard any type of Reverse Traffic Channel  
5 traffic that is not signaling traffic and is not part of the current service  
6 configuration.
- 7 • The base station shall not initiate service negotiation for a new service  
8 configuration.
- 9 • If SERV\_NEG changes from enabled to disabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and  
10 3.6.6.2.2.11), the base station shall activate the *SO Negotiation Subfunction*.
- 11 • If the base station receives one of the following service negotiation messages, the  
12 base station shall process the message according to the specified requirements, if  
13 any:
  - 14 1. *Service Connect Completion Message, Handoff Completion Message, or Extended*  
15 *Handoff Completion Message*: The base station shall activate the *Normal*  
16 *Service Subfunction*.
  - 17 2. *Service Option Control Message*: If the service option connection specified by  
18 the message is part of the current service configuration, and the service option  
19 specified by the message is the same as the service option associated with the  
20 service option connection, the base station shall process the message in  
21 accordance with the requirements for the service option.
  - 22 3. *Service Request Message*
  - 23 4. *Service Response Message*
- 24 • If the base station receives one of the following service option negotiation messages,  
25 the base station shall process the message according to the specified requirements,  
26 if any:
  - 27 1. *Service Option Request Order*
  - 28 2. *Service Option Response Order*
  - 29 3. *Service Option Control Order*

#### 30 3.6.4.1.2.2.6 SO Negotiation Subfunction

31 While this subfunction is active, the base station supports service option negotiation with  
32 the mobile station.

33 Upon activating the *SO Negotiation Subfunction*, the base station shall set SO\_REQ to  
34 NULL. The base station shall delete from the current service configuration any service  
35 option connection which does not use primary traffic on both the Forward and Reverse  
36 Traffic Channels.

37 While the *SO Negotiation Subfunction* is active, the base station shall perform the following:

- 1       • If the current service configuration includes a service option connection, the base  
2       station shall process the received primary traffic bits in accordance with the  
3       requirements for the service option associated with the service option connection;  
4       otherwise, the base station shall discard the received primary traffic bits.
- 5       • If the current service configuration includes a service option connection, the base  
6       station shall transmit primary traffic bits in accordance with the requirements for  
7       the service option associated with the service option connection; otherwise, the  
8       base station shall transmit null traffic and power control bits on the Forward  
9       Fundamental Channel, if the Fundamental channel is present to transmit power  
10      control bits on the Forward Dedicated Control Channel, if only the Dedicated  
11      Control Channel is present.
- 12      • If the current service configuration includes a service option connection, the base  
13      station may send a *Service Option Control Order* to invoke a service option specific  
14      function in accordance with the requirements for the service option associated with  
15      the service option connection.
- 16      • To initiate service option negotiation, the base station shall set SO\_REQ to the  
17      number of the requested service option and shall send a *Service Option Request*  
18      *Order* containing the requested service option number.
- 19      • If SERV\_NEG changes from disabled to enabled (see 3.6.6.2.2.2, 3.6.6.2.2.10, and  
20      3.6.6.2.2.11), the base station shall activate the *Normal Service Subfunction*.
- 21      • The base station shall process a service option request received in an *Origination*  
22      *Message*, a *Page Response Message*, or a *Service Option Request Order* as follows:
  - 23       – If the base station accepts the requested service option, the base station shall  
24       set SO\_REQ to NULL and shall send a *Service Option Response Order* accepting  
25       the requested service option within  $T_{4b}$  seconds. The base station shall begin  
26       using the service configuration implied by the requested service option in  
27       accordance with the requirements for the requested service option. The implied  
28       service configuration shall include the default Forward and Reverse Multiplex  
29       Options and transmission radio configurations associated with the requested  
30       service option. This implied service configuration shall include one service  
31       option connection for which the service option connection reference is 1, for  
32       which the service option is the requested service option, and for which the  
33       Forward and Reverse Traffic Channel types are both primary traffic.
  - 34       – If the base station does not accept the requested service option and has an  
35       alternative service option to request, the base station shall set SO\_REQ to the  
36       alternative service option number and shall send a *Service Option Request Order*  
37       requesting the alternative service option within  $T_{4b}$  seconds.
  - 38       – If the base station does not accept the requested service option and does not  
39       have an alternative service option to request, the base station shall set SO\_REQ  
40       to NULL and shall send a *Service Option Response Order* to reject the request  
41       within  $T_{4b}$  seconds. The base station shall continue to use the current service  
42       configuration.

- 1     • If the base station receives a *Service Option Response Order*, it shall process the  
2     order as follows:
  - 3       – If the service option number specified in the order is equal to SO\_REQ, the base  
4       station shall set SO\_REQ to NULL and shall begin using the service  
5       configuration implied by the specified service option in accordance with the  
6       requirements for the service option. The implied service configuration shall  
7       include the default Forward and Reverse Multiplex Options and radio  
8       configurations associated with the requested service option. This implied  
9       service configuration shall include one service option connection for which the  
10      service option connection reference is 1, for which the service option is the  
11      requested service option, and for which the Forward and Reverse Traffic  
12      Channel types are both primary traffic.
  - 13      – If the order indicates a service option rejection, the base station shall set  
14      SO\_REQ to NULL. The base station shall continue to use the current service  
15      configuration.
  - 16      – If the order does not indicate a service option rejection and the service option  
17      specified in the order is not equal to SO\_REQ, the base station shall set  
18      SO\_REQ to NULL, should send a *Release Order* (ORDQ = '00000010'), and  
19      should enter the *Release Substate*.
- 20   • If the base station receives a *Service Option Control Order*, the base station shall  
21   process the order as follows:
  - 22      – If the current service configuration includes a service option connection, the  
23      base station shall process the received *Service Option Control Order* in  
24      accordance with the requirements for the service option associated with the  
25      service option connection.
- 26   • If the base station receives one of the following service negotiation messages, the  
27   base station shall process the message according to the specified requirements, if  
28   any:
  - 29      1. *Service Connect Completion Message*
  - 30      2. *Service Option Control Message*
  - 31      3. *Service Request Message*
  - 32      4. *Service Response Message*

#### 33   3.6.4.1.3 Ordering of Messages

34   The Layer 2 protocol does not guarantee delivery of messages in any order. If the base  
35   station requires that the mobile station receive a set of messages in a certain order, the  
36   base station shall send each message in assured mode requiring confirmation of delivery  
37   and shall wait for the confirmation of delivery of each message before transmitting the next  
38   message in the set.

#### 3.6.4.1.4 Message Action Times

A Forward Traffic Channel message without a USE\_TIME field or with a USE\_TIME field set to '0' has an implicit action time. A message that has its USE\_TIME field set to '1' has an explicit action time that is specified in the ACTION\_TIME field of the message.

A message with an explicit action time is called a pending message.

Unless otherwise specified, a message having an implicit action time shall take effect no later than the first 80 ms boundary (relative to System Time plus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms) occurring at least 80 ms after the end of the frame containing the last bit of the message. A message with an explicit action time, except for a *Power Up Function Message*, shall take effect when System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms (in 80 ms units) modulo 64 becomes equal to the message's ACTION\_TIME field. A *Power Up Function Message* shall take effect ACTION\_TIME\_FRAME frames after the time when System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms (in 80 ms units) modulo 64 becomes equal to the message's ACTION\_TIME field. The difference in time between ACTION\_TIME and the end of the frame containing the last bit of the message shall be at least 80 ms.

The base station shall support two pending messages at any given time, not including pending *Service Option Control Orders*, *Service Option Control Messages*, or *Power Up Function Messages*. The number of pending *Service Option Control Orders* or *Service Option Control Messages* that the base station is required to support is specific to the service option (see the relevant service option descriptions). In addition, the base station shall support one pending *Power Up Function Message*.

#### 3.6.4.1.5 Long Code Transition Request Processing

If a request for voice privacy is specified in the *Origination Message* or *Page Response Message*, the base station may send a *Long Code Transition Request Order* (ORDQ = '00000001') requesting a transition to the private long code.

The base station shall process the *Long Code Transition Request Order* as follows:

- If the *Long Code Transition Request Order* requests a transition to the private long code and the base station accepts the request, the base station shall send a *Long Code Transition Request Order* (ORDQ = '00000001'). If the base station does not accept the private long code transition request, the base station shall send a *Long Code Transition Request Order* (ORDQ = '00000000').
- If the *Long Code Transition Request Order* requests a transition to the public long code and the base station accepts the request, the base station shall send a *Long Code Transition Request Order* (ORDQ = '00000000'). If the base station does not accept the public long code transition request, the base station shall send a *Long Code Transition Request Order* (ORDQ = '00000001').

The base station shall process the *Long Code Transition Response Order* as follows:

- If the *Long Code Transition Response Order* indicates that the mobile station accepts the long code transition requested in the *Long Code Transition Request Order* sent by the base station, the base station shall use the requested long code mask on both the Forward Traffic Channel and the Reverse Traffic Channel. The base station shall specify an explicit action time in the *Long Code Transition Request Order*. The base station shall begin using the requested long code mask using the explicit action time (see 3.6.4.1.4).

#### 3.6.4.1.6 Processing Resource Request Messages

The base station shall process *Resource Request Message* and *Resource Request Mini Message*, as follows:

- The base station may send one of the messages that assign appropriate resources (e.g. *Extended Supplemental Channel Assignment Message*, *Resource Allocation Message*, *Resource Allocation Mini Message*, *Universal Handoff Direction Message*, *Retry Order*, etc) to the mobile station. If the base station sends one of these messages and a Forward Packet Data Channel is not assigned, the base station shall set PILOT\_GATING\_USE\_RATE to '0' and start transmitting the Forward Power Control Subchannel with the maximum rate at the action time of the message.
- The base station may send a *Retry Order* to the mobile station.

#### 3.6.4.1.7 Response to Enhanced Origination Message

If the base station receives an *Enhanced Origination Message*, the base station should perform the following:

- If the base station does not accept this call request from the mobile station, the base station should send one of the following messages:
  - + A *Call Assignment Message* to the mobile station, with the RESPONSE\_IND field set to '1', the ACCEPT\_IND field set to '0', and the TAG field set to the value of the TAG or ADD\_TAG field of the *Enhanced Origination Message*.
  - + A *Retry Order* if the *Enhanced Origination Message* is for a packet data service option.
- If the base station accepts this call request from the mobile station, the base station should send a *Call Assignment Message*, *Service Connect Message*, or *Universal Handoff Direction Message* (with the Service Configuration information record included) to assign the call:
  - If the GLOBAL\_EMERGENCY\_CALL indicator is set to '1' and the service associated with this origination is a voice service, the base station shall recognize this as an emergency call and should process the message using an implementation-dependent procedure which may include ignoring the dialed digits. If the base station receives an *Origination Message* and the GLOBAL\_EMERGENCY\_CALL indicator is set to '1' and the service associated with this origination is not a voice service, the base station may recognize this

as an emergency call and should process the message using an implementation-dependent procedure which may include ignoring the dialed digits.

- If the *Enhanced Origination Message* includes a SYNC\_ID field, then based on the value of the SYNC\_ID received, the base station may instruct the mobile station to restore one or more of the service option connections from the stored service configuration, and if so, the base station shall send a *Call Assignment Message*, *Universal Handoff Direction Message*, or *Service Connect Message* to the mobile station as follows:
  - + If the base station sends a *Call Assignment Message*, the base station shall perform the following:
    - o The base station shall set the RESPONSE\_IND field to '1', the ACCEPT\_IND field to '1', and the TAG field to the value of the TAG or ADD\_TAG field of the *Enhanced Origination Message*.
    - o The base station shall set the USE\_OLD\_SERV\_CONFIG field to '1'.
  - + If the base station sends a *Service Connect Message*, the base station shall perform the following:
    - o The base station shall set the USE\_OLD\_SERV\_CONFIG field to '11'.
  - + If the mobile station is to restore all remaining service option connections from the stored service configuration, the base station shall set the SR\_ID field to '111'; if the mobile station is to restore more than one but not all remaining service option connections from the stored service configuration, the base station shall set the SR\_ID field to '000' and the SR\_ID\_RESTORE\_BITMAP field to the bitmap of service reference identifiers corresponding to the service option connections to be restored; otherwise, the base station shall set the SR\_ID field to the service reference identifier corresponding to the service option connection to be restored.
  - + At the action time corresponding to this message, the base station shall restore the indicated service option connection(s) from the stored service configuration; Layer 3 shall instantiate a Call Control instance (as specified in 3.6.8) for each of the restored service option connections with a 'restore indication' and Layer 3 shall identify each of these Call Control instances by the value of the CON\_REF field corresponding to the restored service option connection.
- If the base station sends a *Call Assignment Message* to assign the call, the base station shall perform the following:
  - + The base station shall set the RESPONSE\_IND field to '1', the ACCEPT\_IND field to '1', and the TAG field to the value of the TAG or ADD\_TAG field of the *Enhanced Origination Message*. The base station shall set the CON\_REF\_INCL field of the message to '1' and the CON\_REF field of the message to the value of the connection reference of the service option connection corresponding to this call.

- 1           + A service option connection corresponding to this call (if not already  
2           established) shall be established by performing service negotiation; the base  
3           station should initiate service negotiation to establish the service option  
4           connection, if permitted by the current service negotiation subfunction.
  
- 5           + At the action time corresponding to this message, the Layer 3 shall  
6           instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall  
7           identify this Call Control instance by the value of the CON\_REF field  
8           included in the *Call Assignment Message*.
  
- 9           – If the base station sends a *Service Connect Message* or a *Universal Handoff*  
10          *Direction Message* (with the Service Configuration information record included),  
11          to assign the call, the base station shall perform the following:
  - 12           + The base station shall set the call control parameters corresponding to this  
13           call included in the message as follows: The base station shall set the  
14           RESPONSE\_IND field to '1', and the TAG field to the value of the TAG or  
15           ADD\_TAG field of the *Enhanced Origination Message*.
  
  - 16           + At the action time corresponding to this message, the Layer 3 shall  
17           instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall  
18           identify this Call Control instance by the value of the CON\_REF assigned to  
19           the service option connection corresponding to this call.

#### 20   3.6.4.1.8 Processing Resource Release Request Message and Resource Release Request 21   Mini Message

22   The base station may perform the following in response to receiving a *Resource Release*  
23   *Request Message* or a *Resource Release Request Mini Message* from the mobile station:

- 24          • If the mobile station requests to release a service option connection, the base  
25          station may send a *Service Connect Message*, *General Handoff Direction Message*,  
26          or a *Universal Handoff Direction Message* to release the service option connection.
  
- 27          • If the mobile station requests to commence reverse pilot gating operation, the base  
28          station may send a *Extended Release Message*, *Extended Release Mini Message*, or  
29          a *Universal Handoff Direction Message* to instruct the mobile station to commence  
30          the reverse pilot gating operation.

#### 31   3.6.4.1.9 Processing Base Station Status Request Message

32   If the requested RECORD\_TYPE equals '00000000' (Pilot Information), the base station  
33   should send a *Base Station Status Response Message* with a RECORD\_TYPE of '00000000'  
34   (Pilot Information) to the mobile station:

- 35          • For each pilot being requested by the mobile station, the base station shall include  
36          the corresponding Base Station Identification number.

- If SID and NID information is being requested by the mobile station, the base station shall include the SID and NID information corresponding to these pilots.
- If LAT and LONG information is being requested by the mobile station, the base station should include the LAT and LONG information corresponding to these pilots.

#### 3.6.4.1.10 Base Station assigned PLCM

If PLCM\_TYPE field is included in *Extended Channel Assignment Message* or *Universal Handoff Direction Message* and is set to '0001', the base station shall include PLCM\_39 field in the message and shall set it as follows:

P38 P37 are set as specified in the Table 3.6.4.1.10-1:

**Table 3.6.4.1.10-1. The Base Station Assigned Public Long Code Mask Type**

<b>P38 P37 (binary)</b>	<b>Descriptions</b>
00	Proprietary Approach
01	Latitude-Longitude Approach
10	Reserved
11	Reserved

If P38 P37 is equal to '01'; the base station shall set the fields as follows:

$P_{36}, P_{35}, P_{34}, P_{33}, P_{32}, P_{31}, P_{30}, P_{29}, P_{28}, P_{27}, P_{26} = ((\text{BASE\_LONG} \gg 5) \times \cos|\text{BASE\_LAT}|) \bmod (2^{11})$ ,

$P_{25}, P_{24}, P_{23}, P_{22}, P_{21}, P_{20}, P_{19}, P_{18}, P_{17}, P_{16}, P_{15} = (\text{BASE\_LAT} \gg 5) \bmod (2^{11})$ ,

$P_{14}, P_{13}, \dots, P_2, P_1, P_0$  = identifiers assigned by the base station,

where:

BASE\_LONG is the longitude of the base station in units of 0.25 seconds, expressed as a two's complement signed number with positive numbers signifying East longitude, and,

BASE\_LAT is the latitude of the base station in units of 0.25 seconds, expressed as a two's complement signed number with positive numbers signifying North latitudes.

#### 3.6.4.2 Traffic Channel Initialization Substate

In this substate, the base station begins transmitting on the Forward Traffic Channel and acquires the Reverse Traffic Channel.

Upon entering the *Traffic Channel Initialization Substate*, the base station shall perform the following:

- Layer 3 shall send an L2-Supervision.Request primitive to Layer 2 to reset the message acknowledgment procedures as specified in [4].
- The base station shall set its Forward and Reverse Traffic Channel long code masks to the public long code mask (see [2]).
- The base station shall set its Forward and Reverse Traffic Channel frame offsets (see [2]) to the frame offset assigned to the mobile station.
- If the base station set the ASSIGN\_MODE field of the *Channel Assignment Message* to '000', the base station shall set SERV\_NEG to disabled. If the base station set the ASSIGN\_MODE field of the *Channel Assignment Message* to '100', the base station shall set SERV\_NEG to enabled. For operation in band classes other than Band Class 0, SERV\_NEG is always equal to enabled.
- If the base station uses the *Extended Channel Assignment Message*, the base station shall set the SERV\_NEG to enabled.
- The base station shall determine the initial service configuration as follows:
  - If SERV\_NEG is equal to disabled, the initial service configuration shall include Multiplex Option 1 and Radio Configuration 1 for both the Forward and Reverse Traffic Channels, and shall include no service option connections.
  - If SERV\_NEG is equal to enabled and the base station sets the GRANTED\_MODE field of the *Channel Assignment Message* or the *Extended Channel Assignment Message* to '00', the initial service configuration shall include the multiplex option and radio configuration for the Forward and Reverse Traffic Channels as specified by the DEFAULT\_CONFIG field, and shall include no service option connections.
  - If SERV\_NEG is equal to enabled and the base station sets the GRANTED\_MODE field of the *Extended Channel Assignment Message* to '01' or '10', the initial service configuration shall include the default Forward and Reverse Traffic Channel multiplex options that are derived from the radio configurations corresponding to Table 3.7.2.3.2.21-3 and shall include no service option connections.

- 1       – If SERV\_NEG is equal to enabled and the base station sets the  
2       GRANTED\_MODE field of the *Channel Assignment Message* to '01' or '10', the  
3       initial service configuration shall include the default Forward and Reverse  
4       Traffic Channel multiplex options and transmission rates corresponding to the  
5       service option requested by the mobile station in the *Origination Message*, in  
6       the case of a mobile station originated call, or the *Page Response Message*, in  
7       the case of a mobile station terminated call, and shall include no service option  
8       connections.
  - 9       – If SERV\_NEG is equal to enabled and the base station sets the  
10      GRANTED\_MODE field of the *Extended Channel Assignment Message* to '11',  
11      the base station shall begin to use the stored service configuration  
12      corresponding to the SYNC\_ID conveyed to the mobile station as the current  
13      service configuration and shall begin to process Forward and Reverse Traffic  
14      Channel frames accordingly. The set of service option connections to be  
15      restored are determined as follows:
    - 16       + If the base station sets the SR\_ID\_RESTORE field of the *Extended Channel*  
17       *Assignment Message* to '111', the base station shall restore all the service  
18       option connections from the stored service configuration.
    - 19       + If the base station sets the SR\_ID\_RESTORE field of the *Extended Channel*  
20       *Assignment Message* to '000', the base station shall restore the service  
21       option connections indicated by the SR\_ID\_RESTORE\_BITMAP field of the  
22       *Extended Channel Assignment Message* from the stored service  
23       configuration.
    - 24       + Otherwise, the base station shall restore the service option connection  
25       corresponding to the SR\_ID field of the *Extended Channel Assignment*  
26       *Message* from the stored service configuration.
  - 27      • If SERV\_NEG is equal to disabled, the base station shall activate the *SO Negotiation*  
28      *Subfunction* (see 3.6.4.1.2.2.6); otherwise, the base station shall activate the *Normal*  
29      *Service Subfunction* (see 3.6.4.1.2.2.1).
  - 30      • The base station shall set PILOT\_GATING\_USE\_RATE to '0'.
- 31 While in the *Traffic Channel Initialization Substate*, the base station shall perform the  
32 following:
- 33      • If the Forward Fundamental Channel is assigned, the base station shall transmit  
34      null Traffic Channel data on the Forward Fundamental Channel, except when  
35      transmitting signaling traffic.
  - 36      • If F-CPCCH is assigned, the base station shall transmit power control bits on the F-  
37      CPCCH; otherwise, if FPC\_PRI\_CHAN is set to '0', the base station shall transmit  
38      power control bits on the Forward Fundamental Channel. If FPC\_PRI\_CHAN is set  
39      to '1', the base station shall transmit power control bits on the Forward Dedicated  
40      Control Channel.

- 1 • If the base station acquires the Reverse Traffic Channel, Layer 3 shall send a  
2 reverse dedicated channel acquired indication to Layer 2 (see [4]). The base station  
3 shall perform the following:
  - 4 – If SERV\_NEG is equal to enabled and the base station sets the  
5 GRANTED\_MODE field of the *Extended Channel Assignment Message* to '11',  
6 the base station shall perform the following:
    - 7 + For each service option connection (with corresponding connection  
8 reference CON\_REF<sub>i</sub>) in the stored service configuration record, Layer 3  
9 shall instantiate a Call Control instance (as specified in 3.6.8) with a 'restore  
10 indication'. The base station shall identify each of these Call Control  
11 instances by the corresponding CON\_REF<sub>i</sub>. Furthermore, the base station  
12 shall also identify the Call Control instance corresponding to the first  
13 service option connection listed in this restored Service Configuration  
14 information record by the NULL identifier.
  - 15 – Otherwise, the base station shall perform the following:
    - 16 + The Layer 3 shall instantiate a Call Control instance (as specified in 3.6.8).  
17 The Layer 3 shall assign the default identifier of NULL to this Call Control  
18 instance. The Layer 3 shall enter the *Traffic Channel Substate*.
- 19 • If the base station fails to acquire the Reverse Traffic Channel, the base station  
20 should perform one of the following:
  - 21 – retransmit the *Channel Assignment Message* or the *Extended Channel*  
22 *Assignment Message* on the Paging Channel and remain in the *Traffic Channel*  
23 *Initialization Substate*
  - 24 – retransmit the *Extended Channel Assignment Message* on the Forward Common  
25 Control Channel and remain in the *Traffic Channel Initialization Substate*, or
  - 26 – disable transmission on the Forward Traffic Channel and discontinue the  
27 *Traffic Channel Processing* for the mobile station.

#### 28 3.6.4.3 Traffic Channel Substate

29 In this substate, the base station may exchange Traffic Channel frames with the mobile  
30 station in accordance with the current service configuration.

31 Upon entering the *Traffic Channel Substate*, the base station shall perform the following:

- 32 • If SERV\_NEG is equal to enabled and the base station sets the GRANTED\_MODE  
33 field of the *Extended Channel Assignment Message* to '11', the base station should  
34 not send a *Service Connect Message* to the mobile station.
- 35 • If the call is a mobile station terminated call and the base station set  
36 BYPASS\_ALERT\_ANSWER to '0', the base station shall perform the following:

- 1       – If SERV\_NEG is equal to disabled, the base station shall process the service  
2       option request specified in the *Page Response Message* in accordance with the  
3       requirements for the active service subfunction (see 3.6.4.1.2.2).
- 4       – If SERV\_NEG is equal to enabled and the base station sets the  
5       GRANTED\_MODE field of the *Channel Assignment Message* or the *Extended*  
6       *Channel Assignment Message* to '00' or '01', the base station should initiate  
7       service negotiation to request a service configuration in accordance with the  
8       requirements for the active service subfunction (see 3.6.4.1.2.2).
- 9       – If SERV\_NEG is equal to enabled and the base station sets the  
10       GRANTED\_MODE field of the *Channel Assignment Message* or the *Extended*  
11       *Channel Assignment Message* to '10', the base station should send a *Service*  
12       *Connect Message* in accordance with the requirements for the active service  
13       subfunction (see 3.6.4.1.2.2).
- 14       • Otherwise, the base station shall perform the following:
  - 15       – If SERV\_NEG equals enabled, the call is mobile-station-originated and the base  
16       station sets the GRANTED\_MODE field of the *Channel Assignment Message* or  
17       the *Extended Channel Assignment Message* to '10', the base station should  
18       send a *Service Connect Message* in accordance with the requirements for the  
19       active service subfunction (see 3.6.4.1.2.2).
  - 20       – If SERV\_NEG equals disabled and the call is mobile-station-originated, the base  
21       station shall process the service option request specified in the *Origination*  
22       *Message* in accordance with the requirements for the active service subfunction  
23       (see 3.6.4.1.2.2).
- 24   While in the *Traffic Channel Substate*, the base station shall perform the following:
  - 25       • The base station shall transmit the power control subchannel as specified in [2].
  - 26       • The base station shall process Forward and Reverse Traffic Channel frames in  
27       accordance with the requirements for the active service subfunction (see  
28       3.6.4.1.2.2).
  - 29       • When PILOT\_GATING\_USE\_RATE is equal to '0' and the base station is to establish  
30       a Forward or Reverse Fundamental Channel or a Forward or Reverse Dedicated  
31       Control Channel, or a Forward Packet Data Channel, the base station shall send a  
32       *Universal Handoff Direction Message* to the mobile station.
  - 33       • When a Forward Packet Data Channel is not assigned, PILOT\_GATING\_USE\_RATE  
34       is equal to '1' and the base station has data to send, the base station may send a  
35       *Resource Allocation Message*, *Resource Allocation Mini Message*, *Extended*  
36       *Supplemental Channel Assignment Message*, *Forward Supplemental Channel*  
37       *Assignment Mini Message*, *Reverse Supplemental Channel Assignment Mini*  
38       *Message*, or *Universal Handoff Direction Message* and set  
39       PILOT\_GATING\_USE\_RATE to '0' to start transmitting the Forward Power Control  
40       Subchannel with the maximum rate at the action time of the message and start the  
41       exchange of user information.

- 1       • When a Forward Packet Data Channel is assigned, PILOT\_GATING\_USE\_RATE is  
2       equal to '1', and the base station has data or signaling messages to send, the base  
3       station may transition to the Active Mode. If the base station determines to  
4       transition to the Active Mode, the base station shall perform the following:
  - 5       – If a Forward Dedicated Control Channel is assigned, the base station shall  
6       perform one of the following:
    - 7       + The base station shall send a *Resource Allocation Message, Resource*  
8       *Allocation Mini Message, Extended Supplemental Channel Assignment*  
9       *Message, Forward Supplemental Channel Assignment Mini Message, Reverse*  
10       *Supplemental Channel Assignment Mini Message, or Universal Handoff*  
11       *Direction Message* and set PILOT\_GATING\_USE\_RATE to '0' at the action  
12       time of the message, or
    - 13       + The base station shall set PILOT\_GATING\_USE\_RATE to '0' (see [3]).
  - 14       – Otherwise (i.e., Forward Dedicated Control Channel is not assigned), the base  
15       station shall set PILOT\_GATING\_USE\_RATE to '0'.
- 16       • When a Forward Packet Data Channel is assigned, PILOT\_GATING\_USE\_RATE is  
17       equal to '1', and the base station has detected continuous reverse pilot channel or a  
18       valid Reverse Fundicated Channel frame is received, the base station shall set  
19       PILOT\_GATING\_USE\_RATE to '0'.
- 20       • If the base station is to release any but not all traffic channels, the base station  
21       shall send a *Universal Handoff Direction Message, Extended Release Message*, or  
22       an *Extended Release Mini Message* to the mobile station.
- 23       • If the base station is to assign R-FCH, the base station may send a *Universal*  
24       *Handoff Direction Message* or *Shared Channel Configuration Order* (ORDQ =  
25       00000000) to the mobile station. If the base station is to release R-FCH, the base  
26       station may send a *Universal Handoff Direction Message, Extended Release*  
27       *Message, Extended Release Mini Message, or Shared Channel Configuration Order*  
28       (ORDQ = 00000001) to the mobile station.
- 29       • When PILOT\_GATING\_USE\_RATE is equal to '0', the base station does not have any  
30       data to send, and the base station has determined that the mobile station does not  
31       have any data to send, then the base station may send an *Extended Release*  
32       *Message, Extended Release Mini Message or Universal Handoff Direction Message*.  
33       At the action time of the message, the base station may perform the following:
  - 34       – Set PILOT\_GATING\_USE\_RATE to '1'.
  - 35       – If the channel configuration in the message does not include a Forward Packet  
36       Data Channel, start transmitting the Forward Power Control Subchannel with  
37       the specified rate and stop the exchange of user information.
  - 38       – If the channel configuration in the message includes a Forward Packet Data  
39       Channel, stop the exchange of user information and signaling messages.

- 1       • If the base station declares a loss of Reverse Traffic Channel continuity (see 3.4),  
2       the base station should send a *Release Order* to the mobile station. If the base  
3       station sends a *Release Order*, the Layer 3 shall send a “release indication” to all  
4       Call Control instances, and shall enter the *Release Substate*.
- 5       • The base station may perform Forward Traffic Channel power control as specified in  
6       3.6.4.1.1.
- 7       • The base station may request a new service configuration by initiating service  
8       negotiation or service option negotiation in accordance with the requirements for  
9       the active service subfunction (see 3.6.4.1.2.2).
- 10      • The base station may send a *Service Option Control Message* or *Service Option*  
11      *Control Order* to invoke a service option specific function in accordance with the  
12      requirements for the active service subfunction (see 3.6.4.1.2.2).
- 13      • The base station may request a long code transition, as specified in 3.6.4.1.5, either  
14      autonomously or in response to a request for voice privacy specified in the  
15      *Origination Message* or *Page Response Message*.
- 16      • The base station may perform authentication procedures as specified in 3.3.1.
- 17      • The base station may perform TMSI assignment procedures (see 2.3.15).
- 18      • For the first call, if the call is mobile-station-originated and the PACA\_REORIG field  
19      of the *Origination Message* is equal to ‘1’, the Layer 3 shall send a “paca reorig  
20      indication” to the Call Control instance.
- 21      • The base station may control operation of the Forward or Reverse Supplemental  
22      Code Channels by including Supplemental Code Channel assignment information  
23      in the *Supplemental Channel Assignment Message*, or the *General Handoff Direction*  
24      *Message*.
- 25      • If neither a Forward Fundamental Channel, nor a Forward Dedicated Control  
26      Channel is assigned, the base station shall not assign a Forward Supplemental  
27      Channels to the mobile station.
- 28      • If a Reverse Packet Data Channel is assigned, the base station shall not assign a  
29      Reverse Supplemental Channel to the mobile station.
- 30      • The base station may control operation of the Forward or Reverse Supplemental  
31      Channels by including Supplemental Channel assignment information in the  
32      *Extended Supplemental Channel Assignment Message*, the *Forward Supplemental*  
33      *Channel Assignment Mini Message*, or the *Reverse Supplemental Channel*  
34      *Assignment Mini Message*.
- 35      • The base station may assign a new call by sending a *Call Assignment Message*,  
36      *Service Connect Message*, or *Universal Handoff Direction Message* (with the Service  
37      Configuration information record included) to assign the call:
  - 38      – If the base station sends a *Call Assignment Message* to assign the call, the base  
39      station shall perform the following:
    - 40      + The base station shall set the RESPONSE\_IND field to ‘0’.

- 1           +   The base station shall set the CON\_REF\_INCL field of the message to '1' and  
2           the CON\_REF field of the message to the value of the connection reference  
3           of the service option connection corresponding to this call.
- 4           +   A service option connection corresponding to this call (if not already  
5           established) shall be established by performing service negotiation; the base  
6           station should initiate service negotiation to establish the service option  
7           connection, if permitted by the current service negotiation subfunction.
- 8           +   At the action time corresponding to this message, the Layer 3 shall  
9           instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall  
10          identify this Call Control instance by the value of the CON\_REF field  
11          included in the *Call Assignment Message*.
- 12          -   If the base station sends a *Service Connect Message* or *Universal Handoff*  
13          *Direction Message* (with the Service Configuration information record included)  
14          to assign the call, the base station shall perform the following:
  - 15           +   The base station shall set the call control parameters corresponding to this  
16           call included in the message as follows: The base station shall set the  
17           RESPONSE\_IND field to '0', and the BYPASS\_ALERT\_ANSWER field as  
18           required.
  - 19           +   At the action time corresponding to this message, the Layer 3 shall  
20           instantiate a Call Control instance (as specified in 3.6.8). The Layer 3 shall  
21           identify this Call Control instance by the value of the CON\_REF assigned to  
22           the service option connection corresponding to this call.
- 23          •   The base station may instruct the mobile station to restore one or more of the  
24          service option connection records from the stored service configuration by sending  
25          a *Call Assignment Message* or *Service Connect Message* as follows:
  - 26           -   If the base station sends a *Call Assignment Message*, the base station shall  
27           perform the following:
    - 28           +   The base station shall set the RESPONSE\_IND field to '1', the ACCEPT\_IND  
29           field to '1', and the TAG field to the value of the TAG field of the *Enhanced*  
30           *Origination Message*.
    - 31           +   The base station shall set the USE\_OLD\_SERV\_CONFIG field to '1'.
  - 32           -   If the base station sends a *Service Connect Message*, the base station shall  
33           perform the following:
    - 34           +   The base station shall set the USE\_OLD\_SERV\_CONFIG field to '11'.

- 1       – If the mobile station is to restore all remaining service option connection  
2       records from the stored service configuration, the base station shall set the  
3       SR\_ID field to '111'; otherwise, the base station shall set the SR\_ID field to the  
4       service reference identifier corresponding to the service option connection  
5       record to be restored.
- 6       – At the action time corresponding to this message, the base station shall restore  
7       the indicated service option connection record(s) from the stored service  
8       configuration; Layer 3 shall instantiate a Call Control instance (as specified in  
9       3.6.8) for each of the restored service option connections with a 'restore  
10       indication' and Layer 3 shall identify each of these Call Control instances by the  
11       value of the CON\_REF field corresponding to the restored service option  
12       connection.
- 13      • If the Layer 3 receives a 'call release request' from a Call Control instance, the Layer  
14       3 shall perform the following:
  - 15       – If the service option connection corresponding to this call is the only one  
16       connected, the base station should send the mobile station a *Release Order* and  
17       enter the *Release Substate*.
  - 18       – If the service option connection corresponding to this call is not the only one  
19       connected, the base station should release this service option connection. At  
20       the action time of the message, the Layer 3 shall terminate this Call Control  
21       instance.
- 22      • The base station may send the following messages. Some of these messages are  
23       generated by the Call Control Instance. If the base station sends a message, the  
24       base station shall comply with the specified requirements for sending the message,  
25       if any:
  - 26       1. *Alert With Information Message*:
  - 27       2. *Reserved*
  - 28       3. *Audit Order*
  - 29       4. *Authentication Challenge Message*
  - 30       5. *Base Station Challenge Confirmation Order*
  - 31       6. *Base Station Status Response Message*
  - 32       7. *Call Assignment Message*
  - 33       8. *Candidate Frequency Search Request Message*
  - 34       9. *Candidate Frequency Search Control Message*
  - 35       10. *Continuous DTMF Tone Order*
  - 36       11. *Data Burst Message*
  - 37       12. *Extended Alert With Information Message*

- 1       13. *Extended Flash With Information Message*
- 2       14. *Extended Handoff Direction Message*
- 3       15. *Extended Neighbor List Update Message*
- 4       16. *Extended Release Message*: If the physical channels indicated in CH\_IND field
- 5             of this message includes all the physical channels currently being processed by
- 6             the mobile station, the Layer 3 shall send a “release indication” to all Call
- 7             Control instances, and shall enter the *Release Substate*.
- 8       17. *Extended Release Mini Message*: If the physical channels indicated in CH\_IND
- 9             field of this message includes all the physical channels currently being
- 10            processed by the mobile station, the Layer 3 shall send a “release indication” to
- 11            all Call Control instances, and shall enter the *Release Substate*.
- 12       18. *Extended Supplemental Channel Assignment Message*
- 13       19. *Forward Supplemental Channel Assignment Mini Message*
- 14       20. *General Handoff Direction Message*
- 15       21. *Flash With Information Message*
- 16       22. *In-Traffic System Parameters Message*<sup>3</sup>
- 17       23. *Local Control Order*
- 18       24. *Lock Until Power-Cycled Order*: The base station should send this order in
- 19             unassured mode.
- 20       25. *Long Code Transition Request Order*
- 21       26. *Maintenance Order*
- 22       27. *Maintenance Required Order*
- 23       28. *Message Encryption Mode Order*
- 24       29. *Mobile Assisted Burst Operation Parameters Message*
- 25       30. *Mobile Station Registered Message*
- 26       31. *Neighbor List Update Message*: The base station shall not send this message if
- 27             P\_REV\_IN\_USE is greater than or equal to eight.
- 28       32. *Parameter Update Order* (see 2.3.12.1.3).
- 29       33. *Periodic Pilot Measurement Request Order*
- 30       34. *Pilot Measurement Request Order*

---

<sup>3</sup> If the base station determines that the current P\_REV\_IN\_USE is less than or equal to three, the base station does not send an *In-Traffic System Parameters Message* to change the P\_REV\_IN\_USE to greater than or equal to nine.

- 1        35. *Power Control Message*
- 2        36. *Power Control Parameters Message*
- 3        37. *Power Up Function Message*
- 4        38. *Power Up Function Completion Message*
- 5        39. *Resource Allocation Message*
- 6        40. *Resource Allocation Mini Message*
- 7        41. *Release Order*: The Layer 3 shall send a “release indication” to all Call Control
- 8                instances, and shall enter the *Release Substate*.
- 9        42. *Retrieve Parameters Message*
- 10       43. *Retry Order*
- 11       44. *Reverse Supplemental Channel Assignment Mini Message*
- 12       45. *Security Mode Command Message*
- 13       46. *Send Burst DTMF Message*
- 14       47. *Service Connect Message*: The base station shall send the message in
- 15                accordance with the requirements for the active service subfunction (see
- 16                3.6.4.1.2.2).
- 17       48. *Service Option Control Message*: The base station shall send the message in
- 18                accordance with the requirements for the active service subfunction (see
- 19                3.6.4.1.2.2).
- 20       49. *Service Option Control Order*
- 21       50. *Service Option Request Order*
- 22       51. *Service Option Response Order*
- 23       52. *Service Redirection Message*: The Layer 3 shall send a “release indication” to all
- 24                Call Control instances, and shall enter the *Release Substate*.
- 25       53. *Service Request Message*: The base station shall send the message in
- 26                accordance with the requirements for the active service subfunction (see
- 27                3.6.4.1.2.2).
- 28       54. *Service Response Message*: The base station shall send the message in
- 29                accordance with the requirements for the active service subfunction (see
- 30                3.6.4.1.2.2).
- 31       55. *Set Parameters Message*
- 32       56. *SSD Update Message*
- 33       57. *Status Request Message*
- 34       58. *Status Request Order*: The base station shall not send this message if
- 35                P\_REV\_IN\_USE is greater than or equal to eight.
- 36       59. *Supplemental Channel Assignment Message*

1       60. *TMSI Assignment Message*

2       61. *Universal Handoff Direction Message*

3       62. *User Zone Reject Message*

4       63. *User Zone Update Message*

5       64. *Radio Configuration Parameters Message*

6       65. *Handoff Supplementary Information Solicit Message*

7       66. *General Extension Message* : The base station may send this message in order  
8       to extend the above messages with additional records.

9       • If the base station receives one of the following messages from the mobile station,  
10      the base station shall process the message according to the specified requirements,  
11      if any:

12      1. *Base Station Challenge Order*: The base station shall process the message as  
13      described in 2.3.12.1.5.

14      2. *Base Station Status Request Message*: The base station shall process the  
15      message as described in 3.6.4.1.9

16      3. *Call Cancel Message*

17      4. *Candidate Frequency Search Report Message*: The base station shall process the  
18      message as described in 3.6.6.2.2.6.

19      5. *Candidate Frequency Search Response Message*: The base station shall process  
20      the message as described in 3.6.6.2.2.4.

21      6. *CDMA Off Time Report Message*

22      7. *Connect Order*: If the CON\_REF\_INCL field is not included in this message or if  
23      the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver this message to the  
24      Call Control instance identified by NULL; otherwise, the Layer 3 shall deliver  
25      this message to the Call Control instance identified by CON\_REF.

26      8. *Continuous DTMF Tone Order*: If the CON\_REF\_INCL field is not included in this  
27      message or if the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver this  
28      message to the Call Control instance identified by NULL; otherwise, the Layer 3  
29      shall deliver this message to the Call Control instance identified by CON\_REF.

30      9. *Data Burst Message*: The base station may respond with a *Retry Order*.

31      10. *Enhanced Origination Message*: The base station shall process the message as  
32      described in 3.6.4.1.7.

33      11. *Extended Flash With Information Message*: If CON\_REF\_INCL equals '0', the  
34      Layer 3 shall deliver this message to the Call Control instance identified by  
35      NULL; otherwise, the Layer 3 shall deliver this message to the Call Control  
36      instance identified by CON\_REF.

37      12. *Extended Handoff Completion Message*: The base station shall process the  
38      message as described in 3.6.6.2.2.7.

- 1       13. *Extended Pilot Strength Measurement Message*: The base station shall process  
2       the message as described in 3.6.6.2.2.1.
- 3       14. *Extended Release Response Message*.
- 4       15. *Extended Release Response Mini Message*.
- 5       16. *Flash With Information Message*: The Layer 3 shall deliver this message to the  
6       Call Control instance identified by NULL.
- 7       17. *Handoff Completion Message*: The base station shall process the message as  
8       described in 3.6.6.2.2.7.
- 9       18. *Local Control Response Order*
- 10      19. *Long Code Transition Request Order*: The base station shall process the  
11      message as described in 3.6.4.1.5.
- 12      20. *Long Code Transition Response Order*
- 13      21. *Mobile Station Reject Order*: If the CON\_REF\_INCL field is included in this  
14      message, Layer 3 shall perform the following: if the CON\_REF\_INCL field equals  
15      '0', Layer 3 shall send a 'messages rejected indication' to the Call Control  
16      instance identified by NULL; otherwise, Layer 3 shall send a 'messages rejected  
17      indication' to the Call Control instance identified by CON\_REF.
- 18      22. *Origination Continuation Message*: The Layer 3 shall deliver this message to the  
19      Call Control instance identified by NULL.
- 20      23. *Outer Loop Report Message*
- 21      24. *Parameters Response Message*
- 22      25. *Parameter Update Confirmation Order*
- 23      26. *Periodic Pilot Strength Measurement Message*
- 24      27. *Pilot Strength Measurement Message*: The base station shall process the  
25      message as described in 3.6.6.2.2.1.
- 26      28. *Pilot Strength Measurement Mini Message*
- 27      29. *Power Measurement Report Message*: The base station may process the  
28      message as described in 3.6.4.1.1.
- 29      30. *Release Order*: The base station shall send the mobile station a *Release Order*  
30      within T2b seconds, and the Layer 3 shall send a "release indication" to all Call  
31      Control instances, and enter the *Release Substate*; otherwise, the Layer 3 shall  
32      send a "send alert with info message indication" to all Call Control instances.
- 33      31. *Resource Release Request Message*: The base station shall process the message  
34      as described in 3.6.4.1.8.
- 35      32. *Resource Release Request Mini Message*: The base station shall process the  
36      message as described in 3.6.4.1.8.

- 1        33. *Resource Request Message*: The base station shall process the message as  
2        described in 3.6.4.1.6.
- 3        34. *Resource Request Mini Message*: The base station shall process the message as  
4        described in 3.6.4.1.6.
- 5        35. *Reserved*.
- 6        36. *Reserved*.
- 7        37. *Reserved*.
- 8        38. *Send Burst DTMF Message*: If the CON\_REF\_INCL field is not included in this  
9        message or if the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver this  
10       message to the Call Control instance identified by NULL; otherwise, the Layer 3  
11       shall deliver this message to the Call Control instance identified by CON\_REF.
- 12       39. *Service Connect Completion Message*: The base station shall process the  
13       message in accordance with the requirements for the active service subfunction  
14       (see 3.6.4.1.2.2).
- 15       40. *Service Option Control Message*: The base station shall process the message in  
16       accordance with the requirements for the active service subfunction (see  
17       3.6.4.1.2.2).
- 18       41. *Service Option Control Order*: The base station shall process the message in  
19       accordance with the requirements for the active service subfunction (see  
20       3.6.4.1.2.2).
- 21       42. *Service Option Request Order*: The base station shall process the message in  
22       accordance with the requirements for the active service subfunction (see  
23       3.6.4.1.2.2).
- 24       43. *Service Option Response Order*: The base station shall process the message in  
25       accordance with the requirements for the active service subfunction (see  
26       3.6.4.1.2.2).
- 27       44. *Service Request Message*: The base station shall process the message in  
28       accordance with the requirements for the active service subfunction (see  
29       3.6.4.1.2.2).
- 30       45. *Service Response Message*: The base station shall process the message in  
31       accordance with the requirements for the active service subfunction (see  
32       3.6.4.1.2.2).
- 33       46. *SSD Update Confirmation Order*
- 34       47. *SSD Update Rejection Order*
- 35       48. *Status Response Message*
- 36       49. *Status Message*
- 37       50. *Supplemental Channel Request Message*: The base station may respond with a  
38       *Supplemental Channel Assignment Message*, an *Extended Supplemental*  
39       *Channel Assignment Message*, or a *Retry Order*.

1        51. *Supplemental Channel Request Mini Message*: The base station may respond  
 2        with a *Forward Supplemental Channel Assignment Mini Message* or a *Reverse*  
 3        *Supplemental Channel Assignment Mini Message*, or both. The base station may  
 4        also respond with a *Retry Order*.

5        52. *TMSI Assignment Completion Message*

6        53. *User Zone Update Request Message*: The base station shall process this  
 7        message as specified in 3.6.7.2.

8        54. *Handoff Supplementary Information Notification Message*: The base station shall  
 9        process this message as specified in 3.6.6.2.2.16.

10       55. *General Extension Message*: The base station shall store the records and  
 11       process the message included in the *General Extension Message*.

#### 12    3.6.4.4 Release Substate

13    In this substate, the base station disconnects all calls and physical channels.

14    While in the *Release Substate*, the base station shall perform the following:

- 15       • The base station shall transmit the power control subchannel as specified in [2].
- 16       • The base station shall transmit on the Forward Traffic Channel for at least  $T_{3b}$   
 17       seconds. The base station shall transmit null traffic and power control bits on the  
 18       Forward Fundamental Channel, except when transmitting signaling traffic, if the  
 19       Fundamental Channel is present or transmit power control bits on the Forward  
 20       Dedicated Control Channel, if only the dedicated Control Channel is present. After  
 21        $T_{3b}$  seconds, the base station should stop transmitting on the Forward Traffic  
 22       Channel.
- 23       • When a Forward Packet Data Channel and a Forward Common Power Control  
 24       Channel subchannel are assigned to this mobile station, the base station shall  
 25       transmit on the Forward Common Power Control Channel subchannel for at least  
 26        $T_{3b}$  seconds. After  $T_{3b}$  seconds, the base station should stop transmitting on the  
 27       Forward Common Power Control Channel subchannel. If no response is received to  
 28       the Layer 3 message sent to the mobile station to release the call, the base station  
 29       should wait  $T_{5b}$  before assigning this Forward Common Power Control Channel  
 30       subchannel to another mobile station.
- 31       • The base station shall process Reverse Traffic Channel signaling traffic and may  
 32       discard other types of Reverse Traffic Channel traffic.
- 33       • The base station may perform TMSI assignment procedures (see 2.3.15).
- 34       • The base station may perform Forward Traffic Channel power control as specified in  
 35       3.6.4.1.1.
- 36       • The base station may send a *Service Option Control Message* to invoke a service  
 37       option specific function in accordance with the requirements for the active service  
 38       subfunction (see 3.6.4.1.2.2).

- 1 • The base station may send the following messages. Some of these messages are
- 2 generated by the Call Control Instance. If the base station sends a message, the
- 3 base station shall comply with the specified requirements for sending the message,
- 4 if any.
- 5 1. *Alert With Information Message*
- 6 2. *Audit Order*
- 7 3. *Candidate Frequency Search Request Message*
- 8 4. *Candidate Frequency Search Control Message*
- 9 5. *Data Burst Message*
- 10 6. *Extended Alert With Information Message*
- 11 7. *Extended Handoff Direction Message*
- 12 8. *Extended Neighbor List Update Message*
- 13 9. *Extended Release Message*
- 14 10. *Extended Supplemental Channel Assignment Message*
- 15 11. *Forward Supplemental Channel Assignment Mini Message*
- 16 12. *General Handoff Direction Message*
- 17 13. *In-Traffic System Parameters Message*<sup>4</sup>
- 18 14. *Local Control Order*
- 19 15. *Lock Until Power-Cycled Order*: The base station should send this order in
- 20 unassured mode.
- 21 16. *Maintenance Order*
- 22 17. *Maintenance Required Order*
- 23 18. *Mobile Assisted Burst Operation Parameters Message*
- 24 19. *Mobile Station Registered Message*
- 25 20. *Neighbor List Update Message*: The base station shall not send this message if
- 26 P\_REV\_IN\_USE is greater than or equal to eight.
- 27 21. *Parameter Update Order* (see 2.3.12.1.3 or 3.7.4).
- 28 22. *Power Control Message*
- 29 23. *Power Control Parameters Message*

---

<sup>4</sup> If the base station determines that the current P\_REV\_IN\_USE is less than or equal to three, the base station does not send an *In-Traffic System Parameters Message* to change the P\_REV\_IN\_USE to greater than or equal to nine.

- 1        24. *Power Up Function Message*
- 2        25. *Power Up Function Completion Message*
- 3        26. *Release Order*
- 4        27. *Resource Allocation Message*
- 5        28. *Resource Allocation Mini Message*
- 6        29. *Resource Release Request Message*
- 7        30. *Resource Release Request Mini Message*
- 8        31. *Resource Request Message*
- 9        32. *Resource Request Mini Message*
- 10       33. *Retrieve Parameters Message*
- 11       34. *Reverse Supplemental Channel Assignment Mini Message*
- 12       35. *Service Option Control Message*: The base station shall send the message in  
13       accordance with the requirements for the active service subfunction (see  
14       3.6.4.1.2.2).
- 15       36. *Service Option Control Order*
- 16       37. *Status Request Message*
- 17       38. *Status Request Order*: The base station shall not send this message if  
18       P\_REV\_IN\_USE is greater than or equal to eight.
- 19       39. *Supplemental Channel Assignment Message*
- 20       40. *TMSI Assignment Message*
- 21       41. *Universal Handoff Direction Message*
- 22       42. *User Zone Reject Message*
- 23       43. *User Zone Update Message*
- 24       44. *General Extension Message* : The base station may send this message in order  
25       to extend the above messages with additional records.
- 26       • If the base station receives one of the following messages from the mobile station,  
27       the base station shall process the message according to the specified requirements,  
28       if any:
  - 29       1. *Base Station Challenge Order*: The base station shall process the message as  
30       described in 2.3.12.1.5.
  - 31       2. *Call Cancel Message*
  - 32       3. *Candidate Frequency Search Report Message*: The base station shall process  
33       the message as described in 3.6.6.2.2.6.
  - 34       4. *Candidate Frequency Search Response Message*: The base station shall process  
35       the message as described in 3.6.6.2.2.4.

- 1        5. *Connect Order*: If the CON\_REF\_INCL field is not included in this message or if  
2        the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver this message to the  
3        Call Control instance identified by NULL; otherwise, the Layer 3 shall deliver  
4        this message to the Call Control instance identified by CON\_REF.
- 5        6. *Continuous DTMF Tone Order*: If the CON\_REF\_INCL field is not included in  
6        this message or if the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver  
7        this message to the Call Control instance identified by NULL; otherwise, the  
8        Layer 3 shall deliver this message to the Call Control instance identified by  
9        CON\_REF.
- 10       7. *Data Burst Message*
- 11       8. *Enhanced Origination Message*
- 12       9. *Extended Flash With Information Message*: If CON\_REF\_INCL equals '0', the  
13       Layer 3 shall deliver this message to the Call Control instance identified by  
14       NULL; otherwise, the Layer 3 shall deliver this message to the Call Control  
15       instance identified by CON\_REF.
- 16       10. *Extended Handoff Completion Message*: The base station shall process the  
17       message as described in 3.6.6.2.2.7.
- 18       11. *Extended Pilot Strength Measurement Message*: The base station shall process  
19       the message as described in 3.6.6.2.2.1.
- 20       12. *Extended Release Response Message*:
- 21       13. *Flash With Information Message*: The Layer 3 shall deliver this message to the  
22       Call Control instance identified by NULL.
- 23       14. *Handoff Completion Message*: The base station shall process the message as  
24       described in 3.6.6.2.2.7.
- 25       15. *Local Control Response Order*
- 26       16. *Long Code Transition Request Order*
- 27       17. *Long Code Transition Response Order*
- 28       18. *Mobile Station Reject Order*: If the CON\_REF\_INCL field is included in this  
29       message, Layer 3 shall perform the following: if the CON\_REF\_INCL field equals  
30       '0', Layer 3 shall send a 'messages rejected indication' to the Call Control  
31       instance identified by NULL; otherwise, Layer 3 shall send a 'messages rejected  
32       indication' to the Call Control instance identified by CON\_REF.
- 33       19. *Origination Continuation Message*: The Layer 3 shall deliver this message to  
34       the Call Control instance identified by NULL.
- 35       20. *Parameter Update Confirmation Order*
- 36       21. *Parameters Response Message*
- 37       22. *Periodic Pilot Strength Measurement Message*

- 1       23. *Pilot Strength Measurement Message*: The base station shall process the
- 2       message as described in 3.6.6.2.2.1.
- 3       24. *Power Measurement Report Message*
- 4       25. *Release Order*
- 5       26. *Reserved*
- 6       27. *Reserved*
- 7       28. *Reserved*
- 8       29. *Send Burst DTMF Message*: If the CON\_REF\_INCL field is not included in this
- 9       message or if the CON\_REF\_INCL field equals '0', the Layer 3 shall deliver this
- 10      message to the Call Control instance identified by NULL; otherwise, the Layer 3
- 11      shall deliver this message to the Call Control instance identified by CON\_REF.
- 12      30. *Service Connect Completion Message*
- 13      31. *Service Option Control Message*: The base station shall process the message in
- 14      accordance with the requirements for the active service subfunction (see
- 15      3.6.4.1.2.2).
- 16      32. *Service Option Control Order*
- 17      33. *Service Option Request Order*
- 18      34. *Service Option Response Order*
- 19      35. *Service Request Message*
- 20      36. *Service Response Message*:
- 21      37. *SSD Update Confirmation Order*
- 22      38. *SSD Update Rejection Order*
- 23      39. *Status Response Message*
- 24      40. *Status Message*
- 25      41. *TMSI Assignment Completion Message*
- 26      42. *User Zone Update Request Message*: The base station shall process this
- 27      message as specified in 3.6.7.2.
- 28      43. *General Extension Message*: The base station shall store the records and
- 29      process the message included in the *General Extension Message*.

### 30   3.6.5 Registration

31   Registration is the process by which a mobile station notifies the base station of its  
32   location, status, identification, slot cycle, and other characteristics. The base station can  
33   make use of location information to efficiently page the mobile station when establishing a  
34   mobile station terminated call. Registration also provides the mobile station's  
35   SLOT\_CYCLE\_INDEX parameter so that the base station can determine which Paging  
36   Channel or Forward Common Control Channel slots a mobile station operating in the

1 slotted mode is monitoring. Registration also provides the protocol revision number so  
2 that the base station knows the capabilities of the mobile station.

3 The CDMA system supports eleven different forms of registration:

- 4 1. Power-up registration. The mobile station registers when it powers on.
- 5 2. Power-down registration. The mobile station registers when it powers off if  
6 previously registered in the current serving system.
- 7 3. Timer-based registration. The mobile station registers when a timer expires.
- 8 4. Distance-based registration. The mobile station registers when the distance  
9 between the current base station and the base station in which it last registered  
10 exceeds a threshold.
- 11 5. Zone-based registration. The mobile station registers when it enters a new zone.
- 12 6. Parameter-change registration. The mobile station registers when certain of its  
13 stored parameters change or when it enters a new system.
- 14 7. Ordered registration. The mobile station registers when the base station requests  
15 it.
- 16 8. Implicit registration. When a mobile station successfully sends an *Origination*  
17 *Message*, *Reconnect Message*, *Call Recovery Request Message*, or *Page Response*  
18 *Message*, the base station can infer the mobile station's location. This is  
19 considered an implicit registration.
- 20 9. Traffic Channel registration. Whenever the base station has registration  
21 information for a mobile station that has been assigned to a Traffic Channel, the  
22 base station can notify the mobile station that it is registered.
- 23 10. User Zone Registration. The mobile station registers when it selects an active User  
24 Zone (see 2.6.9.1.2).
- 25 11. Encryption/Message Integrity re-sync required registration. The mobile station  
26 registers when extended encryption is turned on and the mobile station  
27 determines that it can not decrypt any messages from the base station (see  
28 2.3.12.4.1.3) or the mobile station registers when message integrity is supported  
29 and the mobile station determines that it can not validate the MACI of any  
30 messages from the base station.

31 The first five forms of registration, User Zone Registration, and Encryption/Message  
32 Integrity re-sync required registration, as a group, are called autonomous registration and  
33 are conditioned, in part, by roaming status and by indicators contained in the *System*  
34 *Parameters Message* and *ANSI-41 System Parameters Message* (see 2.6.5.3). The base  
35 station may initiate ordered registration through the *Registration Request Order*.

36 The base station can obtain registration information by sending the *Status Request*  
37 *Message* to the mobile station on the Paging Channel, the Forward Common Control  
38 Channel, or the Forward Traffic Channel. If the base station is operating with the mobile  
39 station in Band Class 0, the base station can also obtain registration information by  
40 sending the *Status Request Order* to the mobile station on the Forward Traffic Channel.

The base station may notify the mobile station that it is registered through the *Mobile Station Registered Message*.

### 3.6.5.1 Registration on the Common Channels

The base station shall specify the forms of registration that are enabled, the corresponding registration parameters, and the roaming status conditions for which registration is enabled in the *System Parameters Message* and *ANSI-41 System Parameters Message*. If any of the autonomous registration forms are enabled, the base station should also enable parameter-change registration.

The base station should process an *Origination Message*, *Reconnect Message*, *Call Recovery Request Message*, or *Page Response Message* sent on the r-csch as an implicit registration of the mobile station sending the message. The base station can obtain complete registration information about the mobile station at any time by sending a *Registration Request Order* to the mobile station.

### 3.6.5.2 Registration on the Traffic Channels

The base station can obtain registration information from a mobile station on the Traffic Channel by means of the *Status Request Message* or the *Status Request Order*. When the base station has registration information for a mobile station, the base station may send a *Mobile Station Registered Message* to the mobile station, specifying the base station's registration system, zone, and location information.

## 3.6.6 Handoff Procedures

### 3.6.6.1 Overview

#### 3.6.6.1.1 Types of Handoff

The base station supports the following three handoff procedures:

- *Soft Handoff*: A handoff in which a new base station commences communications with the mobile station without interrupting the communications with the old base station. The base station<sup>5</sup> can direct the mobile station to perform a soft handoff only when all Forward Traffic Channels assigned to the mobile station have identical band classes, frequency assignments and frame offsets. Soft handoff provides diversity of Forward Traffic Channels and Reverse Traffic Channel paths on the boundaries between base stations.
- *CDMA-to-CDMA Hard Handoff*: A handoff in which the base station directs the mobile station to transition between disjoint sets of base stations, different band classes, different frequency assignments, or different frame offsets.

---

<sup>5</sup>In this section the term base station may imply multiple cells or sectors.

1 Base station support of CDMA-to-CDMA hard handoff between different band classes is  
2 optional.

3 Section 2.6.6 describes the mobile station requirements during handoff.

#### 4 3.6.6.1.2 Active Set

5 The Active Set contains the pilots (see 2.6.6.1.2) associated with the Forward Traffic  
6 Channels assigned to the mobile station. Initially the base station informs the mobile  
7 station of the contents of the Active Set using the *Channel Assignment Message* or the  
8 *Extended Channel Assignment Message*; subsequent changes to the contents of the Active  
9 Set are provided using the *Extended Handoff Direction Message*, *General Handoff Direction*  
10 *Message*, or *Universal Handoff Direction Message*.

#### 11 3.6.6.2 Requirements

##### 12 3.6.6.2.1 Overhead Information

13 The base station sends the following messages governing the pilot search procedures  
14 performed by the mobile station:

- 15 • *System Parameters Message*
- 16 • *In-Traffic System Parameters Message*
- 17 • *Neighbor List Message*
- 18 • *Extended Neighbor List Message*
- 19 • *Neighbor List Update Message*
- 20 • *Extended Neighbor List Update Message*
- 21 • *General Neighbor List Message*
- 22 • *General Handoff Direction Message*
- 23 • *Extended Handoff Direction Message*
- 24 • *Candidate Frequency Search Request Message*
- 25 • *Candidate Frequency Search Control Message*
- 26 • *Universal Handoff Direction Message*
- 27 • *Universal Neighbor List Message*
- 28 • *MC-RR Parameters Message*

##### 29 3.6.6.2.1.1 System Parameters

30 The base station sends handoff related parameters on the Paging Channel in the *System*  
31 *Parameters Message* and the *Extended System Parameters Message*, and on the Primary  
32 Broadcast Control Channel in the *MC-RR Parameters Message*.

33 The base station may revise handoff related parameters for a mobile station operating on  
34 the Traffic Channel by sending the *In-Traffic System Parameters Message*.

The base station may modify the values of the parameters SRCH\_WIN\_A, T\_ADD, T\_DROP, T\_COMP, and T\_TDROF through the *Extended Handoff Direction Message*, the *General Handoff Direction Message*, or the *Universal Handoff Direction Message*. In addition, the base station may also modify the values of the parameters SRCH\_WIN\_N, SRCH\_WIN\_R, SOFT\_SLOPE, ADD\_INTERCEPT, DROP\_INTERCEPT, and T\_TDROF\_RANGE through the *General Handoff Direction Message* or the *Universal Handoff Direction Message*.

#### 3.6.6.2.1.2 Neighbor List

The base station sends a Neighbor List on the Paging Channel in the *Neighbor List Message*, the *Extended Neighbor List Message*, or the *General Neighbor List Message*. The base station should list the pilots in the *Neighbor List Message* in descending priority order (see 2.6.6.2.6.3).

The base station may revise the Neighbor List for a mobile station operating on the Traffic Channel by sending a *Neighbor List Update Message* or an *Extended Neighbor List Update Message*.

The base station shall not include a pilot that is a member of the mobile station's Active Set in a *Neighbor List Update Message* or an *Extended Neighbor List Update Message*. The base station shall not specify more than  $N_{8m}$  pilots in the *Neighbor List Message*, *Extended Neighbor List Message*, *General Neighbor List Message*, or in the *Extended Neighbor List Update Message*. The base station shall not specify more than 20 pilots in the *Neighbor List Update Message*. The base station should list the pilots in the *Neighbor List Update Message* in descending priority order (see 2.6.6.2.6.3).

#### 3.6.6.2.1.3 Candidate Frequency Neighbor List

The base station sends a Candidate Frequency Neighbor List and inter-frequency handoff related parameters in the *Candidate Frequency Search Request Message*. The base station shall not specify more than  $N_{8m}$  pilots in the *Candidate Frequency Search Request Message*.

#### 3.6.6.2.1.4 Candidate Frequency Search List

The base station designates a subset of the Candidate Frequency Neighbor List included in the *Candidate Frequency Search Request Message* as the Candidate Frequency Search List. For each pilot belonging to the Candidate Frequency Search List, the base station shall set the corresponding SEARCH\_SET field of the *Candidate Frequency Search Request Message* to '1'.

#### 3.6.6.2.2 Call Processing During Handoff

When a mobile station performs a handoff from a base station with a P\_REV lower than the mobile station's MOB\_P\_REV to a base station with a P\_REV greater than the P\_REV of the previous base station, the base station should send the service configuration to the mobile station.

#### 1 3.6.6.2.2.1 Processing the Pilot Strength Measurement Message

2 The base station should use the pilot strength measurements in the *Pilot Strength*  
3 *Measurement Message* or the *Extended Pilot Strength Measurement Message* to determine a  
4 new Active Set.

5 The base station may also use the PN phase measurements in the *Pilot Strength*  
6 *Measurement Message* or the *Extended Pilot Strength Measurement Message* to estimate  
7 the propagation delay to the mobile station. This estimate can be used to reduce Reverse  
8 Traffic Channel acquisition time.

9 If the base station receives a *Pilot Strength Measurement Message* or *Extended Pilot*  
10 *Strength Measurement Message* that includes any pilots for which supplementary  
11 information is needed for handoff, then the base station may send a *Handoff*  
12 *Supplementary Information Solicit Message* to the mobile station<sup>6</sup>.

13 The base station may respond to a *Pilot Strength Measurement Message* or an *Extended*  
14 *Pilot Strength Measurement Message* received from the mobile station by sending the  
15 *Extended Handoff Direction Message*, the *General Handoff Direction Message*, or the  
16 *Universal Handoff Direction Message*.

#### 17 3.6.6.2.2.2 Processing the Extended Handoff Direction Message

18 The base station shall maintain a handoff message sequence number. If the base station  
19 specifies that the mobile station is to use service negotiation, the base station shall set the  
20 SERV\_NEG variable (see 3.6.4.1.2.1.4) to be enabled at the action time of the message.  
21 The sequence number shall be initialized to zero prior to the transmission of the first  
22 *Extended Handoff Direction Message*, *General Handoff Direction Message* (see 3.6.6.2.2.10),  
23 or the *Universal Handoff Direction Message* to the mobile station. The base station shall  
24 increment the sequence number modulo 4 each time the base station modifies the pilot list  
25 (including the order in which pilots are specified within the list) or the code channels  
26 (including a change in the ordering such that the first code channel occurrence for any  
27 pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*, a  
28 *General Handoff Direction Message*, or a *Universal Handoff Direction Message*.

29 Following a hard handoff, the base station should set the handoff message sequence  
30 number to the value of the LAST\_HDM\_SEQ field of the *Handoff Completion Message* or  
31 *Extended Handoff Completion Message* and should use the pilot order contained in the  
32 *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the  
33 contents of subsequent *Power Measurement Report Messages*.

34 The base station shall set the contents of an *Extended Handoff Direction Message*  
35 according to the following rules:

---

<sup>6</sup> After receiving a PSMM, PSMMM or EPSMM Message, base station waits for an implementation specific duration for the arrival of *Handoff Supplementary Information Notification Message* before transmitting the *Handoff Supplementary Information Solicit Message*.

- 1       • An *Extended Handoff Direction Message* shall list no more than  $N_{6m}$  pilots in the  
2       new Active Set.
- 3       • An *Extended Handoff Direction Message* shall identify the identical power control  
4       subchannels (i.e., those carrying identical power control bits).
- 5       • An *Extended Handoff Direction Message* may change the code channel associated  
6       with an Active Set pilot that remains in the new Active Set.
- 7       • The base station specifies the long code mask to be used on the new Forward  
8       Traffic Channel by using the PRIVATE\_LCM field of the *Extended Handoff Direction*  
9       *Message*. The base station may change the long code mask to be used on the new  
10      Forward Traffic Channel via the PRIVATE\_LCM field of the *Extended Handoff*  
11      *Direction Message* only for CDMA-to-CDMA hard handoffs. If a change of long code  
12      mask is specified and the base station does not specify an explicit action time in  
13      the *Extended Handoff Direction Message*, the base station shall begin using the  
14      new long code mask on the first 80 ms boundary (relative to System Time)  
15      occurring at least 80 ms after the end of the frame containing the last bit of the  
16      message.
- 17      • For CDMA-to-CDMA handoffs, the base station may require the mobile station to  
18      perform a reset of the acknowledgment procedures by using the RESET\_L2 field of  
19      the *Extended Handoff Direction Message*. If the base station requires the mobile  
20      station to reset the acknowledgment procedures, Layer 3 shall send an indication  
21      to Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment  
22      procedures shall be reset immediately after the action time of the *Extended Handoff*  
23      *Direction Message*.
- 24      • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by  
25      setting the FRAME\_OFFSET field to a new value. If the base station specifies a new  
26      frame offset and does not specify an explicit action time, the base station shall  
27      change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms  
28      boundary (relative to System Time) after the end of transmission of the *Extended*  
29      *Handoff Direction Message*, unless the end of transmission of the message  
30      coincides with an 80 ms boundary, in which case the change in frame offsets shall  
31      occur 80 ms after the end of transmission.
- 32      • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base  
33      station may alter the nominal transmit power offset after handoff by setting the  
34      NOM\_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA  
35      hard handoffs to band classes other than Band Class 0 and Band Class 3, the base  
36      station may alter the nominal transmit power offset after handoff by setting both  
37      the NOM\_PWR and NOM\_PWR\_EXT fields to the new nominal transmit power offset.

- 1       • The base station may specify a different band class by setting the BAND\_CLASS  
2       and CDMA\_FREQ fields to the band class and CDMA frequency assignment  
3       respectively. The base station shall not specify a band class not supported by the  
4       mobile station. If the reverse channel corresponding to forward channel included in  
5       this message is separated by flexible channel spacing, the base station shall extend  
6       this message using the General Extension Message and include a Reverse Channel  
7       Information Record that specifies the reverse frequency to be used by the mobile  
8       station after handoff.
- 9       • If the base station sends the *Extended Handoff Direction Message* in assured mode,  
10      the base station should set the action time of the message such that there is  
11      sufficient time for the mobile station to transmit a message containing the  
12      acknowledgment prior to the action time.
- 13      • For CDMA-to-CDMA hard handoffs, the base station may specify whether the  
14      mobile station is to use service negotiation or service option negotiation by setting  
15      the SERV\_NEG\_TYPE field of the *Extended Handoff Direction Message*. If the base  
16      station specifies that the mobile station is to use service negotiation, the base  
17      station shall set the SERV\_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action  
18      time of message. If the base station specifies that the mobile station is to use  
19      service option negotiation, the base station shall set SERV\_NEG to disabled at the  
20      action time of the message.

#### 21   3.6.6.2.2.3 Processing the Candidate Frequency Search Request Message

22   The base station may send a *Candidate Frequency Search Request Message* to direct the  
23   mobile station to perform a single or periodic search on the Candidate Frequency.

24   The base station may request the mobile station to perform an aligned search of the  
25   Candidate Frequency Search Set (see 2.6.6.2.8.3). If the base station requests the mobile  
26   station to perform an aligned search, the base station shall specify an explicit action time  
27   for the *Candidate Frequency Search Request Message*.

28   The base station shall maintain a search message sequence number. The sequence  
29   number shall be initialized to zero prior to the transmission of the first *Candidate*  
30   *Frequency Search Request Message* to the mobile station. Each time the base station  
31   sends a new *Candidate Frequency Search Request Message* to the mobile station, it shall  
32   set the CFSRM\_SEQ field to the current value of the sequence number, and increment the  
33   sequence number modulo 4.

#### 34   3.6.6.2.2.4 Processing the Candidate Frequency Search Response Message

35   The base station should use the mobile station's search capabilities as reported in the  
36   *Candidate Frequency Search Response Message* to determine an appropriate period for the  
37   mobile station's periodic search on the Candidate Frequency.

#### 3.6.6.2.2.5 Processing the Candidate Frequency Search Control Message

The base station may send a *Candidate Frequency Search Control Message* to direct the mobile station to perform a single search, or to start or stop a periodic search on the Candidate Frequency.

The base station may request the mobile station to perform an aligned search of the Candidate Frequency Search Set (see 2.6.6.2.8.3). If the base station requests the mobile station to perform an aligned search, the base station shall specify an explicit action time for the *Candidate Frequency Search Control Message*.

Each time the base station sends a new *Candidate Frequency Search Control Message* to the mobile station, it shall set the CFSCM\_SEQ field to the current value of the sequence number, and increment the sequence number modulo 4.

#### 3.6.6.2.2.6 Processing the Candidate Frequency Search Report Message

The base station should use the value of the LAST\_SRCH\_MSG field and of the LAST\_SRCH\_MSG\_SEQ field of the *Candidate Frequency Search Report Message* to interpret the contents of the message.

If the SEARCH\_MODE field of the *Candidate Frequency Search Report Message* is equal to '0000', the base station should use the pilot strength measurements in the message to determine whether to direct the mobile station to perform a CDMA-to-CDMA inter-frequency handoff, and to determine the new Active Set.

#### 3.6.6.2.2.7 Transmitting During Handoff

The base station shall continue transmission to the mobile station on the Fundamental Channel or the Dedicated Control Channel of a Forward Traffic Channel removed from the Active Set until it receives the *Handoff Completion Message* or *Extended Handoff Completion Message* from the mobile station or determines that the call has been released.

The base station should discontinue transmission to the mobile station on the Fundamental Channel or the Dedicated Control Channel of a Forward Traffic Channel removed from the Active Set after it receives the *Handoff Completion Message* or *Extended Handoff Completion Message*.

For Forward Multiplex Options 3 through 16, the base station should discontinue transmission of Forward Supplemental Code Channels removed from the Code Channel List according to the following rules:

- If a *General Handoff Direction Message* is used to remove one or more Forward Supplemental Code Channels, the base station should discontinue transmission on those code channels no later than the action time of the *General Handoff Direction Message*.
- If a *Supplemental Channel Assignment Message* is used to remove one or more Forward Supplemental Code Channels, the base station should discontinue transmission on those Forward Supplemental Code Channels no later than the implicit action time of the *Supplemental Channel Assignment Message*.

#### 3.6.6.2.2.8 Ordering Pilot Measurements From the Mobile Station

The base station may direct the mobile station to send a *Pilot Strength Measurement Message* by sending a *Pilot Measurement Request Order*.

The base station may send a *Periodic Pilot Measurement Request Order* to direct the mobile station to send pilot strength measurements one time or periodically. In response to the order, the mobile station reports the pilot strength measurements using the *Periodic Pilot Strength Measurement Message*.

#### 3.6.6.2.2.9 Processing the Supplemental Channel Assignment Message

The base station may use this message to specify Supplemental Code Channel assignment parameters for the mobile station's Forward Traffic Channel, Reverse Traffic Channel, or both. This information includes the parameters that control the timing of the Supplemental Code Channel assignment (e.g., starting time and duration), and parameters that control the number of Supplemental Code Channels which will be used during the assignment (e.g., the number of Reverse Supplemental Code Channels on which the mobile station may transmit and the set of Walsh codes on which the mobile station receives Forward Supplemental Code Channels for each pilot in the mobile station's Active Set). The *Supplemental Channel Assignment Message* shall be used only with Multiplex Options 3 through 16.

The base station shall set the content of a *Supplemental Channel Assignment Message* according to the following rules:

- The base station may set USE\_RETRY\_DELAY to '1' and RETRY\_DELAY to a delay in 320 ms units starting at the next 80 ms system time boundary during which the mobile station is to refrain from sending subsequent *Supplemental Channel Request Messages*. The base station may set RETRY\_DELAY to '1111111' to indicate that the mobile station is to refrain from transmitting *Supplemental Channel Request Messages* indefinitely. Otherwise, the base station shall set USE\_RETRY\_DELAY to '0' and omit RETRY\_DELAY in which case the mobile station is to reset any previously set RETRY\_DELAY indication.
- The base station shall set REV\_DTX\_DURATION to the maximum duration of time in units of 20 ms that the mobile station is allowed to stop transmission on a Reverse Supplemental Code Channel before resuming transmission on the Reverse Supplemental Code Channel within the reverse assignment duration. The base station shall set this field to '0000' if the mobile station is to stop using a Reverse Supplemental Code Channel once it has stopped transmitting on that Reverse Supplemental Code Channel. The base station shall set this field to '1111' if the mobile station is allowed to resume transmission on a Reverse Supplemental Code Channel at any time within the reverse assignment duration.
- A *Supplemental Channel Assignment Message* may specify Reverse Supplemental Code Channel assignments. If Reverse Supplemental Code Channel assignment information is included, the base station shall set REV\_INCLUDED to '1' and include the appropriate Reverse Supplemental Code Channel assignment information. Otherwise, the base station shall set REV\_INCLUDED to '0'.

- 1     • The base station shall indicate the implicit, explicit, or linked start time for a  
2       Reverse Supplemental Code Channel assignment as follows:
  - 3       – The base station may set EXPL\_REV\_START\_TIME to '1' and set  
4           REV\_START\_TIME to the System Time, in units of 80 ms (modulo 64), at which  
5           the mobile station is to start transmitting on the Reverse Supplemental Code  
6           Channels.
  - 7       – The base station may set USE\_REV\_HDM\_SEQ to '1' and set  
8           REV\_LINKED\_HDM\_SEQ to the sequence number of the *General Handoff*  
9           *Direction Message* (HDM\_SEQ) with which this message is linked to indicate  
10          that the mobile station is to start processing the Reverse Supplemental Code  
11          Channels at the action time of the linked *General Handoff Direction Message*.
  - 12       – The base station may set EXPL\_REV\_START\_TIME to '0' and  
13           USE\_REV\_HDM\_SEQ to '0' to indicate that the mobile station is to start  
14           processing Reverse Supplemental Code Channels at the implicit action time of  
15           this message.
  - 16       – The base station shall not set both EXPL\_REV\_START\_TIME and  
17           USE\_REV\_HDM\_SEQ to '1'.
- 18     • The base station may set USE\_REV\_DURATION to '1' and REV\_DURATION to the  
19       time interval, in units of 80 ms, after the implicit, explicit, or linked action time for  
20       the message (as specified in 2.6.6.2.5.1), during which the mobile station is to  
21       transmit on the specified Reverse Supplemental Code Channels. The base station  
22       may set USE\_REV\_DURATION to '0' to indicate an infinite duration for the  
23       assignment of Reverse Supplemental Code Channels. If NUM\_REV\_CODES is '000',  
24       then the base station shall set USE\_REV\_DURATION to '0'.
- 25     • If Reverse Supplemental Code Channel assignment information is included, the  
26       base station shall set NUM\_REV\_CODES to the number of Reverse Supplemental  
27       Code Channels to be used in this Reverse Supplemental Code Channel assignment.  
28       The base station shall not set NUM\_REV\_CODES to be greater than the number of  
29       codes supported by the currently negotiated multiplex option.
- 30     • The base station may set USE\_T\_ADD\_ABORT, the Reverse Supplemental Code  
31       Channel assignment T\_ADD abort indicator, to '1' to indicate that the mobile  
32       station is to abort Reverse Supplemental Code Channel assignments implicitly  
33       when a T\_ADD trigger occurs. Otherwise, the base station shall set  
34       USE\_T\_ADD\_ABORT to '0'. If NUM\_REV\_CODES is set to '000', the base station  
35       shall set USE\_T\_ADD\_ABORT to '0'.
- 36     • If the base station is sending this message in response to a *Supplemental Channel*  
37       *Request Message* which includes a *Supplemental Channel Request Message*  
38       sequence number and the mobile station is to clear the IGNORE\_SCAM field, the  
39       base station shall set USE\_SCRM\_SEQ\_NUM to '1' and set SCRM\_SEQ\_NUM to the  
40       sequence number corresponding to the SCRM\_SEQ\_NUM field in a *Supplemental*  
41       *Channel Request Message* to which the mobile station is to match this message.  
42       Otherwise, the base station shall set USE\_SCRM\_SEQ\_NUM to '0' and omit  
43       SCRM\_SEQ\_NUM.

- 1 • A *Supplemental Channel Assignment Message* may specify Forward Supplemental  
2 Code Channel assignments. If Forward Supplemental Code Channel assignment  
3 information is included, the base station shall set FOR\_INCLUDED to '1' and  
4 include the appropriate Forward Supplemental Code Channel assignment  
5 information. Otherwise, the base station shall set FOR\_INCLUDED to '0'.
- 6 • The base station shall set FOR\_SUP\_CONFIG to '00' if the mobile station is to stop  
7 processing the forward supplemental code after the action time of the *Supplemental*  
8 *Channel Assignment Message*. The base station should not transmit to the mobile  
9 station on the Forward Supplemental Code Channels after the message takes effect.
- 10 • The base station shall set FOR\_SUP\_CONFIG to '01' if the mobile station is to start  
11 processing the Forward Supplemental Code Channels in the Code Channel List at  
12 the implicit, explicit, or linked action time for the message as specified in  
13 2.6.6.2.5.1.
- 14 • The base station shall set FOR\_SUP\_CONFIG to '10' if the Forward Supplemental  
15 Code Channels associated with the pilots in the Active set are specified in the  
16 *Supplemental Channel Assignment Message* and is to stop processing Forward  
17 Supplemental Code Channels at the implicit action time of the message. The base  
18 station should not transmit to the mobile station on the Forward Supplemental  
19 Code Channels after the message takes effect.
- 20 • The base station shall set FOR\_SUP\_CONFIG to '11' if the Forward Supplemental  
21 Code Channels associated with the pilots in the Active set are specified in the  
22 *Supplemental Channel Assignment Message* and the mobile station is to start  
23 processing the Forward Supplemental Code Channels at the implicit, explicit, or  
24 linked action time for the message as specified in 2.6.6.2.5.1.
- 25 • The base station shall set FOR\_DURATION to the time interval, in units of 80 ms,  
26 after the implicit, explicit, or linked action time for the message (as specified in  
27 2.6.6.2.5.1), during which the mobile station is to process the specified Forward  
28 Supplemental Code Channels. The base station may set USE\_FOR\_DURATION to  
29 '0' to indicate an infinite duration for the allocation of Forward Supplemental Code  
30 Channels. The base station should not transmit to the mobile station on the  
31 Forward Supplemental Code Channels outside the time interval specified by  
32 FOR\_DURATION.
- 33 • The base station may set EXPL\_FOR\_START\_TIME to '1' and set FOR\_START\_TIME  
34 to the System Time, in units of 80 ms (modulo 64), at which the mobile station is to  
35 start processing the Forward Supplemental Code Channels.
- 36 • The base station may set USE\_FOR\_HDM\_SEQ to '1' and set  
37 FOR\_LINKED\_HDM\_SEQ to the sequence number of the *General Handoff Direction*  
38 *Message* (HDM\_SEQ) with which this message is linked to indicate that the mobile  
39 station is to start processing the Forward Supplemental Code Channels at the  
40 action time of the linked *General Handoff Direction Message*.
- 41 • The base station shall not set both USE\_FOR\_HDM\_SEQ and  
42 EXPL\_FOR\_START\_TIME within a *Supplemental Channel Assignment Message* to  
43 '1'.

- The number of Supplemental Code Channels assigned by *Supplemental Channel Assignment Message* shall not exceed the maximum number of Supplemental Code Channels for the negotiated Forward Multiplex Option.
- The base station may set EXPL\_FOR\_START\_TIME to '0' and USE\_FOR\_HDM\_SEQ to '0' to indicate that the mobile station is to start processing Forward Supplemental Code Channels at the implicit action time of this message.

#### 3.6.6.2.2.10 Processing the General Handoff Direction Message

The base station shall maintain a handoff message sequence number. The sequence number shall be initialized to zero prior to the transmission of the first *Extended Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message* (see 3.6.6.2.2.11) to the mobile station (see 2.6.6.2.2.2). The base station shall increment the sequence number modulo 4 each time the base station modifies the pilot list (including the order in which pilots are specified within the list) or the code channels (including a change in the ordering such that the first code channel occurrence for any pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*, *General Handoff Direction Message*, or *Universal Handoff Direction Message*.

Following a hard handoff, the base station should set the handoff message sequence number to the value of the LAST\_HDM\_SEQ field of the *Handoff Completion Message* or *Extended Handoff Completion Message* and should use the pilot order contained in the *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the contents of subsequent *Power Measurement Report Messages*.

The base station shall set the contents of a *General Handoff Direction Message* according to the following rules:

- A *General Handoff Direction Message* shall list no more than  $N_{6m}$  pilots in the new Active Set.
- The base station may include a Service Configuration Information Record in the *General Handoff Direction Message* to accept a service configuration proposed in a *Service Request Message* or *Service Response Message*, and instruct the mobile station to begin using the service configuration.
- A *General Handoff Direction Message* shall identify the identical power control subchannels (i.e., those carrying identical power control bits).
- A *General Handoff Direction Message* shall identify the transmit power level of the power control subchannels to the transmit power level of 20 ms frames at a 9600 bps or 14400 bps rate on their respective associated channels (Forward Fundamental Channel or Forward Dedicated Control Channel).

- 1 • For CDMA-to-CDMA handoffs, the base station may specify Power Control  
2 Subchannel Gain action time (PC\_ACTION\_TIME]. If PC\_ACTION\_TIME is included  
3 in this message, the base station shall apply the new FPC\_SUBCHAN\_GAIN at the  
4 time specified by PC\_ACTION\_TIME. If the PC\_ACTION\_TIME is not included in  
5 this message but the explicit action time is included, the base station shall apply  
6 the new FPC\_SUBCHAN\_GAIN at the action time of the *General Handoff Direction*  
7 *Message*. If the implicit action time is used, the base station should gradually  
8 apply any change in FPC\_SUBCHAN\_GAIN.
- 9 • A *General Handoff Direction Message* may change the code channel associated with  
10 an Active Set pilot that remains in the new Active Set.
- 11 • The base station specifies the long code mask to be used on the new Forward  
12 Traffic Channel by using the PRIVATE\_LCM field of the *General Handoff Direction*  
13 *Message*. The base station may change the long code mask to be used on the new  
14 Forward Traffic Channel via the PRIVATE\_LCM field of the *General Handoff*  
15 *Direction Message* only for CDMA-to-CDMA hard handoffs. If a change of long code  
16 mask is specified and the base station does not specify an explicit action time in  
17 the *General Handoff Direction Message*, the base station shall begin using the new  
18 long code mask on the first 80 ms boundary (relative to System Time) occurring at  
19 least 80 ms after the end of the frame containing the last bit of the message.
- 20 • For CDMA-to-CDMA handoffs, the base station may require the mobile station to  
21 perform a reset of the acknowledgment procedures by using the RESET\_L2 field of  
22 the *General Handoff Direction Message*. If the base station requires the mobile  
23 station to reset the acknowledgment procedures, Layer 3 shall send an indication  
24 to Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment  
25 procedures of the base station that the mobile station is to handoff to shall be reset  
26 immediately after the action time of the *General Handoff Direction Message*.
- 27 • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by  
28 setting the FRAME\_OFFSET field to a new value. If the base station specifies a new  
29 frame offset and does not specify an explicit action time, the base station shall  
30 change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms  
31 boundary (relative to System Time) after the end of transmission of the *General*  
32 *Handoff Direction Message*, unless the end of transmission of the message  
33 coincides with an 80 ms boundary, in which case the change in frame offsets shall  
34 occur 80 ms after the end of transmission.
- 35 • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base  
36 station may alter the nominal transmit power offset after handoff by setting the  
37 NOM\_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA  
38 hard handoffs to band classes other than Band Class 0 and Band Class 3, the base  
39 station may alter the nominal transmit power offset after handoff by setting both  
40 the NOM\_PWR and NOM\_PWR\_EXT fields to the new nominal transmit power offset.

- 1       • The base station may specify a different band class by setting the BAND\_CLASS  
2       and CDMA\_FREQ fields to the band class and CDMA frequency assignment  
3       respectively. The base station shall not specify a band class not supported by the  
4       mobile station. If the reverse channel corresponding to forward channel included in  
5       this message is separated by flexible channel spacing, the base station shall extend  
6       this message using the General Extension Message and include a Reverse Channel  
7       Information Record that specifies the reverse frequency to be used by the mobile  
8       station after handoff.
- 9       • If the base station sends the *General Handoff Direction Message* in assured mode,  
10      the base station should set the action time of the message such that there is  
11      sufficient time for the mobile station to transmit a message containing the  
12      acknowledgment prior to the action time.
- 13      • For CDMA-to-CDMA hard handoffs, the base station may specify whether the  
14      mobile station is to use service negotiation or service option negotiation by setting  
15      the SERV\_NEG\_TYPE field of the *General Handoff Direction Message*. If the base  
16      station specifies that the mobile station is to use service negotiation, the base  
17      station shall set the SERV\_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action  
18      time of message. If the base station specifies that the mobile station is to use  
19      service option negotiation, the base station shall set SERV\_NEG to disabled at the  
20      action time of the message.
- 21      • The base station may specify whether the mobile station is to restore its  
22      configuration to what it was before the handoff attempt, if it fails in the handoff  
23      attempt using criteria specified in the *Candidate Frequency Search Request*  
24      *Message*, by using the RETURN\_IF\_HANDOFF\_FAIL field of the *General Handoff*  
25      *Direction Message*. The base station may specify whether the mobile station is to  
26      periodically search a CDMA Candidate Frequency for useable pilots, using criteria  
27      specified in the *Candidate Frequency Search Request Message*, by using the  
28      PERIODIC\_SEARCH field of the *General Handoff Direction Message*.
- 29      • The base station may include Forward Supplemental Code Channel assignment  
30      information in the *General Handoff Direction Message* if the Forward Multiplex  
31      Option for the currently connected service option is 3, 4, 5, 6, 7, 8, 9, 10, 11, 12,  
32      13, 14, 15, or 16. If Forward Supplemental Code Channel assignment information  
33      is included, the base station shall include FOR\_INCLUDED, set FOR\_INCLUDED to  
34      '1', and include the appropriate Forward Supplemental Code Channel assignment  
35      information.
- 36      • The number of Forward Supplemental Code Channels assigned by the *General*  
37      *Handoff Direction Message* shall not exceed the maximum number of Forward  
38      Supplemental Code Channels for the negotiated Forward Multiplex Option.
- 39      • The base station shall set FOR\_SUP\_CONFIG to '00' if the mobile station is to stop  
40      processing the Forward Supplemental Code Channel after the action time of  
41      *General Handoff Direction Message*. The base station should not transmit to the  
42      mobile station on the Forward Supplemental Code Channels after the message  
43      takes effect.

- 1     • The base station shall set FOR\_SUP\_CONFIG to '01' if the mobile station is to start  
2     processing the Forward Supplemental Code Channels in the Code Channel List at  
3     the action time of the message.
- 4     • The base station shall set FOR\_SUP\_CONFIG to '10' if the Forward Supplemental  
5     Code Channels associated with the pilots in the Active set are specified in the  
6     *General Handoff Direction Message* and the mobile station is to stop processing  
7     Forward Supplemental Code Channels at the implicit action time of the message.  
8     The base station should not transmit to the mobile station on the Forward  
9     Supplemental Code Channels after the message takes effect.
- 10    • The base station shall set FOR\_SUP\_CONFIG to '11' if the Forward Supplemental  
11    Code Channels associated with the pilots in the Active set are specified in the  
12    *General Handoff Direction Message* and the mobile station is to start processing the  
13    Forward Supplemental Code Channels at the action time of the message.
- 14    • The base station shall set FOR\_DURATION to the time interval after the action time  
15    of the message, in units of 80 ms, during which the mobile station is to process the  
16    specified Forward Supplemental Code Channels. The base station may set  
17    USE\_FOR\_DURATION to '0' to indicate an infinite duration for the allocation of  
18    Forward Supplemental Code Channels. The base station should not transmit to  
19    the mobile station on the Forward Supplemental Code Channels outside the time  
20    interval specified by FOR\_DURATION.
- 21    • If FOR\_INCLUDED is included in the message, the base station shall include  
22    EXPL\_CODE\_CHAN for each pilot included in the message. If EXPL\_CODE\_CHAN  
23    is included and set to '1' for a pilot, the code channels associated with the pilot in  
24    the *General Handoff Direction Message* shall be ordered such that the first code  
25    channel occurrence is associated with the Forward Fundamental Channel and the  
26    successive occurrences are associated with Forward Supplemental Code Channels.  
27    If EXPL\_CODE\_CHAN is included and is set to '0', for each pilot in the new Active  
28    Set, the base station shall include BASE\_CODE\_CHAN and set it to the base code  
29    channel index in the range of 1 to (63 - NUM\_FOR\_SUP + 1), inclusive, that the  
30    mobile station is to use as the first Forward Supplemental Code Channel  
31    associated with this pilot. The mobile station is to use NUM\_FOR\_SUP adjacent  
32    code channels beginning with index BASE\_CODE\_CHAN (i.e., BASE\_CODE\_CHAN  
33    through BASE\_CODE\_CHAN + NUM\_FOR\_SUP - 1) for the Forward Supplemental  
34    Code Channels associated with this pilot.
- 35    • The base station may include Reverse Supplemental Code Channel assignment  
36    information in the *General Handoff Direction Message* if the Reverse Multiplex  
37    Option is 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, or 16. If Reverse Supplemental  
38    Code Channel assignment information is included, the base station shall include  
39    REV\_INCLUDED, set REV\_INCLUDED to '1', and include the appropriate Reverse  
40    Supplemental Code Channel assignment information in the additional fields.

- 1       • If Reverse Supplemental Code Channel assignment information is included, the  
2       base station shall set NUM\_REV\_CODES to the number of Reverse Supplemental  
3       Code Channels to be used by the mobile station. The base station shall not set  
4       NUM\_REV\_CODES to be greater than the number of codes supported by the  
5       currently negotiated multiplex option.
- 6       • The base station may set USE\_T\_ADD\_ABORT, the Reverse Supplemental Code  
7       Channel assignment T\_ADD abort indicator, to '1' to indicate that the mobile  
8       station is to abort Reverse Supplemental Code Channel assignments implicitly  
9       when a T\_ADD trigger occurs. Otherwise, the base station shall set  
10      USE\_T\_ADD\_ABORT to '0'. If NUM\_REV\_CODES is set to '000', the base station  
11      shall set USE\_T\_ADD\_ABORT to '0'.
- 12      • The base station shall set REV\_DTX\_DURATION to the maximum duration of time  
13      in units of 20 ms that the mobile station is allowed to stop transmission on a  
14      Reverse Supplemental Code Channel before resuming transmission on the Reverse  
15      Supplemental Code Channel. The base station shall set this field to '0000' if the  
16      mobile station is to stop using a Reverse Supplemental Code Channel once it has  
17      stopped transmitting on that Reverse Supplemental Code Channel. The base  
18      station shall set this field to '1111' if the mobile station is allowed to resume  
19      transmission on a Reverse Supplemental Code Channel at any time within the  
20      reverse assignment duration.
- 21      • The base station may set CLEAR\_RETRY\_DELAY to '1' to indicate that the mobile  
22      station is to cancel any previously stored retry delay. Otherwise, the base station  
23      shall set CLEAR\_RETRY\_DELAY to '0' to indicate that the mobile station is to  
24      continue to honor any previously stored retry delay (see 2.6.6.2.5.1).
- 25      • The base station may indicate a duration for the Reverse Supplemental Code  
26      Channel assignment (in 80 ms superframes) by setting USE\_REV\_DURATION to '1'  
27      and indicating the desired duration in the REV\_DURATION field. If  
28      USE\_REV\_DURATION is set to '0', a duration of infinity is indicated, and the base  
29      station shall set the REV\_DURATION to '00000000'. If NUM\_REV\_CODES is '000',  
30      then the base station shall set USE\_REV\_DURATION to '0' and shall set  
31      REV\_DURATION to '00000000'.
- 32      • The base station may set USE\_REV\_DURATION to '1' and REV\_DURATION to the  
33      time interval after the action time of the message, in units of 80 ms, during which  
34      the mobile station may transmit on the assigned Reverse Supplemental Code  
35      Channels. The base station may set USE\_REV\_DURATION to '0' to indicate an  
36      infinite duration for the allocation of Forward Supplemental Code Channels.
- 37      • The base station may specify a closed loop power control step size by setting  
38      USE\_PWR\_CNTL\_STEP to '1' and indicating the desired power control step size in  
39      the PWR\_CNTL\_STEP field (see 2.1.2.3.2). Otherwise, the base station shall set  
40      USE\_PWR\_CNTL\_STEP to '0'. The base station shall not specify a power control  
41      step size not supported by the mobile station.

### 3.6.6.2.2.11 Processing the Universal Handoff Direction Message

The base station shall maintain a handoff message sequence number. The sequence number shall be initialized to zero prior to the transmission of the first *Extended Handoff Direction Message* (see 3.6.6.2.2.2), *General Handoff Direction Message* (see 3.6.6.2.2.10), or *Universal Handoff Direction Message* to the mobile station. The base station shall increment the sequence number modulo 4 each time the base station modifies the pilot list (including the order in which pilots are specified within the list) or the code channels (including a change in the ordering such that the first code channel occurrence for any pilot is changed) sent to the mobile station in an *Extended Handoff Direction Message*, a *General Handoff Direction Message*, or an *Universal Direction Message*.

Following a hard handoff, the base station should set the handoff message sequence number to the value of the LAST\_HDM\_SEQ field of the *Handoff Completion Message* or *Extended Handoff Completion Message* and should use the pilot order contained in the *Handoff Completion Message* or *Extended Handoff Completion Message* to interpret the contents of subsequent *Power Measurement Report Messages*.

The base station shall set the contents of a *Universal Handoff Direction Message* according to the following rules:

- A *Universal Handoff Direction Message* shall list no more than  $N_{6m}$  pilots in the new Active Set.
- The base station may include a Service Configuration Information Record in the *Universal Handoff Direction Message* to accept a service configuration proposed in a *Service Request Message* or *Service Response Message*, and instruct the mobile station to begin using the service configuration.
- A *Universal Handoff Direction Message* shall identify the identical power control subchannels (i.e., those carrying identical power control bits).
- A *Universal Handoff Direction Message* shall identify the transmit power level of the power control subchannels to the transmit power level of 20 ms frames at a 9600 bps or 14400 bps rate on their respective associated channels (Forward Fundamental Channel or Forward Dedicated Control Channel).
- For CDMA-to-CDMA handoffs, the base station may specify Power Control Subchannel Gain action time (PC\_ACTION\_TIME]. If PC\_ACTION\_TIME is included in this message, the base station shall apply the new FPC\_SUBCHAN\_GAIN at the time specified by PC\_ACTION\_TIME. If the PC\_ACTION\_TIME is not included in this message but the explicit action time is included, the base station shall apply the new FPC\_SUBCHAN\_GAIN at the action time of the *Universal Handoff Direction Message*. If the implicit action time is used, the base station should gradually apply any change in FPC\_SUBCHAN\_GAIN.
- A *Universal Handoff Direction Message* may change the code channel associated with an Active Set pilot that remains in the new Active Set.
- A *Universal Handoff Direction Message* may delete the code channel associated with an Active Set pilot that remains in the new Active Set.

- 1 • A *Universal Handoff Direction Message* may add the code channel associated with  
2 an Active Set pilot that remains in the new Active Set.
- 3 • The base station specifies the long code mask to be used on the new Forward  
4 Traffic Channel by using the PRIVATE\_LCM and PLCM\_TYPE fields of the *Universal*  
5 *Handoff Direction Message*. The base station may change the contents of the  
6 PRIVATE\_LCM field only for CDMA-to-CDMA hard handoffs. If a change of long  
7 code mask is specified and the base station does not specify an explicit action time  
8 in the *Universal Handoff Direction Message*, the base station shall begin using the  
9 new long code mask on the first 80 ms boundary (relative to System Time)  
10 occurring at least 80 ms after the end of the frame containing the last bit of the  
11 message.
- 12 • For CDMA-to-CDMA handoffs, the base station may require the mobile station to  
13 perform a reset of the acknowledgment procedures by using the RESET\_L2 field of  
14 the *Universal Handoff Direction Message*. If the base station requires the mobile  
15 station to reset the acknowledgment procedures, Layer 3 shall send an indication  
16 to Layer 2 to reset the acknowledgment procedures (see [4]). The acknowledgment  
17 procedures of the base station that the mobile station is to handoff to shall be reset  
18 immediately after the action time of the *General Handoff Direction Message*.
- 19 • For CDMA-to-CDMA hard handoffs, the base station may alter the frame offset by  
20 setting the FRAME\_OFFSET field to a new value. If the base station specifies a new  
21 frame offset and does not specify an explicit action time, the base station shall  
22 change its Forward and Reverse Traffic Channel frame offsets at the second 80 ms  
23 boundary (relative to System Time) after the end of transmission of the *Universal*  
24 *Handoff Direction Message*, unless the end of transmission of the message  
25 coincides with an 80 ms boundary, in which case the change in frame offsets shall  
26 occur 80 ms after the end of transmission.
- 27 • For CDMA-to-CDMA hard handoffs to Band Class 0 or Band Class 3, the base  
28 station may alter the nominal transmit power offset after handoff by setting the  
29 NOM\_PWR field to the new nominal transmit power offset. For CDMA-to-CDMA  
30 hard handoffs to band classes other than Band Class 0 and Band Class 3, the base  
31 station may alter the nominal transmit power offset after handoff by setting both  
32 the NOM\_PWR and NOM\_PWR\_EXT fields to the new nominal transmit power offset.
- 33 • The base station may specify a different band class by setting the BAND\_CLASS  
34 and CDMA\_FREQ fields to the band class and CDMA frequency assignment  
35 respectively. The base station shall not specify a band class not supported by the  
36 mobile station. If the reverse channel corresponding to forward channel included in  
37 this message is separated by flexible channel spacing, the base station shall extend  
38 this message using the General Extension Message and include a Reverse Channel  
39 Information Record that specifies the reverse frequency to be used by the mobile  
40 station after handoff<sup>7</sup>.

---

<sup>7</sup> Similarly, *MEID Universal Handoff Direction Message* may be extended through General Extension  
(footnote continued on next page)

- 1 • If the base station sends the *Universal Handoff Direction Message* in assured mode,  
2 the base station should set the action time of the message such that there is  
3 sufficient time for the mobile station to transmit a message containing the  
4 acknowledgment prior to the action time.
- 5 • For CDMA-to-CDMA handoffs, the base station may specify whether the mobile  
6 station is to use service negotiation or service option negotiation by setting the  
7 SERV\_NEG\_TYPE field of the *Universal Handoff Direction Message*. If the base  
8 station specifies that the mobile station is to use service negotiation, the base  
9 station shall set the SERV\_NEG variable (see 3.6.4.1.2.1.4) to enabled at the action  
10 time of message. If the base station specifies that the mobile station is to use  
11 service option negotiation, the base station shall set SERV\_NEG to disabled at the  
12 action time of the message.
- 13 • The base station may specify whether the mobile station is to restore its  
14 configuration to what it was before the handoff attempt, if it fails in the handoff  
15 attempt using criteria specified in the *Candidate Frequency Search Request*  
16 *Message*, by using the RETURN\_IF\_HANDOFF\_FAIL field of the *Universal Handoff*  
17 *Direction Message*. The base station may specify whether the mobile station is to  
18 periodically search a CDMA Candidate Frequency for useable pilots, using criteria  
19 specified in the *Candidate Frequency Search Request Message*, by using the  
20 PERIODIC\_SEARCH field of the *Universal Handoff Direction Message*.
- 21 • The base station specifies Active Set for the Fundamental Channel only, the  
22 Dedicated Control Channel only, or both. The Active Set of the Dedicated Control  
23 Channel shall be the same as the Active Set of the Fundamental Channel when  
24 both the Fundamental Channel and Dedicated Control Channel are assigned.
- 25 • The base station may specify the Active Set of the Supplemental Channels. The  
26 Active Set of the Supplemental Channels shall be a subset of the Active Set of the  
27 Fundamental Channel or the Dedicated Control Channel.
- 28 • If a Reverse Packet Data Channel assignment is not included, a *Universal Handoff*  
29 *Direction Message* may specify a Reverse Supplemental Channel assignment. If  
30 Reverse Supplemental Channel assignment information is included, this message  
31 contains information that specifies the start time, duration, and the data transfer  
32 rate associated with this Reverse Supplemental Channel assignment.
- 33 • If a Reverse Packet Data Channel assignment is included, a *Universal Handoff*  
34 *Direction Message* shall not specify a Reverse Supplemental Channel assignment.
- 35 • A *Universal Handoff Direction Message* may specify a Forward Supplemental  
36 Channel assignment. If Forward Supplemental Channel assignment information is  
37 included, this message contains the start time, duration, and SCCL\_INDEX  
38 associated with this Forward Supplemental Channel assignment.

---

Message.

- 1 • A *Universal Handoff Direction Message* may update the mapping between a  
2 particular SCCL\_INDEX and a set of fields that specifies the data transfer rate, QOF  
3 index, Forward Supplemental Channel Walsh code for each PILOT\_PN, and the  
4 active set for the Forward Supplemental Channel associated with FOR\_SCH\_ID.
- 5 • A *Universal Handoff Direction Message* may update REV\_WALSH\_ID field which  
6 specifies the Reverse Supplemental Walsh cover.
- 7 • The base station may set CLEAR\_RETRY\_DELAY to '1' to indicate that the mobile  
8 station is to cancel any previously stored retry delay. Otherwise, the base station  
9 shall set CLEAR\_RETRY\_DELAY to '0' to indicate that the mobile station is to  
10 continue to honor any previously stored retry delay (see 2.6.6.2.5.1).

#### 11 3.6.6.2.2.12 Processing of Extended Supplemental Channel Assignment Message

12 If the Reverse Packet Data Channel is not assigned, the base station may use this message  
13 to carry Forward Supplemental Channel assignment information or Reverse Supplemental  
14 Channel assignment information.

15 If the Reverse Packet Data Channel is assigned, the base station may use this message to  
16 carry Forward Supplemental Channel assignment information, and the base station shall  
17 not use this message to carry Reverse Supplemental Channel assignment information.

18 If Forward Supplemental Channel assignment information is included, this message  
19 contains the start time, duration, and SCCL\_INDEX associated with this Forward  
20 Supplemental Channel assignment. If Reverse Supplemental Channel assignment  
21 information is included, this message contains information that specifies the start time,  
22 duration, and the number of information bits per frame (or set of number of bits per frame  
23 if RSCH\_VAR\_TABLE\_IDS[REV\_SCH\_ID<sub>r</sub>] is not equal to '000') associated with this Reverse  
24 Supplemental Channel assignment.

25 This message may specify the mapping between a particular SCCL\_INDEX and a set of  
26 fields that specifies the number of information bits per frame (or set of number of bits per  
27 frame if FSCH\_VAR\_TABLE\_IDS[FOR\_SCH\_ID<sub>r</sub>] is not equal to '000'), QOF index, Forward  
28 Supplemental Channel Walsh code for each PILOT\_PN, and the active set for the Forward  
29 Supplemental Channel associated with FOR\_SCH\_ID.

30 This message may also include REV\_WALSH\_ID field which specifies the Reverse  
31 Supplemental Walsh cover.

32 The base station shall set the contents of an *Extended Supplemental Channel Assignment*  
33 *Message* according to the following rules:

- 34 • An *Extended Supplemental Channel Assignment Message* may specify a Reverse  
35 Supplemental Channel assignment. The base station shall set NUM\_REV\_SCH to  
36 the number of Reverse Supplemental Channels to be assigned. If the Reverse  
37 Packet Data Channel is assigned, the base station shall set NUM\_REV\_SCH to 0.
- 38 • An *Extended Supplemental Channel Assignment Message* may specify a Forward  
39 Supplemental Channel assignment. The base station shall set NUM\_FOR\_SCH to  
40 the number of Forward Supplemental Channels to be assigned.

- 1       • The base station shall set the START\_TIME\_UNIT field to indicate the unit of the

2       FOR\_SCH\_START\_TIME included in this message, the *Forward Supplemental*

3       *Channel Assignment Mini Messages* and the *Universal Handoff Direction Message*

4       and REV\_SCH\_START\_TIME included in this message, the *Reverse Supplemental*

5       *Channel Assignment Mini Messages* and the *Universal Handoff Direction Message*.

6       The base station shall set this field to one less than the number of 20 ms intervals

7       that is to be used by the mobile station for calculating the start time included in

8       Forward Supplemental Channel assignments or Reverse Supplemental Channel

9       assignments.
- 10      • An *Extended Supplemental Channel Assignment Message* may specify Forward

11      Supplemental Channel configuration information. The base station shall set

12      NUM\_FOR\_SCH\_CFG to the number of Forward Supplemental Channel to be

13      configured.
- 14      • The base station shall set the NUM\_REC field to the number of instances of the

15      following record minus one included in this message. The base station shall set

16      the fields within each record as follows:

  - 17          – The base station shall set the SCCL\_INDEX field to the index of the

18          Supplemental Channel Code Information Record in the Supplemental Channel

19          Code List Table.
  - 20          – The base station shall set the FOR\_SCH\_NUM\_BITS\_IDX field to the Forward

21          Supplemental Channel number of information bits index associated with

22          SCCL\_INDEX.
  - 23          – The base station shall set the NUM\_SUP\_SHO field to the number of Forward

24          Supplemental Channels minus one, corresponding to the FOR\_SCH\_ID and the

25          SCCL\_INDEX, for which the frames are to be soft-combined by the mobile

26          station. The base station shall set the fields within each record as follows:

    - 27              + The base station shall set the PILOT\_PN field to the pilot PN sequence offset

28              for this pilot in units of 64 PN chips.
    - 29              + The base station shall set the QOF\_MASK\_ID\_SCH field to the ID of the

30              Quasi Orthogonal Function mask ID corresponding to the Forward

31              Supplemental Channel Code index.
    - 32              + The base station shall set the CODE\_CHAN\_SCH field to the code channel

33              on the Supplemental Channel corresponding to the PILOT\_PN.
- 34      • REV\_SCH\_DTX\_DURATION: The base station shall set REV\_SCH\_DTX\_DURATION

35      to the maximum duration of time in units of 20 ms that the mobile station is

36      allowed to stop transmission on a Reverse Supplemental Channel before resuming

37      transmission on the Reverse Supplemental Channel within the reverse assignment

38      duration. The base station shall set this field to '0000' if the mobile station is to

39      stop using a Reverse Supplemental Channel once it has stopped transmitting on

40      that Reverse Supplemental Channel. The base station shall set this field to '1111' if

41      the mobile station is allowed to resume transmission on a Reverse Supplemental

42      Channel at any time within the reverse assignment duration.

- 1       • The base station may set USE\_T\_ADD\_ABORT, the Reverse Supplemental Channel  
2       assignment T\_ADD abort indicator, to '1' to indicate that the mobile station is to  
3       abort Reverse Supplemental Channel assignments when a T\_ADD trigger occurs.  
4       Otherwise, the base station shall set USE\_T\_ADD\_ABORT to '0'.
- 5       • If the base station is sending this message in response to a *Supplemental Channel*  
6       *Request Message* which includes a *Supplemental Channel Request Message*  
7       sequence number and the mobile station is to clear the IGNORE\_ESCAM field, the  
8       base station shall set USE\_SCRM\_SEQ\_NUM to '1' and set SCRM\_SEQ\_NUM to the  
9       sequence number corresponding to the SCRM\_SEQ\_NUM field in a *Supplemental*  
10      *Channel Request Message* to which the mobile station is to match this message.  
11      Otherwise, the base station shall set USE\_SCRM\_SEQ\_NUM to '0' and omit  
12      SCRM\_SEQ\_NUM.
- 13      • If Forward Supplemental Channel burst assignment is included, the base station  
14      may include additional Forward Supplemental Channel configuration information  
15      including radio configuration, multiplex option, coding type, frame length, and  
16      maximum supplemental channel rate; if so, the base station shall set  
17      FOR\_SCH\_CC\_INCL to '1'.
- 18      • If Reverse Supplemental Channel burst assignment is included, the base station  
19      may include additional Reverse Supplemental Channel configuration information  
20      including radio configuration, multiplex option, coding type, frame length, and  
21      maximum supplemental channel rate; if so, the base station shall set  
22      REV\_SCH\_CC\_INCL to '1'.

#### 23   3.6.6.2.2.13 Processing of Forward Supplemental Channel Assignment Mini Message

24   The base station may use this message to specify Forward Supplemental Channel  
25   assignment parameters for the mobile station's Forward Supplemental Channel. This  
26   information includes the FOR\_SCH\_ID, duration, start time, and the index to the  
27   previously specified Forward Supplemental Channel Code List, which determines number  
28   of information bits per frame (or set of number of bits per frame if  
29   FSCH\_VAR\_TABLE\_ID<sub>s</sub>[FOR\_SCH\_ID<sub>r</sub>] is not equal to '000'), code channel index, and the  
30   identifier of the Quasi Orthogonal Function corresponding to the assignment.

31   The base station shall set the content of a *Forward Supplemental Channel Assignment Mini*  
32   *Message* according to the following rules:

- 33      • The base station shall set the FOR\_SCH\_ID to Forward Supplemental Channel  
34      identifier of the burst assignment that this message carries.

- 1 • The base station shall set the FOR\_SCH\_DURATION field to '0000' to indicate that  
2 the mobile station should stop processing the Forward Supplemental Channel  
3 starting at the explicit start time of the message specified by  
4 FOR\_SCH\_START\_TIME. The base station shall set the FOR\_SCH\_DURATION field  
5 to '1111' to indicate that the mobile station should process the Forward  
6 Supplemental Channel, starting at the explicit start time of the message specified  
7 by FOR\_SCH\_START\_TIME, until a subsequent *Forward Supplemental Channel*  
8 *Assignment Mini Message* or an *Extended Supplemental Channel Assignment*  
9 *Message* with the same FOR\_SCH\_ID field is received. The base station shall set  
10 the FOR\_SCH\_DURATION field to the duration in units of 20 ms (see Table  
11 3.7.3.3.2.37-3), starting at the explicit start time of the message specified by  
12 FOR\_SCH\_START\_TIME, during which the mobile station is to process the Forward  
13 Supplemental Channel.
- 14 • The base station shall set the FOR\_SCH\_START\_TIME field to the System Time, in  
15 units of time specified by START\_TIME\_UNIT, (modulo 32) at which the mobile  
16 station is to start processing the Forward Supplemental Channel specified in this  
17 message. The explicit start time for processing Forward Supplemental Channels is  
18 the time for which:

$$\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{FOR\_SCH\_START\_TIME} \bmod 32 = 0,$$

20 where t is the System Time in units of 20 ms.

- 21 • The base station shall set the SCCL\_INDEX field to the index of the record in the  
22 Forward Supplemental Channel Code list corresponding to the FOR\_SCH\_ID.
- 23 • If the PILOT\_GATING\_USE\_RATE to equal to '1', the base station shall set  
24 PILOT\_GATING\_USE\_RATE to '0' and start transmitting the Forward Power Control  
25 Subchannel with the maximum rate at the action time of the message.

#### 26 3.6.6.2.2.14 Processing of Reverse Supplemental Channel Assignment Mini Message

27 If the Reverse Packet Data Channel is assigned, the base station shall not send this  
28 message.

29 If the Reverse Packet Data Channel is not assigned, the base station may use this message  
30 to specify Reverse Supplemental Channel assignment parameters for the mobile station  
31 Reverse Supplemental Channel. This information includes the reverse supplemental  
32 channel identifier (REV\_SCH\_ID), the duration of transmission on the Reverse  
33 Supplemental Channel, the start time for the burst assignment, and the number of  
34 information bits per frame that the mobile station may transmit.

35 The base station shall set the content of the *Reverse Supplemental Channel Assignment*  
36 *Mini Message* according to the following rules:

- 1 • The base station shall set the REV\_SCH\_DURATION field to '0000' to indicate that  
2 the mobile station should stop transmitting on the Reverse Supplemental Channel  
3 specified by REV\_SCH\_ID at the start time specified by REV\_SCH\_START\_TIME.  
4 The base station shall set this field to '1111' to indicate that the mobile station may  
5 transmit on the Reverse Supplemental Channel specified by REV\_SCH\_ID, starting  
6 at the start time specified by REV\_SCH\_START\_TIME. The base station shall set  
7 the REV\_SCH\_DURATION field to the allocated duration (see Table 3.7.3.3.2.37-3),  
8 starting at the start time specified by REV\_SCH\_START\_TIME, during which the  
9 mobile station may transmit on the Reverse Supplemental Channel specified by  
10 REV\_SCH\_ID.
- 11 • The base station shall set the REV\_SCH\_START\_TIME field to the System Time, in  
12 units of time specified by START\_TIME\_UNIT, (modulo 32) at which the mobile  
13 station may start transmitting on the Reverse Supplemental Channel specified in  
14 this message. The explicit start time for transmitting on the Reverse Supplemental  
15 Channel is the time for which:

$$\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{REV\_SCH\_START\_TIME} \bmod 32 = 0,$$

17 where t is the System Time in units of 20 ms.

- 18 • The base station shall set the REV\_SCH\_BITS\_IDX (see Table 3.7.3.3.2.37-2) to  
19 indicate the Reverse Supplemental Channel number of information bits per frame  
20 index.
- 21 • If the PILOT\_GATING\_USE\_RATE to equal to '1', the base station shall set  
22 PILOT\_GATING\_USE\_RATE to '0' and start transmitting the Forward Power Control  
23 Subchannel with the maximum rate at the action time of the message.

#### 24 3.6.6.2.2.15 Processing of the Mobile Assisted Burst Operation Parameters Message

25 The base station may use this message to specify the operating parameters in the mobile  
26 station for Mobile Assisted Burst Operation procedures.

- 27 • A *Mobile Assisted Burst Operation Parameters Message* may specify pilot strength  
28 order change reporting information. If order change reporting information is  
29 included, the base station shall set ORDER\_FLAG to '1' and include the appropriate  
30 order change reporting fields. Otherwise, the base station shall set ORDER\_FLAG  
31 to '0'. If ORDER\_FLAG is set to '1', the base station shall perform the following  
32 procedures:
  - 33 – The base station shall set PS\_MIN\_DELTA to one less than the minimum pilot  
34 strength measurement difference between any two pilots in the Active Set (in  
35 units of 0.5 dB) that must be measured in order for the mobile station to send a  
36 *Pilot Strength Measurement Mini Message*.

- 1       – The base station shall set ORDER\_INTERVAL to the minimum interval (in 20  
2       ms units) during which the indicated pilot strength measurement difference  
3       (greater than or equal to PS\_MIN\_DELTA + 1, in units of 0.5 dB) must be  
4       measured by the mobile station in order for the mobile station to send a *Pilot*  
5       *Strength Measurement Mini Message*.
- 6       • A *Mobile Assisted Burst Operation Parameters Message* may specify periodic pilot  
7       strength reporting. If periodic reporting information is included, the base station  
8       shall set PERIODIC\_FLAG to '1' and include the appropriate periodic reporting  
9       fields. Otherwise, the base station shall set PERIODIC\_FLAG to '0'. If  
10      PERIODIC\_FLAG is set to '1', the base station shall perform the following  
11      procedures:
  - 12      – The base station shall set NUM\_PILOTS to the number of pilots for which the  
13      mobile station is to send *Pilot Strength Measurement Mini Messages*.
  - 14      – The base station shall set PERIODIC\_INTERVAL to the interval (in 20 ms units)  
15      between *Pilot Strength Measurement Mini Messages*.
  - 16      • A *Mobile Assisted Burst Operation Parameters Message* may specify threshold based  
17      pilot strength reporting. If threshold based reporting information is included, the  
18      base station shall set THRESHOLD\_FLAG to '1' and include the appropriate  
19      threshold based reporting fields. Otherwise, the base station shall set  
20      THRESHOLD\_FLAG to '0'. If THRESHOLD\_FLAG is set to '1', the base station shall  
21      perform the following procedures:
    - 22      – The base station shall set PS\_FLOOR\_HIGH to the high water mark for lower  
23      limit threshold for which the mobile station is to send *Pilot Strength*  
24      *Measurement Mini Messages*.
    - 25      – The base station shall set PS\_FLOOR\_LOW to the low water mark for lower limit  
26      threshold for which the mobile station is to send *Pilot Strength Measurement*  
27      *Mini Messages*.
    - 28      – The base station shall set PS\_CEILING\_HIGH to the high water mark for upper  
29      limit threshold for which the mobile station is to send *Pilot Strength*  
30      *Measurement Mini Messages*.
    - 31      – The base station shall set PS\_CEILING\_LOW to the low water mark for upper  
32      limit threshold for which the mobile station is to send *Pilot Strength*  
33      *Measurement Mini Messages*.
    - 34      – The base station shall set THRESHOLD\_INTERVAL to the interval (in 20 ms  
35      units) between *Pilot Strength Measurement Mini Messages*.

#### 3.6.6.2.2.16 Processing of the Handoff Supplementary Information Notification Message

If the message contains any records with HO\_SUP\_REC\_TYPE field set to '000', then the base station should use the AP\_ID, IOS\_MSC\_ID and IOS\_CELL\_ID corresponding to the

1 PN for this mobile<sup>8</sup>.

### 2 3.6.6.2.3 Active Set Maintenance

3 The base station shall maintain an Active Set for each mobile station under its control as  
4 follows:

- 5 • When the base station sends the *Channel Assignment Message*, it shall initialize  
6 the Active Set to contain only the pilot associated with the assigned Forward Traffic  
7 Channel.
- 8 • When the base station sends the *Extended Channel Assignment Message*, it shall  
9 initialize the Active Set to contain all pilots included in the message.
- 10 • When the base station sends an *Extended Handoff Direction Message*, *General*  
11 *Handoff Direction Message*, or *Universal Handoff Direction Message*, it shall add to  
12 the Active Set, before the action time of the message, all pilots included in the  
13 message, if they are not already in the Active Set.
- 14 • The base station shall delete the pilots that were not included in the most recent  
15 *Extended Handoff Direction Message*, *General Handoff Direction Message*, or  
16 *Universal Handoff Direction Message*, from the Active Set upon receipt of the  
17 *Handoff Completion Message* or *Extended Handoff Completion Message*.

### 18 3.6.6.2.4 Soft Handoff

19 The base station should use soft handoff when directing a mobile station from one Forward  
20 Traffic Channel to another Forward Traffic Channel having the same frequency  
21 assignment.

#### 22 3.6.6.2.4.1 Receiving During Soft Handoff

23 Each base station in the Active Set shall demodulate the Reverse Traffic Channel. The  
24 base station should provide diversity combining of the demodulated signals obtained by  
25 each base station in the Active Set.

#### 26 3.6.6.2.4.2 Transmitting During Soft Handoff

27 The base station shall begin transmitting identical modulation symbols on all Forward  
28 Traffic Channels specified in an *Extended Handoff Direction Message* or *General Handoff*  
29 *Direction Message*, or *Universal Handoff Direction Message* (with the possible exception of  
30 the power control subchannel) by the action time of the message.

31 The base station shall transmit identical power control bits on all identical power control  
32 subchannels that were identified as such in the last *Extended Handoff Direction Message*,  
33 or *General Handoff Direction Message*, or *Universal Handoff Direction Message*.

---

<sup>8</sup> The base station may use these for handoff related signaling as specified in [48].

1 The base station shall use the same long code mask on all Forward Traffic Channels whose  
2 associated pilots are in the Active Set.

### 3 3.6.6.2.4.3 Call Rescue Soft Handoff

4 The base station shall support the call rescue feature.

5 The call rescue feature can be enabled or disabled by the base station. If the call rescue  
6 feature is enabled and the base station detects that a mobile station having MOB\_P\_REV  
7 greater than seven has disabled its transmitters, then the base station shall initiate call  
8 rescue procedures.

9 A base station that is configured with a Rescue Channel shall allocate a Walsh Code for  
10 the Rescue Channel. If the base station is designated as a rescue cell candidate, then the  
11 base station shall monitor the Reverse Traffic Channel in order to acquire a mobile station  
12 attempting call rescue soft handoff. If the base station acquires the mobile station, then it  
13 should begin immediately transmitting to the mobile station using the Rescue Channel  
14 Walsh Code.

### 15 3.6.6.2.5 Reserved

## 16 3.6.7 CDMA Tiered Services

### 17 3.6.7.1 Overview

#### 18 3.6.7.1.1 Definition

19 The base station may support Tiered Services to provide individual users or groups of  
20 users with custom services and special features based upon their location. The base  
21 station may also support Tiered Services to provide private network support. Important to  
22 the operation of CDMA Tiered Services is the concept of User Zones. It is via User Zones  
23 by which the base station offers custom services based upon the mobile station location.

24 User Zones are associated with a set of features and services, plus a geographic area in  
25 which the User Zone features/services are made available to the customers that have  
26 subscribed to that User Zone. The boundary of the User Zone Geographic area may be  
27 established based on the coverage area of a public or private base station, or it may be  
28 established independent of RF topology.

29 User Zones may be supported by the public system on the same frequency as the serving  
30 base station, or they may be supported on a private system operating on a different  
31 frequency.

#### 32 3.6.7.1.2 Types of User Zones

33 User Zones may be of two basic types:

- *Broadcast User Zones:* Broadcast User Zones are identified to the mobile station using the Paging Channel or the Primary Broadcast Control Channel. In this case, the base station broadcasts messages on the Paging Channel or the Primary Broadcast Control Channel identifying the User Zones that fall within the coverage area of the particular cell/sector. A mobile station, as part of its monitoring of the Paging Channel or the Primary Broadcast Control Channel, will identify the presence of a particular User Zone.
- *Mobile Specific User Zones:* Mobile Specific User Zones are not broadcast by the base station. A mobile station may use other overhead message parameters and compare them with internally stored User Zone parameters to identify the presence of a particular User Zone. These parameters may include: SID, NID, BASE\_ID, BASE\_LAT, and BASE\_LONG.

### 3.6.7.2 Requirements

If the base station supports CDMA Tiered Services, the base station sends the following messages to assist the mobile station in identifying the presence of User Zones and to validate the User Zone requested by a mobile station:

- *User Zone Identification Message*
- *Private Neighbor List Message*
- *User Zone Reject Message*
- *User Zone Update Message*

#### 3.6.7.2.1 User Zone Identification Message

The base station identifies Broadcast User Zones supported by the base station by sending the *User Zone Identification Message* on the Paging Channel or the Primary Broadcast Control Channel. The base station should list the UZID of each Broadcast User Zone supported by the base station.

#### 3.6.7.2.2 Private Neighbor List Message

The base station sends a Private Neighbor List and identifies the User Zones supported by its private neighbor base stations by sending the *Private Neighbor List Message* on the Paging Channel or the Primary Broadcast Control Channel. The *Private Neighbor List Message* shall list no more than  $N_{gm}$  private neighbors.

#### 3.6.7.2.3 User Zone Update Message and User Zone Reject Message on f-dsch

For a mobile station operating in the *Traffic Channel Substate* or *Release Substate* of the *Mobile Station Control on the Traffic Channel State*, the base station may update the User Zone associated with the mobile station by sending a *User Zone Update Message*. The base station may also send a *User Zone Reject Message* to reject the User Zone requested by the mobile station in the *Origination Message*, *Page Response Message*, or *User Zone Update Request Message*. The base station may include the ASSIGN\_UZID field in the *User Zone Reject Message* to assign a User Zone to the mobile station to replace the

1 rejected User Zone.

#### 2 3.6.7.2.4 User Zone Reject Message on f-csch

3 The base station may send the *User Zone Reject Message* on the Paging Channel or the  
 4 Forward Common Control Channel to reject the User Zone requested by the mobile station  
 5 in the *Registration Message*, *Origination Message*, or *Page Response Message*. The base  
 6 station may include the ASSIGN\_UZID field in the *User Zone Reject Message* record to  
 7 assign a User Zone to the mobile station to replace the rejected User Zone.

#### 8 3.6.8 Call Control Processing

9 The Call Control consists of the following states:

- 10 • *Waiting for Order Substate* - In this substate, the Call Control instance sends the  
 11 *Alert With Information Message* or the *Extended Alert With Information Message* to  
 12 the mobile station.
- 13 • *Waiting for Answer Substate* - In this substate, the Call Control instance waits for  
 14 the *Connect Order* from the mobile station.
- 15 • *Conversation Substate* - In this substate, the parties involved in this call exchanges  
 16 Traffic Channel frames in accordance with the current service configuration.
- 17 • *Call Release Substate* - In this substate, the Call Control instance waits for the call  
 18 to be disconnected.

19 The following messages are processed by the Call Control:

- 20 • *Alert With Information Message*
- 21 • *Extended Alert with Information Message*:
- 22 • *Flash With Information Message*
- 23 • *Extended Flash With Information Message*
- 24 • *Send Burst DTMF Message*
- 25 • *Origination Continuation Message*

26 The following orders are processed by the Call Control:

- 27 • *Continuous DTMF Tone Order*
- 28 • *Maintenance Order*
- 29 • *Connect Order*

30 Upon instantiation, the Call Control instance shall perform the following:

- If the call is a mobile station terminated call and the base station set *BYPASS\_ALERT\_ANSWER* to '1', the Call Control instance shall enter the *Conversation Substate* (see 3.6.8.2). If the call is a mobile station terminated call and the base station set *BYPASS\_ALERT\_ANSWER* to '0', the Call Control instance shall enter the *Waiting for Order Substate* (see 3.6.8.1.1).
- If the call is a mobile-station-originated call, the Call Control instance shall enter the *Conversation Substate* (see 3.6.8.2).

### 3.6.8.1 Alerting

#### 3.6.8.1.1 Waiting for Order Substate

In this substate, the Call Control instance sends an *Alert With Information Message* or an *Extended Alert With Information Message* to the mobile station.

While in the *Waiting for Order Substate*, the Call Control instance shall perform the following:

- If the Call Control instance receives a "release indication" from the Layer 3, the Call Control instance shall enter the *Call Release Substate*.
- If the Call Control instance receives a "send alert with info message indication" from the Layer 3, the Call Control instance shall send an *Alert with Information Message* or an *Extended Alert With Information Message* to the mobile station within T2b seconds, and enter the *Waiting for Answer Substate*.
- The Call Control instance may send the following messages:
  1. *Alert With Information Message*: The Call Control instance shall enter the *Waiting for Answer Substate*.
  2. *Extended Alert With Information Message*: The Call Control instance shall enter the *Waiting for Answer Substate*.
  3. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Answer Substate*.

#### 3.6.8.1.2 Waiting for Answer Substate

In this substate, the Call Control instance waits for a *Connect Order* from the mobile station.

While in the *Waiting for Answer Substate*, the Call Control instance shall perform the following:

- If the Call Control instance receives a "release indication" from the Layer 3, the Call Control instance shall enter the *Call Release Substate*.

- 1 • If the Call Control instance receives a “send alert with info message indication”  
2 from the Layer 3, the Call Control instance shall send an *Alert with Information*  
3 *Message* or an *Extended Alert with Information Message* to the mobile station,  
4 within T2b seconds, and enter the *Waiting for Answer Substate*.
- 5 • The Call Control instance may send the following messages:
  - 6 1. *Alert With Information Message*
  - 7 2. *Extended Alert With Information Message*
  - 8 3. *Maintenance Order*
- 9 • If the Call Control instance receives one of the following messages from the Layer 3,  
10 the Call Control instance shall process the message according to the specified  
11 requirements, if any:
  - 12 1. *Connect Order*: The Call Control instance shall enter the *Conversation Substate*.
  - 13 2. *Flash With Information Message*: If the message contains a Keypad Facility  
14 record with feature codes indicating User Selective Call Forwarding with a pre-  
15 registered number, a stored number, or voice mail, the Call Control instance  
16 may send a ‘call release request’ to the Layer 3. If this message contains the  
17 Global Emergency Call information record and the call associated with this Call  
18 Control instance is a voice call, the base station shall recognize this as an  
19 emergency call and should process the message using an implementation-  
20 dependent procedure which may include ignoring the dialed digits. If this  
21 message contains the Global Emergency Call information record and the call  
22 associated with this Call Control instance is not a voice call, the base station  
23 may recognize this as an emergency call and should process the message using  
24 an implementation-dependent procedure which may include ignoring the dialed  
25 digits.
  - 26 3. *Extended Flash With Information Message*: If the message contains a Keypad  
27 Facility record with feature codes indicating User Selective Call Forwarding with  
28 a pre-registered number, a stored number, or voice mail, the Call Control  
29 instance may send a ‘call release request’ to the Layer 3. If this message  
30 contains the Global Emergency Call information record and the call associated  
31 with this Call Control instance is a voice call, the base station shall recognize  
32 this as an emergency call and should process the message using an  
33 implementation-dependent procedure which may include ignoring the dialed  
34 digits. If this message contains the Global Emergency Call information record  
35 and the call associated with this Call Control instance is not a voice call, the  
36 base station may recognize this as an emergency call and should process the  
37 message using an implementation-dependent procedure which may include  
38 ignoring the dialed digits.

#### 4. *Origination Continuation Message*

##### 3.6.8.2 Conversation Substate

While in the *Conversation Substate*, the Call Control instance shall perform the following:

- If the Call Control instance receives a “release indication” from the Layer 3, the Call Control instance shall enter the *Call Release Substate*.
- If the Call Control instance receives a “paca reorig indication” from the Layer 3, the Call Control instance should send either an *Alert With Information Message/Extended Alert With Information Message* which contains a signal information record with the SIGNAL\_TYPE field set to ‘01’ or ‘10’, or an *Alert With Information Message/Extended Alert With Information Message* which does not contain a signal information record.
- If the Call Control instance receives a “send alert with info message indication” from Layer 3, the Call Control instance shall send an *Alert with Information Message* or an *Extended Alert With Information Message* to the mobile station within T2b seconds, and enter the *Waiting for Answer Substate*.
- The Call Control instance may send the following messages:
  1. *Alert With Information Message*: If the message contains a signal information record with the SIGNAL\_TYPE field set to ‘01’ or ‘10’, or if the message does not contain a signal information record, the Call Control instance shall enter the *Waiting for Answer Substate*.
  2. *Extended Alert With Information Message*: If the message contains a signal information record with the SIGNAL\_TYPE field set to ‘01’ or ‘10’, or if the message does not contain a signal information record, the Call Control instance shall enter the *Waiting for Answer Substate*.
  3. *Continuous DTMF Tone Order*
  4. *Flash With Information Message*
  5. *Extended Flash With Information Message*
  6. *Maintenance Order*: The Call Control instance shall enter the *Waiting for Answer Substate*.
  7. *Send Burst DTMF Message*
- If the Call Control instance receives one of the following messages from Layer 3, the Call Control instance shall process the message according to the specified requirements, if any:

1           1. *Continuous DTMF Tone Order*

2           2. *Flash With Information Message*: If this message contains the Global Emergency  
3           Call information record and the call associated with this Call Control instance  
4           is a voice call, the base station shall recognize this as an emergency call and  
5           should process the message using an implementation-dependent procedure  
6           which may include ignoring the dialed digits. If this message contains the  
7           Global Emergency Call information record and the call associated with this Call  
8           Control instance is not a voice call, the base station may recognize this as an  
9           emergency call and should process the message using an implementation-  
10          dependent procedure which may include ignoring the dialed digits.

11          3. *Extended Flash With Information Message*: If this message contains the Global  
12          Emergency Call information record and the call associated with this Call  
13          Control instance is a voice call, the base station shall recognize this as an  
14          emergency call and should process the message using an implementation-  
15          dependent procedure which may include ignoring the dialed digits. If this  
16          message contains the Global Emergency Call information record and the call  
17          associated with this Call Control instance is not a voice call, the base station  
18          may recognize this as an emergency call and should process the message using  
19          an implementation-dependent procedure which may include ignoring the dialed  
20          digits.

21          4. *Origination Continuation Message*

22          5. *Send Burst DTMF Message*

23    3.6.8.3 Call Release Substate

- 24          • The Call Control instance may send the following messages:

25          1. *Alert With Information Message*: If the message contains a signal information  
26          record with the SIGNAL\_TYPE field set to '01' or '10', or if the message does not  
27          contain a signal information record, the base station shall enter the *Waiting for*  
28          *Answer Substate*.

29          2. *Extended Alert With Information Message*: If the message contains a signal  
30          information record with the SIGNAL\_TYPE field set to '01' or '10', or if the  
31          message does not contain a signal information record, the base station shall  
32          enter the *Waiting for Answer Substate*.

33          3. *Maintenance Order*: The Call Control instance shall enter the *Waiting for*  
34          *Answer Substate*.

- 35          • If the Call Control instance receives one of the following messages from Layer 3, the  
36          Call Control instance shall process the message according to the specified  
37          requirements, if any:

1           1. *Connect Order*

2           2. *Continuous DTMF Tone Order*

3           3. *Flash With Information Message*: If this message contains the Global Emergency  
4           Call information record and the call associated with this Call Control instance  
5           is a voice call, the base station shall recognize this as an emergency call and  
6           should process the message using an implementation-dependent procedure  
7           which may include ignoring the dialed digits. If this message contains the  
8           Global Emergency Call information record and the call associated with this Call  
9           Control instance is not a voice call, the base station may recognize this as an  
10          emergency call and should process the message using an implementation-  
11          dependent procedure which may include ignoring the dialed digits.

12          4. *Extended Flash With Information Message*: If this message contains the Global  
13          Emergency Call information record and the call associated with this Call  
14          Control instance is a voice call, the base station shall recognize this as an  
15          emergency call and should process the message using an implementation-  
16          dependent procedure which may include ignoring the dialed digits. If this  
17          message contains the Global Emergency Call information record and the call  
18          associated with this Call Control instance is not a voice call, the base station  
19          may recognize this as an emergency call and should process the message using  
20          an implementation-dependent procedure which may include ignoring the dialed  
21          digits.

22          5. *Origination Continuation Message*

23          6. *Send Burst DTMF Message*

24   3.6.9 MEID procedures when communicating with MOB\_P\_REV 6, 7, 8, 9, 10 Mobile  
25   Stations

26   The base station shall conform to the requirements in [47] when communicating with a  
27   MOB\_P\_REV 6, 7, 8, 9, or 10 mobile station equipped with an MEID.

1    **3.7 PDU Formats for Messages**

2    The following sections specify the requirements on the PDU formats transmitted on the f-  
3    csch, and the f-dsch.

4    In any multi-bit field in the following messages, the most significant bit (MSB) shall be  
5    transmitted first.

6    3.7.1 Reserved

7    3.7.2 f-csch

8    The f-csch is used to send control information to mobile stations that have not been  
9    assigned to a Traffic Channel.

10   3.7.2.1 Reserved

11   3.7.2.2 Reserved

12

## 1 3.7.2.3 PDU Formats for Messages on the f-csch

2 The messages sent on the f-csch are summarized in Table 3.7.2.3-1.

3

4 **Table 3.7.2.3-1. f-csch Messages**

<b>Message Name</b>	<b>MSG_TAG</b>	<b>Section Number</b>	<b>Primary BCCH</b>	<b>F-CCCH</b>	<b>PCH</b>	<b>P_REV_IN_USE<sup>9</sup></b>
<i>System Parameters Message</i>	SPM	3.7.2.3.2.1	N	N	Y	All
<i>Access Parameters Message</i>	APM	3.7.2.3.2.2	N	N	Y	All
<i>Neighbor List Message (Band Class 0 only)</i>	NLM	3.7.2.3.2.3	N	N	Y	All
<i>CDMA Channel List Message</i>	CCLM	3.7.2.3.2.4	N	N	Y	All

<i>General Page Message</i>	GPM	3.7.2.3.2.17	N	Y	Y	All

5

---

<sup>9</sup> P\_REV\_IN\_USE in this context means P\_REV for overhead messages (see 2.6.2.2). P\_REV\_IN\_USE equal to "All" implies all values applicable to the Band Class.

<sup>10</sup> When the *Data Burst Message* is used as a broadcast message, it can be sent on a Broadcast Control Channel other than the Primary Broadcast Control Channel, or on the Forward Common Control Channel when a secondary Broadcast Control Channel is not allocated, i.e., NUM\_BCCH\_BCAST<sub>S</sub> equals 0 (see 2.6.2.1.1.3).

1			
2	PILOT_PN	-	Pilot PN sequence offset index.
3			The base station shall set this field to the pilot PN sequence
4			offset for this base station, in units of 64 PN chips.
5	CONFIG_MSG_SEQ	-	Configuration message sequence number.
6			The base station shall set this field to CONFIG_SEQ
7			(see 3.6.2.2).
8	SID	-	System identification.
9			The base station shall set this field to the system
10			identification number for this system (see 2.6.5.2).
11	NID	-	Network identification.
12			This field serves as a sub-identifier of a system as defined by
13			the owner of the SID.
14			The base station shall set this field to the network
15			identification number for this network (see 2.6.5.2).
16	REG_ZONE	-	Registration zone.
17			The base station shall set this field to its registration zone
18			number (see 2.6.5.1.5).
19	TOTAL_ZONES	-	Number of registration zones to be retained.
20			The base station shall set this field to the number of
21			registration zones the mobile station is to retain for purposes
22			of zone-based registration (see 2.6.5.1.5).
23			If zone-based registration is to be disabled, the base station
24			shall set this field to '000'.
25	ZONE_TIMER	-	Zone timer length.
26			The base station shall set this field to the ZONE_TIMER value
27			shown in Table 3.7.2.3.2.1-1 corresponding to the length of
28			the zone registration timer to be used by mobile stations.
29			

1

**Table 3.7.2.3.2.1-1. Value of Zone Timer**

<b>ZONE_TIMER Value (binary)</b>	<b>Timer Length (Minutes)</b>
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

2

3

**MULT\_SIDS** - Multiple SID storage indicator.

4

5

6

If mobile stations may store entries of SID\_NID\_LIST containing different SIDs, the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

7

**MULT\_NIDS** - Multiple NID storage indicator.

8

9

10

11

If mobile stations may store multiple entries of SID\_NID\_LIST having the same SID (with different NIDs), the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

12

**BASE\_ID** - Base station identification.

13

14

The base station shall set this field to its identification number.

15

**BASE\_CLASS** - Base station class.

16

The base station shall set this field as follows:

17

18

19

For Band Class 1 and 4, the base station shall set this field to '0001'; otherwise, the base station shall set this field to '0000'.

20

**PAGE\_CHAN** - Number of Paging Channels.

21

22

23

The base station shall set this field to the number of Paging Channels on this CDMA Channel. The base station shall not set this field to '000'.

24

**MAX\_SLOT\_CYCLE\_INDEX** - Maximum slot cycle index.

25

26

27

The base station shall set this field to the SLOT\_CYCLE\_INDEX value corresponding to the maximum slot cycle length permitted (see 2.6.2.1.1).

1	HOME_REG	-	Home registration indicator.
2			If mobile stations that are not roaming (see 2.6.5.3) and have
3			MOB_TERM_HOME equal to '1' are to be enabled for
4			autonomous registrations, the base station shall set this field
5			to '1'. If such mobile stations are not to be enabled for
6			autonomous registration, the base station shall set this field
7			to '0'.
8	FOR_SID_REG	-	SID roamer registration indicator.
9			If mobile stations that are foreign SID roamers (see 2.6.5.3)
10			and have MOB_TERM_FOR_SID equal to '1' are to be enabled
11			for autonomous registration, the base station shall set this
12			field to '1'. If such mobile stations are not to be enabled for
13			autonomous registration, the base station shall set this field
14			to '0'.
15	FOR_NID_REG	-	NID roamer registration indicator.
16			If mobile stations that are foreign NID roamers (see 2.6.5.3)
17			and have MOB_TERM_FOR_NID equal to '1' are to be enabled
18			for autonomous registration, the base station shall set this
19			field to '1'. If such mobile stations are not to be enabled for
20			autonomous registration, the base station shall set this field
21			to '0'.
22	POWER_UP_REG	-	Power-up registration indicator.
23			If mobile stations enabled for autonomous registration are to
24			register immediately after powering on and receiving the
25			system overhead messages, the base station shall set this
26			field to '1'; otherwise, the base station shall set this field to
27			'0'.
28	POWER_DOWN_REG	-	Power-down registration indicator.
29			If mobile stations enabled for autonomous registration are to
30			register immediately before powering down, the base station
31			shall set this field to '1'; otherwise, the base station shall set
32			this field to '0'.
33	PARAMETER_REG	-	Parameter-change registration indicator.
34			If mobile stations are to register on parameter change events
35			as specified in 2.6.5.1.6, the base station shall set this field to
36			'1'. If not, the base station shall set this field to '0'.
37	REG_PRD	-	Registration period.
38			If mobile stations are not to perform timer-based registration,
39			the base station shall set this field to '0000000'. If mobile
40			stations are to perform timer-based registration, the base
41			station shall set this field to the value in the range 29 to 85
42			inclusive, such that the desired timer value is
43			$\lfloor 2\text{REG\_PRD}/4 \rfloor \times 0.08$ seconds.

1	BASE_LAT	-	Base station latitude.
2			The base station shall set this field to its latitude in units of
3			0.25 second, expressed as a two's complement signed
4			number with positive numbers signifying North latitudes.
5			The base station shall set this field to a value in the range -
6			1296000 to 1296000 inclusive (corresponding to a range of -
7			90° to +90°).
8			The base station shall set this field to all zeros if its latitude is
9			not known.
10	BASE_LONG	-	Base station longitude.
11			The base station shall set this field to its longitude in units of
12			0.25 second, expressed as a two's complement signed
13			number with positive numbers signifying East longitude. The
14			base station shall set this field to a value in the range -
15			2592000 to 2592000 inclusive (corresponding to a range of -
16			180° to +180°).
17			The base station shall set this field to all zeros if its longitude
18			is not known.
19	REG_DIST	-	Registration distance.
20			If mobile stations are to perform distance-based registration,
21			the base station shall set this field to the non-zero "distance"
22			beyond which the mobile station is to re-register (see
23			2.6.5.1.4). If mobile stations are not to perform distance-
24			based registration, the base station shall set this field to 0.
25	SRCH_WIN_A	-	Search window size for the Active Set and Candidate Set.
26			The base station shall set this field to the value shown in
27			Table 2.6.6.2.1-1 corresponding to the search window size to
28			be used by mobile stations for the Active Set and Candidate
29			Set.
30	SRCH_WIN_N	-	Search window size for the Neighbor Set.
31			The base station shall set this field to the value shown in
32			Table 2.6.6.2.1-1 corresponding to the search window size to
33			be used by mobile stations for the Neighbor Set.
34	SRCH_WIN_R	-	Search window size for the Remaining Set.
35			The base station shall set this field to the value shown in
36			Table 2.6.6.2.1-1 corresponding to the search window size to
37			be used by mobile stations for the Remaining Set.
38	NGHBR_MAX_AGE	-	Neighbor Set maximum AGE.
39			The base station shall set this field to the maximum AGE
40			value beyond which mobile stations are to drop members
41			from the Neighbor Set (see 2.6.6.2.6.3).
42	PWR_REP_THRESH	-	Power control reporting threshold.

1			The base station shall set this field to the number of bad
2			frames (see [2]) to be received in a measurement period on the
3			channel which carries the Power Control Subchannel before
4			mobile stations are to generate a <i>Power Measurement Report</i>
5			<i>Message</i> (see 2.6.4.1.1). If the base station sets
6			PWR_THRESH_ENABLE to '1', it shall not set this field to
7			'00000'.
8	PWR_REP_FRAMES	-	Power control reporting frame count.
9			The base station shall set this field to the value such that the
10			number given by
11			$\lfloor 2^{(PWR\_REP\_FRAMES/2)} \times 5 \rfloor \text{ frames}$
12			is the number of frames over which mobile stations are to
13			count frame errors.
14	PWR_THRESH_ENABLE	-	Threshold report mode indicator.
15			If mobile stations are to generate threshold <i>Power</i>
16			<i>Measurement Report Messages</i> , the base station shall set this
17			field to '1'. If mobile stations are not to generate threshold
18			<i>Power Measurement Report Messages</i> , the base station shall
19			set this field to '0'.
20	PWR_PERIOD_ENABLE	-	Periodic report mode indicator.
21			If mobile stations are to generate periodic <i>Power Measurement</i>
22			<i>Report Messages</i> , the base station shall set this field to '1'. If
23			mobile stations are not to generate periodic <i>Power</i>
24			<i>Measurement Report Messages</i> , the base station shall set this
25			field to '0'.
26	PWR_REP_DELAY	-	Power report delay.
27			The period that mobile stations wait following a <i>Power</i>
28			<i>Measurement Report Message</i> before restarting frame
29			counting for power control purposes.
30			The base station shall set this field to the power report delay
31			value, in units of 4 frames (see 2.6.4.1.1).
32	RESCAN	-	Rescan indicator.
33			If mobile stations are to re-initialize and re-acquire the
34			system upon receiving this message, the base station shall
35			set this field to '1'; otherwise, the base station shall set this
36			field to '0'.
37	T_ADD	-	Pilot detection threshold.
38			This value is used by the mobile station to trigger the transfer
39			of a pilot from the Neighbor Set or Remaining Set to the
40			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
41			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
42			<i>Strength Measurement Message</i> initiating the handoff process
43			(see 2.6.6.2.5.2).

1		The base station shall set this field to the pilot detection
2		threshold, expressed as an unsigned binary number equal to
3		$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
4	T_DROP	- Pilot drop threshold.
5		This value is used by mobile stations to start a handoff drop
6		timer for pilots in the Active Set and the Candidate Set (see
7		2.6.6.2.3).
8		The base station shall set this field to the pilot drop
9		threshold, expressed as an unsigned binary number equal to
10		$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
11	T_COMP	- Active Set versus Candidate Set comparison threshold.
12		Mobile stations transmit a <i>Pilot Strength Measurement</i>
13		<i>Message</i> or an <i>Extended Pilot Strength Measurement Message</i>
14		when the strength of a pilot in the Candidate Set exceeds that
15		of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
16		The base station shall set this field to the threshold
17		Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB.
18	T_TDROP	- Drop timer value.
19		Timer value after which an action is taken by mobile stations
20		for a pilot that is a member of the Active Set or Candidate Set,
21		and whose strength has not become greater than T_DROP. If
22		the pilot is a member of the Active Set, a <i>Pilot Strength</i>
23		<i>Measurement Message</i> or an <i>Extended Pilot Strength</i>
24		<i>Measurement Message</i> is issued. If the pilot is a member of
25		the Candidate Set, it will be moved to the Neighbor Set.
26		The base station shall set this field to the T_TDROP value
27		shown in Table 2.6.6.2.3-1 corresponding to the drop timer
28		value to be used by mobile stations.
29	EXT_SYS_PARAMETER	- <i>Extended System Parameters Message</i> indicator.
30		The base station shall set this field to '1'.
31	EXT_NGHR_LST	- <i>Extended Neighbor List Message</i> indicator.
32		The base station sets this field to '1' when it sends the
33		<i>Extended Neighbor List Message</i> on the Paging Channel;
34		otherwise the base station sets this field to '0'.
35		If the base station is operating in Band Class 1, Band Class
36		3, or Band Class 4 with MIN_P_REV less than seven, it shall
37		set this field to '1'. If the base station is operating in Band
38		Class 0, it shall set this field to '0'.
39	GEN_NGHR_LST	- <i>General Neighbor List Message</i> indicator.
40		If the base station is sending the <i>General Neighbor List</i>
41		<i>Message</i> on the Paging Channel, it shall set this field to '1';
42		otherwise, it shall set this field to '0'.

1			If the base station is operating in Band Class 1, Band Class
2			3, or Band Class 4 with MIN_P_REV greater than or equal to
3			seven, and if EXT_NGHBR_LST is set to '0', the base station
4			shall set this field to '1'.
5			If the base station is operating in Band Class 0 with
6			MIN_P_REV greater than or equal to seven and if the <i>Neighbor</i>
7			<i>List Message</i> is not sent, the base station shall set this field
8			to '1'.
9			If the base station is operating in a band class other than
10			Band Class 1, Band Class 3, or Band Class 4, and if
11			EXT_NGHBR_LST is set to '0', the base station shall set this
12			field to '1'.
13	GLOBAL_REDIRECT	-	<i>Global Service Redirection Message</i> indicator.
14			If the base station is sending the <i>Global Service Redirection</i>
15			<i>Message</i> on the Paging Channel, it shall set this field to '1';
16			otherwise, it shall set this field to '0'.
17	PRI_NGHBR_LST	-	<i>Private Neighbor List Message</i> indicator.
18			If the base station is sending the <i>Private Neighbor List</i>
19			<i>Message</i> on the Paging Channel, it shall set this field to '1';
20			otherwise, it shall set this field to '0'.
21	USER_ZONE_ID	-	<i>User Zone Identification Message</i> indicator.
22			If the base station is sending the <i>User Zone Identification</i>
23			<i>Message</i> on the Paging Channel, it shall set this field to '1';
24			otherwise, it shall set this field to '0'.
25	EXT_GLOBAL_REDIRECT	-	Extended <i>Global Service Redirection Message</i> indicator.
26			If the base station is sending the <i>Extended Global Service</i>
27			<i>Redirection Message</i> on the Paging Channel, it shall set this
28			field to '1'; otherwise, the base station shall set this field to
29			'0'.
30	EXT_CHAN_LST	-	Extended CDMA Channel List Message indicator.
31			The base station shall set this field to '1', if the <i>Extended</i>
32			<i>Channel List Message</i> is sent on the Paging Channel,
33			otherwise, it shall set this field to '0'.
34	T_TDROP_RANGE_INCL	-	Drop timer range value included indicator.
35			The base station shall set this field to '1' if the
36			T_TDROP_RANGE field is included in this message;
37			otherwise, the base station shall set this field to '0'.
38	T_TDROP_RANGE	-	Drop timer range value.
39			Timer range value to use in association with the T_TDROP
40			parameter when determining the drop timer expiration.
41			If T_TDROP_RANGE_INCL is set to '0', the base station shall
42			omit this field; otherwise, the base station shall set this field
43			to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
44			corresponding to the timer expiration range value to be used
45			by the mobile station.

1	NEG_SLOT_CYCLE_INDEX_SUP	-	Negative slot cycle index supported indicator.
2			The base station shall set this field to '1' if it supports
3			negative values of the preferred slot cycle index
4			(SLOT_CYCLE_INDEX <sub>p</sub> ); otherwise, the base station shall set
5			this field to '0'.
6	CRRM_MSG_IND	-	<i>Call Recovery Request Message</i> supported indicator.
7			The base station shall set this field to '0' if the mobile station
8			is not allowed to send a <i>Call Recovery Request Message</i> ;
9			otherwise, the base station shall set this field to '1'.
10	NUM_OPT_MSG_BITS	-	Number of optional overhead messages transmission
11			information bits.
12			The base station shall set this field to the number of optional
13			overhead messages for which transmission information is
14			included in this message.
15	AP_PILOT_INFO	-	<i>Access Point Pilot Information Message</i> indicator.
16			If NUM_OPT_MSG_BITS is equal to or greater than 1, the
17			base station shall include the field AP_PILOT_INFO and shall
18			set this field as shown below; otherwise, the base station
19			shall omit this field.
20			If the base station is sending the <i>Access Point Pilot</i>
21			<i>Information Message</i> on the Paging Channel, it shall set this
22			field to '1'; otherwise, the base station shall set this field to
23			'0'.
24	AP_IDT	-	<i>Access Point Identification Message</i> indicator.
25			If NUM_OPT_MSG_BITS is equal to or greater than 2, the
26			base station shall include the field AP_IDT and shall set this
27			field as shown below; otherwise, the base station shall omit
28			this field.
29			If the base station is sending the <i>Access Point Identification</i>
30			<i>Message</i> on the Paging Channel, it shall set this field to '1';
31			otherwise, the base station shall set this field to '0'.
32	AP_ID_TEXT	-	<i>Access Point Identification Text Message</i> indicator.
33			If NUM_OPT_MSG_BITS is equal to or greater than 3, the
34			base station shall include the field AP_ID_TEXT and shall set
35			this field as shown below; otherwise, the base station shall
36			omit this field.
37			If the base station is sending the <i>Access Point Identification</i>
38			<i>Text Message</i> on the Paging Channel, it shall set this field to
39			'1'; otherwise, the base station shall set this field to '0'.
40	GEN_OVHD_INF_IND	-	<i>General Overhead Information Message</i> indicator.
41			If NUM_OPT_MSG_BITS is equal to or greater than 4, the
42			base station shall include the field GEN_OVHD_INF_IND and
43			shall set this field as shown below; otherwise, the base
44			station shall omit this field.

1			If the base station is sending the <i>General Overhead Information Message</i> on the Paging Channel, it shall set this field to '1'; otherwise, the base station shall set this field to '0'.
2			
3			
4			
5	FD_CHAN_LST_IND	-	<i>Flex Duplex CDMA Channel List Message</i> indicator.
6			If NUM_OPT_MSG is equal to or greater than 5, the base station shall include the field FD_CHAN_LST_IND and shall set this field as shown below; otherwise, the base station shall omit this field.
7			
8			
9			
10			If the base station is sending the <i>Flex Duplex CDMA Channel List Message</i> on the Paging Channel, it shall set this field to '1'; otherwise, the base station shall set this field to '0'.
11			
12			
13	ATIM_IND	-	<i>Alternative Technologies Information Message</i> indicator.
14			If NUM_OPT_MSG_BITS is equal to or greater than 6, the base station shall include the field ATIM_IND and shall set this field as shown below; otherwise, the base station shall omit this field.
15			
16			
17			
18			If the base station is sending the <i>Alternative Technologies Information Message</i> on the Paging Channel, it shall set this field to '1'; otherwise, the base station shall set this field to '0'.
19			
20			
21			
22	RESERVED	-	Reserved bits.
23			If NUM_OPT_MSG_BITS is greater than 6, the base station shall include the field RESERVED and shall set this field as shown below; otherwise, the base station shall omit this field.
24			
25			
26			The base station shall add (NUM_OPT_MSG_BITS - 5) reserved bits. The base station shall set these bits to '0'.
27			
28	APPIM_PERIOD_INDEX	-	<i>Access Point Pilot Information Message</i> transmission frequency.
29			
30			If the AP_PILOT_INFO is not included or is included and set to 0, the base station shall omit this field. Otherwise, the base station shall include this field if there are any fields following this field or if the base station needs to set this field to a value other than '000'.
31			
32			
33			
34			
35			The base station shall set this field to the period index value of <i>Access Point Pilot Information Message</i> . The base station shall set this field value in the range '000' - '101', both inclusive.
36			
37			
38			
39	GEN_OVHD_CYCLE_INDEX	-	<i>General Overhead Information Message</i> transmission frequency.
40			
41			If the GEN_OVHD_INF_IND is included and set to 1, the base station shall include this field. Otherwise, the base station shall omit this field.
42			
43			

1		The base station shall set this field to the cycle index value of
2		<i>General Overhead Message</i> . The base station shall set this
3		field value in the range '000' – '101', both inclusive.
4	ATIM_CYCLE_INDEX	– <i>Alternative Technologies Information Message</i> transmission
5		frequency.
6		If the ATIM_IND is included and set to 1, the base station
7		shall include this field. Otherwise, the base station shall omit
8		this field.
9		The base station shall set this field to the cycle index value of
10		<i>Alternative Technologies Information Message</i> . The base
11		station shall set this field value in the range '000' – '101', both
12		inclusive.
13	ADD_LOC_INFO_INCL	– Location information included.
14		The base station shall set this field to '1' to indicate that the
15		LOC_UNC_H, HEIGHT, and LOC_UNC_V fields are included
16		in this message, otherwise, the base station shall set this
17		field to '0'.
18	LOC_UNC_H	– Horizontal location uncertainty.
19		If ADD_LOC_INFO_INCL is set to '1', the base station shall
20		include this field and set it as shown below; otherwise, the
21		base station shall omit this field.
22		The base station shall set this field to the circular horizontal
23		location uncertainty, as specified in Table 3.7.2.3.2.1-2. The
24		value of this field indicates the radius of a circular 95%
25		confidence coverage area.

26 **Table 3.7.2.3.2.1-2. Horizontal Position Uncertainty**

'0000'	LOC_UNC_H < 20 m
'0001'	20 m • LOC_UNC_H < 40 m
'0010'	40 m • LOC_UNC_H < 70 m
'0011'	70 m • LOC_UNC_H < 100 m
'0100'	100 m • LOC_UNC_H < 200 m
'0101'	200 m • LOC_UNC_H < 400 m
'0110'	400 m • LOC_UNC_H < 700 m
'0111'	700 m • LOC_UNC_H < 1,000 m
'1000'	1,000 m • LOC_UNC_H < 2,000 m
'1001'	2,000 m • LOC_UNC_H < 4,000 m
'1010'	4,000 m • LOC_UNC_H < 7,000 m
'1011'	7,000 m • LOC_UNC_H < 10,000 m
'1100'	10,000 m • LOC_UNC_H < 20,000 m

'1101'	20,000 m • LOC_UNC_H < 40,000 m
'1110'	40,000 m • LOC_UNC_H < 70,000 m
'1111'	70,000 m • LOC_UNC_H

1

2 HEIGHT

– Height.

3

4

5

If ADD\_LOC\_INFO\_INCL is set to '1', the base station shall include this field and set it as shown below; otherwise, the base station shall omit this field.

6

7

8

9

The base station shall set this field to the height, above the WGS-84 reference ellipsoid, in units of 1 meter, in the range from -500 m to 15,882 m, where the binary value of the field conveys the height plus 500 m.

10

11

The base station shall set this field to all ones if its height is not known.

12 LOC\_UNC\_V

– Vertical location uncertainty.

13

14

15

If ADD\_LOC\_INFO\_INCL is set to '1', the base station shall include this field and set it as shown below; otherwise, the base station shall omit this field.

16

17

18

19

The base station set this field to the vertical location uncertainty, as specified in Table 3.7.2.3.2.1-3. The value of this field indicates the one-sigma uncertainty of HEIGHT within the corresponding horizontal coverage area.

20

21

The base station shall set this field to all ones if its height is not known.

22

23

**Table 3.7.2.3.2.1-3. Vertical Position Uncertainty**

'0000'	0 < LOC_UNC_V < 1 m
'0001'	1 m • LOC_UNC_V < 2 m
'0010'	2 m • LOC_UNC_V < 4 m
'0011'	4 m • LOC_UNC_V < 7 m
'0100'	7 m • LOC_UNC_V < 10 m
'0101'	10 m • LOC_UNC_V < 20 m
'0110'	20 m • LOC_UNC_V < 40 m
'0111'	40 m • LOC_UNC_V < 70 m
'1000'	70 m • LOC_UNC_V < 100 m
'1001'	100 m • LOC_UNC_V < 200 m
'1010'	200 m • LOC_UNC_V < 400 m

'1011'	400 m • LOC_UNC_V < 700 m
'1100'	700 m • LOC_UNC_V < 1,000 m
'1101'	1,000 m • LOC_UNC_V < 2,000 m
'1110'	2,000 m • LOC_UNC_V < 4,000 m
'1111'	4,000 m • LOC_UNC_V

ACCT_AOC_BITMAP2	0 or 5
ACCT_SO_GRP	5

} ( NUM\_ACCT\_SO\_GRP + 1)

2

3 PILOT\_PN - Pilot PN sequence offset index.

4 The base station shall set this field to the pilot PN sequence  
5 offset for this base station, in units of 64 PN chips.

6 ACC\_MSG\_SEQ - Access parameters message sequence number.

7 The base station shall set this field to ACC\_CONFIG\_SEQ  
8 (see 3.6.2.2).

9 ACC\_CHAN - Number of Access Channels.

1			The base station shall set this field to one less than the
2			number of Access Channels associated with this Paging
3			Channel.
4	NOM_PWR	-	Nominal transmit power offset.
5			The base station shall set this field to the correction factor to
6			be used by mobile stations in the open loop power estimate,
7			expressed as a two's complement value in units of 1 dB
8			(see [2]).
9	INIT_PWR	-	Initial power offset for access.
10			The base station shall set this field to the correction factor to
11			be used by mobile stations in the open loop power estimate
12			for the initial transmission on an Access Channel, expressed
13			as a two's complement value in units of 1 dB (see [2]).
14	PWR_STEP	-	Power increment.
15			The base station shall set this field to the value by which
16			mobile stations are to increase their transmit power between
17			successive access probes in an access probe sequence, in
18			units of 1 dB.
19	NUM_STEP	-	Number of access probes.
20			The base station shall set this field to one less than the
21			maximum number of access probes mobile stations are to
22			transmit in a single access probe sequence.
23	MAX_CAP_SZ	-	Maximum Access Channel message capsule size.
24			The base station shall set this field to the value in the range 0
25			to 7, three less than the maximum number of Access Channel
26			frames in an Access Channel message capsule.
27	PAM_SZ	-	Access Channel preamble length.
28			The base station shall set this field to one less than the
29			number of Access Channel frames that mobile stations are to
30			transmit in each Access Channel preamble.
31	PSIST(0-9)	-	Persistence value for access overload classes 0 through 9.
32			If mobile stations in access overload classes 0 through 9 are
33			permitted to transmit requests on the Access Channel, the
34			base station shall set this field to the persistence value to be
35			used. If such mobile stations are not permitted to transmit
36			requests on the Access Channel, the base station shall set
37			this field to '111111'.
38	PSIST(10)	-	Persistence value for access overload class 10 (test mobile
39			stations).
40			If mobile stations in access overload class 10 are permitted to
41			transmit requests on the Access Channel, the base station
42			shall set this field to the persistence value to be used. If such
43			mobile stations are not permitted to transmit requests on the
44			Access Channel, the base station shall set this field to '111'.

1	PSIST(11)	- Persistence value for access overload class 11 (emergency
2		mobile stations).
3		If mobile stations in access overload class 11 are permitted to
4		transmit requests on the Access Channel, the base station
5		shall set this field to the persistence value to be used. If such
6		mobile stations are not permitted to transmit requests on the
7		Access Channel, the base station shall set this field to '111'.
8	PSIST(12)	- Persistence value for access overload class 12.
9		If mobile stations in access overload class 12 are permitted to
10		transmit requests on the Access Channel, the base station
11		shall set this field to the persistence value to be used. If such
12		mobile stations are not permitted to transmit requests on the
13		Access Channel, the base station shall set this field to '111'.
14	PSIST(13)	- Persistence value for access overload class 13.
15		If mobile stations in access overload class 13 are permitted to
16		transmit requests on the Access Channel, the base station
17		shall set this field to the persistence value to be used. If such
18		mobile stations are not permitted to transmit requests on the
19		Access Channel, the base station shall set this field to '111'.
20	PSIST(14)	- Persistence value for access overload class 14.
21		If mobile stations in access overload class 14 are permitted to
22		transmit requests on the Access Channel, the base station
23		shall set this field to the persistence value to be used. If such
24		mobile stations are not permitted to transmit requests on the
25		Access Channel, the base station shall set this field to '111'.
26	PSIST(15)	- Persistence value for access overload class 15.
27		If mobile stations in access overload class 15 are permitted to
28		transmit requests on the Access Channel, the base station
29		shall set this field to the persistence value to be used. If such
30		mobile stations are not permitted to transmit requests on the
31		Access Channel, the base station shall set this field to '111'.
32	MSG_PSIST	- Persistence modifier for Access Channel attempts for message
33		transmissions.
34		A mobile station multiplies its transmission probability by
35		$2^{-\text{MSG\_PSIST}}$ for such attempts.
36		The base station shall set this field to the persistence
37		modifier for Access Channel attempts for message
38		transmissions.
39	REG_PSIST	- Persistence modifier for Access Channel attempts for
40		registrations which are not responses to the <i>Registration</i>
41		<i>Request Order</i> .
42		A mobile station multiplies its transmission probability by
43		$2^{-\text{REG\_PSIST}}$ for such attempts.
44		The base station shall set this field to the persistence
45		modifier for Access Channel attempts for registrations which
46		are not responses to the <i>Registration Request Order</i> .

1	PROBE_PN_RAN	-	Time randomization for Access Channel probes.
2			A mobile station delays its transmission from System Time by
3			RN PN chips, where RN is a number determined by hashing
4			between 0 and $2^{\text{PROBE\_PN\_RAN}} - 1$ PN chips.
5			The base station shall set this field to the value in the range 0
6			to 9 inclusive such that the time randomization range is
7			$2^{\text{PROBE\_PN\_RAN}} - 1$ PN chips.
8	ACC_TMO	-	Acknowledgment timeout.
9			The base station shall set this field to two less than the
10			length of time mobile stations are to wait after the end of an
11			Access Channel transmission before determining that the
12			base station did not receive the transmission, in units of 80
13			ms.
14	PROBE_BKOFF	-	Access Channel probe backoff range.
15			The base station shall set this field to one less than the
16			maximum number of slots mobile stations are to delay due to
17			random backoff between consecutive access probes.
18	BKOFF	-	Access Channel probe sequence backoff range.
19			The base station shall set this field to one less than the
20			maximum number of slots mobile stations are to delay due to
21			random backoff between successive access probe sequences.
22	MAX_REQ_SEQ	-	Maximum number of access probe sequences for an Access
23			Channel request.
24			The base station shall set this field to the maximum number
25			of access probe sequences mobile stations are to transmit for
26			an Access Channel request. The base station shall set this
27			field to a value greater than 0.
28	MAX_RSP_SEQ	-	Maximum number of access probe sequences for an Access
29			Channel response.
30			The base station shall set this field to the maximum number
31			of access probe sequences mobile stations are to transmit for
32			an Access Channel response. The base station shall set this
33			field to a value greater than 0.
34	AUTH	-	Authentication mode.
35			If mobile stations are to include standard authentication data
36			in Access Channel messages, the base station shall set this
37			field to '01'. If mobile stations are not to include
38			authentication data in Access Channel messages, the base
39			station shall set this field to '00'. All other values are
40			reserved.
41	RAND	-	Random challenge value.
42			If the AUTH field is set to '01', the base station shall set this
43			field to the random challenge value to be used by mobile
44			stations for authentication. If the AUTH field is set to any
45			other value, the base station shall omit this field.

1	NOM_PWR_EXT	-	Extended nominal transmit power.
2			If the base station is operating in Band Class 0 or Band Class
3			3, it shall set this field to '0'; otherwise, it shall set this field
4			as follows:
5			If the correction factor to be used by mobile stations in the
6			open loop power estimate is between -24 dB and -9 dB
7			inclusive, the base station shall set this field to '1'; otherwise
8			(the correction factor is in the range -8 dB to 7 dB inclusive),
9			the base station shall set this field to '0'.
10	PSIST_EMG_INCL	-	Emergency persistence included indicator.
11			If PSIST_EMG is included in this message, the base station
12			shall set this field to '1'; otherwise, the base station shall set
13			this field to '0'. The base station shall not include PSIST_EMG
14			in this message if the base station supports the Enhanced
15			Access Channel.
16	PSIST_EMG	-	Persistence value for emergency call for access overload
17			classes 0 through 9.
18			If PSIST_EMG_INCL is set to '0', the base station shall omit
19			this field; otherwise, the base station shall set this field as
20			follows:
21			If a mobile station in access overload classes 0 through 9 is
22			permitted to transmit emergency requests on the Access
23			Channel, the base station shall set this field to the
24			persistence value to be used for the emergency calls. If such
25			a mobile station is not permitted to transmit emergency
26			requests on the Access Channel, the base station shall set
27			this field to '111'.
28	ACCT_INCL	-	Access Control based on Call Type (ACCT) information
29			included indicator.
30			If the base station enables ACCT for at least one service
31			option, the base station shall set this field to '1'; otherwise,
32			the base station shall set this field to '0'.
33			If the base station sets this field to '1', then the base station
34			shall also set at least one of ACCT_SO_INCL or
35			ACCT_SO_GRP_INCL to '1'.
36	ACCT_INCL_EMG	-	Access Control based on Call Type (ACCT) includes
37			emergency calls indicator.
38			If ACCT_INCL is set to '0', the base station shall omit this
39			field; otherwise, the base station shall include this field and
40			set it as follows:
41			The base station shall set this field to '0' if the mobile station
42			is not to apply ACCT to a call that is recognized by the mobile
43			station to be an emergency call; otherwise, the base station
44			shall set this field to '1'.
45	ACCT_AOC_BITMAP_INCL	-	Access Control based on Call Type (ACCT) access overload
46			class bitmap included indicator.

If ACCT\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to '0' if all mobile stations are to apply ACCT regardless of their access overload classes; otherwise, the base station shall set this field to '1' to indicate that the mobile station is to apply ACCT according to its access overload class.

ACCT\_SO\_INCL - Access Control based on Call Type (ACCT) service option included indicator.

If ACCT\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to '1' if at least one occurrence of the ACCT\_SO field is included in this message; otherwise, the base station shall set this field to '0'.

NUM\_ACCT\_SO - Number of service options for Access Control based on Call Type (ACCT).

If ACCT\_SO\_INCL is not included, or is included and set to '0', then the base station shall omit this field; otherwise, the base station shall include this field and set it to one less than the number of occurrences of the ACCT\_SO field included in this message.

If ACCT\_SO\_INCL is included and set to '1', then the base station shall include NUM\_ACCT\_SO + 1 occurrences of the following variable-field record:

ACCT\_AOC\_BITMAP1 - Access Control based on Call Type (ACCT) access overload class bitmap.

If ACCT\_AOC\_BITMAP\_INCL is set to '0', then the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

This field consists of the subfields defined in Table 3.7.2.3.2.2-1.

**Table 3.7.2.3.2.2-1. ACCT Access Overload Class Bitmap Subfields.**

Subfield	Length (bits)	Subfield Description
ACCOLC_0_1	1	Access overload classes 0 and 1
ACCOLC_2_3	1	Access overload classes 2 and 3
ACCOLC_4_5	1	Access overload classes 4 and 5
ACCOLC_6_7	1	Access overload classes 6 and 7
ACCOLC_8_9	1	Access overload classes 8 and 9

1			The base station shall set a subfield to '1' to indicate that
2			mobile stations having the corresponding access overload
3			class are not permitted to perform access attempts using the
4			associated service option ACCT_SO; otherwise, the base
5			station shall set the subfield to '0'.
6	ACCT_SO	-	Access Control based on Call Type (ACCT) service option
7			number.
8			The base station shall set this field to the value of the service
9			option number (as specified in [30]) that has ACCT enabled.
10	ACCT_SO_GRP_INCL	-	Access Control based on Call Type (ACCT) service option
11			group included indicator.
12			If ACCT_INCL is set to '0', the base station shall omit this
13			field; otherwise, the base station shall include this field and
14			set it as follows:
15			The base station shall set this field to '1' if at least one
16			occurrence of the ACCT_SO_GRP field is included in this
17			message; otherwise, the base station shall set this field to '0'.
18	NUM_ACCT_SO_GRP	-	Number of service option groups for Access Control based on
19			Call Type (ACCT).
20			If ACCT_SO_GRP_INCL is not included, or is included and set
21			to '0', then the base station shall omit this field; otherwise,
22			the base station shall include this field and set it to one less
23			than the number of occurrences of the ACCT_SO_GRP field
24			included in this message.
25	If ACCT_SO_GRP_INCL is included and set to '1', then the base station shall include		
26	NUM_ACCT_SO_GRP + 1 occurrences of the following variable-field record:		
27	ACCT_AOC_BITMAP2	-	Access Control based on Call Type (ACCT) access overload
28			class bitmap.
29			If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
30			shall omit this field; otherwise, the base station shall include
31			this field and set it as follows:
32			This field consists of the subfields defined in Table
33			3.7.2.3.2.2-1. The base station shall set a subfield to '1' to
34			indicate that mobile stations having the corresponding access
35			overload class are not permitted to perform access attempts
36			using a service option specified by the associated
37			ACCT_SO_GRP field; otherwise, the base station shall set the
38			subfield to '0'.
39	ACCT_SO_GRP	-	Access Control based on Call Type (ACCT) service option
40			group number.
41			The base station shall set this field to the value of the service
42			option group number (as specified in [30]) whose members all
43			have ACCT enabled.
44			
45			

## 1 3.7.2.3.2.3 Neighbor List Message

2 MSG\_TAG: NLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
PILOT_INC	4

Zero or more occurrences of the following record:

{

NGHBR_CONFIG	3
NGHBR_PN	9

}

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10 PILOT\_INC - Pilot PN sequence offset index increment.

11 A mobile station searches for Remaining Set pilots at pilot PN  
12 sequence index values that are multiples of this value.

13 The base station shall set this field to the pilot PN sequence  
14 increment, in units of 64 PN chips, that mobile stations are to  
15 use for searching the Remaining Set. The base station  
16 should set this field to the largest increment such that the  
17 pilot PN sequence offsets of all its neighbor base stations are  
18 integer multiples of that increment.

19 The base station shall set this field to a value in the range 1  
20 to 15 inclusive.

21

22 The base station shall include one occurrence of the following two-field record for each  
23 member mobile stations are to place in their Neighbor Sets. The base station may include  
24 zero or more occurrences of the following record.

25 NGHBR\_CONFIG - Neighbor configuration.

26 The base station shall set this field to the value shown in  
27 Table 3.7.2.3.2.3-1 corresponding to the configuration of this  
28 neighbor.

29

1

**Table 3.7.2.3.2.3-1. Neighbor Configuration Field**

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment that is same as this current CDMA frequency assignment and with the same number of Paging Channels.</p> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>
001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment that is same as this current CDMA frequency assignment but possibly with a different number of Paging Channels.</p> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>
010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
011	The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the CDMA frequency assignment that is same as this current CDMA frequency assignment.
100-111	Reserved.

1

2

NGHBR\_PN - Neighbor pilot PN sequence offset index.

3

The base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips.

4

5

1 3.7.2.3.2.4 CDMA Channel List Message

2 MSG\_TAG: CCLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6

One or more occurrences of the following field:

{

CDMA_FREQ	11
-----------	----

}

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10 CDMA\_FREQ - CDMA Channel frequency assignment.

11 The order in which occurrences of this field are included  
12 gives the designations of the supported CDMA Channels as  
13 CDMA Channel 1 through CDMA Channel N.

14 Each occurrence of this field shall correspond to a CDMA  
15 Channel containing a Paging Channel that is supported by  
16 this base station. If the supported CDMA Channels are in the  
17 preferred set of CDMA frequency assignments (see [2]), the  
18 base station shall include their occurrences of this field first.

19 The base station shall set each occurrence of this field to the  
20 CDMA channel number corresponding to the CDMA  
21 frequency assignment for that CDMA Channel (see [2]).

1 3.7.2.3.2.7 Order Message

2 MSG\_TAG: ORDM

Field	Length (bits)
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	8 × ADD_RECORD_LEN

3

4 ORDER - Order code.

5 The base station shall set this field to the ORDER code  
6 (see 3.7.4) for this type of order.

7 ADD\_RECORD\_LEN - Additional record length.

8 The base station shall set this field to the number of octets in  
9 the order-specific fields included in this order record.

10 Order-specific fields - Order-specific fields.

11 The base station shall include order-specific fields as  
12 specified in 3.7.4 for this type of order.

13

1 3.7.2.3.2.8 Channel Assignment Message

2 MSG\_TAG: CAM

Field	Length (bits)
ASSIGN_MODE	3
ADD_RECORD_LEN	3
Additional record fields	8 × ADD_RECORD_LEN

3

4 If ASSIGN\_MODE = '000', the additional record fields shall be:

5

FREQ_INCL	1
CODE_CHAN	8
CDMA_FREQ	0 or 11
FRAME_OFFSET	4
ENCRYPT_MODE	2
D_SIG_ENCRYPT_MODE	0 or 3
ENC_KEY_SIZE	0 or 3
C_SIG_ENCRYPT_MODE_INCL	1
C_SIG_ENCRYPT_MODE	0 or 3
RESERVED	0 - 7 (as needed)

6

7 If ASSIGN\_MODE = '001', the additional record fields shall be:

8

RESPOND	1
FREQ_INCL	1
CDMA_FREQ	0 or 11

One or more occurrences of the following field:

{

PILOT_PN	9
----------	---

}

RESERVED	0 - 7 (as needed)
----------	-------------------

9

10

11

1 If ASSIGN\_MODE = '100', the additional record fields shall be:

2

FREQ_INCL	1
RESERVED	3
BYPASS_ALERT_ANSWER	1
DEFAULT_CONFIG	3
GRANTED_MODE	2
CODE_CHAN	8
FRAME_OFFSET	4
ENCRYPT_MODE	2
BAND_CLASS	0 or 5
CDMA_FREQ	0 or 11
D_SIG_ENCRYPT_MODE	0 or 3
ENC_KEY_SIZE	0 or 3
C_SIG_ENCRYPT_MODE_INCL	1
C_SIG_ENCRYPT_MODE	0 or 3
RESERVED	0 - 7 (as needed)

3

4 If ASSIGN\_MODE = '101', the additional record fields shall be:

5

RESPOND	1
FREQ_INCL	1
BAND_CLASS	0 or 5
CDMA_FREQ	0 or 11

One or more occurrences of the following field:

{

PILOT_PN	9
----------	---

}

RESERVED	0 - 7 (as needed)
----------	-------------------

6

7 ASSIGN\_MODE - Assignment mode.

8

The base station shall set this field to the value shown in Table 3.7.2.3.2.8-1 corresponding to the assignment mode for this assignment.

9

10

11

1

**Table 3.7.2.3.2.8-1. Assignment Mode**

<b>Value (binary)</b>	<b>Assignment Mode</b>
000	Traffic Channel Assignment (Band Class 0 only)
001	Paging Channel Assignment (Band Class 0 only)
010	Reserved (Previously: Acquire Analog System)
011	Reserved (Previously: Analog Voice Channel Assignment)
100	Extended Traffic Channel Assignment
101	Extended Paging Channel Assignment
All other values are reserved.	

2

3     **ADD\_RECORD\_LEN**     -     Additional record length.

4                             The base station shall set this field to the number of octets in  
5                             the additional record fields included in this assignment  
6                             record.

7     **Additional record fields**     -     Additional record fields.

8                             The additional record fields are determined by the value of  
9                             ASSIGN\_MODE, as described below.

10    If the ASSIGN\_MODE field is set to '000', the base station shall include the following fields:

11             **FREQ\_INCL**     -     Frequency included indicator.

12                             If the CDMA\_FREQ field is included in this assignment  
13                             record, the base station shall set this bit to '1'. If the  
14                             CDMA\_FREQ field is not included in this assignment record,  
15                             the base station shall set this bit to '0'.

16             **CODE\_CHAN**     -     Code channel.

17                             The base station shall set this field to the code channel index  
18                             (see [2]) in the range 1 to 63 inclusive that the mobile station  
19                             is to use on the Fundamental Channel of the Forward Traffic  
20                             Channel.

21             **CDMA\_FREQ**     -     Frequency assignment.

If the **FREQ\_INCL** bit is set to '1', the base station shall set this field to the CDMA Channel number corresponding to the CDMA frequency assignment for the CDMA Channel containing the Forward Traffic Channel the mobile station is to use. If the **FREQ\_INCL** bit is set to '0', the base station shall omit this field.

**FRAME\_OFFSET** - Frame offset.

The Forward and Reverse Traffic Channel frames are delayed  $\text{FRAME\_OFFSET} \times 1.25 \text{ ms}$  relative to system timing (see [2]).

The base station shall set this field to the Forward and Reverse Traffic Channel frame offset.

**ENCRYPT\_MODE** - Message encryption mode.

The base station shall set this field to the **ENCRYPT\_MODE** value shown in Table 3.7.2.3.2.8-2 corresponding to the encrypting mode that is to be used for signaling messages, as specified in 2.3.12.2.

**Table 3.7.2.3.2.8-2. Message Encryption Modes**

<b>ENCRYPT_MODE Field (binary)</b>	<b>Encryption Mode Used</b>
00	Encryption disabled
01	Basic encryption of call control messages
10	Enhanced encryption of call control messages
11	Extended encryption of call control messages

**D\_SIG\_ENCRYPT\_MODE** - Dedicated channel signaling encryption mode indicator.

If **ENCRYPT\_MODE** is set to '11', the base station shall include this field and shall set it to the dedicated channel signaling encryption mode, as shown in Table 3.7.4.5-1; otherwise the base station shall omit this field.

**ENC\_KEY\_SIZE** - Encryption key size indication.

If **ENCRYPT\_MODE** is set to '10' or '11', the base station shall include this field and shall set it to the encryption key size, as shown in Table 3.7.4.5-2; otherwise, the base station shall omit this field.

**C\_SIG\_ENCRYPT\_MODE\_INCL** - Common channel signaling encryption mode included indicator.

1		If common channel signaling encryption information is
2		included in this message, the base station shall set this field
3		to '1'; otherwise, the base station shall set this field to '0'.
4	C_SIG_ENCRYPT_MODE	- Common channel signaling encryption mode indicator.
5		If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
6		shall include this field and shall set it to the common
7		channel signaling encryption mode, as shown in Table
8		3.7.4.5-1; otherwise, the base station shall omit this field.
9	RESERVED	- Reserved bits.
10		The base station shall add reserved bits as needed in order to
11		make the total length of the fields after the preceding
12		ADD_RECORD_LEN field through this RESERVED field equal
13		to an integer number of octets. The base station shall set
14		these bits to '0'.
15	If the ASSIGN_MODE field is set to '001', the base station shall include the following fields:	
16	RESPOND	- Respond on new Access Channel indicator.
17		If the mobile station is to retransmit an <i>Origination Message</i>
18		or <i>Page Response Message</i> after processing this channel
19		assignment, the base station shall set this field to '1'. The
20		base station may set this field to '0' only in response to a
21		<i>Page Response Message</i> .
22	FREQ_INCL	- Frequency included indicator.
23		If the CDMA_FREQ field is included in this assignment
24		record, the base station shall set this bit to '1'. If the
25		CDMA_FREQ field is not included in this assignment record,
26		the base station shall set this bit to '0'.
27	CDMA_FREQ	- Frequency assignment.
28		If the FREQ_INCL bit is set to '1', the base station shall set
29		this field to the CDMA Channel number corresponding to the
30		CDMA frequency assignment for the CDMA Channel
31		containing the Paging Channel the mobile station is to use. If
32		the FREQ_INCL bit is set to '0', the base station shall omit
33		this field.
34	PILOT_PN	- Pilot PN sequence offset index.
35		The base station shall include one occurrence of this field for
36		each base station whose Paging Channel may be monitored
37		by the mobile station. For each occurrence, the base station
38		shall set this field to the pilot PN sequence offset for a base
39		station, in units of 64 PN chips. The base station having this
40		pilot PN sequence offset should support a Primary Paging
41		Channel with the same Paging Channel rate as the current
42		base station.
43	RESERVED	- Reserved bits.

1                   The base station shall add reserved bits as needed in order to  
2                   make the total length of the fields, after the preceding  
3                   ADD\_RECORD\_LEN field through this RESERVED field,  
4                   equal to an integer number of octets. The base station shall  
5                   set these bits to '0'.

6    If the ASSIGN\_MODE field is set to '100', the base station shall include the following fields:

7                   FREQ\_INCL    -   Frequency included indicator.

8                   If the BAND\_CLASS and CDMA\_FREQ fields are included in  
9                   this assignment record, the base station shall set this bit to  
10                  '1'. If the BAND\_CLASS and CDMA\_FREQ fields are not  
11                  included in this assignment record, the base station shall set  
12                  this bit to '0'.

13                  RESERVED     -   Reserved bits.

14                   The base station shall set this field to '000'.

15    BYPASS\_ALERT\_ANSWER   -   Bypass alert indicator.

16                   If the MOB\_P\_REV of the current band class of the mobile  
17                   station is less than or equal to three, the base station shall  
18                   set this field to '0'; otherwise, the base station shall set this  
19                   field as follows.

20                   If the mobile station is to bypass the *Waiting for Order*  
21                   *Substate* and the *Waiting for Mobile Station Answer Substate*,  
22                   the base station shall set this field to '1'; otherwise, the base  
23                   station shall set this field to '0'.

24    DEFAULT\_CONFIG       -   Default Configuration.

25                   If the GRANTED\_MODE field is set to '00', the base station  
26                   shall set this field as specified in Table 3.7.2.3.2.8-3 to  
27                   indicate an initial multiplex option and radio configuration  
28                   for the Forward and Reverse Traffic Channels.

1

**Table 3.7.2.3.2.8-3. Default Configuration**

<b>Value (binary)</b>	<b>Default Configuration</b>
000	Multiplex Option 1 and Radio Configuration 1 for both the Forward Traffic Channel and the Reverse Traffic Channel
001	Multiplex Option 2 and Radio Configuration 2 for both the Forward Traffic Channel and the Reverse Traffic Channel
010	Multiplex Option 1 and Radio Configuration 1 for the Forward Traffic channel; Multiplex Option 2 and Radio Configuration 2 for the Reverse Traffic channel
011	Multiplex Option 2 and Radio Configuration 2 for the Forward Traffic channel; Multiplex Option 1 and Radio Configuration 1 for the Reverse Traffic channel
All other values are reserved.	

2

3 GRANTED\_MODE - Granted mode.

4 The base station shall set this field to '00' to indicate that the  
5 mobile station is to use an initial service configuration  
6 consisting of the multiplex option and radio configuration  
7 defined by the DEFAULT\_CONFIG field for the Forward and  
8 Reverse Traffic Channels, and to indicate that service  
9 negotiation is to take place before the base station sends the  
10 first *Service Connect Message*.

11 The base station shall set this field to '01' to indicate that the  
12 mobile station is to use an initial service configuration  
13 consisting of the default multiplex option and transmission  
14 rates corresponding to the service option requested by the  
15 mobile station either in the *Origination Message*, or *Page*  
16 *Response Message*, and to indicate that service negotiation is  
17 to take place before the base station sends the first *Service*  
18 *Connect Message*.

1			The base station shall set this field to '10' to indicate that the
2			mobile station is to use an initial service configuration
3			consisting of the default multiplex option and transmission
4			rates corresponding to the service option requested by the
5			mobile station either in the <i>Origination Message</i> , or <i>Page</i>
6			<i>Response Message</i> , and to indicate that service negotiation is
7			not to take place before the base station sends the first
8			<i>Service Connect Message</i> .
9	CODE_CHAN	-	Code channel.
10			The base station shall set this field to the code channel index
11			(see [2]) in the range 1 to 63 inclusive that the mobile station
12			is to use on the Fundamental Channel of the Forward Traffic
13			Channel.
14	FRAME_OFFSET	-	Frame offset.
15			The Forward and Reverse Traffic Channel frames are delayed
16			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
17			The base station shall set this field to the Forward and
18			Reverse Traffic Channel frame offset.
19	ENCRYPT_MODE	-	Message encryption mode.
20			The base station shall set this field to the ENCRYPT_MODE
21			value shown in Table 3.7.2.3.2.8-2 corresponding to the
22			encrypting mode that is to be used for signaling messages, as
23			specified in 2.3.12.2.
24	BAND_CLASS	-	Band class.
25			If the FREQ_INCL bit is set to '1', the base station shall set
26			this field to the CDMA band class, as specified in [30],
27			corresponding to the CDMA frequency assignment for the
28			CDMA Channel containing the Forward Traffic Channel the
29			mobile station is to use. If the FREQ_INCL bit is set to '0', the
30			base station shall omit this field.
31	CDMA_FREQ	-	Frequency assignment.
32			If the FREQ_INCL bit is set to '1', the base station shall set
33			this field to the CDMA Channel number, in the specified
34			CDMA band class, corresponding to the CDMA frequency
35			assignment for the CDMA Channel containing the Forward
36			Traffic Channel the mobile station is to use. If the
37			FREQ_INCL bit is set to '0', the base station shall omit this
38			field.
39	D_SIG_ENCRYPT_MODE	-	Dedicated channel signaling encryption mode indicator.
40			If ENCRYPT_MODE is set to '11', the base station shall include
41			this field and shall set it to the dedicated channel signaling
42			encryption mode, as shown in Table 3.7.4.5-1; otherwise the
43			base station shall omit this field.
44	ENC_KEY_SIZE	-	Encryption key size indication.

1		If ENCRYPT_MODE is set to '10' or '11', the base station shall
2		include this field and shall set it to the encryption key size, as
3		shown in Table 3.7.4.5-2; otherwise, the base station shall omit
4		this field.
5	C_SIG_ENCRYPT_MODE_INCL	- Common channel signaling encryption mode included
6		indicator.
7		If common channel signaling encryption information is
8		included in this message, the base station shall set this field
9		to '1'; otherwise, the base station shall set this field to '0'.
10	C_SIG_ENCRYPT_MODE	- Common channel signaling encryption mode indicator.
11		If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
12		shall include this field and shall set it to the common
13		channel signaling encryption mode, as shown in Table
14		3.7.4.5-1; otherwise, the base station shall omit this field.
15	RESERVED	- Reserved bits.
16		The base station shall add reserved bits as needed in order to
17		make the total length of the fields after the preceding
18		ADD_RECORD_LEN field through this RESERVED field equal
19		to an integer number of octets. The base station shall set
20		these bits to '0'.
21	If the ASSIGN_MODE field is set to '101', the base station shall include the following fields:	
22	RESPOND	- Respond on new Access Channel indicator.
23		If the mobile station is to retransmit an <i>Origination Message</i>
24		or <i>Page Response Message</i> after processing this channel
25		assignment, the base station shall set this field to '1'. The
26		base station may set this field to '0' only in response to a
27		<i>Page Response Message</i> .
28	FREQ_INCL	- Frequency included indicator.
29		If the BAND_CLASS and CDMA_FREQ fields are included in
30		this assignment record, the base station shall set this bit to
31		'1'. If the BAND_CLASS and CDMA_FREQ fields are not
32		included in this assignment record, the base station shall set
33		this bit to '0'.
34	BAND_CLASS	- Band class.
35		If the FREQ_INCL bit is set to '1', the base station shall set
36		this field to the CDMA band class, as specified in [30],
37		corresponding to the CDMA frequency assignment for the
38		CDMA Channel containing the Paging Channel the mobile
39		station is to use. If the FREQ_INCL bit is set to '0', the base
40		station shall omit this field.
41	CDMA_FREQ	- Frequency assignment.

1			If the <code>FREQ_INCL</code> bit is set to '1', the base station shall set
2			this field to the CDMA Channel number, in the specified
3			CDMA band class, corresponding to the CDMA frequency
4			assignment for the CDMA Channel containing the Paging
5			Channel the mobile station is to use. If the <code>FREQ_INCL</code> bit is
6			set to '0', the base station shall omit this field.
7	<code>PILOT_PN</code>	-	Pilot PN sequence offset index.
8			The base station shall include one occurrence of this field for
9			each base station whose Paging Channel may be monitored
10			by the mobile station. For each occurrence, the base station
11			shall set this field to the pilot PN sequence offset for a base
12			station, in units of 64 PN chips. The base station having this
13			pilot PN sequence offset should support a Primary Paging
14			Channel with the same Paging Channel rate as the current
15			base station.
16	<code>RESERVED</code>	-	Reserved bits.
17			The base station shall add reserved bits as needed in order to
18			make the total length of the fields after the preceding
19			<code>ADD_RECORD_LEN</code> field through this <code>RESERVED</code> field equal
20			to an integer number of octets. The base station shall set
21			these bits to '0'.
22			

## 1 3.7.2.3.2.9 Data Burst Message

## 2 MSG\_TAG: DBM

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	8
-------------------	---

} (NUM\_FIELDS)

3

4 MSG\_NUMBER - Message number.

5 The base station shall set this field to the number of this  
6 message within the data burst stream.

7 BURST\_TYPE - Data burst type.

8 The base station shall set the value of this field for the type of  
9 this data burst as defined in [30]. If the mobile station sets  
10 this field equal to '111110', it shall set the first two CHAR<sub>i</sub>  
11 fields of this message equal to  
12 EXTENDED\_BURST\_TYPE\_INTERNATIONAL as described in  
13 the definition of CHAR<sub>i</sub> below. If the base station sets this  
14 field equal to '111111', it shall set the first two CHAR<sub>i</sub> fields of  
15 this message equal to the EXTENDED\_BURST\_TYPE as  
16 described in the definition of CHAR<sub>i</sub> below.

17 NUM\_MSGS - Number of messages in the data burst stream.

18 The base station shall set this field to the number of  
19 messages in this data burst stream.

20 NUM\_FIELDS - Number of characters in this message.

21 The base station shall set this field to the number of  
22 occurrences of the CHAR<sub>i</sub> field included in this message.

23 CHAR<sub>i</sub> - Character.

24 The base station shall include NUM\_FIELDS occurrences of  
25 this field. The base station shall set these fields to the  
26 corresponding octet of the data burst stream.

If the BURST\_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED\_BURST\_TYPE\_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED\_BURST\_TYPE\_INTERNATIONAL field shall specify the COUNTRY\_BURST\_TYPE. The base station shall set the value of the COUNTRY\_BURST\_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

If the BURST\_TYPE field of this message is equal to '111111', the first two CHARi octets shall represent a single, 16 bit, EXTENDED\_BURST\_TYPE field, as shown below. The base station shall set the value of the EXTENDED\_BURST\_TYPE according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

1 3.7.2.3.2.10 Authentication Challenge Message

2 MSG\_TAG: AUCM

Field	Length (bits)
RANDU	24
GEN_CMEAKEY	1

3

4 RANDU - Random challenge data.

5 The base station shall set this field as specified in 2.3.12.1.4.

6 GEN\_CMEAKEY - Generate CMEAKEY indicator.

7 The base station shall set this field to '1' if it wants the MS to  
8 generate the CMEAKEY during the Unique Challenge-  
9 Response procedure (see 2.3.12.1.4); otherwise, the base  
10 station shall set this field to '0'.

11

12

13

1    3.7.2.3.2.11 SSD Update Message

2    MSG\_TAG: SSDUM

Field	Length (bits)
RANDSSD	56

3

4            RANDSSD    -    Random data for the computation of SSD.

5                            The base station shall set this field as specified in 2.3.12.1.5.

6

1 3.7.2.3.2.12 Feature Notification Message

2 MSG\_TAG: FNM

Field	Length (bits)
RELEASE	1

One or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

3

4 RELEASE - Origination completion indicator.

5 The base station shall set this field to '1' if this message is  
6 used to complete an origination request from the mobile  
7 station (see 2.6.3.5); otherwise, the base station shall set this  
8 field to '0'.

9

10 The base station shall include occurrences of the following three-field record as specified  
11 in 3.7.5.

12 RECORD\_TYPE - Information record type.

13 The base station shall set this field as specified in 3.7.5.

14 RECORD\_LEN - Information record length.

15 The base station shall set this field to the number of octets in  
16 the type-specific fields included in this record.

17 Type-specific fields - Type-specific fields.

18 The base station shall include type-specific fields as specified  
19 in 3.7.5.

20

2

PILOT\_PN - Pilot PN sequence offset index.

- 1 The base station shall set this field to the pilot PN sequence  
2 offset for this base station, in units of 64 PN chips.
- 3 CONFIG\_MSG\_SEQ - Configuration message sequence number.  
4 The base station shall set this field to CONFIG\_SEQ  
5 (see 3.6.2.2).
- 6 DELETE\_FOR\_TMSI - Delete foreign TMSI.  
7 The base station shall set this field to '1' to cause the mobile  
8 station to delete its TMSI if the TMSI was assigned in a  
9 different TMSI zone from that specified by the TMSI\_ZONE  
10 field of this message; otherwise, the base station shall set this  
11 field to '0'.
- 12 USE\_TMSI - Use TMSI indicator.  
13 The base station shall set this field to the value shown in  
14 Table 3.7.2.3.2.13-1 corresponding to the type of MSID that  
15 the mobile station is to use on the Access Channel.
- 16 PREF\_MSID\_TYPE - Preferred Access Channel Mobile Station Identifier Type.  
17 The base station shall set this field to the value shown in  
18 Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding  
19 to the type of MSID that the mobile station is to use on the  
20 Access Channel.

21 **Table 3.7.2.3.2.13-1. Preferred MSID Types for**  
22 **P\_REV\_IN\_USE < 11**

1	11	11	N/A	If valid TMSI is assigned: TMSI.  If valid TMSI is not assigned and the mobile station has a R-UIM which indicates that UIM ID is to be used (see [40]): IMSI, ESN and MEID;  Otherwise: IMSI and MEID
All other values are reserved.				

MCC - Mobile Country Code.  
The base station shall set this field to the MCC (see 2.3.1)

IMSI\_11\_12 - 11<sup>th</sup> and 12<sup>th</sup> digits of the IMSI.  
The base station shall set this field to the IMSI\_11\_12 (see 2.3.1).

1	TMSI_ZONE_LEN	-	TMSI zone length.
2			The base station shall set this field to the number of octets
3			included in the TMSI_ZONE. The base station shall set this
4			field to a value in the range 1 to 8 inclusive.
5	TMSI_ZONE	-	TMSI zone.
6			The base station shall set this field to the TMSI zone number
7			as specified in [27].
8	BCAST_INDEX	-	Broadcast slot cycle index.
9			To enable periodic broadcast paging, the base station shall
10			set this field to an unsigned 3-bit number in the range 1-7,
11			equal to the broadcast slot cycle index as defined in
12			2.6.2.1.1.3.3. To disable periodic broadcast paging, the base
13			station shall set this field to '000'.
14	IMSI_T_SUPPORTED	-	IMSI_T support indicator.
15			The base station shall set this field to '1' to indicate support
16			for a 15-digit IMSI_T addressing according to [18].
17	P_REV	-	Protocol revision level.
18			The base station shall set this field to '00001100'.
19	MIN_P_REV	-	Minimum protocol revision level.
20			The base station sets this field to prevent mobile stations
21			which cannot be supported by the base station from
22			accessing the system.
23			The base station shall set this field to the minimum protocol
24			revision level that it supports.
25	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
26			Active Set, or dropping a pilot from the Active Set (see
27			2.6.6.2.3 and 2.6.6.2.5.2).
28			The base station shall set this field as an unsigned binary
29			number.
30	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
31			the Active Set (see 2.6.6.2.5.2).
32			The base station shall set this field as a two's complement
33			signed binary number, in units of 0.5 dB.
34	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
35			from the Active Set (see 2.6.6.2.3).
36			The base station shall set this field as a two's complement
37			signed binary number, in units of 0.5 dB.
38	PACKET_ZONE_ID	-	Packet data services zone identifier.
39			If the base station supports a packet data service zone, the
40			base station shall set this field to its non-zero packet data
41			services zone identifier.
42			If the base station does not support a packet data service
43			zone, the base station shall set this field to '00000000'.
44	MAX_NUM_ALT_SO	-	Maximum number of alternative service options.

1			The base station shall set this field to the maximum number
2			of alternative service option numbers that the mobile station
3			is allowed to include in the <i>Origination Message</i> or the <i>Page</i>
4			<i>Response Message</i> .
5			For mobile stations with MOB_P_REV <sub>s</sub> less than seven, the
6			alternative service options are those service options defined
7			in [30] and related to SERVICE_OPTION in <i>Origination</i>
8			<i>Message</i> and the <i>Page Response Message</i> .
9			For mobile stations with MOB_P_REV <sub>s</sub> equal to or greater
10			than seven, the alternative service options are those service
11			options defined in [30] without service option group number
12			assigned and related to SERVICE_OPTION in <i>Origination</i>
13			<i>Message</i> and the <i>Page Response Message</i> .
14			If the base station sets this field to a value greater than zero,
15			in addition, the base station shall allow the mobile station
16			with MOB_P_REV equal to or greater than seven to include
17			• a 4 or 8-bit service option bitmap in the <i>Origination</i>
18			<i>Message</i> and the <i>Page Response Message</i> ;
19			• alternate service option numbers, not limited to
20			MAX_ALT_SO_NUM, in the <i>Enhanced Origination</i>
21			<i>Message</i> .
22	RESELECT_INCLUDED	-	System reselection parameters included.
23			If the base station is including system reselection parameters,
24			the base station shall set this field to '1'; otherwise, the base
25			station shall set this field to '0'.
26	EC_THRESH	-	Pilot power threshold.
27			If RESELECT_INCLUDED is set to '1', the base station shall
28			include the field EC_THRESH and set this field to:
29			$\lceil (pilot\_power\_threshold + 115) \rceil$
30			where <i>pilot_power_threshold</i> is the pilot power, E <sub>c</sub> , in
31			dBm/1.23 MHz, below which the mobile station is to perform
32			system reselection; otherwise, the base station shall omit this
33			field.
34	EC_IO_THRESH	-	Pilot E <sub>c</sub> / I <sub>0</sub> threshold.
35			If RESELECT_INCLUDED is set to '1', the base station shall
36			include the field EC_IO_THRESH and set this field to:
37			$\lfloor -20 \times \log_{10} (pilot\_threshold) \rfloor$
38			where <i>pilot_threshold</i> is the pilot E <sub>c</sub> /I <sub>0</sub> below which the
39			mobile station is to perform system reselection; otherwise, the
40			base station shall omit this field.
41	PILOT_REPORT	-	Pilot reporting indicator.

1		The base station shall set this field to '1' if the mobile station
2		is to report the additional pilots which have pilot strengths
3		exceeding T_ADD in all Access Channel messages. The base
4		station shall set this field to '0' if the mobile station is to
5		report the additional pilots which have pilot strengths
6		exceeding T_ADD only in the <i>Origination Message</i> , the
7		<i>Reconnect Message</i> , and the <i>Page Response Message</i> .
8	NGHBR_SET_ENTRY_INFO	- Neighbor Set access entry handoff information included
9		indicator.
10		If the base station is including information on the Neighbor
11		Set access entry handoff, the base station shall set this field
12		to '1'; otherwise, the base station shall set this field to '0'.
13	ACC_ENT_HO_ORDER	- Access entry handoff permitted indicator.
14		If NGHBR_SET_ENTRY_INFO is set to '1', the base station
15		shall include this field and set it as described below;
16		otherwise, the base station shall omit this field.
17		The base station shall set this field to '1' if the mobile station
18		is permitted to perform an access entry handoff after receiving
19		a message while performing the <i>Mobile Station Order and</i>
20		<i>Message Processing Operation</i> in the <i>Mobile Station Idle State</i>
21		(see 2.6.2.4); otherwise, the base station shall set this field to
22		'0'.
23	NGHBR_SET_ACCESS_INFO	- Neighbor Set access handoff included indicator.
24		If the base station is including information on the Neighbor
25		Set access handoff or access probe handoff, the base station
26		shall set this field to '1', otherwise, the base station shall set
27		this field to '0'.
28	ACCESS_HO	- Access handoff permitted indicator.
29		If NGHBR_SET_ACCESS_INFO is set to '1', the base station
30		shall include this field and set it as described below;
31		otherwise, the base station shall omit this field.
32		The base station shall set this field to '1' if the mobile station
33		is permitted to perform an access handoff (see 2.6.3.1.3.2);
34		otherwise, the base station shall set this field to '0'.
35	ACCESS_HO_MSG_RSP	- Access handoff permitted for message response indicator.
36		If ACCESS_HO is set to '1', the base station shall include this
37		field and set it as described below; otherwise, the base station
38		shall omit this field.
39		The base station shall set this field to '1' if the mobile station
40		is permitted to perform an access handoff after receiving a
41		message and before responding to that message in the
42		<i>System Access State</i> ; otherwise, the base station shall set this
43		field to '0'.
44	ACCESS_PROBE_HO	- Access probe handoff permitted indicator.
45		If NGHBR_SET_ACCESS_INFO is set to '1', the base station
46		shall include this field and set it as described below;
47		otherwise, the base station shall omit this field.

1		The base station shall set this field to '1' if the mobile station
2		is permitted to perform an access probe handoff (see
3		2.6.3.1.3.3); otherwise, the base station shall set this field to
4		'0'.
5	ACC_HO_LIST_UPD	- Access handoff list update permitted indicator.
6		If ACCESS_PROBE_HO is included and is set to '1', the base
7		station shall include this field and set it as described below;
8		otherwise, the base station shall omit this field.
9		The base station shall set this field to '1' if the mobile station
10		is permitted to update the access handoff list during an
11		access attempt (see 2.6.3.1.7.2); otherwise, the base station
12		shall set this field to '0'.
13	ACC_PROBE_HO_OTHER_MSG	- Access probe handoff permitted for messages other
14		than the <i>Origination Message</i> , the <i>Reconnect Message</i> , and
15		the <i>Page Response Message</i> .
16		If ACCESS_PROBE_HO is set to '1', the base station shall
17		include this field and set it as described below; otherwise, the
18		base station shall omit this field.
19		The base station shall set this field to '1' if the mobile station
20		is permitted to perform an access probe handoff for messages
21		other than the <i>Origination Message</i> , the <i>Reconnect Message</i> ,
22		and the <i>Page Response Message</i> . The base station shall set
23		this field to '0' if the mobile station is permitted to perform an
24		access probe handoff only for the <i>Origination Message</i> , the
25		<i>Reconnect Message</i> , and the <i>Page Response Message</i> . See
26		2.6.3.1.3.3.
27	MAX_NUM_PROBE_HO	- Maximum number of times that the mobile station is
28		permitted to perform an access probe handoff.
29		If ACCESS_PROBE_HO is set to '1', the base station shall
30		include this field and set it as described below; otherwise, the
31		base station shall omit this field.
32		The base station shall set this field to the maximum number
33		of times the mobile station is allowed to perform an access
34		probe handoff within an access attempt minus one.
35	NGHBR_SET_SIZE	- Size of the Neighbor Set.
36		If NGHBR_SET_ENTRY_INFO or NGHBR_SET_ACCESS_INFO
37		is equal to '1', the base station shall set this field to the
38		number of pilots included in the <i>Neighbor List Message</i> ,
39		<i>Extended Neighbor List Message</i> , or <i>General Neighbor List</i>
40		<i>Message</i> ; otherwise, the base station shall omit this field.
41	If NGHBR_SET_ENTRY_INFO is equal to '1', the base station shall include	
42	NGHBR_SET_SIZE occurrences of the following field:	
43	ACCESS_ENTRY_HO	- Access entry handoff permitted when entering the System
44		Access State.

1 The base station shall set this field to '1' if the mobile station  
2 is permitted to perform an access entry handoff to the base  
3 station associated with the corresponding pilot between the  
4 time it receives a message on the Paging Channel when in the  
5 *Mobile Station Idle State* and it enters the *System Access State*  
6 to respond to the message; otherwise, the base station shall  
7 set this field to '0'. The base station shall use the same order  
8 for the ACCESS\_ENTRY\_HO fields in this message as is used  
9 for pilots which are listed in the *Neighbor List Message*,  
10 *Extended Neighbor List Message*, or *General Neighbor List*  
11 *Message*. Specifically, the  $i^{th}$  occurrence of the  
12 ACCESS\_ENTRY\_HO field shall correspond the  $i^{th}$  pilot in the  
13 *Neighbor List Message*, *Extended Neighbor List Message*, or  
14 *General Neighbor List Message*.

15 If NGHBR\_SET\_ACCESS\_INFO is equal to '1', the base station shall include  
16 NGHBR\_SET\_SIZE occurrences of the following field:

17 ACCESS\_HO\_ALLOWED - Access handoff and access probe handoff permitted for the  
18 corresponding pilot while in the *System Access State*.

19 The base station shall set this field to '1' if the mobile station  
20 is permitted to perform an access handoff or access probe  
21 handoff to the base station associated with the corresponding  
22 pilot when the mobile station is in the *System Access State*  
23 (see 2.6.3.1.8 and 2.6.3.1.9); otherwise, the base station shall  
24 set this field to '0'. The base station shall use the same order  
25 for the ACCESS\_HO\_ALLOWED fields in this message as is  
26 used for pilots which are listed in the *Neighbor List Message*,  
27 *Extended Neighbor List Message*, or *General Neighbor List*  
28 *Message*. Specifically, the  $i^{th}$  occurrence of the  
29 ACCESS\_HO\_ALLOWED field shall correspond the  $i^{th}$  pilot in  
30 the *Neighbor List Message*, *Extended Neighbor List Message*,  
31 or *General Neighbor List Message*.

32 The base station shall set this field to '0' if this pilot does not  
33 support a Reverse Access Channel (R-ACH).

34 BROADCAST\_GPS\_ASST - Broadcast GPS Assist Indicator.

35 The base station shall set this field to '1' if it supports  
36 Broadcast GPS Assist capability; otherwise, the base station  
37 shall set this field to '0'.

38 QPCH\_SUPPORTED - Quick Paging Channel Supported Indication.

39 If the base station supports Quick Paging Channel operation,  
40 the base station shall set this field to '1'; otherwise the base  
41 station shall set this field to '0'.

42 NUM\_QPCH - Number of Quick Paging Channels.

43 If the base station sets QPCH\_SUPPORTED to '1', the base  
44 station shall include this field and set it as described below;  
45 otherwise, the base station shall omit this field.

The base station shall set this field to the number of Quick Paging Channels on this CDMA Channel. The base station shall not set this field to '00'.

**QPCH\_RATE** - Quick Paging Channel indicator rate.

If the base station sets QPCH\_SUPPORTED to '1', the base station shall include this field and set it as described below; otherwise, the base station shall omit this field.

The base station shall set this field to the QPCH\_RATE field value shown in Table 3.7.2.3.2.13-2 corresponding to the indicator rate used by the Quick Paging Channel in the system.

**Table 3.7.2.3.2.13-2. QPCH Indicator Data Rate**

<b>QPCH_RATE Field (binary)</b>	<b>QPCH indicator data rate</b>
0	4800 bps
1	9600 bps

**QPCH\_POWER\_LEVEL\_PAGE** - Quick Paging Channel paging indicator transmit power level.

If the base station sets QPCH\_SUPPORTED to '1', the base station shall include this field and set it as described below; otherwise, the base station shall omit this field.

The base station shall set this field to the Quick Paging Channel paging indicator transmit power level relative to that of the Pilot Channel as specified in Table 3.7.2.3.2.13-3.

1  
2  
3

**Table 3.7.2.3.2.13-3 Quick Paging Channel Transmit Power Level**

<b>QPCH_POWER_LEVEL_PA GE QPCH_POWER_LEVEL_C ONFIG (binary)</b>	<b>Transmit Power Level</b>
000	5 dB below the Pilot Channel Transmit Power
001	4 dB below the Pilot Channel Transmit Power
010	3 dB below the Pilot Channel Transmit Power
011	2 dB below the Pilot Channel Transmit Power
100	1 dB below the Pilot Channel Transmit Power
101	Same as the Pilot Channel Transmit Power
110	1 dB above the Pilot Channel Transmit Power
111	2 dB above the Pilot Channel Transmit Power

1	QPCH_CCI_SUPPORTED -	Quick Paging Channel configuration change indicator
2		supported.
3		If QPCH_SUPPORTED is set to '1', the base station shall
4		include this field and set it as described below; otherwise, the
5		base station shall omit this field.
6		If the base station supports configuration change indicators
7		on the Quick Paging Channel, the base station shall set this
8		field to '1'; otherwise the base station shall set this field to '0'.
9	QPCH_POWER_LEVEL_CONFIG -	Quick Paging Channel configuration change indicator
10		transmit power level.
11		If the base station includes the QPCH_CCI_SUPPORTED field
12		and sets it to '1', the base station shall include this field and
13		set it as described below; otherwise, the base station shall
14		omit this field.
15		The base station shall set this field to the Quick Paging
16		Channel configuration change indicator transmit power level
17		relative to that of the Pilot Channel as specified in Table
18		3.7.2.3.2.13-3.
19	SDB_SUPPORTED -	Short Data Burst supported indicator.
20		The base station shall set this field to '1' if the mobile station
21		is permitted to send a Short Data Burst; otherwise, the base
22		station shall set this field to '0'.
23	RLGAIN_TRAFFIC_PILOT -	Gain adjustment of the Reverse Traffic Channel relative to the
24		Reverse Pilot Channel for Radio Configurations greater than
25		2.
26		The base station shall set this field to the correction factor to
27		be used by mobile stations in setting the power of a reverse
28		traffic channel, expressed as a two's complement value in
29		units of 0.125 dB (see [2]).
30	REV_PWR_CNTL_DELAY_INCL -	Reverse Power Control Delay included indicator.
31		The base station shall set this field to '1' if the base station
32		includes the REV_PWR_CNTL_DELAY field in this message;
33		otherwise, the base station shall set this field to '0'.
34	REV_PWR_CNTL_DELAY -	The reverse power control delay.
35		If REV_PWR_CNTL_DELAY_INCL is set to '0', the base station
36		shall omit this field; otherwise, the base station shall include
37		this field and set it as follows:
38		The base station shall set this field to the closed-loop reverse
39		power control delay minus one (the closed-loop reverse power
40		control delay is the time between the end of a gated-on
41		reverse PCG and the beginning of the reverse PCG where the
42		corresponding feedback is sent on the Forward Power Control
43		Subchannel, see [2]), in units of 1.25 ms.
44	AUTO_MSG_SUPPORTED -	Autonomous message supported indicator.

If the base station allows the autonomous delivery of the *Device Information Message* on the r-csch, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

AUTO\_MSG\_INTERVAL - Autonomous message interval.

If AUTO\_MSG\_SUPPORTED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and shall set this field to the AUTO\_MSG\_INTERVAL value shown in Table 3.7.2.3.2.13-4 to indicate the minimum time interval between autonomous messages sent by a mobile station to the infrastructure. This parameter is intended to allow the infrastructure to limit the frequency of autonomous messages sent by a mobile station on the r-csch.

**Table 3.7.2.3.2.13-4. AUTO\_MSG\_INTERVAL Values**

<b>AUTO_MSG_INTERVAL (binary)</b>	<b>Interval Length (milliseconds)</b>
000	200
001	500
010	1000
011	1500
100	2000
101	5000
110	10000
111	15000

MOB\_QOS - Indicator granting permission to the mobile station to request QoS parameter settings in the *Origination Message*, *Origination Continuation Message*, or *Enhanced Origination Message*.

The base station shall set this field to '1', if the mobile station is allowed to include a QoS record in the *Origination Message*, *Origination Continuation Message*, or *Enhanced Origination Message*; otherwise, the base station shall set this field to '0'.

1	ENC_SUPPORTED	-	Encryption fields included.
2			The base station shall set this field to '1' if the encryption
3			related fields are included; otherwise the base station shall
4			set this field to '0'.
5	SIG_ENCRYPT_SUP	-	Signaling encryption supported indicator.
6			If ENC_SUPPORTED is equal to '1', the base station shall
7			include this field; otherwise, the base station shall omit this
8			field. If this field is included, this field indicates which
9			signaling encryption algorithms are supported by the base
10			station.
11			This field consists of the subfields shown in Table
12			2.7.1.3.2.1-5.
13			If this field is included, the base station shall set the
14			subfields as follows:
15			The base station shall set the CMEA subfield to '1'.
16			The base station shall set each other subfield to '1' if the
17			corresponding signaling encryption algorithm is supported by
18			the base station; otherwise, the base station shall set the
19			subfield to '0'.
20			The base station shall set the RESERVED subfield to '00000'.
21	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
22			If ENC_SUPPORTED is equal to '1', the base station shall
23			include this field; otherwise, the base station shall omit this
24			field. If this field is included, the base station shall set this
25			field to indicate the supported user information encryption
26			algorithms.
27			This field consists of the subfields shown in Table
28			2.7.1.3.2.4-9.
29			The base station shall set each subfield to '1' if the
30			corresponding user information encryption algorithm is
31			supported by the base station; otherwise, the base station
32			shall set the subfield to '0'.
33	USE_SYNC_ID	-	Sync ID supported indicator.
34			The base station shall set this field to '1' to indicate that the
35			mobile station is permitted to include the SYNC_ID field in
36			the <i>Page Response Message</i> , the <i>Reconnect Message</i> , the
37			<i>Origination Message</i> , and the <i>Enhanced Origination Message</i> ;
38			otherwise, the base station shall set this field to '0'.
39	CS_SUPPORTED	-	Concurrent Services supported indicator.
40			If the base station supports concurrent services, the base
41			station shall set this field to '1'; otherwise, the base station
42			shall set this field to '0'.
43	BCCH_SUPPORTED	-	Primary Broadcast Control Channel Supported Indicator.
44			If the base station supports Primary Broadcast Control

1		Channel, the base station shall set this field to '1'; otherwise,
2		the base station shall set this field to '0'.
3	MS_INIT_POS_LOC_SUP_IND	- Mobile station initiated position location
4		determination supported indicator.
5		If the base station supports mobile station initiated position
6		determination, the base station shall set this field to '1';
7		otherwise, the base station shall set this field to '0'.
8	PILOT_INFO_REQ_SUPPORTED	- Pilot information request supported indicator.
9		If the base station supports mobile station request for pilot
10		information using the "Pilot Information" record in the <i>Base</i>
11		<i>Station Status Request Message</i> , the base station shall set
12		this field to '1'; otherwise, the base station shall set this field
13		to '0'.
14	QPCH_BI_SUPPORTED	- Quick Paging Channel broadcast indicator supported.
15		If QPCH_SUPPORTED is included and set to '1', the base
16		station shall include this field and set it as described below;
17		otherwise, the base station shall omit this field.
18		If the base station supports broadcast indicators on the
19		Quick Paging Channel, the base station shall set this field to
20		'1'; otherwise the base station shall set this field to '0'.
21	QPCH_POWER_LEVEL_BCAST	- Quick Paging Channel broadcast indicator transmit
22		power level.
23		If QPCH_BI_SUPPORTED is included and set to '1', the base
24		station shall include this field and set it as described below;
25		otherwise, the base station shall omit this field.
26		The base station shall set this field to the Quick Paging
27		Channel broadcast indicator transmit power level relative to
28		that of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.
29	BAND_CLASS_INFO_REQ	- Band class information request indicator.
30		The base station shall set this field to '1' if the
31		ALT_BAND_CLASS field is included in this message;
32		otherwise, the base station shall set this field to '0'.
33	ALT_BAND_CLASS	- Alternate band class.
34		If BAND_CLASS_INFO_REQ is set to '0', then the base station
35		shall omit this field; otherwise, the base station shall include
36		this field and set it as follows:
37		The base station shall set this field to an alternate CDMA
38		band class (see [30]) supported by the base station. The
39		mobile station is to indicate its capability to support the
40		alternate band class in the <i>Origination Message</i> and <i>Page</i>
41		<i>Response Message</i> .
42	CDMA_OFF_TIME_REP_SUP_IND	- CDMA off time report supported indicator.

If the base station supports mobile station report for CDMA off time information using the *CDMA Off Time Report Message*, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**CDMA\_OFF\_TIME\_REP\_THRESHOLD\_UNIT** – CDMA off time report threshold unit

If CDMA\_OFF\_TIME\_REP\_SUP\_IND is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the time unit used in CDMA\_OFF\_TIME\_REP\_THRESHOLD, as specified in Table 3.7.2.3.2.13-5

**Table 3.7.2.3.2.13-5. CDMA Off Time Report Threshold Unit**

<b>CDMA_OFF_TIME_REP_UNIT (binary)</b>	<b>Time Unit (decimal)</b>
0	80 ms
1	0.5 sec

**CDMA\_OFF\_TIME\_REP\_THRESHOLD** – CDMA off time report threshold

If CDMA\_OFF\_TIME\_REP\_SUP\_IND is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the time in units of CDMA\_OFF\_TIME\_REP\_THRESHOLD\_UNIT such that if the mobile station goes away from the CDMA traffic channel longer than this value, the mobile station is to send a *CDMA Off Time Report Message*.

**CHM\_SUPPORTED** – Control Hold Mode supported indicator.

The base station shall set this field to '1' to indicate that the base station supports the Control Hold Mode; otherwise, the base station shall set this field to '0'.

**RELEASE\_TO\_IDLE\_IND** – Release to Idle State allowed indicator.

If the mobile station is allowed to return to the *Mobile Station Idle State* upon call release, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**RECONNECT\_MSG\_IND** – *Reconnect Message* supported indicator.

The base station shall set this field to '0' if the mobile station is not allowed to send a *Reconnect Message* instead of an *Origination Message* or a *Page Response Message*; otherwise, the base station shall set this field to '1'.

**MSG\_INTEGRITY\_SUP** – Message integrity supported indicator.

1		If the base station supports message integrity, the base
2		station shall set this field to '1'; otherwise, the base station
3		shall set this field to '0'.
4	SIG_INTEGRITY_SUP_INCL	- Signaling message integrity information included
5		indicator.
6		If MSG_INTEGRITY_SUP is set to '1', the base station shall
7		include this field and set it as follows; otherwise, the base
8		station shall omit this field.
9		If the base station supports other integrity algorithm(s) in
10		addition to the default integrity algorithm, the base station
11		shall set this field to '1'; otherwise, the base station shall set
12		this field to '0'.
13	SIG_INTEGRITY_SUP	- Signaling integrity algorithm supported by the base station.
14		If SIG_INTEGRITY_SUP_INCL is included and set to '1', the
15		base station shall set this field as follows; otherwise, the base
16		station shall omit this field.
17		The base station shall set this field to indicate the supported
18		message integrity algorithms in addition to the default
19		integrity algorithm.
20		This field consists of the subfields shown in Table
21		2.7.1.3.2.1-6.
22		The base station shall set each subfield to '1' if the
23		corresponding message integrity algorithm is supported by
24		the base station; otherwise, the base station shall set the
25		subfield to '0'.
26		The base station shall set the RESERVED subfield to
27		'00000000'.
28	FOR_PDCH_SUPPORTED	- Forward Packet Data Channel supported indicator.
29		If the base station supports the Forward Packet Data Channel
30		(F-PDCH), the base station shall set this field to '1'; otherwise,
31		the base station shall set this field to '0'.
32	PDCH_CHM_SUPPORTED	- PDCH Control Hold Mode supported indicator.
33		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
34		omit this field; otherwise, the base station shall include this
35		field and set it as follows:
36		The base station shall set this field to '1' to indicate that the
37		base station supports the PDCH Control Hold Mode;
38		otherwise, the base station shall set this field to '0'.
39	PDCH_PARMS_INCL	- Forward Packet Data Channel related parameters included
40		indicator.
41		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
42		omit this field; otherwise, the base station shall set this field
43		as follows:

1		The base station shall set this field to '1' if the following F-
2		PDCH related fields are included in this message; otherwise,
3		the base station shall set this field to '0'.
4	FOR_PDCH_RLGAIN_INCL	- Forward Packet Data Channel parameters related to
5		reverse link adjustment gains included indicator.
6		If PDCH_PARMS_INCL is omitted, or if it is included and set
7		to '0', the base station shall omit this field; otherwise, the
8		base station shall include this field, and set it as follows.
9		The base station shall set this field to '1' if the following F-
10		PDCH gain related fields are included in this message;
11		otherwise, the base station shall set this field to '0'.
12	RLGAIN_ACKCH_PILOT	- Reverse Acknowledgment Channel to pilot adjustment gain.
13		If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included
14		and set to '0', the base station shall omit this field; otherwise,
15		the base station shall include this field, and set it as follows.
16		The base station shall set this field to the Reverse
17		Acknowledgment Channel to pilot adjustment gain expressed
18		as a two's complement value in units of 0.125 dB (see [2]).
19	RLGAIN_CQICH_PILOT	- Reverse Channel Quality Indicator Channel to pilot
20		adjustment gain.
21		If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included
22		and set to '0', the base station shall omit this field; otherwise,
23		the base station shall include this field, and set it as follows.
24		The base station shall set this field to the Reverse Channel
25		Quality Indicator Channel to pilot adjustment gain expressed
26		as a two's complement value in units of 0.125 dB (see [2]).
27	NUM_SOFT_SWITCHING_FRAMES	- Number of frames for R-CQICH soft switching.
28		If PDCH_PARMS_INCL is not included, or is included and set
29		to '0', the base station shall omit this field; otherwise, the
30		base station shall include this field and set it as follows:
31		The base station shall set this field to the duration of the cell
32		switching period, in units of 20 ms, minus one, during which
33		the mobile station is to transmit the cell switch sequence on
34		the R-CQICH when it switches between two pilots which are
35		in different groups (see [3]).
36	NUM_SOFTEN_SWITCHING_FRAMES	- Number of frames for R-CQICH softer
37		switching.
38		If PDCH_PARMS_INCL is not included, or is included and set
39		to '0', the base station shall omit this field; otherwise, the
40		base station shall include this field and set it as follows:
41		The base station shall set this field to the duration of the cell
42		switching period, in units of 20 ms, minus one, during which
43		the mobile station is to transmit the cell switch sequence on
44		the R-CQICH when it switches between two pilots which are
45		in the same group (see [3]).

1	NUM_SOFT_SWITCHING_SLOTS	-	Number of slots per frame for R-CQICH soft
2			switching.
3			If PDCH_PARMS_INCL is not included, or is included and set
4			to '0', the base station shall omit this field; otherwise, the
5			base station shall include this field and set it as follows:
6			The base station shall set this field to the duration of the cell
7			switching slots within a switching frame, in units of 1.25 ms
8			as specified in Table 3.7.2.3.2.21-10, during which the mobile
9			station is to transmit the cell switch indication by using
10			Walsh cover of target on the R-CQICH when it switches
11			between two pilots which are in different groups.
12	NUM_SOFTER_SWITCHING_SLOTS	-	Number of slots per frame for R-CQICH softer
13			switching.
14			If PDCH_PARMS_INCL is not included, or is included and set
15			to '0', the base station shall omit this field; otherwise, the
16			base station shall include this field and set it as follows:
17			The base station shall set this field to the duration of the cell
18			switching slots within a switching frame, in units of 1.25 ms
19			as specified in Table 3.7.2.3.2.21-10, during which the mobile
20			station is to transmit the cell switch indication by using
21			Walsh cover of target on the R-CQICH when it switches
22			between two pilots which are in the same group.
23	PDCH_SOFT_SWITCHING_DELAY	-	F-PDCH soft switching delay.
24			If PDCH_PARMS_INCL is not included, or is included and set
25			to '0', the base station shall omit this field; otherwise, the
26			base station shall include this field and set it as follows:
27			The base station shall set this field to the minimum
28			interruption seen by the mobile station, in units of 10 ms,
29			minus one, when the mobile station is to transmit the cell
30			switch sequence on the R-CQICH channel when it switches
31			between two pilots which are in different groups (see [3]).
32	PDCH_SOFTER_SWITCHING_DELAY	-	F-PDCH softer switching delay.
33			If PDCH_PARMS_INCL is not included, or is included and set
34			to '0', the base station shall omit this field; otherwise, the
35			base station shall include this field and set it as follows:
36			The base station shall set this field to the minimum
37			interruption seen by the mobile station, in units of 10 ms,
38			minus one, when the mobile station is to transmit the cell
39			switch sequence on the R-CQICH channel when it switches
40			between two pilots which are in the same group (see [3]).
41	WALSH_TABLE_ID	-	The index of the Walsh Table used.
42			If PDCH_PARMS_INCL is not included, or is included and set
43			to '0', the base station shall omit this field; otherwise, the
44			base station shall set this field as follows:
45			The base station shall set this field to the index of the Walsh
46			Table being used by the Packet Data Channel. (See [3]).

1	NUM_PDCCH	-	The number of Packet Data Control Channels supported.
2			If PDCH_PARMS_INCL is not included, or is included and set
3			to '0', the base station shall omit this field; otherwise, the
4			base station shall include this field and set it as follows:
5			The base station shall set this field to '000' if the pilot
6			supports one Packet Data Control Channel. The base station
7			shall set this field to '001' if the pilot supports two Packet
8			Data Control Channels. The base station shall not set this
9			field to any other value.
10	The base station shall include NUM_PDCCH+1 occurrences of the field		
11	FOR_PDCCH_WALSH:		
12	FOR_PDCCH_WALSH	-	Forward Packet Data Control Channel Walsh code
13			assignment.
14			If PDCH_PARMS_INCL is not included, or is included and set
15			to '0', the base station shall omit this field; otherwise, the
16			base station shall include this field and set it as follows:
17			The base station shall set this field to the Walsh code
18			assignment for the Forward Packet Data Control Channel.
19			If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
20			shall be included first, followed by the Walsh code for
21			PDCCH1.
22	IMSI_10_INCL	-	IMSI_10 included.
23			If the MNC is a 3-digit number and the base station wants to
24			convey the third digit of the MNC to the mobile station, the
25			base station shall set this field to '1'; otherwise, the base
26			station shall set this field to '0'.
27	IMSI_10	-	The least significant digit of MNC when the MNC is a 3-digit
28			number.
29			If IMSI_10_INCL is set to '0', the base station shall omit this
30			field; otherwise, the base station shall set this field to the
31			least significant digit of MNC converted to binary by the
32			standard decimal-to-binary conversion as shown in Table
33			2.3.1.1-1.
34	MAX_ADD_SERV_INSTANCE	-	Maximum number of additional service reference
35			identifiers allowed in origination
36			If the CS_SUPPORTED field is set to '0', the base station shall
37			omit this field; otherwise, the base station shall include this
38			field and set it as follows:
39			The base station shall set this field to the maximum number
40			of additional service reference identifiers that can be included
41			in the <i>Origination Message</i> or <i>Enhanced Origination Message</i> .
42	RER_MODE_SUPPORTED	-	Radio environment reporting mode supported indicator.
43			If the base station supports radio environment reporting
44			mode, the base station shall set this field to '1'; otherwise, the
45			base station shall set this field to '0'.

1	TKZ_MODE_SUPPORTED	-	Tracking zone mode supported indicator.
2			The base station shall set this field to '1' if the tracking zone
3			mode is supported; otherwise, the base station shall set this
4			field to '0'.
5	TKZ_ID	-	Tracking zone identifier.
6			If TKZ_MODE_SUPPORTED is set to '1', the base station shall
7			set this field to its tracking zone identifier; otherwise, the
8			base station shall omit this field.
9	PZ_HYST_ENABLED	-	Packet zone hysteresis enabled.
10			If the PACKET_ZONE_ID field is set to '00000000', the base
11			station shall omit this field; otherwise, the base station shall
12			include this field and set it as follows:
13			If the packet zone hysteresis feature is to be enabled at the
14			mobile station, the base station shall set this field to '1';
15			otherwise, the base station shall set this field to '0'.
16	PZ_HYST_INFO_INCL	-	Packet zone hysteresis information included indicator.
17			If the PZ_HYST_ENABLED field is included and is set to '1',
18			the base station shall include this field and set it as follows;
19			otherwise, the base station shall omit this field.
20			If the base includes the PZ_HYST_LIST_LEN,
21			PZ_HYST_ACT_TIMER and PZ_HYST_TIMER fields, the base
22			station shall set this field to '1'; otherwise, the base station
23			shall set this field to '0'.
24	PZ_HYST_LIST_LEN	-	Packet zone hysteresis list length.
25			If the PZ_HYST_INFO_INCL field is included and is set to '1',
26			the base station shall include this field and set it as follows;
27			otherwise, the base station shall omit this field.
28			The base station shall set this field to the length of the packet
29			zone hysteresis list. This field shall be within the range '0001'
30			through '1111', inclusive.
31	PZ_HYST_ACT_TIMER	-	Packet zone hysteresis activation timer.
32			If the PZ_HYST_INFO_INCL field is included and is set to '1',
33			the base station shall include this field and set it as follows;
34			otherwise, the base station shall omit this field.
35			The base station shall set to the value of the packet zone
36			hysteresis activation timer (in units of seconds). This field
37			shall be within the range '00000001' through '11111111',
38			inclusive.
39	PZ_HYST_TIMER_MUL	-	Packet zone hysteresis timer multiplier.
40			If the PZ_HYST_INFO_INCL field is included and is set to '1',
41			the base station shall include this field and set it as follows;
42			otherwise, the base station shall omit this field.

1			The base station shall set the field to $x$ , where $x \times 8^y$
2			seconds is the value of the hysteresis timer and $y$ is the value
3			indicated in the PZ_HYST_TIMER_EXP field. The base station
4			shall set this field to a value that is between 1 and 7
5			inclusive. The value 0 is reserved.
6	PZ_HYST_TIMER_EXP	-	Packet zone hysteresis timer exponent.
7			If the PZ_HYST_INFO_INCL field is included and is set to '1',
8			the base station shall include this field and set it as follows;
9			otherwise, the base station shall omit this field.
10			The base station shall set the field to $y$ , where $x \times 8^y$
11			seconds is the value of the hysteresis timer and $x$ is the value
12			indicated in the PZ_HYST_TIMER_MUL field. The base station
13			shall set this field to a value that is between 0 and 4
14			inclusive. All the other values are reserved.
15	EXT_PREF_MSID_TYPE	-	Extended Preferred Access Channel Mobile Station Identifier
16			Type.
17			The base station shall set this field to the value shown in
18			Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
19			to the type of MSID that the mobile station is to use on the
20			Access Channel.
21	MEID_REQD	-	MEID Required Indicator.
22			If EXT_PREF_MSID_TYPE is set to '11' and PREF_MSID_TYPE
23			is set to either '00' or '11', the base station shall omit this
24			field; otherwise, the base station shall include this field and
25			set it as follows:
26			The base station shall set this field to '1' to indicate that
27			network requires MEID (of mobile stations having R-UIM) in
28			registrations; otherwise the base station shall set this field to
29			'0'.
30	AUTO_FCSO_ALLOWED	-	Autonomous <i>Fast Call Setup Order</i> allowed indicator.
31			The base station shall set this field to '1' if the mobile station
32			is allowed to send an autonomous <i>Fast Call Setup Order</i> ;
33			otherwise, the base station shall set this field to '0'.
34	REV_PDCH_SUPPORTED	-	Reverse Packet Data Channel supported indicator.
35			If FOR_PDCH_SUPPORTED is set to '0', the base station shall
36			omit this field; otherwise, the base station shall include this
37			field and set it as follows:
38			If the base station supports the Reverse Packet Data Channel
39			(R-PDCH), the base station shall set this field to '1';
40			otherwise, the base station shall set this field to '0'.
41	REV_PDCH_PARMS_INCL	-	Reverse Packet Data Channel related parameters included
42			indicator.
43			If REV_PDCH_SUPPORTED is omitted, or if it is included and
44			set to '0', the base station shall omit this field; otherwise, the
45			base station shall include this field and set it as follows:

1		The base station shall set this field to '1' if the R-PDCH
2		parameters are included in this message; otherwise, the base
3		station shall set this field to '0'.
4	REV_PDCH_RLGAIN_INCL	- Reverse Packet Data Channel parameters related to
5		reverse link adjustment gains included indicator.
6		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
7		set to '0', the base station shall omit this field; otherwise, the
8		base station shall include this field, and set it as follows.
9		The base station shall set this field to '1' if the following R-
10		PDCH gain related fields are included in this message;
11		otherwise, the base station shall set this field to '0'.
12	RLGAIN_SPICH_PILOT	- Reverse Secondary Pilot Channel to pilot adjustment gain.
13		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
14		and set to '0', the base station shall omit this field; otherwise,
15		the base station shall include this field, and set it as follows.
16		The base station shall set this field to the Reverse Secondary
17		Pilot Channel to pilot adjustment gain expressed as a two's
18		complement value in units of 0.125 dB (see [2]).
19	RLGAIN_REQCH_PILOT	- Reverse Request Channel to pilot adjustment gain.
20		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
21		and set to '0', the base station shall omit this field; otherwise,
22		the base station shall include this field, and set it as follows.
23		The base station shall set this field to the Reverse Request
24		Channel to pilot adjustment gain expressed as a two's
25		complement value in units of 0.125 dB (see [2]).
26	RLGAIN_PDCCH_PILOT	- Reverse Packet Data Control Channel to pilot adjustment
27		gain.
28		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
29		and set to '0', the base station shall omit this field; otherwise,
30		the base station shall include this field, and set it as follows.
31		The base station shall set this field to the Reverse Packet
32		Data Channel to pilot adjustment gain expressed as a two's
33		complement value in units of 0.125 dB (see [2]).
34	REV_PDCH_PARMS_1_INCL	- Reverse Packet Data Channel parameters subset included
35		indicator.
36		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
37		set to '0', the base station shall omit this field; otherwise, the
38		base station shall include this field, and set it as follows.
39		The base station shall set this field to '1' if the following R-
40		PDCH parameters are included in this message; otherwise,
41		the base station shall set this field to '0'.
42	REV_PDCH_TABLE_SEL	- Reverse Packet Data Channel Table selector.
43		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
44		and set to '0', the base station shall omit this field; otherwise,
45		the base station shall include this field, and set it as follows.

1		The base station shall set this field to the Reverse Packet
2		Data Channel Table selector (see [2]).
3	REV_PDCH_MAX_AUTO_TPR	- Reverse Packet Data Channel maximum traffic to
4		pilot ratio for autonomous transmission.
5		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
6		and set to '0', the base station shall omit this field; otherwise,
7		the base station shall include this field and set it as follows.
8		The base station shall set this field to the maximum traffic to
9		pilot ratio for autonomous transmission on the Reverse
10		Packet Data Channel (see [2] and [3]).
11		The base station shall set this field to a value in the range 0
12		to 18 dB inclusive in units of 0.125 dB.
13	REV_PDCH_NUM_ARQ_ROUNDS_NORMAL	- Maximum number of allowed ARQ rounds on
14		the Reverse PDCH in the non-boosted mode.
15		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
16		and set to '0', the base station shall omit this field; otherwise,
17		the base station shall include this field and set it as follows:
18		The base station shall set this field to one less the maximum
19		number of allowed ARQ rounds on the Reverse PDCH in the
20		non-boosted mode. The base station shall set this field to 0,
21		1, or 2 corresponding to 1, 2, or 3 rounds respectively (See
22		[3]).
23	REV_PDCH_OPER_PARMS_INCL	- Reverse Packet Data Channel operational parameters
24		included indicator.
25		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
26		set to '0', the base station shall omit this field; otherwise, the
27		base station shall include this field, and set it as follows.
28		The base station shall set this field to '1' if the following R-
29		PDCH operational parameters are included in this message;
30		otherwise, the base station shall set this field to '0'.
31	REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET	- Maximum Allowed Reverse
32		PDCH encoder packet size.
33		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
34		included and set to '0', the base station shall omit this field;
35		otherwise, the base station shall include this field and set it
36		as follows.
37		The base station shall set this field to the maximum size
38		encoder packet that the mobile station is allowed to use. (see
39		[2] and [3]).
40		The base station shall set this field to a value in the range 0
41		to 10 inclusive, corresponding to the encoder packet sizes
42		192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384,
43		and 18456 bits respectively.
44	REV_PDCH_DEFAULT_PERSISTENCE	- Reverse Packet Data Channel default initial
45		persistence.

1 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
2 included and set to '0', the base station shall omit this field;  
3 otherwise, the base station shall include this field and set it  
4 as follows:

5 The base station shall set this field to '1' if the mobile station  
6 is to be persistent at the call setup; otherwise, the base  
7 station shall set this field to '0' (See [3]).

8 REV\_PDCH\_RESET\_PERSISTENCE - Reverse Packet Data Channel reset persistence  
9 indicator.

10 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
11 included and set to '0', the base station shall omit this field;  
12 otherwise, the base station shall include this field and set it  
13 as follows:

14 The base station shall set this field to '1' if, at the end of a  
15 persistent grant, the mobile station shall reset its persistent  
16 indicator to persistent; otherwise, the base station shall set  
17 this field to '0' if the mobile station shall reset its persistent  
18 indicator to non-persistent (See [3]).

19 REV\_PDCH\_GRANT\_PRECEDENCE - Reverse Packet Data Channel Grant Precedence  
20 Indicator.

21 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
22 included and set to '0', the base station shall omit this field;  
23 otherwise, the base station shall include this field and set it  
24 as follows:

25 The base station shall set this field to '1' if unicast Forward  
26 Grant Channel messages have precedence over Rate Control  
27 commands; otherwise, the base station shall set this field to  
28 '0' to indicate that Rate Control down commands from non-  
29 serving sectors have precedence over Forward Grant Channel  
30 messages (see [3]).

31 REV\_PDCH\_MSIB\_SUPPORTED - Reverse PDCH MSIB usage indicator.

32 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
33 included and set to '0', the base station shall omit this field;  
34 otherwise, the base station shall include this field and set it  
35 as follows:

36 The base station shall set this field to '1' if the mobile station  
37 is to use the MSIB bit on the Reverse Packet Data Control  
38 Channel; otherwise, the base station shall set this field to '0'  
39 (see [3]).

40 REV\_PDCH\_SOFT\_SWITCHING\_RESET\_IND - Reverse Packet Data Channel soft  
41 switching reset indicator.

42 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
43 included and set to '0', the base station shall omit this field;  
44 otherwise, the base station shall include this field and set it  
45 as follows:

1			The base station shall set this field to '1' if the mobile station
2			is to initialize RPDCHCF when soft selection occurs in the
3			FPDCHCF; otherwise, the base station shall set this field to
4			'0' (see [3]).
5	SDB_IN_RCNM_IND	-	Short Data Burst allowed in <i>Reconnect Message</i> indicator.
6			If RECONNECT_MSG_IND is set to '0' or SDB_SUPPORTED is
7			set to '0', the base station shall omit this field; otherwise, the
8			base station shall include this field and set it as follows:
9			The base station shall set this field to '1' if the mobile station
10			is allowed to include a Short Data Burst (see [30]) in the
11			<i>Reconnect Message</i> ; otherwise, the base station shall set this
12			field to '0'.
13	SENDING_BSPM	-	<i>BCMC Service Parameters Message</i> indicator.
14			If the base station is sending the <i>BCMC Service Parameters</i>
15			<i>Message</i> on the Paging Channel, it shall set this field to '1';
16			otherwise, it shall set this field to '0'.
17	BSPM_PERIOD_INDEX	-	BSPM Transmission Periodicity Index.
18			If the SENDING_BSPM field is set to '0', the base station shall
19			omit this field; otherwise, the base station shall include this
20			field and set it as follows:
21			The base station shall set this field to the BSPM transmission
22			periodicity index corresponding to the periodicity with which
23			the BSPM with DIFF_BSPM equal to '0' is transmitted on the
24			paging channel.
25	CAND_BAND_INFO_REQ	-	Candidate band class information request indicator
26			The base station shall set this field to '1' when requesting
27			mobiles to report whether various candidate band class and
28			band subclass (if applicable) combinations are supported;
29			otherwise, the base station shall set this field to '0'.
30			The base station shall not include more than 16 band class-
31			band subclass queries in this message.
32	NUM_CAND_BAND_CLASS	-	Number of candidate band classes
33			If CAND_BAND_INFO_REQ is set to '0', the base station shall
34			omit this field; otherwise, the base station shall include this
35			field and set it as follows:
36			The base station shall set this field to the number of
37			candidate band classes included in the record minus one.
38	If CAND_BAND_INFO_REQ is set to '1', the base station shall include		

- 1 NUM\_CAND\_BAND\_CLASS + 1 occurrences of the following record:
- 2 CAND\_BAND\_CLASS - Candidate band class
- 3 The base station shall set this field (see [30]) to a band class  
4 for which the mobile is to report it's capabilities upon system  
5 access. It may be used in conjunction with the  
6 BAND\_SUBCLASS\_IND fields to specify band subclass(es) for  
7 which the mobile is to report it's capabilities upon system  
8 access.
- 9 SUBCLASS\_INFO\_INCL - Band subclass information included
- 10 The base station shall set this field to '0' when no band  
11 subclasses are associated with CAND\_BAND\_CLASS or if the  
12 base station requires only the band class capabilities of the  
13 mobile station. Otherwise, the base station shall set this field  
14 to '1'.
- 15 SUBCLASS\_REC\_LEN - Band subclass subrecord length
- 16 If SUBCLASS\_INFO\_INCL is set to '0', the base station shall  
17 omit this field; otherwise, the base station shall set this field  
18 as follows:
- 19 The base station shall set this field to the number of band  
20 subclass indicator fields included in the subrecord minus  
21 one. The number of subclass indicator fields included  
22 depends on the highest band subclass being queried for  
23 mobile support for the associated CAND\_BAND\_CLASS (i.e. if  
24 the highest band subclass being queried is K, then  
25 SUBCLASS\_REC\_LEN = K).
- 26 If the SUBCLASS\_REC\_LEN field is included, the base station shall include  
27 SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord. The first field included  
28 corresponds to band subclass '0' and the N<sup>th</sup> field included corresponds to band subclass  
29 'N-1'.
- 30 BAND\_SUBCLASS\_IND - Band subclass indicator
- 31 The base station shall set this field to '1' if it requires the  
32 mobile to report whether it supports this band subclass for  
33 the associated CAND\_BAND\_CLASS; otherwise, the base  
34 station shall set this field to '0'.
- 35 The mobile station is to indicate its capability to support the  
36 candidate band class and band subclass (if applicable)  
37 combination in the *Registration Message*, *Origination*  
38 *Message*, and *Page Response Message*.
- 39 TX\_PWR\_LIMIT\_INCL - Transmit Power Limit Inclusion for the current base station
- 40 If the transmit power limit field is included in this message,  
41 the base station shall set this field to '1'; otherwise, the base  
42 station shall set this field to '0'.
- 43 TX\_PWR\_LIMIT - Transmit Power Limit for the current base station

If TX\_PWR\_LIMIT\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set to as follows.

The base station shall set this field to thirty dB more than transmit power limit in dBm EIRP, in steps of 1 dB. This field can take the values 30 to 53 corresponding to maximum transmit power values 0 dBm to 23 dBm.

**BYPASS\_REG\_IND** - Indication to bypass the power up registration upon the change of bands, serving systems and frequency blocks.

The base station shall set this field to '00' if the mobile station is to perform a power up registration upon band, frequency block or serving system change.

The base station shall set this field to '01' if the mobile station is to bypass the power up registration requirement upon band, frequency block or serving system changes due to processing the *Extended CDMA Channel List Message*.

The base station shall set this field to '10' if the mobile station is to bypass the power up registration requirement upon band, frequency block or serving system change when the SID remains the same.

The base station shall set this field to '11' if the mobile station is to bypass the power up registration requirement upon band, frequency block or serving system change.

#### 3.7.2.3.2.14 Extended Neighbor List Message

MSG\_TAG: ENLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
PILOT_INC	4

Zero or more occurrences of the following record:

{	
NGHBR_CONFIG	3
NGHBR_PN	9
SEARCH_PRIORITY	2
FREQ_INCL	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
}	

**PILOT\_PN** - Pilot PN sequence offset index.

1			The base station shall set this field to the pilot PN sequence
2			offset for this base station, in units of 64 PN chips.
3	CONFIG_MSG_SEQ	-	Configuration message sequence number.
4			The base station shall set this field to CONFIG_SEQ
5			(see 3.6.2.2).
6	PILOT_INC	-	Pilot PN sequence offset index increment.
7			A mobile station searches for Remaining Set pilots at pilot PN
8			sequence index values that are multiples of this value.
9			The base station shall set this field to the pilot PN sequence
10			increment, in units of 64 PN chips, that mobile stations are to
11			use for searching the Remaining Set. The base station
12			should set this field to the largest increment such that the
13			pilot PN sequence offsets of all its neighbor base stations are
14			integer multiples of that increment.
15			The base station shall set this field to a value in the range 1
16			to 15 inclusive.

The base station shall include one occurrence of the following record for each pilot that a mobile station is to place in its Neighbor Set.

NGHBR\_CONFIG - Neighbor configuration.

The base station shall set this field to the value shown in Table 3.7.2.3.2.14-1 corresponding to the configuration of this neighbor.

**Table 3.7.2.3.2.14-1. Neighbor Configuration Field**

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with the same number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If FREQ_INCL equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If FREQ_INCL equals '1' for this record, this corresponding CDMA frequency assignment is given by NGHBR_BAND and NGHBR_FREQ.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>

001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with a different number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>
010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the following CDMA frequency:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, the neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, the neighbor base station has a Primary Paging Channel on the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.</li> </ul>

011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> <li>• If FREQ_INCL equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel.</li> <li>• If FREQ_INCL equals '1' for this record, the CDMA frequency assignment given by NGHBR_BAND and NGHBR_FREQ has a Pilot Channel.</li> </ul>
100-111	Reserved.

NGHBR\_PN - Neighbor pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this neighbor, in units of 64 PN chips.

SEARCH\_PRIORITY - Pilot Channel search priority.

The base station shall set this field to the search priority for the Pilot Channel corresponding to NGHBR\_PN. The base station shall set the search priority as shown in Table 3.7.2.3.2.14-2.

**Table 3.7.2.3.2.14-2. Search Priority Field**

Value (binary)	Search Priority
00	Low
01	Medium
10	High
11	Very high

FREQ\_INCL - Frequency included indicator.

If the NGHBR\_BAND and NGHBR\_FREQ fields are included for this neighbor base station, the base station shall set this bit to '1'. If the NGHBR\_BAND and NGHBR\_FREQ fields are not included for this neighbor base station, the base station shall set this bit to '0'.

NGHBR\_BAND - Neighbor band class.

If the FREQ\_INCL bit is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search. If the FREQ\_INCL bit is set to '0', the base station shall omit this field.

1       NGHBR\_FREQ   -   Neighbor frequency assignment.  
2  
3       If the FREQ\_INCL bit is set to '1', the base station shall set  
4       this field to the CDMA Channel number, in the specified  
5       CDMA band class, corresponding to the CDMA frequency  
6       assignment for the CDMA Channel containing the Paging  
7       Channel the mobile station is to search. If the FREQ\_INCL  
8       bit is set to '0', the base station shall omit this field.

## 1 3.7.2.3.2.15 Status Request Message

2 MSG\_TAG: STRQM

Field	Length (bits)
RESERVED	4
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL\_INFO\_LEN}$
NUM_FIELDS	4

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

RECORD_TYPE	8
-------------	---

} (NUM\_FIELDS)

3

4 RESERVED - Reserved bits.

5 The base station shall set this field to '0000'.

6 QUAL\_INFO\_TYPE - Qualification information type.

7 The base station shall set this field to the value shown in  
 8 Table 3.7.2.3.2.15-1 to show the inclusion of qualification  
 9 information in the type-specific fields. The base station shall  
 10 include the required qualification information in this  
 11 message.

12 **Table 3.7.2.3.2.15-1. Qualification Information Type**

Value (binary)	Included Information
00000000	None
00000001	BAND_CLASS
00000010	BAND_CLASS and OP_MODE
All other values are reserved.	

13

14 QUAL\_INFO\_LEN - Qualification information length.

15 The base station shall set this field to the number of octets  
 16 included in the type-specific fields of the qualification  
 17 information.

18 Type-specific fields - Type-specific fields.

19 The base station shall set these fields to the qualification  
 20 information according to the QUAL\_INFO\_TYPE field.

1  
2  
3  
4  
5  
6  
  
7  
  
8  
9  
10  
11  
  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24

If QUAL\_INFO\_TYPE is equal to '00000000', the type-specific fields are omitted.

If QUAL\_INFO\_TYPE is equal to '00000001', the base station shall use the following fixed-length format for the type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
RESERVED	3

If QUAL\_INFO\_TYPE is equal to '00000010', the base station shall use the following fixed-length format for the type-specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
OP_MODE	8
RESERVED	3

- BAND\_CLASS

- Band class.

The base station shall set this field as defined in [30] to specify the band class qualification information.
- OP\_MODE

- Operating mode.

The base station shall set this field as shown in Table 3.7.2.3.2.15-2 to specify the operating mode qualification information if MOB\_P\_REV of the current band class is less than or equal to three. The base station shall set this field as shown in Table 3.7.2.3.2.15-3 to specify the operating mode qualification information if MOB\_P\_REV of the current band class is greater than three.

**Table 3.7.2.3.2.15-2. Operating Mode for MOB\_P\_REV  
Less Than or Equal to Three**

<b>Description</b>	<b>Value (binary)</b>
CDMA mode in Band Class 1 or Band Class 4	00000000
CDMA mode in Band Class 0 or Band Class 3	00000001
Reserved (Previously: analog mode)	00000010
Reserved (Previously: wide analog mode)	00000011
Reserved (Previously: Narrow analog mode)	00000100
All other values are reserved.	

**Table 3.7.2.3.2.15-3. Operating Mode for MOB\_P\_REV  
Greater Than Three**

<b>Description</b>	<b>Standards</b>	<b>Value (binary)</b>
CDMA mode		00000000 or 00000001
Reserved (Previously: Analog mode)		00000010
Reserved (Previously: Wide analog mode)		00000011
Reserved (Previously: Narrow analog mode)		00000100
DS-41 mode	[32]	00000101
MC-MAP mode	[31]	00000110
All other values are reserved.		

**NUM\_FIELDS** - Number of requested fields in this message.  
The base station shall set this field to the number of occurrences of RECORD\_TYPE in this message.

1 The base station shall only request the status information records qualified by the  
2 included qualification information (see Table 2.7.4-1) in this message. The base station  
3 shall include one occurrence of the following field for each information record that is  
4 requested:

5       RECORD\_TYPE     -   Information record type.

6                        The base station shall set this field to the record type value  
7                        shown in Table 2.7.4-1 corresponding to the information  
8                        record requested.

9                        If MOB\_P\_REV is equal to or greater than seven, the base  
10                       station shall not request the Call Mode information record  
11                       (record type '00000111' in Table 2.7.4-1).

## 1 3.7.2.3.2.16 Service Redirection Message

2 MSG\_TAG: SRDM

Field	Length (bits)
RETURN_IF_FAIL	1
DELETE_TMSI	1
REDIRECT_TYPE	1
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

3

4 RETURN\_IF\_FAIL - Return if fail indicator.

5 The base station shall set this field to '1' if the mobile station  
6 is required to return to the system from which it is being  
7 redirected upon failure to obtain service using the redirection  
8 criteria specified in this message; otherwise, the base station  
9 shall set this field to '0'.

10 DELETE\_TMSI - Delete TMSI indicator.

11 The base station shall set this field to '1' if the mobile station  
12 is required to delete the TMSI assigned to the mobile station;  
13 otherwise, the base station shall set this field to '0'.

14 REDIRECT\_TYPE - Redirect indicator.

15 The base station shall set this field to the REDIRECT\_TYPE  
16 value shown in table 3.7.2.3.2.16-1 corresponding to the  
17 redirection type.

18 **Table 3.7.2.3.2.16-1. Redirection Types**

Description	REDIRECT_TYPE (binary)
Normal redirection	0
NDSS redirection	1

19

20 RECORD\_TYPE - Redirection record type.

21 The base station shall set this field to the RECORD\_TYPE  
22 value shown in Table 3.7.2.3.2.16-2 corresponding to the  
23 type of redirection specified by this record.

24

1

**Table 3.7.2.3.2.16-2. Redirection Record Types**

<b>Description</b>	<b>RECORD_TYPE (binary)</b>
NDSS off indication	00000000
Reserved (Previously: Redirection to an analog system)	00000001
Redirection to a CDMA system as defined in [24] and [2]	00000010
Reserved (Previously: Redirection to a TACS analog system as defined in Department of Trade and Industry's TACS Mobile Station-Land Station Compatibility Specification, Issue 4, Amendment 1.)	00000011
Reserved (Previously: Redirection to a JTACS analog system as defined in ARIB's RCR STD-36.)	00000100
Redirection to a DS-41 system as defined in [32].	00000101
All other RECORD_TYPE values are reserved	

2

3        RECORD\_LEN        -        Redirection record length.

4        If RECORD\_TYPE equals to '00000000', the base station shall  
5        set this field to '00000000'; otherwise, the base station shall  
6        set this field to the number of octets in the type-specific fields  
7        of this redirection record.

8        Type-specific fields        -        Redirection record type-specific fields.

9        The base station shall include type-specific fields based on  
10       the RECORD\_TYPE of this redirection record.

11       If RECORD\_TYPE is equal to '00000000', the base station shall not include the type-  
12       specific fields.

13       If RECORD\_TYPE is equal to '00000010', the base station shall include the following fields:

14

1

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM\_CHANS occurrences of the following field:

{ (NUM\_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM\_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

2

3 BAND\_CLASS - Band class.

4 The base station shall set this field to the CDMA band class,  
5 as specified in [30].

6 EXPECTED\_SID - Expected SID.

7 If the base station is redirecting the mobile station to a  
8 specific system, the base station shall set this field to the SID  
9 of that system; otherwise, the base station shall set this field  
10 to 0.

11 EXPECTED\_NID - Expected NID.

12 If the base station is redirecting the mobile station to a  
13 specific network, the base station shall set this field to the  
14 NID of that network; otherwise, the base station shall set this  
15 field to 65535.

16 RESERVED - Reserved bits.

17 The base station shall set this field to '0000'.

18 NUM\_CHANS - Number of CDMA Channels.

19 The base station shall set this field to the number of  
20 occurrences of the CDMA\_CHAN field in this record.

21 CDMA\_CHAN - CDMA Channel number.

22 For each CDMA Channel on which the mobile station is to  
23 attempt to acquire a CDMA system, the base station shall  
24 include one occurrence of this field specifying the associated  
25 CDMA Channel number.

26 RESERVED - Reserved bits.

1  
2  
3  
4

The base station shall add reserved bits as needed in order to make the length of the record equal to an integer number of octets. The base station shall set these bits to '0'.

## 3.7.2.3.2.17 General Page Message

MSG\_TAG: GPM

When Layer 3 at the base station sends a PDU corresponding to the *General Page Message* to Layer 2, it also sends the GPM Common fields to Layer 2. These GPM Common fields and PDUs are used by Layer 2 to assemble a Layer 2 PDU corresponding to the *General Page Message* (see [4]).

GPM Common Fields:

Field	Length (bits)
CONFIG_MSG_SEQ	6
ACC_MSG_SEQ	6
CLASS_0_DONE	1
CLASS_1_DONE	1
TMSI_DONE	1
ORDERED_TMSIS	1
BROADCAST_DONE	1
RESERVED	4
ADD_LENGTH	3
ADD_PFIELD	$8 \times \text{ADD\_LENGTH}$

PDU Format for a mobile station-addressed page:

Field	Length (bits)
SERVICE_OPTION	0 or 16

PDU Format for a broadcast page: There are no Layer 3 fields associated with this record.

PDU Format for an enhanced broadcast page:

Field	Length (bits)
BCN	3
TIME_OFFSET	10
REPEAT_TIME_OFFSET	0 or 5
ADD_BCAST_RECORD	0 or $8 \times \text{EXT\_BCAST\_SDU\_LENGTH}$ (see [4])

- 1
- 2      CONFIG\_MSG\_SEQ      -      Configuration message sequence number.
- 3                              The base station shall set this field to CONFIG\_SEQ
- 4                              (see 3.6.2.2).
- 5              ACC\_MSG\_SEQ      -      Access parameters message sequence number.
- 6                              The base station shall set this field to ACC\_CONFIG\_SEQ
- 7                              (see 3.6.2.2).
- 8              CLASS\_0\_DONE      -      Class 0 pages are done.
- 9                              If all messages and records directed to mobile stations
- 10                             operating in the slotted mode, active in this slot, and having
- 11                             an assigned class 0 IMSI have been sent by the end of this
- 12                             *General Page Message*, the base station shall set this field to
- 13                             '1'; otherwise, the base station shall set this field to '0'.
- 14              CLASS\_1\_DONE      -      Class 1 pages are done.
- 15                              If all messages and records directed to mobile stations
- 16                             operating in the slotted mode, active in this slot, and having
- 17                             an assigned class 1 IMSI have been sent by the end of this
- 18                             *General Page Message*, the base station shall set this field to
- 19                             '1'; otherwise, the base station shall set this field to '0'.
- 20              TMSI\_DONE      -      TMSI pages are done.
- 21                              If all the page records having PAGE\_CLASS equal to '10' or
- 22                             other directed messages for mobile stations operating in the
- 23                             slotted mode, active in this slot, and having an assigned TMSI
- 24                             have been sent by the end of this *General Page Message*, the
- 25                             base station shall set this field to '1'; otherwise, the base
- 26                             station shall set this field to '0'.
- 27              ORDERED\_TMSIS      -      TMSIs sent in numerical order.
- 28                              If all the page records of PAGE\_CLASS equal to '10' are sent
- 29                             such that the TMSI code values of the TMSI\_CODE\_ADDR
- 30                             fields for the mobile stations operating in the slotted mode
- 31                             are in ascending numerical order in all the *General Page*
- 32                             *Messages* sent within this slot, the base station shall set this
- 33                             field to '1'; otherwise, the base station shall set this field to
- 34                             '0'.
- 35              BROADCAST\_DONE      -      Broadcast pages are done.

1			If all broadcast page records (PAGE_CLASS equal to '11') have
2			been sent by the end of this <i>General Page Message</i> , the base
3			station shall set this field to '1'; otherwise, the base station
4			shall set this field to '0'.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0000'.
7	ADD_LENGTH	-	Number of octets in the page message specific fields.
8			If there are no additional page message specific fields, the
9			base station shall set this field to '000'.
10	ADD_PFIELD	-	Additional page message specific fields.
11			The base station shall not include any additional page
12			message specific fields, if ADD_LENGTH is '000'.
13	SERVICE_OPTION	-	Service option.
14			If the base station requests a special service option (i.e., the
15			SDU_INCLUDED field, see [4], is set to '1'), the base station
16			shall set this field to the service option code shown in [30],
17			corresponding to the requested service option; otherwise, the
18			base station shall omit this field.
19	BCN	-	Broadcast Control Channel Number.
20			If NUM_BCCH_BCAST is equal to '000', base station shall set
21			this field to '000' and this field is to be ignored by the mobile
22			station.
23			Otherwise, the base station shall set this field to the
24			Broadcast Control Channel number of the F-BCCH to which
25			the mobile station is being redirected. The base station shall
26			not set this field to '000' (reserved) or '001'.
27	TIME_OFFSET	-	BCCH time offset.
28			If NUM_BCCH_BCAST is equal to '000', base station shall set
29			this field to one less than the time offset, in units of 40 ms,
30			from the beginning of the slot in which this message began to
31			the beginning of the Forward Common Control Channel slot
32			to which the mobile station is being directed.
33			Otherwise,,the base station shall set this field to one less
34			than the time offset, in units of 40 ms, from the beginning of
35			the slot in which this message began to the beginning of the
36			Broadcast Control Channel slot to which the mobile station is
37			being directed.
38	REPEAT_TIME_OFFSET	-	BCCH offset of repeat.
39			If EXT_BCAST_SDU_LENGTH_IND (see [4]) is set to '01' or
40			'11', the base station shall set this field as follows:

- If NUM\_BCCH\_BCAST is equal to '000', the base station shall set this field to one less than the time offset, in units of 40 ms, from the time specified by TIME\_OFFSET to the beginning of the Forward Common Control Channel slot to which the mobile station is being directed for a repeat of the broadcast message.
- Otherwise, the base station shall set this field to one less than the time offset, in units of 40 ms, from the time specified by TIME\_OFFSET to the beginning of the Broadcast Control Channel slot to which the mobile station is being directed for a repeat of the broadcast message;

Otherwise, the base station shall omit this field.

ADD\_BCAST\_RECORD - Additional broadcast information record.

The base station shall omit this field if EXT\_BCAST\_SDU\_LENGTH\_IND (see [4]) is set to '00' or '01'; otherwise, the base station shall include EXT\_BCAST\_SDU\_LENGTH (see [4]) octets in this field.

1 3.7.2.3.2.18 Global Service Redirection Message

2 MSG\_TAG: GSRDM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
REDIRECT_ACCOLC	16
RETURN_IF_FAIL	1
DELETE_TMSI	1
EXCL_P_REV_MS	1
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10

1 REDIRECT\_ACCOLC - Redirected access overload classes.

2 This field consists of the following subfields:

Subfield	Length (bits)	Subfield Description
ACCOLC_0	1	Access overload class 0
ACCOLC_1	1	Access overload class 1
ACCOLC_2	1	Access overload class 2
ACCOLC_3	1	Access overload class 3
ACCOLC_4	1	Access overload class 4
ACCOLC_5	1	Access overload class 5
ACCOLC_6	1	Access overload class 6
ACCOLC_7	1	Access overload class 7
ACCOLC_8	1	Access overload class 8
ACCOLC_9	1	Access overload class 9
ACCOLC_10	1	Access overload class 10
ACCOLC_11	1	Access overload class 11
ACCOLC_12	1	Access overload class 12
ACCOLC_13	1	Access overload class 13
ACCOLC_14	1	Access overload class 14
ACCOLC_15	1	Access overload class 15

3

4 The base station shall set the subfields corresponding to the  
5 access overload classes of mobile stations which are to be  
6 redirected to '1', and shall set the remaining subfields to '0'.

7 RETURN\_IF\_FAIL - Return if fail indicator.

8 The base station shall set this field to '1' if the mobile station  
9 is required to return to the system from which it is being  
10 redirected upon failure to obtain service using the redirection  
11 criteria specified in this message; otherwise, the base station  
12 shall set this field to '0'.

13 DELETE\_TMSI - Delete TMSI indicator.

14 The base station shall set this field to '1' if the mobile station,  
15 which the corresponding REDIRECT\_ACCOLC subfield is set  
16 to '1', is required to delete the TMSI assigned to the mobile  
17 station; otherwise, the base station shall set this field to '0'.

18 EXCL\_P\_REV\_MS - Exclude redirection indicator.

1 If this message does not apply to mobile stations with  
 2 MOB\_P\_REV greater than or equal to six, the base station  
 3 shall set this field to '1'; otherwise, the base station shall set  
 4 this field to '0'.

5 RECORD\_TYPE - Redirection record type.

6 The base station shall set this field to the RECORD\_TYPE  
 7 value shown in Table 3.7.2.3.2.16-2 corresponding to the  
 8 type of redirection specified by this record.

9 RECORD\_LEN - Redirection record length.

10 The base station shall set this field to the number of octets in  
 11 the type-specific fields of this redirection record.

12 Type-specific fields - Redirection record type-specific fields.

13 The base station shall include type-specific fields based on  
 14 the RECORD\_TYPE of this redirection record.

15

16 If RECORD\_TYPE is equal to '00000010', the base station shall include the following fields:

17

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM\_CHANS occurrences of the following field:

{ (NUM\_CHANS)

CDMA_CHAN	11
-----------	----

}(NUM\_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

18

19 BAND\_CLASS - Band class.

20 The base station shall set this field to the CDMA band class,  
 21 as specified in [30].

22 EXPECTED\_SID - Expected SID.

23 If the base station is redirecting the mobile station to a  
 24 specific system, the base station shall set this field to the SID  
 25 of that system; otherwise, the base station shall set this field  
 26 to 0.

27 EXPECTED\_NID - Expected NID.

1			If the base station is redirecting the mobile station to a
2			specific network, the base station shall set this field to the
3			NID of that network; otherwise, the base station shall set this
4			field to 65535.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0000'.
7	NUM_CHANS	-	Number of CDMA Channels.
8			The base station shall set this field to the number of
9			occurrences of the CDMA_CHAN field in this record.
10	CDMA_CHAN	-	CDMA Channel number.
11			For each CDMA Channel on which the mobile station is to
12			attempt to acquire a CDMA system, the base station shall
13			include one occurrence of this field specifying the associated
14			CDMA Channel number.
15	RESERVED	-	Reserved bits.
16			The base station shall add reserved bits as needed in order to
17			make the length of the record equal to an integer number of
18			octets. The base station shall set these bits to '0'.
19			

## 1 3.7.2.3.2.19 TMSI Assignment Message

2 MSG\_TAG: TASM

Field	Length (bits)
RESERVED	5
TMSI_ZONE_LEN	4
TMSI_ZONE	$8 \times \text{TMSI\_ZONE\_LEN}$
TMSI_CODE	32
TMSI_EXP_TIME	24

3

4 RESERVED - Reserved bits.

5 The base station shall set this field to '00000'.

6 TMSI\_ZONE\_LEN - TMSI zone length.

7 The base station shall set this field to the number of octets  
 8 included in the TMSI\_ZONE. The base station shall set this  
 9 field to a value in the range 1 to 8 inclusive.

10 TMSI\_ZONE - TMSI zone.

11 The base station shall set this field to the TMSI zone number,  
 12 as specified in [27].

13 TMSI\_CODE - Temporary mobile station identity code.

14 The base station shall set this field to the 32-bit TMSI code  
 15 assigned to the mobile station.

16 If the base station is to deassign the TMSI, the base station  
 17 shall set all the bits in this field to '1'.

18 TMSI\_EXP\_TIME - TMSI expiration time.

19 The base station shall set this field to the System Time in the  
 20 units of  $80 \text{ ms} \times 2^{12}$  when the TMSI is to expire.  
 21

## 1 3.7.2.3.2.20 PACA Message

2 MSG\_TAG: PACAM

Field	Length (bits)
RESERVED	7
PURPOSE	4
Q_POS	8
PACA_TIMEOUT	3

3

4 RESERVED - Reserved bits.

5 The base station shall set this field to '0000000'.

6 PURPOSE - Purpose of the *PACA Message*.

7 The base station shall set this field to the appropriate  
 8 PURPOSE code from Table 3.7.2.3.2.20-1 to indicate the  
 9 purpose of the message.

10

11

**Table 3.7.2.3.2.20-1. Purpose of PACA Message**

PURPOSE (binary)	Meaning
0000	Indicates that the purpose of the message is to respond to an <i>Origination Message</i> .
0001	Indicates that the purpose of the message is to provide the queue position of the PACA call.
0010	Indicates that the purpose of the message is to instruct the mobile station to re-originate the PACA call.
0011	Indicates that the purpose of the message is to cancel the PACA call.
0100 – 1111	Reserved

12

13 Q\_POS - PACA queue position.

14 If the PURPOSE field of this message is set to '0000' or '0001',  
 15 the base station shall set this field to the queue position of  
 16 the PACA call. If the queue position exceeds 255, the base  
 17 station shall set this field to '11111111'. If the queue  
 18 position is unknown or the PURPOSE field of this message is  
 19 set to '0010' or '0011', the base station shall set this field to  
 20 '00000000'.

1           PACA\_TIMEOUT    -   PACA state timer duration.

2                               The base station shall set this field to the PACA\_TIMEOUT  
3                               value shown in Table 3.7.2.3.2.20-2 corresponding to the  
4                               length of the PACA state timer to be used by the mobile  
5                               stations.

6                               **Table 3.7.2.3.2.20-2. Value of PACA State Timer**

<b>PACA_TIMEOUT Value (binary)</b>	<b>Timer Length (Minutes)</b>
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

7

ASSIGN\_MODE - Assignment mode.

The base station shall set this field to the value shown in Table 3.7.2.3.2.21-1 corresponding to the assignment mode for this assignment.

1

**Table 3.7.2.3.2.21-1. Assignment Mode**

<b>Value (binary)</b>	<b>Assignment Mode</b>
000	Traffic Channel Assignment
001	Paging Channel Assignment
010	Reserved (Previously: Acquire Analog System)
011	Reserved (Previously: Analog Voice Channel Assignment)
100	Enhanced Traffic Channel Assignment
101	Packet Data Traffic Channel Assignment
All other values are reserved.	

2      **DIRECT\_CH\_ASSIGN\_IND**

-      Direct Channel Assignment Indicator.

3      If ASSIGN\_MODE is set to a value other than '100' or '101',  
4      the base station shall omit this field; otherwise, the base  
5      station shall include this field and set it as follows:

6      If any channel assigned by this message is to use Radio  
7      Configuration 1 or 2 (see [2]), then the base station shall set  
8      this field to '0'. Otherwise, base station shall set this field as  
9      follows:

10      - If this message is for a mobile station terminated call using  
11      direct channel assignment, the base station shall set this  
12      field to '1'; otherwise, the base station shall set this field to  
13      '0'.

14      If this field is set to '1', the base station should send this  
15      message in unassured mode.

16      **RESERVED\_2**

-      Reserved bits.

17      If ASSIGN\_MODE is set to '100' or '101', the base station  
18      shall set this field to '0000'; otherwise, the base station shall  
19      set this field to '00000'.

20      **Additional record fields**

-      Additional record fields.

21      The additional record fields are determined by the value of  
22      ASSIGN\_MODE, as described below.

23      If the ASSIGN\_MODE field is set to '000', the base station shall include the following fields:

24      **FREQ\_INCL**

-      Frequency included indicator.

25      If the BAND\_CLASS and CDMA\_FREQ fields are included in  
26      this assignment record, the base station shall set this bit to  
27      '1'. If the BAND\_CLASS and CDMA\_FREQ fields are not  
28      included in this assignment record, the base station shall set  
29      this bit to '0'.

30      **DEFAULT\_CONFIG**

-      Default Configuration.

If the GRANTED\_MODE field is set to '00', the base station shall set this field as specified in Table 3.7.2.3.2.21-2 to indicate an initial multiplex option and radio configuration for the Forward and Reverse Traffic Channels.

If MOB\_P\_REV is less than six, the base station shall not set this field to '100'.

**Table 3.7.2.3.2.21-2. Default Configuration**

<b>Value (binary)</b>	<b>Default Configuration</b>
000	Multiplex Option 1 and Radio Configuration 1 for both the Forward Traffic Channel and the Reverse Traffic Channel
001	Multiplex Option 2 and Radio Configuration 2 for both the Forward Traffic Channel and the Reverse Traffic Channel
010	Multiplex Option 1 and Radio Configuration 1 for the Forward Traffic channel; Multiplex Option 2 and Radio Configuration 2 for the Reverse Traffic channel
011	Multiplex Option 2 and Radio Configuration 2 for the Forward Traffic channel; Multiplex Option 1 and Radio Configuration 1 for the Reverse Traffic channel
100	FOR_FCH_RC or FOR_RC included in this message for the Forward Fundamental Channel or the Forward Dedicated Control Channel and REV_FCH_RC or REV_RC included in this message for the Reverse Fundamental or the Reverse Dedicated Control Channel. Use 20ms frames. Use Multiplex Option 1 for radio configurations that include the bit rate of 9600 bps; Use Multiplex Option 2 for radio configurations that include the bit rate of 14400 bps.
All other values are reserved.	

**BYPASS\_ALERT\_ANSWER** - Bypass alert indicator.

If the mobile station is to bypass the *Waiting for Order Substate* and the *Waiting for Mobile Station Answer Substate*, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**RESERVED** - Reserved bit.

1		The base station shall set this field to '0'.
2	NUM_PILOTS	- Number of pilots in the Active Set.
3		The base station shall set this field to number of pilots that
4		are to be in the mobile station's Active Set on the Traffic
5		Channel minus one. The base station shall set this field to
6		the value in the range 0 to $N_{6m}-1$ inclusive.
7	GRANTED_MODE	- Granted mode.
8		The base station shall set this field to '00' to indicate that the
9		mobile station is to use an initial service configuration
10		consisting of the multiplex option and radio configuration
11		defined by the DEFAULT_CONFIG field for the Forward and
12		Reverse Traffic Channels, and to indicate that service
13		negotiation may take place before the base station sends one
14		of the following messages: <i>Service Connect Message</i> , <i>General</i>
15		<i>Handoff Direction Message</i> (with SCR) or <i>Universal Handoff</i>
16		<i>Direction Message</i> (with SCR).
17		The base station shall set this field to '01' to indicate that the
18		mobile station is to use an initial service configuration
19		consisting of the default multiplex option that is derived from
20		the radio configuration corresponding to Table 3.7.2.3.2.21-3,
21		and to indicate that service negotiation may take place before
22		the base station sends one of the following messages: <i>Service</i>
23		<i>Connect Message</i> , <i>General Handoff Direction Message</i> (with
24		SCR) or <i>Universal Handoff Direction Message</i> (with SCR).
25		The base station shall set this field to '10' to indicate that the
26		mobile station is to use an initial service configuration
27		consisting of the default multiplex option that is derived from
28		the radio configuration corresponding to Table 3.7.2.3.2.21-3,
29		and to indicate that service negotiation is not to take place
30		before the base station sends one of the following messages:
31		<i>Service Connect Message</i> , <i>General Handoff Direction Message</i>
32		(with SCR) or <i>Universal Handoff Direction Message</i> (with
33		SCR).

**Table 3.7.2.3.2.21-3. Mapping between Multiplex Options and Radio Configurations**

<b>Multiplex Option</b>	<b>Radio Configuration</b>
Multiplex Option 1	Forward link: RC1, RC3, RC4, RC6, RC7, RC11, or RC12 Reverse Link: RC1, RC3, RC5, or RC8
Multiplex Option2	Forward link: RC2, RC5, RC 8, or RC9 Reverse Link: RC2, RC4 or RC 6
Multiplex Option 0xf00	Forward link: RC10
Multiplex Option 0xf00 is used for the Reverse Packet Data Channel Multiplex Option for Higher Data Rates and Multiplex Option 1 is used for the Reverse Packet Data Channel Multiplex Option for Lower Data Rate (see [3])	Reverse Link: RC7

**FRAME\_OFFSET** - Frame offset.

The Forward and Reverse Traffic Channel frames are delayed  $\text{FRAME\_OFFSET} \times 1.25$  ms relative to system timing (see [2]).

The base station shall set this field to the Forward and Reverse Traffic Channel frame offset.

**ENCRYPT\_MODE** - Message encryption mode.

The base station shall set this field to the ENCRYPT\_MODE value shown in Table 3.7.2.3.2.8-2 corresponding to the encrypting mode that is to be used for signaling messages, as specified in 2.3.12.2.

**BAND\_CLASS** - Band class.

If the **FREQ\_INCL** bit is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Forward Traffic Channel the mobile station is to use. If the **FREQ\_INCL** bit is set to '0', the base station shall omit this field.

1	CDMA_FREQ	-	Frequency assignment.
2			If the FREQ_INCL bit is set to '1', the base station shall set
3			this field to the CDMA Channel number, in the specified
4			CDMA band class, corresponding to the CDMA frequency
5			assignment for the CDMA Channel containing the Forward
6			Traffic Channel the mobile station is to use. If the
7			FREQ_INCL bit is set to '0', the base station shall omit this
8			field.
9	The base station shall include NUM_PILOTS plus one occurrences of the following three-		
10	field record, one for each member of the mobile station's Active Set on the Traffic Channel.		
11	PILOT_PN	-	Pilot PN sequence offset index.
12			The base station shall set this field to the pilot PN sequence
13			offset for this pilot in units of 64 PN chips.
14	PWR_COMB_IND	-	Power control symbol combining indicator.
15			If the Forward Traffic Channel associated with this pilot will
16			carry the same closed-loop power control subchannel bits as
17			that of the previous pilot in this message, the base station
18			shall set this field to '1'; otherwise, the base station shall set
19			this field to '0'. For the first occurrence of this record in the
20			message, the base station shall set this field to '0'.
21	CODE_CHAN	-	Code channel index.
22			The base station shall set this field to the code channel index
23			(see [2]) that the mobile station is to use on the Forward
24			Traffic Channel associated with this pilot. If Radio
25			Configuration 1, 2, 3, or 5 (see [2]) is used, the base station
26			shall set this field in the range 1 to 63 inclusive. If Radio
27			Configuration 4, 6, 8, 11 or 12 is used, the base station shall
28			set this field in the range 1 to 127 inclusive. If Radio
29			Configuration 7 or 9 is used, the base station shall set this
30			field in the range 1 to 255 inclusive.
31	FOR_FCH_RC	-	Forward Fundamental Channel radio configuration
32			The base station shall set this field to the radio configuration
33			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
34			the Forward Fundamental Channel before the first <i>Service</i>
35			<i>Connect Message</i> is sent to the mobile station.
36			If GRANTED_MODE is set to '00', and DEFAULT_CONFIG is
37			not set to '100' (see Table 3.7.2.3.2.21-2), the base station
38			shall set this field to either '00001' or '00010' (see Table
39			3.7.2.3.2.21-4).
40	REV_FCH_RC	-	Reverse Fundamental Channel radio configuration
41			The base station shall set this field to the radio configuration
42			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
43			the Reverse Fundamental Channel before the first <i>Service</i>
44			<i>Connect Message</i> is sent to the mobile station.

If GRANTED\_MODE is set to '00', and DEFAULT\_CONFIG is not set to '100' (see Table 3.7.2.3.2.21-2), the base station shall set this field to either '00001' or '00010' (see Table 3.7.2.3.2.21-4).

**Table 3.7.2.3.2.21-4. Radio Configurations**

<b>Value (binary)</b>	<b>Radio Configuration</b>
00001	RC 1
00010	RC 2
00011	RC 3
00100	RC 4
00101	RC 5
00110	RC 6
00111	RC 7
01000	RC 8
01001	RC 9
01010	RC 10
01011	RC 11
01100	RC 12
All other values are reserved.	

- FPC\_FCH\_INIT\_SETPT** - Initial Fundamental Channel outer loop  $E_b/N_t$  setpoint.  
The base station shall set this field to initial Fundamental Channel outer loop  $E_b/N_t$  setpoint, in units of 0.125 dB.
- FPC\_SUBCHAN\_GAIN** - Forward power control subchannel relative gain.  
The base station shall set FPC\_SUBCHAN\_GAIN equal to the power level of the forward link power control subchannel relative to the power level of 20 ms frames at a 9600 bps or 14400 bps rate of the Forward Fundamental Channel that the Forward Power Control Subchannel is punctured on. The base station shall set the value in units of 0.25 dB.
- RLGAIN\_ADJ** - Reverse Traffic Channel power relative to access power.  
The base station shall set this field to adjust the initial Traffic Channel transmission power relative to the Access Channel or Enhanced Access Channel transmission power. The base station shall set this field as a two's complement signed binary number, in units of 1 dB.
- FPC\_FCH\_FER** - Fundamental Channel target Frame Error Rate.

1		The base station shall set this field to the target Frame Error
2		Rate on the Forward Fundamental Channel, as specified in
3		Table 3.7.3.3.2.25-2.
4	FPC_FCH_MIN_SETPT	- Minimum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
5		The base station shall set this field to minimum Fundamental
6		Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125 dB.
7	FPC_FCH_MAX_SETPT	- Maximum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
8		The base station shall set this field to maximum
9		Fundamental Channel Outer Loop $E_b/N_t$ setpoint, in units of
10		0.125 dB.
11	REV_FCH_GATING_MODE	- Reverse eighth gating mode indicator.
12		The base station shall set this field to '1' if the mobile station
13		is allowed to perform the reverse eighth gating mode where
14		the $1/8^{\text{th}}$ rate frames on the Reverse Fundamental Channel
15		are gated off for 10 ms per frame (see [2]); otherwise, the base
16		station shall set this field to '0'.
17		The base station shall not set this field to '1' if
18		REV_FCH_GATING_REQ included in the <i>Origination Message</i>
19		or <i>Page Response Message</i> is set to '0'.
20	REV_PWR_CNTL_DELAY_INCL	- Reverse power control delay included indicator.
21		If REV_FCH_GATING_MODE is set to '0', the base station
22		shall omit this field; otherwise, the base station shall include
23		this field and set it as follows.
24		The base station shall set this field to '1' if
25		REV_PWR_CNTL_DELAY is included in this message;
26		otherwise, the base station shall set this field to '0'.
27		If the REV_FCH_GATING_MODE field in this message is set to
28		'1' and the REV_PWR_CNTL_DELAY_INCL field in the
29		<i>Extended System Parameters Message</i> or <i>MC-RR Parameters</i>
30		<i>Message</i> is set to '0', the base station shall set this field to '1'.
31	REV_PWR_CNTL_DELAY	- The reverse power control delay.
32		If REV_PWR_CNTL_DELAY_INCL is set to '0', the base station
33		shall omit this field; otherwise, the base station shall include
34		this field and set it as follows:
35		The base station shall set this field to the closed-loop reverse
36		power control delay minus one (the closed-loop reverse power
37		control delay is the time between the end of a gated-on
38		reverse PCG and the beginning of the reverse PCG where the
39		corresponding feedback is sent on the Forward Power Control
40		Subchannel, see [2]) in units of 1.25 ms.
41	D_SIG_ENCRYPT_MODE	- Dedicated channel signaling encryption mode indicator.
42		If ENCRYPT_MODE is set to '11', the base station shall include
43		this field and shall set it to the dedicated channel signaling
44		encryption mode, as shown in Table 3.7.4.5-1; otherwise the
45		base station shall omit this field.

1	ENC_KEY_SIZE	-	Encryption key size indication.
2			If ENCRYPT_MODE is set to '10' or '11', the base station shall
3			include this field and shall set it to the encryption key size, as
4			shown in Table 3.7.4.5-2; otherwise, the base station shall omit
5			this field.
6	C_SIG_ENCRYPT_MODE_INCL	-	Common channel signaling encryption mode included
7			indicator.
8			If common channel signaling encryption information is
9			included in this message, the base station shall set this field
10			to '1'; otherwise, the base station shall set this field to '0'.
11	C_SIG_ENCRYPT_MODE	-	Common channel signaling encryption mode indicator.
12			If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
13			shall include this field and shall set it to the common
14			channel signaling encryption mode, as shown in Table
15			3.7.4.5-1; otherwise, the base station shall omit this field.
16	MSG_INT_INFO_INCL	-	Message integrity information included indicator
17			The base station shall set this field to '1' if the base station
18			supports message integrity; otherwise, the base station shall
19			set this field to '0'. If this field is set to '1', the base station
20			shall require the LAC Layer to include a MACI in this
21			message; otherwise, the base station shall require the LAC
22			Layer not to include a MACI in this message.
23	CHANGE_KEYS	-	Change keys indicator
24			If MSG_INT_INFO_INCL is set to '0', the base station shall
25			omit this field; otherwise, the base station shall include this
26			field and set it as follows:
27			The base station shall set this field to '0' to command the
28			mobile station not to update the encryption key and integrity
29			key. The base station shall set this field to '1' to command the
30			mobile station to update the encryption key and integrity key
31			to the latest being generated.
32	USE_UAK	-	Use UAK indicator
33			If MSG_INT_INFO_INCL is set to '0', the base station shall
34			omit this field; otherwise, the base station shall include this
35			field and set it as follows:
36			If the base station receives an authentication vector with a
37			UAK, the base station shall set this field to '1' to indicate that
38			the mobile station is to use UMAC; otherwise, the base
39			station shall set this field to '0' to indicate that the mobile
40			station is to use MAC-I.
41	PLCM_TYPE_INCL	-	The Public Long Code Mask type included indicator.
42			The base station shall set this field to '1' if the base station
43			include PLCM_TYPE in the message; otherwise, the base
44			station shall set this field to '0'.
45	PLCM_TYPE	-	The Public Long Code Mask type indicator.

If PLCM\_TYPE\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the corresponding Public Long Code Mask type as specified in Table 3.7.2.3.2.21-5.

PLCM\_TYPE '0010' shall not be used when the mobile station is not in its home country (i.e., the MCC of the mobile station is different from the MCC of this base station).

PLCM\_TYPE '0011' shall not be used when the mobile station is not in its home network (i.e., the MCC or MNC of the mobile station is different from the MCC or MNC of this base station).

**Table 3.7.2.3.2.21-5. The Public Long Code Mask Type**

<b>PLCM_TYPE (binary)</b>	<b>Descriptions</b>
0000	PLCM derived from ESN
0001	PLCM specified by the base station
0010	PLCM derived from IMSI_O_S when IMSI_O is derived from IMSI_M
0011	PLCM derived from IMSI_O_S when IMSI_O is derived from IMSI_T
0100	PLCM derived from MEID
All other values	Reserved

PLCM\_39 - The 39 LSBs bits of the Public Long Code Mask.

If PLCM\_TYPE is not set to '0001', the base station shall omit this field; otherwise, the base station shall include this field and set it to the 39 least significant bits of the public long code mask as defined in 3.6.4.1.10.

RESERVED - Reserved bits.

The base station shall add reserved bits as needed in order to make the total length of the fields after the preceding ADD\_RECORD\_LEN field through this RESERVED field equal to an integer number of octets. The base station shall set these bits to '0'.

If the ASSIGN\_MODE field is set to '001', the base station shall include the following fields:

1	RESPOND	- Respond on new Access Channel indicator.
2		If the mobile station is to retransmit an <i>Origination Message</i>
3		or <i>Page Response Message</i> after processing this channel
4		assignment, the base station shall set this field to '1'. The
5		base station may set this field to '0' only in response to a
6		<i>Page Response Message</i> .
7	FREQ_INCL	- Frequency included indicator.
8		If the BAND_CLASS and CDMA_FREQ fields are included in
9		this assignment record, the base station shall set this bit to
10		'1'. If the BAND_CLASS and CDMA_FREQ fields are not
11		included in this assignment record, the base station shall set
12		this bit to '0'.
13	BAND_CLASS	- Band class.
14		If the FREQ_INCL bit is set to '1', the base station shall set
15		this field to the CDMA band class, as specified in [30],
16		corresponding to the CDMA frequency assignment for the
17		CDMA Channel containing the Paging Channel the mobile
18		station is to use. If the FREQ_INCL bit is set to '0', the base
19		station shall omit this field.
20	CDMA_FREQ	- Frequency assignment.
21		If the FREQ_INCL bit is set to '1', the base station shall set
22		this field to the CDMA Channel number, in the specified
23		CDMA band class, corresponding to the CDMA frequency
24		assignment for the CDMA Channel containing the Paging
25		Channel the mobile station is to use. If the FREQ_INCL bit is
26		set to '0', the base station shall omit this field.
27	NUM_PILOTS	- Number of pilots whose Paging Channel may be monitored.
28		The base station shall set this field to the number of pilots
29		whose Paging Channel may be monitored by the mobile
30		station minus one. The base station shall set this field to the
31		value in the range 0 to $N_{8m} - 1$ inclusive.
32	The base station shall include NUM_PILOTS plus one occurrences of the following field	
33	record for each pilot whose Paging Channel may be monitored by the mobile station.	
34	PILOT_PN	- Pilot PN sequence offset index.
35		The base station shall include one occurrence of this field for
36		each base station whose Paging Channel may be monitored
37		by the mobile station. For each occurrence, the base station
38		shall set this field to the pilot PN sequence offset for a base
39		station, in units of 64 PN chips. The base station having this
40		pilot PN sequence offset should support a Primary Paging
41		Channel with the same Paging Channel rate as the current
42		base station.
43	RESERVED	- Reserved bits.

1                   The base station shall add reserved bits as needed in order to  
2                   make the total length of the fields after the preceding  
3                   ADD\_RECORD\_LEN field through this RESERVED field equal  
4                   to an integer number of octets. The base station shall set  
5                   these bits to '0'.

6    If the ASSIGN\_MODE field is set to '100', the base station shall include the following fields:

7                   FREQ\_INCL    -   Frequency included indicator.

8                   If the BAND\_CLASS and CDMA\_FREQ fields are included in  
9                   this assignment record, the base station shall set this bit to  
10                  '1'. If the BAND\_CLASS and CDMA\_FREQ fields are not  
11                  included in this assignment record, the base station shall set  
12                  this bit to '0'.

13                  BAND\_CLASS    -   Band class.

14                  If the FREQ\_INCL bit is set to '1', the base station shall set  
15                  this field to the CDMA band class, as specified in [30],  
16                  corresponding to the CDMA frequency assignment for the  
17                  CDMA Channel containing the Forward Traffic Channel(s) the  
18                  mobile station is to use. If the FREQ\_INCL bit is set to '0', the  
19                  base station shall omit this field.

20                  CDMA\_FREQ    -   Frequency assignment.

21                  If the FREQ\_INCL bit is set to '0', the base station shall omit  
22                  this field; otherwise, the base station shall include this field  
23                  and set it as follows:

24                  If FOR\_RC is set to a Radio Configuration associated with  
25                  Spreading Rate 1, the FREQ\_INCL bit is set to '1', the base  
26                  station shall set this field to the CDMA Channel number, in  
27                  the specified CDMA band class, corresponding to the CDMA  
28                  frequency assignment for the CDMA Channel containing the  
29                  Forward Traffic Channel(s) the mobile station is to use. If  
30                  FOR\_RC is set to a Radio Configuration associated with  
31                  Spreading Rate 3, the base station shall set this field to the  
32                  center SR3 frequency assignment containing the Forward  
33                  Traffic Channel(s) the mobile station is to use.

34    BYPASS\_ALERT\_ANSWER   -   Bypass alert indicator.

35                  If the mobile station is to bypass the *Waiting for Order*  
36                  *Substate* and the *Waiting for Mobile Station Answer Substate*,  
37                  the base station shall set this field to '1'; otherwise, the base  
38                  station shall set this field to '0'.

1        GRANTED\_MODE    -    Granted mode.

2        The base station shall set this field to '00' to indicate that the  
3        mobile station is to use an initial service configuration  
4        consisting of the multiplex option and Radio Configuration  
5        defined by the DEFAULT\_CONFIG field for the Forward and  
6        Reverse Traffic channels, and to indicate that service  
7        negotiation may take place before the base station sends one  
8        of the following messages: *Service Connect Message*, *General*  
9        *Handoff Direction Message* (with SCR) or *Universal Handoff*  
10       *Direction Message* (with SCR).

11       The base station shall set this field to '01' to indicate that the  
12       mobile station is to use an initial service configuration  
13       consisting of the default multiplex option that is derived from  
14       the radio configuration corresponding to Table 3.7.2.3.2.21-3,  
15       and to indicate that service negotiation may take place before  
16       the base station sends one of the following messages: *Service*  
17       *Connect Message*, *General Handoff Direction Message* (with  
18       SCR) or *Universal Handoff Direction Message* (with SCR).

19       The base station shall set this field to '10' to indicate that the  
20       mobile station is to use an initial service configuration  
21       consisting of the default multiplex option that is derived from  
22       the radio configuration corresponding to Table 3.7.2.3.2.21-3,  
23       and to indicate that service negotiation is not to take place  
24       before the base station sends one of the following messages:  
25       *Service Connect Message*, *General Handoff Direction Message*  
26       (with SCR) or *Universal Handoff Direction Message* (with  
27       SCR).

28       The base station shall set this field to '11' to instruct the  
29       mobile station to use the stored service configuration (that is,  
30       both the Service Configuration information record and the  
31       Non-negotiable Service Configuration information record).

32       SR\_ID\_RESTORE    -    Service reference identifier to be restored.

33       If the GRANTED\_MODE field is not set to '11', the base  
34       station shall omit this field; otherwise, the base station shall  
35       include this field and set it as follows:

- 36       o    If the mobile station is to restore all the service option  
37            connections from the stored service configuration, the  
38            base station shall set this field to '111'.
- 39       o    If the mobile station is to restore more than one but not  
40            all the service option connections from the stored service  
41            configuration, the base station shall set this field to '000'.
- 42       o    Otherwise, the base station shall set this field to the  
43            service reference identifier corresponding to the service  
44            option connection to be restored.

**SR\_ID\_RESTORE\_BITMAP** – Bitmap of service reference identifiers to be restored.

If the SR\_ID\_RESTORE field is included and set to '000', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field.

This field consists of the subfields defined in Table 3.7.2.3.2.21-6. The base station shall set a subfield to '1' to indicate that the mobile station is to restore the service option connection of the corresponding service reference identifier; otherwise, the base station shall set the subfield to '0'.

**Table 3.7.2.3.2.21-6. SR\_ID\_RESTORE\_BITMAP Subfields.**

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	sr_id 1 to be restored
SR_ID_2	1	sr_id 2 to be restored
SR_ID_3	1	sr_id 3 to be restored
SR_ID_4	1	sr_id 4 to be restored
SR_ID_5	1	sr_id 5 to be restored
SR_ID_6	1	sr_id 6 to be restored

**DEFAULT\_CONFIG** - Default Configuration.

If the GRANTED\_MODE field is set to '00', the base station shall set this field as specified in Table 3.7.2.3.2.21-2 to indicate an initial multiplex option and Radio Configuration for the Forward and Reverse Traffic Channels.

FOR\_RC - Forward Traffic Channel radio configuration.

The base station shall set this field to the radio configuration (see Table 3.7.2.3.2.21-4) to be used by the mobile station on the Forward Traffic (Fundamental and Dedicated Control) Channel before the first *Service Connect Message* is sent to the mobile station.

If GRANTED\_MODE is set to '00', and DEFAULT\_CONFIG is not set to '100' (see Table 3.7.2.3.2.21-2), the base station shall set this field to either '00001' or '00010' (see Table 3.7.2.3.2.21-4).

**REV\_RC** - Reverse Traffic Channel radio configuration.

The base station shall set this field to the radio configuration (see Table 3.7.2.3.2.21-4) to be used by the mobile station on the Reverse Traffic (Fundamental and Dedicated Control) Channel before the first *Service Connect Message* is sent to the mobile station.

1			If GRANTED_MODE is set to '00', and DEFAULT_CONFIG is
2			not set to '100' (see Table 3.7.2.3.2.21-2), the base station
3			shall set this field to either '0001' or '0010' (see Table
4			3.7.2.3.21-3).
5	FRAME_OFFSET	-	Frame offset.
6			The Forward and Reverse Traffic Channel frames are delayed
7			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
8			The base station shall set this field to the Forward and
9			Reverse Traffic Channel frame offset.
10	ENCRYPT_MODE	-	Message encryption mode.
11			The base station shall set this field to the ENCRYPT_MODE
12			value shown in Table 3.7.2.3.2.8-2 corresponding to the
13			encrypting mode that is to be used for signaling messages, as
14			specified in 2.3.12.2.
15	FPC_SUBCHAN_GAIN	-	Forward Power Control Subchannel relative gain.
16			The base station shall set FPC_SUBCHAN_GAIN equal to the
17			power level of the forward link power control subchannel
18			relative to the power level of 20 ms frames at a 9600 bps or
19			14400 bps rate on the Forward Fundamental Channel or the
20			Forward Dedicated Control Channel indicated by
21			FPC_PRI_CHAN <sub>s</sub> . The base station shall set the value in
22			units of 0.25 dB.
23	RLGAIN_ADJ	-	Reverse Traffic Channel power.
24			If DIRECT_CH_ASSIGN_IND field is set to '0', the base station
25			shall set this field to adjust the initial Traffic Channel
26			transmission power relative to the Access Channel or
27			Enhanced Access Channel transmission power. The base
28			station shall set this field as a two's complement signed
29			binary number, in units of 1 dB.
30			If DIRECT_CH_ASSIGN_IND field is set to '1', the base station
31			shall set this field to adjust the initial Traffic Channel
32			transmission power as specified 2.6.4.2. The base station
33			shall set this field as a two's complement signed binary
34			number, in units of 1 dB.
35	NUM_PILOTS	-	Number of pilots in the Active Set.
36			The base station shall set this field to number of pilots that
37			are to be in the mobile station's Active Set on the Traffic
38			Channel minus one. The base station shall set this field to
39			the value in the range 0 to N <sub>6m</sub> -1 inclusive.
40	CH_IND	-	Channel indicator.
41			The base station shall set this field as shown in Table
42			3.7.2.3.2.21-7.

1

**Table 3.7.2.3.2.21-7. Channel Indicator**

<b>Value (Binary)</b>	<b>Channels Being Assigned</b>
00	Reserved
01	Fundamental Channel only
10	Dedicated Control Channel only
11	Both Fundamental Channel and Dedicated Control Channel

2

3      CH\_RECORD\_LEN      -      Channel record length.

4                                      The base station shall set this field to the number of octets in  
5                                      the CH\_RECORD\_FIELDS included in this channel record.

6      CH\_RECORD\_FIELDS      -      Channel record fields.

7                                      The channel record fields are determined by the value of  
8                                      CH\_IND, as described below.

9      REV\_FCH\_GATING\_MODE      -      Reverse eighth gating mode indicator.

10                                      The base station shall set this field to '1' if the mobile station  
11                                      is allowed to perform the reverse eighth gating mode where  
12                                      the 1/8<sup>th</sup> rate frames on the Reverse Fundamental Channel  
13                                      are gated off for 10 ms per frame (see [2]); otherwise, the base  
14                                      station shall set this field to '0'.15                                      The base station shall not set this field to '1' if  
16                                      REV\_FCH\_GATING\_REQ included in the *Origination Message*  
17                                      or *Page Response Message* is set to '0'.

18      REV\_PWR\_CNTL\_DELAY\_INCL      -      Reverse power control delay included indicator.

19                                      If REV\_FCH\_GATING\_MODE is set to '0', the base station  
20                                      shall omit this field; otherwise, the base station shall include  
21                                      this field and set it as follows.22                                      The base station shall set this field to '1' if  
23                                      REV\_PWR\_CNTL\_DELAY is included in this message;  
24                                      otherwise, the base station shall set this field to '0'.25                                      If the REV\_FCH\_GATING\_MODE field in this message is set to  
26                                      '1' and the REV\_PWR\_CNTL\_INCL field in the *Extended*  
27                                      *System Parameters Message* is set to '0', the base station  
28                                      shall set this field to '1'.

29      REV\_PWR\_CNTL\_DELAY      -      The reverse power control delay.

30                                      If REV\_PWR\_CNTL\_DELAY\_INCL is set to '0', the base station  
31                                      shall omit this field; otherwise, the base station shall include  
32                                      this field and set it as follows:

1		The base station shall set this field to the closed-loop reverse
2		power control delay minus one (the closed-loop reverse power
3		control delay is the time between the end of a gated-on
4		reverse PCG and the beginning of the reverse PCG where the
5		corresponding feedback is sent on the Forward Power Control
6		Subchannel, see [2]), in units of 1.25 ms.
7	D_SIG_ENCRYPT_MODE -	Dedicated channel encryption mode indicator.
8		If ENCRYPT_MODE is set to '11', the base station shall include
9		this field and shall set it to the dedicated channel signaling
10		encryption mode, as shown in Table 3.7.4.5-1; otherwise the
11		base station shall omit this field.
12	ENC_KEY_SIZE -	Encryption key size indication.
13		If ENCRYPT_MODE is set to '10' or '11', the base station shall
14		include this field and shall set it to the encryption key size, as
15		shown in Table 3.7.4.5-2; otherwise, the base station shall omit
16		this field.
17	C_SIG_ENCRYPT_MODE_INCL -	Common channel signaling encryption mode included
18		indicator.
19		If common channel signaling encryption information is
20		included in this message, the base station shall set this field
21		to '1'; otherwise, the base station shall set this field to '0'.
22	C_SIG_ENCRYPT_MODE -	Common channel signaling encryption mode indicator.
23		If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
24		shall include this field and shall set it to the common
25		channel signaling encryption mode, as shown in Table
26		3.7.4.5-1; otherwise, the base station shall omit this field.
27	3XFL_1XRL_INCL -	3X Forward Link and 1X Reverse Link indicator.
28		The base station shall set this field to '1' if the base station is
29		assigning 3X traffic channel on the Forward Link and 1X
30		traffic channel on the Reverse Link; otherwise, the base
31		station shall set this field to '0'.
32	1XRL_FREQ_OFFSET -	1X Reverse Link frequency offset.
33		If 3XFL_1XRL_INCL is set to '0', the base station shall omit
34		this field; otherwise, the base station shall set this field as
35		follows:
36		The base station shall set this field to the value shown in
37		Table 3.7.2.3.2.21-8 corresponding to the frequency offset of
38		the 1X reverse link.

1

**Table 3.7.2.3.2.21-8. 1X Reverse Link Frequency Offset**

<b>1XRL_FREQ_OFFSET (Binary)</b>	<b>1X Reverse Link frequency offset</b>
00	The Reverse Link is on the lowest SR3 frequency
01	The Reverse Link is on the center SR3 frequency
10	The Reverse Link is on the highest SR3 frequency
11	Reserved

2

3     MSG\_INT\_INFO\_INCL     -   Message integrity information included indicator  
4     The base station shall set this field to '1' if the base station  
5     supports message integrity; otherwise, the base station shall  
6     set this field to '0'. If this message is to include a MACI in the  
7     LAC Layer, the base station shall set this field to '1'.

8     CHANGE\_KEYS         -   Change keys indicator  
9     If MSG\_INT\_INFO\_INCL is set to '0', the base station shall  
10    omit this field; otherwise, the base station shall include this  
11    field and set it as follows:  
12    The base station shall set this field to '0' to command the  
13    mobile station not to update the encryption key and integrity  
14    key. The base station shall set this field to '1' to command the  
15    mobile station to update the encryption key and integrity key  
16    to the latest being generated.

17    USE\_UAK             -   Use UAK indicator  
18    If MSG\_INT\_INFO\_INCL is set to '0', the base station shall  
19    omit this field; otherwise, the base station shall include this  
20    field and set it as follows:  
21    If the base station receives an authentication vector with a  
22    UAK, the base station shall set this field to '1' to indicate that  
23    the mobile station is to use UMAC; otherwise, the base station  
24    shall set this field to '0' to indicate that the mobile  
25    station is to use MAC-I.

26    PLCM\_TYPE\_INCL     -   The Public Long Code Mask type included indicator.  
27    The base station shall set this field to '1' if the base station  
28    include PLCM\_TYPE in the message; otherwise, the base  
29    station shall set this field to '0'.

30    PLCM\_TYPE           -   The Public Long Code Mask type indicator.

1			If PLCM_TYPE_INCL is set to '0', the base station shall omit
2			this field; otherwise, the base station shall include this field
3			and set it as follows.
4			The base station shall set this field to the corresponding
5			Public Long Code Mask type as specified in Table
6			3.7.2.3.2.21-5.
7			PLCM_TYPE '0010' shall not be used when the mobile station
8			is not in its home country (i.e., the MCC of the mobile station
9			is different from the MCC of this base station).
10			PLCM_TYPE '0011' shall not be used when the mobile station
11			is not in its home network (i.e., the MCC or MNC of the
12			mobile station is different from the MCC or MNC of this base
13			station).
14	PLCM_39	-	The 39 LSB bits of the Public Long Code Mask.
15			If PLCM_TYPE is not set to '0001', the base station shall omit
16			this field; otherwise, the base station shall include this field
17			and set it to the 39 least significant bits of the public long
18			code mask as defined in 3.6.4.1.10.
19	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
20			indicator.
21			The base station shall omit this field if the GRANTED_MODE
22			field is not set to '11'; otherwise, the base station shall
23			include this field and set it as follows:
24			If the mobile station is to use a stored service configuration
25			corresponding to SYNC_ID field included in this message, the
26			base station shall set this field to '1', otherwise, the base
27			station shall set this field to '0'.
28	SYNC_ID_LEN	-	Service Configuration synchronization identifier length
29			indicator.
30			If the SYNC_ID_INCL field is not included or is included and
31			is set to '0', the base station shall omit this field; otherwise
32			the base station shall include this field and set it as follows:
33			The base station shall set this field to the length of the
34			SYNC_ID field included in this message.
35	SYNC_ID	-	Service Configuration synchronization identifier.
36			If the SYNC_ID_INCL field is not included or is included and
37			is set to '0', the base station shall omit this field; otherwise,
38			the base station shall include this field and set it as follows:
39			The base station shall set this field to the Service
40			Configuration synchronization identifier corresponding to the
41			stored service configuration that the mobile station is to use.
42	CONFIG_MSG_SEQ	-	Configuration message sequence number.

1		If the DIRECT_CH_ASSIGN_IND is to '0', the base station
2		shall omit this field; otherwise the base station shall include
3		this field and set it as follows:
4		The base station shall set this field to CONFIG_SEQ
5		(see 3.6.2.2).
6	RTC_NOM_PWR	- Reverse Traffic Channel Nominal Power.
7		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
8		omit this field; otherwise, the base station shall include this
9		field and set it as follows:
10		The base station shall set this field to the value of the
11		nominal power correction to be used by the mobile station
12		when transmitting on the Reverse Traffic Channel after the
13		Direct Channel Assignment call setup procedure as specified
14		in 2.6.4.2. The base station shall set this field as a two's
15		complement signed binary number, in units of 1 dB.
16	RESPOND_IND	- Response requested indicator.
17		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
18		omit this field; otherwise, the base station shall include this
19		field and set it as follows:
20		The base station shall set this field to '1' if the mobile station
21		is to respond to the <i>Extended Channel Assignment Message</i>
22		with a <i>Page Response Message</i> or <i>Reconnect Message</i> in
23		unassured mode on the r-csch; otherwise, the base station
24		shall set this field to '0' to indicate that the mobile station is
25		not to respond on the r-csch.
26	DIRECT_CH_ASSIGN_RECOVER_IND	- Direct Channel Assignment Recover Indicator
27		If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
28		omit this field; otherwise, the base station shall include this
29		field and set it as follows:
30		The base station shall set this field to '1' if the mobile station
31		is to transmit a <i>Page Response Message</i> or a <i>Reconnect</i>
32		<i>Message</i> after failing to acquire the forward traffic channel
33		assigned in this message; otherwise, the base station shall
34		set this field to '0'.
35	FIXED_PREAMBLE_TRANSMIT_IND	- Fixed Preamble Length Transmission Indicator.
36		If GRANTED_MODE is not set to '11', the base station shall
37		omit this field; otherwise, the base station shall include this
38		field and set it as follows:
39		The base station shall set this field to '1' to indicate if the
40		mobile station is allowed to enter the <i>Traffic Channel Substate</i>
41		of the <i>Mobile Station Control on the Traffic Channel State</i> after
42		sending the number of preambles specified in this message;
43		otherwise the base station shall set this field to '0'.
44		If any channel assigned by this message is to use Radio
45		Configuration 1 or 2 (see [2]), then the base station shall set
46		this field to '0'.

**FIXED\_NUM\_PREAMBLE** - Traffic Channel preamble length.

If **FIXED\_PREAMBLE\_TRANSMIT\_IND** is not included, or is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it to the minimum length of Traffic Channel preamble that the mobile station is to transmit, before entering the *Traffic Channel Substate* of the *Mobile Station Control on the Traffic Channel State* without having received a *forward dedicated channel acquired* indication from Layer 2 (see [4]).

The base station shall set **FIXED\_NUM\_PREAMBLE** to the value shown in Table 3.7.2.3.2.21-13 corresponding to the Traffic Channel preamble length in ms.

**Table 3.7.2.3.2.21-13 Traffic Channel Preamble Length**

<b>FIXED_NUM_PREAMBLE (binary)</b>	<b>Preamble Length in ms</b>
000	0
001	20
010	40
011	60
100	80
101	100
110	200
111	300

**EARLY\_RL\_TRANSMIT\_IND** - Early Reverse Link Transmission indicator.

The base station shall set this field to '1' if, upon channel assignment, the mobile station is to enable the transmitter prior to receiving sufficient signal quality on the forward link; otherwise, the base station shall set this field to '0'.

**TX\_PWR\_LIMIT\_INCL** - Transmit Power Limit Inclusion for the current base station

If the transmit power limit field is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**TX\_PWR\_LIMIT** - Transmit Power Limit for the current base station

If **TX\_PWR\_LIMIT\_INCL** is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set to as follows.

1		The base station shall set this field to thirty dB more than
2		transmit power limit in dBm EIRP, in steps of 1 dB. This field
3		can take the values 30 to 53 corresponding to maximum
4		transmit power values 0 dBm to 23 dBm.
5	RESERVED	- Reserved bits.
6		The base station shall set all the bits of this field to '0' to
7		make the entire record octet-aligned.
8	If the CH_IND field is set to '01', the base station shall include the following fields:	
9	FPC_FCH_INIT_SETPT	- Initial Fundamental Channel outer loop $E_b/N_t$ setpoint.
10		The base station shall set this field to initial Fundamental
11		Channel outer loop $E_b/N_t$ setpoint, in units of 0.125 dB.
12	FPC_FCH_FER	- Fundamental Channel target Frame Error Rate.
13		The base station shall set this field to the target Frame Error
14		Rate on the Forward Fundamental Channel, as specified in
15		Table 3.7.3.3.2.25-2.
16	FPC_FCH_MIN_SETPT	- Minimum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
17		The base station shall set this field to minimum Fundamental
18		Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125 dB.
19	FPC_FCH_MAX_SETPT	- Maximum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
20		The base station shall set this field to maximum
21		Fundamental Channel Outer Loop $E_b/N_t$ setpoint, in units of
22		0.125 dB.
23	The base station shall include NUM_PILOTS plus one occurrences of the following record,	
24	one for each member of the mobile station's Active Set on the Traffic Channel.	
25	PILOT_PN	- Pilot PN sequence offset index.
26		The base station shall set this field to the pilot PN sequence
27		offset for this pilot in units of 64 PN chips.
28	ADD_PILOT_REC_INCL	- Additional pilot information included indicator.
29		The base station shall set this field to '1' if additional pilot
30		information listed in PILOT_REC_TYPE and RECORD_LEN
31		fields are included. The base station shall set this field to '0'
32		if the corresponding pilot is the common pilot and there is no
33		additional pilot information included.
34	PILOT_REC_TYPE	- Pilot record type.
35		If ADD_PILOT_REC_INCL is set to '1', the base station shall
36		set this field to the PILOT_REC_TYPE value shown in Table
37		3.7.2.3.2.21-9 corresponding to the type of Pilot Record
38		specified by this record.
39		If ADD_PILOT_REC_INCL is set to '0', the base station shall
40		omit this field.
41		

1

**Table 3.7.2.3.2.21-9. Pilot Record Types**

<b>Description</b>	<b>PILOT_REC_TYPE (binary)</b>
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other PILOT_REC_TYPE values are reserved	

2

3

RECORD\_LEN - Pilot record length.

4

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall set this field to the number of octets in the type-specific fields of this pilot record.

5

6

7

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

8

9

Type-specific fields - Pilot record type-specific fields.

10

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall include type-specific fields based on the PILOT\_REC\_TYPE of this pilot record as described in 3.7.6.1.

11

12

13

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

14

15

PWR\_COMB\_IND - Power control symbol combining indicator.

16

If the Forward Fundamental Traffic Channel associated with this pilot will carry the same closed-loop power control subchannel bits as that of the previous pilot in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'. For the first occurrence of this record in the message, the base station shall set this field to '0'.

17

18

19

20

21

22

23

CODE\_CHAN\_FCH - Code channel index for the Fundamental Channel.

24

If FOR\_RC is set to a Radio Configuration associated with Spreading Rate 1, the base station shall set this field to the code channel index (see [2]) that the mobile station is to use on the Forward Fundamental Channel associated with this pilot. If FOR\_RC is set to a Radio Configuration associated with Spreading Rate 3, the base station shall set this field to the code channel index that the mobile station is to use on the Forward Fundamental on the center SR3 frequency.

25

26

27

28

29

30

31

1			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
2			station shall set this field in the range 1 to 63 inclusive. If
3			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
4			station shall set this field in the range 1 to 127 inclusive. If
5			Radio Configuration 7 or 9 is used, the base station shall set
6			this field in the range 1 to 255 inclusive.
7	QOF_MASK_ID_FCH	-	Quasi-Orthogonal Function Mask Identifier for the
8			Fundamental Channel.
9			If FOR_RC is set to a Radio Configuration associated with
10			Spreading Rate 1, the base station shall set this field to the
11			quasi-orthogonal function mask identifier (see [2]) that the
12			mobile station is to use on the Forward Fundamental
13			Channel associated with this pilot. If FOR_RC is set to a
14			Radio Configuration associated with Spreading Rate 3, the
15			base station shall set this field to the quasi-orthogonal
16			function mask identifier that the mobile station is to use on
17			the Forward Fundamental Channel on the center SR3
18			frequency.
19	3X_FCH_INFO_INCL	-	3X Fundamental Channel information included indicator.
20			If the 3X Fundamental Channel information is included, the
21			base station shall set this field to '1'; otherwise, the base
22			station shall set this field to '0'.
23	The base station shall include NUM_PILOTS plus one occurrences of the following record if		
24	3X_FCH_INFO_INCL is set to '1'. The base station shall use the same order for the		
25	following fields as is used for the PILOT_PN fields listed in this message.		
26	3X_FCH_LOW_INCL	-	FCH code channel on the lowest SR3 frequency included
27			indicator.
28			If the Fundamental Channel on the lowest SR3 frequency has
29			a different code channel than the Fundamental Channel on
30			the center SR3 frequency, the base station shall set this field
31			to '1'; otherwise, the base station shall set this field to '0'.
32	QOF_MASK_ID_FCH_LOW	-	QOF index for the Fundamental Channel on the lowest
33			SR3 frequency.
34			If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
35			this field; otherwise, the base station shall set this field as
36			follows:
37			The base station shall set this field to the index of the Quasi-
38			orthogonal function (see [2]) corresponding to the QOF index
39			for the Fundamental Channel on the lowest SR3 frequency.
40	CODE_CHAN_FCH_LOW	-	Code channel for the Fundamental Channel on the lowest
41			SR3 frequency.
42			If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
43			this field; otherwise, the base station shall set this field as
44			follows:

1			The base station shall set this field to the code channel index
2			(see [2]) that the mobile station is to use on the Fundamental
3			Channel on the lowest SR3 frequency. If Radio Configuration
4			6 or 8 is used, the base station shall set this field in the range
5			1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
6			base station shall set this field in the range 1 to 255
7			inclusive.
8	3X_FCH_HIGH_INCL	-	FCH code channel on the highest SR3 frequency included
9			indicator.
10			If the Fundamental Channel on the highest SR3 frequency
11			has a different code channel than the Fundamental Channel
12			on the center SR3 frequency, the base station shall set this
13			field to '1'; otherwise, the base station shall set this field to
14			'0'.
15	QOF_MASK_ID_FCH_HIGH	-	QOF index for the Fundamental Channel on the highest
16			SR3 frequency.
17			If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
18			this field; otherwise, the base station shall set this field as
19			follows:
20			The base station shall set this field to the index of the Quasi-
21			orthogonal function (see [2]) corresponding to the QOF index
22			for the Fundamental Channel on the highest SR3 frequency.
23	CODE_CHAN_FCH_HIGH	-	Code channel for the Fundamental Channel on the
24			highest SR3 frequency.
25			If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
26			this field; otherwise, the base station shall set this field as
27			follows:
28			The base station shall set this field to the code channel index
29			(see [2]) that the mobile station is to use on the Fundamental
30			Channel on the highest SR3 frequency. If Radio
31			Configuration 6 or 8 is used, the base station shall set this
32			field in the range 1 to 127 inclusive. If Radio Configuration 7
33			or 9 is used, the base station shall set this field in the range 1
34			to 255 inclusive.
35	RESERVED	-	Reserved bits.
36			The base station shall add reserved bits as needed in order to
37			make the total length of the fields after the preceding
38			CH_RECORD_LEN field through this RESERVED field equal
39			to an integer number of octets. The base station shall set
40			these bits to '0'.
41	If the CH_IND field is set to '10', the base station shall include the following fields:		
42	FPC_DCCH_INIT_SETPT	-	Initial Dedicated Control Channel outer loop $E_b/N_t$ setpoint.
43			The base station shall set this field to initial Dedicated
44			Control Channel outer loop $E_b/N_t$ setpoint, in units of 0.125
45			dB.
46	FPC_DCCH_FER	-	Dedicated Control Channel target Frame Error Rate.

1		The base station shall set this field to the target Frame Error
2		Rate on the Dedicated Control Channel, as specified in Table
3		3.7.3.3.2.25-2.
4	FPC_DCCH_MIN_SETPT -	Minimum Dedicated Control Channel Outer Loop $E_b/N_t$
5		setpoint.
6		The base station shall set this field to minimum Dedicated
7		Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
8		dB.
9	FPC_DCCH_MAX_SETPT -	Maximum Dedicated Control Channel Outer Loop $E_b/N_t$
10		setpoint.
11		The base station shall set this field to maximum Dedicated
12		Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
13		dB.
14	The base station shall include NUM_PILOTS plus one occurrences of the following three-	
15	field record for each member of the mobile station's Active Set on the Traffic Channel.	
16	PILOT_PN -	Pilot PN sequence offset index.
17		The base station shall set this field to the pilot PN sequence
18		offset for this pilot in units of 64 PN chips.
19	ADD_PILOT_REC_INCL -	Additional pilot information included indicator.
20		The base station shall set this field to '1' if additional pilot
21		information listed in PILOT_REC_TYPE and RECORD_LEN
22		fields are included. The base station shall set this field to '0'
23		if the corresponding pilot is the common pilot and there is no
24		additional pilot information included.
25	PILOT_REC_TYPE -	Pilot record type.
26		If ADD_PILOT_REC_INCL is set to '1', the base station shall
27		set this field to the PILOT_REC_TYPE value shown in Table
28		3.7.2.3.2.21-9 corresponding to the type of Pilot Record
29		specified by this record.
30		If ADD_PILOT_REC_INCL is set to '0', the base station shall
31		omit this field.
32	RECORD_LEN -	Pilot record length.
33		If ADD_PILOT_REC_INCL is set to '1', the base station shall
34		set this field to the number of octets in the type-specific fields
35		of this pilot record.
36		If ADD_PILOT_REC_INCL is set to '0', the base station shall
37		omit this field.
38	Type-specific fields -	Pilot record type-specific fields.
39		If ADD_PILOT_REC_INCL is set to '1', the base station shall
40		include type-specific fields based on the PILOT_REC_TYPE of
41		this pilot record.
42		If ADD_PILOT_REC_INCL is set to '0', the base station shall
43		omit this field as described in 3.7.6.1.

1	PWR_COMB_IND	-	Power control symbol combining indicator.
2			If this pilot will carry the same closed-loop power control
3			subchannel bits as that of the previous pilot in this message,
4			the base station shall set this field to '1'; otherwise, the base
5			station shall set this field to '0'. The base station shall set
6			this field to '0' in the first record in the pilot list.
7	CODE_CHAN_DCCH	-	Code channel index for the Dedicated Control Channel.
8			If FOR_RC is set to a Radio Configuration associated with
9			Spreading Rate 1, the base station shall set this field to the
10			code channel index (see [2]), in the range of 1 to 127
11			inclusive, that the mobile station is to use on the Forward
12			Dedicated Control Channel associated with this pilot. If
13			FOR_RC is set to a Radio Configuration associated with
14			Spreading Rate 3, the base station shall set this field to the
15			code channel index in the range of 1 to 255 inclusive, that
16			the mobile station is to use on the Forward Dedicated Control
17			Channel on the center SR3 frequency.
18			If Radio Configuration 3 or 5 (see [2]) is used, the base station
19			shall set this field in the range 1 to 63 inclusive. If Radio
20			Configuration 4, 6 or 8 is used, the base station shall set this
21			field in the range 1 to 127 inclusive. If Radio Configuration 7
22			or 9 is used, the base station shall set this field in the range 1
23			to 255 inclusive.
24	QOF_MASK_ID_DCCH	-	Quasi-Orthogonal Function Mask Identifier for the Dedicated
25			Control Channel.
26			If FOR_RC is set to a Radio Configuration associated with
27			Spreading Rate 1, the base station shall set this field to the
28			quasi-orthogonal function mask identifier (see [2]) that the
29			mobile station is to use on the Forward Dedicated Control
30			Channel associated with this pilot. If FOR_RC is set to a
31			Radio Configuration associated with Spreading Rate 3, the
32			base station shall set this field to the quasi-orthogonal
33			function mask identifier (see [2]) that the mobile station is to
34			use on the Forward Dedicated Control Channel on the center
35			SR3 frequency.
36	3X_DCCH_INFO_INCL	-	3X Dedicated Control Channel information included
37			indicator.
38			If the 3X Dedicated Control Channel information is included,
39			the base station shall set this field to '1'; otherwise, the base
40			station shall set this field to '0'.
41	The base station shall include NUM_PILOTS plus one occurrences of the following record if		
42	3X_DCCH_INFO_INCL is set to '1'. The base station shall use the same order for the		
43	following fields as is used for the PILOT_PN fields listed in this message.		
44	3X_DCCH_LOW_INCL	-	DCCH code channel on the lowest SR3 frequency included
45			indicator.

1		If the Dedicated Control Channel on the lowest SR3
2		frequencies has a different code channel than the Dedicated
3		Control Channel on the center SR3 frequency, the base
4		station shall set this field to '1'; otherwise, the base station
5		shall set this field to '0'.
6	QOF_MASK_ID_DCCH_LOW	- QOF index for the Dedicated Control Channel on the
7		lowest SR3 frequency.
8		If 3X_DCCH_LOW_INCL is set to '0', the base station shall
9		omit this field; otherwise, the base station shall set this field
10		as follows:
11		The base station shall set this field to the index of the Quasi-
12		orthogonal function (see [2]) corresponding to the QOF index
13		for the Dedicated Control Channel on the lowest SR3
14		frequency.
15	CODE_CHAN_DCCH_LOW	- Code channel for the Dedicated Control Channel on the
16		lowest SR3 frequency.
17		If 3X_DCCH_LOW_INCL is set to '0', the base station shall
18		omit this field; otherwise, the base station shall set this field
19		as follows:
20		The base station shall set this field to the code channel index
21		(see [2]) that the mobile station is to use on the Dedicated
22		Control Channel on the lowest SR3 frequency. If Radio
23		Configuration 6 or 8 is used, the base station shall set this
24		field in the range 1 to 127 inclusive. If Radio Configuration 7
25		or 9 is used, the base station shall set this field in the range 1
26		to 255 inclusive.
27	3X_DCCH_HIGH_INCL	- DCCH code channel on the highest SR3 frequency included
28		indicator.
29		If the Dedicated Control Channel on the highest SR3
30		frequencies has a different code channel than the Dedicated
31		Control Channel on the center SR3 frequency, the base
32		station shall set this field to '1'; otherwise, the base station
33		shall set this field to '0'.
34	QOF_MASK_ID_DCCH_HIGH	- QOF index for the Dedicated Control Channel on the
35		highest SR3 frequency.
36		If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
37		omit this field; otherwise, the base station shall set this field
38		as follows:
39		The base station shall set this field to the index of the Quasi-
40		orthogonal function (see [2]) corresponding to the QOF index
41		for the Dedicated Control Channel on the highest SR3
42		frequency.
43	CODE_CHAN_DCCH_HIGH	- Code channel for the Dedicated Control Channel on the
44		highest SR3 frequency.
45		If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
46		omit this field; otherwise, the base station shall set this field
47		as follows:

1		The base station shall set this field to the code channel index
2		(see [2]) that the mobile station is to use on the Dedicated
3		Control Channel on the highest SR3 frequency. If Radio
4		Configuration 6 or 8 is used, the base station shall set this
5		field in the range 1 to 127 inclusive. If Radio Configuration 7
6		or 9 is used, the base station shall set this field in the range 1
7		to 255 inclusive.
8	FUNDICATED_BCMC_IND	- BCMC on fundicated channel Indicator.
9		If the channel assignment in this message contains a
10		Forward Fundicated Channel used for BCMC transmission,
11		the base station shall set this field to '1'; otherwise, the base
12		station shall set this field to '0'.
13	If FUNDICATED_BCMC_IND is set to '1', the base station shall include NUM_PILOT plus 1	
14	occurrences of the following record:	
15	FOR_CPCCH_WALSH	- The Forward Common Power Control Channel Walsh code
16		assignment.
17		The base station shall set this field to the Walsh code
18		assignment for the Forward Common Power Control Channel.
19	FOR_CPCSCH	- The Forward Common Power Control Channel Subchannel.
20		The base station shall set this field to the Forward Common
21		Power Control Channel Subchannel associated with this base
22		station.
23	RESERVED	- Reserved bits.
24		The base station shall add reserved bits as needed in order to
25		make the total length of the fields after the preceding
26		CH_RECORD_LEN field through this RESERVED field equal
27		to an integer number of octets. The base station shall set
28		these bits to '0'.
29	If the CH_IND field is set to '11', the base station shall include the following fields:	
30	FPC_FCH_INIT_SETPT	- Initial Fundamental Channel outer loop $E_b/N_t$ setpoint.
31		The base station shall set this field to initial Fundamental
32		Channel outer loop $E_b/N_t$ setpoint, in units of 0.125 dB.
33	FPC_DCCH_INIT_SETPT	- Initial Dedicated Control Channel outer loop $E_b/N_t$ setpoint.
34		The base station shall set this field to initial Dedicated
35		Control Channel outer loop $E_b/N_t$ setpoint, in units of 0.125
36		dB.
37	FPC_PRI_CHAN	- Power Control Subchannel indicator.
38		The base station shall set this field to '0' if the mobile station
39		is to perform the primary inner loop estimation on the
40		received Forward Fundamental Channel. The base station
41		shall set this field to '1' if the mobile station is to perform the
42		primary inner loop estimation on the received Forward
43		Dedicated Control Channel.

1			If the F-CPCCH is assigned, the base station shall multiplex
2			the Power Control Subchannel on the F-CPCCH; otherwise:
3			If this field is set to '0', the base station shall multiplex the
4			Power Control Subchannel on the Forward Fundamental
5			Channel; otherwise, the base station shall multiplex the
6			Power Control Subchannel on the Forward Dedicated Control
7			Channel.
8	FPC_FCH_FER	-	Fundamental Channel target Frame Error Rate.
9			The base station shall set this field to the target Frame Error
10			Rate on the Forward Fundamental Channel.
11	FPC_FCH_MIN_SETPT	-	Minimum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
12			The base station shall set this field to minimum Fundamental
13			Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125 dB.
14	FPC_FCH_MAX_SETPT	-	Maximum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
15			The base station shall set this field to maximum
16			Fundamental Channel Outer Loop $E_b/N_t$ setpoint, in units of
17			0.125 dB.
18	FPC_DCCH_FER	-	Dedicated Control Channel target Frame Error Rate.
19			The base station shall set this field to the target Frame Error
20			Rate on the Dedicated Control Channel.
21	FPC_DCCH_MIN_SETPT	-	Minimum Dedicated Control Channel Outer Loop $E_b/N_t$
22			setpoint.
23			The base station shall set this field to minimum Dedicated
24			Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
25			dB.
26	FPC_DCCH_MAX_SETPT	-	Maximum Dedicated Control Channel Outer Loop $E_b/N_t$
27			setpoint.
28			The base station shall set this field to maximum Dedicated
29			Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
30			dB.
31	The base station shall include NUM_PILOTS plus one occurrences of the following three-		
32	field record, one for each member of the mobile station's Active Set on the Traffic Channel.		
33	PILOT_PN	-	Pilot PN sequence offset index.
34			The base station shall set this field to the pilot PN sequence
35			offset for this pilot in units of 64 PN chips.
36	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
37			The base station shall set this field to '1' if additional pilot
38			information listed in PILOT_REC_TYPE and RECORD_LEN
39			fields are included. The base station shall set this field to '0'
40			if the corresponding pilot is the common pilot and there is no
41			additional pilot information included.
42	PILOT_REC_TYPE	-	Pilot record type.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the PILOT_REC_TYPE value shown in Table
3			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
4			specified by this record.
5			If ADD_PILOT_REC_INCL is set to '0', the base station shall
6			omit this field.
7	RECORD_LEN	-	Pilot record length.
8			If ADD_PILOT_REC_INCL is set to '1', the base station shall
9			set this field to the number of octets in the type-specific fields
10			of this pilot record.
11			If ADD_PILOT_REC_INCL is set to '0', the base station shall
12			omit this field.
13	Type-specific fields	-	Pilot record type-specific fields.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			include type-specific fields based on the PILOT_REC_TYPE of
16			this pilot record as described in 3.7.6.1.
17			If ADD_PILOT_REC_INCL is set to '0', the base station shall
18			omit this field.
19	PWR_COMB_IND	-	Power control symbol combining indicator.
20			If this pilot will carry the same closed-loop power control
21			subchannel bits as that of the previous pilot in this message,
22			the base station shall set this field to '1'; otherwise, the base
23			station shall set this field to '0'. The base station shall set
24			this field to '0' in the first record in the pilot list.
25	CODE_CHAN_FCH	-	Code channel index for the Fundamental Channel.
26			If FOR_RC is set to a Radio Configuration associated with
27			Spreading Rate 1, the base station shall set this field to the
28			code channel index (see [2]) that the mobile station is to use
29			on the Forward Channel associated with this pilot. If FOR_RC
30			is set to a Radio Configuration associated with Spreading
31			Rate 3, the base station shall set this field to the code
32			channel index that the mobile station is to use on the
33			Forward Channel on the center SR3 frequency.
34			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
35			station shall set this field in the range 1 to 63 inclusive. If
36			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
37			station shall set this field in the range 1 to 127 inclusive. If
38			Radio Configuration 7 or 9 is used, the base station shall set
39			this field in the range 1 to 255 inclusive.
40	QOF_MASK_ID_FCH	-	Quasi-Orthogonal Function Mask Identifier for the
41			Fundamental Channel.

1			If FOR_RC is set to a Radio Configuration associated with
2			Spreading Rate 1, the base station shall set this field to the
3			quasi-orthogonal function mask identifier (see [2]) that the
4			mobile station is to use on the Forward Fundamental
5			Channel associated with this pilot. If FOR_RC is set to a
6			Radio Configuration associated with Spreading Rate 3, the
7			base station shall set this field to the quasi-orthogonal
8			function mask identifier that the mobile station is to use on
9			the Forward Fundamental Channel on the center SR3
10			frequency.
11	CODE_CHAN_DCCH	-	Code channel index for the Dedicated Control Channel.
12			If FOR_RC is set to a Radio Configuration associated with
13			Spreading Rate 1, the base station shall set this field to the
14			code channel index (see [2]), in the range of 1 to 127
15			inclusive, that the mobile station is to use on the Dedicated
16			Control Channel associated with this pilot. If FOR_RC is set
17			to a Radio Configuration associated with Spreading Rate 3,
18			the base station shall set this field to the code channel index
19			in the range of 1 to 255 inclusive, that the mobile station is to
20			use on the Dedicated Control Channel on the center SR3
21			frequency.
22			If Radio Configuration 3 or 5 (see [2]) is used, the base station
23			shall set this field in the range 1 to 63 inclusive. If Radio
24			Configuration 4, 6 or 8 is used, the base station shall set this
25			field in the range 1 to 127 inclusive. If Radio Configuration 7
26			or 9 is used, the base station shall set this field in the range 1
27			to 255 inclusive.
28	QOF_MASK_ID_DCCH	-	Quasi-Orthogonal Function Mask Identifier for the Dedicated
29			Control Channel.
30			If FOR_RC is set to a Radio Configuration associated with
31			Spreading Rate 1, the base station shall set this field to the
32			quasi-orthogonal function mask identifier (see [2]) that the
33			mobile station is to use on the Forward Dedicated Control
34			Channel associated with this pilot. If FOR_RC is set to a
35			Radio Configuration associated with Spreading Rate 1, the
36			base station shall set this field to the quasi-orthogonal
37			function mask identifier that the mobile station is to use on
38			the Forward Dedicated Control Channel on the center SR3
39			frequency.
40	3X_FCH_INFO_INCL	-	3X Fundamental Channel information included indicator.
41			If the 3X Fundamental Channel information is included, the
42			base station shall set this field to '1'; otherwise, the base
43			station shall set this field to '0'.
44	The base station shall include NUM_PILOTS plus one occurrences of the following record if		
45	3X_FCH_INFO_INCL is set to '1'. The base station shall use the same order for the		
46	following fields as is used for the PILOT_PN fields listed in this message.		
47	3X_FCH_LOW_INCL	-	FCH code channel on the lowest SR3 frequency included
48			indicator.

1		If the Fundamental Channel on the lowest SR3 frequencies
2		has a different code channel than the Fundamental Channel
3		on the center SR3 frequency, the base station shall set this
4		field to '1'; otherwise, the base station shall set this field to
5		'0'.
6	QOF_MASK_ID_FCH_LOW	- QOF index for the Fundamental Channel on the lowest
7		SR3 frequency.
8		If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
9		this field; otherwise, the base station shall set this field as
10		follows:
11		The base station shall set this field to the index of the Quasi-
12		orthogonal function (see [2]) corresponding to the QOF index
13		for the Fundamental Channel on the lowest SR3 frequency.
14	CODE_CHAN_FCH_LOW	- Code channel for the Fundamental Channel on the lowest
15		SR3 frequency.
16		If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
17		this field; otherwise, the base station shall set this field as
18		follows:
19		The base station shall set this field to the code channel index
20		(see [2]) that the mobile station is to use on the Fundamental
21		Channel on the lowest SR3 frequency. If Radio Configuration
22		6 or 8 is used, the base station shall set this field in the range
23		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
24		base station shall set this field in the range 1 to 255
25		inclusive.
26	3X_FCH_HIGH_INCL	- FCH code channel on the highest SR3 frequency included
27		indicator.
28		If the Fundamental Channel on the highest SR3 frequencies
29		has a different code channel than the Fundamental Channel
30		on the center SR3 frequency, the base station shall set this
31		field to '1'; otherwise, the base station shall set this field to
32		'0'.
33	QOF_MASK_ID_FCH_HIGH	- QOF index for the Fundamental Channel on the highest
34		SR3 frequency.
35		If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
36		this field; otherwise, the base station shall set this field as
37		follows:
38		The base station shall set this field to the index of the Quasi-
39		orthogonal function (see [2]) corresponding to the QOF index
40		for the Fundamental Channel on the highest SR3 frequency.
41	CODE_CHAN_FCH_HIGH	- Code channel for the Fundamental Channel on the
42		highest SR3 frequency.
43		If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
44		this field; otherwise, the base station shall set this field as
45		follows:

1                   The base station shall set this field to the code channel index  
2                   (see [2]) that the mobile station is to use on the Fundamental  
3                   Channel on the highest SR3 frequency. If Radio  
4                   Configuration 6 or 8 is used, the base station shall set this  
5                   field in the range 1 to 127 inclusive. If Radio Configuration 7  
6                   or 9 is used, the base station shall set this field in the range 1  
7                   to 255 inclusive.

8   3X\_DCCH\_INFO\_INCL   -   3X Dedicated Control Channel information included  
9                   indicator.

10                   If the 3X Dedicated Control Channel information is included,  
11                   the base station shall set this field to '1'; otherwise, the base  
12                   station shall set this field to '0'.

13   The base station shall include NUM\_PILOTS plus one occurrences of the following record if  
14   3X\_DCCH\_INFO\_INCL is set to '1'. The base station shall use the same order for the  
15   following fields as is used for the PILOT\_PN fields listed in this message.

16   3X\_DCCH\_LOW\_INCL   -   DCCH code channel on the lowest SR3 frequency included  
17                   indicator.

18                   If the Dedicated Control Channel on the lowest SR3  
19                   frequencies has a different code channel than the Dedicated  
20                   Control Channel on the center SR3 frequency, the base  
21                   station shall set this field to '1'; otherwise, the base station  
22                   shall set this field to '0'.

23   QOF\_MASK\_ID\_DCCH\_LOW - QOF index for the Dedicated Control Channel on the  
24                   lowest SR3 frequency.

25                   If 3X\_DCCH\_LOW\_INCL is set to '0', the base station shall  
26                   omit this field; otherwise, the base station shall set this field  
27                   as follows:

28                   The base station shall set this field to the index of the Quasi-  
29                   orthogonal function (see [2]) corresponding to the QOF index  
30                   for the Dedicated Control Channel on the lowest SR3  
31                   frequency.

32   CODE\_CHAN\_DCCH\_LOW   -   Code channel for the Dedicated Control Channel on the  
33                   lowest SR3 frequency.

34                   If 3X\_DCCH\_LOW\_INCL is set to '0', the base station shall  
35                   omit this field; otherwise, the base station shall set this field  
36                   as follows:

37                   The base station shall set this field to the code channel index  
38                   (see [2]) that the mobile station is to use on the Dedicated  
39                   Control Channel on the lowest SR3 frequency. If Radio  
40                   Configuration 6 or 8 is used, the base station shall set this  
41                   field in the range 1 to 127 inclusive. If Radio Configuration 7  
42                   or 9 is used, the base station shall set this field in the range 1  
43                   to 255 inclusive.

44   3X\_DCCH\_HIGH\_INCL   -   DCCH code channel on the highest SR3 frequency included  
45                   indicator.

1		If the Dedicated Control Channel on the highest SR3
2		frequencies has a different code channel than the Dedicated
3		Control Channel on the center SR3 frequency, the base
4		station shall set this field to '1'; otherwise, the base station
5		shall set this field to '0'.
6	QOF_MASK_ID_DCCH_HIGH-	QOF index for the Dedicated Control Channel on the
7		highest SR3 frequency.
8		If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
9		omit this field; otherwise, the base station shall set this field
10		as follows:
11		The base station shall set this field to the index of the Quasi-
12		orthogonal function (see [2]) corresponding to the QOF index
13		for the Dedicated Control Channel on the highest SR3
14		frequency.
15	CODE_CHAN_DCCH_HIGH	- Code channel for the Dedicated Control Channel on the
16		highest SR3 frequency.
17		If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
18		omit this field; otherwise, the base station shall set this field
19		as follows:
20		The base station shall set this field to the code channel index
21		(see [2]) that the mobile station is to use on the Dedicated
22		Control Channel on the highest SR3 frequency. If Radio
23		Configuration 6 or 8 is used, the base station shall set this
24		field in the range 1 to 127 inclusive. If Radio Configuration 7
25		or 9 is used, the base station shall set this field in the range 1
26		to 255 inclusive.
27	FUNDICATED_BCNC_IND	- BCNC on fundicated channel Indicator.
28		If the channel assignment in this message contains a
29		Forward Fundicated Channel used for BCNC transmission,
30		the base station shall set this field to '1'; otherwise, the base
31		station shall set this field to '0'.
32	REV_FCH_ASSIGNED	- Reverse FCH channel assigned indicator.
33		If the FUNDICATED_BCNC_IND field is set to '0', the base
34		station shall omit this field; otherwise, the base station shall
35		include this field and set it as follows:
36		If the reverse FCH is assigned in this message, the base
37		station shall set this field to '1'; otherwise, the base station
38		shall set this field to '0'.
39	ADD_PLCM_FOR_FCH_INCL	- Additional PLCM for forward FCH included indicator.
40		If the FUNDICATED_BCNC_IND field is set to '0', the base
41		station shall omit this field; otherwise, the base station shall
42		include this field and set it as follows:
43		If the additional PLCM for forward FCH is included in this
44		message, the base station shall set this field to '1'; otherwise,
45		the base station shall set this field to '0'.

1	ADD_PLCM_FOR_FCH_TYPE -	The Additional Public Long Code Mask for forward FCH
2		type indicator.
3		If ADD_PLCM_FOR_FCH_INCL is not included or is included
4		and is set to '0', the base station shall omit this field;
5		otherwise, the base station shall include this field and set it
6		as follows.
7		The base station shall set this field to '1' to indicate PLCM
8		specified by the base station. The field value '0' is reserved.
9	ADD_PLCM_FOR_FCH_39	- The 39 LSB bits of the additional Public Long Code Mask
10		for forward FCH.
11		If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
12		'1', the base station shall include this field and set it to the 39
13		least significant bits of the public long code mask used by the
14		mobile station; otherwise, the base station shall omit this
15		field.
16	FOR_CPCCH_INFO_INCL -	CPCCH information included indicator.
17		If the FUNDICATED_BCNC_IND field is set to '0', the base
18		station shall omit this field; otherwise, the base station shall
19		include this field and set it as follows:
20		If the F-CPCCH information is included in this message, the
21		base station shall set this field to '1'; otherwise, the base
22		station shall set this field to '0'.
23	If FOR_CPCCH_INFO_INCL field is included and is set to '1', the base station shall include	
24	NUM_PILOT plus one occurrences of the following record:	
25	FOR_CPCCH_WALSH	- The Forward Common Power Control Channel Walsh code
26		assignment.
27		The base station shall set this field to the Walsh code
28		assignment for the Forward Common Power Control Channel.
29	FOR_CPCSCH	- The Forward Common Power Control Channel Subchannel.
30		The base station shall set this field to the Forward Common
31		Power Control Channel Subchannel associated with this base
32		station.
33	RESERVED	- Reserved bits.
34		The base station shall add reserved bits as needed in order to
35		make the total length of the fields after the preceding
36		CH_RECORD_LEN field through this RESERVED field equal
37		to an integer number of octets. The base station shall set
38		these bits to '0'.
39	If the ASSIGN_MODE field is set to '101', the base station shall include the following fields:	
40	FREQ_INCL	- Frequency included indicator.
41		If the BAND_CLASS and CDMA_FREQ fields are included in
42		this assignment record, the base station shall set this bit to
43		'1'. If the BAND_CLASS and CDMA_FREQ fields are not
44		included in this assignment record, the base station shall set
45		this bit to '0'.

1	BAND_CLASS	-	Band class.
2			If the FREQ_INCL bit is set to '1', the base station shall set
3			this field to the CDMA band class, as specified in [30],
4			corresponding to the CDMA frequency assignment for the
5			CDMA Channel containing the Forward Traffic Channel(s) the
6			mobile station is to use. If the FREQ_INCL bit is set to '0', the
7			base station shall omit this field.
8	CDMA_FREQ	-	Frequency assignment.
9			If the FREQ_INCL bit is set to '0', the base station shall omit
10			this field; otherwise, the base station shall set this field as
11			follows:
12			If the FREQ_INCL bit is set to '1', the base station shall set
13			this field to the CDMA Channel number, in the specified
14			CDMA band class, corresponding to the CDMA frequency
15			assignment for the CDMA Channel containing the Forward
16			Traffic Channel(s) the mobile station is to use.
17	BYPASS_ALERT_ANSWER	-	Bypass alert indicator.
18			If the mobile station is to bypass the <i>Waiting for Order</i>
19			<i>Substate</i> and the <i>Waiting for Mobile Station Answer Substate</i> ,
20			the base station shall set this field to '1'; otherwise, the base
21			station shall set this field to '0'.
22	GRANTED_MODE	-	Granted mode.
23			The base station shall set this field to '01' to indicate that the
24			mobile station is to use an initial service configuration
25			consisting of the default multiplex option that is derived from
26			the radio configuration corresponding to Table 3.7.2.3.2.21-3,
27			and to indicate that service negotiation may take place before
28			the base station sends one of the following messages: <i>Service</i>
29			<i>Connect Message</i> , <i>General Handoff Direction Message</i> (with
30			SCR) or <i>Universal Handoff Direction Message</i> (with SCR).
31			The base station shall set this field to '10' to indicate that the
32			mobile station is to use an initial service configuration
33			consisting of the default multiplex option that is derived from
34			the radio configuration corresponding to Table 3.7.2.3.2.21-3,
35			and to indicate that service negotiation is not to take place
36			before the base station sends one of the following messages:
37			<i>Service Connect Message</i> , <i>General Handoff Direction Message</i>
38			(with SCR) or <i>Universal Handoff Direction Message</i> (with
39			SCR).
40			The base station shall set this field to '11' to instruct the
41			mobile station to use the stored service configuration (that is,
42			both the <i>Service Configuration</i> information record and the
43			<i>Non-negotiable Service Configuration</i> information record)
44			The base station shall not set this field to '00'.

1	SR_ID_RESTORE	-	Service reference identifier to be restored.
2			If the GRANTED_MODE field is not set to '11', the base
3			station shall omit this field; otherwise, the base station shall
4			include this field and set it as follows:
5		o	If the mobile station is to restore all the service option
6			connections from the stored service configuration, the
7			base station shall set this field to '111'.
8		o	If the mobile station is to restore more than one but not
9			all the service option connections from the stored service
10			configuration, the base station shall set this field to '000'.
11		o	Otherwise, the base station shall set this field to the
12			service reference identifier corresponding to the service
13			option connection to be restored.
14	SR_ID_RESTORE_BITMAP	-	Bitmap of service reference identifiers to be restored.
15			If the SR_ID_RESTORE field is included and set to '000', the
16			base station shall include this field and set it as follows;
17			otherwise, the base station shall omit this field.
18			This field consists of the subfields defined in Table
19			3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
20			indicate that the mobile station is to restore the service
21			option connection of the corresponding service reference
22			identifier; otherwise, the base station shall set the subfield to
23			'0'.
24	FRAME_OFFSET	-	Frame offset.
25			The Forward and Reverse Traffic Channel frames are delayed
26			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
27			The base station shall set this field to the Forward and
28			Reverse Traffic Channel frame offset (the frame offset does not
29			apply to the F-PDCH).
30	ENCRYPT_MODE	-	Message encryption mode.
31			The base station shall set this field to the ENCRYPT_MODE
32			value shown in Table 3.7.2.3.2.8-2 corresponding to the
33			encrypting mode that is to be used for signaling messages, as
34			specified in 2.3.12.2.
35	D_SIG_ENCRYPT_MODE	-	Dedicated channel encryption mode indicator.
36			If ENCRYPT_MODE is set to '11', the base station shall include
37			this field and shall set it to the dedicated channel signaling
38			message mode, as shown in Table 3.7.4.5-1; otherwise the base
39			station shall omit this field.
40	ENC_KEY_SIZE	-	Encryption key size indication.

1			If ENCRYPT_MODE is set to '10' or '11', the base station shall
2			include this field and shall set it to the encryption key size, as
3			shown in Table 3.7.4.5-2; otherwise, the base station shall omit
4			this field.
5	C_SIG_ENCRYPT_MODE_INCL	-	Common channel signaling encryption mode included
6			indicator.
7			If common channel signaling encryption information is
8			included in this message, the base station shall set this field
9			to '1'; otherwise, the base station shall set this field to '0'.
10	C_SIG_ENCRYPT_MODE	-	Common channel signaling encryption mode indicator.
11			If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
12			shall include this field and shall set it to the common
13			channel signaling encryption mode, as shown in Table
14			3.7.4.5-1; otherwise, the base station shall omit this field.
15	MSG_INT_INFO_INCL	-	Message integrity information included indicator
16			The base station shall set this field to '1' if the base station
17			supports message integrity; otherwise, the base station shall
18			set this field to '0'. If this message is to include a MACI in the
19			LAC Layer, the base station shall set this field to '1'.
20	CHANGE_KEYS	-	Change keys indicator
21			If MSG_INT_INFO_INCL is set to '0', the base station shall
22			omit this field; otherwise, the base station shall include this
23			field and set it as follows:
24			The base station shall set this field to '0' to command the
25			mobile station not to update the encryption key and integrity
26			key. The base station shall set this field to '1' to command the
27			mobile station to update the encryption key and integrity key
28			to the latest being generated.
29	USE_UAK	-	Use UAK indicator
30			If MSG_INT_INFO_INCL is set to '0', the base station shall
31			omit this field; otherwise, the base station shall include this
32			field and set it as follows:
33			If the base station receives an authentication vector with a
34			UAK, the base station shall set this field to '1' to indicate that
35			the mobile station is to use UMAC; otherwise, the base
36			station shall set this field to '0' to indicate that the mobile
37			station is to use MAC-I.
38	PLCM_TYPE_INCL	-	The Public Long Code Mask type included indicator.
39			The base station shall set this field to '1' if the base station
40			include PLCM_TYPE in the message; otherwise, the base
41			station shall set this field to '0'.
42	PLCM_TYPE	-	The Public Long Code Mask type indicator.
43			If PLCM_TYPE_INCL is set to '0', the base station shall omit
44			this field; otherwise, the base station shall include this field
45			and set it as follows.

1			The base station shall set this field to the corresponding
2			Public Long Code Mask type as specified in Table
3			3.7.2.3.2.21-5.
4			PLCM_TYPE '0010' shall not be used when the mobile station
5			is not in its home country (i.e., the MCC of the mobile station
6			is different from the MCC of this base station).
7			PLCM_TYPE '0011' shall not be used when the mobile station
8			is not in its home network (i.e., the MCC or MNC of the
9			mobile station is different from the MCC or MNC of this base
10			station).
11	PLCM_39	-	The 39 LSB bits of the Public Long Code Mask.
12			If PLCM_TYPE is not set to '0001', the base station shall omit
13			this field; otherwise, the base station shall include this field
14			and set it to the 39 least significant bits of the public long
15			code mask as defined in 3.6.4.1.10.
16	RLGAIN_ADJ	-	Reverse Traffic Channel power .
17			If DIRECT_CH_ASSIGN_IND field is set to '0', the base station
18			shall set this field to adjust the initial Traffic Channel
19			transmission power relative to the Access Channel or
20			Enhanced Access Channel transmission power. The base
21			station shall set this field as a two's complement signed
22			binary number, in units of 1 dB.
23			If DIRECT_CH_ASSIGN_IND field is set to '1', the base station
24			shall set this field to adjust the initial Traffic Channel
25			transmission power. The base station shall set this field as a
26			two's complement signed binary number, in units of 1 dB.
27	NUM_PILOTS	-	Number of pilots in the Active Set.
28			The base station shall set this field to number of pilots that
29			are to be in the mobile station's Active Set on the Traffic
30			Channel minus one. The base station shall set this field to
31			the value in the range 0 to $N_{6m}-1$ inclusive.
32	EXT_CH_IND	-	Extended Channel Indicator.
33			The base station shall set this field as shown in
34			Table 2.7.1.3.2.4-11.
35	FPC_SUBCHAN_GAIN	-	Forward Power Control Subchannel relative gain.
36			If EXT_CH_IND signals the allocation of a F-FCH, or a F-
37			DCCH, the base station shall include this field and shall set it
38			as follows; otherwise, the base station shall omit this field.
39			The base station shall set this field to the power level of the
40			forward link power control subchannel relative to the power
41			level of 20 ms frames at a 9600 bps or 14400 bps rate on the
42			Forward Fundamental Channel or the Forward Dedicated
43			Control Channel indicated by FPC_PRI_CHAN <sub>s</sub> .
44			The base station shall set the value in units of 0.25 dB.
45	REV_FCH_GATING_MODE	-	Reverse eighth gating mode indicator.

1		If EXT_CH_IND signals the allocation of R-FCH, the base
2		station shall include this field and shall set it as follows;
3		otherwise, the base station shall omit this field.
4		The base station shall set this field to '1' if the mobile station
5		is allowed to perform the reverse eighth gating mode where
6		the 1/8 <sup>th</sup> rate frames on the Reverse Fundamental Channel
7		are gated off for 10 ms per frame (see [2]); otherwise, the base
8		station shall set this field to '0'.
9		The base station shall not set this field to '1' if
10		REV_FCH_GATING_REQ included in the <i>Origination Message</i>
11		or <i>Page Response Message</i> is set to '0'.
12	REV_PWR_CNTL_DELAY_INCL	- Reverse power control delay included indicator.
13		If REV_FCH_GATING_MODE is not included, or is included
14		and set to '0', then the base station shall omit this field;
15		otherwise, the base station shall include this field and set it
16		as follows.
17		The base station shall set this field to '1' if
18		REV_PWR_CNTL_DELAY is included in this message;
19		otherwise, the base station shall set this field to '0'.
20		If the REV_FCH_GATING_MODE field in this message is set to
21		'1' and the REV_PWR_CNTL_INCL field in the <i>Extended</i>
22		<i>System Parameters Message</i> is set to '0', the base station
23		shall set this field to '1'.
24	REV_PWR_CNTL_DELAY	- The reverse power control delay.
25		If REV_PWR_CNTL_DELAY_INCL is not included, or is
26		included and set to '0', then the base station shall omit this
27		field; otherwise, the base station shall include this field and
28		set it as follows:
29		The base station shall set this field to the closed-loop reverse
30		power control delay minus one (the closed-loop reverse power
31		control delay is the time between the end of a gated-on
32		reverse PCG and the beginning of the reverse PCG where the
33		corresponding feedback is sent on the Forward Power Control
34		Subchannel, see [2]), in units of 1.25 ms.
35	FULL_CI_FEEDBACK_IND	- Full C/I feedback rate indicator.
36		If the mobile station is to send full C/I feedback every 1.25
37		ms, the base station shall set this field to '1'. If the mobile
38		station is to transmit full C/I feedback every 20 ms, the base
39		station shall set this field to '0'.
40	FOR_CPCCH_RATE	- The Forward Common Power Control Channel Rate.
41		If EXT_CH_IND equals '01000', the base station shall include
42		this field and shall set it as follows; otherwise, the base
43		station shall omit this field.
44		The base station shall set this field to the rate of the Forward
45		Common Power Control Channel as specified in Table
46		3.7.2.3.2.21-12.

**Table 3.7.2.3.2.21-12 Rate of the Forward Common Power Control Channel.**

<b>FOR_CPCCH_RATE (binary)</b>	<b>Rate of the F-CPCCH (Hz)</b>
00	800
01	400
10	200
11	Reserved

**FOR\_CPCCH\_UPDATE\_RATE** - Forward Common Power Control update rate.

If EXT\_CH\_IND equals '01000', the base station shall include this field and shall set it as follows; otherwise, the base station shall omit this field.

The base station shall set this field to the update rate of the Forward Common Power Control as specified in Table 3.7.2.3.2.21-13 (see [2]).

**Table 3.7.2.3.2.21-13 CPCCH/RCCH Update rate.**

<b>Encoded update rate (binary)</b>	<b>CPCCH/RCCH Update rate (Hz)</b>
00	800
01	400
10	200
11	Reserved

**REV\_CQICH\_FRAME\_OFFSET** - Reverse Channel Quality Indicator Channel Frame Offset.

The C/I feedback reports on the Reverse Channel Quality Indicator Channel are delayed REV\_CQICH\_FRAME\_OFFSET × 1.25 ms relative to system timing (see [2]).

The base station shall set this field to the Reverse Channel Quality Indicator Channel frame offset.

**REV\_CQICH\_REPS** - Reverse Channel Quality Indicator Channel repetition factor.

The base station shall set this field according to Table 3.7.3.3.2.49-1.

**REV\_ACKCH\_REPS** - Reverse Acknowledgment Channel repetition factor.

The base station shall set this field according to Table 3.7.3.3.2.49-2.

**FOR\_PDCH\_RC** - Forward Packet Data Channel radio configuration.

1			The base station shall set this field to the radio configuration
2			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
3			the Forward Packet Data Channel.
4	REV_PDCH_RC	-	Reverse Packet Data Channel radio configuration.
5			If EXT_CH_IND signals the allocation of a R-PDCH, the base
6			station shall include this field and shall set it as follows;
7			otherwise, the base station shall omit this field.
8			The base station shall set this field to the radio configuration
9			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
10			the Reverse Packet Data Channel.
11	FOR_FCH_DCCH_RC	-	Forward Fundamental Channel or Forward Dedicated Control
12			Channel radio configuration.
13			If EXT_CH_IND signals the allocation of a F-FCH, or a F-
14			DCCH, the base station shall include this field and shall set it
15			as follows; otherwise, the base station shall omit this field.
16			The base station shall set this field to the radio configuration
17			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
18			the Forward Fundamental Channel, or on the Forward
19			Dedicated Control Channel, or on both.
20			The initial service configuration consisting of the default
21			multiplex option that is to be used by the mobile station is
22			derived from the radio configuration corresponding to Table
23			3.7.2.3.2.21-3.
24	REV_FCH_DCCH_RC	-	Reverse Fundamental Channel or Reverse Dedicated Control
25			Channel radio configuration.
26			If EXT_CH_IND signals the allocation of a R-FCH, or a R-
27			DCCH, the base station shall include this field and shall set it
28			as follows; otherwise, the base station shall omit this field.
29			The base station shall set this field to the radio configuration
30			(see Table 3.7.2.3.2.21-4) to be used by the mobile station on
31			the Reverse Fundamental Channel, or on the Reverse
32			Dedicated Control Channel, or on both.
33			The initial service configuration consisting of the default
34			multiplex option that is to be used by the mobile station is
35			derived from the radio configuration corresponding to Table
36			3.7.2.3.2.21-3.
37	FPC_PRI_CHAN	-	Power Control Subchannel indicator.
38			If EXT_CH_IND signals the allocation of a F-FCH and a F-
39			DCCH, the base station shall set this field as follows;
40			otherwise, the base station shall omit this field.
41			The base station shall set this field to '0' if the mobile station
42			is to perform the primary inner loop estimation on the
43			received Forward Fundamental Channel. The base station
44			shall set this field to '1' if the mobile station is to perform the
45			primary inner loop estimation on the received Forward
46			Dedicated Control Channel.

1			If the F-CPCCH is assigned, the base station shall multiplex
2			the Power Control Subchannel on the F-CPCCH; otherwise:
3			If this field is set to '0', the base station shall multiplex the
4			Power Control Subchannel on the Forward Fundamental
5			Channel; otherwise, the base station shall multiplex the
6			Power Control Subchannel on the Forward Dedicated Control
7			Channel.
8	FPC_FCH_INIT_SETPT	-	Initial Fundamental Channel outer loop $E_b/N_t$ setpoint.
9			If EXT_CH_IND signals the allocation of a F-FCH, the base
10			station shall include this field and shall set it as follows;
11			otherwise, the base station shall omit this field.
12			The base station shall set this field to initial Fundamental
13			Channel outer loop $E_b/N_t$ setpoint, in units of 0.125 dB.
14	FPC_FCH_FER	-	Fundamental Channel target Frame Error Rate.
15			If EXT_CH_IND signals the allocation of a F-FCH, the base
16			station shall include this field and shall set it as follows;
17			otherwise it shall be omitted.
18			The base station shall set this field to the target Frame Error
19			Rate on the Forward Fundamental Channel, as specified in
20			Table 3.7.3.3.2.25-2.
21	FPC_FCH_MIN_SETPT	-	Minimum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
22			If EXT_CH_IND signals the allocation of a F-FCH, the base
23			station shall include this field and shall set it as follows;
24			otherwise it shall be omitted.
25			The base station shall set this field to minimum Fundamental
26			Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125 dB.
27	FPC_FCH_MAX_SETPT	-	Maximum Fundamental Channel Outer Loop $E_b/N_t$ setpoint.
28			If EXT_CH_IND signals the allocation of a F-FCH, the base
29			station shall include this field and shall set it as follows;
30			otherwise it shall be omitted.
31			The base station shall set this field to maximum
32			Fundamental Channel Outer Loop $E_b/N_t$ setpoint, in units of
33			0.125 dB.
34	FPC_DCCH_INIT_SETPT	-	Initial Dedicated Control Channel outer loop $E_b/N_t$ setpoint.
35			If EXT_CH_IND signals the allocation of a F-DCCH, the base
36			station shall include this field and shall set it as follows;
37			otherwise it shall be omitted.
38			The base station shall set this field to initial Dedicated
39			Control Channel outer loop $E_b/N_t$ setpoint, in units of 0.125
40			dB.
41	FPC_DCCH_FER	-	Dedicated Control Channel target Frame Error Rate.

1		If EXT_CH_IND signals the allocation of a F-DCCH, the base
2		station shall include this field and shall set it as follows;
3		otherwise it shall be omitted.
4		The base station shall set this field to the target Frame Error
5		Rate on the Dedicated Control Channel, as specified in Table
6		3.7.3.3.2.25-2.
7	FPC_DCCH_MIN_SETPT -	Minimum Dedicated Control Channel Outer Loop $E_b/N_t$
8		setpoint.
9		If EXT_CH_IND signals the allocation of a F-DCCH, the base
10		station shall include this field and shall set it as follows;
11		otherwise it shall be omitted.
12		The base station shall set this field to minimum Dedicated
13		Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
14		dB.
15	FPC_DCCH_MAX_SETPT -	Maximum Dedicated Control Channel Outer Loop $E_b/N_t$
16		setpoint.
17		If EXT_CH_IND signals the allocation of a F-DCCH, the base
18		station shall include this field and shall set it as follows;
19		otherwise it shall be omitted.
20		The base station shall set this field to maximum Dedicated
21		Control Channel Outer Loop $E_b/N_t$ setpoint, in units of 0.125
22		dB.
23	PDCH_GROUP_IND_INCL	- Packet Data Channel Group Indicator included flag.
24		The base station shall set this field to '1' if the
25		PDCH_GROUP_IND fields are included; otherwise, the base
26		station shall set this field to '0'.
27		If this field is set to '0', the mobile station is to use
28		PWR_COMB_IND to determine whether the softer or soft
29		reselection parameters are used when re-pointing between
30		pilots in its Active Set (see [3]).
31	FOR_PDCH_PARMS_INCL	- Indicator of the inclusion of Forward Packet Data Channel
32		configuration fields.
33		The base station shall set this field to '1' if the Forward
34		Packet Data Channel configuration fields are included;
35		otherwise, the base station shall set this field to '0'.
36	FOR_PDCH_RLGAIN_INCL	- Forward Packet Data Channel parameters related to
37		reverse link adjustment gains included indicator.
38		If FOR_PDCH_PARMS_INCL is omitted, or if it is included and
39		set to '0', the base station shall omit this field; otherwise, the
40		base station shall include this field, and set it as follows.
41		The base station shall set this field to '1' if the following F-
42		PDCH gain related fields are included in this message;
43		otherwise, the base station shall set this field to '0'.
44	RLGAIN_ACKCH_PILOT -	Reverse Acknowledgment Channel to pilot adjustment gain.

1 If FOR\_PDCH\_RLGAIN\_INCL is omitted, or if it is included  
2 and set to '0', the base station shall omit this field; otherwise,  
3 the base station shall include this field, and set it as follows.

4 The base station shall set this field to the Reverse  
5 Acknowledgment Channel to pilot adjustment gain expressed  
6 as a two's complement value in units of 0.125 dB (see [2]).

7 RLGAIN\_CQICH\_PILOT - Reverse Channel Quality Indicator Channel to pilot  
8 adjustment gain.

9 If FOR\_PDCH\_RLGAIN\_INCL is omitted, or if it is included  
10 and set to '0', the base station shall omit this field; otherwise,  
11 the base station shall include this field, and set it as follows.

12 The base station shall set this field to the Reverse Channel  
13 Quality Indicator Channel to pilot adjustment gain expressed  
14 as a two's complement value in units of 0.125 dB (see [2]).

15 NUM\_SOFT\_SWITCHING\_FRAMES - Number of frames for R-CQICH soft switching.

16 If FOR\_PDCH\_PARMS\_INCL is equal to '0', the base station  
17 shall omit this field; otherwise, the base station shall include  
18 this field and set it as follows:

19 The base station shall set this field to the duration of the cell  
20 switching period, in units of 20 ms, minus one, during which  
21 the mobile station is to transmit the cell switch sequence on  
22 the R-CQICH channel when it switches between two pilots  
23 which are in different groups.

24 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
25 indicated by PDCH\_GROUP\_IND; otherwise, they are  
26 indicated by PWR\_COMB\_IND.

27 NUM\_SOFTER\_SWITCHING\_FRAMES - Number of frames for R-CQICH softer  
28 switching.

29 If FOR\_PDCH\_PARMS\_INCL is equal to '0', the base station  
30 shall omit this field; otherwise, the base station shall include  
31 this field and set it as follows:

32 The base station shall set this field to the duration of the cell  
33 switching period, in units of 20 ms, minus one, during which  
34 the mobile station is to transmit the cell switch sequence on  
35 the R-CQICH channel when it switches between two pilots  
36 which are in the same group.

37 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
38 indicated by PDCH\_GROUP\_IND; otherwise, they are  
39 indicated by PWR\_COMB\_IND.

40 NUM\_SOFT\_SWITCHING\_SLOTS - Number of slots per frame for R-CQICH soft  
41 switching.

42 If FOR\_PDCH\_PARMS\_INCL is equal to '0', the base station  
43 shall omit this field; otherwise, the base station shall include  
44 this field and set it as follows:

The base station shall set this field to the duration of the cell switching slots within a switching frame, in units of 1.25 ms as specified in Table 3.7.2.3.2.21-10, during which the mobile station is to transmit the cell switch indication by using Walsh cover of target on the R-CQICH when it switches between two pilots which are in different groups.

If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are indicated by PDCH\_GROUP\_IND; otherwise, they are indicated by PWR\_COMB\_IND.

**Table 3.7.2.3.2.21-10 Number of slots per frame for R-CQICH switching.**

<b>NUM_SOFT/SOFTER _SWITCHING_SLOTS (binary)</b>	<b>Number of slots per frame for R-CQICH switching.</b>
00	2
01	4
10	7
11	Reserved

NUM\_SOFTER\_SWITCHING\_SLOTS - Number of slots per frame for R-CQICH softer switching.

If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the duration of the cell switching slots within a switching frame, in units of 1.25 ms as specified in Table 3.7.2.3.2.21-10, during which the mobile station is to transmit the cell switch indication by using Walsh cover of target on the R-CQICH when it switches between two pilots which are in the same group.

If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are indicated by PDCH\_GROUP\_IND; otherwise, they are indicated by PWR\_COMB\_IND.

CHM\_SWITCHING\_PARMES\_INCL - Control Hold Mode fields included indicator.

If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to '1' if the switching parameters for Control Hold Mode are included; otherwise, the base station shall set this field to '0'.

1 NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH soft  
2 switching while in Control Hold.

3 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
4 the base station shall omit this field; otherwise, the base  
5 station shall include this field and set it as follows:

6 The base station shall set this field to the duration of the cell  
7 switching period, in units of 20 ms, minus one, during which  
8 the mobile station, while in Control Hold, is to transmit the  
9 cell switch sequence on the R-CQICH when it switches  
10 between two pilots which are in different groups.

11 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
12 indicated by PDCH\_GROUP\_IND; otherwise, they are  
13 indicated by PWR\_COMB\_IND.

14 NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH  
15 softer switching while in Control Hold.

16 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
17 the base station shall omit this field; otherwise, the base  
18 station shall include this field and set it as follows:

19 The base station shall set this field to the duration of the cell  
20 switching period, in units of 20 ms, minus one, during which  
21 the mobile station, while in Control Hold, is to transmit the  
22 cell switch sequence on the R-CQICH when it switches  
23 between two pilots which are in the same group.

24 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
25 indicated by PDCH\_GROUP\_IND; otherwise, they are  
26 indicated by PWR\_COMB\_IND.

27 NUM\_SOFT\_SWITCHING\_SLOTS\_CHM - Number of slots per frame for R-CQICH soft  
28 switching while in Control Hold.

29 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
30 the base station shall omit this field; otherwise, the base  
31 station shall include this field and set it as follows:

32 The base station shall set this field to the duration of the cell  
33 switching slots within a switching frame, in units of 1.25 ms  
34 as specified in Table 3.7.2.3.2.21-10, during which the mobile  
35 station, while in Control Hold, is to transmit the cell switch  
36 indication by using Walsh cover of target on the R-CQICH  
37 when it switches between two pilots which are in different  
38 groups.

39 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
40 indicated by PDCH\_GROUP\_IND; otherwise, they are  
41 indicated by PWR\_COMB\_IND.

42 NUM\_SOFT\_SWITCHING\_SLOTS\_CHM - Number of slots per frame for R-CQICH  
43 softer switching while in Control Hold.

44 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
45 the base station shall omit this field; otherwise, the base  
46 station shall include this field and set it as follows:

1		The base station shall set this field to the duration of the cell
2		switching slots within a switching frame, in units of 1.25 ms
3		as specified in Table 3.7.2.3.2.21-10, during which the mobile
4		station, while in Control Hold, is to transmit the cell switch
5		indication by using Walsh cover of target on the R-CQICH
6		when it switches between two pilots which are in the same
7		group.
8		If PDCH_GROUP_IND_INCL is set to '1', these groups are
9		indicated by PDCH_GROUP_IND; otherwise, they are
10		indicated by PWR_COMB_IND.
11	PDCH_SOFT_SWITCHING_DELAY	- F-PDCH Soft Switching Delay.
12		If FOR_PDCH_PARMS_INCL is equal to '0', the base station
13		shall omit this field; otherwise, the base station shall include
14		this field and set it as follows:
15		The base station shall set this field to the minimum
16		interruption seen by the mobile station, in units of 10 ms,
17		minus one, when the mobile station is to transmit the cell
18		switch sequence on the R-CQICH when it switches between
19		two pilots which are in different groups.
20		If PDCH_GROUP_IND_INCL is set to '1', these groups are
21		indicated by PDCH_GROUP_IND; otherwise, they are
22		indicated by PWR_COMB_IND.
23	PDCH_SOFTER_SWITCHING_DELAY	- F-PDCH Soft Switching Delay.
24		If FOR_PDCH_PARMS_INCL is equal to '0', the base station
25		shall omit this field; otherwise, the base station shall include
26		this field and set it as follows:
27		The base station shall set this field to the minimum
28		interruption seen by the mobile station, in units of 10 ms,
29		minus one, when the mobile station is to transmit the cell
30		switch sequence on the R-CQICH when it switches between
31		two pilots which are in the same group.
32		If PDCH_GROUP_IND_INCL is set to '1', these groups are
33		indicated by PDCH_GROUP_IND; otherwise, they are
34		indicated by PWR_COMB_IND.
35	TX_DISABLED_TIMER_INCL	- Transmitter disabled timer included flag.
36		The base station shall set this field to '1' if the following
37		TX_DISABLED_TIMER field is included; otherwise, the base
38		station shall set this field to '0'.
39	TX_DISABLED_TIMER	- Transmitter disabled timer.
40		If TX_DISABLED_TIMER_INCL is equal to '0', the base station
41		shall omit this field; otherwise, the base station shall include
42		this field and set it as follows:

1		The base station shall set this field to the maximum time, in
2		units of 20ms, the mobile station's transmitter can be
3		disabled before the MAC Layer is to perform Forward Packet
4		Data Channel initialization.(See [3])
5	FOR_GCH_ASSIGNED	- Forward Grant Channel assignment indicator.
6		If EXT_CH_IND signals the allocation of a R-PDCH, the base
7		station shall include this field and shall set it as follows;
8		otherwise, the base station shall omit this field.
9		The base station shall set this field to '1' if the mobile station
10		is to listen to grants on the Forward Grant Channel;
11		otherwise, the base station shall set this field to '0' (see [3]).
12	FOR_RCCH_ASSIGNED	- Forward Rate Control Channel assignment indicator.
13		If EXT_CH_IND signals the allocation of a R-PDCH, the base
14		station shall include this field and shall set it as follows;
15		otherwise, the base station shall omit this field.
16		The base station shall set this field to '1' if the mobile station
17		is to follow rate control indicators on the Forward Rate
18		Control Channel; otherwise, the base station shall set this
19		field to '0' (see [3]).
20	FOR_RCCH_DRC_MODE	- Forward Rate Control Channel Dedicated Rate Control
21		Mode Indicator.
22		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
23		set to '0', the base station shall omit this field; otherwise, the
24		base station shall include this field and set it as follows.
25		The base station shall set this field to '1' if the dedicated rate
26		control mode is being used on the Forward Rate Control
27		Channel; otherwise, the base station shall set this field to '0'
28		if the common rate control mode is being used (see [3]).
29	FOR_RCCH_REPETITION	- Forward Rate Control Subchannel repetition factor.
30		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
31		set to '0', the base station shall omit this field; otherwise, the
32		base station shall include this field and set it as follows.
33		The base station shall set this field to the subchannel
34		repetition factor of the Rate Control Subchannel on all pilots.
35		as specified in Table 3.7.2.3.2.21-11. See [2].

1

**Table 3.7.2.3.2.21-11 Repetition factor for the F-RCCH.**

<b>FOR_RCCH_ REPETITION (binary)</b>	<b>Repetition factor for the F-RCCH.</b>
00	2
01	4
10	8
11	Reserved

2    **FOR\_RCCH\_UPDATE\_RATE**       -    Forward Rate Control Subchannel update rate.

3                                        If FOR\_RCCH\_ASSIGNED is omitted, or if it is included and

4                                        set to '0', the base station shall omit this field; otherwise, the

5                                        base station shall include this field and set it as follows.

6                                        The base station shall set this field to the update rate of the

7                                        Rate Control Subchannel on all pilots as specified in Table

8                                        3.7.2.3.2.21-13. See [2].

9    **FOR\_ACKCH\_ASSIGNED** -    Forward Acknowledgment Channel assignment indicator.

10                                       If EXT\_CH\_IND signals the allocation of a R-PDCH, the base

11                                       station shall include this field and shall set it as follows;

12                                       otherwise, the base station shall omit this field.

13                                       The base station shall set this field to '1' if the mobile station

14                                       is to listen to acknowledgments on the Forward

15                                       Acknowledgment Channel; otherwise, the base station shall

16                                       set this field to '0' (see [2] and [3]).

17    **FOR\_ACKCH\_MODE**       -    Forward Acknowledgment Channel Mode.

18                                       If FOR\_ACKCH\_ASSIGNED is omitted, or if it is included and

19                                       set to '0', the base station shall omit this field; otherwise, the

20                                       base station shall include this field and set it as follows.

21                                       The base station shall set this field to the Acknowledgment

22                                       Channel operation mode identifier that governs how the

23                                       Acknowledgment channel is demodulated. See [2] and [3] for

24                                       the details.

25                                       The base station shall set this field to '00' if the mobile

26                                       station is to attempt the reception of the Forward

27                                       Acknowledgment Channel from all members of the reduced

28                                       active set of the Forward Packet Data Channel, and is not to

29                                       softer combine acknowledgments.

30                                       The base station shall set this field to '01' if the mobile

31                                       station is to attempt reception of the Forward

32                                       Acknowledgment Channel from all members of the reduced

33                                       active set, and is to combine the acknowledgments from all

34                                       sectors in the same combining indicator set.

1		The base station shall set this field to '10' if the mobile
2		station is to attempt reception of the Forward
3		Acknowledgment Channel from the serving sector only.
4		The base station shall set this field to '11' if the mobile
5		station is to combine the Forward Acknowledgment Channel
6		from all sectors in the same combining indicator set as the
7		serving sector.
8	FOR_ACKCH_COMB_SEL	- Forward Acknowledgment Channel Combining method
9		selector.
10		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
11		set to '0', or if FOR_ACKCH_MODE is omitted, or if it is
12		included and set to '00' or '10', or if PDCH_GROUP_IND_INCL
13		is set to '0', the base station shall omit this field; otherwise, it
14		shall include it and set it as follows.
15		The base station shall set this field to '0' if the mobile station
16		is to use PWR_COMB_IND as a combining indicator when
17		receiving the Forward Acknowledgment Channel; otherwise, it
18		shall set it to '1' if the mobile station is to use
19		PDCH_GROUP_IND as the indicator for combining sectors.
20	REV_PDCH_PARMS_INCL	- Reverse Packet Data Channel related parameters included
21		indicator.
22		If EXT_CH_IND signals the allocation of a R-PDCH, the base
23		station shall include this field and shall set it as follows;
24		otherwise, the base station shall omit this field.
25		The base station shall set this field to '1' if the following R-
26		PDCH parameters are included in this message; otherwise,
27		the base station shall set this field to '0'.
28	REV_PDCH_RLGAIN_INCL	- Reverse Packet Data Channel parameters related to
29		reverse link adjustment gains included indicator.
30		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
31		set to '0', the base station shall omit this field; otherwise, the
32		base station shall include this field, and set it as follows.
33		The base station shall set this field to '1' if the following R-
34		PDCH gain related fields are included in this message;
35		otherwise, the base station shall set this field to '0'.
36	RLGAIN_SPICH_PILOT	- Reverse Secondary Pilot Channel to pilot adjustment gain.
37		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
38		and set to '0', the base station shall omit this field; otherwise,
39		the base station shall include this field, and set it as follows.
40		The base station shall set this field to the Reverse Secondary
41		Pilot Channel to pilot adjustment gain expressed as a two's
42		complement value in units of 0.125 dB (see [2]).
43	RLGAIN_REQCH_PILOT	- Reverse Request Channel to pilot adjustment gain.
44		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
45		and set to '0', the base station shall omit this field; otherwise,
46		the base station shall include this field, and set it as follows.

1		The base station shall set this field to the Reverse Request
2		Channel to pilot adjustment gain expressed as a two's
3		complement value in units of 0.125 dB (see [2]).
4	RLGAIN_PDCCH_PILOT -	Reverse Packet Data Control Channel to pilot adjustment
5		gain.
6		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
7		and set to '0', the base station shall omit this field; otherwise,
8		the base station shall include this field, and set it as follows.
9		The base station shall set this field to the Reverse Packet
10		Data Channel to pilot adjustment gain expressed as a two's
11		complement value in units of 0.125 dB (see [2]).
12	REV_PDCH_PARMS_1_INCL -	Reverse Packet Data Channel parameters subset included
13		indicator.
14		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
15		set to '0', the base station shall omit this field; otherwise, the
16		base station shall include this field, and set it as follows.
17		The base station shall set this field to '1' if the following R-
18		PDCH parameters are included in this message; otherwise,
19		the base station shall set this field to '0'.
20	REV_PDCH_TABLE_SEL -	Reverse Packet Data Channel Table selector.
21		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
22		and set to '0', the base station shall omit this field; otherwise,
23		the base station shall include this field, and set it as follows.
24		The base station shall set this field to the Reverse Packet
25		Data Channel Table selector (see [2]).
26	REV_PDCH_MAX_AUTO_TPR -	Reverse Packet Data Channel maximum traffic to
27		pilot ratio for autonomous transmission.
28		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
29		and set to '0', the base station shall omit this field; otherwise,
30		the base station shall include this field and set it as follows.
31		The base station shall set this field to the maximum traffic to
32		pilot ratio for autonomous transmission on the Reverse
33		Packet Data Channel (see [2] and [3]).
34		The base station shall set this field to a value in the range 0
35		to 18 dB inclusive in units of 0.125 dB.
36	The base station shall include NUM_PILOTS plus one occurrences of the following record,	
37	one for each member of the mobile station's Active Set on the Traffic Channel.	
38	PILOT_PN -	Pilot PN sequence offset index.
39		The base station shall set this field to the pilot PN sequence
40		offset for this pilot in units of 64 PN chips.
41	ADD_PILOT_REC_INCL -	Additional pilot information included indicator.

1			The base station shall set this field to '1' if additional pilot
2			information listed in PILOT_REC_TYPE and RECORD_LEN
3			fields are included. The base station shall set this field to '0'
4			if the corresponding pilot is the common pilot and there is no
5			additional pilot information included.
6	PILOT_REC_TYPE	-	Pilot record type.
7			If ADD_PILOT_REC_INCL is set to '1', the base station shall
8			set this field to the PILOT_REC_TYPE value shown in Table
9			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
10			specified by this record.
11			If ADD_PILOT_REC_INCL is set to '0', the base station shall
12			omit this field.
13	RECORD_LEN	-	Pilot record length.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			set this field to the number of octets in the type-specific fields
16			of this pilot record.
17			If ADD_PILOT_REC_INCL is set to '0', the base station shall
18			omit this field.
19	Type-specific fields	-	Pilot record type-specific fields.
20			If ADD_PILOT_REC_INCL is set to '1', the base station shall
21			include type-specific fields based on the PILOT_REC_TYPE of
22			this pilot record as described in 3.7.6.1.
23			If ADD_PILOT_REC_INCL is set to '0', the base station shall
24			omit this field.
25	FOR_PDCH_INCL	-	Forward Packet Data Channel assignment included indicator.
26			The base station shall set this field to '1' if the MS is assigned
27			resources on the F-PDCH channel; otherwise, the base
28			station shall set this field to '0'. This field shall be set to '1' for
29			at least one of the pilots included in this message.
30	WALSH_TABLE_ID	-	The index of the Walsh Table used.
31			If FOR_PDCH_PARMS_INCL is set to '1', and
32			FOR_PDCH_INCL is set to '1', the base station shall include
33			this field and set it as follows; otherwise, the base station
34			shall omit this field.
35			The base station shall set this field to the index of the Walsh
36			Table being used by the Packet Data Channel. (See [3]).
37	NUM_PDCCH	-	The number of Packet Data Control Channels supported.
38			If FOR_PDCH_PARMS_INCL is set to '1', and
39			FOR_PDCH_INCL is set to '1', the base station shall include
40			this field and set it as follows; otherwise, the base station
41			shall omit this field.
42			The base station shall set this field to '000' if the pilot
43			supports one Packet Data Control Channel. The base station

1 shall set this field to '001' if the pilot supports two Packet  
2 Data Control Channels. The base station shall not set this  
3 field to any other value.

4 The base station shall include *NUM\_PDCCH+1* occurrences of the following one-field  
5 record:

6 FOR\_PDCCH\_WALSH - Forward Packet Data Control Channel Walsh code  
7 assignment.

8 If FOR\_PDCH\_PARMS\_INCL is set to '1', and  
9 FOR\_PDCH\_INCL is set to '1', the base station shall include  
10 this field and set it as follows; otherwise, the base station  
11 shall omit this field.

12 The base station shall set this field to the Walsh code  
13 assignment for the Forward Packet Data Control Channel.

14 If NUM\_PDCCH is set to '001', the Walsh code of PDCCH0  
15 shall be included first, followed by the Walsh code for  
16 PDCCH1

17 MAC\_ID - Medium Access Control index.

18 If FOR\_PDCH\_INCL is set to '0', the base station shall omit  
19 this field; otherwise, the base station shall include this field  
20 and set it as follows:

21 The base station shall set this field to the MAC index  
22 assigned to the mobile station by this pilot.

23 The base station shall set this field to an integer value larger  
24 than 63.

25 REV\_CQICH\_COVER - Reverse Channel Quality Indicator Channel cover.

26 If FOR\_PDCH\_INCL is set to '0', the base station shall omit  
27 this field; otherwise, the base station shall include this field  
28 and set it as follows:

29 The base station shall set this field to the index of the R-  
30 CQICH cover associated with this pilot (See [2]).

31 FOR\_CPCCH\_WALSH - The Forward Common Power Control Channel Walsh code  
32 assignment.

33 If EXT\_CH\_IND signals the allocation of a F-CPCCH, and  
34 either of the following conditions is true:

35 - EXT\_CH\_IND signals the allocation of a F-FCH or a F-  
36 DCCH

37 - all of the following conditions are true:

38 + FOR\_PDCH\_INCL is set to '1'

39 + EXT\_CH\_IND does not signal allocation of a F-FCH

40 + EXT\_CH\_IND does not signal allocation of a F-DCCH

1		the base station shall include this field and shall set it as
2		follows; otherwise, the base station shall omit this field
3		The base station shall set this field to the Walsh code
4		assignment for the Forward Common Power Control Channel.
5	FOR_CPCSCH	- The Forward Common Power Control Channel Subchannel.
6		If EXT_CH_IND signals the allocation of a F-CPCCH, and
7		either of the following conditions is true:
8		- EXT_CH_IND signals the allocation of a F-FCH or a F-
9		DCCH
10		- all of the following conditions are true:
11		+ FOR_PDCH_INCL is set to '1'
12		+ EXT_CH_IND does not signal allocation of a F-FCH
13		+ EXT_CH_IND does not signal allocation of a F-DCCH
14		the base station shall include this field and shall set it as
15		follows; otherwise, the base station shall omit this field.
16		The base station shall set this field to the Forward Common
17		Power Control Channel Subchannel associated with this base
18		station.
19		If FOR_CPCCH_RATE is omitted, or if it is included and set to
20		'00', the base station shall set this field to a value in the
21		range 0 to 23 inclusive. If FOR_CPCCH_RATE is included and
22		set set to '01', the base station shall set this field to a value in
23		the range 0 to 47 inclusive. If FOR_CPCCH_RATE is included
24		and set set to '10', the base station shall set this field to a
25		value in the range 0 to 95 inclusive.
26	PWR_COMB_IND	- Power control symbol combining indicator.
27		If this pilot will carry the same closed-loop power control
28		subchannel bits as that of the previous pilot in this message,
29		the base station shall set this field to '1'; otherwise, the base
30		station shall set this field to '0'. The base station shall set
31		this field to '0' in the first record in the pilot list.
32	PDCH_GROUP_IND	- Packet Data Channel Group Indicator.
33		If PDCH_GROUP_IND_INCL is set to '0', the base station shall
34		omit this field; otherwise, the base station shall include this
35		field and set it as follows.
36		If the mobile station is to use the softer reselection
37		parameters when re-pointing between this pilot and the
38		previous pilot that has a F-PDCH assigned to this mobile
39		station in this message (i.e. FOR_PDCH_INCL is set to '1'), the
40		base station shall set this field to '1' (see [3]).
41		If the mobile station is to use the soft reselection parameters
42		when re-pointing between this pilot and the previous pilot in
43		this message that has a F-PDCH assigned to this mobile
44		station (i.e. FOR_PDCH_INCL is set to '1'), the base station
45		shall set this field to '0' (see [3]).

1			The base station shall set this field to '0' in the first record in
2			the pilot list that has a F-PDCH assigned to this mobile
3			station (i.e. FOR_PDCH_INCL is set to '1').
4	CODE_CHAN_FCH	-	Code channel on the Fundamental Channel.
5			If EXT_CH_IND signals the allocation of a F-FCH, the base
6			station shall include this field and shall set it as follows;
7			otherwise it shall be omitted.
8			The base station shall set this field to the code channel index
9			(see [2]) that the mobile station is to use on the Fundamental
10			Channel of the Forward Traffic Channel.
11			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
12			station shall set this field in the range 1 to 63 inclusive. If
13			Radio Configuration 4, 11, or 12 is used, the base station
14			shall set this field in the range 1 to 127 inclusive.
15	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
16			Channel.
17			If EXT_CH_IND signals the allocation of a F-FCH, the base
18			station shall include this field and shall set it as follows;
19			otherwise it shall be omitted.
20			The base station shall set this field to the index of the Quasi-
21			orthogonal function (see [2]).
22	CODE_CHAN_DCCH	-	Code channel on the Dedicated Control Channel.
23			If EXT_CH_IND signals the allocation of a F-DCCH, the base
24			station shall include this field and shall set it as follows;
25			otherwise it shall be omitted.
26			The base station shall set this field to the code channel index
27			(see [2]), in the range of 1 to 127 inclusive, that the mobile
28			station is to use on the Dedicated Control Channel of the
29			Forward Traffic Channel.
30			If Radio Configuration 3 or 5 (see [2]) is used, the base station
31			shall set this field in the range 1 to 63 inclusive. If Radio
32			Configuration 4 is used, the base station shall set this field in
33			the range 1 to 127 inclusive.
34	QOF_MASK_ID_DCCH	-	Quasi-orthogonal function index on the Dedicated Control
35			Channel.
36			If EXT_CH_IND signals the allocation of a F-DCCH, the base
37			station shall include this field and shall set it as follows;
38			otherwise it shall be omitted.
39			The base station shall set this field to the index of the Quasi-
40			orthogonal function (see [2]).
41	FOR_ACKCH_WALSH_INDEX	-	Walsh Code for the Forward Acknowledgment
42			Channel.

1		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
2		set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
3		does not signal the allocation of a R-PDCH, the base station
4		shall omit this field; otherwise, it shall include it and set it as
5		follows.
6		The base station shall set this field to the Walsh code of the
7		Forward Acknowledgment Channel (see [2]).
8	FOR_ACKSCH_INDEX	- Forward Acknowledgment Subchannel Index.
9		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
10		set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
11		does not signal the allocation of a R-PDCH, the base station
12		shall omit this field; otherwise, it shall include it and set it as
13		follows.
14		The base station shall set this field to the subchannel index
15		of the Forward Acknowledgment Channel (see [2]). The base
16		station should not use FOR_ACKSCH_INDEX = 0, 1, 2, 96, 97,
17		or 98.
18	FOR_RCCH_INCL	- Forward Rate Control Subchannel included flag.
19		If FOR_PDCH_INCL is set to '0', or if FOR_RCCH_ASSIGNED
20		is omitted, or if it is included and set to '0', the base station
21		shall omit this field; otherwise, the base station shall include
22		this field and set it as follows.
23		The base station shall set this field to '1' if a Forward Rate
24		Control Channel Subchannel is allocated on this pilot (see
25		[2]); otherwise, the base station shall set this field to '0'.
26		The base station shall set this field to a non zero value for at
27		least one pilot in this message.
28	FOR_RCCH_WALSH_INDEX	- Walsh Code for the Forward Rate Control Channel
29		Subchannel.
30		If FOR_RCCH_INCL is omitted, or if it is included and set to
31		'0', the base station shall omit this field; otherwise, the base
32		station shall include this field and set it as follows.
33		The base station shall set this field to the Walsh code of the
34		Forward Rate Control Channel Subchannel (see [2]).
35	FOR_RCSCH_INDEX	- Forward Rate Control Subchannel.
36		If FOR_RCCH_INCL is omitted, or if it is included and set to
37		'0', the base station shall omit this field; otherwise, the base
38		station shall include this field and set it as follows.
39		The base station shall set this field to the subchannel index
40		of the Rate Control Subchannel on this pilot (see [2]).
41		If FOR_RCCH_REPETITION is set to '00', the base station
42		shall set this field to a value in the range 0 to 95 inclusive. If
43		FOR_RCCH_REPETITION is set to '01', the base station shall
44		set this field to a value in the range 0 to 47 inclusive. If
45		FOR_RCCH_REPETITION is set to '10', the base station shall
46		set this field to a value in the range 0 to 23 inclusive.

1		The base station shall set this field to the subchannel offset
2		of the Rate Control Subchannel on this pilot.
3	NUM_FOR_GCH	- Number of Forward Grant Channels
4		If FOR_PDCH_INCL is set to '0', or if FOR_GCH_ASSIGNED is
5		omitted, or if it is included and set to '0', the base station
6		shall omit this field; otherwise, the base station shall include
7		this field and set it as follows.
8		The base station shall set this field to the number of assigned
9		Forward Grant Channels on this pilot. The base station shall
10		set this field to 0, 1, or 2.
11		The base station shall set this field to a non zero value for at
12		least one pilot in this message.
13	If FOR_PDCH_INCL is set to '1', and if FOR_GCH_ASSIGNED is included and set to '1', the	
14	base station shall include NUM_FOR_GCH occurrences of the field	
15	FOR_GCH_WALSH_INDEX:	
16	FOR_GCH_WALSH_INDEX	- Walsh Code for the Forward Grant Channel.
17		The base station shall set this field to the Walsh code of the
18		Forward Grant Channels (see [2]).
19	SYNC_ID_INCL	- Service Configuration synchronization identifier included
20		indicator.
21		The base station shall omit this field if the GRANTED_MODE
22		field is not set to '11'; otherwise, the base station shall
23		include this field and set it as follows:
24		If the mobile station is to use a stored service configuration
25		corresponding to SYNC_ID field included in this message, the
26		base station shall set this field to '1', otherwise, the base
27		station shall set this field to '0'.
28	SYNC_ID_LEN	- Service Configuration synchronization identifier length
29		indicator.
30		If the SYNC_ID_INCL field is not included or is included and
31		is set to '0', the base station shall omit this field; otherwise
32		the base station shall include this field and set it as follows:
33		The base station shall set this field to the length of the
34		SYNC_ID field included in this message.
35	SYNC_ID	- Service Configuration synchronization identifier.
36		If the SYNC_ID_INCL field is not included or is included and
37		is set to '0', the base station shall omit this field; otherwise,
38		the base station shall include this field and set it as follows:
39		The base station shall set this field to the Service
40		Configuration synchronization identifier corresponding to the
41		stored service configuration that the mobile station is to use.
42	CONFIG_MSG_SEQ	- Configuration message sequence number.

1			If the DIRECT_CH_ASSIGN_IND is set to '0', the base station
2			shall omit this field; otherwise the base station shall include
3			this field and set it as follows:
4			The base station shall set this field to CONFIG_SEQ
5			(see 3.6.2.2).
6	RTC_NOM_PWR	-	Reverse Traffic Channel Nominal Power.
7			If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
8			omit this field; otherwise, the base station shall include this
9			field and set it as follows:
10			The base station shall set this field to the value of the
11			nominal power correction to be used by the mobile station
12			when transmitting on the Reverse Traffic Channel after the
13			Direct Channel Assignment call setup procedure. The base
14			station shall set this field as a two's complement signed
15			binary number, in units of 1 dB.
16	RESPOND_IND	-	Response requested indicator.
17			If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
18			omit this field; otherwise, the base station shall include this
19			field and set it as follows:
20			The base station shall set this field to '1' if the mobile station
21			is to respond to the <i>Extended Channel Assignment Message</i>
22			with a <i>Page Response Message</i> or <i>Reconnect Message</i> in
23			unassured mode on the r-csch; otherwise, the base station
24			shall set this field to '0' to indicate that the mobile station is
25			not to respond on the r-csch.
26	DIRECT_CH_ASSIGN_RECOVER_IND	-	Direct Channel Assignment Recover Indicator.
27			If DIRECT_CH_ASSIGN_IND is set to '0', the base station shall
28			omit this field; otherwise, the base station shall include this
29			field and set it as follows:
30			The base station shall set this field to '1' if the mobile station
31			is to transmit a <i>Page Response Message</i> or a <i>Reconnect</i>
32			<i>Message</i> after failing to acquire the forward traffic channel
33			assigned in this message; otherwise, the base station shall
34			set this field to '0'.
35	EARLY_RL_TRANSMIT_IND	-	Early Reverse Link Transmission indicator.
36			If FOR_CPCCH_RATE is included and not set to '00', the base
37			station shall omit this field; otherwise, the base station shall
38			include this field and set it as follows.
39			The base station shall set this field to '1' if, upon channel
40			assignment, the mobile station is to enable the transmitter
41			prior to receiving sufficient signal quality on the forward link;
42			otherwise, the base station shall set this field to '0'.

1	FUNDICATED_BCMC_IND	- BCMC on fundicated channel Indicator.
2		If the channel assignment in this message contains a
3		Forward Fundicated Channel used for BCMC transmission,
4		the base station shall set this field to '1'; otherwise, the base
5		station shall set this field to '0'.
6	ADD_PLCM_FOR_FCH_INCL	- Additional PLCM for forward FCH included indicator.
7		If the FUNDICATED_BCMC_IND field is set to '0', the base
8		station shall omit this field; otherwise, the base station shall
9		include this field and set it as follows:
10		If the additional PLCM for forward FCH is included in this
11		message, the base station shall set this field to '1'; otherwise,
12		the base station shall set this field to '0'.
13	ADD_PLCM_FOR_FCH_TYPE	- The Additional Public Long Code Mask for forward FCH
14		type indicator.
15		If ADD_PLCM_FOR_FCH_INCL is not included or is included
16		and is set to '0', the base station shall omit this field;
17		otherwise, the base station shall include this field and set it
18		as follows.
19		The base station shall set this field to '1' to indicate PLCM
20		specified by the base station. The field value '0' is reserved.
21	ADD_PLCM_FOR_FCH_39	- The 39 LSB bits of the additional Public Long Code Mask
22		for forward FCH.
23		If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
24		'1', the base station shall include this field and set it to the 39
25		least significant bits of the public long code mask used by the
26		mobile station; otherwise, the base station shall omit this
27		field.
28	FIXED_PREAMBLE_TRANSMIT_IND	- Fixed Number of Preambles Transmission
29		Indicator.
30		If GRANTED_MODE is not set to '11', the base station shall
31		omit this field; otherwise, the base station shall include this
32		field and set it as follows:
33		The base station shall set this field to '1' to indicate if the
34		mobile station is allowed to enter <i>Traffic Channel Substate</i> of
35		the <i>Mobile Station Control on the Traffic Channel State</i> after
36		sending the number of preambles specified in this message;
37		otherwise the base station shall set this field to '0'.
38		If any channel assigned by this message is to use Radio
39		Configuration 1 or 2 (see [2]), then the base station shall set
40		this field to '0'.
41	FIXED_NUM_PREAMBLE	- Traffic Channel preamble length.

1			If <code>FIXED_PREAMBLE_TRANSMIT_IND</code> is not included, or is
2			included and set to '0', the base station shall omit this field;
3			otherwise, the base station shall include this field and set it
4			to the minimum length of Traffic Channel preamble that the
5			mobile station is to transmit, before entering the <i>Traffic</i>
6			<i>Channel Substate</i> of the <i>Mobile Station Control on the Traffic</i>
7			<i>Channel State</i> without having received a <i>forward dedicated</i>
8			<i>channel acquired</i> indication from Layer 2 (see [4]).
9			The base station shall set <code>FIXED_NUM_PREAMBLE</code> to the
10			value shown in Table 3.7.2.3.2.21-13 corresponding to the
11			Traffic Channel preamble length in ms.
12	<code>TX_PWR_LIMIT_INCL</code>	-	Transmit Power Limit inclusion for the current base station
13			If the transmit power limit field is included in this message,
14			the base station shall set this field to '1'; otherwise, the base
15			station shall set this field to '0'.
16	<code>TX_PWR_LIMIT</code>	-	Transmit Power Limit for the current base station
17			If <code>TX_PWR_LIMIT_INCL</code> is set to '0', the base station shall
18			omit this field; otherwise, the base station shall include this
19			field and set to as follows.
20			The base station shall set this field to thirty dB more than
21			transmit power limit in dBm EIRP, in steps of 1 dB. This field
22			can take the values 30 to 53 corresponding to maximum
23			transmit power values 0 dBm to 23 dBm.
24			

## 1 3.7.2.3.2.22 General Neighbor List Message

## 2 MSG\_TAG: GNLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
PILOT_INC	4
NGHBR_SRCH_MODE	2
NGHBR_CONFIG_PN_INCL	1
FREQ_FIELDS_INCL	1
USE_TIMING	1
GLOBAL_TIMING_INCL	0 or 1
GLOBAL_TX_DURATION	0 or 4
GLOBAL_TX_PERIOD	0 or 7
NUM_NGHBR	6

NUM\_NGHBR occurrences of the following record:

{ (NUM\_NGHBR)

NGHBR_CONFIG	0 or 3
NGHBR_PN	0 or 9
SEARCH_PRIORITY	0 or 2
SRCH_WIN_NGHBR	0 or 4
FREQ_INCL	0 or 1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
TIMING_INCL	0 or 1
NGHBR_TX_OFFSET	0 or 7
NGHBR_TX_DURATION	0 or 4
NGHBR_TX_PERIOD	0 or 7

} (NUM\_NGHBR)

NUM_ANALOG_NGHBR	3
------------------	---

NUM\_ANALOG\_NGHBR occurrences of the following record:

{ (NUM\_ANALOG\_NGHBR)

(continues on next page)

<b>Field</b>	<b>Length (bits)</b>
BAND_CLASS	5
SYS_A_B	2

} (NUM\_ANALOG\_NGHR)

SRCH_OFFSET_INCL	1
------------------	---

NUM\_NGHR occurrences of the following record:

{ (NUM\_NGHR)

ADD_PILOT_REC_INCL	1
NGHR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$
SRCH_OFFSET_NGHR	0 or 3

} (NUM\_NGHR)

BCCH_IND_INCL	1
---------------	---

If BCCH\_IND\_INCL is set to '1', NUM\_NGHR occurrences of the following record:

{ (NUM\_NGHR)

BCCH_SUPPORT	0 or 1
--------------	--------

} (NUM\_NGHR)

RESQ_ENABLED	1
RESQ_DELAY_TIME	0 or 6
RESQ_ALLOWED_TIME	0 or 6
RESQ_ATTEMPT_TIME	0 or 6
RESQ_CODE_CHAN	0 or 11
RESQ_QOF	0 or 2
RESQ_MIN_PERIOD_INCL	0 or 1
RESQ_MIN_PERIOD	0 or 5
RESQ_NUM_TOT_TRANS_INCL	0 or 1
RESQ_NUM_TOT_TRANS_20MS	0 or 4
RESQ_NUM_TOT_TRANS_5MS	0 or 4

(continues on next page)

Field	Length (bits)
RESQ_NUM_PREAMBLE_RC1_RC2	0 or 3
RESQ_NUM_PREAMBLE	0 or 3
RESQ_POWER_DELTA	0 or 3

If RESQ\_ENABLED is set to '1', NUM\_NGHBR occurrences of the following one-field record:

{ (NUM\_NGHBR)

NGHBR_RESQ_CONFIGURED	1
-----------------------	---

} (NUM\_NGHBR)

{ (NUM\_NGHBR)

NGHBR_PDCH_SUPPORTED	1
----------------------	---

} (NUM\_NGHBR)

HRPD_NGHBR_INCL	1
NUM_HRPD_NGHBR	0 or 6

NUM\_HRPD\_NGHBR occurrences of the following subrecord:

{ (NUM\_HRPD\_NGHBR)

HRPD_NGHBR_REC_LEN	8
NGHBR_PN	9
NGHBR_FREQ_INCL	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
PN_ASSOCIATION_IND	1
DATA_ASSOCIATION_IND	1
HRPD_NGHBR_REC_RESERVED	0-7 (as needed)

} (NUM\_HRPD\_NGHBR)

- 1
- 2           PILOT\_PN   -   Pilot PN sequence offset index.
- 3                       The base station shall set this field to the pilot PN sequence
- 4                       offset for this base station, in units of 64 PN chips.
- 5   CONFIG\_MSG\_SEQ   -   Configuration message sequence number.
- 6                       The base station shall set this field to CONFIG\_SEQ
- 7                       (see 3.6.2.2).
- 8           PILOT\_INC   -   Pilot PN sequence offset index increment.
- 9                       A mobile station searches for Remaining Set pilots at pilot PN
- 10                      sequence index values that are multiples of this value.

- 1 The base station shall set this field to the pilot PN sequence  
 2 increment, in units of 64 PN chips, that mobile stations are to  
 3 use for searching the Remaining Set. The base station  
 4 should set this field to the largest increment such that the  
 5 pilot PN sequence offsets of all its neighbor base stations are  
 6 integer multiples of that increment.
- 7 The base station shall set this field to a value in the range 1  
 8 to 15 inclusive.
- 9 NGHBR\_SRCH\_MODE - Search mode.
- 10 The base station shall set this field to the value shown in  
 11 Table 3.7.2.3.2.22-1 corresponding to the search mode.

12

**Table 3.7.2.3.2.22-1. Search Mode Field**

<b>Value (binary)</b>	<b>Description</b>
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

13

- 14 NGHBR\_CONFIG\_PN\_INCL - Neighbor configuration and PN offset included.  
 15 If neighbor configuration and PN offset fields are included in  
 16 this message, the base station shall set this field to '1';  
 17 otherwise, the base station shall set this field to '0'.
- 18 FREQ\_FIELDS\_INCL - Frequency fields included.  
 19 If frequency fields are included in this message, the base  
 20 station shall set this field to '1'; otherwise, the base station  
 21 shall set this field to '0'.
- 22 USE\_TIMING - Use timing indicator.  
 23 If base station timing information is included for neighbor  
 24 base stations, the base station shall set this field to '1';  
 25 otherwise, the base station shall set this field to '0'.
- 26 GLOBAL\_TIMING\_INCL - Global timing included.  
 27 If USE\_TIMING is set to '1', the base station shall include the  
 28 field GLOBAL\_TIMING\_INCL and set this field as described  
 29 below; otherwise, the base station shall omit this field.
- 30 If base station timing information is included globally for all  
 31 neighbor base stations with TIMING\_INCL equal to '1', the  
 32 base station shall set this field to '1'; otherwise, the base  
 33 station shall set this field to '0'.
- 34 GLOBAL\_TX\_DURATION - Global neighbor transmit time duration.

1 If GLOBAL\_TIMING\_INCL is included and is set to '1', the  
2 base station shall include the field GLOBAL\_TX\_DURATION  
3 and shall set this field as described below; otherwise, the  
4 base station shall omit this field.

5 The base station shall set this field to the duration of the  
6 base station transmit window, during each period, in units of  
7 80 ms. The base station should set this field to a value of 3  
8 or greater.

9 GLOBAL\_TX\_PERIOD - Global neighbor transmit time period.

10 If GLOBAL\_TIMING\_INCL is included and is set to '1', the  
11 base station shall include the field GLOBAL\_TX\_PERIOD and  
12 shall set this field as described below; otherwise, the base  
13 station shall omit this field.

14 The base station shall set this field to duration of the period,  
15 in units of 80 ms.

16 NUM\_NGHR - Number of neighbor pilot PN sequences.

17 The base station shall set this field to the number of  
18 neighbors included in the message.

19 The base station shall include one occurrence of the following record for each pilot that a  
20 mobile station is to place in its Neighbor Set. The base station shall use the same order for  
21 the following record in this message as is used for pilots which are listed in the *Neighbor*  
22 *List Message* or *Extended Neighbor List Message*. Specifically, the  $i^{th}$  occurrence of the  
23 following record shall correspond the  $i^{th}$  pilot in the *Neighbor List Message* or in the  
24 *Extended Neighbor List Message*.

25

26 NGHBR\_CONFIG - Neighbor configuration.

27 If NGHBR\_CONFIG\_PN\_INCL = '1', the base station shall set  
28 this field to the value shown in Table 3.7.2.3.2.22-2  
29 corresponding to the configuration of this neighbor;  
30 otherwise, the base station shall omit this field.

31

1

**Table 3.7.2.3.2.22-2. Neighbor Configuration Field**

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
000	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this current CDMA frequency assignment with the same number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <b>FREQ_INCL</b> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <b>FREQ_INCL</b> equals '1' for this record, this corresponding CDMA frequency assignment is given by <b>NGHBR_BAND</b> and <b>NGHBR_FREQ</b>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p>
001	<p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this current CDMA frequency assignment but possibly with a different number of Paging Channels, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <b>FREQ_INCL</b> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <b>FREQ_INCL</b> equals '1' for this record, this corresponding CDMA frequency assignment is given by <b>NGHBR_BAND</b> and <b>NGHBR_FREQ</b>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel.</p>

010	<p>The neighbor base station may have a different number of frequencies having Paging Channels as the current base station.</p> <p>The neighbor base station has a Primary Paging Channel on the following CDMA frequency:</p> <ul style="list-style-type: none"> <li>• If <b>FREQ_INCL</b> equals '0' for this record, the neighbor base station has a Primary Paging Channel on the first CDMA Channel listed in the <i>CDMA Channel List Message</i> or the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</li> <li>• If <b>FREQ_INCL</b> equals '1' for this record, the neighbor base station has a Primary Paging Channel on the CDMA frequency assignment given by <b>NGHBR_BAND</b> and <b>NGHBR_FREQ</b>.</li> </ul>
011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> <li>• If <b>FREQ_INCL</b> equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel.</li> <li>• If <b>FREQ_INCL</b> equals '1' for this record, the CDMA frequency assignment given by <b>NGHBR_BAND</b> and <b>NGHBR_FREQ</b> has a Pilot Channel.</li> </ul>
100-111	Reserved.

1

2           **NGHBR\_PN**     -   Neighbor pilot PN sequence offset index.

3                               If **NGHBR\_CONFIG\_PN\_INCL** = '1', the base station shall set  
4                               this field to the pilot PN sequence offset for this neighbor, in  
5                               units of 64 PN chips; otherwise, the base station shall omit  
6                               this field.

7           **SEARCH\_PRIORITY**   -   Pilot Channel search priority.

8                               If **NGHBR\_SRCH\_MODE** = '01' or **NGHBR\_SRCH\_MODE** =  
9                               '11', then the base station shall set this field to the search  
10                              priority for the Pilot Channel corresponding to **NGHBR\_PN**.  
11                              The base station shall set the search priority as shown in  
12                              Table 3.7.2.3.2.22-3. If **NGHBR\_SRCH\_MODE** is set to any  
13                              other value, the base station shall omit this field.  
14

1

**Table 3.7.2.3.2.22-3. Search Priority Field**

<b>Value (binary)</b>	<b>Search Priority</b>
00	Low
01	Medium
10	High
11	Very High

2

3

**SRCH\_WIN\_NGHBR** - Neighbor pilot channel search window size.

4

5

6

7

8

If **NGHBR\_SRCH\_MODE** = '10' or '11', then the base station shall set this field to the value shown in Table 2.6.6.2.1-1 corresponding to the search window size to be used by mobile stations for this neighbor. If **NGHBR\_SRCH\_MODE** is set to any other value, the base station shall omit this field.

9

**FREQ\_INCL** - Frequency included indicator.

10

11

12

If **FREQ\_FIELDS\_INCL** is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

13

14

15

16

17

If the **NGHBR\_BAND** and **NGHBR\_FREQ** fields are included for this neighbor base station, the base station shall set this bit to '1'. If the **NGHBR\_BAND** and **NGHBR\_FREQ** fields are not included in this assignment record, the base station shall set this bit to '0'.

18

**NGHBR\_BAND** - Neighbor band class.

19

20

21

22

23

24

25

If the **FREQ\_INCL** bit is included and is set to '1', the base station shall set this field to the CDMA band class, as specified in [30], corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search. If the **FREQ\_INCL** bit is omitted or is set to '0', the base station shall omit this field.

26

**NGHBR\_FREQ** - Neighbor frequency assignment.

27

28

If the **FREQ\_INCL** bit is omitted or is set to '0', the base station shall omit this field.

29

30

31

32

33

34

35

If the **FREQ\_INCL** bit is included and is set to '1' and the corresponding neighbor has a 1X neighbor pilot record type, the base station shall set this field to the CDMA Channel number, in the specified CDMA band class, corresponding to the CDMA frequency assignment for the CDMA Channel containing the Paging Channel the mobile station is to search.

1			If the <code>FREQ_INCL</code> bit is included and is set to '1' and the
2			corresponding neighbor has a 3X neighbor pilot record type,
3			the base station shall set this field to the CDMA Channel
4			number, in the specified CDMA band class, corresponding to
5			the center SR3 frequency assignment containing the Paging
6			Channel the mobile station is to search.
7	<code>TIMING_INCL</code>	-	Timing included indicator.
8			If <code>USE_TIMING</code> is set to '1', the base station shall include the
9			field <code>TIMING_INCL</code> and set this field as described below;
10			otherwise, the base station shall omit this field.
11			If base station timing information is included for this
12			neighbor base station, the base station shall set this field to
13			'1'; otherwise, the base station shall set this field to '0'.
14	<code>NGHBR_TX_OFFSET</code>	-	Neighbor transmit time offset.
15			If <code>TIMING_INCL</code> is included and is set to '1', the base station
16			shall include the field <code>NGHBR_TX_OFFSET</code> and set this field
17			as described below; otherwise, the base station shall omit
18			this field.
19			The base station shall set this field to the time offset, in units
20			of 80 ms, from the beginning of the neighbor timing period to
21			the beginning of the first base station transmit window within
22			the period. The beginning of the neighbor timing period
23			occurs when $\lfloor t/4 \rfloor \bmod (16384) = 0$ .
24	<code>NGHBR_TX_DURATION</code>	-	Neighbor transmit time duration.
25			If <code>TIMING_INCL</code> is included and is set to '1' and
26			<code>GLOBAL_TIMING_INCL</code> is set to '0', the base station shall
27			include the field <code>NGHBR_TX_DURATION</code> and set this field as
28			described below; otherwise, the base station shall omit this
29			field.
30			The base station shall set this field to duration of the base
31			station transmit window, during each period, in units of
32			80 ms. The base station should set this field to a value of 3
33			or greater.
34	<code>NGHBR_TX_PERIOD</code>	-	Neighbor transmit time period.
35			If <code>TIMING_INCL</code> is included and is set to '1' and
36			<code>GLOBAL_TIMING_INCL</code> is set to '0', the base station shall
37			include the field <code>NGHBR_TX_PERIOD</code> and set this field as
38			described below; otherwise, the base station shall omit this
39			field.
40			The base station shall set this field to duration of the period,
41			in units of 80 ms.
42	<code>NUM_ANALOG_NGHBR</code>	-	Number of neighboring analog systems.
43			The base station shall set this field to the number of
44			neighboring analog systems included in the message. The
45			base station shall set this field to '000'.
46			

The base station shall include one occurrence of the following record for each neighboring analog system included in the message:

**BAND\_CLASS** - Band class.

The base station shall set this field to the CDMA band class, as specified in [30].

**SYS\_A\_B** - System A/B.

If **BAND\_CLASS** is set to '00000' or to '00011', the base station shall set this field to the value shown in Table 3.7.2.3.2.22-4 corresponding to the availability of neighboring analog systems; otherwise, the base station shall set this field to '00'.

**Table 3.7.2.3.2.22-4. Cellular System A/B**

Cellular System A/B	Value
RESERVED	00
System A	01
System B	10
System A and B	11

**SRCH\_OFFSET\_INCL** - Neighbor pilot channel search window offset included.

If **NGHBR\_SRCH\_MODE** = '10' or '11' and if the **SRCH\_OFFSET\_NGHR** field is included in the following records, the base station shall set this bit to '1'; otherwise, the base station shall set this bit to '0'.

The base station shall include one occurrence of the following record for each pilot that a mobile station is to place in its Neighbor Set. The base station shall use the same order for the following record in this message as is used for pilots which are listed in the *Neighbor List Message* or *Extended Neighbor List Message*. Specifically, the  $i^{th}$  occurrence of the following record shall correspond the  $i^{th}$  pilot in the *Neighbor List Message* or in the *Extended Neighbor List Message*.

**ADD\_PILOT\_REC\_INCL** - Additional pilot information included indicator.

The base station shall set this field to '1' if additional pilot information listed in the **NGHBR\_PILOT\_REC\_TYPE** and **RECORD\_LEN** fields are included. The base station shall set this field to '0' if the corresponding pilot is the common pilot and there is no additional pilot information included.

**NGHBR\_PILOT\_REC\_TYPE** - Neighbor Pilot record type

If **ADD\_PILOT\_REC\_INCL** is set to '1', the base station shall set this field to the **NGHBR\_PILOT\_REC\_TYPE** value shown in Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record specified by this record.

1

**Table 3.7.2.3.2.22-5. Neighbor Pilot Record Types**

<b>Description</b>	<b>NGHBR_PILOT_REC_TYPE (binary)</b>
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other NGHBR_PILOT_REC_TYPE values are reserved	

2

3

4

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

5

RECORD\_LEN - Pilot record length.

6

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall set this field to the number of octets in the type-specific fields of this pilot record.

7

8

9

10

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

11

Type-specific fields - Pilot record type-specific fields.

12

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall include type-specific fields based on the NGHBR\_PILOT\_REC\_TYPE of this pilot record.

13

14

15

16

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

17

18

If NGHBR\_PILOT\_REC\_TYPE is equal to '000', the base station shall include the following fields:

19

20

<b>Field</b>	<b>Length (bits)</b>
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

21

22

TD\_POWER\_LEVEL - TD Transmit Power Level.

- 1 The base station shall set this field to the TD transmit power  
 2 level relative to that of the Forward Pilot Channel as specified  
 3 in Table 3.7.2.3.2.26-4.
- 4 **TD\_MODE** - Transmit Diversity mode.
- 5 The base station shall set this field to the Transmit Diversity  
 6 mode, as specified in Table 3.7.2.3.2.26-3.
- 7 **RESERVED** - Reserved bits.
- 8 The base station shall set this field to '0000'.
- 9 If NGHBR\_PILOT\_REC\_TYPE is equal to '001', the base station shall include the following  
 10 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

- 11
- 12 **QOF** - Quasi-orthogonal function index.
- 13 The base station shall set this field to the index of the Quasi-  
 14 orthogonal function (see [2]).
- 15 **WALSH\_LENGTH** - Length of the Walsh Code.
- 16 The base station shall set this field to the WALSH\_LENGTH  
 17 value shown in Table 3.7.2.3.2.22-6 corresponding to the  
 18 length of the Walsh code for the pilot that is used in as the  
 19 Auxiliary pilot.

**Table 3.7.2.3.2.22-6. Walsh Code Length**

WALSH_LENGTH (binary)	Length of the Walsh Code
'000'	64
'001'	128
'010'	256
'011'	512
'100' – '111'	Reserved

- 21
- 22 **AUX\_PILOT\_WALSH** - Walsh Code for the Auxiliary Pilot.
- 23 The base station shall set this field to the Walsh code  
 24 corresponding to the Auxiliary pilot.
- 25 **RESERVED** - Reserved bits.

1 The base station shall set all the bits of this field to '0' to  
2 make the entire record octet-aligned.

3 If NGHBR\_PILOT\_REC\_TYPE is equal to '010', the base station shall include the following  
4 fields:

5

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

6

7 QOF - Quasi-orthogonal function index for the Auxiliary Transmit  
8 Diversity Pilot.

9 The base station shall set this field to the index of the Quasi-  
10 orthogonal function (see [2]).

11 WALSH\_LENGTH - Length of the Walsh Code.

12 The base station shall set this field to the WALSH\_LENGTH  
13 value shown in 3.7.2.3.2.22-6 corresponding to the length of  
14 the Walsh code for the pilots that are used as Auxiliary pilot  
15 in the transmit diversity mode.

16 AUX\_WALSH - Walsh Code for the Auxiliary Pilot.

17 The base station shall set this field to the Walsh code  
18 corresponding to the Auxiliary Pilot.

19 AUX\_TD\_POWER\_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.

20 The base station shall set this field to the Auxiliary Transmit  
21 Diversity Pilot transmit power level relative to that of the  
22 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.

**Table 3.7.2.3.2.22-7. Auxiliary Transmit Diversity Pilot  
Transmit Power Level**

<b>AUX_TD_POWER_LEVEL</b>	<b>Transmit Power Level</b>
00	9 dB below the Auxiliary Pilot Channel transmit power
01	6 dB below the Auxiliary Pilot Channel transmit power
10	3 dB below the Auxiliary Pilot Channel transmit power
11	Same as the Auxiliary Pilot Channel transmit power

**TD\_MODE** - Transmit Diversity mode.

The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.

**RESERVED** - Reserved bits.

The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If NGHBR\_PILOT\_REC\_TYPE is equal to '011', the base station shall include the following fields:

<b>Field</b>	<b>Length (bits)</b>
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

**SR3\_PRIMARY\_PILOT** - Primary SR3 pilot.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-5 corresponding to the position of the primary SR3 pilot.

**SR3\_PILOT\_POWER1** - The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.

**SR3\_PILOT\_POWER2** - The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

- 1 If NGHBR\_PILOT\_REC\_TYPE is equal to '100', the base station shall include the following  
 2 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

- 3 SR3\_PRIMARY\_PILOT – Primary SR3 pilot.  
 4 The base station shall set this field to the value shown in  
 5 Table 3.7.2.3.2.26-5 corresponding to the position of the  
 6 primary SR3 pilot.
- 7 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot  
 8 on the lower frequency of the two remaining SR3 frequencies.  
 9 The base station shall set this field to the value shown in  
 10 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 11 primary pilot with respect to the pilot on the lower frequency  
 12 of the two remaining SR3 frequencies.
- 13 SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot  
 14 on the higher frequency of the two remaining SR3  
 15 frequencies.  
 16 The base station shall set this field to the value shown in  
 17 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 18 primary pilot with respect to the pilot on the higher frequency  
 19 of the two remaining SR3 frequencies.
- 20 QOF – Quasi-orthogonal function index.

1		The base station shall set this field to the index of the Quasi-
2		orthogonal function (see [2]) on the frequency of the primary
3		pilot.
4	WALSH_LENGTH	- Length of the Walsh Code.
5		The base station shall set this field to the WALSH_LENGTH
6		value shown in Table 3.7.2.3.2.22-6 corresponding to the
7		length of the Walsh code for the pilot that is used as the
8		Auxiliary pilot on the frequency of the primary pilot.
9	AUX_PILOT_WALSH	- Walsh Code for the Auxiliary Pilot.
10		The base station shall set this field to the Walsh code
11		corresponding to the Auxiliary pilot on the frequency of the
12		primary pilot.
13	ADD_INFO_INCL1	- Additional information included for the pilot on the lower
14		frequency of the two remaining SR3 frequencies.
15		If the additional information for the pilot on the lower
16		frequencies of the two remaining SR3 frequencies is the same
17		as pilot on the primary frequency, the base station shall set
18		this field to '0'; otherwise, the base station shall set this field
19		to '1'.
20	QOF1	- Quasi-orthogonal function index for the pilot on the lower
21		frequency of the two remaining SR3 frequencies.
22		If ADD_INFO_INCL1 is set to '0', the base station shall omit
23		this field; otherwise, the base station shall set this field as
24		follows:
25		The base station shall set this field to the index of the Quasi-
26		orthogonal function (see [2]) on the lower frequency of the two
27		remaining SR3 frequencies.
28	WALSH_LENGTH1	- Length of the Walsh Code for the pilot on the lower frequency
29		of the two remaining SR3 frequencies.
30		If ADD_INFO_INCL1 is set to '0', the base station shall omit
31		this field; otherwise, the base station shall set this field as
32		follows:
33		The base station shall set this field to the WALSH_LENGTH
34		value shown in Table 3.7.2.3.2.22-6 corresponding to the
35		length of the Walsh code for the pilot that is used as the
36		Auxiliary pilot on the lower frequency of the two remaining
37		SR3 frequencies.
38	AUX_PILOT_WALSH1	- Walsh Code for the Auxiliary Pilot on the lower frequency of
39		the two remaining SR3 frequencies.
40		If ADD_INFO_INCL1 is set to '0', the base station shall omit
41		this field; otherwise, the base station shall set this field as
42		follows:
43		The base station shall set this field to the Walsh code
44		corresponding to the Auxiliary pilot on the lower frequency of
45		the two remaining SR3 frequencies.

1	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher frequency of the two remaining SR3 frequencies.
2			
3			If the additional information for the pilot on the higher frequencies of the two remaining SR3 frequencies is the same as pilot on the primary frequency, the base station shall set this field to '0'; otherwise, the base station shall set this field to '1'.
4			
5			
6			
7			
8	QOF2	-	Quasi-orthogonal function index for the pilot on the higher frequency of the two remaining SR3 frequencies.
9			
10			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
11			
12			
13			The base station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the higher frequency of the two remaining SR3 frequencies.
14			
15			
16	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher frequency of the two remaining SR3 frequencies.
17			
18			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
19			
20			
21			The base station shall set this field to the WALSH_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the higher frequency of the two remaining SR3 frequencies.
22			
23			
24			
25			
26	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of the two remaining SR3 frequencies.
27			
28			If ADD_INFO_INCL2 is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
29			
30			
31			The base station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the higher frequency of the two remaining SR3 frequencies.
32			
33			
34	RESERVED	-	Reserved bits.
35			The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.
36			
37	SRCH_OFFSET_NGHBR	-	Neighbor pilot channel search window size offset.
38			If SRCH_OFFSET_INCL equals to '1', then the base station shall set this field to the value shown in Table 2.6.6.2.1-2 corresponding to the search window offset to be used by mobile stations for this neighbor; otherwise, the base station shall omit this field.
39			
40			
41			
42			
43	BCCH_IND_INCL	-	BCCH support included indicator.
44			If the BCCH_SUPPORT field is included in the following records, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
45			
46			

If BCCH\_IND\_INCL is set to '1', the base station shall include one occurrence of the following field for each pilot that a mobile station is to place in its Neighbor Set. The base station shall use the same order for the following record in this message as is used for pilots which are listed in the *Neighbor List Message* or *Extended Neighbor List Message*. Specifically, the  $i^{th}$  occurrence of the following record shall correspond the  $i^{th}$  pilot in the *Neighbor List Message* or in the *Extended Neighbor List Message*.

BCCH\_SUPPORT - BCCH support indicator.

If this neighbor base station supports Broadcast Control Channel, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

RESQ\_ENABLED - Call rescue feature enabled indicator.

The base station shall set this field to '1' if the call rescue feature is enabled and there is at least one occurrence of NGHBR\_RESQ\_CONFIGURED set to '1' in this message; otherwise, the base station shall set this field to '0'.

RESQ\_DELAY\_TIME - Call rescue delay timer value.

If RESQ\_ENABLED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the value of the call rescue delay timer to be used by the mobile station, in units of 80 ms.

RESQ\_ALLOWED\_TIME - Call rescue allowed timer value.

If RESQ\_ENABLED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the value of the call rescue allowed timer to be used by the mobile station, in units of 80 ms.

RESQ\_ATTEMPT\_TIME - Call rescue attempt timer value.

If RESQ\_ENABLED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the value of the call rescue attempt timer to be used by the mobile station, in units of 40 ms.

RESQ\_CODE\_CHAN - Code channel index for the Rescue Channel.

If RESQ\_ENABLED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

1			The base station shall set this field to the code channel index
2			(see [2]) that the mobile station is to use on the Forward
3			Fundamental Channel when attempting Call Rescue Soft
4			Handoff with the associated neighbor pilot.
5			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
6			station shall set this field in the range 1 to 63 inclusive. If
7			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
8			station shall set this field in the range 1 to 127 inclusive. If
9			Radio Configuration 7 or 9 is used, the base station shall set
10			this field in the range 1 to 255 inclusive.
11	RESQ_QOF	-	Quasi-Orthogonal Function mask identifier for the Rescue
12			Channel.
13			If RESQ_ENABLED is set to '0', the base station shall omit
14			this field; otherwise, the base station shall include this field
15			and set it as follows:
16			The base station shall set this field to the quasi-orthogonal
17			function mask identifier (see [2]) that the mobile station is to
18			use on the Forward Fundamental Channel when attempting
19			Call Rescue Soft Handoff with the associated neighbor pilot.
20	RESQ_MIN_PERIOD_INCL	-	Minimum time between consecutive rescues included
21			indicator.
22			If RESQ_ENABLED is set to '0', the base station shall omit
23			this field; otherwise, the base station shall include this field
24			and set it as follows:
25			The base station shall set this field to '1' if the
26			RESQ_MIN_PERIOD field is included in this message;
27			otherwise, the base station shall set this field to '0'.
28			This field is set to '0' if there is no minimum time restriction
29			between consecutive rescues.
30	RESQ_MIN_PERIOD	-	Minimum time between consecutive rescues.
31			If RESQ_MIN_PERIOD_INCL is not included, or is included
32			and set to '0', the base station shall omit this field; otherwise,
33			the base station shall include this field and set it as follows:
34			The base station shall set this field to one less than the
35			minimum time after a successful call rescue (i.e. receipt of
36			N <sub>3m</sub> good frames by the mobile station after the rescue
37			attempt timer is enabled) before any subsequent call rescue
38			attempts can be initiated, in units of 2 seconds.
39	RESQ_NUM_TOT_TRANS_INCL	-	The required number of transmissions before
40			declaring L2 Acknowledgment Failure when Call Rescue is
41			enabled included indicator.
42			If RESQ_ENABLED is set to '0', the base station shall omit
43			this field; otherwise, the base station shall include this field
44			and set it as follows:

1 If the required number of transmissions of a regular PDU and  
2 mini PDU before declaring L2 Acknowledgment Failure when  
3 Call Rescue is enabled is included in this message, the base  
4 station shall set this field to '1'; otherwise, the base station  
5 shall set this field to '0'.

6 RESQ\_NUM\_TOT\_TRANS\_20MS – The required number of transmissions of a regular  
7 PDU before declaring L2 Acknowledgment Failure when Call  
8 Rescue is enabled.

9 If RESQ\_NUM\_TOT\_TRANS\_INCL field is not included or is  
10 included and is set to '0', the base station shall omit this  
11 field; otherwise, the base station shall include this field and  
12 set it as follows:

13 The base station shall set this field to the required number of  
14 transmissions of a regular PDU before declaring L2  
15 Acknowledgment Failure when Call Rescue is enabled.

16 The base station shall not set this field to a value greater  
17 than  $N_{1m}$ .

18 RESQ\_NUM\_TOT\_TRANS\_5MS – The required number of transmissions of a mini PDU  
19 before declaring L2 Acknowledgment Failure when Call  
20 Rescue is enabled.

21 If RESQ\_NUM\_TOT\_TRANS\_INCL field is not included or is  
22 included and is set to '0', the base station shall omit this  
23 field; otherwise, the base station shall include this field and  
24 set it as follows:

25 The base station shall set this field to the required number of  
26 transmissions of a mini PDU before declaring L2  
27 Acknowledgment Failure when Call Rescue is enabled.

28 The base station shall not set this field to a value greater  
29 than  $N_{15m}$ .

30 RESQ\_NUM\_PREAMBLE\_RC1\_RC2 – The Traffic Channel preamble length for Call  
31 Rescue Soft Handoff when operating in Radio Configuration 1  
32 or 2.

33 If RESQ\_ENABLED is set to '0', the base station shall omit  
34 this field; otherwise, the base station shall include this field  
35 and set it to the length of Traffic Channel preamble, in 20 ms  
36 units, that the mobile station is to send when performing a  
37 call rescue soft handoff.

38 RESQ\_NUM\_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft  
39 Handoff when operating in Radio Configuration greater than  
40 2.

41 If RESQ\_ENABLED is set to '0', the base station shall omit  
42 this field; otherwise, the base station shall include this field  
43 and set it to the length of Traffic Channel preamble that the  
44 mobile station is to send when performing a call rescue soft  
45 handoff, as follows:

1                   The base station shall set this field to the value shown in  
2                   Table 3.7.3.3.2.17-1 corresponding to the Traffic Channel  
3                   preamble length in 1.25 ms units.

4   RESQ\_POWER\_DELTA   -   The power level adjustment to be applied to the last closed-  
5                   loop power level when re-enabling the transmitter for call  
6                   rescue soft handoff.

7                   If RESQ\_ENABLED is set to '0', the base station shall omit  
8                   this field; otherwise, the base station shall set this field to a  
9                   value by which mobile stations are to adjust the last closed-  
10                  loop power level when re-enabling the transmitter for call  
11                  rescue, expressed as a two's complement value in units of  
12                  1 dB.

13   The base station shall include NUM\_NGHBR occurrences of the following one-field record  
14   if RESQ\_ENABLED is set to '1'. The base station shall use the same order for the following  
15   field as is used for the NGHBR\_PN fields listed in this message.

16   NGHBR\_RESQ\_CONFIGURED   -   Neighbor Rescue Channel configured indicator.

17                   The base station shall set this field to '1' if a Rescue Channel  
18                   is configured for this neighbor pilot; otherwise, the base  
19                   station shall set this field to '0'.

20   The base station shall include NUM\_NGHBR occurrences of the following variable length  
21   record. The base station shall use the same order for the following field as is used for the  
22   NGHBR\_PN fields listed in this message.

23   NGHBR\_PDCH\_SUPPORTED-   Neighbor PDCH supported indicator.

24                   The base station shall set this field to '1' if PDCH is  
25                   configured for this neighbor pilot; otherwise, the base station  
26                   shall set this field to '0'.

27   HRPD\_NGHBR\_INCL   -   HRPD neighbor information included indicator.

28                   If this message contains information on HRPD neighbors, the  
29                   base station shall set this field to '1'; otherwise, the base  
30                   station shall set this field to '0'.

31   NUM\_HRPD\_NGHBR   -   Number of HRPD neighbor pilot PN sequences.

32                   If the HRPD\_NGHBR\_INCL field is set to '0', the base station  
33                   shall omit this field; otherwise, the base station shall include  
34                   this field and set it to the number of HRPD neighbors  
35                   included in the message.

36   The base station shall include one occurrence of the following subrecord for each pilot  
37   that a mobile station is to place in its HRPD Neighbor Set.

38   HRPD\_NGHBR\_REC\_LEN -   HRPD neighbor record length

39                   The base station shall set this field to one less than the  
40                   number of octets included in this HRPD neighbor record  
41                   including this field.

1	NGHBR_PN	- Neighbor pilot PN sequence offset index.
2		The base station shall set this field to the pilot PN sequence
3		offset for this neighbor, in units of 64 PN chips.
4	NGHBR_FREQ_INCL	- Neighbor frequency information included indicator.
5		The base station shall set this field to '1' if the neighbor
6		frequency information is included in this message; otherwise,
7		the base station shall set this field to '0'.
8	NGHBR_BAND	- Neighbor band class.
9		If the NGHBR_FREQ_INCL field is set to '0', the base station
10		shall omit this field; otherwise, the base station shall include
11		this field and set it as follows:
12		The base station shall set this field to the CDMA band class,
13		as specified in [30], corresponding to the CDMA frequency
14		assignment for the CDMA Channel containing this neighbor.
15	NGHBR_FREQ	- Neighbor frequency assignment.
16		If the NGHBR_FREQ_INCL field is set to '0', the base station
17		shall omit this field; otherwise, the base station shall include
18		this field and set it as follows:
19		The base station shall set this field to the CDMA Channel
20		number, in the specified CDMA band class, corresponding to
21		the CDMA frequency assignment for this neighbor.
22	PN_ASSOCIATION_IND	- Neighbor PN association indicator.
23		The base station shall set this field to '1' if the system
24		identified by this system record has the same PN assignment
25		as the MC system to which this BS belongs; otherwise, the
26		base station shall set this field to '0'.
27	DATA_ASSOCIATION_IND	- Neighbor data association indicator.
28		The base station shall set this field to '1' if the system
29		identified by this system record can reach the same set of
30		PDSNs as the MC system to which this BS belongs;
31		otherwise, the base station shall set this field to '0'.
32	HRPD_NGHBR_REC_RESERVED	- HRPD neighbor record reserved bits.
33		The base station shall add reserved bits as needed in order to
34		make the length of this record equal to an integer number of
35		octets. The base station shall set these bits to '0'.
36		

## 1 3.7.2.3.2.23 User Zone Identification Message

2 MSG\_TAG: UZIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
UZ_EXIT	4
NUM_UZID	4

NUM\_UZID occurrences of the following record:

{ (NUM\_UZID)

UZID	16
UZ_REV	4
TEMP_SUB	1

} (NUM\_UZID)

- 3
- 4           PILOT\_PN   -   Pilot PN sequence offset index.
- 5                       The base station shall set this field to the pilot PN sequence
- 6                       offset for this base station, in units of 64 PN chips.
- 7           CONFIG\_MSG\_SEQ   -   Configuration message sequence number.
- 8                       The base station shall set this field to CONFIG\_SEQ
- 9                       (see 3.6.2.2).
- 10           UZ\_EXIT   -   User Zone Exit parameter.
- 11                       The base station shall set this field to the User Zone exit
- 12                       parameter (see 2.6.9.2.1). The base station shall set this field
- 13                       to a value (in dB) in the range 0 to 15.
- 14           NUM\_UZID   -   Number of User Zone identifiers.
- 15                       The base station shall set this field to the number of user
- 16                       zone identifiers included in this message.
- 17   The base station shall include NUM\_UZID occurrences of the following record.
- 18           UZID   -   User Zone identifier.
- 19                       The base station shall set this field to the User Zone identifier
- 20                       (see 3.6.7) supported by the base station.
- 21           UZ\_REV   -   User Zone update revision number.
- 22                       The base station shall set this field to the User Zone update
- 23                       revision number.
- 24           TEMP\_SUB   -   Temporary subscription flag.

1  
2  
3  
4

If the corresponding User Zone allows for temporary subscription, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

## 1 3.7.2.3.2.24 Private Neighbor List Message

2 MSG\_TAG: PNLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM\_RADIO\_INTERFACE occurrences of the following record:

{ (NUM\_RADIO\_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	8
Radio Interface Type-specific fields	8× RADIO_INTERFACE_LEN

} (NUM\_RADIO\_INTERFACE)

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10 NUM\_RADIO\_INTERFACE - Number of interface types.

11 The base station shall set this field to the number of radio  
12 interface types for which private neighbors are included in  
13 this message.

14 The base station shall include NUM\_RADIO\_INTERFACE occurrences of the following  
15 record, one occurrence for each radio interface for which private neighbors are included in  
16 this message.

17 RADIO\_INTERFACE\_TYPE - The radio interface type.

18 The base station shall set this field to the radio interface type  
19 of this record as specified in Table 3.7.2.3.2.24-1.

1

**Table 3.7.2.3.2.24-1. Radio Interface Type**

<b>RADIO_INTERFACE_TYPE</b> <b>(binary)</b>	<b>Descriptions</b>
0000	MC system
0001-1111	Reserved

2 RADIO\_INTERFACE\_LEN - The length of the Radio Interface Type-specific fields.  
3 The base station shall set this field to the number of octets in  
4 the Radio Interface Type-specific fields of this record.  
5 If RADIO\_INTERFACE\_TYPE is equal to '0000', the base station shall set the radio interface  
6 type-specific fields as follows:  
7

1

Field	Length (bits)
COMMON_INCL	1
COMMON_BAND_CLASS	0 or 5
COMMON_NGHBR_FREQ	0 or 11
SRCH_WIN_PN	4
NUM_PRI_NGHBR	6

NUM\_PRI\_NGHBR occurrences of the following record:

{ (NUM\_PRI\_NGHBR)

SID	15
NID	16
PRI_NGHBR_PN	9
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or 8× RECORD_LEN
BAND_CLASS	0 or 5
NGHBR_FREQ	0 or 11
UZID_INCL	1
NUM_UZID	0 or 4

(continues on next page)

2  
3

1

Field	Length (bits)
-------	---------------

NUM\_UZID occurrences of the following subrecord:

{ ( NUM\_UZID or 0)

UZID	0 or 16
UZ_REV	0 or 4
TEMP_SUB	0 or 1

} ( NUM\_UZID or 0)

} (NUM\_PRI\_NGHBR)

RESERVED	0 - 7 (as needed)
----------	-------------------

2

3           COMMON\_INCL   -   Common configuration included indicator.

4                               If all private neighbor base stations included in this message  
5                               are on the same CDMA band class and CDMA Channel  
6                               number as specified in the COMMON\_BAND\_CLASS and  
7                               COMMON\_NGHBR\_FREQ fields, the base station shall set  
8                               this field to '1'; otherwise, the base station shall set this field  
9                               to '0'.

10       COMMON\_BAND\_CLASS - Neighbor band class.

11                            If COMMON\_INCL is set to '1', the base station shall set this  
12                            field to the CDMA band class as specified in [30]  
13                            corresponding to the CDMA frequency assignment for the  
14                            CDMA Channel containing the Paging Channel or the  
15                            Forward Common Control Channel for all private neighbors;  
16                            otherwise, the base station shall omit this field.

17       COMMON\_NGHBR\_FREQ - Neighbor frequency assignment.

18                            If the COMMON\_INCL bit is set to '1', the base station shall  
19                            set this field to the CDMA Channel number, in the specified  
20                            CDMA band class, corresponding to the CDMA frequency  
21                            assignment for the CDMA Channel containing the Paging  
22                            Channel or the Forward Common Control Channel for all  
23                            private neighbor base station; otherwise, the base station  
24                            shall omit this field.

25           SRCH\_WIN\_N    -   Search window size for the Private Neighbor Set.

26                            The base station shall set this field to the value shown in  
27                            Table 2.6.6.2.1-1 corresponding to the search window size to  
28                            be used by mobile stations for the Private Neighbor Set.

29       NUM\_PRI\_NGHBR    -   Number of private neighbor pilot PN sequences.

30                            The base station shall set this field to the number of private  
31                            neighbors included in the message.

32

1 The base station shall include NUM\_PRI\_NGHR occurrences of the following record.

2                   SID    -   System Identification.

3                            The base station shall set this field to the system

4                            identification number for this private neighbor system (see

5                            2.6.5.2).

6                   NID    -   Network Identification.

7                            This field serves as a sub-identifier of a system as defined by

8                            the owner of the SID.

9                            The base station shall set this field to the system

10                           identification number for this private neighbor network (see

11                            2.6.5.2).

12           PRI\_NGHR\_PN   -   Private neighbor pilot PN sequence offset index.

13                            The base station shall set this field to the pilot PN sequence

14                            offset for this private neighbor, in units of 64 PN chips.

15   ADD\_PILOT\_REC\_INCL   -   Additional pilot information included indicator.

16                            The base station shall set this field to '1' if additional pilot

17                            information listed in the NGHR\_PILOT\_REC\_TYPE and

18                            RECORD\_LEN fields are included. The base station shall set

19                            this field to '0' if the corresponding pilot is the common pilot

20                            and there is no additional pilot information included.

21   NGHR\_PILOT\_REC\_TYPE - Neighbor Pilot record type

22                            If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall

23                            set this field to the NGHR\_PILOT\_REC\_TYPE value shown in

24                            Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record

25                            specified by this record.

26                            If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall

27                            omit this field.

28           RECORD\_LEN   -   Pilot record length.

29                            If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall

30                            set this field to the number of octets in the type-specific fields

31                            of this pilot record.

32                            If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall

33                            omit this field.

34   Type-specific fields   -   Pilot record type-specific fields.

35                            If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall

36                            include type-specific fields based on the

37                            NGHR\_PILOT\_REC\_TYPE of this pilot record.

38                            If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall

39                            omit this field.

40   If NGHR\_PILOT\_REC\_TYPE is equal to '000', the base station shall include the following

41   fields:

42

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

**1**

2 TD\_POWER\_LEVEL - TD Transmit Power Level.

3 The base station shall set this field to the TD transmit power  
4 level relative to that of the Forward Pilot Channel as specified  
5 in Table 3.7.2.3.2.26-4.

6 TD\_MODE - Transmit Diversity mode.

7 The base station shall set this field to the Transmit Diversity  
8 mode, as specified in Table 3.7.2.3.2.26-3.

9 RESERVED - Reserved bits.

10	The base station shall set this field to '0000'.
----	--

11 If NGHBR\_PILOT\_REC\_TYPE is equal to '001', the base station shall include the following  
12 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

13

14 QOF - Quasi-orthogonal function index.

15                   The base station shall set this field to the index of the Quasi-  
16                   orthogonal function (see [2]).

17      WALSH\_LENGTH      -      Length of the Walsh Code.

18                   The base station shall set this field to the WALSH\_LENGTH  
19                   value shown in Table 3.7.2.3.2.22-6 corresponding to the  
20                   length of the Walsh code for the pilot that is used in as the  
21                   Auxiliary pilot.

22      AUX\_PILOT\_WALSH      -      Walsh Code for the Auxiliary Pilot.

23                   The base station shall set this field to the Walsh code  
24                   corresponding to the Auxiliary pilot.

25                      RESERVED        -    Reserved bits.

26                   The base station shall set all the bits of this field to '0' to  
27                   make the entire record octet-aligned.

28 If NGHBR\_PILOT\_REC\_TYPE is equal to '010', the base station shall include the following  
29 fields;

1

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

2

3 QOF - Quasi-orthogonal function index for the Auxiliary Transmit  
4 Diversity Pilot.

5 The base station shall set this field to the index of the Quasi-  
6 orthogonal function (see [2]).

7 WALSH\_LENGTH - Length of the Walsh Code.

8 The base station shall set this field to the WALSH\_LENGTH  
9 value shown in 3.7.2.3.2.22-6 corresponding to the length of  
10 the Walsh code for the pilots that are used as Auxiliary pilot  
11 in the transmit diversity mode.

12 AUX\_WALSH - Walsh Code for the Auxiliary Pilot.

13 The base station shall set this field to the Walsh code  
14 corresponding to the Auxiliary Pilot.

15 AUX\_TD\_POWER\_LEVEL - Auxiliary Transmit Diversity Pilot Power Level.

16 The base station shall set this field to the Auxiliary Transmit  
17 Diversity Pilot transmit power level relative to that of the  
18 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.

19 TD\_MODE - Transmit Diversity mode.

20 The base station shall set this field to the Transmit Diversity  
21 mode, as specified in Table 3.7.2.3.2.26-3.

22 RESERVED - Reserved bits.

23 The base station shall set all the bits of this field to '0' to  
24 make the entire record octet-aligned.

25 If NGHBR\_PILOT\_REC\_TYPE is equal to '011', the base station shall include the following  
26 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

27

28 SR3\_PRIMARY\_PILOT - Primary SR3 pilot.

1 The base station shall set this field to the value shown in  
 2 Table 3.7.2.3.2.26-5 corresponding to the position of the  
 3 primary SR3 pilot.

4 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot  
 5 on the lower frequency of the two remaining SR3 frequencies.

6 The base station shall set this field to the value shown in  
 7 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 8 primary pilot with respect to the pilot on the lower frequency  
 9 of the two remaining SR3 frequencies.

10 SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot  
 11 on the higher frequency of the two remaining SR3  
 12 frequencies.

13 The base station shall set this field to the value shown in  
 14 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 15 primary pilot with respect to the pilot on the higher frequency  
 16 of the two remaining SR3 frequencies.

17

18 If NGHBR\_PILOT\_REC\_TYPE is equal to '100', the base station shall include the following  
 19 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

20

21

1	SR3_PRIMARY_PILOT	-	Primary SR3 pilot.
2			The base station shall set this field to the value shown in
3			Table 3.7.2.3.2.26-5 corresponding to the position of the
4			primary SR3 pilot.
5	SR3_PILOT_POWER1	-	The primary SR3 pilot power level relative to that of the pilot
6			on the lower frequency of the two remaining SR3 frequencies.
7			The base station shall set this field to the value shown in
8			Table 3.7.2.3.2.26-6 corresponding to the power level of the
9			primary pilot with respect to the pilot on the lower frequency
10			of the two remaining SR3 frequencies.
11	SR3_PILOT_POWER2	-	The primary SR3 pilot power level relative to that of the pilot
12			on the higher frequency of the two remaining SR3
13			frequencies.
14			The base station shall set this field to the value shown in
15			Table 3.7.2.3.2.26-6 corresponding to the power level of the
16			primary pilot with respect to the pilot on the higher frequency
17			of the two remaining SR3 frequencies.
18	QOF	-	Quasi-orthogonal function index.
19			The base station shall set this field to the index of the Quasi-
20			orthogonal function (see [2]) on the frequency of the primary
21			pilot.
22	WALSH_LENGTH	-	Length of the Walsh Code.
23			The base station shall set this field to the WALSH_LENGTH
24			value shown in Table 3.7.2.3.2.22-6 corresponding to the
25			length of the Walsh code for the pilot that is used as the
26			Auxiliary pilot on the frequency of the primary pilot.
27	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
28			The base station shall set this field to the Walsh code
29			corresponding to the Auxiliary pilot on the frequency of the
30			primary pilot.
31	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
32			frequency of the two remaining SR3 frequencies.
33			If the additional information for the pilot on the lower
34			frequencies of the two remaining SR3 frequencies is the same
35			as pilot on the primary frequency, the base station shall set
36			this field to '0'; otherwise, the base station shall set this field
37			to '1'.
38	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
39			frequency of the two remaining SR3 frequencies.
40			If ADD_INFO_INCL1 is set to '0', the base station shall omit
41			this field; otherwise, the base station shall set this field as
42			follows:
43			The base station shall set this field to the index of the Quasi-
44			orthogonal function (see [2]) on the lower frequency of the two
45			remaining SR3 frequencies.

1	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
2			of the two remaining SR3 frequencies.
3			If ADD_INFO_INCL1 is set to '0', the base station shall omit
4			this field; otherwise, the base station shall set this field as
5			follows:
6			The base station shall set this field to the WALSH_LENGTH
7			value shown in Table 3.7.2.3.2.22-6 corresponding to the
8			length of the Walsh code for the pilot that is used as the
9			Auxiliary pilot on the lower frequency of the two remaining
10			SR3 frequencies.
11	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
12			the two remaining SR3 frequencies.
13			If ADD_INFO_INCL1 is set to '0', the base station shall omit
14			this field; otherwise, the base station shall set this field as
15			follows:
16			The base station shall set this field to the Walsh code
17			corresponding to the Auxiliary pilot on the lower frequency of
18			the two remaining SR3 frequencies.
19	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
20			frequency of the two remaining SR3 frequencies.
21			If the additional information for the pilot on the higher
22			frequencies of the two remaining SR3 frequencies is the same
23			as pilot on the primary frequency, the base station shall set
24			this field to '0'; otherwise, the base station shall set this field
25			to '1'.
26	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
27			frequency of the two remaining SR3 frequencies.
28			If ADD_INFO_INCL2 is set to '0', the base station shall omit
29			this field; otherwise, the base station shall set this field as
30			follows:
31			The base station shall set this field to the index of the Quasi-
32			orthogonal function (see [2]) on the higher frequency of the
33			two remaining SR3 frequencies.
34	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher
35			frequency of the two remaining SR3 frequencies.
36			If ADD_INFO_INCL2 is set to '0', the base station shall omit
37			this field; otherwise, the base station shall set this field as
38			follows:
39			The base station shall set this field to the WALSH_LENGTH
40			value shown in Table 3.7.2.3.2.22-6 corresponding to the
41			length of the Walsh code for the pilot that is used as the
42			Auxiliary pilot on the higher frequency of the two remaining
43			SR3 frequencies.
44	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
45			the two remaining SR3 frequencies.

1			If ADD_INFO_INCL2 is set to '0', the base station shall omit
2			this field; otherwise, the base station shall set this field as
3			follows:
4			The base station shall set this field to the Walsh code
5			corresponding to the Auxiliary pilot on the higher frequency
6			of the two remaining SR3 frequencies.
7	RESERVED	-	Reserved bits.
8			The base station shall set all the bits of this field to '0' to
9			make the entire record octet-aligned.
10	BAND_CLASS	-	Neighbor band class.
11			If COMMON_INCL is set to '0', the base station shall set this
12			field to the CDMA band class as specified in [30]
13			corresponding to the CDMA frequency assignment for the
14			CDMA Channel containing the Paging Channel for the private
15			neighbor; otherwise, the base station shall omit this field.
16	NGHBR_FREQ	-	Neighbor frequency assignment.
17			If the COMMON_INCL bit is set to '0', the base station shall
18			set this field to the CDMA Channel number, in the specified
19			CDMA band class, corresponding to the CDMA frequency
20			assignment for the CDMA Channel containing the Paging
21			Channel for the private neighbor base station; otherwise, the
22			base station shall omit this field.
23	UZID_INCL	-	User Zone identifier included indicator.
24			If the UZID information is included, the base station shall set
25			this field to '1'; otherwise, the base station shall set this field
26			to '0'.
27	NUM_UZID	-	Number of User Zone identifiers.
28			If UZID_INCL is set to '1', the base station shall set this field
29			to the number of occurrences of UZID supported by the
30			private neighbor base station; otherwise, the base station
31			shall omit this field.
32	If UZID_INCL is set to '1', the base station shall include NUM_UZID occurrences of the		
33	following three-field subrecord; otherwise, the base station shall omit this subrecord.		
34	UZID	-	User Zone identifiers.
35			The base station shall set this field to the User Zone identifier
36			supported by the private neighbor base station.
37	UZ_REV	-	User Zone update revision number.
38			The base station shall set this field to the User Zone update
39			revision number.
40	TEMP_SUB	-	Temporary subscription flag.
41			If the corresponding User Zone allows for temporary
42			subscription, the base station shall set this field to '1';
43			otherwise, the base station shall set this field to '0'.
44	RESERVED	-	Reserved bits.

1 The base station shall add reserved bits as needed in order to  
2 make the length of the entire record equal to an integer  
3 number of octets. The base station shall set these bits to '0'.

- 1
- 2                   P\_REV   -   Protocol revision level.
- 3                               The base station shall set this field to '00001100'.
- 4                   MIN\_P\_REV   -   Minimum protocol revision level.
- 5                               The base station sets this field to prevent mobile stations
- 6                               which cannot be supported by the base station from
- 7                               accessing the system.
- 8                               The base station shall set this field to the minimum protocol
- 9                               revision level that it supports.
- 10                   SID   -   System identification.
- 11                               The base station shall set this field to the system
- 12                               identification number for this system (see 2.6.5.2).
- 13                   NID   -   Network identification.
- 14                               This field serves as a sub-identifier of a system as defined by
- 15                               the owner of the SID.
- 16                               The base station shall set this field to the network
- 17                               identification number for this network (see 2.6.5.2).
- 18                   PILOT\_PN   -   Pilot PN sequence offset index.
- 19                               The base station shall set this field to the pilot PN sequence
- 20                               offset for this base station, in units of 64 PN chips.
- 21                   LC\_STATE   -   Long code state.
- 22                               The base station shall set this field to the long code state at
- 23                               the time given by the SYS\_TIME field of this message.
- 24                   SYS\_TIME   -   System time.

- 1 The base station shall set this field to the System Time as of  
 2 four Sync Channel superframes (320 ms) after the end of the  
 3 last superframe containing any part of this *Sync Channel*  
 4 *Message*, minus the pilot PN sequence offset, in units of 80  
 5 ms (see [2]).
- 6 LP\_SEC - The number of leap seconds that have occurred since the  
 7 start of System Time.
- 8 The base station shall set this field to the number of leap  
 9 seconds that have occurred since the start of System Time, as  
 10 of the time given by the SYS\_TIME field of this message.
- 11 LTM\_OFF - Offset of local time from System Time.
- 12 The base station shall set this field to the two's complement  
 13 offset of local time from System Time, in units of 30 minutes.
- 14 The local time of day, in units of 80 ms, as of four Sync  
 15 Channel superframes (320 ms) after the end of the last  
 16 superframe containing any part of this *Sync Channel*  
 17 *Message*, minus the pilot PN sequence offset, is equal to  
 18  $\text{SYS\_TIME} - (\text{LP\_SEC} \times 12.5) + (\text{LTM\_OFF} \times 22500)$ .
- 19 DAYLT - Daylight savings time indicator.
- 20 If daylight savings time is in effect, the base station shall set  
 21 this field to '1'; otherwise, the base station shall set this field  
 22 to '0'.
- 23 PRAT - Paging Channel data rate.
- 24 The base station shall set this field to the PRAT field value  
 25 shown in Table 3.7.2.3.2.26-1 corresponding to the data rate  
 26 used by the Paging Channels in the system.

**Table 3.7.2.3.2.26-1. Paging Channel Data Rate**

PRAT Field (binary)	Paging Channel data rate
00	9600 bps
01	4800 bps
10	Reserved
11	Reserved

- 28
- 29 CDMA\_FREQ - Frequency assignment.

1		The base station shall set this field to the CDMA Channel
2		number corresponding to the CDMA frequency assignment
3		for the CDMA Channel containing a Primary Paging
4		Channel. <sup>11</sup>
5	EXT_CDMA_FREQ	- Extended frequency assignment.
6		The base station shall set this field to the CDMA Channel
7		number corresponding to the CDMA frequency assignment
8		for the CDMA Channel containing a Primary Paging Channel
9		that a mobile station capable of Radio Configurations greater
10		than 2 or capable of supporting Quick Paging Channel will
11		use.
12	SR1_BCCH_NON_TD_INCL	- Common Channel in non TD mode on Spreading Rate 1
13		information included indicator.
14		The base station shall set this field to '1' if the base station
15		includes common channels (BCCH/F-CCCH/EACH)
16		information in non TD mode; otherwise, the base station
17		shall set this field to '0'.
18	SR1_NON_TD_FREQ_INCL	- Non Transmit Diversity frequency included indicator.
19		If SR1_BCCH_NON_TD_INCL is set to '0', the base station
20		shall omit this field; otherwise, the base station shall set this
21		field as follows:
22		The base station shall set this field to '1' if
23		SR1_CDMA_FREQ_NON_TD is included in the message. The
24		base station shall set this field to '0' if the frequency specified
25		by the EXT_CDMA_FREQ field is used for BCCH frequency
26		assignment.
27	SR1_CDMA_FREQ_NON_TD	- Frequency assignment for non-transmit diversity
28		operation.
29		If SR1_NON_TD_FREQ_INCL is not included, or is included
30		and set to '0', the base station shall omit this field; otherwise,
31		the base station shall set this field as follows:
32		The base station shall set this field to the CDMA Channel
33		number corresponding to the CDMA frequency assignment
34		for the CDMA Channel containing a Broadcast Control
35		Channel that does not support the TD operation.
36	SR1_BRAT_NON_TD	- BCCH data rate in non-TD mode for Spreading Rate 1.
37		If SR1_BCCH_NON_TD_INCL is set to '0', the base station
38		shall omit this field; otherwise, the base station shall set this
39		field as follows:

---

<sup>11</sup> If compatibility with IS-95-A mobile stations is desired in a Band Class 0 system, the CDMA\_FREQ field is set to the CDMA frequency assignment containing this Sync Channel.

The base station shall set this field to the BRAT field value shown in Table 3.7.2.3.2.26-2 corresponding to the data rate used by the Primary Broadcast Control Channel in the system.

**Table 3.7.2.3.2.26-2. Broadcast Control Channel Data Rate**

<b>BRAT Field (binary)</b>	<b>Broadcast Control Channel data rate</b>
00	4800 bps
01	9600 bps
10	19200bps
11	Reserved

**SR1\_CRAT\_NON\_TD** - BCCH code rate in non Transmit Diversity mode for Spreading Rate 1.

If SR1\_BCCH\_NON\_TD\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to '0' if the BCCH Code Rate is 1/4 (see [2]). The base station shall set this field to '1' if the BCCH code rate is 1/2 (see [2]).

**SR1\_BCCH\_CODE\_CHAN\_NON\_TD** - Walsh code for the Spreading Rate 1 BCCH in non Transmit Diversity mode.

If SR1\_BCCH\_NON\_TD\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to the Walsh code corresponding to the Spreading Rate 1 BCCH in non Transmit Diversity mode.

**SR1\_TD\_INCL** - Spreading Rate 1 Transmit Diversity frequency information included indicator.

The base station shall set this field to '1' if SR1\_CDMA\_FREQ\_TD, SR1\_BRAT\_TD, SR1\_CRAT\_TD, SR1\_TD\_MODE, and SR1\_TD\_POWER\_LEVEL are included in the message; otherwise, the base station shall set this field to '0'.

**SR1\_CDMA\_FREQ\_TD** - Spreading Rate 1 frequency assignment for Transmit Diversity operation.

If SR1\_TD\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to the CDMA Channel number corresponding to the CDMA frequency assignment for the CDMA Channel containing a BCCH Channel that supports the TD operation.

SR1_BRAT_TD	<p>- BCCH data rate in Transmit Diversity mode for Spreading Rate 1.</p> <p>If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:</p> <p>The base station shall set this field to the BRAT field value shown in Table 3.7.2.3.2.26-2 corresponding to the data rate used by the Primary Broadcast Control Channel in the system.</p>
SR1_CRAT_TD	<p>- BCCH code rate in Transmit Diversity mode for Spreading Rate 1.</p> <p>If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:</p> <p>The base station shall set this field to '0' if the BCCH Code Rate is 1/4 (see [2]). The base station shall set this field to '1' if the BCCH Code Rate is 1/2 (see [2]).</p>
SR1_BCCH_CODE_CHAN_TD	<p>- Walsh code for the Spreading Rate 1 BCCH in Transmit Diversity mode.</p> <p>If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:</p> <p>The base station shall set this field to the Walsh code corresponding to the Spreading Rate 1 BCCH in Transmit Diversity mode.</p>
SR1_TD_MODE	<p>- Spreading Rate 1 Transmit Diversity Mode.</p> <p>If SR1_TD_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:</p> <p>The base station shall set this field corresponding to Table 3.7.2.3.2.26-3.</p>

**Table 3.7.2.3.2.26-3. TD Mode**

<b>TD_MODE</b>	<b>Descriptions</b>
<b>00</b>	OTD (Orthogonal Transmit Diversity) mode
<b>01</b>	STS (Space Time Spreading) mode
<b>10-11</b>	Reserved

SR1\_TD\_POWER\_LEVEL - Spreading Rate 1 TD transmit power level.

If SR1\_TD\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to the TD transmit power level relative to that of the Forward Pilot Channel, as specified in Table 3.7.2.3.2.26-4.

1

**Table 3.7.2.3.2.26-4. TD Transmit Power Level**

<b>TD_POWER_LEVEL</b>	<b>Transmit Power Level</b>
00	9 dB below the Forward Pilot Channel transmit power
01	6 dB below the Forward Pilot Channel transmit power
10	3 dB below the Forward Pilot Channel transmit power
11	Same as the Forward Pilot Channel transmit power

2

3

SR3\_INCL - Spreading Rate 3 information included indicator.

4

5

6

The base station shall set this field to '1' if the Spreading Rate 3 information is included in this message; otherwise, the base station shall set this field to '0'.

7

SR3\_CENTER\_FREQ\_INCL - Center SR3 frequency assignment included.

8

9

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

10

11

12

13

14

The base station shall set this field to '1', if the CDMA Channel number corresponding to the SR3 center frequency assignment for the CDMA Channel containing a Broadcast Control Channel is different to EXT\_CDMA\_FREQ. Otherwise, the base station shall set this field to '0'.

15

SR3\_CENTER\_FREQ - Center SR3 frequency assignment.

16

17

18

If SR3\_CENTER\_FREQ\_INCL is not included or is included but is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

19

20

21

22

The base station shall set this field to the CDMA Channel number corresponding to the SR3 center frequency assignment for the CDMA Channel containing a Broadcast Control Channel.

23

SR3\_BRAT - Spreading Rate 3 BCCH data rate.

24

25

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

26

27

28

29

The base station shall set this field to the BCCH rate field value shown in Table 3.7.2.3.2.26-2 corresponding to the data rate used by the Primary Broadcast Control Channel in the system.

30

SR3\_BCCH\_CODE\_CHAN - Spreading Rate 3 BCCH Walsh code.

31

32

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to the Walsh code corresponding to the Spreading Rate 3 BCCH.

**SR3\_PRIMARY\_PILOT** – Primary SR3 pilot.

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to the value shown in Table 3.7.2.3.2.26-5 corresponding to the position of the primary SR3 pilot.

**Table 3.7.2.3.2.26-5. The Position of the Primary SR3 Pilot**

<b>SR3_PRIMARY_PILOT (Binary)</b>	<b>Position</b>
00	The primary pilot is on the lowest SR3 frequency
01	The primary pilot is on the center SR3 frequency
10	The primary pilot is on the highest SR3 frequency
11	Reserved

**SR3\_PILOT\_POWER1** – The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.

**Table 3.7.2.3.2.26-6. Pilot Transmission Power**

<b>SR3_PILOT_POWER1, SR3_PILOT_POWER2 (Binary)</b>	<b>Relative Transmission Power</b>
000	0dB
001	1dB
010	2dB
011	3dB
100	4dB
101	5dB
110	6dB
111	7dB

SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

If SR3\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field to the value shown in Table 3.7.2.3.2.26-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.

6

7

8

9

10

1

**DS\_INCL** - Direct Spread (DS) System and Information Available.

13

14

15

16

DS\_BLOB - Access Information about a Direct Spread (DS) System.

18

If DS\_INCL is set to '1', the base station shall include this field and set it as described in [32].

If DS INCL is set to '0', the base station shall omit this field.

21

## 1 3.7.2.3.2.27 Extended Global Service Redirection Message

2 MSG\_TAG: EGSRDM

3

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
REDIRECT_ACCOLC	16
RETURN_IF_FAIL	1
DELETE_TMSI	1

ADD_RECORD_LEN	8
Type-specific fields	$8 \times \text{ADD\_RECORD\_LEN}$
ADD_LAST_SEARCH_RECORD_IND	1

{(NUM\_ADD\_RECORD)}

4

5

PILOT\_PN - Pilot PN sequence offset index.

1			The base station shall set this field to the pilot PN sequence
2			offset for this base station, in units of 64 PN chips.
3	CONFIG_MSG_SEQ	-	Configuration message sequence number.
4			The base station shall set this field to CONFIG_SEQ
5			(see 3.6.2.2).
6	REDIRECT_ACCOLC	-	Redirected access overload classes.
7			See REDIRECT_ACCOLC field defined in 3.7.2.3.2.18.
8			The base station shall set the subfields corresponding to the
9			access overload classes of mobile stations which are to be
10			redirected to '1', and shall set the remaining subfields to '0'.

1	RETURN_IF_FAIL	-	Return if fail indicator.
2			The base station shall set this field to '1' if the mobile station
3			is required to return to the system from which it is being
4			redirected upon failure to obtain service after attempting all
5			qualified redirection records in this message; otherwise, the
6			base station shall set this field to '0'.
7	DELETE_TMSI	-	Delete TMSI indicator.
8			The base station shall set this field to '1' if the mobile station
9			is required to delete the TMSI assigned to the mobile station;
10			otherwise, the base station shall set this field to '0'.
11	REDIRECT_P_REV_INCL	-	Redirection mobile protocol revision included.
12			If the redirection specified in this message applies to the
13			mobile stations of some specific protocol revisions, the base
14			station shall set this field to '1'; otherwise, if this redirection
15			applies to all mobile stations, the base station shall set this
16			field to '0'.
17	EXCL_P_REV_IND	-	Excluding mobile protocol revision indicator.
18			If the REDIRECT_P_REV_INCL is set to '1', the base station
19			shall include this field and set this field as described below;
20			otherwise, the base station shall omit this field.
21			If mobile stations with MOB_P_REV in the range between
22			REDIRECT_P_MIN and REDIRECT_P_MAX inclusive are
23			excluded from this Global Service Redirection, the base
24			station shall set this field to '1'. Otherwise, if the mobile
25			stations with MOB_P_REV in the protocol revision range
26			specified in REDIRECT_P_MIN and REDIRECT_P_MAX are
27			subjected to the redirection, the base station shall set this
28			field to '0'.
29	REDIRECT_P_MIN	-	Minimum redirection protocol revision.
30			If REDIRECT_P_REV_INCL is set to '0', the base station shall
31			omit this field; otherwise, the base station shall include this
32			field and set it as follows.
33			The base station shall set this field to the minimum protocol
34			revision of which mobile stations are subjected to as specified
35			by the action contained in EXCL_P_REV_IND (i.e., to be
36			redirected or excluded from redirection). The base station
37			shall set this field to a protocol revision equal to or greater
38			than six.
39	REDIRECT_P_MAX	-	Maximum redirection protocol revision.
40			If REDIRECT_P_REV_INCL is set to '0', the base station shall
41			omit this field; otherwise, the base station shall include this
42			field and set it as follows.

1			The base station shall set this field to the maximum protocol
2			revision of which mobile stations are subjected to as specified
3			by the action contained in EXCL_P_REV_IND (i.e., to be
4			redirected or excluded from redirection). The base station
5			shall set this field to a protocol revision equal to or greater
6			than six.
7	RECORD_TYPE	-	Redirection record type.
8			The base station shall set this field to the RECORD_TYPE
9			value shown in Table 3.7.2.3.2.16-2 corresponding to the
10			type of redirection specified by this record.
11	RECORD_LEN	-	Redirection record length.
12			The base station shall set this field to the number of octets in
13			the type-specific fields of this redirection record.
14	Type-specific fields	-	Redirection record type-specific fields.
15			The base station shall include type-specific fields based on
16			the RECORD_TYPE of this redirection record, as specified
17			below.
18	LAST_SEARCH_RECORD_IND	-	Last search record indicator.
19			The base station shall set this field to '0' if the mobile station
20			is to attempt redirection per the next qualified redirection
21			record in the message following failure to acquire the target
22			system for the current redirection record; otherwise, the base
23			station shall set this field to '1'.
24	NUM_ADD_RECORD	-	Number of additional redirection records.
25			The base station shall set this field to the number of
26			additional redirection records.
27	The base station shall include NUM_ADD_RECORD occurrences of the following variable		
28	length additional redirection record.		
29	ADD_REDIRECT_ACCOLC	-	Additional redirected access overload classes.
30			See REDIRECT_ACCOLC field defined in 3.7.2.3.2.18.
31			The base station shall set the subfields corresponding to the
32			access overload classes of mobile stations which are to be
33			redirected to '1' and shall set the remaining subfields to '0'.
34	ADD_DELETE_TMSI	-	Additional delete TMSI indicator.
35			The base station shall set this field to '1' if the mobile station
36			is required to delete the TMSI assigned to the mobile station;
37			otherwise, the base station shall set this field to '0'.
38	ADD_REDIRECT_P_REV_INCL	-	Additional redirection mobile protocol revision
39			included.
40			If the redirection specified in this message applies to the
41			mobile stations of some specific protocol revisions, the base
42			station shall set this field to '1'; otherwise, if this redirection
43			applies to all mobile stations, the base station shall set this
44			field to '0'.

1	ADD_EXCL_P_REV_IND	-	Additional excluding mobile protocol revision indicator.
2			If the ADD_REDIRECT_P_REV_INCL is set to '1', the base
3			station shall include this field and set this field as described
4			below; otherwise, the base station shall omit this field.
5			If mobile stations with MOB_P_REV in the range between
6			ADD_REDIRECT_P_MIN and ADD_REDIRECT_P_MAX
7			inclusive are excluded from this global service redirection, the
8			base station shall set this field to '1'. Otherwise, if the mobile
9			stations with MOB_P_REV in the protocol revision range
10			specified in ADD_REDIRECT_P_MIN and
11			ADD_REDIRECT_P_MAX are subjected to the redirection, the
12			base station shall set this field to '0'.
13	ADD_REDIRECT_P_MIN	-	Additional minimum redirection protocol revision.
14			If ADD_REDIRECT_P_REV_INCL is set to '0', the base station
15			shall omit this field; otherwise, the base station shall include
16			this field and set it as follows.
17			The base station shall set this field to the minimum protocol
18			revision of which mobile stations are subjected to as specified
19			by the action contained in ADD_EXCL_P_REV_IND (i.e., to be
20			redirected or excluded from redirection). The base station
21			shall set this field to a protocol revision equal to or greater
22			than six.
23	ADD_REDIRECT_P_MAX	-	Additional maximum redirection protocol revision.
24			If ADD_REDIRECT_P_REV_INCL is set to '0', the base station
25			shall omit this field; otherwise, the base station shall include
26			this field and set it as follows.
27			The base station shall set this field to the maximum protocol
28			revision of which mobile stations are subjected to as specified
29			by the action contained in ADD_EXCL_P_REV_IND (i.e., to be
30			redirected or excluded from redirection). The base station
31			shall set this field to a protocol revision equal to or greater
32			than six.
33	ADD_RECORD_TYPE	-	Additional redirection record type.
34			The base station shall set this field to the RECORD_TYPE
35			value shown in Table 3.7.2.3.2.16-2 corresponding to the
36			type of redirection specified by this record.
37	ADD_RECORD_LEN	-	Additional redirection record length.
38			The base station shall set this field to the number of octets in
39			the type-specific fields of this redirection record.
40	Type-specific fields	-	Redirection record type-specific fields.
41			The base station shall include type-specific fields based on
42			the ADD_RECORD_TYPE of this redirection record, as
43			specified below.

1 ADD\_LAST\_SEARCH\_RECORD\_IND - Additional last search record indicator.

2 The base station shall set this field to '0' if the mobile station  
3 is to attempt redirection per the next qualified redirection  
4 record in the message following failure to acquire the target  
5 system for the current redirection record; otherwise, the base  
6 station shall set this field to '1'.

7

8 If RECORD\_TYPE or ADD\_RECORD\_TYPE is equal to '00000010', the base station shall  
9 include the following type specific fields:

10

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM\_CHANS occurrences of the following field:

{ (NUM\_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM\_CHANS)

SUBCLASS_INFO_INCL	1
SUBCLASS_REC_LEN	0 or 5

SUBCLASS\_REC\_LEN + 1 occurrences of the following  
subrecord:

{ (SUBCLASS\_REC\_LEN + 1)

REDIRECT_SUBCLASS	1
-------------------	---

} (SUBCLASS\_REC\_LEN + 1)

RESERVED	0 - 7 (as needed)
----------	-------------------

11

12 BAND\_CLASS - Band class.

13 The base station shall set this field to the CDMA band class,  
14 as specified in [30].

15 EXPECTED\_SID - Expected SID.

16 If the base station is redirecting the mobile station to a  
17 specific system, the base station shall set this field to the SID  
18 of that system; otherwise, the base station shall set this field  
19 to '0'.

20 EXPECTED\_NID - Expected NID.

1			If the base station is redirecting the mobile station to a
2			specific network, the base station shall set this field to the
3			NID of that network; otherwise, the base station shall set this
4			field to 65535.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '0'
7	NUM_CHANS	-	Number of CDMA Channels.
8			The base station shall set this field to the number of
9			occurrences of the CDMA_CHAN field in this record.
10	CDMA_CHAN	-	CDMA Channel number.
11			For each CDMA Channel on which the mobile station is to
12			attempt to acquire a CDMA system, the base station shall
13			include one occurrence of this field specifying the associated
14			CDMA Channel number.
15	SUBCLASS_INFO_INCL	-	Band subclass information included
16			The base station shall set this field to '0' when band subclass
17			information is not included for the redirection record;
18			otherwise, the base station shall set this field to '1'.
19	SUBCLASS_REC_LEN	-	Band subclass subrecord length
20			If SUBCLASS_INFO_INCL is set to '0', the base station shall
21			omit this field; otherwise, the base station shall set this field
22			as follows:
23			The base station shall set this field to the number of
24			redirection band subclass indicator fields included in the
25			subrecord minus one. The number of redirection band
26			subclass indicator fields included is limited to the highest
27			band subclass associated with this redirection record (i.e. if
28			the highest band subclass is K, then SUBCLASS_REC_LEN =
29			K).
30			If the SUBCLASS_REC_LEN field is included, the base station shall include
31			SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included
32			corresponds to band subclass '0' and the N <sup>th</sup> field included corresponds to band subclass
33			'N-1'.
34	REDIRECT_SUBCLASS	-	Redirection band subclass indicator
35			The base station shall set this field to '1' if the corresponding
36			band subclass is associated with this redirection record;
37			otherwise, the base station shall set this field to '0'.
38	RESERVED	-	Reserved bits.
39			The base station shall add reserved bits as needed in order to
40			make the length of the entire record equal to an integer
41			number of octets. The base station shall set these bits to '0'.
42			
43			

## 1 3.7.2.3.2.28 Extended CDMA Channel List Message

2 MSG\_TAG: ECCLM

3

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_FREQ	4

NUM\_FREQ occurrences of the following field:

{ (NUM\_FREQ)

CDMA_FREQ	11
-----------	----

} (NUM\_FREQ)

RC_QPCH_SEL_INCL	1
------------------	---

If RC\_QPCH\_SEL\_INCL is equal to '1', include NUM\_FREQ occurrences of the following field:

{ (NUM\_FREQ)

RC_QPCH_HASH_IND	1
------------------	---

} (NUM\_FREQ)

TD_SEL_INCL	1
-------------	---

TD_MODE	0 or 2
---------	--------

If TD\_SEL\_INCL is equal to '1', include NUM\_FREQ occurrences of the following fields:

{ (NUM\_FREQ)

TD_HASH_IND	1
-------------	---

TD_POWER_LEVEL	0 or 2
----------------	--------

} (NUM\_FREQ)

CDMA_BAND	5
-----------	---

SUBCLASS_INFO_INCL	1
--------------------	---

SUBCLASS_REC_LEN	0 or 5
------------------	--------

SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS\_REC\_LEN + 1)

CDMA_SUBCLASS	1
---------------	---

} (SUBCLASS\_REC\_LEN + 1)

CDMA_FREQ_WEIGHT_INCL	1
-----------------------	---

4

1

If CDMA\_FREQ\_WEIGHT\_INCL is equal to '1', include NUM\_FREQ occurrences of the following field:

{ (NUM\_FREQ)

CDMA_FREQ_WEIGHT	3
------------------	---

} (NUM\_FREQ)

NUM_BAND	3
----------	---

{ (NUM\_BAND)

ADD_CDMA_BAND	5
ADD_SUBCLASS_INFO_INCL	1
ADD_SUBCLASS_REC_LEN	0 or 5

ADD\_SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord:

{ (ADD\_SUBCLASS\_REC\_LEN + 1)

ADD_CDMA_SUBCLASS	1
-------------------	---

} (ADD\_SUBCLASS\_REC\_LEN + 1)

ADD_TD_MODE	0 or 2
BYPASS_SYS_DET_IND	1
NUM_ADD_FREQ	4

NUM\_ADD\_FREQ occurrences of the following field:

{ (NUM\_ADD\_FREQ)

ADD_CDMA_FREQ	11
ADD_RC_QPCH_HASH_IND	0 or 1
ADD_TD_HASH_IND	0 or 1
ADD_TD_POWER_LEVEL	0 or 2
ADD_CDMA_FREQ_WEIGHT	0 or 3

} (NUM\_ADD\_FREQ)

} (NUM\_BAND)

2

3

PILOT\_PN - Pilot PN sequence offset index.

4

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

5

6

CONFIG\_MSG\_SEQ - Configuration message sequence number.

7

The base station shall set this field to CONFIG\_SEQ (see 3.6.2.2).

8

9

NUM\_FREQ - Number of CDMA Frequencies

1                   The base station shall set this field to the number of  
2 occurrences of the CDMA\_FREQ field included in this  
3 message.

4                   The base station shall not set this field to '0000'.

5   The base station shall include NUM\_FREQ occurrences of the following one-field record:

6                   CDMA\_FREQ     -   CDMA Channel frequency assignment.

7                   If this message is sent on the Paging Channel:

8                   The base station shall set this field to the CDMA channel  
9 number corresponding to the CDMA frequency  
10 assignment for a CDMA Channel containing a Paging  
11 Channel (see [2]).

12                   This CDMA channel shall reside in the same band class  
13 as the band class where this message is being  
14 transmitted. If SUBCLASS\_INFO\_INCL is equal to '1', this  
15 CDMA channel shall also reside in at least one supported  
16 CDMA\_SUBCLASS included in the message.

17                   If this message is sent on the Primary Broadcast Control  
18 Channel:

19                   The base station shall set this field to the CDMA Channel  
20 number corresponding to the CDMA frequency  
21 assignment for a CDMA Channel containing a Primary  
22 Broadcast Control Channel and Forward Common Control  
23 Channel (see [2]).

24                   This CDMA channel shall reside in the same band class  
25 as the band class where this message is being  
26 transmitted. If SUBCLASS\_INFO\_INCL is equal to '1', this  
27 CDMA channel shall also reside in at least one supported  
28 CDMA\_SUBCLASS included in the message.

29                   If the base station supports a CDMA frequency  
30 assignment without transmit diversity, the base station  
31 should not set the first occurrence of this field to a CDMA  
32 channel number corresponding to a transmit diversity  
33 frequency assignment.

34   RC\_QPCH\_SEL\_INCL     -   RC and QPCH Selection included indicator

35                   The base station shall set this field to '1', if NUM\_FREQ  
36 occurrences of RC\_QPCH\_HASH\_IND are included; otherwise,  
37 it shall set this field to '0'.

38   If the base station sets this field to '1', the base station shall set the RC\_QPCH\_HASH\_IND  
39 field to '1' in at least one of the following one-field records:

40   RC\_QPCH\_HASH\_IND     -   RC\_QPCH channel hashing indicator

41                   If RC\_QPCH\_SEL\_INCL is set to '1', the base station shall  
42 include NUM\_FREQ occurrences of this field and set this field  
43 as follow; otherwise, the base station shall omit this field.

1			The base station shall set this field to '1', if the corresponding
2			CDMA channel is to be selected for channel hashing by
3			mobile stations capable of Radio Configurations greater than
4			two or capable of supporting Quick Paging Channel.
5	TD_SEL_INCL	-	Transmit diversity selection indicator included.
6			The base station shall set this field to '1', if the base station
7			includes transmit diversity selection information in this
8			message; otherwise, the base station shall set this field to '0'.
9			When the <i>Extended CDMA Channel List Message</i> is sent on
10			the Paging Channel, the base station shall set this field to '0'.
11	TD_MODE	-	Transmit diversity mode.
12			If TD_SEL_INCL is set to '0', the base station shall omit this
13			field; otherwise, the base station shall include this field and
14			set it as follows:
15			The base station shall set this field to the Transmit Diversity
16			mode used on the band class where this message is being
17			transmitted, as specified in Table 3.7.2.3.2.26-3.
18	If TD_SEL_INCL is set to '1', the base station shall include NUM_FREQ occurrences of the		
19	following two-field record, and shall set the TD_HASH_IND field to '1' in at least one of the		
20	records:		
21	TD_HASH_IND	-	Transmit diversity hash indicator.
22			If the associated CDMA_FREQ is to be selected for CDMA
23			channel hashing by mobile stations capable of supporting
24			transmit diversity [TD_MODE], the base station shall set the
25			field to '1'; otherwise, the base station shall set this field to
26			'0'.
27	TD_POWER_LEVEL	-	Transmit diversity power level.
28			If TD_HASH_IND is set to '0', the base station shall omit this
29			field; otherwise, the base station shall include this field and
30			set it to the transmit diversity transmission power level
31			relative to that of the Forward Pilot Channel, as specified in
32			Table 3.7.2.3.2.26-4.
33	CDMA_BAND	-	Current band class.
34			The base station shall set this field to the CDMA band class
35			(see [30]) corresponding to the CDMA frequency assignment
36			for the CDMA Channel where this message is being
37			transmitted.
38	SUBCLASS_INFO_INCL	-	Band subclass information included
39			The base station shall set this field to '0' when no band
40			subclasses are associated with the listed CDMA_FREQ
41			channels or when band subclasses are not to be factored into
42			the mobile station's hashing algorithm; otherwise, the base
43			station shall set this field to '1'.

1	SUBCLASS_REC_LEN	- Band subclass subrecord length
2		If SUBCLASS_INFO_INCL is set to '0', the base station shall
3		omit this field; otherwise, the base station shall set this field
4		as follows:
5		The base station shall set this field to the number of band
6		subclass indicator fields included in the subrecord minus
7		one. The number of band subclass indicator fields included
8		is limited to the highest band subclass supported on any of
9		the CDMA_FREQ channels listed above for the current band
10		(i.e. if the highest band subclass is K, then
11		SUBCLASS_REC_LEN = K).
12	If the SUBCLASS_REC_LEN field is included, the base station shall include	
13	SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field included	
14	corresponds to band subclass '0' and the N <sup>th</sup> field included corresponds to band subclass	
15	'N-1'.	
16	CDMA_SUBCLASS	- Band subclass indicator
17		The base station shall set this field to '1' if the corresponding
18		band subclass is supported on any of the CDMA_FREQ
19		channels listed above; otherwise, the base station shall set
20		this field to '0'.
21	CDMA_FREQ_WEIGHT_INCL	- CDMA frequency weight included indicator
22		The base station shall set this field to '1' if the
23		CDMA_FREQ_WEIGHT fields are included in this message;
24		otherwise, it shall set this field to '0'.
25	If CDMA_FREQ_WEIGHT_INCL is included and set to '1', the base station shall include	
26	NUM_FREQ occurrences of the following one-field record:	
27	CDMA_FREQ_WEIGHT	- CDMA frequency weight
28		The base station shall set this field to one less than the
29		weight for this CDMA channel to be used in channel hashing
30		by the mobile station.
31	NUM_BAND	- Number of CDMA Bands
32		The base station shall set this field to the number of
33		additional bands listed in this message.
34	The base station shall include NUM_BAND occurrences of the following record:	
35	ADD_CDMA_BAND	- Band class.
36		The base station shall set this field to the CDMA band class,
37		as specified in [30], corresponding to the additional CDMA
38		frequencies (ADD_CDMA_FREQ) included in this record.
39	ADD_SUBCLASS_INFO_INCL	- Band subclass information included
40		The base station shall set this field to '0' when no band
41		subclasses are associated with the listed band or when band
42		subclasses are not to be factored into the mobile station's
43		hashing algorithm; otherwise, the base station shall set this
44		field to '1'.

1	ADD_SUBCLASS_REC_LEN	-	Band subclass subrecord length
2			If ADD_SUBCLASS_INFO_INCL is set to '0', the base station
3			shall omit this field; otherwise, the base station shall set this
4			field as follows:
5			The base station shall set this field to the number of band
6			subclass indicator fields included in the subrecord minus
7			one. The number of band subclass indicator fields included
8			is limited to the highest band subclass supported on the
9			band listed above (i.e. if the highest band subclass is K, then
10			ADD_SUBCLASS_REC_LEN = K).
11	If the ADD_SUBCLASS_REC_LEN field is included, the base station shall include		
12	ADD_SUBCLASS_REC_LEN + 1 occurrences of the following subrecord. The first field		
13	included corresponds to band subclass '0' and the N <sup>th</sup> field included corresponds to band		
14	subclass 'N-1'.		
15	ADD_CDMA_SUBCLASS	-	Band subclass indicator
16			The base station shall set this field to '1' if the corresponding
17			band subclass is supported on the band listed above;
18			otherwise, the base station shall set this field to '0'.
19	ADD_TD_MODE	-	Transmit diversity mode.
20			If TD_SEL_INCL is set to '0', the base station shall omit this
21			field; otherwise, the base station shall include this field and
22			set it as follows:
23			The base station shall set this field to the Transmit Diversity
24			mode on the ADD_CDMA_BAND listed above, as specified in
25			Table 3.7.2.3.2.26-3.
26	BYPASS_SYS_DET_IND	-	Direct to idle allowed indicator.
27			The base station shall set this field to '1' if the mobile station
28			is allowed to go directly to idle state on any CDMA channel
29			belonging to the ADD_CDMA_BAND listed above.
30	NUM_ADD_FREQ	-	Number of additional CDMA Frequencies
31			The base station shall set this field to the number of
32			occurrences of the ADD_CDMA_FREQ field included hereafter.
33	The mobile station shall include NUM_ADD_FREQ occurrences of the following record:		
34	ADD_CDMA_FREQ	-	CDMA Channel frequency assignment.
35			If this message is sent on the Paging Channel:
36			The base station shall set this field to the CDMA channel
37			number corresponding to the CDMA frequency
38			assignment for a CDMA Channel containing a Paging
39			Channel (see [2]).

1 This CDMA channel resides in the band class listed in  
2 this ADD\_CDMA\_BAND record. If  
3 ADD\_SUBCLASS\_INFO\_INCL is equal to '1', this CDMA  
4 channel shall also reside in at least one supported  
5 ADD\_CDMA\_SUBCLASS included in this  
6 ADD\_CDMA\_BAND record.

7 If this message is sent on the Primary Broadcast Control  
8 Channel:

9 The base station shall set this field to the CDMA Channel  
10 number corresponding to the CDMA frequency  
11 assignment for a CDMA Channel containing a Primary  
12 Broadcast Control Channel and Forward Common Control  
13 Channel (see [2]).

14 This CDMA channel resides in the band class listed in  
15 this ADD\_CDMA\_BAND record. If  
16 ADD\_SUBCLASS\_INFO\_INCL is equal to '1', this CDMA  
17 channel shall also reside in at least one supported  
18 ADD\_CDMA\_SUBCLASS included in this  
19 ADD\_CDMA\_BAND record.

20 If the base station supports a CDMA frequency  
21 assignment without transmit diversity, the base station  
22 should not set the first occurrence of this field to a CDMA  
23 channel number corresponding to a transmit diversity  
24 frequency assignment.

25 ADD\_RC\_QPCH\_HASH\_IND - RC QPCH channel hashing indicator

26 If RC\_QPCH\_SEL\_INCL is set to '0', the base station shall  
27 omit this field; otherwise, the base station shall include this  
28 field and set it as follows:

29 The base station shall set this field to '1', if the corresponding  
30 CDMA channel is to be selected for channel hashing by  
31 mobile stations capable of Radio Configurations greater than  
32 two or capable of supporting Quick Paging Channel.

33 ADD\_TD\_HASH\_IND - Transmit diversity hash indicator.

34 If TD\_SEL\_INCL is set to '0', the base station shall omit this  
35 field; otherwise, the base station shall include this field and  
36 set it as follows:

37 If the associated ADD\_CDMA\_FREQ is to be selected for  
38 CDMA channel hashing by mobile stations capable of  
39 supporting transmit diversity [TD\_MODE], the base station  
40 shall set the field to '1'; otherwise, the base station shall set  
41 this field to '0'.

42 ADD\_TD\_POWER\_LEVEL - Transmit diversity power level.

43 If ADD\_TD\_HASH\_IND is not included or is included and set  
44 to '0', the base station shall omit this field; otherwise, the  
45 base station shall include this field and set it to the transmit  
46 diversity transmission power level relative to that of the  
47 Forward Pilot Channel, as specified in Table 3.7.2.3.2.26-4.

1    ADD\_CDMA\_FREQ\_WEIGHT -    CDMA frequency weight  
2  
3                                If CDMA\_FREQ\_WEIGHT\_INCL is set to '0', the base station  
4                                shall omit this field; otherwise, the base station shall include  
5                                this field and set it as follows:  
6  
7                                The base station shall set this field to one less than the  
8                                weight for this CDMA channel to be used in channel hashing  
                                 by the mobile station.

## 1 3.7.2.3.2.29 User Zone Reject Message

2 MSG\_TAG: UZRM

Field	Length (bits)
REJECT_UZID	16
REJECT_ACTION_INDI	3
UZID_ASSIGN_INCL	1
ASSIGN_UZID	0 or 16

3 REJECT\_UZID - Rejected User Zone identifier.

4 The base station shall set this field to the User Zone identifier  
5 of the User Zone rejected by the base station.

6 REJECT\_ACTION\_INDI - Rejection action indicator.

7 The base station shall set this field to the value shown in  
8 Table 3.7.2.3.2.29-1 corresponding to the User Zone rejection  
9 action field to identify the mobile station action.

10 **Table 3.7.2.3.2.29-1. Rejection Action Indicators**

Description	REJECT_ACTION_INDI (binary)
Disable UZID until Next Update	000
Disable UZID until next power cycle	001
Disable UZID until new SID	010
Disable UZID until new SID/NID	011
Disable UZID until next BASE_ID	100
All other REJECT_ACTION_INDI values are reserved	

11

12 UZID\_ASSIGN\_INCL - User Zone identifier assignment included indicator.

13 If assigned UZID information is included, the base station  
14 shall set this field to '1'; otherwise, the base station shall set  
15 this field to '0'.

16 ASSIGN\_UZID - Assigned User Zone identifiers.

1  
2  
3

The base station shall set this field to the User Zone identifier of the User Zone assigned to the mobile station.

3

1	PILOT_PN	- Pilot PN sequence offset index.
2		The base station shall set this field to the pilot PN sequence
3		offset for this base station, in units of 64 PN chips.
4	CONFIG_MSG_SEQ	- Configuration message sequence number.
5		The base station shall set this field to CONFIG_SEQ
6		(see 3.6.2.2).
7	SID	- System identification.
8		The base station shall set this field to the system
9		identification number for this system (see 2.6.5.2).
10	NID	- Network identification.
11		This field serves as a sub-identifier of a system as defined by
12		the owner of the SID.
13		The base station shall set this field to the network
14		identification number for this network (see 2.6.5.2).
15	PACKET_ZONE_ID	- Packet data services zone identifier.
16		If the base station supports a packet data service zone, the
17		base station shall set this field to its non-zero packet data
18		services zone identifier.
19		If the base station does not support a packet data service
20		zone, the base station shall set this field to '00000000'.
21	REG_ZONE	- Registration zone.
22		The base station shall set this field to its registration zone
23		number (see 2.6.5.1.5).
24	TOTAL_ZONES	- Number of registration zones to be retained.
25		The base station shall set this field to the number of
26		registration zones the mobile station is to retain for purposes
27		of zone-based registration (see 2.6.5.1.5).
28		If zone-based registration is to be disabled, the base station
29		shall set this field to '000'.
30	ZONE_TIMER	- Zone timer length.
31		The base station shall set this field to the ZONE_TIMER value
32		shown in Table 3.7.2.3.2.30-1 corresponding to the length of
33		the zone registration timer to be used by mobile stations.
34		

1

**Table 3.7.2.3.2.30-1. Value of Zone Timer**

<b>ZONE_TIMER Value (binary)</b>	<b>Timer Length (Minutes)</b>
000	1
001	2
010	5
011	10
100	20
101	30
110	45
111	60

2

3

MULT\_SIDS - Multiple SID storage indicator.

4

If mobile stations may store entries of SID\_NID\_LIST containing different SIDs, the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

5

6

7

MULT\_NIDS - Multiple NID storage indicator.

8

If mobile stations may store multiple entries of SID\_NID\_LIST having the same SID (with different NIDs), the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

9

10

11

12

HOME\_REG - Home registration indicator.

13

If mobile stations that are not roaming (see 2.6.5.3) and have MOB\_TERM\_HOME equal to '1' are to be enabled for autonomous registrations, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

14

15

16

17

18

19

FOR\_SID\_REG - SID roamer registration indicator.

20

If mobile stations that are foreign SID roamers (see 2.6.5.3) and have MOB\_TERM\_FOR\_SID equal to '1' are to be enabled for autonomous registration, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

21

22

23

24

25

26

FOR\_NID\_REG - NID roamer registration indicator.

27

If mobile stations that are foreign NID roamers (see 2.6.5.3) and have MOB\_TERM\_FOR\_NID equal to '1' are to be enabled for autonomous registration, the base station shall set this field to '1'. If such mobile stations are not to be enabled for autonomous registration, the base station shall set this field to '0'.

28

29

30

31

32

1	POWER_UP_REG	-	Power-up registration indicator.
2			If mobile stations enabled for autonomous registration are to
3			register immediately after powering on and receiving the
4			system overhead messages, the base station shall set this
5			field to '1'; otherwise, the base station shall set this field to
6			'0'.
7	POWER_DOWN_REG	-	Power-down registration indicator.
8			If mobile stations enabled for autonomous registration are to
9			register immediately before powering down, the base station
10			shall set this field to '1'; otherwise, the base station shall set
11			this field to '0'.
12	PARAMETER_REG	-	Parameter-change registration indicator.
13			If mobile stations are to register on parameter change events
14			as specified in 2.6.5.1.6, the base station shall set this field to
15			'1'. If not, the base station shall set this field to '0'.
16	REG_PRD	-	Registration period.
17			If mobile stations are not to perform timer-based registration,
18			the base station shall set this field to '0000000'. If mobile
19			stations are to perform timer-based registration, the base
20			station shall set this field to the value in the range 29 to 85
21			inclusive, such that the desired timer value is
22			$\lfloor 2\text{REG\_PRD}/4 \rfloor \times 0.08 \text{ seconds.}$
23	DIST_REG_INCL	-	Distance-Based Registration Information Included.
24			The base station shall set this field to '1' if it includes
25			distance-based registration information in the message and
26			mobile stations are to perform distance-based registration;
27			otherwise the base station shall set this field to '0'.
28	REG_DIST	-	Registration distance.
29			If DIST_REG_INCL is set to '1', the base station shall include
30			the field REG_DIST and shall set this field as shown below;
31			otherwise, the base station shall omit this field.
32			The base station shall set this field to the non-zero "distance"
33			beyond which the mobile station is to re-register (see
34			2.6.5.1.4).
35	DELETE_FOR_TMSI	-	Delete foreign TMSI.
36			The base station shall set this field to '1' to cause the mobile
37			station to delete its TMSI if the TMSI was assigned in a
38			different TMSI zone from that specified by the TMSI_ZONE
39			field of this message; otherwise, the base station shall set this
40			field to '0'.
41	USE_TMSI	-	Use TMSI indicator.
42			The base station shall set this field to the value shown in
43			Table 3.7.2.3.2.13-1 corresponding to the type of MSID that
44			the mobile station is to use on the Enhanced Access
45			Channel.

1	PREF_MSID_TYPE	-	Preferred Enhanced Access Channel Mobile Station Identifier Type.
2			
3			The base station shall set this field to the value shown in
4			Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
5			to the type of MSID that the mobile station is to use on the
6			Enhanced Access Channel.
7	TMSI_ZONE_LEN	-	TMSI zone length.
8			The base station shall set this field to the number of octets
9			included in the TMSI_ZONE. The base station shall set this
10			field to a value in the range 1 to 8 inclusive.
11	TMSI_ZONE	-	TMSI zone.
12			The base station shall set this field to the TMSI zone number
13			as specified in [27].
14	IMSI_T_SUPPORTED	-	IMSI_T support indicator.
15			The base station shall set this field to '1' to indicate support
16			for a 15-digit IMSI_T addressing according to [18].
17	MAX_NUM_ALT_SO	-	Maximum number of alternative service options.
18			The base station shall set this field to the maximum number
19			of service option numbers defined in [30], corresponding to
20			alternative service options with no service option group
21			number assigned, that the mobile station is allowed to
22			include in the <i>Origination Message</i> , and the <i>Page Response</i> .
23			If the base station sets this field to a value greater than zero,
24			in addition, the base station shall allow the mobile station to
25			include
26			• a 4-bit or 8-bit service option bitmap in the <i>Origination</i>
27			<i>Message</i> and the <i>Page Response Message</i> ;
28			• alternate service option numbers, not limited to
29			MAX_ALT_SO_NUM, in the <i>Enhanced Origination</i>
30			<i>Message</i> .
31	AUTO_MSG_SUPPORTED	-	Autonomous message supported indicator.
32			If the base station allows the autonomous delivery of the
33			<i>Device Information Message</i> on the r-csch, the base station
34			shall set this field to '1'; otherwise, the base station shall set
35			this field to '0'.
36	AUTO_MSG_INTERVAL	-	Autonomous message interval.
37			If AUTO_MSG_SUPPORTED is set to '0', the base station shall
38			omit this field; otherwise, the base station shall include this
39			field and shall set this field to the AUTO_MSG_INTERVAL
40			value shown in Table 3.7.2.3.2.13-4 to indicate the minimum
41			time interval between autonomous messages sent by a mobile
42			station to the infrastructure. This parameter is intended to
43			allow the infrastructure to limit the frequency of autonomous
44			messages sent by a mobile station on the r-csch.
45	OTHER_INFO_INCL	-	Other information included indicator.

1		The base station shall set this field to '1' if the MC-RR
2		Parameters Message is not sent (see [32]); otherwise, the base
3		station shall set this field to '0'.
4	BASE_ID	- Base station identification.
5		If OTHER_INFO_INCL is set to '1', the base station shall
6		include this field and set it as follows; otherwise, the base
7		station shall omit this field.
8		The base station shall set this field to its identification
9		number.
10	MCC	- Mobile Country Code.
11		If OTHER_INFO_INCL is set to '1', the base station shall
12		include this field and set it as follows; otherwise, the base
13		station shall omit this field.
14		The base station shall set this field to the MCC (see 2.3.1)
15	IMSI_11_12	- 11 <sup>th</sup> and 12 <sup>th</sup> digits of the IMSI.
16		If OTHER_INFO_INCL is set to '1', the base station shall
17		include this field and set it as follows; otherwise, the base
18		station shall omit this field.
19		The base station shall set this field to the IMSI_11_12 (see
20		2.3.1).
21	BROADCAST_GPS_ASST	- Broadcast GPS Assist Indicator.
22		If OTHER_INFO_INCL is set to '1', the base station shall
23		include this field and set it as follows; otherwise, the base
24		station shall omit this field.
25		The base station shall set this field to '1' if it supports
26		Broadcast GPS Assist capability; otherwise, the base station
27		shall set this field to '0'.
28	SIG_ENCRYPT_SUP	- Signaling encryption supported indicator.
29		If OTHER_INFO_INCL is set to '1', the base station shall
30		include this field and set it as follows; otherwise, the base
31		station shall omit this field.
32		This field consists of the subfields shown in Table
33		2.7.1.3.2.1-5.
34		If this field is included, the base station shall set the
35		subfields as follows:
36		The base station shall set the CMEA subfield to '1'.
37		The base station shall set each other subfield to '1' if the
38		corresponding signaling encryption algorithm is supported by
39		the base station; otherwise, the base station shall set the
40		subfield to '0'.
41		The base station shall set the RESERVED subfield to '00000'.
42	CS_SUPPORTED	- Concurrent Services supported indicator.

1			If the base station supports concurrent services, the base
2			station shall set this field to '1'; otherwise, the base station
3			shall set this field to '0'.
4	MS_INIT_POS_LOC_SUP_IND	-	Mobile station initiated position location
5			determination supported indicator.
6			If the base station supports mobile station initiated position
7			determination, the base station shall set this field to '1';
8			otherwise, the base station shall set this field to '0'.
9	MSG_INTEGRITY_SUP	-	Message integrity supported indicator.
10			If the base station supports message integrity the base
11			station shall set this field to '1'; otherwise, the base station
12			shall set this field to '0'.
13	SIG_INTEGRITY_SUP_INCL	-	Signaling message integrity information included
14			indicator.
15			If MSG_INTEGRITY_SUP is set to '1', the base station shall
16			include this field and set it as follows; otherwise, the base
17			station shall omit this field.
18			If the base station supports other integrity algorithm(s) in
19			addition to the default integrity algorithm, the base station
20			shall set this field to '1'; otherwise, the base station shall set
21			this field to '0'.
22	SIG_INTEGRITY_SUP	-	Signaling integrity algorithm supported by the base station.
23			If SIG_INTEGRITY_SUP_INCL is included and is set to '1',
24			the base station shall set this field as follows; otherwise, the
25			base station shall omit this field.
26			The base station shall set this field to indicate the supported
27			message integrity algorithms in addition to the default
28			integrity algorithm.
29			This field consists of the subfields shown in Table
30			2.7.1.3.2.1-6.
31			The base station shall set each subfield to '1' if the
32			corresponding message integrity algorithm is supported by
33			the base station; otherwise, the base station shall set the
34			subfield to '0'.
35			The base station shall set the RESERVED subfield to
36			'00000000'.
37	IMSI_10_INCL	-	IMSI_10 included.
38			If the MNC is a 3-digit number and the base station wants to
39			convey the third digit of the MNC to the mobile station, the
40			base station shall set this field to '1'; otherwise, the base
41			station shall set this field to '0'.
42	IMSI_10	-	The least significant digit of MNC when the MNC is a 3-digit
43			number.

1		If IMSI_10_INCL is set to '0', the base station shall omit this
2		field; otherwise, the base station shall set this field to the
3		least significant digit of MNC converted to binary by the
4		standard decimal-to-binary conversion as shown in Table
5		2.3.1.1-1.
6	MAX_ADD_SERV_INSTANCE-	Maximum number of additional service reference
7		identifiers allowed in origination
8		If the CS_SUPPORTED field is set to '0', the base station shall
9		omit this field; otherwise, the base station shall include this
10		field and set it as follows:
11		The base station shall set this field to the maximum number
12		of additional service reference identifiers that can be included
13		in the <i>Origination Message</i> or <i>Enhanced Origination Message</i> .
14	TKZ_MODE_SUPPORTED	- Tracking zone mode supported indicator.
15		The base station shall set this field to '1' if tracking zone
16		mode is supported; otherwise, the base station shall set this
17		field to '0'.
18	TKZ_ID	- Tracking zone identifier.
19		If TKZ_MODE_SUPPORTED is set to '1', the base station shall
20		set this field to its tracking zone identifier; otherwise, the
21		base station shall omit this field.
22	PZ_HYST_ENABLED	- Packet zone hysteresis enabled.
23		If the PACKET_ZONE_ID field is set to '00000000', the base
24		station shall omit this field; otherwise, the base station shall
25		include this field and set it as follows:
26		If the packet zone hysteresis feature is to be enabled at the
27		mobile station, the base station shall set this field to '1';
28		otherwise, the base station shall set this field to '0'.
29	PZ_HYST_INFO_INCL	- Packet zone hysteresis information included indicator.
30		If the PZ_HYST_ENABLED field is included and is set to '1',
31		the base station shall include this field and set it as follows;
32		otherwise, the base station shall omit this field.
33		If the base includes the PZ_HYST_LIST_LEN,
34		PZ_HYST_ACT_TIMER and packet zone hysteresis timer
35		related fields, the base station shall set this field to '1';
36		otherwise, the base station shall set this field to '0'.
37	PZ_HYST_LIST_LEN	- Packet zone hysteresis list length.
38		If the PZ_HYST_INFO_INCL field is included and is set to '1',
39		the base station shall include this field and set it as follows;
40		otherwise, the base station shall omit this field.
41		The base station shall set this field to the length of the packet
42		zone hysteresis list. This field shall be within the range '0001'
43		through '1111', inclusive.
44	PZ_HYST_ACT_TIMER	- Packet zone hysteresis activation timer.

1			If the PZ_HYST_INFO_INCL field is included and is set to '1',
2			the base station shall include this field and set it as follows;
3			otherwise, the base station shall omit this field.
4			The base station shall set to the value of the packet zone
5			hysteresis activation timer (in units of seconds). This field
6			shall be within the range '00000001' through '11111111',
7			inclusive.
8	PZ_HYST_TIMER_MUL	-	Packet zone hysteresis timer multiplier.
9			If the PZ_HYST_INFO_INCL field is included and is set to '1',
10			the base station shall include this field and set it as follows;
11			otherwise, the base station shall omit this field.
12			The base station shall set the field to x, where $x \times 8^y$
13			seconds is the value of the hysteresis timer and y is the value
14			indicated in the PZ_HYST_TIMER_EXP field. The base station
15			shall set this field to a value that is between 1 and 7
16			inclusive. The value 0 is reserved.
17	PZ_HYST_TIMER_EXP	-	Packet zone hysteresis timer exponent.
18			If the PZ_HYST_INFO_INCL field is included and is set to '1',
19			the base station shall include this field and set it as follows;
20			otherwise, the base station shall omit this field.
21			The base station shall set the field to y, where $x \times 8^y$
22			seconds is the value of the hysteresis timer and x is the value
23			indicated in the PZ_HYST_TIMER_MUL field. The base station
24			shall set this field to a value that is between 0 and 4
25			inclusive. All the other values are reserved.
26	EXT_PREF_MSID_TYPE	-	Extended Preferred Enhanced Access Channel Mobile Station
27			Identifier Type.
28			The base station shall set this field to the value shown in
29			Table 3.7.2.3.2.13-1 and Table 3.7.2.3.2.13-1a corresponding
30			to the type of MSID that the mobile station is to use on the
31			Enhanced Access Channel.
32	MEID_REQD	-	MEID Required Indicator.
33			If EXT_PREF_MSID_TYPE is set to '11' and PREF_MSID_TYPE
34			is set to either '00' or '11', the base station shall omit this
35			field; otherwise, the base station shall include this field and
36			set it as follows:
37			The base station shall set this field to '1' to indicate that
38			network requires MEID (of mobile stations having R-UIM) in
39			registrations; otherwise the base station shall set this field to
40			'0'.
41			
42

1

2

PILOT\_PN - Pilot PN sequence offset index.

3

4

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

5

CONFIG\_MSG\_SEQ - Configuration message sequence number.

6

7

The base station shall set this field to CONFIG\_SEQ (see 3.6.2.2).

8

BASE\_ID - Base station identification.

1		The base station shall set this field to its identification
2		number.
3	P_REV	- Protocol revision level.
4		The base station shall set this field to '00001100'.
5	MIN_P_REV	- Minimum protocol revision level.
6		The base station sets this field to prevent mobile stations,
7		which cannot be supported by the base station from
8		accessing the system.
9		The base station shall set this field to the minimum protocol
10		revision level that it supports.
11	SR3_INCL	- Spreading Rate 3 common channel parameters included
12		indicator.
13		The base station shall set this field to '1' if the base station
14		includes SR3 related parameters in this message; otherwise,
15		the base station shall set this field to '0'.
16	SR3_CENTER_FREQ_INCL	- Center SR3 frequency assignment included.
17		If SR3_INCL is set to '0', the base station shall omit this field;
18		otherwise, the base station shall set this field as follows:
19		The base station shall set this field to '1', if the CDMA
20		Channel number corresponding to the SR3 center frequency
21		assignment for the CDMA Channel containing a Broadcast
22		Control Channel is different from the current SR1 frequency
23		assignment. Otherwise, the base station shall set this field to
24		'0'.
25	SR3_CENTER_FREQ	- Center SR3 frequency assignment.
26		If SR3_CENTER_FREQ_INCL is not included or is included
27		but is set to '0', the base station shall omit this field;
28		otherwise, the base station shall set this field as follows:
29		The base station shall set this field to the CDMA Channel
30		number corresponding to the SR3 center frequency
31		assignment for the CDMA Channel containing a Broadcast
32		Control Channel.
33	SR3_BRAT	- Spreading Rate 3 BCCH data rate.
34		If SR3_INCL is set to '0', the base station shall omit this field;
35		otherwise, the base station shall set this field as follows:
36		The base station shall set this field to the BCCH rate field
37		value shown in Table 3.7.2.3.2.26-2 corresponding to the
38		data rate used by the Primary Broadcast Control Channel in
39		the system.
40	SR3_BCCH_CODE_CHAN	- Spreading Rate 3 BCCH Walsh code index.
41		If SR3_INCL is set to '0', the base station shall omit this field;
42		otherwise, the base station shall set this field as follows:

1			The base station shall set this field to the Walsh code index
2			corresponding to the Spreading Rate 3 BCCH.
3	SR3_PRIMARY_PILOT	-	Primary SR3 pilot.
4			If SR3_INCL is set to '0', the base station shall omit this field;
5			otherwise, the base station shall set this field as follows:
6			The base station shall set this field to the value shown in
7			Table 3.7.2.3.2.26-5 corresponding to the position of the
8			primary SR3 pilot.
9	SR3_PILOT_POWER1	-	The primary SR3 pilot power level relative to that of the pilot
10			on the lower frequency of the two remaining SR3 frequencies.
11			If SR3_INCL is set to '0', the base station shall omit this field;
12			otherwise, the base station shall set this field to the value
13			shown in Table 3.7.2.3.2.26-6 corresponding to the power
14			level of the primary pilot with respect to the pilot on the lower
15			frequency of the two remaining SR3 frequencies.
16	SR3_PILOT_POWER2	-	The primary SR3 pilot power level relative to that of the pilot
17			on the higher frequency of the two remaining SR3
18			frequencies.
19			If SR3_INCL is set to '0', the base station shall omit this field;
20			otherwise, the base station shall set this field to the value
21			shown in Table 3.7.2.3.2.26-6 corresponding to the power
22			level of the primary pilot with respect to the pilot on the
23			higher frequency of the two remaining SR3 frequencies.
24	SRCH_WIN_A	-	Search window size for the Active Set and Candidate Set.
25			The base station shall set this field to the value shown in
26			Table 2.6.6.2.1-1 corresponding to the search window size to
27			be used by mobile stations for the Active Set and Candidate
28			Set.
29	SRCH_WIN_R	-	Search window size for the Remaining Set.
30			The base station shall set this field to the value shown in
31			Table 2.6.6.2.1-1 corresponding to the search window size to
32			be used by mobile stations for the Remaining Set.
33	T_ADD	-	Pilot detection threshold.
34			This value is used by the mobile station to trigger the transfer
35			of a pilot from the Neighbor Set or Remaining Set to the
36			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
37			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
38			<i>Strength Measurement Message</i> initiating the handoff process
39			(see 2.6.6.2.5.2).
40			The base station shall set this field to the pilot detection
41			threshold, expressed as an unsigned binary number equal to
42			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .

1	T_DROP	-	Pilot drop threshold.
2			This value is used by mobile stations to start a handoff drop
3			timer for pilots in the Active Set and the Candidate Set (see
4			2.6.6.2.3).
5			The base station shall set this field to the pilot drop
6			threshold, expressed as an unsigned binary number equal to
7			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
8	T_COMP	-	Active Set versus Candidate Set comparison threshold.
9			Mobile stations transmit a <i>Pilot Strength Measurement</i>
10			<i>Message</i> or <i>Extended Pilot Strength Measurement Message</i>
11			when the strength of a pilot in the Candidate Set exceeds that
12			of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
13			The base station shall set this field to the threshold
14			Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB.
15	T_TDROP	-	Drop timer value.
16			Timer value after which an action is taken by mobile stations
17			for a pilot that is a member of the Active Set or Candidate Set,
18			and whose strength has not become greater than T_DROP. If
19			the pilot is a member of the Active Set, a <i>Pilot Strength</i>
20			<i>Measurement Message</i> or <i>Extended Pilot Strength</i>
21			<i>Measurement Message</i> is issued. If the pilot is a member of
22			the Candidate Set, it will be moved to the Neighbor Set.
23			The base station shall set this field to the T_TDROP value
24			shown in Table 2.6.6.2.3-1 corresponding to the drop timer
25			value to be used by mobile stations.
26	NGHBR_MAX_AGE	-	Neighbor Set maximum AGE.
27			The base station shall set this field to the maximum AGE
28			value beyond which mobile stations are to drop members
29			from the Neighbor Set (see 2.6.6.2.6.3).
30	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
31			Active Set, or dropping a pilot from the Active Set (see
32			2.6.6.2.3 and 2.6.6.2.5.2).
33			The base station shall set this field as an unsigned binary
34			number.
35	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
36			the Active Set (see 2.6.6.2.5.2).
37			The base station shall set this field as a two's complement
38			signed binary number, in units of 0.5 dB.
39	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
40			from the Active Set (see 2.6.6.2.3).
41			The base station shall set this field as a two's complement
42			signed binary number, in units of 0.5 dB.

1	ENC_SUPPORTED	-	Encryption fields included.
2			The base station shall set this field to '1' if the encryption
3			related fields are included; otherwise the base station shall
4			set this field to '0'.
5	SIG_ENCRYPT_SUP	-	Signaling encryption supported indicator.
6			If ENC_SUPPORTED is equal to '1', the base station shall
7			include this field; otherwise, the base station shall omit this
8			field. If this field is included, this field indicates which
9			signaling encryption algorithms are supported by the base
10			station.
11			This field consists of the subfields shown in Table
12			2.7.1.3.2.1-5.
13			If this field is included, the base station shall set the
14			subfields as follows:
15			The base station shall set the CMEA subfield to '1'.
16			The base station shall set each other subfield to '1' if the
17			corresponding signaling encryption algorithm is supported by
18			the base station; otherwise, the base station shall set the
19			subfield to '0'.
20			The base station shall set the RESERVED subfield to '00000'.
21	UI_ENCRYPT_SUP	-	User information encryption supported indicator.
22			If ENC_SUPPORTED is equal to '1', the base station shall
23			include this field; otherwise, the base station shall omit this
24			field. If this field is included, the base station shall set this
25			field to indicate the supported user information encryption
26			algorithms.
27			This field consists of the subfields shown in Table
28			2.7.1.3.2.4-9.
29			The base station shall set each subfield to '1' if the
30			corresponding user information encryption algorithm is
31			supported by the base station; otherwise, the base station
32			shall set the subfield to '0'.
33	ADD_FIELDS_LEN	-	Additional fields length.
34			The base station shall set this field to the number of octets
35			included in the ADD_FIELDS.
36	ADD_FIELDS	-	Additional fields.
37			If the ADD_FIELDS_LEN field is not equal to '00000000', the
38			base station shall include the following fields as additional
39			fields.
40			

Field	Length (bits)
RESERVED	0 – 7 (as needed)

1	CCH_INFO_INCL	-	Common Channel information included indicator.
2			If the message is sent on the f-csch and additional
3			information is included, the base station shall set this field to
4			'1'; otherwise, the base station shall set this field to '0'.
5			The base station shall set this field to '1'.
6	MCC	-	Mobile Country Code.
7			If CCH_INFO_INCL is set to '1', the base station shall include
8			this field and set it as follows; otherwise, the base station
9			shall omit this field.
10			The base station shall set this field to the MCC (see 2.3.1)
11	IMSI_11_12	-	11 <sup>th</sup> and 12 <sup>th</sup> digits of the IMSI.
12			If CCH_INFO_INCL is set to '1', the base station shall include
13			this field and set it as follows; otherwise, the base station
14			shall omit this field.
15			The base station shall set this field to the IMSI_11_12 (see
16			2.3.1).
17	MAX_SLOT_CYCLE_INDEX	-	Maximum slot cycle index.
18			If CCH_INFO_INCL is set to '1', the base station shall include
19			the field MAX_SLOT_CYCLE_INDEX and shall set this field as
20			shown below; otherwise, the base station shall omit this field.
21			The base station shall set this field to the
22			SLOT_CYCLE_INDEX value corresponding to the maximum
23			slot cycle length permitted (see 2.6.2.1.1).
24	PWR_REP_THRESH	-	Power control reporting threshold.
25			If CCH_INFO_INCL is set to '1', the base station shall include
26			the field PWR_REP_THRESH and shall set this field as shown
27			below; otherwise, the base station shall omit this field.
28			The base station shall set this field to the number of bad
29			frames (see [2]) to be received in a measurement period on the
30			channel which carries the Power Control Subchannel before
31			mobile stations are to generate a <i>Power Measurement Report</i>
32			<i>Message</i> (see 2.6.4.1.1). If the base station sets
33			PWR_THRESH_ENABLE to '1', it shall not set this field to
34			'00000'.
35	PWR_REP_FRAMES	-	Power control reporting frame count.
36			If CCH_INFO_INCL is set to '1', the base station shall include
37			the field PWR_REP_FRAMES and shall set this field as shown
38			below; otherwise, the base station shall omit this field.

1		The base station shall set this field to the value such that the
2		number given by
3		$\lfloor 2^{(PWR\_REP\_FRAMES/2)} \times 5 \rfloor \text{ frames}$
4		is the number of frames over which mobile stations are to
5		count frame errors.
6	PWR_THRESH_ENABLE -	Threshold report mode indicator.
7		If CCH_INFO_INCL is set to '1', the base station shall include
8		the field PWR_THRESH_ENABLE and shall set this field as
9		shown below; otherwise, the base station shall omit this field.
10		If mobile stations are to generate threshold <i>Power</i>
11		<i>Measurement Report Messages</i> , the base station shall set this
12		field to '1'. If mobile stations are not to generate threshold
13		<i>Power Measurement Report Messages</i> , the base station shall
14		set this field to '0'.
15	PWR_PERIOD_ENABLE -	Periodic report mode indicator.
16		If CCH_INFO_INCL is set to '1', the base station shall include
17		the field PWR_PERIOD_ENABLE and shall set this field as
18		shown below; otherwise, the base station shall omit this field.
19		If mobile stations are to generate periodic <i>Power Measurement</i>
20		<i>Report Messages</i> , the base station shall set this field to '1'. If
21		mobile stations are not to generate periodic <i>Power</i>
22		<i>Measurement Report Messages</i> , the base station shall set this
23		field to '0'.
24	PWR_REP_DELAY -	Power report delay.
25		The period that mobile stations wait following a <i>Power</i>
26		<i>Measurement Report Message</i> before restarting frame
27		counting for power control purposes.
28		If CCH_INFO_INCL is set to '1', the base station shall include
29		the field PWR_REP_DELAY and shall set this field as shown
30		below; otherwise, the base station shall omit this field.
31		The base station shall set this field to the power report delay
32		value, in units of 4 frames (see 2.6.4.1.1).
33	RESELECT_INCLUDED -	System reselection parameters included.
34		If CCH_INFO_INCL is set to '1', the base station shall include
35		the field RESELECT_INCLUDED and shall set this field as
36		shown below; otherwise, the base station shall omit this field.
37		If the base station is including system reselection parameters,
38		the base station shall set this field to '1'; otherwise, the base
39		station shall set this field to '0'.
40	EC_THRESH -	Pilot power threshold.
41		If RESELECT_INCLUDED is included and is set to '1', the
42		base station shall include the field EC_THRESH and shall set
43		this field as shown below; otherwise, the base station shall
44		omit this field.
45		The base station shall set this field to:

1		$\lceil (pilot\_power\_threshold + 115) \rceil$
2		where <i>pilot_power_threshold</i> is the pilot power, $E_c$ , in
3		dBm/1.23 MHz, below which the mobile station is to perform
4		system reselection.
5	EC_I0_THRESH	- Pilot $E_c/I_0$ threshold.
6		If RESELECT_INCLUDED is included and is set to '1', the
7		base station shall include the field EC_I0_THRESH and shall
8		set this field as shown below; otherwise, the base station
9		shall omit this field.
10		The base station shall set this field to:
11		$\lfloor -20 \times \log_{10} (pilot\_threshold) \rfloor$
12		where <i>pilot_threshold</i> is the pilot $E_c/I_0$ below which the
13		mobile station is to perform system reselection.
14	BASE_LAT	- Base station latitude.
15		If CCH_INFO_INCL is set to '1', the base station shall include
16		this field and set it as shown below; otherwise, the base
17		station shall omit this field.
18		The base station shall set this field to its latitude in units of
19		0.25 second, expressed as a two's complement signed
20		number with positive numbers signifying North latitudes.
21		The base station shall set this field to a value in the range -
22		1296000 to 1296000 inclusive (corresponding to a range of -
23		90° to +90°).
24		The base station shall set this field to all zeros if its latitude is
25		not known.
26	BASE_LONG	- Base station longitude.
27		If CCH_INFO_INCL is set to '1', the base station shall include
28		this field and set it as shown below; otherwise, the base
29		station shall omit this field.
30		The base station shall set this field to its longitude in units of
31		0.25 second, expressed as a two's complement signed
32		number with positive numbers signifying East longitude. The
33		base station shall set this field to a value in the range -
34		2592000 to 2592000 inclusive (corresponding to a range of -
35		180° to +180°).
36		The base station shall set this field to all zeros if its longitude
37		is not known.
38	PILOT_REPORT	- Pilot reporting indicator.
39		If CCH_INFO_INCL is set to '1', the base station shall include
40		the field PILOT_REPORT and shall set this field as shown
41		below; otherwise, the base station shall omit this field.

1			The base station shall set this field to '1' if the mobile station
2			is to report the additional pilots which have pilot strengths
3			exceeding T_ADD in all Enhanced Access Channel messages.
4			The base station shall set this field to '0' if the mobile station
5			is to report the additional pilots which have pilot strengths
6			exceeding T_ADD only in the <i>Origination Message</i> , <i>Reconnect</i>
7			<i>Message</i> , and the <i>Page Response Message</i> .
8	ACC_ENT_HO_ORDER	-	Access entry handoff permitted indicator.
9			If CCH_INFO_INCL is set to '1', the base station shall include
10			this field and set it as described below; otherwise, the base
11			station shall omit this field.
12			The base station shall set this field to '1' if the mobile station
13			is permitted to perform an access entry handoff after receiving
14			a message while performing the <i>Mobile Station Order and</i>
15			<i>Message Processing Operation</i> in the <i>Mobile Station Idle State</i>
16			(see 2.6.2.4); otherwise, the base station shall set this field to
17			'0'.
18	ACCESS_HO	-	Access handoff permitted indicator.
19			If CCH_INFO_INCL is set to '1', the base station shall include
20			this field and set it as described below; otherwise, the base
21			station shall omit this field.
22			The base station shall set this field to '1' if the mobile station
23			is permitted to perform an access handoff (see 2.6.3.1.3.2);
24			otherwise, the base station shall set this field to '0'.
25	ACCESS_HO_MSG_RSP	-	Access handoff permitted for message response indicator.
26			If ACCESS_HO is included and set to '1', the base station
27			shall include this field and set it as described below;
28			otherwise, the base station shall omit this field.
29			The base station shall set this field to '1' if the mobile station
30			is permitted to perform an access handoff after receiving a
31			message and before responding to that message in the
32			<i>System Access State</i> ; otherwise, the base station shall set this
33			field to '0'.
34	ACCESS_PROBE_HO	-	Access probe handoff permitted indicator.
35			If CCH_INFO_INCL is set to '1', the base station shall include
36			this field and set it as described below; otherwise, the base
37			station shall omit this field.
38			The base station shall set this field to '1' if the mobile station
39			is permitted to perform an access probe handoff (see
40			2.6.3.1.3.3); otherwise, the base station shall set this field to
41			'0'.
42	ACC_HO_LIST_UPD	-	Access handoff list update permitted indicator.
43			If ACCESS_PROBE_HO is included and is set to '1', the base
44			station shall include this field and set it as described below;
45			otherwise, the base station shall omit this field.

1		The base station shall set this field to '1' if the mobile station
2		is permitted to update the access handoff list during an
3		access attempt (see 2.6.3.1.7.2); otherwise, the base station
4		shall set this field to '0'.
5	ACC_PROBE_HO_OTHER_MSG	- Access probe handoff permitted for messages other
6		than the <i>Origination Message</i> , <i>Reconnect Message</i> , and the
7		<i>Page Response Message</i> .
8		If ACCESS_PROBE_HO is included and set to '1', the base
9		station shall include this field and set it as described below;
10		otherwise, the base station shall omit this field.
11		The base station shall set this field to '1' if the mobile station
12		is permitted to perform an access probe handoff for messages
13		other than the <i>Origination Message</i> , <i>Reconnect Message</i> , and
14		the <i>Page Response Message</i> . The base station shall set this
15		field to '0' if the mobile station is permitted to perform an
16		access probe handoff only for the <i>Origination Message</i> ,
17		<i>Reconnect Message</i> , and the <i>Page Response Message</i> . See
18		2.6.3.1.3.3.
19	MAX_NUM_PROBE_HO	- Maximum number of times that the mobile station is
20		permitted to perform an access probe handoff.
21		If ACCESS_PROBE_HO is included and set to '1', the base
22		station shall include this field and set it as described below;
23		otherwise, the base station shall omit this field.
24		The base station shall set this field to the maximum number
25		of times the mobile station is allowed to perform an access
26		probe handoff within an access attempt minus one.
27	NUM_FCCCH	- Total number of Forward Common Control Channels.
28		If CCH_INFO_INCL is set to '1', the base station shall include
29		this field and shall set it as shown below; otherwise, the base
30		station shall omit this field.
31		The base station shall set this field to the total number of
32		Forward Common Control Channels on this CDMA Channel.
33		If this is not a pilot beacon base station, the base station
34		shall set this field to an integer value greater than 0.
35	FCCCH_RATE	- Rate words for the Forward Common Control Channels.
36		If CCH_INFO_INCL is set to '1' and NUM_FCCCH is not equal
37		to '0', the base station shall include this field and shall set it
38		as shown below; otherwise, the base station shall omit this
39		field.
40		The base station shall set this field to the FCCCH rate field
41		value shown in Table 3.7.2.3.2.31-1 corresponding to the
42		data rate used on the Forward Common Control Channels in
43		the system.

**Table 3.7.2.3.2.31-1. Forward Common Control Channel Rate Words**

<b>FCCCH Rate Field (binary)</b>	<b>Forward Common Control Channel rate word</b>
000	9600 bps, 20 ms frame size
001	19200 bps, 20 ms frame size
010	19200 bps, 10 ms frame size
011	38400 bps, 20 ms frame size
100	38400 bps, 10 ms frame size
101	38400 bps, 5 ms frame size
110 – 111	Reserved

- 3
- 4 **FCCCH\_CODE\_RATE** - Code Rate for the Forward Common Control Channels.
- 5 If CCH\_INFO\_INCL is set to '1' and NUM\_FCCCH is not equal
- 6 to '0', the base station shall include this field and shall set it
- 7 as shown below; otherwise, the base station shall omit this
- 8 field.
- 9 If the FCCCH is operating in Spreading Rate 1, the base
- 10 station shall set this field to '0' if the FCCCH Code Rate is 1/4
- 11 (see [2]). The base station shall set this field to '1' if the
- 12 FCCCH Code Rate is 1/2 (see [2]).
- 13 If the FCCCH is operating in Spreading Rate 3, the base
- 14 station shall set this field to '0'.
- 15 The base station shall include NUM\_FCCCH occurrences of the following one field record:
- 16 **FCCCH\_CODE\_CHAN** - Code channel index for the Forward Common Control
- 17 Channel.
- 18 The base station shall set this field to the code channel index
- 19 (see [2]) in the range 1 to 255 inclusive that the mobile
- 20 station is to use on the Forward Common Control Channel.
- 21 **BCAST\_INDEX** - Broadcast index.
- 22 If CCH\_INFO\_INCL is set to '1', the base station shall include
- 23 the field BCAST\_INDEX and shall set this field as shown
- 24 below; otherwise, the base station shall omit this field.
- 25 If Periodic Enhanced Broadcast Paging is disabled, the base
- 26 station shall set this field to '000'; otherwise, the base station
- 27 shall set this field to the Broadcast Index (see 2.6.2.1.1.3.3.2).
- 28 **NUM\_BCCH\_BCAST** - The number of Broadcast Control Channels used for
- 29 transmitting broadcast messages.

If CCH\_INFO\_INCL is set to '1', the base station shall include this field and set it as shown below; otherwise, the base station shall omit this field.

The base station shall set this field to the number of Broadcast Control Channels used for transmitting broadcast messages.

If the NUM\_BCCH\_BCAST field is included, the base station shall set NUM\_BCCH\_BCAST occurrences of the following three-field record, where the *i*th occurrence corresponds to a BCCH indexed by BCN of *i*+1:

BCCH\_CODE\_CHAN - The Walsh Code index for the Broadcast Control Channel.

The base station shall set this field to the Walsh code corresponding to the Broadcast Control Channel.

BRAT - BCCH data rate.

The base station shall set this field to the BRAT field value shown in Table 3.7.2.3.2.31-2 corresponding to the data rate used by the Broadcast Control Channel to which the mobile station is being directed.

**Table 3.7.2.3.2.31-2. Broadcast Control Channel Data Rate**

BRAT Field (binary)	Broadcast Control Channel data rate
00	4800 bps
01	9600 bps
10	19200 bps
11	Reserved

BCCH\_CODE\_RATE - BCCH code rate.

For spreading rate 1, the base station shall set this field to '0' if the BCCH Code Rate is 1/4 (see [2]). For spreading rate 1, the base station shall set this field to '1' if the BCCH code rate is 1/2 (see [2]). For spreading rate 3, the base station shall set this field to '0'.

QPCH\_SUPPORTED - Quick Paging Channel Supported Indication.

If CCH\_INFO\_INCL is set to '1', the base station shall include the field QPCH\_SUPPORTED and shall set this field as shown below; otherwise, the base station shall omit this field.

If the base station supports Quick Paging Channel operation, the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

NUM\_QPCH - Number of Quick Paging Channels.

1			If QPCH_SUPPORTED is included and set to '1', the base
2			station shall include this field and set it as described below;
3			otherwise, the base station shall omit this field.
4			The base station shall set this field to the number of Quick
5			Paging Channels on this CDMA Channel. The base station
6			shall not set this field to '00'.
7	QPCH_RATE	-	Quick Paging Channel indicator rate.
8			If QPCH_SUPPORTED is included and set to '1', the base
9			station shall include this field and set it as described below;
10			otherwise, the base station shall omit this field.
11			The base station shall set this field to the QPCH_RATE field
12			value shown in Table 3.7.2.3.2.13-2 corresponding to the
13			indicator rate used by the Quick Paging Channel in the
14			system.
15	QPCH_POWER_LEVEL_PAGE	-	Quick Paging Channel paging indicator transmit
16			power level.
17			If QPCH_SUPPORTED is included and set to '1', the base
18			station shall include this field and set it as described below;
19			otherwise, the base station shall omit this field.
20			The base station shall set this field to the Quick Paging
21			Channel paging indicator transmit power level relative to that
22			of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.

**Table 3.7.2.3.2.31-3. Quick Paging Channel Transmit Power Level**

<b>QPCH_POWER_LEVEL_PAGE QPCH_POWER_LEVEL_CONFIG QPCH_POWER_LEVEL_BCAST (binary)</b>	<b>Transmit Power Level</b>
000	5 dB below the Pilot Channel Transmit Power
001	4 dB below the Pilot Channel Transmit Power
010	3 dB below the Pilot Channel Transmit Power
011	2 dB below the Pilot Channel Transmit Power
100	1 dB below the Pilot Channel Transmit Power
101	Same as the Pilot Channel Transmit Power
110	1 dB above the Pilot Channel Transmit Power
111	2 dB above the Pilot Channel Transmit Power

**QPCH\_CCI\_SUPPORTED** - Quick Paging Channel configuration change indicator supported.

If QPCH\_SUPPORTED is included and set to '1', the base station shall include this field and set it as described below; otherwise, the base station shall omit this field.

If the base station supports configuration change indicators on the Quick Paging Channel, the base station shall set this field to '1'; otherwise the base station shall set this field to '0'.

**QPCH\_POWER\_LEVEL\_CONFIG** - Quick Paging Channel configuration change indicator transmit power level.

If QPCH\_CCI\_SUPPORTED is included and set to '1', the base station shall include this field and set it as described below; otherwise, the base station shall omit this field.

The base station shall set this field to the Quick Paging Channel configuration change indicator transmit power level relative to that of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.

1			If SR3_INCL is set to '1' and QPCH_SUPPORTED is included
2			and set to '1', the base station shall include NUM_QPCH
3			occurrences of the following one field record:
4	QPCH_CODE_CHAN	-	Code channel index of the Quick Paging Channel for
5			Spreading Rate 3.
6			The base station shall set this field to the code channel index
7			(see [2]) in the range 1 to 255 inclusive that the mobile
8			station is to use on the Quick Paging Channel for Spreading
9			Rate 3.
10	QPCH_BI_SUPPORTED	-	Quick Paging Channel broadcast indicator supported.
11			If QPCH_SUPPORTED is included and set to '1', the base
12			station shall include this field and set it as described below;
13			otherwise, the base station shall omit this field.
14			If the base station supports broadcast indicators on the
15			Quick Paging Channel, the base station shall set this field to
16			'1'; otherwise the base station shall set this field to '0'.
17	QPCH_POWER_LEVEL_BCAST	-	Quick Paging Channel broadcast indicator transmit
18			power level.
19			If QPCH_BI_SUPPORTED is included and set to '1', the base
20			station shall include this field and set it as described below;
21			otherwise, the base station shall omit this field.
22			The base station shall set this field to the Quick Paging
23			Channel broadcast indicator transmit power level relative to
24			that of the Pilot Channel as specified in Table 3.7.2.3.2.31-3.
25	SDB_SUPPORTED	-	Short Data Burst supported indicator.
26			If CCH_INFO_INCL is set to '1', the base station shall include
27			the field SDB_SUPPORTED and shall set this field as shown
28			below; otherwise, the base station shall omit this field.
29			The base station shall set this field to '1' if the mobile station
30			is permitted to send a Short Data Burst; otherwise, the base
31			station shall set this field to '0'.
32	BROADCAST_GPS_ASST	-	Broadcast GPS Assist Indicator.
33			If CCH_INFO_INCL is set to '1', the base station shall include
34			the field BROADCAST_GPS_ASST and shall set this field as
35			shown below; otherwise, the base station shall omit this field.
36			The base station shall set this field to '1' if it supports
37			Broadcast GPS Assist capability; otherwise, the base station
38			shall set this field to '0'.
39	RLGAIN_TRAFFIC_PILOT	-	Gain adjustment of the Reverse Traffic Channel relative to the
40			Reverse Pilot Channel for Radio Configurations greater than
41			2.
42			If CCH_INFO_INCL is set to '1', the base station shall include
43			the field RLGAIN_TRAFFIC_PILOT and shall set this field as
44			shown below; otherwise, the base station shall omit this field.

1		The base station shall set this field to the correction factor to
2		be used by mobile stations in setting the power of a reverse
3		traffic channel, expressed as a two's complement value in
4		units of 0.125 dB (see [2]).
5	REV_PWRCNTL_DELAY_INCL	- Reverse Power Control Delay included indicator.
6		If CCH_INFO_INCL is set to '1', the base station shall include
7		this field and set it as shown below; otherwise, the base
8		station shall omit this field.
9		The base station shall set this field to '1' if the base station
10		includes the REV_PWR_CNTL_DELAY field in this message;
11		otherwise, the base station shall set this field to '0'.
12	REV_PWR_CNTL_DELAY	- The reverse power control delay.
13		If REV_PWR_CNTL_DELAY_INCL is included and set to '1', the
14		base station shall include this field and set it as follows;
15		otherwise, the base station shall omit this field.
16		The base station shall set this field to the closed-loop reverse
17		power control delay minus one (the closed-loop reverse power
18		control delay is the time between the end of a gated-on
19		reverse PCG and the beginning of the reverse PCG where the
20		corresponding feedback is sent on the Forward Power Control
21		Subchannel, see [2]), in units of 1.25 ms.
22	MOB_QOS	- Indicator granting permission to the mobile station to request
23		QoS parameter settings in the <i>Origination Message</i> ,
24		<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
25		<i>Message</i> .
26		If CCH_INFO_INCL is set to '1', the base station shall include
27		this field and set it as shown below; otherwise, the base
28		station shall omit this field.
29		The base station shall set this field to '1', if the mobile station
30		is allowed to include a QoS record in the <i>Origination Message</i> ,
31		<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
32		<i>Message</i> ; otherwise, the base station shall set this field to '0'.
33	USE_SYNC_ID	- Sync ID supported indicator.
34		If CCH_INFO_INCL is set to '1', the base station shall include
35		this field and set it as shown below; otherwise, the base
36		station shall omit this field.
37		The base station shall set this field to '1' to indicate that the
38		mobile station is permitted to include the SYNC_ID field in
39		the <i>Page Response Message</i> , the <i>Reconnect Message</i> , the
40		<i>Origination Message</i> and the <i>Enhanced Origination Message</i> ;
41		otherwise, the base station shall set this field to '0'.
42	NUM_OPT_MSG_BITS	- Number of optional overhead messages to be sent.
43		If CCH_INFO_INCL is set to '1', the base station shall include
44		this field and shall set this field as shown below; otherwise,
45		the base station shall omit this field.

1		The base station shall set this field to the number of optional
2		overhead messages to be sent.
3	SENDING_RAND	- <i>ANSI-41 RAND Message</i> indicator.
4		If NUM_OPT_MSG_BITS is included and is equal to or greater
5		than 1, the base station shall include the field
6		SENDING_RAND and shall set this field as shown below;
7		otherwise, the base station shall omit this field.
8		If the base station is sending the <i>ANSI-41 RAND Message</i> on
9		the Primary Broadcast Control Channel, it shall set this field
10		to '1'; otherwise, it shall set this field to '0'.
11	PRI_NGHBR_LST	- <i>Private Neighbor List Message</i> indicator.
12		If NUM_OPT_MSG_BITS is included and is equal to or greater
13		than 2, the base station shall include the field
14		PRI_NGHBR_LST and shall set this field as shown below;
15		otherwise, the base station shall omit this field.
16		If the base station is sending the <i>Private Neighbor List</i>
17		<i>Message</i> on the Primary Broadcast Control Channel, it shall
18		set this field to '1'; otherwise, it shall set this field to '0'.
19	USER_ZONE_ID	- <i>User Zone Identification Message</i> indicator.
20		If NUM_OPT_MSG_BITS is included and is equal to or greater
21		than 3, the base station shall include the field
22		USER_ZONE_ID and shall set this field as shown below;
23		otherwise, the base station shall omit this field.
24		If the base station is sending the <i>User Zone Identification</i>
25		<i>Message</i> on the Primary Broadcast Control Channel, it shall
26		set this field to '1'; otherwise, it shall set this field to '0'.
27	EXT_GLOBAL_REDIRECT	- <i>Extended Global Service Redirection Message</i> indicator.
28		If NUM_OPT_MSG_BITS is included and is equal to or greater
29		than 4, the base station shall include the field
30		EXT_GLOBAL_REDIRECT and shall set this field as shown
31		below; otherwise, the base station shall omit this field.
32		If the base station is sending the <i>Extended Global Service</i>
33		<i>Redirection Message</i> on the Primary Broadcast Control
34		Channel, it shall set this field to '1'; otherwise, the base
35		station shall set this field to '0'.
36	AP_PILOT_INFO	- <i>Access Point Pilot Information Message</i> indicator.
37		If NUM_OPT_MSG_BITS is included and is equal to or greater
38		than 5, the base station shall include the field
39		AP_PILOT_INFO and shall set this field as shown below;
40		otherwise, the base station shall omit this field.
41		If the base station is sending the <i>Access Point Pilot</i>
42		<i>Information Message</i> on the Primary Broadcast Control
43		Channel, it shall set this field to '1'; otherwise, the base
44		station shall set this field to '0'.
45	AP_IDT	- <i>Access Point Identification Message</i> indicator.

1			If NUM_OPT_MSG_BITS is included and is equal to or greater
2			than 6, the base station shall include the field AP_IDT and
3			shall set this field as shown below; otherwise, the base
4			station shall omit this field.
5			If the base station is sending the <i>Access Point Identification</i>
6			<i>Message</i> on the Primary Broadcast Control Channel, it shall
7			set this field to '1'; otherwise, the base station shall set this
8			field to '0'.
9	AP_ID_TEXT	-	<i>Access Point Identification Text Message</i> indicator.
10			If NUM_OPT_MSG_BITS is included and is equal to or greater
11			than 7, the base station shall include the field AP_ID_TEXT
12			and shall set this field as shown below; otherwise, the base
13			station shall omit this field.
14			If the base station is sending the <i>Access Point Identification</i>
15			<i>Text Message</i> on the Primary Broadcast Control Channel, it
16			shall set this field to '1'; otherwise, the base station shall set
17			this field to '0'.
18	GEN_OVHD_INF_IND	-	<i>General Overhead Information Message</i> indicator.
19			If NUM_OPT_MSG is equal to or greater than 8, the base
20			station shall include the field GEN_OVHD_INF_IND and shall
21			set this field as shown below; otherwise, the base station
22			shall omit this field.
23			If the base station is sending the <i>General Overhead</i>
24			<i>Information Message</i> on the Paging Channel, it shall set this
25			field to '1'; otherwise, the base station shall set this field to
26			'0'.
27	FD_CHAN_LST_IND	-	<i>Flex Duplex CDMA Channel List Message</i> indicator.
28			If NUM_OPT_MSG is equal to or greater than 9, the base
29			station shall include the field FD_CHAN_LST_IND and shall
30			set this field as shown below; otherwise, the base station
31			shall omit this field.
32			If the base station is sending the <i>Flex Duplex CDMA Channel</i>
33			<i>List Message</i> on the Primary Broadcast Control Channel, it
34			shall set this field to '1'; otherwise, the base station shall set
35			this field to '0'.
36	ATIM_IND	-	<i>Alternative Technologies Information Message</i> indicator.
37			If NUM_OPT_MSG is equal to or greater than 10, the base
38			station shall include the field ATIM_IND and shall set this
39			field as shown below; otherwise, the base station shall omit
40			this field.
41			If the base station is sending the <i>Alternative Technologies</i>
42			<i>Information Message</i> on the Paging Channel, it shall set this
43			field to '1'; otherwise, the base station shall set this field to
44			'0'.
45			
46	RESERVED	-	Reserved bits.

1		If NUM_OPT_MSG_BITS is included and is equal to or greater
2		than 11, the base station shall include the field RESERVED
3		and shall set this field as shown below; otherwise, the base
4		station shall omit this field.
5		The base station shall add (NUM_OPT_MSG_BITS - 10)
6		reserved bits. The base station shall set these bits to '0'.
7	PILOT_INFO_REQ_SUPPORTED	- Pilot information request supported indicator.
8		If CCH_INFO_INCL is set to '1', the base station shall include
9		this field and set it as shown below; otherwise, the base
10		station shall omit this field.
11		If the base station supports mobile station request for pilot
12		information using the "Pilot Information" record in the <i>Base</i>
13		<i>Station Status Request Message</i> , the base station shall set
14		this field to '1'; otherwise, the base station shall set this field
15		to '0'.
16	BAND_CLASS_INFO_REQ	- Band class information request indicator.
17		If CCH_INFO_INCL is set to '1', the base station shall include
18		this field and set it as shown below; otherwise, the base
19		station shall omit this field.
20		The base station shall set this field to '1' if the
21		ALT_BAND_CLASS field is included in this message;
22		otherwise, the base station shall set this field to '0'.
23	ALT_BAND_CLASS	- Alternate band class.
24		If BAND_CLASS_INFO_REQ is not included, or is included
25		and set to '0', then the base station shall omit this field;
26		otherwise, the base station shall include this field and set it
27		as follows:
28		The base station shall set this field to an alternate CDMA
29		band class (see [30]) supported by the base station. The
30		mobile station is to indicate its capability to support the
31		alternate band class in the <i>Origination Message</i> and <i>Page</i>
32		<i>Response Message</i> .
33	CDMA_OFF_TIME_REP_SUP_IND	- CDMA off time report supported indicator.
34		If the base station supports mobile station report for CDMA
35		off time information using the <i>CDMA Off Time Report</i>
36		<i>Message</i> , the base station shall set this field to '1'; otherwise,
37		the base station shall set this field to '0'.
38	CDMA_OFF_TIME_REP_THRESHOLD_UNIT	- CDMA off time report threshold unit
39		If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
40		station shall omit this field; otherwise, the base station shall
41		include this field and set it as follows:
42		The base station shall set this field to the time unit used in
43		CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
44		3.7.2.3.2.13-5
45	CDMA_OFF_TIME_REP_THRESHOLD	- CDMA off time report threshold

1		If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
2		station shall omit this field; otherwise, the base station shall
3		include this field and set it as follows:
4		The base station shall set this field to the time in units of
5		CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
6		mobile station goes away from the CDMA traffic channel
7		longer than this value, the mobile station is to send a <i>CDMA</i>
8		<i>Off Time Report Message</i> .
9	CHM_SUPPORTED	- Control Hold Mode supported indicator.
10		The base station shall set this field to '1' to indicate that the
11		base station supports the Control Hold Mode; otherwise, the
12		base station shall set this field to '0'.
13	RELEASE_TO_IDLE_IND	- Release to Idle State allowed indicator.
14		If the mobile station is allowed to return to the <i>Mobile Station</i>
15		<i>Idle State</i> upon call release, the base station shall set this
16		field to '1'; otherwise, the base station shall set this field to
17		'0'.
18	RECONNECT_MSG_IND	- <i>Reconnect Message</i> supported indicator.
19		The base station shall set this field to '0' if the mobile station
20		is not allowed to send a <i>Reconnect Message</i> instead of an
21		<i>Origination Message</i> or a <i>Page Response Message</i> ; otherwise,
22		the base station shall set this field to '1'.
23	T_TDROP_RANGE_INCL	- Drop timer range value included indicator.
24		The base station shall set this field to '1' if the
25		T_TDROP_RANGE field is included in this message;
26		otherwise, the base station shall set this field to '0'.
27	T_TDROP_RANGE	- Drop timer range value.
28		Timer range value to use in association with the T_TDROP
29		parameter when determining the drop timer expiration.
30		If T_TDROP_RANGE_INCL is set to '0', the base station shall
31		omit this field; otherwise, the base station shall set this field
32		to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
33		corresponding to the timer expiration range value to be used
34		by the mobile station.
35	FOR_PDCH_SUPPORTED	- Forward Packet Data Channel supported indicator.
36		If the base station supports the Forward Packet Data Channel
37		(F-PDCH), the base station shall set this field to '1'; otherwise,
38		the base station shall set this field to '0'.
39	PDCH_CHM_SUPPORTED	- PDCH Control Hold Mode supported indicator.
40		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
41		omit this field; otherwise, the base station shall include this
42		field and set it as follows:
43		The base station shall set this field to '1' to indicate that the
44		base station supports the PDCH Control Hold Mode;
45		otherwise, the base station shall set this field to '0'

1	PDCH_PARMS_INCL	-	Forward Packet Data Channel related parameters included indicator.
2			
3			If FOR_PDCH_SUPPORTED is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:
4			
5			
6			The base station shall set this field to '1' if the following F-PDCH related fields are included in this message; otherwise, the base station shall set this field to '0'.
7			
8			
9	FOR_PDCH_RLGAIN_INCL	-	Forward Packet Data Channel parameters related to reverse link adjustment gains included indicator.
10			
11			If PDCH_PARMS_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.
12			
13			
14			The base station shall set this field to '1' if the following F-PDCH gain related fields are included in this message; otherwise, the base station shall set this field to '0'.
15			
16			
17	RLGAIN_ACKCH_PILOT	-	Reverse Acknowledgment Channel to pilot adjustment gain.
18			If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.
19			
20			
21			The base station shall set this field to the Reverse Acknowledgment Channel to pilot adjustment gain expressed as a two's complement value in units of 0.125 dB (see [2]).
22			
23			
24	RLGAIN_CQICH_PILOT	-	Reverse Channel Quality Indicator Channel to pilot adjustment gain.
25			
26			If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.
27			
28			
29			The base station shall set this field to the Reverse Channel Quality Indicator Channel to pilot adjustment gain expressed as a two's complement value in units of 0.125 dB (see [2]).
30			
31			
32	NUM_SOFT_SWITCHING_FRAMES	-	Number of frames for R-CQICH soft switching.
33			If PDCH_PARMS_INCL is not included, or is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
34			
35			
36			The base station shall set this field to the duration of the cell switching period, in units of 20 ms, minus one, during which the mobile station is to transmit the cell switch sequence on the R-CQICH when it switches between two pilots which are in different groups (see [3]).
37			
38			
39			
40			
41	NUM_SOFTEN_SWITCHING_FRAMES	-	Number of frames for R-CQICH softer switching.
42			
43			If PDCH_PARMS_INCL is not included, or is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:
44			
45			

1                   The base station shall set this field to the duration of the cell  
2                   switching period, in units of 20 ms, minus one, during which  
3                   the mobile station is to transmit the cell switch sequence on  
4                   the R-CQICH when it switches between two pilots which are  
5                   in the same group (see [3]).

6   NUM\_SOFT\_SWITCHING\_SLOTS   -   Number of slots per frame for R-CQICH soft  
7                   switching.

8                   If PDCH\_PARMS\_INCL is not included, or is included and set  
9                   to '0', the base station shall omit this field; otherwise, the  
10                  base station shall include this field and set it as follows:

11                 The base station shall set this field to the duration of the cell  
12                 switching slots within a switching frame, in units of 1.25 ms  
13                 as specified in Table 3.7.2.3.2.21-10, during which the mobile  
14                 station is to transmit the cell switch indication by using  
15                 Walsh cover of target on the R-CQICH when it switches  
16                 between two pilots which are in different groups.

17   NUM\_SOFTER\_SWITCHING\_SLOTS -   Number of slots per frame for R-CQICH softer  
18                   switching.

19                   If PDCH\_PARMS\_INCL is not included, or is included and set  
20                   to '0', the base station shall omit this field; otherwise, the  
21                   base station shall include this field and set it as follows:

22                 The base station shall set this field to the duration of the cell  
23                 switching slots within a switching frame, in units of 1.25 ms  
24                 as specified in Table 3.7.2.3.2.21-10, during which the mobile  
25                 station is to transmit the cell switch indication by using  
26                 Walsh cover of target on the R-CQICH when it switches  
27                 between two pilots which are in the same group.

28   PDCH\_SOFT\_SWITCHING\_DELAY   -   F-PDCH soft switching delay.

29                   If PDCH\_PARMS\_INCL is not included, or is included and set  
30                   to '0', the base station shall omit this field; otherwise, the  
31                   base station shall include this field and set it as follows:

32                 The base station shall set this field to the minimum  
33                 interruption seen by the mobile station, in units of 10 ms,  
34                 minus one, when the mobile station is to transmit the cell  
35                 switch sequence on the R-CQICH channel when it switches  
36                 between two pilots which are in different groups (see [3]).

37   PDCH\_SOFTER\_SWITCHING\_DELAY   -   F-PDCH softer switching delay.

38                   If PDCH\_PARMS\_INCL is not included, or is included and set  
39                   to '0', the base station shall omit this field; otherwise, the  
40                   base station shall include this field and set it as follows:

41                 The base station shall set this field to the minimum  
42                 interruption seen by the mobile station, in units of 10 ms,  
43                 minus one, when the mobile station is to transmit the cell  
44                 switch sequence on the R-CQICH channel when it switches  
45                 between two pilots which are in the same group (see [3]).

46   WALSH\_TABLE\_ID   -   The index of the Walsh Table used.

1		If PDCH_PARMS_INCL is not included, or is included and set
2		to '0', the base station shall omit this field; otherwise, the
3		base station shall set this field as follows:
4		The base station shall set this field to the index of the Walsh
5		Table being used by the Packet Data Channel. (See [3]).
6	NUM_PDCCH	- The number of Packet Data Control Channels supported.
7		If PDCH_PARMS_INCL is not included, or is included and set
8		to '0', the base station shall omit this field; otherwise, the
9		base station shall include this field and set it as follows:
10		The base station shall set this field to '000' if the pilot
11		supports one Packet Data Control Channel. The base station
12		shall set this field to '001' if the pilot supports two Packet
13		Data Control Channels. The base station shall not set this
14		field to any other value.
15	The base station shall include <i>NUM_PDCCH+1</i> occurrences of the following one-field	
16	record:	
17	FOR_PDCCH_WALSH	- Forward Packet Data Control Channel Walsh code
18		assignment.
19		If PDCH_PARMS_INCL is not included, or is included and set
20		to '0', the base station shall omit this field; otherwise, the
21		base station shall include this field and set it as follows:
22		The base station shall set this field to the Walsh code
23		assignment for the Forward Packet Data Control Channel.
24		If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
25		shall be included first, followed by the Walsh code for
26		PDCCH1.
27	IMSI_10_INCL	- IMSI_10 included.
28		If CCH_INFO_INCL is set to '1', the base station shall include
29		this field and set it as follows; otherwise, the base station
30		shall omit this field.
31		If the MNC is a 3-digit number, the base station shall set this
32		field to '1'; otherwise, the base station shall set this field to
33		'0'.
34	IMSI_10	- The least significant digit of MNC when the MNC is a 3-digit
35		number.
36		If IMSI_10_INCL is not included, or is included and set to '0',
37		the base station shall omit this field; otherwise, the base
38		station shall set this field to the least significant digit of MNC
39		converted to binary by the standard decimal-to-binary
40		conversion as shown in Table 2.3.1.1-1.
41	NEG_SLOT_CYCLE_INDEX_SUP	- Negative slot cycle index supported indicator.
42		The base station shall set this field to '1' if it supports
43		negative values of the preferred slot cycle index
44		(SLOT_CYCLE_INDEX <sub>p</sub> ); otherwise, the base station shall set
45		this field to '0'.

1	RER_MODE_SUPPORTED	- Radio environment reporting mode supported indicator.
2		If the base station supports radio environment reporting
3		mode, the base station shall set this field to '1'; otherwise, the
4		base station shall set this field to '0'.
5	AUTO_FCSO_ALLOWED	- Autonomous <i>Fast Call Setup Order</i> allowed indicator.
6		The base station shall set this field to '1' if the mobile station
7		is allowed to send an autonomous <i>Fast Call Setup Order</i> ;
8		otherwise, the base station shall set this field to '0'.
9	SENDING_BSPM	- <i>BCMC Service Parameters Message</i> indicator.
10		If the base station is sending the <i>BCMC Service Parameters</i>
11		<i>Message</i> on the Primary Broadcast Control Channel, it shall
12		set this field to '1'; otherwise, it shall set this field to '0'.
13	BSPM_PERIOD_INDEX	- BSPM Transmission Periodicity Index.
14		If the SENDING_BSPM field is set to '0', the base station shall
15		omit this field; otherwise, the base station shall include this
16		field and set it as follows:
17		The base station shall set this field to the BSPM transmission
18		periodicity index corresponding to the periodicity with which
19		the BSPM with DIFF_BSPM equal to '0' is transmitted on the
20		Primary Broadcast Control Channel.
21	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
22		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
23		omit this field; otherwise, the base station shall include this
24		field and set it as follows:
25		If the base station supports the Reverse Packet Data Channel
26		(R-PDCH), the base station shall set this field to '1';
27		otherwise, the base station shall set this field to '0'.
28	REV_PDCH_PARMS_INCL	- Reverse Packet Data Channel related parameters included
29		indicator.
30		If REV_PDCH_SUPPORTED is omitted, or if it is included and
31		set to '0', the base station shall omit this field; otherwise, the
32		base station shall include this field and set it as follows:
33		The base station shall set this field to '1' if the R-PDCH
34		parameters are included in this message; otherwise, the base
35		station shall set this field to '0'.
36	REV_PDCH_RLGAIN_INCL	- Reverse Packet Data Channel parameters related to
37		reverse link adjustment gains included indicator.
38		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
39		set to '0', the base station shall omit this field; otherwise, the
40		base station shall include this field, and set it as follows.
41		The base station shall set this field to '1' if the following R-
42		PDCH gain related fields are included in this message;
43		otherwise, the base station shall set this field to '0'.

1	RLGAIN_SPICH_PILOT	-	Reverse Secondary Pilot Channel to pilot adjustment gain.
2			If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
3			and set to '0', the base station shall omit this field; otherwise,
4			the base station shall include this field, and set it as follows.
5			The base station shall set this field to the Reverse Secondary
6			Pilot Channel to pilot adjustment gain expressed as a two's
7			complement value in units of 0.125 dB (see [2]).
8	RLGAIN_REQCH_PILOT	-	Reverse Request Channel to pilot adjustment gain.
9			If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
10			and set to '0', the base station shall omit this field; otherwise,
11			the base station shall include this field, and set it as follows.
12			The base station shall set this field to the Reverse Request
13			Channel to pilot adjustment gain expressed as a two's
14			complement value in units of 0.125 dB (see [2]).
15	RLGAIN_PDCCH_PILOT	-	Reverse Packet Data Control Channel to pilot adjustment
16			gain.
17			If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
18			and set to '0', the base station shall omit this field; otherwise,
19			the base station shall include this field, and set it as follows.
20			The base station shall set this field to the Reverse Packet
21			Data Channel to pilot adjustment gain expressed as a two's
22			complement value in units of 0.125 dB (see [2]).
23	REV_PDCH_PARMS_1_INCL	-	Reverse Packet Data Channel parameters subset included
24			indicator.
25			If REV_PDCH_PARMS_INCL is omitted, or if it is included and
26			set to '0', the base station shall omit this field; otherwise, the
27			base station shall include this field, and set it as follows.
28			The base station shall set this field to '1' if the following R-
29			PDCH parameters are included in this message; otherwise,
30			the base station shall set this field to '0'.
31	REV_PDCH_TABLE_SEL	-	Reverse Packet Data Channel Table selector.
32			If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
33			and set to '0', the base station shall omit this field; otherwise,
34			the base station shall include this field, and set it as follows.
35			The base station shall set this field to the Reverse Packet
36			Data Channel Table selector (see [2]).
37	REV_PDCH_MAX_AUTO_TPR	-	Reverse Packet Data Channel maximum traffic to
38			pilot ratio for autonomous transmission.
39			If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
40			and set to '0', the base station shall omit this field; otherwise,
41			the base station shall include this field and set it as follows.
42			The base station shall set this field to the maximum traffic to
43			pilot ratio for autonomous transmission on the Reverse
44			Packet Data Channel (see [2] and [3]).

1		The base station shall set this field to a value in the range 0
2		to 18 dB inclusive in units of 0.125 dB.
3	REV_PDCH_NUM_ARQ_ROUNDS_NORMAL -	Maximum number of allowed ARQ rounds on
4		the Reverse PDCH in the non-boosted mode.
5		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
6		and set to '0', the base station shall omit this field; otherwise,
7		the base station shall include this field and set it as follows:
8		The base station shall set this field to one less the maximum
9		number of allowed ARQ rounds on the Reverse PDCH in the
10		non-boosted mode. The base station shall set this field to 0,
11		1, or 2 corresponding to 1, 2, or 3 rounds respectively (See
12		[3]).
13	REV_PDCH_OPER_PARMS_INCL -	Reverse Packet Data Channel operational parameters
14		included indicator.
15		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
16		set to '0', the base station shall omit this field; otherwise, the
17		base station shall include this field, and set it as follows.
18		The base station shall set this field to '1' if the following R-
19		PDCH operational parameters are included in this message;
20		otherwise, the base station shall set this field to '0'.
21	REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET -	Maximum Allowed Reverse
22		PDCH encoder packet size.
23		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
24		included and set to '0', the base station shall omit this field;
25		otherwise, the base station shall include this field and set it
26		as follows.
27		The base station shall set this field to the maximum size
28		encoder packet that the mobile station is allowed to use. (see
29		[2] and [3]).
30		The base station shall set this field to a value in the range 0
31		to 10 inclusive, corresponding to the encoder packet sizes
32		192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384,
33		and 18456 bits respectively.
34	REV_PDCH_DEFAULT_PERSISTENCE -	Reverse Packet Data Channel default initial
35		persistence.
36		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
37		included and set to '0', the base station shall omit this field;
38		otherwise, the base station shall include this field and set it
39		as follows:
40		The base station shall set this field to '1' if the mobile station
41		is to be persistent at the call setup; otherwise, the base
42		station shall set this field to '0' (See [3]).
43	REV_PDCH_RESET_PERSISTENCE -	Reverse Packet Data Channel reset persistence
44		indicator.

1		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
2		included and set to '0', the base station shall omit this field;
3		otherwise, the base station shall include this field and set it
4		as follows:
5		The base station shall set this field to '1' if, at the end of a
6		persistent grant, the mobile station shall reset its persistent
7		indicator to persistent; otherwise, the base station shall set
8		this field to '0' if the mobile station shall reset its persistent
9		indicator to non-persistent (See [3]).
10	REV_PDCH_GRANT_PRECEDENCE -	Reverse Packet Data Channel Grant Precedence
11		Indicator.
12		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
13		included and set to '0', the base station shall omit this field;
14		otherwise, the base station shall include this field and set it
15		as follows:
16		The base station shall set this field to '1' if unicast Forward
17		Grant Channel messages have precedence over Rate Control
18		commands; otherwise, the base station shall set this field to
19		'0' to indicate that Rate Control down commands from non-
20		serving sectors have precedence over Forward Grant Channel
21		messages (see [3]).
22	REV_PDCH_MSIB_SUPPORTED -	Reverse PDCH MSIB usage indicator.
23		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
24		included and set to '0', the base station shall omit this field;
25		otherwise, the base station shall include this field and set it
26		as follows:
27		The base station shall set this field to '1' if the mobile station
28		is to use the MSIB bit on the Reverse Packet Data Control
29		Channel; otherwise, the base station shall set this field to '0'
30		(see [3]).
31	REV_PDCH_SOFT_SWITCHING_RESET_IND -	Reverse Packet Data Channel soft
32		switching reset indicator.
33		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
34		included and set to '0', the base station shall omit this field;
35		otherwise, the base station shall include this field and set it
36		as follows:
37		The base station shall set this field to '1' if the mobile station
38		is to initialize RPDCHCF when soft selection occurs in the
39		FPDCHCF; otherwise, the base station shall set this field to
40		'0' (see [3]).
41	SDB_IN_RCNM_IND -	Short Data Burst allowed in <i>Reconnect Message</i> indicator.
42		If RECONNECT_MSG_IND is set to '0' or SDB_SUPPORTED is
43		set to '0', the base station shall omit this field; otherwise, the
44		base station shall include this field and set it as follows:

1		The base station shall set this field to '1' if the mobile station
2		is allowed to include a Short Data Burst (see [30]) in the
3		<i>Reconnect Message</i> ; otherwise, the base station shall set this
4		field to '0'.
5	CAND_BAND_INFO_REQ -	Candidate band class information request indicator
6		If CCH_INFO_INCL is set to '1', the base station shall include
7		this field and set it as shown below; otherwise, the base
8		station shall omit this field.
9		The base station shall set this field to '1' when requesting
10		mobiles to report whether various candidate band class and
11		band subclass (if applicable) combinations are supported;
12		otherwise, the base station shall set this field to '0'.
13		The base station shall not include more than 16 band class-
14		band subclass queries in this message.
15	NUM_CAND_BAND_CLASS -	Number of candidate band classes
16		If CAND_BAND_INFO_REQ is not included, or is included and
17		set to '0', the base station shall omit this field; otherwise, the
18		base station shall include this field and set it as follows:
19		The base station shall set this field to the number of
20		candidate band classes included in the record minus one.
21	If CAND_BAND_INFO_REQ is included and set to '1', the base station shall include	
22	NUM_CAND_BAND_CLASS + 1 occurrences of the following record:	
23	CAND_BAND_CLASS -	Candidate band class
24		The base station shall set this field to a band class (see [30])
25		for which the mobile is to report it's capabilities upon system
26		access. It may be used in conjunction with the
27		BAND_SUBCLASS_IND fields to specify band subclass(es) for
28		which the mobile is to report it's capabilities upon system
29		access.
30	SUBCLASS_INFO_INCL -	Band subclass information included
31		The base station shall set this field to '0' when no band
32		subclasses are associated with CAND_BAND_CLASS or if the
33		base station requires only the band class capabilities of the
34		mobile station. Otherwise, the base station shall set this field
35		to '1'.
36	SUBCLASS_REC_LEN -	Band subclass subrecord length
37		If SUBCLASS_INFO_INCL is set to '0', the base station shall
38		omit this field; otherwise, the base station shall set this field
39		as follows:

1 The base station shall set this field to the number of band  
2 subclass indicator fields included in the subrecord minus  
3 one. The number of subclass indicator fields included  
4 depends on the highest band subclass being queried for  
5 mobile support for the associated CAND\_BAND\_CLASS (i.e. if  
6 the highest band subclass being queried is K, then  
7 SUBCLASS\_REC\_LEN = K).

8 If the SUBCLASS\_REC\_LEN field is included, the base station shall include  
9 SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord. The first field included  
10 corresponds to band subclass '0' and the N<sup>th</sup> field included corresponds to band subclass  
11 'N-1'.

12 BAND\_SUBCLASS\_IND - Band subclass indicator

13 The base station shall set this field to '1' if it requires the  
14 mobile to report whether it supports this band subclass for  
15 the associated CAND\_BAND\_CLASS; otherwise, the base  
16 station shall set this field to '0'.

17 The mobile station is to indicate its capability to support the  
18 candidate band class and band subclass (if applicable)  
19 combination in the *Registration Message*, *Origination*  
20 *Message*, and *Page Response Message*.

21 RESCAN - Rescan indicator.

22 If mobile stations are to re-initialize and re-acquire the  
23 system upon receiving this message, the base station shall  
24 set this field to '1'; otherwise, the base station shall set this  
25 field to '0'.

26 TX\_PWR\_LIMIT\_INCL - Transmit Power Limit inclusion for the current base station

27 If the transmit power limit field is included in this message,  
28 the base station shall set this field to '1'; otherwise, the base  
29 station shall set this field to '0'.

30 TX\_PWR\_LIMIT - Transmit Power Limit for the current base station

31 If TX\_PWR\_LIMIT\_INCL is set to '0', the base station shall  
32 omit this field; otherwise, the base station shall include this  
33 field and set to as follows.

34 The base station shall set this field to thirty dB more than  
35 transmit power limit in dBm EIRP, in steps of 1 dB. This field  
36 can take the values 30 to 53 corresponding to maximum  
37 transmit power values 0 dBm to 23 dBm.

38 BYPASS\_REG\_IND - Indication to bypass the power up registration upon the  
39 change of bands, serving systems, and frequency blocks.

40 The base station shall set this field to '00' if the mobile  
41 station is to perform a power up registration upon band,  
42 frequency block or serving system change.

43 The base station shall set this field to '01' if the mobile  
44 station is to bypass the power up registration requirement  
45 upon band, frequency block or serving system changes due to  
46 processing the *Extended CDMA Channel List Message*.

1		The base station shall set this field to '10' if the mobile
2		station is to bypass the power up registration requirement
3		upon band, frequency block or serving system change when
4		the SID remains the same.
5		The base station shall set this field to '11' if the mobile
6		station is to bypass the power up registration requirement
7		upon band, frequency block or serving system change.
8	CRRM_MSG_IND -	<i>Call Recovery Request Message</i> supported indicator.
9		The base station shall set this field to '0' if the mobile station
10		is not allowed to send a <i>Call Recovery Request Message</i> ;
11		otherwise, the base station shall set this field to '1'.
12	APPIM_PERIOD_INDEX -	<i>Access Point Pilot Information Message</i> transmission
13		frequency.
14		If the AP_PILOT_INFO is not included or is included and set
15		to 0, the base station shall omit this field. Otherwise, the
16		base station shall include this field if there are any fields
17		following this field or if the base station needs to set this field
18		to a value other than '000'.
19		The base station shall set this field to the period index value
20		of <i>Access Point Pilot Information Message</i> . The base station
21		shall set this field value in the range '000' - '101', both
22		inclusive.
23	GEN_OVHD_CYCLE_INDEX -	<i>General Overhead Information Message</i> transmission
24		frequency.
25		If the GEN_OVHD_INF_IND is not included or is included and
26		set to 0, the base station shall omit this field. Otherwise, the
27		base station shall include this field if there are any fields
28		following this field or if the base station needs to set this field
29		to a value other than '000'.
30		The base station shall set this field to the cycle index value of
31		<i>General Overhead Message</i> . The base station shall set this
32		field value in the range '000' - '101', both inclusive.
33	ATIM_CYCLE_INDEX -	<i>Alternative Technologies Information Message</i> transmission
34		frequency.
35		If the ATIM_IND is not included or is included and set to 0,
36		the base station shall omit this field. Otherwise, the base
37		station shall include this field if there are any fields following
38		this field or if the base station needs to set this field to a
39		value other than '000'.
40		The base station shall set this field to the cycle index value of
41		<i>Alternative Technologies Information Message</i> . The base
42		station shall set this field vale in the range '000' - '101', both
43		inclusive.
44	ADD_LOC_INFO_INCL	- Location information included.

1		If CCH_INFO_INCL is set to '1', the base station shall include
2		this field and set it as shown below; otherwise, the base
3		station shall omit this field.
4		The base station shall set this field to '1' to indicate if the
5		LOC_UNC_H, HEIGHT, and LOC_UNC_V fields are included
6		in this message and to indicate if the BASE_LAT and
7		BASE_LONG contain legitimate values, otherwise, the base
8		station shall set this field to '0'.
9	LOC_UNC_H	- Horizontal location uncertainty.
10		If ADD_LOC_INFO_INCL are set to '1', the base station shall
11		include this field and set it as shown below; otherwise, the
12		base station shall omit this field.
13		The base station shall set this field to the circular horizontal
14		location uncertainty, as specified in Table 3.7.2.3.2.1-2. The
15		value of this field indicates the radius of a circular 95%
16		confidence coverage area.
17	HEIGHT	- Height.
18		If ADD_LOC_INFO_INCL are set to '1', the base station shall
19		include this field and set it as shown below; otherwise, the
20		base station shall omit this field.
21		The base station shall this field to the height, above the
22		WGS-84 reference ellipsoid, in units of 1 meter, in the range
23		from -500 m to 15,882 m, where the binary value of the field
24		conveys the height plus 500 m.
25		The base station shall set this field to all ones if its height is
26		not known.
27	LOC_UNC_V	- Vertical location uncertainty.
28		If ADD_LOC_INFO_INCL are set to '1', the base station shall
29		include this field and set it as shown below; otherwise, the
30		base station shall omit this field.
31		The base station set this field to the vertical location
32		uncertainty, as specified in Table 3.7.2.3.2.1-3. The value of
33		this field indicates the one-sigma uncertainty of HEIGHT
34		within the corresponding horizontal coverage area.
35		The base station shall set this field to all ones if its height is
36		not known.
37		
38		

1 3.7.2.3.2.32 ANSI-41 RAND Message

2 MSG\_TAG: A41RANDM

3

4

Field	Length (bits)
PILOT_PN	9
ACC_MSG_SEQ	6
RAND	32

5

6

PILOT\_PN - Pilot PN sequence offset index.

7

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

8

9

ACC\_MSG\_SEQ - Enhanced Access Parameters Message sequence number.

10

The base station shall set this field to ACC\_CONFIG\_SEQ (see 3.6.2.2).

11

12

RAND - Random challenge value.

13

The base station shall set this field to the random challenge value to be used by mobile stations for authentication.

1

2

PILOT\_PN - Pilot PN sequence offset index.

3

The base station shall set this field to the pilot PN sequence offset for this base station, in units of 64 PN chips.

4

1	ACC_MSG_SEQ	-	Enhanced Access Parameters Message sequence number.
2			The base station shall set this field to ACC_CONFIG_SEQ
3			(see 2.6.2.2.15).
4	PSIST_PARMS_INCL	-	Persistence parameters included indicator.
5			If persistence parameters are included in this message, the
6			base station shall set this field to '1'; otherwise, the base
7			station shall set this field to '0'.
8	PSIST_PARMS_LEN	-	Length of persistence parameters record.
9			If PSIST_PARMS_INCL is set to '0', the base station shall omit
10			this field; otherwise, the base station shall set this field to the
11			total length, in octets, of persistence parameters included in
12			the message, including the PSIST_PARMS_LEN and
13			RESERVED fields.
14	PSIST(0-9)_EACH	-	Persistence value for access overload classes 0 through 9.
15			If PSIST_PARMS_INCL is set to '0', the base station shall omit
16			this field; otherwise, the base station shall set this field as
17			follows:
18			If a mobile station in access overload classes 0 through 9 is
19			permitted to transmit requests on the Enhanced Access
20			Channel, the base station shall set this field to the
21			persistence value to be used. If such a mobile stations is not
22			permitted to transmit requests on the Enhanced Access
23			Channel, the base station shall set this field to '11111'.
24	PSIST(10)_EACH	-	Persistence value for access overload class 10 (test mobile
25			stations).
26			If PSIST_PARMS_INCL is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			If a mobile station in access overload class 10 is permitted to
30			transmit requests on the Enhanced Access Channel, the base
31			station shall set this field to the persistence value to be used.
32			If such a mobile station is not permitted to transmit requests
33			on the Enhanced Access Channel, the base station shall set
34			this field to '111'.
35	PSIST(11)_EACH	-	Persistence value for access overload class 11 (emergency
36			mobile stations).
37			If PSIST_PARMS_INCL is set to '0', the base station shall omit
38			this field; otherwise, the base station shall set this field as
39			follows:
40			If a mobile station in access overload class 11 is permitted to
41			transmit requests on the Enhanced Access Channel, the base
42			station shall set this field to the persistence value to be used.
43			If such a mobile station is not permitted to transmit requests
44			on the Enhanced Access Channel, the base station shall set
45			this field to '111'.
46	PSIST(12)_EACH	-	Persistence value for access overload class 12.

1			If PSIST_PARMS_INCL is set to '0', the base station shall omit
2			this field; otherwise, the base station shall set this field as
3			follows:
4			If a mobile station in access overload class 12 is permitted to
5			transmit requests on the Enhanced Access Channel, the base
6			station shall set this field to the persistence value to be used.
7			If such a mobile station is not permitted to transmit requests
8			on the Enhanced Access Channel, the base station shall set
9			this field to '111'.
10	PSIST(13)_EACH	-	Persistence value for access overload class 13.
11			If PSIST_PARMS_INCL is set to '0', the base station shall omit
12			this field; otherwise, the base station shall set this field as
13			follows:
14			If a mobile station in access overload class 13 is permitted to
15			transmit requests on the Enhanced Access Channel, the base
16			station shall set this field to the persistence value to be used.
17			If such a mobile station is not permitted to transmit requests
18			on the Enhanced Access Channel, the base station shall set
19			this field to '111'.
20	PSIST(14)_EACH	-	Persistence value for access overload class 14.
21			If PSIST_PARMS_INCL is set to '0', the base station shall omit
22			this field; otherwise, the base station shall set this field as
23			follows:
24			If a mobile station in access overload class 14 is permitted to
25			transmit requests on the Enhanced Access Channel, the base
26			station shall set this field to the persistence value to be used.
27			If such a mobile station is not permitted to transmit requests
28			on the Enhanced Access Channel, the base station shall set
29			this field to '111'.
30	PSIST(15)_EACH	-	Persistence value for access overload class 15.
31			If PSIST_PARMS_INCL is set to '0', the base station shall omit
32			this field; otherwise, the base station shall set this field as
33			follows:
34			If a mobile station in access overload class 15 is permitted to
35			transmit requests on the Enhanced Access Channel, the base
36			station shall set this field to the persistence value to be used.
37			If such a mobile stations is not permitted to transmit
38			requests on the Enhanced Access Channel, the base station
39			shall set this field to '111'.
40	PSIST_EMG	-	Persistence value for emergency call for access overload
41			classes 0 through 9.
42			If PSIST_PARMS_INCL is set to '0', the base station shall omit
43			this field; otherwise, the base station shall set this field as
44			follows:

1			If a mobile station in access overload classes 0 through 9 is
2			permitted to transmit emergency requests on the Enhanced
3			Access Channel, the base station shall set this field to the
4			persistence value to be used for the emergency calls. If such
5			a mobile station is not permitted to transmit emergency
6			requests on the Enhanced Access Channel, the base station
7			shall set this field to '111'.
8	MSG_PSIST_EACH	-	Persistence modifier for Enhanced Access Channel attempts
9			for message transmissions.
10			If PSIST_PARMs_INCL is set to '0', the base station shall omit
11			this field; otherwise, the base station shall set this field to the
12			persistence modifier for Enhanced Access Channel attempts
13			for message transmissions.
14	REG_PSIST_EACH	-	Persistence modifier for Enhanced Access Channel attempts
15			for registrations which are not responses to the <i>Registration</i>
16			<i>Request Order</i> .
17			If PSIST_PARMs_INCL is set to '0', the base station shall omit
18			this field; otherwise, the base station shall set this field to the
19			persistence modifier for Enhanced Access Channel attempts
20			for registrations which are not responses to the <i>Registration</i>
21			<i>Request Order</i> .
22	RESERVED	-	Reserved bits.
23			If PSIST_PARMs_INCL is set to '0', the base station shall omit
24			this field; otherwise, the base station shall include as many
25			bits as required to make the length of the persistence
26			parameters record an integral number of octets. If this field is
27			included, the base station shall set each of these bits to '0'.
28	LAC_PARMs_LEN	-	Length of Link Access Control parameter fields.
29			The base station shall set this field to the total length, in
30			octets, of Link Access Control parameters included in the
31			message, including the LAC_PARMs_LEN and RESERVED
32			fields.
33	ACC_TMO	-	Acknowledgment timeout.
34			The base station shall set this field to one less than the
35			length of time, in units of 20 ms, that a mobile station is to
36			wait to receive a Layer 2 acknowledgment after the end of an
37			Enhanced Access Channel transmission.
38	RESERVED_1	-	The reserved bits
39			The base station shall set this field to '0000'
40	MAX_REQ_SEQ	-	Maximum number of access probe sequences for an
41			Enhanced Access Channel request.
42			The base station shall set this field to the maximum number
43			of access probe sequences a mobile station is to transmit for
44			an Enhanced Access Channel request. The base station shall
45			set this field to a value greater than 0.

- 1           MAX\_RSP\_SEQ   -   Maximum number of access probe sequences for an  
2                                   Enhanced Access Channel response.
- 3                                   The base station shall set this field to the maximum number  
4                                   of access probe sequences a mobile station is to transmit for  
5                                   an Enhanced Access Channel response. The base station  
6                                   shall set this field to a value greater than 0.
- 7           RESERVED       -   Reserved Bits.
- 8                                   The base station shall include as many bits as required to  
9                                   make the length of the Link Access Control parameters record  
10                                  an integral number of octets. The base station shall set each  
11                                  of these bits to '0'.
- 12   NUM\_MODE\_SELECTION\_ENTRIES -   Number of entries of the Mode Selection Table.
- 13                                  The base station shall set this field to the number of entries  
14                                  of the Mode Selection Table, minus one.
- 15   The base station shall include NUM\_MODE\_SELECTION\_ENTRIES + 1 occurrences of the  
16   following three-field record:
- 17           ACCESS\_MODE   -   Access Mode used for the Enhanced Access Channel.
- 18                                  The base station shall set this field to the Access Mode value  
19                                  shown in Table 3.7.2.3.2.33-1 corresponding to the Access  
20                                  Mode used.

21

22

**Table 3.7.2.3.2.33-1. Enhanced Access Modes**

<b>ACCESS_MODE (binary)</b>	<b>Access Mode</b>
000	Basic Access Mode
001	Reservation Access Mode
010 – 011	Reserved

- 23   ACCESS\_MODE\_MIN\_DURATION - The minimum message duration for the  
24                                   corresponding Access Mode.
- 25                                  The base station shall set this field to the minimum message  
26                                  duration for the corresponding Access Mode, in units of 5 ms.  
27                                  See [3].
- 28   ACCESS\_MODE\_MAX\_DURATION - The maximum message duration for the  
29                                   corresponding Access Mode.
- 30                                  The base station shall set this field to the maximum message  
31                                  duration for the corresponding Access Mode, in units of 5 ms.  
32                                  See [3].
- 33   RLGAIN\_COMMON\_PILOT   -   Gain adjustment of the Enhanced Access Channel or  
34                                   Reverse Common Control Channel relative to the Reverse  
35                                   Pilot Channel.

- 1 The base station shall set this field to the correction factor to  
 2 be used by mobile stations in setting the power of a code  
 3 channel, expressed as a two's complement value in units of  
 4 0.125 dB (see [2]).
- 5 **IC\_THRESH** - Interference correction threshold.  
 6 The threshold level at which the interference correction  
 7 begins to be applied.  
 8 The base station shall set this field to the negative of the  
 9 interference correction threshold to be used by mobile  
 10 stations to determine the interference correction, in units of 1  
 11 dB (see [2]).
- 12 **IC\_MAX** - The maximum interference correction that can be applied.  
 13 The base station shall set this field to the maximum  
 14 interference correction that can be applied, in units of 1 dB  
 15 (see [2]).
- 16 **NUM\_MODE\_PARM\_REC** - The number of mode-specific parameter records.  
 17 The base station shall set this field to the number of mode-  
 18 specific parameter records included in the message, minus  
 19 one.
- 20 The base station shall include **NUM\_MODE\_PARM\_REC** + 1 occurrences of the following  
 21 record:
- 22 **EACH\_PARM\_REC\_LEN** - Length of the mode-specific parameters record.  
 23 The base station shall set this field to the total length, in  
 24 octets, of the mode-specific parameters record, including the  
 25 **EACH\_PARM\_REC\_LEN** and **RESERVED** fields.
- 26 **APPLICABLE\_MODES** - Access modes to which the access parameters specified in  
 27 this record apply.  
 28 The base station shall set each subfield of the  
 29 **APPLICABLE\_MODES** field as follows: the base station shall  
 30 set the subfield to '1' if the access parameters included in this  
 31 record are applicable to the corresponding Access Mode in  
 32 Table 3.7.2.3.2.33-2; otherwise, the base station shall set the  
 33 subfield to '0'.  
 34

**Table 3.7.2.3.2.33-2. Applicable Modes**

Subfield	Length (bits)	Subfield Description
ACC_MODE_1	1	Basic Access Mode
ACC_MODE_2	1	Reservation Access Mode
RESERVED	6	

36

- 37 **EACH\_NOM\_PWR** - Nominal transmit power offset for the Enhanced Access  
 38 Channels.

1		The base station shall set this field to the correction factor to
2		be used by a mobile station in the open loop power estimate,
3		expressed as a two's complement value in units of 1 dB
4		(see [2]).
5	EACH_INIT_PWR	- Initial power offset for the Enhanced Access Channels.
6		The base station shall set this field to the correction factor to
7		be used by a mobile station in the open loop power estimate
8		for the initial transmission on an Enhanced Access Channel,
9		expressed as a two's complement value in units of 1 dB (see
10		[2]).
11	EACH_PWR_STEP	- Power increment for the Enhanced Access Channels.
12		The base station shall set this field to the value by which a
13		mobile station is to increase their transmit power between
14		successive access probes in an access probe sequence, in
15		units of 1 dB.
16	EACH_NUM_STEP	- Number of access probes.
17		The base station shall set this field to one less than the
18		maximum number of access probes a mobile station is to
19		transmit in a single access probe sequence.
20	EACH_PREAMBLE_ENABLED	- Preamble enabled indicator for the Enhanced Access
21		Channel.
22		The base station shall set this field to '1' if EACH preambles
23		related information is included in this message; otherwise,
24		the base station shall set this field to '0'.
25	EACH_PREAMBLE_NUM_FRAC	- The number of fractional preambles on the Enhanced
26		Access Channels.
27		If EACH_PREAMBLE_ENABLED is set to '1', the base station
28		shall set this field to the number of fractional preambles
29		minus one on the Enhanced Access Channels; otherwise, the
30		base station shall omit this field.
31	EACH_PREAMBLE_FRAC_DURATION	- Fractional preamble duration on the Enhanced
32		Access Channels.
33		If EACH_PREAMBLE_ENABLED is set to '1', the base station
34		shall set this field to the fractional preamble duration minus
35		one on an Enhanced Access Channel, in units of 1.25 ms;
36		otherwise, the base station shall omit this field.
37	EACH_PREAMBLE_OFF_DURATION	- Fractional preamble gated-off duration on the
38		Enhanced Access Channels.
39		If EACH_PREAMBLE_ENABLED is set to '1', the base station
40		shall set this field to the fractional preamble gated-off
41		duration (in units of 1.25 ms) after the transmission of each
42		fractional preamble on an Enhanced Access Channel;
43		otherwise, the base station shall omit this field.
44	EACH_PREAMBLE_ADD_DURATION	- Additional preamble duration on the Enhanced
45		Access Channels.

1			If EACH_PREAMBLE_ENABLED is set to '1', the base station
2			shall set this field to the additional preamble duration on an
3			Enhanced Access Channel, in units of 1.25 ms; otherwise,
4			the base station shall omit this field.
5	RESERVED	-	Reserved bits.
6			The base station shall set this field to '000000'.
7	EACH_PROBE_BKOFF	-	Enhanced Access Channel probe backoff range.
8			The base station shall set this field to one less than the
9			maximum number of slots a mobile station is to delay due to
10			random backoff between consecutive enhanced access
11			probes.
12	EACH_BKOFF	-	Enhanced Access Channel probe sequence backoff range.
13			The base station shall set this field to one less than the
14			maximum number of slots a mobile station is to delay due to
15			random backoff between successive enhanced access probe
16			sequences.
17	EACH_SLOT	-	Slot duration for the Enhanced Access Channels.
18			The base station shall set this field to N where the slot
19			duration of the Enhanced Access Channel is $(N+1) \times 1.25$ ms.
20			The base station shall set this field to a value between 0 and
21			63.
22	EACH_SLOT_OFFSET1	-	First slot offset for the Enhanced Access Channels.
23			The base station shall set this field so that the Enhanced
24			Access Channel has a slot offset equal to $(EACH\_ID \times$
25			$EACH\_SLOT\_OFFSET2 + EACH\_SLOT\_OFFSET1) \bmod$
26			$(EACH\_SLOT+1)$ , where EACH_ID is the Enhanced Access
27			Channel Index. The base station shall set this field to a value
28			between 0 and 63, in units of 1.25 ms.
29	EACH_SLOT_OFFSET2	-	Relative slot offset for the Enhanced Access Channels.
30			The base station shall set this field so that the Enhanced
31			Access Channel has a slot offset equal to $(EACH\_ID \times$
32			$EACH\_SLOT\_OFFSET2 + EACH\_SLOT\_OFFSET1) \bmod$
33			$(EACH\_SLOT+1)$ , where EACH_ID is the Enhanced Access
34			Channel Index. The base station shall set this field to a value
35			between 0 and 63, in units of 1.25 ms.
36	RESERVED	-	Reserved bits.
37			The base station shall include as many bits as required to
38			make the length of the mode-specific parameters record an
39			integral number of octets. The base station shall set each of
40			these bits to '0'.
41	BA_PARMS_LEN	-	Length of Basic Access Mode parameter record.

The base station shall set this field to the total length, in octets, of Basic Access Mode parameters record included in the message, excluding the BA\_PARMS\_LEN but including the RESERVED fields. If there are no fields other than the BA\_PARMS\_LEN in this record, the base station shall set this field to '000'.

**NUM\_EACH\_BA** - Number of Enhanced Access Channels used for the Basic Access Mode.

If BA\_PARMS\_LEN is equal to '000', the base station shall omit this field; otherwise, the base station shall include this field and set it to the number of Enhanced Access Channels used for the Basic Access mode minus one.

**EACH\_BA\_RATES\_SUPPORTED** - Supported rate words for the Basic Access mode on the Enhanced Access Channels.

If BA\_PARMS\_LEN is equal to '000', the base station shall omit this field; otherwise, the base station shall include this field and set each subfield of the EACH\_BA\_RATES\_SUPPORTED field as follows: the base station shall set the subfield to '1' if the corresponding mode in Table 3.7.2.3.2.33-3 is allowed; otherwise the base station shall set the subfield to '0'.

**Table 3.7.2.3.2.33-3. EACH and RCCCH Data Rate and Frame Size**

Subfield	Length (bits)	Subfield Description
RATE_SIZE_1	1	9600 bps, 20 ms frame size
RATE_SIZE_2	1	19200 bps, 20 ms frame size
RATE_SIZE_3	1	19200 bps, 10 ms frame size
RATE_SIZE_4	1	38400 bps, 20 ms frame size
RATE_SIZE_5	1	38400 bps, 10 ms frame size
RATE_SIZE_6	1	38400 bps, 5 ms frame size
RESERVED	2	Reserved

**RESERVED** - Reserved bits.

If BA\_PARMS\_LEN is equal to '000', the base station shall omit this field; otherwise, the base station shall include as many bits as required to make the length of the Basic Access Mode record (excluding the BA\_PARMS\_LEN field but including the RESERVED field) an integral number of octets. The base station shall set each of these bits to '0'.

**RA\_PARMS\_LEN** - Length of Reservation Access Mode parameters record.

1			The base station shall set this field to the total length, in
2			octets, of Reservation Access Mode parameters record
3			included in the message, excluding the RA_PARMS_LEN but
4			including the RESERVED field.
5	NUM_EACH_RA	-	Number of Enhanced Access Channels used for the
6			Reservation Access Mode.
7			If RA_PARMS_LEN is equal to '00000', the base station shall
8			omit this field; otherwise, the base station shall include this
9			field and set it to the number of Enhanced Access Channels
10			used for the Reservation Access mode minus one.
11	NUM_CACH	-	Number of Common Assignment Channels.
12			If RA_PARMS_LEN is equal to '00000', the base station shall
13			omit this field; otherwise, the base station shall include this
14			field and set it to the number of Common Assignment
15			Channels supported by the system minus one.
16	CACH_CODE_RATE	-	Code Rate for the Common Assignment Channels.
17			If RA_PARMS_LEN is equal to '00000', the base station shall
18			omit this field; otherwise, the base station shall include this
19			field and set it as follows:
20			If the CACH is operating in Spreading Rate 1, the base station
21			shall set this field to '0' if the CACH Code Rate is 1/4 (see [2]).
22			The base station shall set this field to '1' if the CACH Code
23			Rate is 1/2 (see [2]).
24			If the CACH is operating in Spreading Rate 3, the base station
25			shall set this field to '0'.
26	If RA_PARMS_LEN is not equal to '00000', the base station shall include (NUM_CACH + 1)		
27	occurrences of the following one field record:		
28	CACH_CODE_CHAN	-	Code channel index for the Common Assignment Channel.
29			The base station shall set this field to the code channel index
30			(see [2]) in the range 1 to 255 inclusive that the mobile
31			station is to use on the Common Assignment Channel.
32	NUM_RCCCH	-	Number of Reverse Common Control Channels used for the
33			Reservation Mode.
34			If RA_PARMS_LEN is equal to '00000', the base station shall
35			omit this field; otherwise, the base station shall include this
36			field and set it to the number of Reverse Common Control
37			Channels used for the Reservation mode minus one.
38	RCCCH_RATES_SUPPORTED	-	Supported rate words on the Reverse Common Control
39			Channels.
40			If RA_PARMS_LEN is equal to '00000', the base station shall
41			omit this field; otherwise, the base station shall include this
42			field and set each bit of the RCCCH_RATES_SUPPORTED
43			field as follows: the base station shall set the bit to '1' if the
44			corresponding mode in Table 3.7.2.3.2.33-3 is allowed;
45			otherwise the base station shall set the bit to '0'.

1	RCCCH_PREAMBLE_ENABLED	-	Preamble enabled indicator for the Reverse Common
2			Control Channel.
3			If RA_PARMS_LEN is equal to '00000', the base station shall
4			omit this field; otherwise, the base station shall include this
5			field and set it as follows:
6			If RCCCH preambles related information is included in this
7			message, the base station shall set this field to '1'; otherwise,
8			the base station shall set this field to '0'.
9	RCCCH_PREAMBLE_NUM_FRAC	-	Number of fractional preambles on the Reverse
10			Common Control Channels.
11			If RCCCH_PREAMBLE_ENABLED is included and is set to '1',
12			the base station shall set this field to the number of fractional
13			preambles minus one on the Reverse Common Control
14			Channels; otherwise, the base station shall omit this field.
15	RCCCH_PREAMBLEFRAC_DURATION	-	Fractional preamble duration for the Reverse
16			Common Control Channels.
17			If RCCCH_PREAMBLE_ENABLED is included and is set to '1',
18			the base station shall set this field to the fractional preamble
19			duration minus one on a Reverse Common Control Channel,
20			in units of 1.25 ms; otherwise, the base station shall omit
21			this field.
22	RCCCH_PREAMBLE_OFF_DURATION	-	Fractional preamble gated-off duration on
23			Reverse Common Control Channels.
24			If RCCCH_PREAMBLE_ENABLED is included and is set to '1',
25			the base station shall set this field to the fractional preamble
26			gated-off duration (in units of 1.25 ms) after the transmission
27			of each fractional preamble on a Reverse Common Control
28			Channel; otherwise, the base station shall omit this field.
29	RCCCH_PREAMBLE_ADD_DURATION	-	Additional preamble duration on the Reverse
30			Common Control Channels.
31			If RCCCH_PREAMBLE_ENABLED is included and is set to '1',
32			the base station shall set this field to the additional preamble
33			duration on a Reverse Common Control Channel, in units of
34			1.25 ms; otherwise, the base station shall omit this field.
35	RCCCH_SLOT	-	Slot interval for the Reverse Common Control Channels.
36			If RA_PARMS_LEN is equal to '00000', the base station shall
37			omit this field; otherwise, the base station shall include this
38			field and set it to N where the slot duration on the Reverse
39			Common Control Channel is $(N+1) \times 1.25$ ms. The base
40			station shall set this field to a value between 0 and 63.
41	RCCCH_SLOT_OFFSET1	-	First slot offset for the Reverse Common Control Channels.

1			If RA_PARMS_LEN is equal to '00000', the base station shall
2			omit this field; otherwise, the base station shall include this
3			field and set it so that Reverse Common Control Channel has
4			a slot offset equal to $(RCCCH\_ID \times RCCCH\_SLOT\_OFFSET2 +$
5			$RCCCH\_SLOT\_OFFSET1) \bmod (RCCCH\_SLOT+1)$ , where
6			RCCCH_ID is the Reverse Common Control Channel Index.
7			The base station shall set this field to a value between 0 and
8			63, in units of 1.25 ms.
9	RCCCH_SLOT_OFFSET2	-	Second slot offset for the Reverse Common Control Channels.
10			If RA_PARMS_LEN is equal to '00000', the base station shall
11			omit this field; otherwise, the base station shall include this
12			field and set it so that Reverse Common Control Channel has
13			a slot offset equal to $(RCCCH\_ID \times RCCCH\_SLOT\_OFFSET2 +$
14			$RCCCH\_SLOT\_OFFSET1) \bmod (RCCCH\_SLOT+1)$ , where
15			RCCCH_ID is the Reverse Common Control Channel Index.
16			The base station shall set this field to a value between 0 and
17			63, in units of 1.25 ms.
18	RCCCH_NOM_PWR	-	Nominal transmit power offset for the Reverse Common
19			Control Channels.
20			If RA_PARMS_LEN is equal to '00000', the base station shall
21			omit this field; otherwise, the base station shall include this
22			field and set it to the correction factor to be used by a mobile
23			station in the open loop power estimate, expressed as a two's
24			complement value in units of 1 dB (see [2]).
25	RCCCH_INIT_PWR	-	Initial power offset for the Reverse Common Control
26			Channels.
27			If RA_PARMS_LEN is equal to '00000', the base station shall
28			omit this field; otherwise, the base station shall include this
29			field and set it to the correction factor to be used by a mobile
30			station in the open loop power estimate for the initial
31			transmission on a Reverse Common Control Channel,
32			expressed as a two's complement value in units of 1 dB (see
33			[2]).
34	RA_PC_DELAY	-	Power control delay for the Reverse Common Control
35			Channel.
36			If RA_PARMS_LEN is equal to '00000', the base station shall
37			omit this field; otherwise, the base station shall include this
38			field and set it to the number of power control bits the mobile
39			is to disregard after initiating transmission on a Reverse
40			Common Control Channel.
41	EACAM_CACH_DELAY	-	Maximum time after an Enhanced Access Channel header
42			transmission for receiving a response on the Common
43			Assignment Channel when Reverse Common Control
44			Channel soft handoff has not been requested.

1		If RA_PARMS_LEN is equal to '00000', the base station shall
2		omit this field; otherwise, the base station shall include this
3		field and set it to the number of complete Common
4		Assignment Channel frames minus one, from the end of the
5		<i>R-EACH Header</i> , for which a mobile station is to wait for the
6		<i>Early Acknowledgment Channel Assignment Message</i> if the
7		mobile station has not requested Reverse Common Control
8		Channel soft handoff.
9	RCCCH_HO_SUPPORTED	- Reverse Common Control Channel handoff supported
10		indicator.
11		If RA_PARMS_LEN is equal to '00000', the base station shall
12		omit this field; otherwise, the base station shall include this
13		field and set it as follows:
14		The base station shall set this field to '1' if Reverse Common
15		Control Channel handoff is supported by the base station;
16		otherwise, the base station shall set this field to '0'.
17	RCCCH_HO_THRESH	- Reverse Common Control Channel soft handoff threshold.
18		If RCCCH_HO_SUPPORTED is included and is set to '1', the
19		base station shall include this field; otherwise the base
20		station shall omit this field.
21		If included, the base station shall set this field to:
22		$\lfloor -20 \times \log_{10} \text{pilot\_threshold} \rfloor$
23		where <i>pilot_threshold</i> is the pilot $E_c/I_0$ threshold used to
24		determine whether the mobile station requests Reverse
25		Common Control Channel in soft handoff.
26		This is a positive value in units of 0.5 dB.
27	EACAM_PCCAM_DELAY	- Maximum time after an Enhanced Access Channel header
28		transmission for receiving a response on the Common
29		Assignment Channel when Reverse Common Control
30		Channel soft handoff has been requested.
31		If RCCCH_HO_SUPPORTED is included and is set to '1', the
32		base station shall include this field; otherwise the base
33		station shall omit this field.
34		If included, the base station shall set this field to the number
35		of complete Common Assignment Channel frames minus one,
36		from the end of the <i>R-EACH Header</i> , for which a mobile
37		station is to wait for the <i>Early Acknowledgment Channel</i>
38		<i>Assignment Message</i> and <i>Power Control Channel Assignment</i>
39		<i>Message</i> if the mobile station has requested Reverse Common
40		Control Channel soft handoff (see [3]).
41	NUM_CPCCH	- Number of Common Power Control Channels.
42		If RA_PARMS_LEN is equal to '00000', the base station shall
43		omit this field; otherwise, the base station shall include this
44		field and set it to the number of Common Power Control
45		Channels supported minus one.

**CPCCH\_RATE** - Power control rate for the Common Power Control Channels.

If RA\_PARMS\_LEN is equal to '00000', the base station shall omit this field; otherwise, the base station shall include this field and set it to the value shown in Table 3.7.2.3.2.33-4 corresponding to the power control rate for the Common Power Control Channels.

**Table 3.7.2.3.2.33-4. CPCCH Power Control Rate**

<b>CPCCH_RATE (Binary)</b>	<b>Power Control Rate</b>
00	200 bps
01	400 bps
10	800 bps
11	Reserved

If RA\_PARMS\_LEN is not equal to '00000', the base station shall include (NUM\_CPCCH + 1) occurrences of the following one field record:

**CPCCH\_CODE\_CHAN** - Code channel index for the Common Power Control Channel.

The base station shall set this field to the code channel index (see [2]) in the range 1 to 127 inclusive that the mobile station is to use on the Common Power Control Channel.

**NUM\_PCSCH\_RA** - Number of Power Control Subchannels used for the Reservation Access Mode.

If RA\_PARMS\_LEN is equal to '00000', the base station shall omit this field; otherwise, the base station shall include this field and set it to the number of Power Control Subchannels used for the Reservation Access Mode minus one.

**RESERVED** - Reserved bits.

If RA\_PARMS\_LEN is equal to '00000', the base station shall omit this field; otherwise, the base station shall include as many bits as required to make the length of the Reservation Access Mode record (excluding the RA\_PARMS\_LEN but including the RESERVED field) an integral number of octets. The base station shall set each of these bits to '0'.

**ACCT\_INCL** - Access Control based on Call Type (ACCT) information included indicator.

If the base station enables ACCT for at least one service option, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

If the base station sets this field to '1', then the base station shall also set at least one of ACCT\_SO\_INCL or ACCT\_SO\_GRP\_INCL to '1'.

1	ACCT_INCL_EMG	-	Access Control based on Call Type (ACCT) includes
2			emergency calls indicator.
3			If ACCT_INCL is set to '0', the base station shall omit this
4			field; otherwise, the base station shall include this field and
5			set it as follows:
6			The base station shall set this field to '0' if the mobile station
7			is not to apply ACCT to a call that is recognized by the mobile
8			station to be an emergency call; otherwise, the base station
9			shall set this field to '1'.
10	ACCT_AOC_BITMAP_INCL	-	Access Control based on Call Type (ACCT) access overload
11			class bitmap included indicator.
12			If ACCT_INCL is set to '0', the base station shall omit this
13			field; otherwise, the base station shall include this field and
14			set it as follows:
15			The base station shall set this field to '0' if all mobile stations
16			are to apply ACCT regardless of their access overload classes;
17			otherwise, the base station shall set this field to '1' to indicate
18			that the mobile station is to apply ACCT according to its
19			access overload class.
20	ACCT_SO_INCL	-	Access Control based on Call Type (ACCT) service option
21			included indicator.
22			If ACCT_INCL is set to '0', the base station shall omit this
23			field; otherwise, the base station shall include this field and
24			set it as follows:
25			The base station shall set this field to '1' if at least one
26			occurrence of the ACCT_SO field is included in this message;
27			otherwise, the base station shall set this field to '0'.
28	NUM_ACCT_SO	-	Number of service options for Access Control based on Call
29			Type (ACCT).
30			If ACCT_SO_INCL is not included, or is included and set to
31			'0', then the base station shall omit this field; otherwise, the
32			base station shall include this field and set it to one less than
33			the number of occurrences of the ACCT_SO field included in
34			this message.
35	If ACCT_SO_INCL is included and set to '1', then the base station shall include		
36	NUM_ACCT_SO + 1 occurrences of the following variable-field record:		
37	ACCT_AOC_BITMAP1	-	Access Control based on Call Type (ACCT) access overload
38			class bitmap.
39			If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
40			shall omit this field; otherwise, the base station shall include
41			this field and set it as follows:
42			This field consists of the subfields defined in Table
43			3.7.2.3.2.2-1.

1			The base station shall set a subfield to '1' to indicate that
2			mobile stations having the corresponding access overload
3			class are not permitted to perform access attempts using the
4			associated service option ACCT_SO; otherwise, the base
5			station shall set the subfield to '0'.
6	ACCT_SO	-	Access Control based on Call Type (ACCT) service option
7			number.
8			The base station shall set this field to the value of the service
9			option number (as specified in [30]) that has ACCT enabled.
10	ACCT_SO_GRP_INCL	-	Access Control based on Call Type (ACCT) service option
11			group included indicator.
12			If ACCT_INCL is set to '0', the base station shall omit this
13			field; otherwise, the base station shall include this field and
14			set it as follows:
15			The base station shall set this field to '1' if at least one
16			occurrence of the ACCT_SO_GRP field is included in this
17			message; otherwise, the base station shall set this field to '0'.
18	NUM_ACCT_SO_GRP	-	Number of service option groups for Access Control based on
19			Call Type (ACCT).
20			If ACCT_SO_GRP_INCL is not included, or is included and set
21			to '0', then the base station shall omit this field; otherwise,
22			the base station shall include this field and set it to one less
23			than the number of occurrences of the ACCT_SO_GRP field
24			included in this message.
25	If ACCT_SO_GRP_INCL is included and set to '1', then the base station shall include		
26	NUM_ACCT_SO_GRP + 1 occurrences of the following variable-field record:		
27	ACCT_AOC_BITMAP2	-	Access Control based on Call Type (ACCT) access overload
28			class bitmap.
29			If ACCT_AOC_BITMAP_INCL is set to '0', then the base station
30			shall omit this field; otherwise, the base station shall include
31			this field and set it as follows:
32			This field consists of the subfields defined in Table
33			3.7.2.3.2.2-1. The base station shall set a subfield to '1' to
34			indicate that mobile stations having the corresponding access
35			overload class are not permitted to perform access attempts
36			using a service option specified by the associated
37			ACCT_SO_GRP field; otherwise, the base station shall set the
38			subfield to '0'.
39	ACCT_SO_GRP	-	Access Control based on Call Type (ACCT) service option
40			group number.
41			The base station shall set this field to the value of the service
42			option group number (as specified in [30]) whose members all
43			have ACCT enabled.
44			

## 1 3.7.2.3.2.34 Universal Neighbor List Message

2 MSG\_TAG: UNLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM\_RADIO\_INTERFACE occurrences of the following record:

{ (NUM\_RADIO\_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	8
Radio Interface Type-specific fields	8 × RADIO_INTERFACE_LEN

} (NUM\_RADIO\_INTERFACE)

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ (see  
9 3.6.2.2).

10 NUM\_RADIO\_INTERFACE - Number of interface types.

11 The base station shall set this field to the number of radio  
12 interface types for which neighbors are included in this  
13 message.

14 The base station shall include NUM\_RADIO\_INTERFACE occurrences of the following  
15 record, one occurrence for each radio interface for which neighbors are included in this  
16 message.

17 RADIO\_INTERFACE\_TYPE - The radio interface type.

18 The base station shall set this field to the radio interface type  
19 of this record as specified in Table 3.7.2.3.2.34-1.

20

21

22

23

24

1

**Table 3.7.2.3.2.34-1. Radio Interface Type**

<b>RADIO_INTERFACE_TYP E (binary)</b>	<b>Descriptions</b>
0000	MC system
0001	Reserved (Previously: Analog system)
0010	HRPD System
0011-1111	Reserved

- 2 RADIO\_INTERFACE\_LEN - The length of the Radio Interface Type-specific fields.  
 3 The base station shall set this field to the number of octets in  
 4 the Radio Interface Type-specific fields of this record.  
 5 If RADIO\_INTERFACE\_TYPE is equal to '0000', the base station shall include the following  
 6 fields:

<b>Field</b>	<b>Length (bits)</b>
PILOT_INC	4
NGHBR_SRCH_MODE	2
SRCH_WIN_N	0 or 4
SRCH_OFFSET_INCL	1
FREQ_FIELDS_INCL	1
USE_TIMING	1
GLOBAL_TIMING_INCL	0 or 1
GLOBAL_TX_DURATION	0 or 4
GLOBAL_TX_PERIOD	0 or 7
NGHBR_SET_ENTRY_INFO	1
NGHBR_SET_ACCESS_INFO	1
NUM_NGHR	6

NUM\_NGHR occurrences of the following subrecord:

{ (NUM\_NGHR)

NGHBR_CONFIG	3
NGHBR_PN	9
BCCH_SUPPORT	0 or 1

(continues on next page)

7

Field	Length (bits)
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times$ RECORD_LEN
SEARCH_PRIORITY	0 or 2
SRCH_WIN_NGHR	0 or 4
SRCH_OFFSET_NGHR	0 or 3
FREQ_INCL	0 or 1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
TIMING_INCL	0 or 1
NGHBR_TX_OFFSET	0 or 7
NGHBR_TX_DURATION	0 or 4
NGHBR_TX_PERIOD	0 or 7
ACCESS_ENTRY_HO	0 or 1
ACCESS_HO_ALLOWED	0 or 1

} (NUM\_NGHR)

RESQ_ENABLED	1
RESQ_DELAY_TIME	0 or 6
RESQ_ALLOWED_TIME	0 or 6
RESQ_ATTEMPT_TIME	0 or 6
RESQ_CODE_CHAN	0 or 11
RESQ_QOF	0 or 2
RESQ_MIN_PERIOD_INCL	0 or 1
RESQ_MIN_PERIOD	0 or 5
RESQ_NUM_TOT_TRANS_INCL	0 or 1
RESQ_NUM_TOT_TRANS_20MS	0 or 4
RESQ_NUM_TOT_TRANS_5MS	0 or 4
RESQ_NUM_PREAMBLE_RC1_RC2	0 or 3
RESQ_NUM_PREAMBLE	0 or 3

(continues on next page)

Field	Length (bits)
RESQ_POWER_DELTA	0 or 3

NUM\_NGHR occurrences of the following one-field record if RESQ\_ENABLED is set to '1':

{ (NUM\_NGHR)

NGHR_RESQ_CONFIGURED	1
----------------------	---

} (NUM\_NGHR)

{ (NUM\_NGHR)

NGHR_PDCH_SUPPORTED	1
---------------------	---

} (NUM\_NGHR)

RESERVED	0 – 7 (as needed)
----------	-------------------

1

2

PILOT\_INC - Pilot PN sequence offset index increment.

3

4

A mobile station searches for Remaining-Set pilots at pilot PN sequence index values that are multiples of this value.

5

6

7

8

9

10

The base station shall set this field to the pilot PN sequence increment, in units of 64 PN chips, that mobile stations are to use for searching the Remaining Set. The base station should set this field to the largest increment such that the pilot PN sequence offsets of all its neighbor base stations are integer multiples of that increment.

11

12

The base station shall set this field to a value in the range 1 to 15 inclusive.

13

NGHR\_SRCH\_MODE - Search mode.

14

15

The base station shall set this field to the value shown in Table 3.7.2.3.2.34-2 corresponding to the search mode.

16

17

**Table 3.7.2.3.2.34-2. Search Mode Field**

Value (binary)	Description
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

18

19

SRCH\_WIN\_N - Search window size for the Neighbor Set.

1			If NGHBR_SRCH_MODE = '00' or NGHBR_SRCH_MODE =
2			'01', the base station shall include the field SRCH_WIN_N and
3			shall set this field as described below; otherwise, the base
4			station shall omit this field.
5			The base station shall set this field to the value shown in
6			Table 2.6.6.2.1-1 corresponding to the search window size to
7			be used by mobile stations for the Neighbor Set.
8	SRCH_OFFSET_INCL	-	Neighbor pilot channel search window offset included.
9			If NGHBR_SRCH_MODE = '10' or '11' and if the
10			SRCH_OFFSET_NGHR field is included in the following
11			records, the base station shall set this bit to '1'; otherwise,
12			the base station shall set this bit to '0'.
13	FREQ_FIELDS_INCL	-	Frequency fields included.
14			If frequency fields are included in this message, the base
15			station shall set this field to '1'; otherwise, the base station
16			shall set this field to '0'.
17	USE_TIMING	-	Use timing indicator.
18			If base station timing information is included for neighbor
19			base stations, the base station shall set this field to '1';
20			otherwise, the base station shall set this field to '0'.
21	GLOBAL_TIMING_INCL	-	Global timing included.
22			If USE_TIMING is set to '1', the base station shall include the
23			field GLOBAL_TIMING_INCL and shall set this field as
24			described below; otherwise, the base station shall omit this
25			field.
26			If base station timing information is included globally for all
27			neighbor base stations with TIMING_INCL equal to '1', the
28			base station shall set this field to '1'; otherwise, the base
29			station shall set this field to '0'.
30	GLOBAL_TX_DURATION	-	Global neighbor transmit time duration.
31			If GLOBAL_TIMING_INCL is included and is set to '1', the
32			base station shall include the field GLOBAL_TX_DURATION
33			and shall set this field as described below; otherwise, the
34			base station shall omit this field.
35			The base station shall set this field to the duration of the
36			base station transmit window, during each period, in units of
37			80 ms. The base station should set this field to a value of 3
38			or greater.
39	GLOBAL_TX_PERIOD	-	Global neighbor transmit time period.
40			If GLOBAL_TIMING_INCL is included and is set to '1', the
41			base station shall include the field GLOBAL_TX_PERIOD and
42			shall set this field as described below; otherwise, the base
43			station shall omit this field.
44			The base station shall set this field to duration of the period,
45			in units of 80 ms.

1	NGHBR_SET_ENTRY_INFO	-	Neighbor Set access entry handoff information included
2			indicator.
3			If the base station is including information on the Neighbor
4			Set access entry handoff, the base station shall set this field
5			to '1'; otherwise, the base station shall set this field to '0'.
6	NGHBR_SET_ACCESS_INFO	-	Neighbor Set access handoff included indicator.
7			If the base station is including information on the Neighbor
8			Set access handoff or access probe handoff, the base station
9			shall set this field to '1', otherwise, the base station shall set
10			this field to '0'.
11	NUM_NGHBR	-	Number of neighbor pilot PN sequences.
12			The base station shall set this field to the number of
13			neighbors included in the message.
14			

The base station shall include one occurrence of the following subrecord for each pilot that a mobile station is to place in its Neighbor Set.

NGHBR\_CONFIG - Neighbor configuration.

The base station shall set this field to the value shown in Table 3.7.2.3.2.34-3 corresponding to the configuration of this neighbor.

**Table 3.7.2.3.2.34-3. Neighbor Configuration Field**

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
000	<p>The neighbor base station has the same number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channels as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with the same number of Forward Common Control Channels, and the neighbor frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <b>FREQ_INCL</b> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <b>FREQ_INCL</b> equals '1' for this record, this corresponding CDMA frequency assignment is given by <b>NGHBR_BAND</b> and <b>NGHBR_FREQ</b>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>The rate, code rate, and code channel of the corresponding Forward Common Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If <b>NGHBR_PILOT_REC_TYPE</b> is included in this message, then neighbor pilot type is as specified in <b>NGHBR_PILOT_REC_TYPE</b>; otherwise, the neighbor pilot is a 1X common pilot.</p>

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
001	<p>The neighbor base station does not have any frequencies with Primary Broadcast Control Channel/Forward Common Control Channel.</p> <p>The neighbor base station has the same number of frequencies having Paging Channels as the current base station has frequencies having Primary Broadcast Control Channel/Forward Common Control Channel.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment but possibly with a different number of Paging Channels, and the neighbor frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>This corresponding neighbor CDMA frequency assignment does have a Primary Paging Channel, at 9600 bps.</p>

<b>Value (binary)</b>	<b>Neighbor Configuration</b>
010	<p>The neighbor base station may have a different number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channel as the current base station.</p> <p>The neighbor base station has a Primary Broadcast Control Channel on the following frequency:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, the neighbor base station has a Primary Broadcast Control Channel on the first CDMA Channel listed in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, the neighbor base station has a Primary Broadcast Control Channel on the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.</li> </ul> <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If <code>NGHBR_PILOT_REC_TYPE</code> is included in this message, then neighbor pilot type is as specified in <code>NGHBR_PILOT_REC_TYPE</code>; otherwise, the neighbor pilot is a 1X common pilot.</p>
011	<p>The neighbor base station configuration is unknown but the neighbor base station has a Pilot Channel on the following frequency:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, the neighbor CDMA frequency assignment is the same as the current CDMA frequency assignment and has a Pilot Channel.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, the CDMA frequency assignment given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code> has a Pilot Channel.</li> </ul>

Value (binary)	Neighbor Configuration
100	<p>The neighbor base station has the same number of frequencies having Primary Broadcast Control Channel/Forward Common Control Channel as the current base station.</p> <p>The neighbor base station has a CDMA frequency assignment corresponding to this CDMA frequency assignment with a Primary Broadcast Control Channel, and the neighbor CDMA frequency is given as follows:</p> <ul style="list-style-type: none"> <li>• If <code>FREQ_INCL</code> equals '0' for this record, this corresponding CDMA frequency assignment is the current CDMA frequency assignment.</li> <li>• If <code>FREQ_INCL</code> equals '1' for this record, this corresponding CDMA frequency assignment is given by <code>NGHBR_BAND</code> and <code>NGHBR_FREQ</code>.</li> </ul> <p>The position of the neighbor CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the neighbor base station is the same as the position of this current CDMA frequency assignment in the <i>Extended CDMA Channel List Message</i> transmitted by the current base station.</p> <p>The rate, code rate, and code channel of the Primary Broadcast Control Channel on this corresponding CDMA frequency are the same values as the current ones.</p> <p>If <code>NGHBR_PILOT_REC_TYPE</code> is included in this message, then neighbor pilot type is as specified in <code>NGHBR_PILOT_REC_TYPE</code>; otherwise, the neighbor pilot is a 1X common pilot.</p>
101-111	Reserved.

- 1
- 2            `NGHBR_PN`    -   Neighbor pilot PN sequence offset index.
- 3                                      The base station shall set this field to the pilot PN sequence
- 4                                      offset for this neighbor, in units of 64 PN chips.
- 5            `BCCH_SUPPORT`    -   BCCH support indicator.
- 6                                      If the `NGHBR_CONFIG` field is not set to '011', the base
- 7                                      station shall omit this field; otherwise, the base station shall
- 8                                      include this field and set it as follows:
- 9                                      If this neighbor base station supports Broadcast Control
- 10                                     Channel, the base station shall set this field to '1'; otherwise,
- 11                                     the base station shall set this field to '0'.
- 12    `ADD_PILOT_REC_INCL`    -   Additional pilot information included indicator.

The base station shall set this field to '1' if additional pilot information listed in the NGHBR\_PILOT\_REC\_TYPE and RECORD\_LEN fields are included. The base station shall set this field to '0' if the corresponding pilot is the common pilot and there is no additional pilot information included.

NGHBR\_PILOT\_REC\_TYPE - Neighbor Pilot record type

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall set this field to the NGHBR\_PILOT\_REC\_TYPE value shown in Table 3.7.2.3.2.34-4 corresponding to the type of Pilot Record specified by this record.

**Table 3.7.2.3.2.34-4. Neighbor Pilot Record Types**

<b>Description</b>	<b>NGHBR_PILOT_REC_TYPE (binary)</b>
1X Common Pilot with Transmit Diversity	000
1X Auxiliary Pilot	001
1X Auxiliary Pilot with Transmit Diversity	010
3X Common Pilot	011
3X Auxiliary Pilot	100
All other NGHBR_PILOT_REC_TYPE values are reserved	

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

RECORD\_LEN - Pilot record length.

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall set this field to the number of octets in the type-specific fields of this pilot record.

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

Type-specific fields - Pilot record type-specific fields.

If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall include type-specific fields based on the NGHBR\_PILOT\_REC\_TYPE of this pilot record.

If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall omit this field.

If NGHBR\_PILOT\_REC\_TYPE is equal to '000', the base station shall include the following fields:

1

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

2

3 TD\_POWER\_LEVEL - TD Transmit Power Level.

4 The base station shall set this field to the TD transmit power  
5 level relative to that of the Forward Pilot Channel as specified  
6 in Table 3.7.2.3.2.26-4.

7 TD\_MODE - Transmit Diversity mode.

8 The base station shall set this field to the Transmit Diversity  
9 mode, as specified in Table 3.7.2.3.2.26-3.

10 RESERVED - Reserved bits.

11 The base station shall set this field to '0000'.

12 If NGHBR\_PILOT\_REC\_TYPE is equal to '001', the base station shall include the following  
13 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

14

15 QOF - Quasi-orthogonal function index.

16 The base station shall set this field to the index of the Quasi-  
17 orthogonal function (see [2]).

18 WALSH\_LENGTH - Length of the Walsh Code.

19 The base station shall set this field to the WALSH\_LENGTH  
20 value shown in Table 3.7.2.3.2.22-6 corresponding to the  
21 length of the Walsh code for the pilot that is used in as the  
22 Auxiliary pilot.

23 AUX\_PILOT\_WALSH - Walsh Code for the Auxiliary Pilot.

24 The base station shall set this field to the Walsh code  
25 corresponding to the Auxiliary pilot.

26 RESERVED - Reserved bits.

27 The base station shall set all the bits of this field to '0' to  
28 make the entire record octet-aligned.

29

If NGHBR\_PILOT\_REC\_TYPE is equal to '010', the base station shall include the following fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

- QOF** - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.  
The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- WALSH\_LENGTH** - Length of the Walsh Code.  
The base station shall set this field to the WALSH\_LENGTH value shown in 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilots that are used as Auxiliary pilot in the transmit diversity mode.
- AUX\_WALSH** - Walsh Code for the Auxiliary Pilot.  
The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.
- AUX\_TD\_POWER\_LEVEL** - Auxiliary Transmit Diversity Pilot Power Level.  
The base station shall set this field to the Auxiliary Transmit Diversity Pilot transmit power level relative to that of the Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.
- TD\_MODE** - Transmit Diversity mode.  
The base station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.2.3.2.26-3.
- RESERVED** - Reserved bits.  
The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If NGHBR\_PILOT\_REC\_TYPE is equal to '011', the base station shall include the following fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- 1
- 2    SR3\_PRIMARY\_PILOT    –    Primary SR3 pilot.
- 3                            The base station shall set this field to the value shown in
- 4                            Table 3.7.2.3.2.26-5 corresponding to the position of the
- 5                            primary SR3 pilot.
- 6    SR3\_PILOT\_POWER1    –    The primary SR3 pilot power level relative to that of the pilot
- 7                            on the lower frequency of the two remaining SR3 frequencies.
- 8                            The base station shall set this field to the value shown in
- 9                            Table 3.7.2.3.2.26-6 corresponding to the power level of the
- 10                           primary pilot with respect to the pilot on the lower frequency
- 11                           of the two remaining SR3 frequencies.
- 12    SR3\_PILOT\_POWER2    –    The primary SR3 pilot power level relative to that of the pilot
- 13                            on the higher frequency of the two remaining SR3
- 14                            frequencies.
- 15                            The base station shall set this field to the value shown in
- 16                            Table 3.7.2.3.2.26-6 corresponding to the power level of the
- 17                            primary pilot with respect to the pilot on the higher frequency
- 18                            of the two remaining SR3 frequencies.
- 19
- 20    If NGHBR\_PILOT\_REC\_TYPE is equal to '100', the base station shall include the following
- 21    fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

- 1 SR3\_PRIMARY\_PILOT – Primary SR3 pilot.  
2  
3 The base station shall set this field to the value shown in  
4 Table 3.7.2.3.2.26-5 corresponding to the position of the  
5 primary SR3 pilot.
- 6 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot  
7 on the lower frequency of the two remaining SR3 frequencies.  
8 The base station shall set this field to the value shown in  
9 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
10 primary pilot with respect to the pilot on the lower frequency  
11 of the two remaining SR3 frequencies.
- 12 SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot  
13 on the higher frequency of the two remaining SR3  
14 frequencies.  
15 The base station shall set this field to the value shown in  
16 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
17 primary pilot with respect to the pilot on the higher frequency  
18 of the two remaining SR3 frequencies.
- 19 QOF – Quasi-orthogonal function index.  
20 The base station shall set this field to the index of the Quasi-  
21 orthogonal function (see [2]) on the frequency of the primary  
22 pilot.
- 23 WALSH\_LENGTH – Length of the Walsh Code.

1		The base station shall set this field to the WALSH_LENGTH
2		value shown in Table 3.7.2.3.2.22-6 corresponding to the
3		length of the Walsh code for the pilot that is used as the
4		Auxiliary pilot on the frequency of the primary pilot.
5	AUX_PILOT_WALSH	- Walsh Code for the Auxiliary Pilot.
6		The base station shall set this field to the Walsh code
7		corresponding to the Auxiliary pilot on the frequency of the
8		primary pilot.
9	ADD_INFO_INCL1	- Additional information included for the pilot on the lower
10		frequency of the two remaining SR3 frequencies.
11		If the additional information for the pilot on the lower
12		frequencies of the two remaining SR3 frequencies is the same
13		as pilot on the primary frequency, the base station shall set
14		this field to '0'; otherwise, the base station shall set this field
15		to '1'.
16	QOF1	- Quasi-orthogonal function index for the pilot on the lower
17		frequency of the two remaining SR3 frequencies.
18		If ADD_INFO_INCL1 is set to '0', the base station shall omit
19		this field; otherwise, the base station shall set this field as
20		follows:
21		The base station shall set this field to the index of the Quasi-
22		orthogonal function (see [2]) on the lower frequency of the two
23		remaining SR3 frequencies.
24	WALSH_LENGTH1	- Length of the Walsh Code for the pilot on the lower frequency
25		of the two remaining SR3 frequencies.
26		If ADD_INFO_INCL1 is set to '0', the base station shall omit
27		this field; otherwise, the base station shall set this field as
28		follows:
29		The base station shall set this field to the WALSH_LENGTH
30		value shown in Table 3.7.2.3.2.22-6 corresponding to the
31		length of the Walsh code for the pilot that is used as the
32		Auxiliary pilot on the lower frequency of the two remaining
33		SR3 frequencies.
34	AUX_PILOT_WALSH1	- Walsh Code for the Auxiliary Pilot on the lower frequency of
35		the two remaining SR3 frequencies.
36		If ADD_INFO_INCL1 is set to '0', the base station shall omit
37		this field; otherwise, the base station shall set this field as
38		follows:
39		The base station shall set this field to the Walsh code
40		corresponding to the Auxiliary pilot on the lower frequency of
41		the two remaining SR3 frequencies.
42	ADD_INFO_INCL2	- Additional information included for the pilot on the higher
43		frequency of the two remaining SR3 frequencies.

1			If the additional information for the pilot on the higher
2			frequencies of the two remaining SR3 frequencies is the same
3			as pilot on the primary frequency, the base station shall set
4			this field to '0'; otherwise, the base station shall set this field
5			to '1'.
6	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
7			frequency of the two remaining SR3 frequencies.
8			If ADD_INFO_INCL2 is set to '0', the base station shall omit
9			this field; otherwise, the base station shall set this field as
10			follows:
11			The base station shall set this field to the index of the Quasi-
12			orthogonal function (see [2]) on the higher frequency of the
13			two remaining SR3 frequencies.
14	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher
15			frequency of the two remaining SR3 frequencies.
16			If ADD_INFO_INCL2 is set to '0', the base station shall omit
17			this field; otherwise, the base station shall set this field as
18			follows:
19			The base station shall set this field to the WALSH_LENGTH
20			value shown in Table 3.7.2.3.2.22-6 corresponding to the
21			length of the Walsh code for the pilot that is used as the
22			Auxiliary pilot on the higher frequency of the two remaining
23			SR3 frequencies.
24	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
25			the two remaining SR3 frequencies.
26			If ADD_INFO_INCL2 is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			The base station shall set this field to the Walsh code
30			corresponding to the Auxiliary pilot on the higher frequency
31			of the two remaining SR3 frequencies.
32	RESERVED	-	Reserved bits.
33			The base station shall set all the bits of this field to '0' to
34			make the entire record octet-aligned.
35	SEARCH_PRIORITY	-	Pilot Channel search priority.
36			If NGHBR_SRCH_MODE = '01' or NGHBR_SRCH_MODE =
37			'11', the base station shall include the field
38			SEARCH_PRIORITY and shall set this field as described
39			below; otherwise, the base station shall omit this field.
40			The base station shall set this field to the search priority for
41			the Pilot Channel corresponding to NGHBR_PN. The base
42			station shall set the search priority as shown in Table
43			3.7.2.3.2.34-5.
44			

1

**Table 3.7.2.3.2.34-5. Search Priority Field**

<b>Value (binary)</b>	<b>Search Priority</b>
00	Low
01	Medium
10	High
11	Very High

2

3      **SRCH\_WIN\_NGHBR**      -      Neighbor pilot channel search window size.

4      If NGHBR\_SRCH\_MODE = '10' or NGHBR\_SRCH\_MODE =  
5      '11', the base station shall include the field  
6      SRCH\_WIN\_NGHBR and shall set this field as described  
7      below; otherwise, the base station shall omit this field.

8      The base station shall set this field to the value shown in  
9      Table 2.6.6.2.1-1 corresponding to the search window size to  
10     be used by mobile stations for this neighbor.

11     **SRCH\_OFFSET\_NGHBR**      -      Neighbor pilot channel search window size offset.

12     If SRCH\_OFFSET\_INCL equals to '1', then the base station  
13     shall include the field SRCH\_OFFSET\_NGHBR and shall set  
14     this field as described below; otherwise, the base station shall  
15     omit this field.

16     The base station shall set this field to the value shown in  
17     Table 2.6.6.2.1-2 corresponding to the search window offset  
18     to be used by mobile stations for this neighbor.

19                    **FREQ\_INCL**      -      Frequency included indicator.

20     If FREQ\_FIELDS\_INCL is set to '1', the base station shall  
21     include the field FREQ\_INCL and shall set this field as  
22     described below; otherwise, the base station shall omit this  
23     field.

24     If the NGHBR\_BAND and NGHBR\_FREQ fields are included  
25     for this neighbor base station, the base station shall set this  
26     bit to '1'. If the NGHBR\_BAND and NGHBR\_FREQ fields are  
27     not included in this assignment record, the base station shall  
28     set this bit to '0'.

29                    **NGHBR\_BAND**      -      Neighbor band class.

30     If the FREQ\_INCL field is included and is set to '1', the base  
31     station shall include the field NGHBR\_BAND and shall set  
32     this field as described below; otherwise, the base station shall  
33     omit this field.

1			The base station shall set this field to the CDMA band class,
2			as specified in [30], corresponding to the CDMA frequency
3			assignment for the CDMA Channel containing the Broadcast
4			Control Channel/Forward Common Control Channel the
5			mobile station is to search.
6	NGHBR_FREQ	-	Neighbor frequency assignment.
7			If the FREQ_INCL field is omitted or is set to '0', the base
8			station shall omit this field.
9			If the FREQ_INCL field is included and is set to '1' and the
10			corresponding neighbor has a 1X neighbor pilot record type,
11			the base station shall set this field to the CDMA Channel
12			number, in the specified CDMA band class, corresponding to
13			the CDMA frequency assignment for the CDMA Channel
14			containing the Broadcast Control Channel/Forward Common
15			Control Channel the mobile station is to search.
16			If the FREQ_INCL field is included and is set to '1' and the
17			corresponding neighbor has a 3X neighbor pilot record type,
18			the base station shall set this field to the CDMA Channel
19			number, in the specified CDMA band class, corresponding to
20			the center SR3 frequency assignment containing the
21			Broadcast Control Channel/Forward Common Control
22			Channel the mobile station is to search.
23	TIMING_INCL	-	Timing included indicator.
24			If USE_TIMING is set to '1', the base station shall include the
25			field TIMING_INCL and set this field as described below;
26			otherwise, the base station shall omit this field.
27			If base station timing information is included for this
28			neighbor base station, the base station shall set this field to
29			'1'; otherwise, the base station shall set this field to '0'.
30	NGHBR_TX_OFFSET	-	Neighbor transmit time offset.
31			If TIMING_INCL is included and is set to '1', the base station
32			shall include the field NGHBR_TX_OFFSET and shall set this
33			field as described below; otherwise, the base station shall
34			omit this field.
35			The base station shall set this field to the time offset, in units
36			of 80 ms, from the beginning of the neighbor timing period to
37			the beginning of the first base station transmit window within
38			the period. The beginning of the neighbor timing period
39			occurs when $\lfloor t/4 \rfloor \bmod (16384) = 0$ .
40	NGHBR_TX_DURATION	-	Neighbor transmit time duration.
41			If TIMING_INCL is included and is set to '1' and
42			GLOBAL_TIMING_INCL is set to '0', the base station shall
43			include the field NGHBR_TX_DURATION and shall set this
44			field as described below; otherwise, the base station shall
45			omit this field.

1			The base station shall set this field to duration of the base
2			station transmit window, during each period, in units of
3			80 ms. The base station should set this field to a value of 3
4			or greater.
5	NGHBR_TX_PERIOD	-	Neighbor transmit time period.
6			If TIMING_INCL is included and is set to '1' and
7			GLOBAL_TIMING_INCL is set to '0', the base station shall
8			include the field NGHBR_TX_PERIOD and shall set this field
9			as described below; otherwise, the base station shall omit
10			this field.
11			The base station shall set this field to duration of the period,
12			in units of 80 ms.
13	ACCESS_ENTRY_HO	-	Access entry handoff permitted when entering the System
14			Access State.
15			If NGHBR_SET_ENTRY_INFO is equal to '1', the base station
16			shall include the field ACCESS_ENTRY_HO and shall set this
17			field as described below; otherwise, the base station shall
18			omit this field.
19			The base station shall set this field to '1' if the mobile station
20			is permitted to perform an access entry handoff to the base
21			station associated with the corresponding pilot between the
22			time it receives a message on the Paging Channel when in the
23			<i>Mobile Station Idle State</i> and it enters the <i>System Access State</i>
24			to respond to the message; otherwise, the base station shall
25			set this field to '0'.
26	ACCESS_HO_ALLOWED	-	Access handoff and access probe handoff permitted for the
27			corresponding pilot while in the <i>System Access State</i> .
28			If NGHBR_SET_ACCESS_INFO is equal to '1', the base station
29			shall include the field ACCESS_HO_ALLOWED and shall set
30			this field as described below; otherwise, the base station shall
31			omit this field.
32			The base station shall set this field to '1' if the mobile station
33			is permitted to perform an access handoff or access probe
34			handoff to the base station associated with the corresponding
35			pilot when the mobile station is in the <i>System Access State</i>
36			(see 2.6.3.1.8 and 2.6.3.1.9); otherwise, the base station shall
37			set this field to '0'.
38			The base station shall set this field to '0' if this pilot does not
39			support a Reverse Enhanced Access Channel (R-EACH).
40	RESQ_ENABLED	-	Call rescue feature enabled indicator.
41			The base station shall set this field to '1' if the call rescue
42			feature is enabled and there is at least one occurrence of
43			NGHBR_RESQ_CONFIGURED set to '1' in this message;
44			otherwise, the base station shall set this field to '0'.

1	RESQ_DELAY_TIME	-	Call rescue delay timer value.
2			If RESQ_ENABLED is set to '0', the base station shall omit
3			this field; otherwise, the base station shall include this field
4			and set it as follows:
5			The base station shall set this field to the value of the call
6			rescue delay timer to be used by the mobile station, in units
7			of 80 ms.
8	RESQ_ALLOWED_TIME	-	Call rescue allowed timer value.
9			If RESQ_ENABLED is set to '0', the base station shall omit
10			this field; otherwise, the base station shall include this field
11			and set it as follows:
12			The base station shall set this field to the value of the call
13			rescue allowed timer to be used by the mobile station, in
14			units of 80 ms.
15	RESQ_ATTEMPT_TIME	-	Call rescue attempt timer value.
16			If RESQ_ENABLED is set to '0', the base station shall omit
17			this field; otherwise, the base station shall include this field
18			and set it as follows:
19			The base station shall set this field to the value of the call
20			rescue attempt timer to be used by the mobile station, in
21			units of 40 ms.
22	RESQ_CODE_CHAN	-	Code channel index for the Rescue Channel.
23			If RESQ_ENABLED is set to '0', the base station shall omit
24			this field; otherwise, the base station shall include this field
25			and set it as follows:
26			The base station shall set this field to the code channel index
27			(see [2]) that the mobile station is to use on the Forward
28			Fundamental Channel when attempting Call Rescue Soft
29			Handoff with the associated neighbor pilot.
30			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
31			station shall set this field in the range 1 to 63 inclusive. If
32			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
33			station shall set this field in the range 1 to 127 inclusive. If
34			Radio Configuration 7 or 9 is used, the base station shall set
35			this field in the range 1 to 255 inclusive.
36	RESQ_QOF	-	Quasi-Orthogonal Function mask identifier for the Rescue
37			Channel.
38			If RESQ_ENABLED is set to '0', the base station shall omit
39			this field; otherwise, the base station shall include this field
40			and set it as follows:
41			The base station shall set this field to the quasi-orthogonal
42			function mask identifier (see [2]) that the mobile station is to
43			use on the Forward Fundamental Channel when attempting
44			Call Rescue Soft Handoff with the associated neighbor pilot.

1	RESQ_MIN_PERIOD_INCL	- Minimum time between consecutive rescues included
2		indicator.
3		If RESQ_ENABLED is set to '0', the base station shall omit
4		this field; otherwise, the base station shall include this field
5		and set it as follows:
6		The base station shall set this field to '1' if the
7		RESQ_MIN_PERIOD field is included in this message;
8		otherwise, the base station shall set this field to '0'.
9		This field is set to '0' if there is no minimum time restriction
10		between consecutive rescues.
11	RESQ_MIN_PERIOD	- Minimum time between consecutive rescues.
12		If RESQ_MIN_PERIOD_INCL is not included, or is included
13		and set to '0', the base station shall omit this field; otherwise,
14		the base station shall include this field and set it as follows:
15		The base station shall set this field to one less than the
16		minimum time after a successful call rescue (i.e. receipt of
17		N <sub>3m</sub> good frames by the mobile station after the rescue
18		attempt timer is enabled) before any subsequent call rescue
19		attempts can be initiated, in units of 2 seconds.
20	RESQ_NUM_TOT_TRANS_INCL	- The required number of transmissions before
21		declaring L2 Acknowledgment Failure when Call Rescue is
22		enabled included indicator.
23		If RESQ_ENABLED is set to '0', the base station shall omit
24		this field; otherwise, the base station shall include this field
25		and set it as follows:
26		If the required number of transmissions of a regular PDU and
27		mini PDU before declaring L2 Acknowledgment Failure when
28		Call Rescue is enabled is included in this message, the base
29		station shall set this field to '1'; otherwise, the base station
30		shall set this field to '0'.
31	RESQ_NUM_TOT_TRANS_20MS	- The required number of transmissions of a regular
32		PDU before declaring L2 Acknowledgment Failure when Call
33		Rescue is enabled.
34		If RESQ_NUM_TOT_TRANS_INCL field is not included or is
35		included and is set to '0', the base station shall omit this
36		field; otherwise, the base station shall include this field and
37		set it as follows:
38		The base station shall set this field to the required number of
39		transmissions of a regular PDU before declaring L2
40		Acknowledgment Failure when Call Rescue is enabled.
41		The base station shall not set this field to a value greater
42		than N <sub>1m</sub> .
43	RESQ_NUM_TOT_TRANS_5MS	- The required number of transmissions of a mini PDU
44		before declaring L2 Acknowledgment Failure when Call
45		Rescue is enabled.

1 If RESQ\_NUM\_TOT\_TRANS\_INCL field is not included or is  
2 included and is set to '0', the base station shall omit this  
3 field; otherwise, the base station shall include this field and  
4 set it as follows:

5 The base station shall set this field to the required number of  
6 transmissions of a mini PDU before declaring L2  
7 Acknowledgment Failure when Call Rescue is enabled.

8 The base station shall not set this field to a value greater  
9 than  $N_{15m}$ .

10 RESQ\_NUM\_PREAMBLE\_RC1\_RC2 – The Traffic Channel preamble length for Call  
11 Rescue Soft Handoff when operating in Radio Configuration 1  
12 or 2.

13 If RESQ\_ENABLED is set to '0', the base station shall omit  
14 this field; otherwise, the base station shall include this field  
15 and set it to the length of Traffic Channel preamble, in 20 ms  
16 units, that the mobile station is to send when performing a  
17 call rescue soft handoff.

18 RESQ\_NUM\_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft  
19 Handoff when operating in Radio Configuration greater than  
20 2.

21 If RESQ\_ENABLED is set to '0', the base station shall omit  
22 this field; otherwise, the base station shall include this field  
23 and set it to the length of Traffic Channel preamble that the  
24 mobile station is to send when performing a call rescue soft  
25 handoff, as follows:

26 The base station shall set this field to the value shown in  
27 Table 3.7.3.3.2.17-1 corresponding to the Traffic Channel  
28 preamble length in 1.25 ms units.

29 RESQ\_POWER\_DELTA – The power level adjustment to be applied to the last closed-  
30 loop power level when re-enabling the transmitter for call  
31 rescue soft handoff.

32 If RESQ\_ENABLED is set to '0', the base station shall omit  
33 this field; otherwise, the base station shall set this field to a  
34 value by which mobile stations are to adjust the last closed-  
35 loop power level when re-enabling the transmitter for call  
36 rescue, expressed as a two's complement value in units of  
37 1 dB.

38 The base station shall include NUM\_NGHBR occurrences of the following one-field record  
39 if RESQ\_ENABLED is set to '1'. The base station shall use the same order for the following  
40 field as is used for the NGHBR\_PN fields listed in this message.

41 NGHBR\_RESQ\_CONFIGURED – Neighbor Rescue Channel configured indicator.

42 The base station shall set this field to '1' if a Rescue Channel  
43 is configured for this neighbor pilot; otherwise, the base  
44 station shall set this field to '0'.

45 The base station shall include NUM\_NGHBR occurrences of the following variable length  
46 record. The base station shall use the same order for the following field as is used for the  
47 NGHBR\_PN fields listed in this message.

1    NGHBR\_PDCH\_SUPPORTED – Neighbor PDCH supported indicator.

2                                    The base station shall set this field to '1' if PDCH is  
3                                    configured for this neighbor pilot; otherwise, the base station  
4                                    shall set this field to '0'.

5                    RESERVED    -    Reserved bits.

6                                    The base station shall add reserved bits as needed in order to  
7                                    make the length of the entire RADIO\_INTERFACE\_TYPE  
8                                    record equal to an integer number of octets. The base station  
9                                    shall set these bits to '0'.

10

11    If RADIO\_INTERFACE\_TYPE is equal to '0010', the base station shall include the following  
12    fields:

Field	Length (bits)
NUM_HRPD_NGHBR	6

NUM\_HRPD\_NGHBR occurrences of the following  
subrecord:

{ (NUM\_HRPD\_NGHBR)

HRPD_NGHBR_REC_LEN	8
NGHBR_PN	9
NGHBR_FREQ_INCL	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
PN_ASSOCIATION_IND	1
DATA_ASSOCIATION_IND	1
HRPD_NGHBR_REC_RESERVED	0-7 (as needed)

} (NUM\_HRPD\_NGHBR)

13    NUM\_HRPD\_NGHBR    -    Number of neighbor pilot PN sequences.

14                                    The base station shall set this field to the number of HRPD  
15                                    neighbors included in the message.

16    The base station shall include one occurrence of the following subrecord for each pilot that  
17    a mobile station is to place in its HRPD Neighbor Set.

18    HRPD\_NGHBR\_REC\_LEN - HRPD neighbor record length

19                                    The base station shall set this field to one less than the  
20                                    number of octets included in this HRPD neighbor record  
21                                    including this field.

22                    NGHBR\_PN    -    Neighbor pilot PN sequence offset index.

23                                    The base station shall set this field to the pilot PN sequence  
24                                    offset for this neighbor, in units of 64 PN chips.

1	NGHBR_FREQ_INCL	- Neighbor frequency information included indicator.
2		The base station shall set this field to '1' if the neighbor
3		frequency information is included in this message; otherwise,
4		the base station shall set this field to '0'.
5	NGHBR_BAND	- Neighbor band class.
6		If the NGHBR_FREQ_INCL field is set to '0', the base station
7		shall omit this field; otherwise, the base station shall include
8		this field and set it as follows:
9		The base station shall set this field to the CDMA band class,
10		as specified in [30], corresponding to the CDMA frequency
11		assignment for the CDMA Channel containing this neighbor.
12	NGHBR_FREQ	- Neighbor frequency assignment.
13		If the NGHBR_FREQ_INCL field is set to '0', the base station
14		shall omit this field; otherwise, the base station shall include
15		this field and set it as follows:
16		The base station shall set this field to the CDMA Channel
17		number, in the specified CDMA band class, corresponding to
18		the CDMA frequency assignment for this neighbor.
19	PN_ASSOCIATION_IND	- Neighbor PN association indicator.
20		The base station shall set this field to '1' if the system
21		identified by this system record has the same PN assignment
22		as the 1x system to which this BS belongs; otherwise, the
23		base station shall set this field to '0'.
24	DATA_ASSOCIATION_IND	- Neighbor data association indicator.
25		The base station shall set this field to '1' if the system
26		identified by this system record can reach the same set of
27		PDSNs as the 1x system to which this BS belongs; otherwise,
28		the base station shall set this field to '0'.
29	HRPD_NGHBR_REC_RESERVED	- HRPD neighbor record reserved bits.
30		The base station shall add reserved bits as needed in order to
31		make the length of this record equal to an integer number of
32		octets. The base station shall set these bits to '0'.
33		

## 1 3.7.2.3.2.35 Security Mode Command Message

2 MSG\_TAG: SMCM

Field	Length (bits)
C_SIG_ENCRYPT_MODE	3
ENC_KEY_SIZE	0 or 3
MSG_INT_INFO_INCL	1
CHANGE_KEYS	0 or 1
USE_UAK	0 or 1

3

4 C\_SIG\_ENCRYPT\_MODE - Common channel encryption mode indicator.

5 The base station shall set this field to the common channel  
6 signaling encryption mode, as shown in Table 3.7.4.5-1.

7 ENC\_KEY\_SIZE - Key size used for user information and signaling encryption

8 If C\_SIG\_ENCRYPT\_MODE is equal to '001', or '010', the base  
9 station shall include this field and set this field to the  
10 encryption key\_size as shown in Table 3.7.4.5-2; otherwise,  
11 the base station shall omit this field.

12 MSG\_INT\_INFO\_INCL - Message integrity information included indicator

13 The base station shall set this field to '1' if the base station  
14 supports message integrity; otherwise, the base station shall  
15 set this field to '0'.

16 CHANGE\_KEYS - Change keys indicator

17 If MSG\_INT\_INFO\_INCL is set to '0', the base station shall  
18 omit this field; otherwise, the base station shall include this  
19 field and set it as follows:

20 The base station shall set this field to '0' to command the  
21 mobile station not to update the encryption key and integrity  
22 key. The base station shall set this field to '1' to command the  
23 mobile station to update the encryption key and integrity key  
24 to the latest being generated.

25 USE\_UAK - Use UAK indicator

26 If MSG\_INT\_INFO\_INCL is set to '0', the base station shall  
27 omit this field; otherwise, the base station shall include this  
28 field and set it as follows:

29 If the base station receives an authentication vector with a  
30 UAK, the base station shall set this field to '1' to indicate that  
31 the mobile station is to use UMAC; otherwise, the base  
32 station shall set this field to '0' to indicate that the mobile  
33 station is to use MAC-I.

34

35

## 3.7.2.3.2.36 Universal Page Message

## MSG\_TAG: UPM

When Layer 3 at the base station sends a PDU corresponding to the *Universal Page Message* to Layer 2, it also sends the UPM Common fields to Layer 2. These UPM Common fields and PDUs are used by Layer 2 to assemble the Layer 2 PDU or PDUs corresponding to the *Universal Page Message* (see [4]).

## UPM Common Fields:

Field	Length (bits)
CONFIG_MSG_SEQ	6
ACC_MSG_SEQ	6
READ_NEXT_SLOT	1
READ_NEXT_SLOT_BCAST	1

## PDU Format for a mobile station-addressed page:

Field	Length (bits)
SERVICE_OPTION	16
ADD_MS_RECORD	0 or 8 × EXT_MS_SDU- _LENGTH (see [4])

PDU Format for a mobile station-directed message announcement: There are no Layer 3 fields associated with this record.

## PDU Format for an enhanced broadcast page:

Field	Length (bits)
BCN	3
TIME_OFFSET	10
REPEAT_TIME_OFFSET	0 or 5
ADD_BCAST_RECORD	0 or $8 \times \text{EXT\_BCAST\_SDU\_LENGTH}$ (see [4])

1		
2		
3	CONFIG_MSG_SEQ	- Configuration message sequence number.
4		The base station shall set this field to CONFIG_SEQ
5		(see 3.6.2.2).
6	ACC_MSG_SEQ	- Access parameters message sequence number.
7		The base station shall set this field to ACC_CONFIG_SEQ
8		(see 3.6.2.2).
9	READ_NEXT_SLOT	- Pages carried into next slot indicator.
10		If all messages and records directed to mobile stations
11		operating in the slotted mode and active in this slot, are
12		included in this slot, the base station shall set this field to '0';
13		otherwise, the base station shall set this field to '1'.
14	READ_NEXT_SLOT_BCAST	- Enhanced Broadcast Pages carried into next slot
15		indicator.
16		If all enhanced broadcast pages directed to mobile stations
17		operating in the slotted mode and active in this slot to receive
18		enhanced broadcast pages are included in this slot, the base
19		station shall set this field to '0'; otherwise, the base station
20		shall set this field to '1'.
21	SERVICE_OPTION	- Service option.
22		The base station shall set this field to the service option code
23		shown in [30], corresponding to the requested service option.
24	ADD_MS_RECORD	- Additional mobile station-addressed information record.
25		The base station shall omit this field if
26		EXT_MS_SDU_LENGTH_INCL (see [4]) is set to '0'; otherwise,
27		the base station shall include EXT_MS_SDU_LENGTH (see
28		[4]) octets in this field.
29	BCN	- Broadcast Control Channel Number.
30		If NUM_BCCH_BCAST is equal to '000', base station shall set
31		this field to '000' and this field is to be ignored by the mobile
32		station.
33		Otherwise, the base station shall set this field to the
34		Broadcast Control Channel number of the F-BCCH to which
35		the mobile station is being redirected.

1		The base station shall not set this field to '000'(reserved) or
2		'001'.
3	TIME_OFFSET	- BCCH offset.
4		If NUM_BCCH_BCAST is equal to '000', base station shall set
5		this field to one less than the time offset, in units of 40 ms,
6		from the beginning of the slot in which this message began to
7		the beginning of the Forward Common Control Channel slot
8		to which the mobile station is being directed.
9		Otherwise, the base station shall set this field to one less
10		than the time offset, in units of 40 ms, from the beginning of
11		the slot in which this message began to the beginning of the
12		Broadcast Control Channel slot to which the mobile station is
13		being directed.
14	REPEAT_TIME_OFFSET	- BCCH offset of repeat.
15		If EXT_BCAST_SDU_LENGTH_IND (see [4]) is set to '01' or
16		'11', the base station shall set this field as follows:
17		• If NUM_BCCH_BCAST is equal to '000', the base
18		station shall set this field to one less than the time
19		offset, in units of 40 ms, from the time specified by
20		TIME_OFFSET to the beginning of the Forward
21		Common Control Channel slot to which the mobile
22		station is being directed for a repeat of the broadcast
23		message.
24		• Otherwise, the base station shall set this field to
25		one less than the time offset, in units of 40 ms, from
26		the time specified by TIME_OFFSET to the beginning of
27		the Broadcast Control Channel slot to which the
28		mobile station is being directed for a repeat of the
29		broadcast message.
30		Otherwise, the base station shall omit this field.
31	ADD_BCAST_RECORD	- Additional broadcast information record.
32		The base station shall omit this field if
33		EXT_BCAST_SDU_LENGTH_IND (see [4]) is set to '00' or '01';
34		otherwise, the base station shall include
35		EXT_BCAST_SDU_LENGTH (see [4]) octets in this field.
36		
37		
38		

1 3.7.2.3.2.37 Authentication Request Message

2 MSG\_TAG: AUREQM

3

Field	Length (bits)
RANDA	128
CON_SQN	48
AMF	16
MAC_A	64

4

5           RANDA    -   The Random Challenge Number.  
6                    The base station shall set this field to the value of the  
7                    Random Challenge Number in the authentication vector.

8           CON\_SQN -   Concealed Sequence Number.  
9                    The base station shall set this field to  $SQN \oplus AK$  (Concealed  
10                   Sequence Number), where SQN and AK are the sequence  
11                   number and the anonymity key in the authentication vector,  
12                   respectively.

13           AMF     -   Authentication Management Field.  
14                    The base station shall set this field to the value of the  
15                    Authentication Management Field in the authentication  
16                    vector.

17           MAC\_A   -   Message Authentication Code.  
18                    The base station shall set this field to the value of the  
19                    Message Authentication Code in the authentication vector.

20

## 1 3.7.2.3.2.38 BCMC Service Parameters Message

## 2 MSG\_TAG: BSPM

Field	Length (bits)
PILOT_PN	9
BSPM_MSG_SEQ	6

{ (BSPM COMMON RECORD)

BSPM_COMMON_RECORD_LEN	4
DIFF_BSPM	1

2

- 3           PILOT\_PN    -   Pilot PN sequence offset index.
- 4                        The base station shall set this field to the pilot PN sequence
- 5                        offset for this base station, in units of 64 PN chips.
- 6           BSPM\_MSG\_SEQ   -   BSPM sequence number.
- 7                        The base station shall set this field to the BCMC Service
- 8                        Parameters Message sequence number.
- 9   BSPM\_COMMON\_RECORD\_LEN-   BSPM common part record length.

1		The base station shall set this field to one less the number of
2		octets included in this BSPM common part record including
3		this field.
4	DIFF_BSPM	- Differential BSPM indicator.
5		If this message contains all the information with respect to
6		the last transmitted BCMC Service Parameters Message, the
7		base station shall set this field to '0'; if this message contains
8		only information that changed with respect to the last
9		transmitted BCMC Service Parameters Message, the base
10		station shall set this field to '1'.
11	AUTO_REQ_ALLOWED_IND	- Autonomous BCMC request allowed indicator.
12		The base station shall set this field to '1' to indicate that the
13		mobile station is allowed to request for a BCMC flow that is
14		not included in this message; otherwise, the base station
15		shall set this field to '0'.
16	FREQ_CHG_REG_REQUIRED	- Frequency change BCMC registration required
17		indication.
18		The base station shall set this field to '1' to indicate that the
19		mobile station is to send a Registration Message whenever
20		mobile station changes frequency while monitoring at least
21		one BCMC flow listed on this message; otherwise, the base
22		station shall set this field to '0'.
23	FREQ_CHG_REG_TIMER_IND	- Frequency change registration timer indicator.
24		The base station shall omit this field if the
25		FREQ_CHG_REG_REQUIRED field is set to '0'; otherwise, the
26		base station shall include this field and set it as follows:
27		The base station shall set this field to '1' to indicate frequency
28		change registration timer is enabled; otherwise, the base
29		station shall set this field to '0'.
30	FREQ_CHG_REG_TIMER	- Frequency change registration timer.
31		If the field FREQ_CHG_REG_TIMER_IND is not included or is
32		included and is set to '0', the base station shall omit this
33		field; otherwise, the base station shall include this field and
34		set it as follows:
35		The base station shall set this field to a value as specified in
36		Table 3.7.2.3.2.38-1 to indicate the duration of time within as
37		specified in Table 3.7.2.3.2.38-1 which the mobile station is
38		not to perform another registration due to a frequency
39		change.

**Table 3.7.2.3.2.38-1. Value of Frequency change registration timer**

<b>FREQ_CHG_REG_T IMER Value (binary)</b>	<b>Timer Length (Minutes)</b>
000	Reserved
001	1
010	2
011	5
100	10
101	20
110	30
111	60

**REGISTRATION\_REQ\_FLAG\_INCL** - Registration Required Flag Included.

The base station shall set this field to '1' if the registration is required for at least one BCMC flow listed in this message; otherwise the base station shall set this field to '0'.

**REGISTRATION\_REQ\_TIMER\_PERIOD** - Registration Required Timer Period.

If REGISTRATION\_REQ\_FLAG\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it to log (base 2) of the maximum value of the BCMC registration required timer divided by 80 msec.

**BCMC\_ON\_TRAFFIC\_SUP** - BCMC on traffic channel supported indicator.

The base station shall set this field to '1' to indicate that the BCMC feature is supported on traffic channel; otherwise, the base station shall set this field to '0'.

**AUTH\_SIGNATURE\_REQUIRED** - Authorization signature required indication.

The base station shall set this field to '1' to indicate that the mobile station is to include the authorization signature in the Registration Message, Origination Message, or Page Response Message for at least one of the BCMC flows included in this message; otherwise, the base station shall set this field to '0'.

**NON\_DEFAULT\_VALUE\_INCLUDED** - Non-default values for Authorization signature included indicator.

1		If the AUTH_SIGNATURE_REQUIRED field is set to '0', the
2		base station shall omit this field; otherwise, the base station
3		shall include this field and set it as follows:
4		The base station shall set this field to '0' if default values are
5		to be used to generate the Authorization signature; otherwise,
6		the base station shall set this field to '1'.
7	ACH_TIME_STAMP_SHORT_LENGTH	- Length of time stamp for use on r-csch.
8		If the NON_DEFAULT_VALUE_INCLUDED field is not
9		included or is included and is set to '0', the base station shall
10		omit this field; otherwise, the base station shall include this
11		field and set it as follows:
12		The base station shall set this field to the length of the time
13		stamp, in units of bits, included on the Registration
14		Message, Origination Message, or Page Response Message
15		transmitted on r-csch.
16	TIME_STAMP_LONG_LENGTH	- Length of time stamp.
17		If the NON_DEFAULT_VALUE_INCLUDED field is not
18		included or is included and is set to '0', the base station shall
19		omit this field; otherwise, the base station shall include this
20		field and set it as follows:
21		The base station shall set this field to the length of the time
22		stamp, in units of bits, used to generate the Authorization
23		signature.
24	TIME_STAMP_UNIT	- Unit for time stamp length.
25		If the NON_DEFAULT_VALUE_INCLUDED field is not
26		included or is included and is set to '0', the base station shall
27		omit this field; otherwise, the base station shall include this
28		field and set it as follows:
29		The base station shall set this field to the unit of the time
30		stamp length field as follows: the unit of the time stamp field
31		shall be 2 to the power of the value of this field.
32	NUM_FSCH	- Number of Forward Supplemental Channels.
33		The base station shall set this field to the number of Forward
34		Supplemental Channels being transmitted by this base
35		station in any one of the frequencies.
36	FSCH_PLCM_SCHEME_IND	- Forward Supplemental Channels Public Long Code Mask
37		Scheme Indicator.
38		The base station shall set this field as specified in Table
39		3.7.2.3.2.38-2 to indicate the Forward Supplemental Channel
40		public long code mask scheme used.

**Table 3.7.2.3.2.38-2. Forward Supplemental Channel PLCM scheme used**

<b>FSCH_PLCM_SCHEME_IND (binary)</b>	<b>PLCM scheme used</b>
00	PLCM autonomously generated from BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow on each Forward Supplemental Channel
01	PLCM generated from FSCH_PLCM_INDEX signaled for each Forward Supplemental Channel
10	PLCM scheme individually specified for each Forward Supplemental Channel
11	Reserved

**NUM\_BCMC\_PROGRAMS** - Number of BCMC Programs.

The base station shall set this field to the number of BCMC programs available in this base station in any one of the frequencies minus one.

**USE\_TIME** - Use action time indicator.

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**ACTION\_TIME** - Action time.

If the USE\_TIME field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and shall set it to the System Time in units of 80 ms (modulo 64) at which this message takes effect.

**FRAMING\_TYPE** - Framing type.

The base station shall set this field as specified in Table 3.7.2.3.2.38-7 to indicate the framing type used.

1

**Table 3.7.2.3.2.38-7. FRAMING\_TYPE values**

<b>FRAMING_TYPE (binary)</b>	<b>Framing type used</b>
00	HDLC-like
01	Segment-based
10	Reserved
11	Reserved

2

**FCS\_LENGTH** - FCS Length.

3

4

5

The base station shall omit this field if the FRAMING\_TYPE field is set to '00'; otherwise, the base station shall include this field and set it as follows:

6

7

8

The base station shall set this field as specified in Table 3.7.2.3.2.38-8 to indicate the length of FCS included in BCMC payload.

9

**Table 3.7.2.3.2.38-8. FCS\_LENGTH values**

<b>FCS_LENGTH (binary)</b>	<b>Length of FCS (bits)</b>
00	0
01	16
10	Reserved
11	Reserved

10

**BSPM\_COMMON\_RECORD\_RESERVED** - BSPM common part record reserved bits.

11

12

13

14

The base station shall add reserved bits as needed in order to make the length of this BSPM common part record equal to an integer number of octets. The base station shall set these bits to '0'.

15

The base station shall include NUM\_FSCH occurrences of the following variable length record:

16

17

**FSCH\_RECORD\_LEN** - Forward Supplemental Channel record length.

18

19

20

The base station shall set this field to one less the number of octets included in this Forward Supplemental Channel record including this field.

21

**FSCH\_BAND\_CLASS\_INCL** - Forward Supplemental Channel band class included indicator.

22

1			If this Forward Supplemental Channel resides in the same
2			band class as where this message is being transmitted, the
3			base station shall set this field to '0'; otherwise, the base
4			station shall set this field to '1'.
5	FSCH_BAND_CLASS	-	Band class of the Forward Supplemental Channel.
6			If the FSCH_BAND_CLASS_INCL field is set to '0', the base
7			station shall omit this field; otherwise, the base station shall
8			include this field and set it as follows:
9			The base station shall set this field to the CDMA band class,
10			as specified in [30], corresponding to the CDMA frequency
11			assignment containing this Forward Supplemental Channel.
12	FSCH_CDMA_FREQ_INCL	-	Forward Supplemental Channel Frequency included
13			indicator.
14			If this Forward Supplemental Channel resides in the same
15			frequency as where this message is being transmitted, the
16			base station shall set this field to '0'; otherwise, the base
17			station shall set this field to '1'.
18	FSCH_CDMA_FREQ	-	Frequency assignment of the Forward Supplemental
19			Channel.
20			If the FSCH_CDMA_FREQ_INCL field is set to '0', the base
21			station shall omit this field; otherwise, the base station shall
22			include this field and set it as follows:
23			The base station shall set this field to the CDMA Channel
24			number corresponding to the CDMA frequency assignment
25			for the CDMA Channel containing this Forward Supplemental
26			Channel.
27	FSCH_CODE_CHAN	-	Code channel index of the Forward Supplemental Channel.
28			The base station shall set this field to the code channel index
29			of this Forward Supplemental Channel as specified in [2].
30	FSCH_PLCM_IND	-	Forward Supplemental Channel Public Long Code Mask
31			Scheme Indicator.
32			If the FSCH_PLCM_SCHEME_IND field is not set to '10', the
33			base station shall omit this field; otherwise, the base stations
34			shall include this field and set it as follows:
35			If the index to generate PLCM for this Forward Supplemental
36			Channel is signaled in this message, the base station shall
37			set this field to '1'; otherwise if the PLCM for this Forward
38			Supplemental Channel is autonomously generated from
39			BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow
40			on this Forward Supplemental Channel as specified in
41			2.6.13.10.1, the base station shall set this field to '0'.
42	FSCH_PLCM_INDEX	-	Index to generate the Forward Supplemental Channel public
43			long code mask.

1			If the FSCH_PLCM_SCHEME_IND field is set to '01', or the
2			FSCH_PLCM_IND field is included and is set to '1', the base
3			station shall include this field and set it as follows; otherwise,
4			the base station shall omit this field.
5			The base station shall set this field to the index from which
6			the public long code mask for this Forward Supplemental
7			Channel is generated as specified in 2.6.13.10.2.
8	FSCH_MUX_OPTION	-	Multiplex Option of the Forward Supplemental Channel.
9			The base station shall set this field to the multiplex option of
10			this Forward Supplemental Channel as specified in [3].
11	FSCH_RC	-	Radio configuration of the Forward Supplemental Channel.
12			The base station shall set this field to the radio configuration
13			of this Forward Supplemental Channel as specified in [2].
14	FSCH_CODING	-	Coding type of the Forward Supplemental Channel.
15			The base station shall set this field to '1' if Convolutional
16			Coding will be used when the number of channel bits per
17			frame is less than 360 and Turbo Coding when the number of
18			channel bits per frame is equal to or greater than 360. The
19			base station shall set this field to '0' if Convolution Coding
20			will be used for all block sizes.
21	FSCH_OUTERCODE_INCL	-	Forward Supplemental Channel Outer Code included
22			indicator.
23			The base station shall set this field to '1' if the Forward
24			Supplemental Channel outer code information is included in
25			this message; otherwise, the base station shall set this field
26			to '0'.
27	FSCH_OUTERCODE_RATE	-	Outer Code Rate of the Forward Supplemental Channel.
28			If the FSCH_OUTERCODE_INCL field is set to '0', the base
29			station shall omit this field; otherwise, the base station shall
30			include this field and set it as follows:
31			The base station shall set this field to specify the outer code
32			rate of the Forward Supplemental Channel as specified in
33			Table 3.7.2.3.2.38-3

1 **Table 3.7.2.3.2.38-3. Forward Supplemental Channel Outer Code Rate**

<b>FSCH_OUTERCODE_RATE (binary)</b>	<b>FORWARD SUPPLEMENTAL CHANNEL Outer Code Rate</b>	<b>Length of TDM_SUPER_PER IOD_MASK (bits)</b>
000	11/16	11
001	12/16	12
010	13/16	13
011	14/16	14
100-111	Reserved	Reserved

2

3 **FSCH\_OUTERCODE\_OFFSET** - Outer Coding Buffer Offset of the Forward  
4 Supplemental Channel.

5 If the **FSCH\_OUTERCODE\_INCL** field is set to '0', the base  
6 station shall omit this field; otherwise, the base station shall  
7 include this field and set it as follows:

8 The base station shall set this field to specify the outer coding  
9 buffer offset of the Forward Supplemental Channel in units of  
10 20ms as specified in [2]. The base station shall set this field  
11 to a value between 0 and 63 inclusive.

12 **FSCH\_NUM\_BITS\_INDX** - Number of information bits index of the Forward  
13 Supplemental Channel.

14 The base station shall set this field according to Table  
15 3.7.3.3.2.37-4 to indicate the number of information bits per  
16 frame and the length of the CRC field for this Forward  
17 Supplemental Channel.

18 **FSCH\_FRAME\_40\_USED** - Forward Supplemental Channel 40ms frame used indicator.

19 The base station shall set this field to '1' if 40ms frame is  
20 used on this Forward Supplemental Channel; otherwise, the  
21 base station shall set this field to '0'.

22 The base station shall not set both **FSCH\_FRAME\_40\_USED**  
23 and **FSCH\_FRAME\_80\_USED** fields to '1'.

24 **FSCH\_FRAME\_80\_USED** - Forward Supplemental Channel 80ms frame used indicator.

25 The base station shall set this field to '1' if 80ms frame is  
26 used on this Forward Supplemental Channel; otherwise, the  
27 base station shall set this field to '0'.

28 The base station shall not set both **FSCH\_FRAME\_40\_USED**  
29 and **FSCH\_FRAME\_80\_USED** fields to '1'.

30 **TDM\_STRUCTURE\_IND** - TDM structure used indicator.

1 The base station shall set this field to '1' if a time-division  
 2 multiplexing structure (i.e. BCMC TDM Mode) is used on this  
 3 Forward Supplemental Channel; otherwise, the base station  
 4 shall set this field to '0'.

5 **TDM\_SLOT\_LENGTH** - TDM slot length.

6 If the TDM\_STRUCTURE\_IND field is set to '0' or if  
 7 FSCH\_OUTERCODE\_INCL field in this record is set to '1', the  
 8 base station shall omit this field; otherwise, the base station  
 9 shall include this field and shall set it as follows:

10 The base station shall set this field to the length of the TDM  
 11 slot as specified in Table 3.7.2.3.2.38-4.

12 **Table 3.7.2.3.2.38-4. TDM\_SLOT\_LENGTH values**

<b>TDM_SLOT_LENGTH (binary)</b>	<b>Length of the TDM slot</b>
00	20 ms
01	40 ms
10	80 ms
11	Reserved

13

14 **TDM\_SUPER\_PERIOD\_MASK\_LEN** - TDM super period mask length indicator.

15 If the TDM\_STRUCTURE\_IND field is set to '0' or if  
 16 FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID  
 17 field included in this record is set to '1', the base station shall  
 18 omit this field; otherwise, the base station shall include this  
 19 field and set it as follows:

20 The base station shall set this field to the TDM super period  
 21 mask length as specified in Table 3.7.2.3.2.38-5.

**Table 3.7.2.3.2.38-5. TDM\_SUPER PERIOD\_MASK\_LEN and TDM\_MEGA\_PERIOD\_MASK\_LEN values**

<b>TDM_SUPER_PERIOD_MASK_LEN or TDM_MEGA_PERIOD_MASK_LEN (binary)</b>	<b>Bits in TDM_SUPER_PERIOD_MASK or TDM_MEGA_PERIOD_MASK</b>
00	4 bits
01	8 bits
10	16 bits
11	Reserved

**TDM\_MEGA\_PERIOD\_MASK\_LEN** - TDM mega period mask length indicator.

If the **TDM\_STRUCTURE\_IND** field is set to '0' or if **FSCH\_OUTERCODE\_INCL** field corresponding to **FSCH\_ID** field included in this record is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the TDM mega period mask length as specified in Table 3.7.2.3.2.38-5.

**FSCH\_RECORD\_RESERVED** - Forward Supplemental Channel record reserved bits.

The base station shall add reserved bits as needed in order to make the length of this Forward Supplemental Channel record equal to an integer number of octets. The base station shall set these bits to '0'.

The base station shall include **NUM\_BCMC\_PROGRAMS** plus one occurrences of the following variable length record:

**BCMC\_PROGRAM\_ID\_LEN** - Length of **BCMC\_PROGRAM\_ID** field.

The base station shall set this field to one less than the length in bits of the **BCMC\_PROGRAM\_ID** of this program.

**BCMC\_PROGRAM\_ID** - BCMC program Identifier.

The length of this field shall be one more than the value of **BCMC\_PROGRAM\_ID\_LEN** bits.

The base station shall set this field to the BCMC program identifier of this program.

**BCMC\_FLOW\_DISCRIMINATOR\_LEN** - Length of **BCMC\_FLOW\_DISCRIMINATOR** field.

The base station shall set this field to the length in bits of the **BCMC\_FLOW\_DISCRIMINATOR** of this program.

- 1 NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators.
- 2 The length of this field shall be determined by the value of
- 3 the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if
- 4 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field
- 5 is omitted; otherwise, the length of this field shall be
- 6 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.
- 7 The base station shall set this field to the number of flow
- 8 discriminators included for this program minus one.
- 9 If NUM\_FLOW\_DISCRIMINATOR field is included, the base station shall include
- 10 NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;
- 11 otherwise, the base station shall include 1 occurrence of the following variable length
- 12 record:
- 13 BCMC\_FLOW\_DISCRIMINATOR\_HEADER\_RECORD\_LEN - BCMC flow discriminator
- 14 header record length.
- 15 The base station shall set this field to one less the number of
- 16 octets included in this BCMC flow discriminator header
- 17 record including this field.
- 18 BCMC\_FLOW\_DISCRIMINATOR - BCMC flow discriminator.
- 19 The length of this field shall be determined by the value of
- 20 the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if
- 21 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field
- 22 is omitted; otherwise, the length of this field shall be
- 23 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.
- 24 The base station shall set this field to the BCMC flow
- 25 discriminator of this flow.
- 26 FLOW\_INFO\_ON\_OTHER\_FREQ - BCMC flow information on another frequency
- 27 indicator.
- 28 The base station shall set this field to '1' if the information on
- 29 this BCMC flow is available on another frequency; otherwise,
- 30 the base station shall set this field to '0'.
- 31 BSPM\_CDMA\_FREQ\_SAME\_AS\_PREV - BSPM CDMA Frequency same as previous
- 32 indicator.
- 33 If the FLOW\_INFO\_ON\_OTHER\_FREQ field is set to '0', the
- 34 base station shall omit this field; otherwise, the base station
- 35 shall include this field and set it as follows:
- 36 The base station shall set this field to '1' if the CDMA channel
- 37 number and band class where the BCMC Service Parameters
- 38 Message containing information on this BCMC flow is
- 39 transmitted is the same as the one for the previous BCMC
- 40 flow listed in this message.
- 41 BSPM\_BAND\_CLASS- BSPM band class.

1 If the BSPM\_CDMA\_FREQ\_SAME\_AS\_PREV field is not  
2 included or included and set to '1', the base station shall  
3 omit this field; otherwise, the base station shall include this  
4 field and set it as follows:

5 The base station shall set this field to the CDMA band class  
6 where the BCMC Service Parameters Message containing  
7 information on this BCMC flow is transmitted.

8 **BSPM\_CDMA\_FREQ - BSPM Frequency.**

9 If the BSPM\_CDMA\_FREQ\_SAME\_AS\_PREV field is not  
10 included or included and set to '1', the base station shall omit  
11 this field; otherwise, the base station shall include this field  
12 and set it as follows:

13 The base station shall set this field to the CDMA channel  
14 number where the BCMC Service Parameters Message  
15 containing information on this BCMC flow is transmitted.

16 **REGISTRATION\_REQ\_FLAG - Registration Required Flag.**

17 If FLOW\_INFO\_ON\_OTHER\_FREQ is set to '1' or  
18 REGISTRATION\_REQ\_FLAG\_INCL is set to '0', the base  
19 station shall omit this field; otherwise, the base station shall  
20 include this field and set it as follows:

21 The base station shall set this field to '1' if registration is  
22 required for this BCMC flow. Otherwise, the base station shall  
23 set this field to '0'.

24 **AUTH\_SIGNATURE\_REQ\_IND - Authorization signature required indicator.**

25 If FLOW\_INFO\_ON\_OTHER\_FREQ is set to '1' or the  
26 AUTH\_SIGNATURE\_REQUIRED field is set to '0', the base  
27 station shall omit this field; otherwise, the base station shall  
28 include this field and set it as follows:

29 The base station shall set this field to '1' if the mobile station  
30 is to include the authorization signature in the Registration  
31 Message, Origination Message, or Page Response Message for  
32 this BCMC flow; otherwise, the base station shall set this  
33 field to '0'.

34 **BCMC\_FLOW\_ON\_TRAFFIC\_IND - BCMC flow on traffic channel supported indicator.**

35 If FLOW\_INFO\_ON\_OTHER\_FREQ is set to '1' or  
36 BCMC\_ON\_TRAFFIC\_SUP is set to '0', the base station shall  
37 omit this field; otherwise, the base station shall include this  
38 field and set it as follows:

39 The base station shall set this field to '1' if this BCMC flow is  
40 available on traffic channel; otherwise, the base station shall  
41 set this field to '0'.

42 **NUM\_LPM\_ENTRIES - Number of Logical-to-Physical Mapping Entries.**

43 If the FLOW\_INFO\_ON\_OTHER\_FREQ field is set to '1', the  
44 base station shall omit this field; otherwise, the base station  
45 shall include this field and set it as follows:

1                   The base station shall set this field to the number of logical to  
2                   physical mapping included for this BCMC flow.

3    BCMC\_FLOW\_DISCRIMINATOR\_HEADER\_RECORD\_RESERVED -    BCMC                   flow  
4                   discriminator header record reserved bits.

5                   The base station shall add reserved bits as needed in order to  
6                   make the length of this BCMC flow discriminator header  
7                   record equal to an integer number of octets. The base station  
8                   shall set these bits to '0'.

9    The base station shall include NUM\_LPM\_ENTRIES occurrences of the following variable-  
10   length record:

11                   FSCH\_ID    -   Forward Supplemental Channel Identifier. The base station  
12                                   shall set this field to the identifier corresponding to the  
13                                   Forward Supplemental Channel on which the above BCMC  
14                                   flow is being transmitted. The Forward Supplemental Channel  
15                                   included first in this message is given the FSCH\_ID of  
16                                   '0000000', the second one listed is given the FSCH\_ID of  
17                                   '0000001', and so on.

18                   TDM\_USED\_IND   -   TDM used indicator.

19                                   If the TDM\_STRUCTURE\_IND field for the Forward  
20                                   Supplemental Channel specified by this FSCH\_ID is set to '0',  
21                                   the base station shall omit this field; otherwise, the base  
22                                   station shall include this field and set it as follows:

23                                   The base station shall set this field to '1' if a time-division  
24                                   multiplexing structure (i.e. BCMC TDM Mode) is used on the  
25                                   Forward Supplemental Channel for this flow; otherwise, the  
26                                   base station shall set this field to '0'.

27                   TDM\_MASK    -   TDM mask.

28                                   If the TDM\_USED\_IND field is not included or is included and  
29                                   is set to '0', the base station shall omit this field; otherwise,  
30                                   the base station shall include this field and set it as follows:

31                                   If FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID  
32                                   field included in this record is set to '1', the duration of a slot  
33                                   is 20 ms; otherwise, duration of a slot is indicated by  
34                                   TDM\_SLOT\_LENGTH. For each bit of this field, the base  
35                                   station set it to '1' if this flow is assigned to the corresponding  
36                                   slot. For each bit of this field, the base station shall set it to  
37                                   '0' if this flow is not assigned to the corresponding slot.

38    TDM\_SUPER\_PERIOD\_MASK\_INCL -   TDM super period mask included indicator.

39                                   If the TDM\_USED\_IND field is not included or is included and  
40                                   is set to '0', the base station shall omit this field; otherwise,  
41                                   the base station shall include this field and set it as follows:

42                                   The base station set it to '1' if TDM\_SUPER\_PERIOD\_MASK  
43                                   field is included in this message; otherwise, the base station  
44                                   shall set it to '0'.

45    TDM\_SUPER\_PERIOD\_MASK       -   TDM super period mask.

1 If the TDM\_SUPER\_PERIOD\_MASK\_INCL field is not included  
2 or is included and is set to '0', the base station shall omit this  
3 field; otherwise, the base station shall include this field and  
4 set it as follows:

5 If FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID  
6 field included in this record is set to '0', then number of bits  
7 included in this field is indicated by  
8 TDM\_SUPER\_PERIOD\_MASK\_LEN field. Otherwise, number  
9 of bits included in this field is set as specified in Table  
10 3.7.2.3.2.38-3, based on FSCH\_OUTERCODE\_RATE field  
11 corresponding to FSCH\_ID field included in this record.

12 Duration of super slot is 4 slots. For each bit of this field, the  
13 base station set it to '1' if the TDM\_MASK specified above  
14 applies to the corresponding super slot. For each bit of this  
15 field, the base station shall set it to '0' if the TDM\_MASK  
16 specified above does not apply to the corresponding super  
17 slot.

18 If FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID  
19 field included in this record is set to '1', the super period  
20 mask bits for parity frames (16 - bits included in this field)  
21 are not specified.

22 If TDM\_SUPER\_PERIOD\_MASK is not included in this  
23 message, then it is considered equivalent to  
24 TDM\_SUPER\_PERIOD\_MASK being implicitly included with  
25 all bits set to '1'.

26 TDM\_MEGA\_PERIOD\_MASK\_INCL - TDM mega period mask included indicator.

27 If the TDM\_USED\_IND field is not included or is included and  
28 is set to '0', the base station shall omit this field; otherwise,  
29 the base station shall include this field and set it as follows:

30 The base station set it to '1' if TDM\_MEGA\_PERIOD\_MASK  
31 field is included in this message; otherwise, the base station  
32 shall set it to '0'.

33 TDM\_MEGA\_PERIOD\_MASK - TDM mega period mask.

34 If the TDM\_MEGA\_PERIOD\_MASK\_INCL field is not included  
35 or is included and is set to '0', the base station shall omit this  
36 field; otherwise, the base station shall include this field and  
37 set it as follows:

38 If FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID  
39 field included in this record is set to '1', then number of bits  
40 included in this field is indicated by  
41 TDM\_MEGA\_PERIOD\_MASK\_LEN field. Otherwise, number of  
42 bits included in this field is set as specified in Table  
43 3.7.2.3.2.38-6.

**Table 3.7.2.3.2.38-6. Length of TDM\_MEGA\_PERIOD\_MASK**

<b>TDM_SUPER_PERIOD_MASK_INCL (binary)</b>	<b>Length of TDM_MEGA_PERIOD_MASK (bits)</b>
0	8
1	4

If FSCH\_OUTERCODE\_INCL field corresponding to FSCH\_ID field included in this record is set to '1', duration of mega slot is 16 super slots. Otherwise, duration of mega slot is number of bits in TDM\_SUPER\_PERIOD\_MASK times duration of super slot.

For each bit of this field, the base station set it to '1' if the TDM\_SUPER\_PERIOD\_MASK specified above applies to the corresponding mega slot. For each bit of this field, the base station shall set it to '0' if the TDM\_SUPER\_PERIOD\_MASK specified above does not apply to the corresponding mega slot.

**BSR\_ID** - BCMC Service Reference Identifier.

The base station shall set this field to the BCMC Service Reference identifier corresponding to this BCMC flow on this Forward Supplemental Channel.

The base station shall not set this field to a value of 0.

**NUM\_NGHR** - Number of neighbor base stations.

The base station shall set this field to the number of neighbor base stations included in this message for this logical-to-physical mapping entry.

The base station shall include NUM\_NGHR occurrences of the following variable length record.

**NGHBR\_RECORD\_LEN** - Neighbor record length.

The base station shall set this field to one less the number of octets included in this neighbor record including this field.

**NGHBR\_PN** - Neighbor pilot PN sequence offset index.

The base station shall set this field to the pilot PN sequence offset for this neighbor base station, in units of 64 PN chips.

**NGHBR\_BCMC\_CONFIG** - Neighbor BCMC Configuration.

The base station shall set this field as specified in Table 3.7.2.3.2.38-6 to indicate the configuration of this BCMC flow in this neighbor base station.

1

**Table 3.7.2.3.2.38-6. Neighbor BCMC Configuration Field**

<b>Value (binary)</b>	<b>Neighbor BCMC Configuration</b>
000	The neighbor base station configuration with respect to this BCMC flow is not known or the neighbor base station is not configured to transmit this BCMC flow.
001	The neighbor base station is transmitting this BCMC flow on idle state.  Autonomous soft-handoff of the Forward Supplemental Channel carrying this BCMC flow is not possible with this neighbor base station.
010	The neighbor base station is transmitting this BCMC flow on idle state.  Autonomous soft-handoff of the Forward Supplemental Channel carrying this BCMC flow is possible with this neighbor base station.
011	The neighbor base station supports this BCMC flow on traffic channel.
100-111	Reserved.

2

3 NGHBR\_BSR\_ID - Neighbor BCMC Service Reference Identifier.

4 If the NGHBR\_BCMC\_CONFIG field is set to '000', '010', or  
5 '011', the base station shall omit this field; otherwise, the  
6 base station shall include this field and set it as follows.

7 The base station shall set this field to the BCMC Service  
8 Reference identifier corresponding to this BCMC flow in the  
9 neighbor base station.

10 The base station shall not set this field to a value of 0.

11 NGHBR\_FSCH\_BAND\_CLASS\_INCL - Neighbor Forward Supplemental Channel band  
12 class included indicator.

13 If the NGHBR\_BCMC\_CONFIG field is set to '000' '010', or  
14 '011', the base station shall omit this field; otherwise, the  
15 base station shall include this field and set it as follows.

16 If this F-SCH in the neighbor base station resides in the same  
17 band class as in this base station, the base station shall set  
18 this field to '0'; otherwise, the base station shall set this field  
19 to '1'.

20 NGHBR\_FSCH\_BAND\_CLASS - Band class of the Forward Supplemental Channel in  
21 the neighbor base station.

1		If the NGHBR_FSCH_BAND_CLASS_INCL field is not included
2		in this message or is included and is set to '0', the base
3		station shall omit this field; otherwise, the base station shall
4		include this field and set it as follows:
5		The base station shall set this field to the CDMA band class,
6		as specified in [30], corresponding to the CDMA frequency
7		assignment containing this Forward Supplemental Channel
8		in the neighbor base station.
9	NGHBR_FSCH_CDMA_FREQ_INCL -	Neighbor frequency included indicator.
10		If the NGHBR_BCMC_CONFIG field is set to '000', '010', or
11		'011', the base station shall omit this field; otherwise, the
12		base station shall include this field and set it as follows.
13		If this F-SCH in the neighbor base station resides in the same
14		frequency as in this base station, the base station shall set
15		this field to '0'; otherwise, the base station shall set this field
16		to '1'.
17	NGHBR_FSCH_CDMA_FREQ-	Frequency assignment of the Forward Supplemental
18		Channel in the neighbor base station.
19		If the NGHBR_FSCH_CDMA_FREQ_INCL field is not included
20		in this message or is included and is set to '0', the base
21		station shall omit this field; otherwise, the base station shall
22		include this field and set it as follows.
23		The base station shall set this field to the CDMA Channel
24		number corresponding to the CDMA frequency assignment
25		for the CDMA Channel containing this Forward Supplemental
26		Channel in this neighbor base station.
27	NGHBR_FSCH_CODE_CHAN_INCL -	Neighbor pilot Forward Supplemental Channel
28		Code Channel Index Included Indicator.
29		If the NGHBR_BCMC_CONFIG field is set to '000' or '011' the
30		base station shall omit this field; otherwise, the base station
31		shall include this field and set it as follows.
32		If this F-SCH in the neighbor base station uses the same code
33		channel as in this base station, the base station shall set this
34		field to '0'; otherwise, the base station shall set this field to
35		'1'.
36	NGHBR_FSCH_CODE_CHAN-	Neighbor pilot Forward Supplemental Channel Code
37		Channel Index.
38		If the NGHBR_FSCH_CODE_CHAN_INCL field is not included
39		in this message or is included and is set to '0', the base
40		station shall omit this field; otherwise, the base station shall
41		include this field and set it as follows.
42		The base station shall set this field to the code channel index
43		that the mobile station is to use for this Forward
44		Supplemental Channel on this neighbor base station.
45	NGHBR_FSCH_PARMS_INCL-	Neighbor Forward Supplemental Channel Parameters
46		Included Indicator.

1		If the NGHBR_BCMC_CONFIG field is set to '000', '010', or
2		'011', the base station shall omit this field; otherwise, the
3		base station shall include this field and set it as follows.
4		If this F-SCH in the neighbor base station uses the same
5		physical layer parameters as in this base station, the base
6		station shall set this field to '0'; otherwise, the base station
7		shall set this field to '1'.
8	NGHBR_FSCH_PLCM_IND	- Neighbor Forward Supplemental Channel Public Long
9		Code Mask Scheme Indicator.
10		If the NGHBR_FSCH_PARAMS_INCL field is not included in
11		this message, or is included and is set to '0', the base station
12		shall omit this field; otherwise, the base station shall include
13		this field and set it as follows.
14		If the index to generate PLCM for this Forward Supplemental
15		Channel is signaled in this message, the base station shall
16		set this field to '1'; otherwise if the PLCM for this Forward
17		Supplemental Channel is autonomously generated from
18		BCMC_FLOW_ID and BSR_ID corresponding to a BCMC flow
19		on this Forward Supplemental Channel as specified in
20		2.6.13.10.1, the base station shall set this field to '0'.
21	NGHBR_FSCH_PLCM_INDEX	- Index to generate the Forward Supplemental Channel
22		public long code mask.
23		If the NGHBR_FSCH_PLCM_IND field is not included or is
24		included and is set to '0', the base station shall omit this
25		field; otherwise, the base station shall include and set it as
26		follows.
27		The base station shall set this field to the index from which
28		the public long code mask for this Forward Supplemental
29		Channel is generated as specified in 2.6.13.10.2.
30	NGHBR_FSCH_MUX_OPTION	- Multiplex Option of the Forward Supplemental
31		Channel in the neighbor base station.
32		If the NGHBR_FSCH_PARAMS_INCL field is not included in
33		this message or is included and is set to '0', the base station
34		shall omit this field; otherwise, the base station shall include
35		this field and set it as follows.
36		The base station shall set this field to the multiplex option of
37		this Forward Supplemental Channel in the neighbor base
38		station as specified in [3].
39	NGHBR_FSCH_RC	- Radio configuration of the Forward Supplemental Channel in
40		the Neighbor Base Station.
41		If the NGHBR_FSCH_PARAMS_INCL field is not included in
42		this message or is included and is set to '0', the base station
43		shall omit this field; otherwise, the base station shall include
44		this field and set it as follows.

1		The base station shall set this field to the radio configuration
2		to be used by the mobile station for this Forward
3		Supplemental Channel in this neighbor base station as
4		specified in [2].
5	NGHBR_FSCH_CODING -	Coding type of the Forward Supplemental Channel in this
6		neighbor base station.
7		If the NGHBR_FSCH_PARMS_INCL field is not included in
8		this message or is included and is set to '0', the base station
9		shall omit this field; otherwise, the base station shall include
10		this field and set it as follows.
11		The base station shall set this field to '1' if Convolutional
12		Coding will be used when the number of channel bits per
13		frame is less than 360 and Turbo Coding when the number of
14		channel bits per frame is equal to or greater than 360. The
15		base station shall set this field to '0' if Convolution Coding
16		will be used for all block sizes.
17	NGHBR_FSCH_OUTERCODE_INCL -	Forward Supplemental Channel Outer Code
18		included indicator for this neighbor base station.
19		If the NGHBR_FSCH_PARMS_INCL field is not included in
20		this message or is included and is set to '0', the base station
21		shall omit this field; otherwise, the base station shall include
22		this field and set it as follows.
23		The base station shall set this field to '1' if the Forward
24		Supplemental Channel outer code information for this
25		neighbor base station is included in this message; otherwise,
26		the base station shall set this field to '0'.
27	NGHBR_FSCH_OUTERCODE_RATE -	Outer Code Rate of the Forward Supplemental
28		Channel in this neighbor base station.
29		If the FSCH_OUTERCODE_INCL field is not included or is
30		included and set to '0', the base station shall omit this field;
31		otherwise, the base station shall include this field and set it
32		as follows:
33		The base station shall set this field to specify the outer code
34		rate of the Forward Supplemental Channel as specified in
35		Table 3.7.2.3.2.38-3.
36	NGHBR_FSCH_OUTERCODE_OFFSET -	Outer Coding Buffer Offset of the Forward
37		Supplemental Channel in this neighbor base station.
38		If the FSCH_OUTERCODE_INCL field is not included or is
39		included and is set to '0', the base station shall omit this
40		field; otherwise, the base station shall include this field and
41		set it as follows:
42		The base station shall set this field to specify the outer coding
43		buffer offset of the Forward Supplemental Channel in units of
44		20ms as specified in [2]. The base station shall set this field
45		to a value between 0 and 63 inclusive.
46	NGHBR_FSCH_NUM_BITS_IDX -	Number of Information bits index of the Forward
47		Supplemental Channel in the Neighbor Base Station.

1 If the NGHBR\_FSCH\_PARAMS\_INCL field is not included in  
2 this message or is included and is set to '0', the base station  
3 shall omit this field; otherwise, the base station shall include  
4 this field and set it as follows.

5 The base station shall set this field according to Table  
6 3.7.3.3.2.37-4 to indicate the number of information bits per  
7 frame and the length of the CRC field for this Forward  
8 Supplemental Channel in this neighbor base station.

9 NGHBR\_FSCH\_FRAME\_40\_USED - Forward Supplemental Channel 40ms frame used  
10 indicator in the Neighbor Base Station.

11 If the NGHBR\_FSCH\_PARAMS\_INCL field is not included in  
12 this message or is included and is set to '0', the base station  
13 shall omit this field; otherwise, the base station shall include  
14 this field and set it as follows.

15 The base station shall set this field to '1' if 40ms frame is  
16 used on this Forward Supplemental Channel in this neighbor  
17 base station; otherwise, the base station shall set this field to  
18 '0'.

19 The base station shall not set both  
20 NGHBR\_FSCH\_FRAME\_40\_USED and  
21 NGHBR\_FSCH\_FRAME\_80\_USED fields to '1'.

22 NGHBR\_FSCH\_FRAME\_80\_USED - Forward Supplemental Channel 80ms frame used  
23 indicator in the Neighbor Base Station.

24 If the NGHBR\_FSCH\_PARAMS\_INCL field is not included in  
25 this message or is included and is set to '0', the base station  
26 shall omit this field; otherwise, the base station shall include  
27 this field and set it as follows.

28 The base station shall set this field to '1' if 80ms frame is  
29 used on this Forward Supplemental Channel in this neighbor  
30 base station; otherwise, the base station shall set this field to  
31 '0'.

32 The base station shall not set both  
33 NGHBR\_FSCH\_FRAME\_40\_USED and  
34 NGHBR\_FSCH\_FRAME\_80\_USED fields to '1'.

35 NGHBR\_RECORD\_RESERVED - Neighbor record reserved bits.

36 The base station shall add reserved bits as needed in order to  
37 make the length of this neighbor record equal to an integer  
38 number of octets. The base station shall set these bits to '0'.

39 BCMC\_NUM\_BCCH\_NGHR - Number of neighbor base stations that support  
40 Broadcast Control Channel.

41 The base station shall set this field to the number of neighbor  
42 base stations included in this message that support Primary  
43 Broadcast Control Channel and support BCMC on idle state.

44 BCMC\_BCCH\_NGHR\_PN - Neighbor Pilot PN sequence offset index.

45 The base station shall set this field to the pilot PN sequence  
46 offset for this neighbor base station, in units of 64 PN chips.

1	BCMC_SR1_BCCH_NON_TD_INCL	- Common Channel in non TD mode on Spreading
2		Rate 1 information included indicator.
3		The base station shall set this field to '1' if the base station
4		includes common channels (BCCH/F-CCCH/EACH)
5		information in non TD mode; otherwise, the base station
6		shall set this field to '0'.
7	BCMC_SR1_NON_TD_FREQ_INCL	- Non Transmit Diversity frequency included
8		indicator.
9		If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
10		included and set to '0', the base station shall omit this field;
11		otherwise, the base station shall set this field as follows:
12		The base station shall set this field to '1' if
13		BCMC_SR1_CDMA_FREQ_NON_TD is included in the
14		message. Otherwise, base station shall set this field to '0'.
15	BCMC_SR1_CDMA_FREQ_NON_TD	- Frequency assignment for non-transmit diversity
16		operation.
17		If BCMC_SR1_NON_TD_FREQ_INCL is not included, or is
18		included and set to '0', the base station shall omit this field;
19		otherwise, the base station shall set this field as follows:
20		The base station shall set this field to the CDMA Channel
21		number corresponding to the CDMA frequency assignment
22		for the CDMA Channel containing a Broadcast Control
23		Channel that does not support the TD operation.
24	BCMC_SR1_BRAT_NON_TD	- BCCH data rate in non-TD mode for Spreading Rate 1.
25		If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
26		included and set to '0', the base station shall omit this field;
27		otherwise, the base station shall set this field as follows:
28		The base station shall set this field to the BRAT field value
29		shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
30		used by the Primary Broadcast Control Channel in the
31		system.
32	BCMC_SR1_CRAT_NON_TD	- BCCH code rate in non Transmit Diversity mode for
33		Spreading Rate 1.
34		If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
35		included and set to '0', the base station shall omit this field;
36		otherwise, the base station shall set this field as follows:
37		The base station shall set this field to '0' if the BCCH Code
38		Rate is 1/4 (see [2]). The base station shall set this field to '1'
39		if the BCCH code rate is 1/2 (see [2]).
40	BCMC_SR1_BCCH_CODE_CHAN_NON_TD	- Walsh code for the Spreading Rate 1 BCCH
41		in non Transmit Diversity mode.
42		If BCMC_SR1_BCCH_NON_TD_INCL is not included, or is
43		included and set to '0', the base station shall omit this field;
44		otherwise, the base station shall set this field as follows:

1			The base station shall set this field to the Walsh code
2			corresponding to the Spreading Rate 1 BCCH in non
3			Transmit Diversity mode.
4	BCMC_SR1_TD_INCL	-	Spreading Rate 1 Transmit Diversity frequency information
5			included indicator.
6			The base station shall set this field to '1' if
7			BCMC_SR1_CDMA_FREQ_TD, BCMC_SR1_BRAT_TD,
8			BCMC_SR1_CRAT_TD, BCMC_SR1_TD_MODE, and
9			BCMC_SR1_TD_POWER_LEVEL are included in the message;
10			otherwise, the base station shall set this field to '0'.
11	BCMC_SR1_CDMA_FREQ_TD	-	Spreading Rate 1 frequency assignment for Transmit
12			Diversity operation.
13			If BCMC_SR1_TD_INCL is not included, or is included and set
14			to '0', the base station shall omit this field; otherwise, the
15			base station shall set this field as follows:
16			The base station shall set this field to the CDMA Channel
17			number corresponding to the CDMA frequency assignment
18			for the CDMA Channel containing a BCCH Channel that
19			supports the TD operation.
20	BCMC_SR1_BRAT_TD	-	BCCH data rate in Transmit Diversity mode for Spreading
21			Rate 1.
22			If BCMC_SR1_TD_INCL is not included, or is included and set
23			to '0', the base station shall omit this field; otherwise, the
24			base station shall set this field as follows:
25			The base station shall set this field to the BRAT field value
26			shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
27			used by the Primary Broadcast Control Channel in the
28			system.
29	BCMC_SR1_CRAT_TD	-	BCCH code rate in Transmit Diversity mode for Spreading
30			Rate 1.
31			If BCMC_SR1_TD_INCL is not included, or is included and set
32			to '0', the base station shall omit this field; otherwise, the
33			base station shall set this field as follows:
34			The base station shall set this field to '0' if the BCCH Code
35			Rate is 1/4 (see [2]). The base station shall set this field to '1'
36			if the BCCH Code Rate is 1/2 (see [2]).
37	BCMC_SR1_BCCH_CODE_CHAN_TD	-	Walsh code for the Spreading Rate 1 BCCH in
38			Transmit Diversity mode.
39			If BCMC_SR1_TD_INCL is not included, or is included and set
40			to '0', the base station shall omit this field; otherwise, the
41			base station shall set this field as follows:
42			The base station shall set this field to the Walsh code
43			corresponding to the Spreading Rate 1 BCCH in Transmit
44			Diversity mode.
45	BCMC_SR1_TD_MODE	-	Spreading Rate 1 Transmit Diversity Mode.

1 If BCMC\_SR1\_TD\_INCL is not included, or is included and set  
2 to '0', the base station shall omit this field; otherwise, the  
3 base station shall set this field as follows:  
4  
5 The base station shall set this field corresponding to Table  
6 3.7.2.3.2.26-3.  
7  
8 BCMC\_SR1\_TD\_POWER\_LEVEL - Spreading Rate 1 TD transmit power level.  
9  
10 If BCMC\_SR1\_TD\_INCL is not included, or is included and set  
11 to '0', the base station shall omit this field; otherwise, the  
12 base station shall set this field as follows:  
13  
14 The base station shall set this field to the TD transmit power  
level relative to that of the Forward Pilot Channel, as specified  
in Table 3.7.2.3.2.26-4.

## 1 3.7.2.3.2.39 Access Point Identification Message

2 MSG\_TAG: APIDM

3

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
ASSTN_TYPE	3
SID	15
NID	16
AP_ID_LEN	4

INTER_FREQ_HO_SLOPE	0 or 6
INTER_FREQ_SRCH_TH_INCL	1
INTER_FREQ_SRCH_TH	0 or 5

4

5 PILOT\_PN - Pilot PN sequence offset index.

- 1 The base station shall set this field to the pilot PN sequence  
 2 offset for this base station, in units of 64 PN chips.
- 3 CONFIG\_MSG\_SEQ - Configuration message sequence number.
- 4 The base station shall set this field to CONFIG\_SEQ  
 5 (see 3.6.2.2).
- 6 ASSTN\_TYPE - Association Type.
- 7 The base station shall set this field to the value shown in  
 8 Table 3.7.2.3.2.39-1 corresponding to the configuration of the  
 9 base station.

10 **Table 3.7.2.3.2.39-1. Association Type Field**

Value (binary)	Association Type
000	The base station allows any mobile stations to register and receive any services available at the base station.
001	The base station only allows any mobile stations to register and receive page on the base station.
010	The base station only allows selected mobile stations to register and only provides services to the selected mobile stations.
011-111	Reserved.

- 11
- 12 SID - System identification.
- 13 The base station shall set this field to the system  
 14 identification number for this system (see 2.6.5.2).
- 15 NID - Network identification.
- 16 This field serves as a sub-identifier of a system as defined by  
 17 the owner of the SID.
- 18 The base station shall set this field to the network  
 19 identification number for this network (see 2.6.5.2).
- 20 AP\_ID\_LEN - Access Point identification length.
- 21 The base station shall set this field to the length of the access  
 22 point identification in units of 16 bits.
- 23 AP\_ID - Access Point identification.
- 24 The base station shall set this field to its access point  
 25 identification number.
- 26 AP\_ID\_MASK - Access Point identification mask.
- 27 The base station shall set this field to the number of  
 28 consecutive bits (starting from the most significant bit) of  
 29 AP\_ID which identifies the group of access points.

1	IOS_MSC_ID	-	MSC_ID of the base station.
2			The base station shall set this field to the MSC_ID value that
3			the other base station uses in the network (see [48]) for
4			handoff into this base station.
5	IOS_CELL_ID	-	CELL_ID of the base station.
6			The base station shall set this field to the CELL_ID value that
7			the other base station uses in the network (see [48]) for
8			handoff into this base station.
9	HRPD_ACQ_REC_INCL	-	HRPD Acquisition Record Included.
10			The base station shall set this field to '1' if the message
11			includes HRPD acquisition information. Otherwise, this field
12			shall be set to '0'.
13	HRPD_PN	-	HRPD pilot PN sequence offset index.
14			If the HRPD_ACQ_REC_INCL field is set to '1', then this field
15			is set to the pilot PN sequence offset corresponding to the
16			HRPD pilot at this access point, in units of 64 PN chips.
17			Otherwise, this field shall be omitted.
18	HRPD_BAND_CLASS	-	HRPD Band Class.
19			If the HRPD_ACQ_REC_INCL field is set to '1', then this field
20			is set to the Band Class number corresponding to the
21			frequency assignment of the channel allocated to the HRPD
22			pilot at this access point. Otherwise, this field shall be
23			omitted.
24	HRPD_CHANNEL	-	HRPD Channel.
25			If the HRPD_ACQ_REC_INCL field is set to '1', then this field
26			is set to the channel number corresponding to the Band
27			Class of the HRPD pilot at this access point. Otherwise, this
28			field shall be omitted.
29	LOC_REC_TYPE	-	Location record type.
30			The base station shall set this field based on the type of the
31			LOC_REC field included in this message.
32	LOC_REC_LEN	-	Location record length.
33			The base station shall set this field to the number of octets in
34			the fields included in LOC_REC field. If LOC_REC_TYPE field
35			is set to '000', then this field shall be set to zero.
36	LOC_REC	-	Location record.
37			The Location record fields are determined by the value of
38			LOC_REC_TYPE, as described below.
39	If LOC_REC_TYPE = '000', the LOC_REC field shall be omitted.		
40	If LOC_REC_TYPE = '001', the LOC_REC field shall be:		
41			

BASE_LAT	22
BASE_LONG	23
LOC_UNC_H	4
BASE_HEIGHT	14
LOC_UNC_V	4
Reserved	0-7

If LOC\_REC\_TYPE field is set to '001', the base station shall include the following sub-fields in LOC\_REC field:

BASE\_LAT - Base station latitude.

The base station shall set this field to its latitude in units of 0.25 second, expressed as a two's complement signed number with positive numbers signifying North latitudes. The base station shall set this field to a value in the range - 1296000 to 1296000 inclusive (corresponding to a range of - 90° to +90°). The base station shall set this field to all zeros if its latitude is not known.

BASE\_LONG - Base station longitude.

The base station shall set this field to its longitude in units of 0.25 second, expressed as a two's complement signed number with positive numbers signifying East longitude. The base station shall set this field to a value in the range - 2592000 to 2592000 inclusive (corresponding to a range of - 180° to +180°). The base station shall set this field to all zeros if its longitude is not known.

LOC\_UNC\_H - Horizontal location uncertainty.

The base station shall set this field to the circular horizontal location uncertainty, as specified in Table 3.7.2.3.2.39-2. The value of this field indicates the radius of a circular 95% confidence coverage area.

**Table 3.7.2.3.2.39-2. Horizontal Position Uncertainty**

'0000'	LOC_UNC_H < 20 m
'0001'	20 m • LOC_UNC_H < 40 m
'0010'	40 m • LOC_UNC_H < 70 m
'0011'	70 m • LOC_UNC_H < 100 m
'0100'	100 m • LOC_UNC_H < 200 m
'0101'	200 m • LOC_UNC_H < 400 m
'0110'	400 m • LOC_UNC_H < 700 m
'0111'	700 m • LOC_UNC_H < 1,000 m
'1000'	1,000 m • LOC_UNC_H < 2,000 m

'1001'	2,000 m • LOC_UNC_H < 4,000 m
'1010'	4,000 m • LOC_UNC_H < 7,000 m
'1011'	7,000 m • LOC_UNC_H < 10,000 m
'1100'	10,000 m • LOC_UNC_H < 20,000 m
'1101'	20,000 m • LOC_UNC_H < 40,000 m
'1110'	40,000 m • LOC_UNC_H < 70,000 m
'1111'	70,000 m • LOC_UNC_H

**BASE\_HEIGHT** - Base station height.

The base station shall set this field to the height, above the WGS-84 reference ellipsoid, in units of 1 meter, in the range from -500 m to 15,882 m, where the binary value of the field conveys the height plus 500 m. The base station shall set this field to all ones if its height is not known.

**LOC\_UNC\_V** - Vertical location uncertainty.

The base station set this field to the vertical location uncertainty, as specified in Table 3.7.2.3.2.39-3. The value of this field indicates the one-sigma uncertainty of HEIGHT within the corresponding horizontal coverage area.

**Table 3.7.2.3.2.39-3. Vertical Position Uncertainty**

'0000'	0 < LOC_UNC_V < 1 m
'0001'	1 m • LOC_UNC_V < 2 m
'0010'	2 m • LOC_UNC_V < 4 m
'0011'	4 m • LOC_UNC_V < 7 m
'0100'	7 m • LOC_UNC_V < 10 m
'0101'	10 m • LOC_UNC_V < 20 m
'0110'	20 m • LOC_UNC_V < 40 m
'0111'	40 m • LOC_UNC_V < 70 m
'1000'	70 m • LOC_UNC_V < 100 m
'1001'	100 m • LOC_UNC_V < 200 m
'1010'	200 m • LOC_UNC_V < 400 m
'1011'	400 m • LOC_UNC_V < 700 m
'1100'	700 m • LOC_UNC_V < 1,000 m
'1101'	1,000 m • LOC_UNC_V < 2,000 m
'1110'	2,000 m • LOC_UNC_V < 4,000 m

'1111'	4,000 m • LOC_UNC_V
--------	---------------------

1	
2	INTRA_FREQ_HO_HYS_INCL - Intra-frequency idle handoff hysteresis included.
3	The base station shall set this field to '1' if the message
4	includes intra-frequency idle handoff hysteresis information.
5	Otherwise, this field shall be set to '0'.
6	INTRA_FREQ_HO_HYS - Intra-frequency idle handoff hysteresis.
7	If the INTRA_FREQ_HO_HYS_INCL field is set to '1', then the
8	base station shall set this field to the intra-frequency idle
9	handoff hysteresis value in units of dB (see 2.6.2.1.4.1),
10	expressed as an unsigned binary number.
11	If the INTRA_FREQ_HO_HYS_INCL field is set to '0', then this
12	field shall be omitted.
13	INTRA_FREQ_HO_SLOPE_INCL - Intra-frequency idle handoff slope included.
14	The base station shall set this field to '1' if the message
15	includes intra-frequency idle handoff slope information.
16	Otherwise, this field shall be set to '0'. This field shall not be
17	set to '1' if INTRA_FREQ_HO_HYS_INCL field is not set to '1'.
18	INTRA_FREQ_HO_SLOPE - Intra-frequency idle handoff slope.
19	If the INTRA_FREQ_HO_SLOPE_INCL field is set to '1', then
20	the base station shall set this field to the slope in the intra-
21	frequency idle handoff inequality criterion (see 2.6.2.1.4.1).
22	The base station shall set this field as an unsigned binary
23	number.
24	If the INTRA_FREQ_HO_SLOPE_INCL field is set to '0', then
25	this field shall be omitted.
26	INTER_FREQ_HO_HYS_INCL - Inter-frequency idle handoff hysteresis included.
27	The base station shall set this field to '1' if the message
28	includes inter-frequency idle handoff hysteresis information.
29	Otherwise, this field shall be set to '0'.
30	INTER_FREQ_HO_HYS - Inter-frequency idle handoff hysteresis.
31	If the INTER_FREQ_HO_HYS_INCL field is set to '1', then the
32	base station shall set this field to the inter-frequency idle
33	handoff hysteresis value in units of dB (see 2.6.2.1.4.1),
34	expressed as an unsigned binary number.
35	If the INTER_FREQ_HO_HYS_INCL field is set to '0', then this
36	field shall be omitted.
37	INTER_FREQ_HO_SLOPE_INCL - Inter-frequency idle handoff slope included.
38	The base station shall set this field to '1' if the message
39	includes inter-frequency idle handoff slope information.
40	Otherwise, this field shall be set to '0'. This field shall not be
41	set to '1' if INTER_FREQ_HO_HYS_INCL field is not set to '1'.
42	INTER_FREQ_HO_SLOPE - Inter-frequency idle handoff slope.

If the INTER\_FREQ\_HO\_SLOPE\_INCL field is set to '1', then the base station shall set this field to the slope in the inter-frequency idle handoff inequality criterion (see 2.6.2.1.4.1). The base station shall set this field as an unsigned binary number.

If the INTER\_FREQ\_HO\_SLOPE\_INCL field is set to '0', then this field shall be omitted.

INTER\_FREQ\_SRCH\_TH\_INCL - Inter-frequency idle search threshold included.

The base station shall set this field to '1' if the message includes inter-frequency idle search threshold information. Otherwise, this field shall be set to '0'.

INTER\_FREQ\_SRCH\_TH - Inter-frequency idle search threshold.

If the INTER\_FREQ\_SRCH\_TH\_INCL field is set to '1', then the base station shall set this field to the inter-frequency idle search threshold value (see 2.6.2.1.4.1) in 0.5 dB decrements as specified in Table 3.7.2.3.2.39-4.

**Table 3.7.2.3.2.39-4. Inter-frequency Search Threshold**

INTER_FREQ_SRCH_TH	Inter-frequency search threshold
'00000'	0 dB
'00001'	- 0.5 dB
'00010'	- 1 dB
...	...
'11110'	- 15 dB
'11111'	- 15.5dB

If the INTER\_FREQ\_SRCH\_TH\_INCL field is set to '0', then this field shall be omitted.

RESERVED - Reserved bits.

This field shall contain the number of bits required to make the entire LOC\_REC field an integer number of octets in length. All bits of this field shall be set to zeros.

# 3.7.2.3.2.40 Access Point Identification Text Message

MSG\_TAG: APTIDM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
AP_ID_TEXT_LEN	8

One occurrence of the following AP\_ID\_TEXT field

AP_ID_TEXT	8 x AP_ID_TEXT_LEN
------------	--------------------

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10 AP\_ID\_TEXT\_LEN - Access Point Identification Text length.

11 The base station shall set this field to the number of octets in  
12 the AP\_ID\_TEXT field following the AP\_ID\_TEXT\_LEN field.

13 AP\_ID\_TEXT - Access Point Identification Text.

14 The AP\_ID\_TEXT field shall include the following sub-fields:

15

MSG_ENCODING	5
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field

{

CHARi	Variable – see [30]
-------	---------------------

}

Reserved	0-7
----------	-----

16

17 MSG\_ENCODING - Message encoding.

18 See [30].

1			Support of an encoding method does not imply that the entire
2			encodable character set needs to be supported. In general,
3			once the supported character set is determined, various
4			subsets of the character set can be supported. If a message is
5			comprised entirely of characters from a supported subset of a
6			character set, it can be displayed. If a message contains an
7			unsupported character of a character set, it can be discarded.
8	NUM_FIELDS	-	Number of fields.
9			If the MSG_ENCODING field is set to '00101' (Shift-JIS) or
10			'00110' (Korean), this field indicates the total length in bytes
11			of the CHARi field; otherwise this field shall be set to the
12			number of characters included in this occurrence of the
13			encoding-specific-fields.
14	CHARi	-	Character.
15			NUM_FIELDS occurrences of this field shall be included. The
16			base station shall set each occurrence of this field to
17			represent the character string that identifies this base
18			station. The character string shall be included in the order of
19			appearance.
20	RESERVED	-	Reserved bits.
21			This field shall contain the number of bits required to make
22			the entire AP_ID_TEXT field an integer number of octets in
23			length. All bits of this field shall be set to zeros.
24			

1 3.7.2.3.2.41 Access Point Pilot Information Message

2 MSG\_TAG: APPIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
LIFETIME	16
NUM_APPI_REC	9

NUM\_APPI\_REC occurrences of the following record:

APPI_REC	Variable
----------	----------

3

4 PILOT\_PN - Pilot PN sequence offset index.

5 The base station shall set this field to the pilot PN sequence  
6 offset for this base station, in units of 64 PN chips.

7 CONFIG\_MSG\_SEQ - Configuration message sequence number.

8 The base station shall set this field to CONFIG\_SEQ  
9 (see 3.6.2.2).

10 LIFETIME - Lifetime of the access point pilot information

11 The base station shall set this field to the duration (in  
12 minutes) that the information in this message remains valid  
13 at the mobile station if the mobile station does not receive  
14 another Access Point Pilot Information message.

15 NUM\_APPI\_REC - Number of access point pilot information record.

16 The base station shall set this field based on the number of  
17 access point pilot information record included in this  
18 message.

1 The base station shall include NUM\_APPI\_REC occurrences of the following APPI\_REC  
 2 record.

3

AP_ASSN_TYPE	3
AP_SID_SAME_AS_PREVIOUS	1
AP_NID_SAME_AS_PREVIOUS	1
AP_BAND_SAME_AS_PREVIOUS	1
AP_FREQ_SAME_AS_PREVIOUS	1
AP_PN_REC_SAME_AS_PREVIOUS	1
AP_SID	0 or 15
AP_NID	0 or 16
AP_BAND	0 or 5
AP_FREQ	0 or 11
AP_PN_REC_TYPE	0 or 3
AP_PN_REC_LEN	0 or 5
AP_PN_REC	0 or 8 x AP_PN_REC_LEN
RESERVED	0 – 7 (as needed)

4

5 AP\_ASSN\_TYPE - Access point association type.

6 The base station shall set this field to association type of the  
 7 access points listed in APPI\_REC according to Table  
 8 3.7.2.3.2.41-1.

9 **Table 3.7.2.3.2.41-1. Access Point Association Type Field**

<b>Value (binary)</b>	<b>Access Point Association Type</b>
000	The base station allows any mobile stations to register and receive any services available at the base station.
001	The base station only allows any mobile stations to register and receive page on the base station.
010	The base station only allows selected mobile stations to register and only provides services to the selected mobile stations.
011-110	Reserved.
111	There is no designated association type corresponding to access points in this APPI_REC record.

10

- 1 AP\_SID\_SAME\_AS\_PREVIOUS - The base station shall set this field to '1' if the system  
 2 identification value associated with this record is identical to  
 3 the system identification value in the previous record.  
 4 Otherwise, the base station shall set this field to '0'.
- 5 AP\_NID\_SAME\_AS\_PREVIOUS - The base station shall set this field to '1' if the network  
 6 identification value associated with this record is identical to  
 7 the system identification value in the previous record.  
 8 Otherwise, the base station shall set this field to '0'.
- 9 AP\_BAND\_SAME\_AS\_PREVIOUS -  
 10 The base station shall set this field to '1' if the band class  
 11 value associated with this record is identical to the band  
 12 class value in the previous record. Otherwise, the base  
 13 station shall set this field to '0'.
- 14 AP\_FREQ\_SAME\_AS\_PREVIOUS -  
 15 The base station shall set this field to '1' if the CDMA  
 16 Channel number associated with this record is identical to  
 17 the CDMA Channel number in the previous record.  
 18 Otherwise, the base station shall set this field to '0'.
- 19 AP\_PN\_SAME\_AS\_PREVIOUS -  
 20 The base station shall set this field to '1' if the list of PN  
 21 Offsets associated with this record is identical to the list of PN  
 22 Offsets associated with the previous record. Otherwise, the  
 23 base station shall set this field to '0'.
- 24 AP\_SID - Access Point System identification.  
 25 The base station shall omit this field if the  
 26 AP\_SID\_SAME\_AS\_PREVIOUS field is set to '1'. Otherwise,  
 27 the base station shall set this field to the system  
 28 identification number (see 2.6.5.2) that the following pilot  
 29 information applies to.
- 30 AP\_NID - Access Point Network identification.  
 31 This field serves as a sub-identifier of a system as defined by  
 32 the owner of the SID.  
 33 The base station shall omit this field if the  
 34 AP\_NID\_SAME\_AS\_PREVIOUS field is set to '1'. Otherwise,  
 35 the base station shall set this field to the network  
 36 identification number (see 2.6.5.2) that the following pilot  
 37 information applies to.
- 38 AP\_BAND - Access Point Band class.  
 39 The base station shall omit this field if the  
 40 AP\_BAND\_SAME\_AS\_PREVIOUS field is set to '1'. Otherwise,  
 41 the base station shall set this field according to the band  
 42 class, as defined in [38], of access points listed in this record.
- 43 AP\_FREQ - Access Point Frequency assignment.

1 The base station shall omit this field if the  
 2 AP\_FREQ\_SAME\_AS\_PREVIOUS field is set to '1'. Otherwise,  
 3 the base station shall set this field to the CDMA Channel  
 4 number corresponding to the CDMA frequency assignment  
 5 corresponding to the access points listed in this record.

6 AP\_PN\_REC\_TYPE - Access Point PN Record Type.

7 The base station shall omit this field if the  
 8 AP\_PN\_REC\_SAME\_AS\_PREVIOUS field is set to '1'.  
 9 Otherwise, the base station shall set this field according to  
 10 the AP\_PN\_REC field including in this record.

11 AP\_PN\_REC\_LEN - Access Point PN Record Length.

12 The base station shall omit this field if the  
 13 AP\_PN\_REC\_SAME\_AS\_PREVIOUS field is set to '1'.  
 14 Otherwise, the base station shall set this field to the number  
 15 of octets in the AP\_PN\_REC field following this field.

16 AP\_PN\_REC - Access Point PN Record.

17 The base station shall omit this field if the  
 18 AP\_PN\_REC\_SAME\_AS\_PREVIOUS field is set to '1'.  
 19 Otherwise, the base station shall set this field as follow.

20

21 If the AP\_PN\_REC\_TYPE field is set to '000', then this field  
 22 shall be set as

23

AP_PN_COUNT	7
-------------	---

AP\_PN\_COUNT occurrences of the following field:

AP_PN	9
-------	---

24 AP\_PN\_COUNT - Access Point PN Count.

25 The base station shall set this field to the number of AP\_PN  
 26 fields in this record following this field.

27 AP\_PN - Access point pilot PN sequence offset index.

28 The base station shall set this field to the pilot PN sequence  
 29 offset allocated for access points in this area, in units of 64  
 30 PN chips.

31

32 If the AP\_PN\_REC\_TYPE field is set to '001', then this field  
 33 shall be set as

34

AP_PN_COUNT	8
AP_PN_START	9
AP_PN_INC	4

35 AP\_PN\_COUNT - Access Point PN Count.

1			The base station shall set this field to the number of pilot PN
2			sequence offset in the series listed in this record.
3	AP_PN_START	-	Access point pilot PN sequence offset index.
4			The base station shall set this field to the smallest pilot PN
5			sequence offset, in units of 64 PN chips, in the series listed in
6			this record allocated for access points in this area.
7	AP_PN_INC	-	Access Point Pilot PN sequence offset index increment.
8			The base station shall set this field to the pilot PN sequence
9			increment, in units of 64 PN chips, that such that the pilot
10			PN sequence offsets in the series allocated to the access
11			points in this area are: $AP\_PN\_START + (k \times PILOT\_INC)$
12			where $k = 0, \dots, AP\_PN\_COUNT - 1$ .
13			
14	RESERVED	-	Reserved bits.
15			The base station shall add reserved bits as needed in order to
16			make the total length of the APPI_REC through this
17			RESERVED field equal to an integer number of octets. The
18			base station shall set these bits to '0'.
19			

## 1 3.7.2.3.2.42 General Overhead Information Message

## 2 MSG\_TAG: GOIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_GOI_REC	4

NUM\_GOI\_REC occurrences of the following fields

{

GOI_REC_TYPE	8
GOI_REC_LEN	8
GOI_REC	8 x GOI_REC_LEN

}

- 3           PILOT\_PN   - Pilot PN sequence offset index.
- 4                       The base station shall set this field to the pilot PN sequence
- 5                       offset for this base station, in units of 64 PN chips.
- 6       CONFIG\_MSG\_SEQ   - Configuration message sequence number.
- 7                       The base station shall set this field to CONFIG\_SEQ
- 8                       (see 3.6.2.2).
- 9       NUM\_GOI\_REC   - Number of GOI records included in this message.
- 10                      The base station shall set this field to the number of *General*
- 11                      *Overhead Information Message* records included in this
- 12                      message. The base station shall include atleast one General
- 13                      Overhead Information record in this message.
- 14       GOI\_REC\_TYPE   - GOI record type.
- 15                      The base station shall set this field to the type of the *General*
- 16                      *Overhead Information Message* record according to table
- 17                      3.7.2.3.2.42-1 and [30]<sup>12</sup>.

---

<sup>12</sup> Further record types may be defined in [30].

**Table 3.7.2.3.2.42-1. General Overhead Information  
Record Type Field**

<b>Value (binary)</b>	<b>Record Type Description</b>
00000000	The base station shall include the operator name in this record.
00000001	The base station shall include the cell name in this record <sup>13</sup> .
00000010 - 11111111	Reserved.

- GOI\_REC\_LEN - The length of the GOI record length.  
The base station shall set this field to the number of octets in the GOI\_REC field following the GOI\_REC\_LEN.
- GOI\_REC - General Overhead Information record.  
If the GOI\_REC\_TYPE is set to '00000000' or '00000001', the GOI\_REC field shall include the following fields<sup>14</sup>:

MSG_ENCODING	5
NUM_FIELDS	8
NUM_FIELDS occurrences of the following field	
{	
CHARi	Variable – see [30]
}	
Reserved	0-7

- MSG\_ENCODING - Message encoding.  
See [30].  
Support of an encoding method does not imply that the entire encodable character set needs to be supported. In general, once the supported character set is determined, various subsets of the character set can be supported. If a message is comprised entirely of characters from a supported subset of a character set, it can be displayed. If a message contains an unsupported character of a character set, it can be discarded.
- NUM\_FIELDS - Number of fields.

<sup>13</sup> For example, the base station may include a text string identifying the region.

<sup>14</sup> Future GOI records may be defined in [30].

1			If the MSG_ENCODING field is set to '00101' (Shift-JIS) or
2			'00110' (Korean), this field indicates the total length in bytes
3			of the CHARi field; otherwise this field shall be set to the
4			number of characters included in this occurrence of the
5			encoding-specific-fields.
6	CHARi	-	Character.
7			NUM_FIELDS occurrences of this field shall be included. The
8			base station shall set each occurrence of this field to
9			represent the character string that identifies this base
10			station. The character string shall be included in the order of
11			appearance.
12	RESERVED	-	Reserved bits.
13			This field shall contain the number of bits required to make
14			the entire GOI_REC field an integer number of octets in
15			length. All bits of this field shall be set to zeros.
16			

## 1 3.7.2.3.2.43 Flex Duplex CDMA Channel List Message

## 2 MSG\_TAG: FDCCLM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
CAND_BAND_INFO_REQ	1
RC_QPCH_SEL_INCL	1
TD_SEL_INCL	1
CDMA_FREQ_WEIGHT_INCL	1
NUM_CAND_BAND_CLASS	3

{ (NUM\_CAND\_BAND\_CLASS + 1)

CAND_BAND_CLASS	5
SUBCLASS_INFO_INCL	0 or 1
SUBCLASS_REC_LEN	0 or 5

SUBCLASS\_REC\_LEN + 1 occurrences of the following subrecord:

{ (SUBCLASS\_REC\_LEN + 1)

BAND_SUBCLASS_IND	1
-------------------	---

} (SUBCLASS\_REC\_LEN + 1)

TD_MODE	0 or 2
BYPASS_SYS_DET_IND	1
NUM_FREQ	4

NUM\_FREQ occurrences of the following field:

{ (NUM\_FREQ)

CDMA_FREQ	11
REMAINING_FIELD_INCL	1
REV_CDMA_FREQ	0 or 11
RC_QPCH_HASH_IND	0 or 1
TD_HASH_IND	0 or 1
TD_POWER_LEVEL	0 or 2
CDMA_FREQ_WEIGHT	0 or 3

} (NUM\_FREQ)

} (NUM\_CAND\_BAND\_CLASS + 1)

1	PILOT_PN	-	Pilot PN sequence offset index.
2			The base station shall set this field to the pilot PN sequence
3			offset for this base station, in units of 64 PN chips.
4	CONFIG_MSG_SEQ	-	Configuration message sequence number.
5			The base station shall set this field to CONFIG_SEQ
6			(see 3.6.2.2).
7	CAND_BAND_INFO_REQ	-	Candidate band class information request indicator
8			The base station shall set this field to '1' when requesting
9			mobiles to report whether various candidate band class and
10			band subclass (if applicable) combinations are supported;
11			otherwise, the base station shall set this field to '0'.
12			The base station shall not include more than 16 band class-
13			band subclass queries in this message.
14	RC_QPCH_SEL_INCL	-	RC and QPCH Selection included indicator
15			The base station shall set this field to '1' if
16			RC_QPCH_HASH_IND field are included; otherwise, it shall
17			set this field to '0'.
18			If the base station sets this field to '1', the base station shall
19			set the RC_QPCH_HASH_IND field to '1' in at least one of the
20			records.
21	TD_SEL_INCL	-	Transmit diversity selection indicator included.
22			If the base station includes transmit diversity selection
23			information in this message it shall set this field to '1';
24			otherwise, the base station shall set this field to '0'.
25			When the <i>Flex Duplex CDMA Channel List Message</i> is sent on
26			the Paging Channel, the base station shall set this field to '0'.
27	CDMA_FREQ_WEIGHT_INCL	-	CDMA frequency weight included indicator
28			The base station shall set this field to '1' if the
29			CDMA_FREQ_WEIGHT fields are included in this message;
30			otherwise, it shall set this field to '0'.
31	NUM_CAND_BAND_CLASS	-	Number of candidate band classes
32			The base station shall set this field to the number of
33			candidate band classes included in the record minus one.
34	The base station shall include NUM_CAND_BAND_CLASS + 1 occurrences of the following		
35	record:		
36	CAND_BAND_CLASS	-	Candidate band class

1		The base station shall set this field (see [30]) to a band class
2		for which the mobile is to report it's capabilities upon system
3		access. It may be used in conjunction with the
4		BAND_SUBCLASS_IND fields to specify band subclass(es) for
5		which the mobile is to report it's capabilities upon system
6		access.
7	SUBCLASS_INFO_INCL -	Band subclass information included
8		The base station shall omit this field if
9		CAND_BAND_INFO_REQ is set to '0'. Otherwise the base
10		station shall set this field as follows:
11		The base station shall set this field to '0' when no band
12		subclasses are associated with CAND_BAND_CLASS or if the
13		base station requires only the band class capabilities of the
14		mobile station. Otherwise, the base station shall set this field
15		to '1'.
16	SUBCLASS_REC_LEN	- Band subclass subrecord length
17		If SUBCLASS_INFO_INCL is set to '0', the base station shall
18		omit this field; otherwise, the base station shall set this field
19		as follows:
20		The base station shall set this field to the number of band
21		subclass indicator fields included in the subrecord minus
22		one. The number of subclass indicator fields included
23		depends on the highest band subclass being queried for
24		mobile support for the associated CAND_BAND_CLASS (i.e. if
25		the highest band subclass being queried is K, then
26		SUBCLASS_REC_LEN = K).
27	If the SUBCLASS_REC_LEN field is included, the base station shall include	
28	SUBCLASS_REC_LEN +1 occurrences of the following subrecord. The first field included	
29	corresponds to band subclass '0' and the N <sup>th</sup> field included corresponds to band subclass	
30	'N-1'.	
31	BAND_SUBCLASS_IND -	Band subclass indicator
32		The base station shall set this field to '1' if it requires the
33		mobile to report whether it supports this band subclass for
34		the associated CAND_BAND_CLASS; otherwise, the base
35		station shall set this field to '0'.
36		The mobile station is to indicate its capability to support the
37		candidate band class and band subclass (if applicable)
38		combination in the General Extension Message that carries a
39		<i>Registration Message</i> , <i>Origination Message</i> , or a <i>Page</i>
40		<i>Response Message</i> and a Supported Band Class - Subclass
41		record.
42	TD_MODE -	Transmit Diversity Mode.
43		If TD_SEL_INCL is set to '0', the base station shall omit this
44		field; otherwise, the base station shall include this field and
45		set it as follows:

1		The base station shall set this field to the Transmit Diversity
2		mode on the CAND_BAND_CLASS, as specified in Table
3		3.7.2.3.2.26-3.
4	BYPASS_SYS_DET_IND	- Direct to idle allowed indicator.
5		The base station shall set this field to '1' if the mobile station
6		is allowed to go directly to idle state on any CDMA channel
7		belonging to the CAND_BAND_CLASS included in this record.
8	NUM_FREQ	- Number of additional CDMA Frequencies
9		The base station shall set this field to the number of
10		occurrences of the CDMA_FREQ field included hereafter in
11		this record.
12	The base station shall include NUM_FREQ occurrences of the following record:	
13	CDMA_FREQ	- CDMA Channel frequency assignment.
14		Each occurrence of this field shall correspond to a CDMA
15		Channel containing a Paging Channel that is supported by
16		this base station.
17		If this message is sent on the Paging Channel:
18		The base station shall set this field to the CDMA channel
19		number corresponding to the CDMA frequency
20		assignment for a CDMA Channel containing a Paging
21		Channel (see [2]).
22		This CDMA channel shall reside in the band class listed
23		in this CAND_BAND_CLASS record. If
24		SUBCLASS_INFO_INCL is equal to '1', this CDMA channel
25		shall also reside in at least one supported
26		CDMA_SUBCLASS included in this CAND_BAND_CLASS
27		record.
28		If this message is sent on the Primary Broadcast Control
29		Channel:
30		The base station shall set this field to the CDMA Channel
31		number corresponding to the CDMA frequency
32		assignment for a CDMA Channel containing a Primary
33		Broadcast Control Channel and Forward Common Control
34		Channel (see [2]).
35		This CDMA channel resides in the band class listed in
36		this CAND_BAND_CLASS record. If
37		SUBCLASS_INFO_INCL is equal to '1', this CDMA channel
38		shall also reside in at least one supported
39		CDMA_SUBCLASS included in this CAND_BAND_CLASS
40		record.
41		If the base station supports a CDMA frequency
42		assignment without transmit diversity, the base station
43		should not set the first occurrence of this field to a CDMA
44		channel number corresponding to a transmit diversity
45		frequency assignment.
46	REMAINING_FIELD_INCL	- Remaining fields included.

1		If the base station is sending <i>Extended CDMA Channel List</i>
2		<i>Message</i> that includes this CDMA_FREQ and
3		CAND_BAND_CLASS, the base station shall set this bit to '0'.
4		Otherwise, the base station shall set bit to '1'
5	REV_CDMA_FREQ	- If REMAINING_FIELD_INCL is set to '0', the base station shall
6		omit this field. Otherwise, the base station shall set this field
7		to the CDMA channel number corresponding to the CDMA
8		frequency assignment for the Reverse CDMA Channel (see [2])
9		that is paired with the CDMA_FREQ contained in this record.
10		This Reverse CDMA channel resides in the band class listed
11		in this CAND_BAND_CLASS record. If SUBCLASS_INFO_INCL
12		is equal to '1', this CDMA channel shall also reside in at least
13		one supported CDMA_SUBCLASS included in this
14		CAND_BAND_CLASS record.
15	RC_QPCH_HASH_IND	- RC QPCH channel hashing indicator
16		If REMAINING_FIELD_INCL is set to '0' or if
17		RC_QPCH_SEL_INCL is set to '0', the base station shall omit
18		this field; otherwise, the base station shall include this field
19		and set it as follows:
20		The base station shall set this field to '1', if the corresponding
21		CDMA channel is to be selected for channel hashing by
22		mobile stations capable of Radio Configurations greater than
23		two or capable of supporting Quick Paging Channel.
24	TD_HASH_IND	- Transmit diversity hash indicator.
25		If REMAINING_FIELD_INCL is set to '0' or if TD_SEL_INCL is
26		set to '0', the base station shall omit this field; otherwise, the
27		base station shall include this field and set it as follows:
28		If the associated CDMA_FREQ is to be selected for CDMA
29		channel hashing by mobile stations capable of supporting
30		transmit diversity [TD_MODE], the base station shall set the
31		field to '1'; otherwise, the base station shall set this field to
32		'0'.
33	TD_POWER_LEVEL	- Transmit diversity power level.
34		If REMAINING_FIELD_INCL is set to '0', or if TD_HASH_IND is
35		set to '0', the base station shall omit this field; otherwise, the
36		base station shall include this field and set it to the transmit
37		diversity transmission power level relative to that of the
38		Forward Pilot Channel, as specified in Table 3.7.2.3.2.26-4.
39	CDMA_FREQ_WEIGHT	- CDMA frequency weight
40		If REMAINING_FIELD_INCL is set to '0' or if
41		CDMA_FREQ_WEIGHT_INCL is set to '0', the base station
42		shall omit this field; otherwise, the base station shall include
43		this field and set it as follows:
44		The base station shall set this field to one less than the
45		weight for this CDMA channel to be used in channel hashing
46		by the mobile station.
47		

## 1 3.7.2.3.2.44 General Extension Message

## 2 MSG\_TAG: GEM

Field	Length (bits)
NUM_GE_REC	8

NUM\_GE\_REC occurrences of the following record:

{ (NUM\_GE\_REC)

GE_REC_TYPE	8
GE_REC_LEN	8
GE_REC	8 x GE_REC_LEN

} (NUM\_GE\_REC)

MESSAGE_TYPE	8
MESSAGE_REC	variable

3 NUM\_GE\_REC - Number of General Extension Records included in this message.  
 4 The base station shall set this field to the number of general  
 5 extension records included in this message. Base station shall  
 6 set this field to a value greater than 0.

7 GE\_REC\_TYPE - Type of General Extension Record.  
 8 The base station shall set this field based on the type of record as  
 9 specified in Table 3.7.2.3.2.40-1.

10 **Table 3.7.2.3.2.40-1. General Extension Record Type**  
 11 **values**

GE_REC_TYPE (binary)	Description
00000000	Reverse Channel Information.
00000001	Radio Configuration Parameters Record <sup>15</sup>
00000010-11111111	Reserved

12 GE\_REC\_LEN - Length of the General Extension Record.

---

<sup>15</sup> Base station may use this record to extend CAM/ECAM/MECAM or UHDM/GHDM/EHDM/MUHDM messages instead of sending a RCPM message separately to the mobile station.

1 The base station shall set this field to the length in octets of the  
2 general extension record following the GE\_REC\_LEN field.

3 GE\_REC - General Extension Record.

4 The base station shall set this field according to the previous  
5 occurrence of the GE\_REC\_TYPE in this message.

6 If the GE\_REC\_TYPE is set to '00000000' then the base station shall set the GE\_REC to the  
7 following:

8

BAND_CLASS	5
REV_CHAN	11

9 BAND\_CLASS - Band Class of the Reverse Channel.

10 The base station shall set this field to the Band Class of  
11 the Reverse CDMA channel as specified in [30].

12 REV\_CHAN - Channel number of the reverse link frequency.

13 The base station shall set this field to the CDMA channel  
14 number corresponding to the CDMA frequency assignment  
15 for the reverse CDMA channel (see [2]) that is paired with the  
16 forward CDMA channel included in message carried in the  
17 General Extension Message.

18 If the GE\_REC\_TYPE is set to '00000001' then the base station shall set the GE\_REC to the  
19 fields of the Radio Configuration Parameters Message defined in  
20 3.7.3.3.2.51; followed by a variable length RESERVED field to make  
21 length of the entire GE\_REC record an integer number of octets, with  
22 all bits of the RESERVED field set to 0.

23 MESSAGE\_TYPE - Message type of the message included in the General  
24 Extension Message.

25 This field shall contain the message type value for the  
26 message following this field. When transmitting the general  
27 extension message over f-csch, then base station shall set the  
28 first 2 MSB of this field to '00'. The base station shall set this  
29 field according to [4].

30 MESSAGE\_REC - Message extended through the General Extension message.

31 The base station shall set this field to the message that is  
32 being extended using the *General Extension Message*.

33

## 1 3.7.2.3.2.45 Alternative Technologies Information Message

## 2 MSG\_TAG: ATIM

Field	Length (bits)
PILOT_PN	9
CONFIG_MSG_SEQ	6
NUM_RADIO_INTERFACE	4

NUM\_RADIO\_INTERFACE occurrences of the following  
Radio Interface record:

{ (NUM\_RADIO\_INTERFACE)

RADIO_INTERFACE_TYPE	4
RADIO_INTERFACE_LEN	10
Radio Interface Type-specific fields	8 x RADIO_INTERFACE_L EN

} (NUM\_RADIO\_INTERFACE)

- 3                   PILOT\_PN    -   Pilot PN sequence offset index.
- 4                                    The base station shall set this field to the pilot PN sequence
- 5                                    offset for this base station, in units of 64 PN chips.
- 6           CONFIG\_MSG\_SEQ   -   Configuration message sequence number.
- 7                                    The base station shall set this field to CONFIG\_SEQ
- 8                                    (see 3.6.2.2 of [2]).
- 9   NUM\_RADIO\_INTERFACE   -   Number of radio interface types.
- 10                                   The base station shall set this field to the number of radio
- 11                                   interface type records included in this message.
- 12   The base station shall include NUM\_RADIO\_INTERFACE occurrences of the following
- 13   record, one occurrence for each radio interface type is included in this message.
- 14   RADIO\_INTERFACE\_TYPE   -   The radio interface type.
- 15                                   The base station shall set this field to the radio interface type
- 16                                   of this record as specified in Table 3.5-1<sup>16</sup>.

---

<sup>16</sup> New RADIO\_INTERFACE\_TYPE values may be defined in [30].

1

**Table 3.5-1. Radio Interface Type**

<b>RADIO_INTERFACE_TYPE (binary)</b>	<b>Descriptions</b>
0010	HRPD
0011	E-UTRAN
0100	WiMAX
Other	Reserved

2 RADIO\_INTERFACE\_LEN - The length of the Radio Interface Type-specific fields.

3 The base station shall set this field to the number of octets in  
4 the Radio Interface Type-specific fields of this record.

5 If RADIO\_INTERFACE\_TYPE is equal to '0010', the base station may include the following  
6 radio interface type-specific fields:

{ (COMMON RECORD)

COMMON_RECORD_LEN	4
SUBNET_COLOR_CODE_INCL	1
SUBNET_COLOR_CODE	0 or 8
COMMON_RECORD_RESERVED	0 ~ 7 (as needed)

} (COMMON RECORD)

NUM_HRPD_NGHBR	6
HRPD_NGHBR_REC_LEN	5

NUM\_HRPD\_NGHBR occurrences of the following  
subrecord:

{ (NUM\_HRPD\_NGHBR)

NGHBR_PN	9
NGHBR_FREQ_SAME_AS_PREV	1
NGHBR_BAND	0 or 5
NGHBR_FREQ	0 or 11
PN_ASSOCIATION_IND	1
DATA_ASSOCIATION_IND	1
NGHBR_SUBNET_COLOR_CODE_I ND	2
NGHBR_SUBNET_COLOR_CODE	0 or 8
HRPD_NGHBR_REC_RESERVED	0-7 (as needed)

} (NUM\_HRPD\_NGHBR)

7 COMMON\_RECORD\_LEN - Length of the common record part.

8 The base station shall set this field to one less than the  
9 length of the common record in octets, including this field.

10 SUBNET\_COLOR\_CODE\_INCL - HRPD Subnet Color Code Included Indicator.

1 If the Subnet Color Code (see [1]) associated with the HRPD sector corresponding to this  
2 pilot is included in this message, the base station shall set  
3 this field to '1'; otherwise, the base station shall set this field  
4 to '0'.

5 SUBNET\_COLOR\_CODE - HRPD Subnet Color Code.

6 If the SUBNET\_COLOR\_CODE\_INCL field is set to '0', the base station shall omit this field;  
7 otherwise, the base station shall include this field and set it  
8 as follows:

9 The base station shall set this field to Subnet Color Code (see [1]) associated with the  
10 HRPD sector corresponding to this pilot.

11 COMMON\_RECORD\_RESERVED - Common record part reserved bits.

12 The base station shall add reserved bits as needed in order to  
13 make the length of the common record equal to an integer  
14 number of octets. The base station shall set these bits to '0'.

15 NUM\_HRPD\_NGHR - Number of HRPD neighbor pilot PN sequences.

16 The base station shall set this field to the number of HRPD  
17 neighbors included in the message.

18 HRPD\_NGHR\_REC\_LEN - HRPD neighbor record length

19 The base station shall set this field to one less than the number of octets included in each  
20 HRPD neighbor records.

21 The base station shall include one occurrence of the following subrecord for each pilot that  
22 a mobile station is to place in its HRPD Neighbor Set.

23 NGHR\_PN - Neighbor pilot PN sequence offset index.

24 The base station shall set this field to the pilot PN sequence  
25 offset for this neighbor, in units of 64 PN chips.

26 NGHR\_FREQ\_SAME\_AS\_PREV - Neighbor frequency information is same as previous  
27 indicator.

28 The base station shall set this field to '1' if the neighbor  
29 frequency information for this record is the same as the  
30 neighbor frequency information for the previous record  
31 included in this message; otherwise, the base station shall  
32 set this field to '0'.

33 NGHR\_BAND - Neighbor band class.

34 If the NGHR\_FREQ\_SAME\_AS\_PREV field is set to '1', the  
35 base station shall omit this field; otherwise, the base station  
36 shall include this field and set it as follows:

37 The base station shall set this field to the CDMA band class,  
38 as specified in [5], corresponding to the CDMA frequency  
39 assignment for the CDMA Channel containing this neighbor.

40 NGHR\_FREQ - Neighbor frequency assignment.

41 If the NGHR\_FREQ\_SAME\_AS\_PREV field is set to '1', the  
42 base station shall omit this field; otherwise, the base station  
43 shall include this field and set it as follows:

1                   The base station shall set this field to the CDMA Channel  
2                   number, in the specified CDMA band class, corresponding to  
3                   the CDMA frequency assignment for this neighbor.

4    PN\_ASSOCIATION\_IND   - Neighbor PN association indicator.

5                   The base station shall set this field to '1' if the system  
6                   identified by this system record has the same PN assignment  
7                   as the MC system to which this base station belongs;  
8                   otherwise, the base station shall set this field to '0'.

9    DATA\_ASSOCIATION\_IND   - Neighbor data association indicator.

10                  The base station shall set this field to '1' if the system  
11                  identified by this system record can reach the same set of  
12                  PDSNs as the MC system to which this base station belongs;  
13                  otherwise, the base station shall set this field to '0'.

14   NGHBR\_SUBNET\_COLOR\_CODE\_IND   - Neighbor HRPD Subnet Color Code Indicator.

15                  If the Subnet Color Code (see [1]) information for this  
16                  neighbor is not included, the base station shall set this field  
17                  to '00'.

18                  If the Subnet Color Code information for this neighbor is  
19                  included and is the same value as included in the  
20                  SUBNET\_COLOR\_CODE field above, the base station shall  
21                  set this field to '01'.

22                  If the Subnet Color Code (see [1]) information for this  
23                  neighbor is included below, the base station shall set this  
24                  field to '10'.

25   NGHBR\_SUBNET\_COLOR\_CODE   - Neighbor HRPD Subnet Color Code.

26                  If the NGHBR\_SUBNET\_COLOR\_CODE\_IND field is not set to  
27                  '10', the base station shall omit this field; otherwise, the base  
28                  station shall include this field and set it as follows:

29                  The base station shall set this field to the Subnet Color Code  
30                  (see [1]) for this neighbor.

31   HRPD\_NGHBR\_REC\_RESERVED   - HRPD neighbor record reserved bits.

32                  The base station shall add reserved bits as needed in order to  
33                  make the length of this record equal to an integer number of  
34                  octets. The base station shall set these bits to '0'.

35                  If RADIO\_INTERFACE\_TYPE is equal to '0011', the base  
36                  station may include the radio interface type-specific fields  
37                  specified in [49].

38                  If RADIO\_INTERFACE\_TYPE is equal to '0100', the base  
39                  station may include the radio interface type-specific fields  
40                  specified in [50].

- 4 be sent on the f-dsch.
- 5

## 1 3.7.3.3.2.1 Order Message

2 MSG\_TAG: ORDRM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
ORDER	6
ADD_RECORD_LEN	3
Order-specific fields (if used)	$8 \times \text{ADD\_RECORD\_LEN}$
CON_REF_INCL	0 or 1
CON_REF	0 or 8

4

5 USE\_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is  
7 specified in this order.8 If an explicit action time can be specified for this order code,  
9 as shown in Table 3.7.4-1, the base station may set this field  
10 to '1'; otherwise, the base station shall set this field to '0'.

11 ACTION\_TIME - Action time.

12 If the USE\_TIME field is set to '1', the base station shall set  
13 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
14 ms, in units of 80 ms (modulo 64), at which the order is to  
15 take effect. If the USE\_TIME field is set to '0', the base station  
16 shall set this field to '000000'.

17 ORDER - Order code.

18 The base station shall set this field to the ORDER code for  
19 this type of *Order Message* (see 3.7.4).

20 ADD\_RECORD\_LEN - Additional record length.

21 The base station shall set this field to the number of octets in  
22 the order-specific fields included in this message.

23 Order-specific fields - Order-specific fields.

24 The base station shall include order-specific fields as  
25 specified in 3.7.4.

26 CON\_REF\_INCL - Connection reference included indicator.

27 If the order carried by this message is not a Call Control order

1 (see 3.6.8), the base station shall omit this field; otherwise, the  
2 base station shall include this field and set it as follows:  
3 The base station shall set this field to '1' if the connection  
4 reference field is included in this message; otherwise, it shall set  
5 this field to '0'.  
6 CON\_REF - Connection reference.  
7 If the CON\_REF\_INCL field is not included or is included but is  
8 set to '0', the base station shall omit this field; otherwise, the  
9 base station shall include this field and shall set it to the value of  
10 the connection reference assigned to the service option  
11 connection of the call, to which this message corresponds.  
12

1    3.7.3.3.2.2 Authentication Challenge Message

2    MSG\_TAG: AUCM

3

Field	Length (bits)
RANDU	24
GEN_CMEAKEY	1

4

5            RANDU    -    Random challenge data.

6                      The base station shall set this field as specified in 2.3.12.1.4.

7            GEN\_CMEAKEY - Generate CMEAKEY indicator.

8                      The base station shall set this field to '1' if it wants the MS to  
9                      generate the CMEAKEY during the Unique Challenge-  
10                     Response procedure (see 2.3.12.1.4); otherwise, the base  
11                     station shall set this field to '0'.

12

13

14

3.7.3.3.2.3 Alert With Information Message

MSG\_TAG: AWIM

Field	Length (bits)
-------	---------------

Zero or more occurrences of the following record:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	$8 \times \text{RECORD\_LEN}$

}

The base station shall include occurrences of the following three-field record as specified in 3.7.5.

- RECORD\_TYPE - Information record type.  
The base station shall set this field as specified in 3.7.5.
- RECORD\_LEN - Information record length.  
The base station shall set this field to the number of octets in the type-specific fields included in this record.
- Type-specific fields - Type-specific fields.  
The base station shall include type-specific fields as specified in 3.7.5.

## 1 3.7.3.3.2.4 Data Burst Message

2 MSG\_TAG: DBM

3

Field	Length (bits)
MSG_NUMBER	8
BURST_TYPE	6
NUM_MSGS	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	8
-------------------	---

} (NUM\_FIELDS)

4

5 MSG\_NUMBER - Message number.

6 The base station shall set this field to the number of this  
7 message within the data burst stream.

8 BURST\_TYPE - Data burst type.

9 The base station shall set the value of this field for the type of  
10 this data burst as defined in [30]. If the base station sets this  
11 field equal to '111110', it shall set the first two CHAR<sub>i</sub> fields of  
12 this message equal to the  
13 EXTENDED\_BURST\_TYPE\_INTERNATIONAL field as  
14 described in the definition of CHAR<sub>i</sub> below. If the base  
15 station sets this field equal to '111111', it shall set the first  
16 two CHAR<sub>i</sub> fields of this message equal to the  
17 EXTENDED\_BURST\_TYPE as described in the definition of  
18 CHAR<sub>i</sub> below.

19 NUM\_MSGS - Number of messages in the data burst stream.

20 The base station shall set this field to the number of  
21 messages in this data burst stream.

22 NUM\_FIELDS - Number of characters in this message.

23 The base station shall set this field to the number of  
24 occurrences of the CHAR<sub>i</sub> field included in this message.

25 CHAR<sub>i</sub> - Character.

26 The base station shall include NUM\_FIELDS occurrences of  
27 this field. The base station shall set these fields to the  
28 corresponding octet of the data burst stream.

If the BURST\_TYPE field of this message is equal to '111110', the first two CHARi octets shall represent a 16 bit EXTENDED\_BURST\_TYPE\_INTERNATIONAL field, which is encoded as shown below. The first ten bits of this field contain a binary mapping of the Mobile Country Code (MCC) associated with the national standards organization administering the use of the remaining octets of the message. Encoding of the MCC shall be as specified in 2.3.1.3. The remaining six bits of the EXTENDED\_BURST\_TYPE\_INTERNATIONAL field shall specify the COUNTRY\_BURST\_TYPE. The base station shall set the value of the COUNTRY\_BURST\_TYPE according to the type of this data burst as defined in standards governed by the country where this data burst type is to be used.

Field	Length (bits)
Mobile Country Code	10
COUNTRY_BURST_TYPE	6
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

If the BURST\_TYPE field of this message is equal to '111111', the first two CHARi octets shall represent a single, 16 bit, EXTENDED\_BURST\_TYPE field, as shown below. The base station shall set the value of the EXTENDED\_BURST\_TYPE field according to the type of this data burst as defined in [30].

Field	Length (bits)
EXTENDED_BURST_TYPE (first two CHARi fields)	16
Remaining CHARi fields	$8 \times (\text{NUM\_FIELDS} - 2)$

- SID** - System identification.
- The base station shall set this field to the system identification number for this wireless system (see 2.6.5.2).
- NID** - Network identification.
- This field serves as a sub-identifier of a system as defined by the owner of the SID.
- The base station shall set this field to the network identification number for this network (see 2.6.5.2).

1	SRCH_WIN_A	- Search window size for the Active Set and Candidate Set.
2		The base station shall set this field to the window size
3		parameter shown in Table 2.6.6.2.1-1 corresponding to the
4		number of PN chips that the mobile station is to search for
5		pilots in the Active Set and Candidate Set.
6	SRCH_WIN_N	- Search window size for the Neighbor Set.
7		The base station shall set this field to the window size
8		parameter shown in Table 2.6.6.2.1-1 corresponding to the
9		number of PN chips that the mobile station is to search for
10		pilots in the Neighbor Set.
11	SRCH_WIN_R	- Search window size for the Remaining Set.
12		The base station shall set this field to the window size
13		parameter shown in Table 2.6.6.2.1-1 corresponding to the
14		number of PN chips that the mobile station is to search for
15		pilots in the Remaining Set.
16	T_ADD	- Pilot detection threshold.
17		This value is used by the mobile station to trigger the transfer
18		of a pilot from the Neighbor Set or Remaining Set to the
19		Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
20		<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
21		<i>Strength Measurement Message</i> initiating the handoff process
22		(see 2.6.6.2.5.2).
23		The base station shall set this field to the pilot detection
24		threshold, expressed as an unsigned binary number equal to
25		$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
26	T_DROP	- Pilot drop threshold.
27		This value is used by the mobile station to start a handoff
28		drop timer for pilots in the Active Set and the Candidate Set
29		(see 2.6.6.2.3).
30		The base station shall set this field to the pilot drop
31		threshold, expressed as an unsigned binary number equal to
32		$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
33	T_COMP	- Active Set versus Candidate Set comparison threshold.
34		The mobile station transmits a <i>Pilot Strength Measurement</i>
35		<i>Message</i> or an <i>Extended Pilot Strength Measurement Message</i>
36		when the strength of a pilot in the Candidate Set exceeds that
37		of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
38		The base station shall set this field to the threshold
39		Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB.
40	T_TDROP	- Drop timer value.

1			Timer value after which an action is taken by the mobile
2			station for a pilot that is a member of the Active Set or
3			Candidate Set, and whose strength has not become greater
4			than T_DROP. If the pilot is a member of the Active Set, a
5			<i>Pilot Strength Measurement Message</i> or an <i>Extended Pilot</i>
6			<i>Strength Measurement Message</i> is issued. If the pilot is a
7			member of the Candidate Set, it will be moved to the Neighbor
8			Set.
9			The base station shall set this field to the T_TDROP value
10			shown in Table 2.6.6.2.3-1 corresponding to the drop timer
11			value to be used by the mobile station.
12	NGHBR_MAX_AGE	-	Maximum age for retention of Neighbor Set members.
13			The mobile station drops neighbor set members whose AGE
14			count exceeds this field.
15			The base station shall set this field to the Neighbor Set
16			maximum age retention value (see 2.6.6.2.6.3).
17	P_REV	-	Protocol revision level.
18			The base station shall set this field to the base station
19			protocol revision level.
20	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
21			Active Set, or dropping a pilot from the Active Set (see
22			2.6.6.2.3 and 2.6.6.2.5.2).
23			The base station shall set this field as an unsigned binary
24			number.
25	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
26			the Active Set (see 2.6.6.2.5.2).
27			The base station shall set this field as a two's complement
28			signed binary number, in units of 0.5 dB.
29	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
30			from the Active Set (see 2.6.6.2.3).
31			The base station shall set this field as a two's complement
32			signed binary number, in units of 0.5 dB.
33	PACKET_ZONE_ID	-	Packet data services zone identifier.
34			If the base station supports a packet data service zone, the
35			base station shall set this field to its non-zero packet data
36			services zone identifier.
37			If the base station does not support a packet data service
38			zone, the base station shall set this field to '00000000'.
39	EXTENSION	-	Indicator that extension fields are present.
40			If Reverse Supplemental Code Channel or Reverse Supple-
41			mental Channel system parameters are included in this
42			message, the base station shall set this field to '1'; otherwise,
43			the base station shall set this field to '0'.
44	T_MULCHAN	-	<i>Supplemental Channel Request Message</i> pilot strength
45			reporting offset.

1			If EXTENSION is set to '1', the base station shall include this
2			field and set this field to the threshold offset that the mobile
3			station is to use when reporting neighbor pilot strength
4			measurements in a <i>Supplemental Channel Request Message</i> .
5			The mobile station is to interpret this field as an offset to
6			T_ADD ranging from 0.5 dB (corresponding to T_MULCHAN =
7			'000') to 4.0 dB (corresponding to T_MULCHAN = '111') in 0.5
8			dB increments.
9	BEGIN_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
10			Channels at the beginning of transmission on Reverse
11			Supplemental Code Channel.
12			If EXTENSION is set to '1', the base station shall include this
13			field and set this field to the number of Reverse Supplemental
14			Code Channel preamble frames that the mobile station is to
15			send when beginning transmission on Reverse Supplemental
16			Code Channels.
17	RESUME_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
18			Channels at the resumption of transmission.
19			If EXTENSION is set to '1', the base station shall include this
20			field and set this field to the number of Reverse Supplemental
21			Code Channel preamble frames that the mobile station is to
22			send when resuming transmission on a Reverse
23			Supplemental Code Channel following an autonomous
24			suspension of transmission on an allocated Supplemental
25			Code Channel.
26	T_SLOTTED_INCL	-	Slotted timer value included indicator.
27			The base station shall set this field to '1' if the slotted timer
28			value is included; otherwise, the base station shall set this
29			field to '0'.
30	T_SLOTTED	-	Slotted timer value
31			If T_SLOTTED_INCL is set to '1', the base station shall
32			include this field and set this field to the value of the
33			TMS_Slotted timer to be used by the mobile station in units of
34			80 ms; otherwise, the base station shall omit this field.
35	ENC_SUPPORTED	-	Encryption fields included.
36			The base station shall set this field to '1' in the encryption
37			related fields are included; otherwise the base station shall
38			set this field to '0'.
39	SIG_ENCRYPT_SUP	-	Signaling Encryption supported indicator.
40			If ENC_SUPPORTED is equal to '1', the base station shall
41			include this field; otherwise, the base station shall omit this
42			field. If this field is included, this field indicates which
43			signaling encryption algorithms are supported by the base
44			station.

1		This field consists of the subfields shown in Table
2		2.7.1.3.2.1-5.
3		If this field is included, the base station shall set the
4		subfields as follows:
5		The base station shall set the CMEA subfield to '1'.
6		The base station shall set each other subfield to '1' if the
7		corresponding signaling algorithm is supported by the base
8		station; otherwise, the base station shall set the subfield to
9		'0'.
10		The base station shall set the RESERVED subfield to '00000'.
11	UI_ENCRYPT_SUP	- User information Encryption supported indicator.
12		If ENC_SUPPORTED is equal to '1', the base station shall
13		include this field; otherwise, the base station shall omit this
14		field. If this field is included, the base station shall set this
15		field to indicate the supported user information encryption
16		algorithms.
17		This field consists of the subfields shown in Table
18		2.7.1.3.2.4-9.
19		The base station shall set each subfield to '1' if the
20		corresponding user information encryption algorithm is
21		supported by the base station; otherwise, the base station
22		shall set the subfield to '0'.
23	CS_SUPPORTED	- Concurrent Services supported indicator.
24		If the base station supports concurrent services, the base
25		station shall set this field to '1'; otherwise, the base station
26		shall set this field to '0'.
27	CHM_SUPPORTED	- Control Hold Mode supported indicator.
28		The base station shall set this field to '1' to indicate that the
29		base station supports the Control Hold Mode; otherwise, the
30		base station shall set this field to '0'.
31	CDMA_OFF_TIME_REP_SUP_IND	- CDMA off time report supported indicator.
32		If the base station supports mobile station report for CDMA
33		off time information using the <i>CDMA Off Time Report</i>
34		<i>Message</i> , the base station shall set this field to '1'; otherwise,
35		the base station shall set this field to '0'.
36	CDMA_OFF_TIME_REP_THRESHOLD_UNIT	- CDMA off time report threshold unit
37		If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
38		station shall omit this field; otherwise, the base station shall
39		include this field and set it as follows:
40		The base station shall set this field to the time unit used in
41		CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
42		3.7.2.3.2.13-5
43	CDMA_OFF_TIME_REP_THRESHOLD	- CDMA off time report threshold

1		If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
2		station shall omit this field; otherwise, the base station shall
3		include this field and set it as follows:
4		The base station shall set this field to the time in units of
5		CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
6		mobile station goes away from the CDMA traffic channel
7		longer than this value, the mobile station is to send a <i>CDMA</i>
8		<i>Off Time Report Message</i> .
9	T_TDROP_RANGE_INCL -	Drop timer range value included indicator.
10		The base station shall set this field to '1' if the
11		T_TDROP_RANGE field is included in this message;
12		otherwise, the base station shall set this field to '0'.
13	T_TDROP_RANGE -	Drop timer range value.
14		Timer range value to use in association with the T_TDROP
15		parameter when determining the drop timer expiration.
16		If T_TDROP_RANGE_INCL is set to '0', the base station shall
17		omit this field; otherwise, the base station shall set this field
18		to the T_TDROP_RANGE value shown in Table 2.6.6.2.3-2
19		corresponding to the timer expiration range value to be used
20		by the mobile station.
21	FOR_PDCH_SUPPORTED -	Forward Packet Data Channel supported indicator.
22		If the base station supports Forward Packet Data Channel, the
23		base station shall set this field to '1'; otherwise, the base station
24		shall set this field to '0'.
25	PDCH_CHM_SUPPORTED -	PDCH Control Hold Mode supported indicator.
26		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
27		omit this field; otherwise, the base station shall include this
28		field and set it as follows:
29		The base station shall set this field to '1' to indicate that the
30		base station supports the PDCH Control Hold Mode; otherwise,
31		the base station shall set this field to '0'.
32	SDB_SUPPORTED -	Short Data Burst supported indicator.
33		The base station shall set this field to '1' if the mobile station
34		is permitted to send a Short Data Burst; otherwise, the base
35		station shall set this field to '0'.
36	MOB_QOS -	Indicator granting permission to the mobile station to request
37		QoS parameter settings in the <i>Origination Message</i> ,
38		<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
39		<i>Message</i> .
40		If CS_SUPPORTED is equal to '0', the base station shall omit
41		this field; otherwise the base station shall include this field
42		and shall set it as follows:
43		The base station shall set this field to '1', if the mobile station
44		is allowed to include a QoS record in the <i>Origination Message</i> ,
45		<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
46		<i>Message</i> ; otherwise, the base station shall set this field to '0'.

1	MS_INIT_POS_LOC_SUP_IND	-	Mobile station initiated position location
2			determination supported indicator.
3			If the base station supports mobile station initiated position
4			determination, the base station shall set this field to '1';
5			otherwise, the base station shall set this field to '0'.
6	PZ_HYST_ENABLED	-	Packet zone hysteresis enabled.
7			If the PACKET_ZONE_ID field is set to '00000000', the base
8			station shall omit this field; otherwise, the base station shall
9			include this field and set it as follows:
10			If the packet zone hysteresis feature is to be enabled at the
11			mobile station, the base station shall set this field to '1';
12			otherwise, the base station shall set this field to '0'.
13	PZ_HYST_INFO_INCL	-	Packet zone hysteresis information included indicator.
14			If the PZ_HYST_ENABLED field is included and is set to '1',
15			the base station shall include this field and set it as follows;
16			otherwise, the base station shall omit this field.
17			If the base includes the PZ_HYST_LIST_LEN,
18			PZ_HYST_ACT_TIMER and packet zone hysteresis timer
19			related fields, the base station shall set this field to '1';
20			otherwise, the base station shall set this field to '0'.
21	PZ_HYST_LIST_LEN	-	Packet zone hysteresis list length.
22			If the PZ_HYST_INFO_INCL field is included and is set to '1',
23			the base station shall include this field and set it as follows;
24			otherwise, the base station shall omit this field.
25			The base station shall set this field to the length of the packet
26			zone hysteresis list. This field shall be within the range '0001'
27			through '1111', inclusive.
28	PZ_HYST_ACT_TIMER	-	Packet zone hysteresis activation timer.
29			If the PZ_HYST_INFO_INCL field is included and is set to '1',
30			the base station shall include this field and set it as follows;
31			otherwise, the base station shall omit this field.
32			The base station shall set to the value of the packet zone
33			hysteresis activation timer (in units of seconds). This field
34			shall be within the range '00000001' through '11111111',
35			inclusive.
36	PZ_HYST_TIMER_MUL	-	Packet zone hysteresis timer multiplier.
37			If the PZ_HYST_INFO_INCL field is included and is set to '1',
38			the base station shall include this field and set it as follows;
39			otherwise, the base station shall omit this field.
40			The base station shall set the field to x, where $x \times 8^y$
41			seconds is the value of the hysteresis timer and y is the value
42			indicated in the PZ_HYST_TIMER_EXP field. The base station
43			shall set this field to a value that is between 1 and 7
44			inclusive. The value 0 is reserved.
45	PZ_HYST_TIMER_EXP	-	Packet zone hysteresis timer exponent.

1		If the PZ_HYST_INFO_INCL field is included and is set to '1',
2		the base station shall include this field and set it as follows;
3		otherwise, the base station shall omit this field.
4		The base station shall set the field to $y$ , where $x \times 8^y$
5		seconds is the value of the hysteresis timer and $x$ is the value
6		indicated in the PZ_HYST_TIMER_MUL field. The base station
7		shall set this field to a value that is between 0 and 4
8		inclusive. All the other values are reserved.
9	BCMC_ON_TRAFFIC_SUP	- BCMC on traffic channel supported indicator.
10		The base station shall set this field to '1' to indicate that the
11		BCMC feature is supported on traffic channel; otherwise, the
12		base station shall set this field to '0'.
13	AUTO_REQ_TRAF_ALLOWED_IND	- Autonomous BCMC request on traffic channel
14		allowed indicator.
15		If the BCMC_ON_TRAFFIC_SUP field is set to '0', the base
16		station shall omit this field; otherwise, the base station shall
17		include this field and set it as follows:
18		The base station shall set this field to '1' to indicate that the
19		mobile station is allowed to request for a BCMC flow
20		autonomously on traffic; otherwise, the base station shall set
21		this field to '0'.
22	REV_PDCH_SUPPORTED-	Reverse Packet Data Channel supported indicator.
23		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
24		omit this field; otherwise, the base station shall include this
25		field and set it as follows.
26		If the base station supports the Reverse Packet Data Channel
27		(R-PDCH), the base station shall set this field to '1';
28		otherwise, the base station shall set this field to '0'.
29	MAX_ADD_SERV_INSTANCE-	Maximum number of additional service reference
30		identifiers allowed in origination
31		If the CS_SUPPORTED field is set to '0', the base station shall
32		omit this field; otherwise, the base station shall include this
33		field and set it as follows:
34		The base station shall set this field to the maximum number
35		of additional service reference identifiers that can be included
36		in the <i>Origination Message</i> or <i>Enhanced Origination Message</i> .
37	USE_CH_CFG_RRM	- Channel configuration request allowed indicator.
38		The base station shall set this field to '1' to indicate that the
39		mobile station is permitted to include the CH_IND and
40		EXT_CH_IND fields in the <i>Resource Request Message</i> , and the
41		<i>Resource Request Mini Message</i> ; otherwise, the base station
42		shall set this field to '0'.
43		
44		

## 3.7.3.3.2.8 Neighbor List Update Message

MSG\_TAG: NLUM

Field	Length (bits)
PILOT_INC	4

One or more occurrences of the following field:

{	
NGHBR_PN	9
}	

**PILOT\_INC** - Pilot PN sequence offset index increment.

The mobile station searches for Remaining Set pilots at pilot PN sequence offset index values that are multiples of this value.

The base station shall set this field to the pilot PN sequence increment, in units of 64 PN chips, that the mobile station is to use for searching the Remaining Set. The base station should set this field to the largest increment such that the pilot PN sequence offsets of all its neighbor base stations are integer multiples of that increment.

**NGHBR\_PN** - Neighbor pilot PN sequence offset index.

The base station shall include one occurrence of this field for each pilot in its neighbor list. The base station shall set this field to the pilot's PN sequence offset, in units of 64 PN chips. The base station shall include no more than 20 occurrences of this field.

## 1 3.7.3.3.2.9 Send Burst DTMF Message

2 MSG\_TAG: BDTMFM

3

Field	Length (bits)
NUM_DIGITS	8
DTMF_ON_LENGTH	3
DTMF_OFF_LENGTH	3

NUM\_DIGITS occurrences of the following field:

{ (NUM\_DIGITS)

DIGIT <sub>i</sub>	4
--------------------	---

} (NUM\_DIGITS)

CON_REF_INCL	1
CON_REF	0 or 8

4

5 NUM\_DIGITS - Number of DTMF digits.

6 The base station shall set this field to the number of DTMF  
7 digits included in this message.

8 DTMF\_ON\_LENGTH - DTMF pulse width code.

9 The base station shall set this field to the DTMF\_ON\_LENGTH  
10 value shown in Table 2.7.2.3.2.7-1 corresponding to the  
11 requested pulse width of the DTMF pulse to be generated by  
12 the mobile station.

13 DTMF\_OFF\_LENGTH - DTMF interdigit interval code.

14 The base station shall set this field to the  
15 DTMF\_OFF\_LENGTH value shown in Table 2.7.2.3.2.7-2  
16 corresponding to the requested minimum interdigit interval  
17 between DTMF pulses to be generated by the mobile station.

18 DIGIT<sub>i</sub> - DTMF digit.

19 The base station shall include one occurrence of this field for  
20 each DTMF digit to be generated by the mobile station. The  
21 base station shall set each occurrence of this field to the code  
22 value shown in Table 2.7.1.3.2.4-4 corresponding to the  
23 dialed digit.

24 CON\_REF\_INCL - Connection reference included indicator.

25 The base station shall set this field to '1' if the connection  
26 reference field is included in this message; otherwise, it shall  
27 set this field to '0'.

1                    CON\_REF    –    Connection reference.

2                                    If the CON\_REF\_INCL field is set to '0', the base station shall  
3                                    omit this field; otherwise, the base station shall include this  
4                                    field and shall set it to the value of the connection reference  
5                                    assigned to the service option connection of the call, to which  
6                                    this message corresponds.

7

## 1 3.7.3.3.2.10 Power Control Parameters Message

2 MSG\_TAG: PCNPM

3

Field	Length (bits)
PWR_REP_THRESH	5
PWR_REP_FRAMES	4
PWR_THRESH_ENABLE	1
PWR_PERIOD_ENABLE	1
PWR_REP_DELAY	5

4

5 PWR\_REP\_THRESH - Power control reporting threshold.

6 The base station shall set this field to the number of bad  
7 frames (see [2]) to be received in a measurement period on the  
8 channel which carries the Power Control Subchannel before  
9 the mobile station is to generate a *Power Measurement Report*  
10 *Message* (see 2.6.4.1.1). If the base station sets  
11 PWR\_THRESH\_ENABLE to '1', it shall not set this field to  
12 '00000'.

13 PWR\_REP\_FRAMES - Power control reporting frame count.

14 The base station shall set this field to the value such that the  
15 number given by

$$\lfloor 2^{(PWR\_REP\_FRAMES/2)} \times 5 \rfloor \text{ frames}$$

17 is the number of frames over which the mobile station is to  
18 count frame errors.

19 PWR\_THRESH\_ENABLE - Threshold report mode indicator.

20 If the mobile station is to generate threshold *Power*  
21 *Measurement Report Messages*, the base station shall set this  
22 field to '1'. If the mobile station is not to generate threshold  
23 *Power Measurement Report Messages*, the base station shall  
24 set this field to '0'.

25 PWR\_PERIOD\_ENABLE - Periodic report mode indicator.

26 If the mobile station is to generate periodic *Power*  
27 *Measurement Report Messages*, the base station shall set this  
28 field to '1'. If the mobile station is not to generate periodic  
29 *Power Measurement Report Messages*, the base station shall  
30 set this field to '0'.

31 PWR\_REP\_DELAY - Power report delay.

32 The period that the mobile station waits following a *Power*  
33 *Measurement Report Message* before restarting frame  
34 counting for power control purposes.

1	
2	The base station shall set this field to the power report delay
3	value, in units of 4 frames (see 2.6.4.1.1).

1 3.7.3.3.2.11 Retrieve Parameters Message

2 MSG\_TAG: RTPM

3

Field	Length (bits)
-------	---------------

One or more occurrences of the following field:

{

PARAMETER_ID	16
--------------	----

}

4

5       PARAMETER\_ID   -   Parameter identification.

6       The base station can request the mobile station to report any  
7       parameter specified in Table E-1.

8       The base station shall include one occurrence of this field for  
9       each parameter requested. The base station shall set this  
10      field to the parameter identification number specified in  
11      Table E-1 corresponding to the parameter requested.

12

## 3.7.3.3.2.12 Set Parameters Message

MSG\_TAG: STPM

Field	Length (bits)
-------	---------------

One or more occurrences of the following record:

{

PARAMETER_ID	16
PARAMETER_LEN	10
PARAMETER	PARAMETER_LEN + 1

}

The base station shall include one occurrence of the following three-field record for each parameter to be set.

PARAMETER\_ID - Parameter identification.

The base station shall set this field to the identification shown in Table E-1 corresponding to the settable parameter to be set.

PARAMETER\_LEN - Parameter length.

The base station shall set this field to the length shown in Table E-1 corresponding to the parameter to be set.

PARAMETER - Parameter value.

The base station shall set this field to the value of the parameter specified by the PARAMETER\_ID field.

1    3.7.3.3.2.13 SSD Update Message

2    MSG\_TAG: SSDUM

3

Field	Length (bits)
RANDSSD	56

4

5            RANDSSD    -    Random data.

6                            The base station shall set this field as specified in 2.3.12.1.5.

7

1 3.7.3.3.2.14 Flash With Information Message

2 MSG\_TAG: FWIM

3

Field	Length (bits)
One or more occurrences of the following record:	
{	
RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN
}	

4

5 The base station shall include occurrences of the following three-field record as specified  
6 in 3.7.5.

- 7

RECORD\_TYPE

-

Information record type.
- 8

The base station shall set this field as specified in 3.7.5.
- 9

RECORD\_LEN

-

Information record length.
- 10

The base station shall set this field to the number of octets in
- 11

the type-specific fields included in this record.
- 12

Type-specific fields

-

Type-specific fields.
- 13

The base station shall include type-specific fields as specified
- 14

in 3.7.5.

15

1 3.7.3.3.2.15 Mobile Station Registered Message

2 MSG\_TAG: MSRM

3

Field	Length (bits)
SID	15
NID	16
REG_ZONE	12
TOTAL_ZONES	3
ZONE_TIMER	3
MULT_SIDS	1
MULT_NIDS	1
BASE_LAT	22
BASE_LONG	23
REG_DIST	11

4

5                   SID    -   System identification.

6                               The base station shall set this field to the system  
7                               identification number for this system.

8                   NID    -   Network identification.

9                               This field serves as a sub-identifier of a system as defined by  
10                              the owner of the SID.

11                             The base station shall set this field to the network  
12                             identification number for this network. The NID value of  
13                             65,535 is reserved.

14               REG\_ZONE   -   Registration zone.

15                             The base station shall set this field to its registration zone  
16                             number (see 2.6.5.1.5).

17               TOTAL\_ZONES   -   Number of registration zones to be retained.

18                             The base station shall set this field to the number of  
19                             registration zones the mobile station is to retain for purposes  
20                             of zone-based registration (see 2.6.5.1.5).

21                             If zone-based registration is to be disabled, the base station  
22                             shall set this field to '000'.

23               ZONE\_TIMER   -   Zone timer length.

24                             The base station shall set this field to the ZONE\_TIMER value  
25                             shown in Table 3.7.2.3.2.1-1 corresponding to the length of  
26                             the zone registration timer to be used by mobile stations.

1	MULT_SIDS	-	Multiple SID storage indicator.
2			If mobile stations may store entries of SID_NID_LIST
3			containing different SIDs, the base station shall set this field
4			to '1'; otherwise the base station shall set this field to '0'.
5	MULT_NIDS	-	Multiple NID storage indicator.
6			If mobile stations may store multiple entries of SID_NID_LIST
7			having the same SID (with different NIDs), the base station
8			shall set this field to '1'; otherwise the base station shall set
9			this field to '0'.
10	BASE_LAT	-	Base station latitude.
11			The base station shall set this field to its latitude in units of
12			0.25 second, expressed as a two's complement signed
13			number with positive numbers signifying North latitudes.
14			The base station shall set this field to a value in the range -
15			1296000 to 1296000 inclusive (corresponding to a range of -
16			90° to +90°).
17	BASE_LONG	-	Base station longitude.
18			The base station shall set this field to its longitude in units of
19			0.25 second, expressed as a two's complement signed
20			number with positive numbers signifying East longitude. The
21			base station shall set this field to a value in the range -
22			2592000 to 2592000 inclusive (corresponding to a range of -
23			180° to +180°).
24	REG_DIST	-	Registration distance.
25			If mobile stations are to perform distance-based registration,
26			the base station shall set this field to the non-zero "distance"
27			beyond which the mobile station is to re-register (see
28			2.6.5.1.4). If mobile stations are not to perform distance-
29			based registration, the base station shall set this field to 0.
30			

1 3.7.3.3.2.16 Status Request Message

2 MSG\_TAG: STRQM

3

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields	$8 \times \text{QUAL\_INFO\_LEN}$
NUM_FIELDS	4

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

RECORD_TYPE	8
-------------	---

} (NUM\_FIELDS)

4

5 QUAL\_INFO\_TYPE - Qualification information type.

6 The base station shall set this field to the value shown in  
7 Table 3.7.2.3.2.15-1 to show the inclusion of qualification  
8 information in the type-specific fields.

9 QUAL\_INFO\_LEN - Qualification information length.

10 The base station shall set this field to the number of octets  
11 included in the type-specific fields of the qualification  
12 information.

13 Type-specific fields - Type-specific fields.

14 The base station shall set these fields to the qualification  
15 information according to the QUAL\_INFO\_TYPE field.

16 If QUAL\_INFO\_TYPE is equal to '00000000', the type-specific  
17 fields are omitted.

18 If QUAL\_INFO\_TYPE is equal to '00000001', the base station  
19 shall use the following fixed-length format for the type-  
20 specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
RESERVED	3

21

22 If QUAL\_INFO\_TYPE is equal to '00000010', the base station  
23 shall use the following fixed-length format for the type-  
24 specific fields:

Type-specific Field	Length (bits)
BAND_CLASS	5
OP_MODE	8
RESERVED	3

- 1
- 2       BAND\_CLASS   -   Band class.
- 3                    The base station shall set this field to the CDMA band class,
- 4                    as specified in [30].
- 5       OP\_MODE    -   Operating mode.
- 6                    The base station shall set this field as shown in
- 7                    Table 3.7.2.3.2.15-3 to specify the operating mode
- 8                    qualification information.
- 9       RESERVED   -   Reserved bits.
- 10                   The base station shall set this field to '000'.
- 11       NUM\_FIELDS   -   Number of requested record fields in this message.
- 12                    The base station shall set this field to the number of
- 13                    occurrences of RECORD\_TYPE in this message.
- 14   The base station shall only request the status information records qualified by the
- 15   included qualification information (see Table 2.7.4-1) in this message. The base station
- 16   shall include one occurrence of the following field for each information record that is
- 17   requested:
- 18       RECORD\_TYPE   -   Information record type.
- 19                    The base station shall set this field to the record type value
- 20                    shown in Table 2.7.4-1 corresponding to the information
- 21                    record requested.
- 22

T_DROP	0 or 6
T_COMP	0 or 4
T_TDROP	0 or 4
HARD_INCLUDED	1
FRAME_OFFSET	0 or 4
PRIVATE_LCM	0 or 1
RESET_L2	0 or 1
RESET_FPC	0 or 1
SERV_NEG_TYPE	0 or 1
ENCRYPT_MODE	0 or 2
NOM_PWR_EXT	0 or 1
NOM_PWR	0 or 4
NUM_PREAMBLE	0 or 3
BAND_CLASS	0 or 5
CDMA_FREQ	0 or 11

4

(continues on next page)

5

1

Field	Length (bits)
ADD_LENGTH	3
Additional fields	$8 \times \text{ADD\_LENGTH}$

One or more occurrences of the following record:

{

PILOT_PN	9
PWR_COMB_IND	1
CODE_CHAN	8

}

2

3

USE\_TIME - Use action time indicator.

4

This field indicates whether an explicit action time is specified in this message.

5

6

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

7

8

9

ACTION\_TIME - Action time.

10

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $\text{FRAME\_OFFSET}_s \times 1.25$  ms, in units of 80 ms (modulo 64), at which the handoff is to take effect. If the USE\_TIME field is set to '0', the base station shall set this field to '000000'.

11

12

13

14

15

HDM\_SEQ - *Extended Handoff Direction Message* sequence number.

16

This field is used by the mobile station in the *Power Measurement Report Message* to identify the order in which the reported pilot strengths are sent.

17

18

19

The base station shall set this field as specified in 2.6.6.2.2.2.

20

SEARCH\_INCLUDED - Pilot search parameters included.

21

If the mobile station is to change its pilot search parameters, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

22

23

24

SRCH\_WIN\_A - Search window size for the Active Set and Candidate Set.

25

If SEARCH\_INCLUDED is set to '1', the base station shall include the field SRCH\_WIN\_A and set this field to the window size parameter shown in Table 2.6.6.2.1-1 corresponding to the number of PN chips that the mobile station is to search for pilots in the Active Set and Candidate Set; otherwise, the base station shall omit this field.

26

27

28

29

30

31

T\_ADD - Pilot detection threshold.

1			This value is used by the mobile station to trigger the transfer
2			of a pilot from the Neighbor Set or Remaining Set to the
3			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
4			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
5			<i>Strength Measurement Message</i> initiating the handoff process
6			(see 2.6.6.2.5.2).
7			If SEARCH_INCLUDED is set to '1', the base station shall
8			include the field T_ADD and set this field to the pilot
9			detection threshold, expressed as an unsigned binary
10			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base
11			station shall omit this field.
12	T_DROP	-	Pilot drop threshold.
13			This value is used by mobile stations to start a handoff drop
14			timer for pilots in the Active Set and the Candidate Set (see
15			2.6.6.2.3).
16			If SEARCH_INCLUDED is set to '1', the base station shall
17			include the field T_DROP and set this field to the pilot drop
18			threshold, expressed as an unsigned binary number equal to
19			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base station shall omit
20			this field.
21	T_COMP	-	Active Set versus Candidate Set comparison threshold.
22			The mobile station transmits a <i>Pilot Strength Measurement</i>
23			<i>Message</i> or an <i>Extended Pilot Strength Measurement Message</i>
24			when the strength of a pilot in the Candidate Set exceeds that
25			of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
26			If SEARCH_INCLUDED is set to '1', the base station shall
27			include the field T_COMP and set this field to the threshold
28			Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
29			otherwise, the base station shall omit this field.
30	T_TDROPP	-	Drop timer value.
31			Timer value after which an action is taken by the mobile
32			station for a pilot that is a member of the Active Set or
33			Candidate Set, and whose strength has not become greater
34			than T_DROP. If the pilot is a member of the Active Set, a
35			<i>Pilot Strength Measurement Message</i> or an <i>Extended Pilot</i>
36			<i>Strength Measurement Message</i> is issued. If the pilot is a
37			member of the Candidate Set, it will be moved to the Neighbor
38			Set.
39			If SEARCH_INCLUDED is set to '1', the base station shall
40			include the field T_TDROPP and set this field to the T_TDROPP
41			value shown in Table 2.6.6.2.3-1 corresponding to the drop
42			timer value to be used by the mobile station; otherwise, the
43			base station shall omit this field.
44	HARD_INCLUDED	-	Hard handoff parameters included.

1			If the mobile station is to change FRAME_OFFSET,
2			PRIVATE_LCM, ENCRYPT_MODE, SERV_NEG_TYPE,
3			NOM_PWR_EXT, NUM_PREAMBLE, NOM_PWR,
4			BAND_CLASS, or CDMA_FREQ, or the mobile station is to
5			perform a reset of the acknowledgment procedures, or the
6			mobile station is to reset Forward Traffic Channel power
7			control counters, the base station shall set this field to '1';
8			otherwise, the base station shall set this field to '0'.
9	FRAME_OFFSET	-	Frame offset.
10			The Forward and Reverse Traffic Channel frames are delayed
11			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
12			If HARD_INCLUDED is set to '1', the base station shall
13			include the field FRAME_OFFSET and set it to the Forward
14			and Reverse Traffic Channel frame offset; otherwise, the base
15			station shall omit this field.
16	PRIVATE_LCM	-	Private long code mask indicator.
17			This field is used to change the long code mask after a hard
18			handoff.
19			If HARD_INCLUDED is set to '1', the base station shall
20			include the field PRIVATE_LCM and set it as described below;
21			otherwise, the base station shall omit this field.
22			If the private long code mask is to be used after the handoff,
23			the base station shall set this field to '1'; otherwise, the base
24			station shall set this field to '0'.
25	RESET_L2	-	Reset acknowledgment procedures command.
26			This field is used to reset acknowledgment processing in the
27			mobile station.
28			If HARD_INCLUDED is set to '1', the base station shall
29			include the field RESET_L2 and set it as described below;
30			otherwise, the base station shall omit this field.
31			If the field is included and the mobile station is to reset its
32			acknowledgment procedures, the base station shall set this
33			field to '1'; otherwise, the base station shall set this field to
34			'0'.
35	RESET_FPC	-	Reset Forward Traffic Channel power control.
36			This field is used to reset the Forward Traffic Channel power
37			control counters.
38			If HARD_INCLUDED is set to '1', the base station shall
39			include the field RESET_FPC and set it as described below;
40			otherwise, the base station shall omit this field.
41			The base station shall set this field to '0' if the Forward Traffic
42			Channel power control counters are to be maintained after
43			completion of the handoff. If the counters are to be initialized
44			as specified in 2.6.4.1.1.1, then the base station shall set this
45			field to '1'.

1	SERV_NEG_TYPE	-	Service negotiation type.
2			If HARD_INCLUDED is set to '1', the base station shall
3			include the field SERV_NEG_TYPE and set it as described
4			below; otherwise, the base station shall omit this field.
5			If the mobile station is to use service negotiation, the base
6			station shall set this field to '1'. If the mobile station is to use
7			service option negotiation, the base station shall set this field
8			to '0'.
9	ENCRYPT_MODE	-	Message encryption mode.
10			If HARD_INCLUDED is set to '1', the base station shall
11			include the field ENCRYPT_MODE and set it to the
12			ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2
13			corresponding to the encrypting mode that is to be used for
14			messages sent on the Forward and Reverse Traffic Channels,
15			as specified in 2.3.12.2; otherwise, the base station shall omit
16			this field.
17	NOM_PWR_EXT	-	Extended nominal transmit power.
18			If HARD_INCLUDED is set to '1', the base station shall
19			include this field and set it as described below; otherwise, the
20			base station shall omit this field.
21			If the mobile station is being handed off to a base station
22			operating in Band Class 0 or Band Class 3, the base station
23			shall set this field to '0'; otherwise, it shall set this field as
24			follows:
25			If the correction factor to be used by the mobile station in the
26			open loop power estimate is between -24 dB and -9 dB
27			inclusive, the base station shall set this field to '1'; otherwise
28			(the correction factor is in the range -8 dB to 7 dB inclusive),
29			the base station shall set this field to '0'.
30	NOM_PWR	-	Nominal transmit power offset.
31			If HARD_INCLUDED is set to '1', the base station shall
32			include the field NOM_PWR and set it to the correction factor
33			to be used by the mobile station in the open loop power
34			estimate, expressed as a two's complement value in units of 1
35			dB (see [2]); otherwise, the base station shall omit this field.
36	NUM_PREAMBLE	-	Traffic Channel preamble length.
37			If HARD_INCLUDED is set to '0', the base station shall omit
38			the NUM_PREAMBLE field; otherwise, the base station shall
39			include this field and set it to the length of Traffic Channel
40			preamble that the mobile station is to send when performing
41			a handoff; as follows:

If, after the handoff, radio configuration 1 or radio configuration 2 is to be used, the base station shall set NUM\_PREAMBLE to the Traffic Channel preamble length in 20 ms units; otherwise, the base station shall set NUM\_PREAMBLE to the value shown in Table 3.7.3.3.2.17-1 corresponding to the Traffic Channel preamble length in 1.25 ms units.

**Table 3.7.3.3.2.17-1. Traffic Channel Preamble Length**

<b>NUM_PREAMBLE or RESQ_NUM_PREAM BLE (binary)</b>	<b>Preamble Length in 1.25 ms Increments</b>
000	0
001	2
010	4
011	6
100	8
101	10
110	12
111	16

**BAND\_CLASS** - Band class.

If HARD\_INCLUDED is set to '1', the base station shall include the field BAND\_CLASS and set it to the CDMA band class corresponding to the CDMA frequency assignment for the CDMA Channel as specified in [30]; otherwise, the base station shall omit this field.

**CDMA\_FREQ** - Frequency assignment.

If HARD\_INCLUDED is set to '1', the base station shall include the field CDMA\_FREQ and set it to the CDMA Channel number, in the specified CDMA band class, corresponding to the CDMA frequency assignment for the CDMA Channel as specified in [2]; otherwise, the base station shall omit this field.

**ADD\_LENGTH** - Number of octets in the additional fields.

The base station shall set this field to the number of octets included in the Additional fields. If Additional fields are not included in this message, the base station shall set this field to '000'.

**Additional fields** - Additional fields.

If the ADD\_LENGTH field is not equal to '000', the base station shall include the following fields as additional fields.

Field	Length (bits)
P_REV	8

1

2

P\_REV - Protocol revision level.

3

4

5

The base station shall set this field to the base station protocol revision level that the mobile station is to use after completion of the handoff.

6

7

The base station shall include one occurrence of the following three-field record for each member of the mobile station's new Active Set.

9

PILOT\_PN - Pilot PN sequence offset index.

10

11

The base station shall set this field to the pilot PN sequence offset for this pilot in units of 64 PN chips.

12

PWR\_COMB\_IND - Power control symbol combining indicator.

13

14

15

16

17

18

If the Forward Traffic Channel associated with this pilot will carry the same closed-loop power control subchannel bits as that of the previous pilot in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'. For the first occurrence of this record in the message, the base station shall set this field to '0'.

19

CODE\_CHAN - Code channel index.

20

21

22

23

24

25

26

27

28

29

The base station shall set this field to the code channel index (see [2]) that the mobile station is to use as the Forward Fundamental Channel associated with this pilot. If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base station shall set this field in the range 1 to 63 inclusive. If Radio Configuration 4, 6, 8, 11, or 12 is used, the base station shall set this field in the range 1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the base station shall set this field in the range 1 to 255 inclusive.

## 3.7.3.3.2.18 Service Request Message

MSG\_TAG: SRQM

Field	Length (bits)
SERV_REQ_SEQ	3
REQ_PURPOSE	4
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

SERV\_REQ\_SEQ - Service request sequence number.

The base station shall set this field to the service request sequence number pertaining to this request message as specified in 3.6.4.1.2.1.1.

REQ\_PURPOSE - Request purpose.

The base station shall set this field to the appropriate REQ\_PURPOSE code from Table 3.7.3.3.2.18-1 to indicate the purpose of the message.

**Table 3.7.3.3.2.18-1. REQ\_PURPOSE Codes**

REQ_PURPOSE (binary)	Meaning
0001	Indicates that the purpose of this message is to reject a proposed service configuration.
0010	Indicates that the purpose of this message is to propose a service configuration.
All other REQ_PURPOSE codes are reserved.	

1	RECORD_TYPE	-	Information record type.
2			If REQ_PURPOSE is set to '0010', the base station shall
3			include this field and set it as follows; otherwise, the base
4			station shall omit this field.
5			The base station shall set this field to the record type value
6			shown in Table 3.7.5-1 corresponding to the Service
7			Configuration information record.
8	RECORD_LEN	-	Information record length.
9			If REQ_PURPOSE is set to '0010', the base station shall
10			include this field and set it as follows; otherwise, the base
11			station shall omit this field.
12			The base station shall set this field to the number of octets
13			included in the type-specific fields of the Service
14			Configuration information record.
15	Type-specific fields	-	Type-specific fields.
16			If REQ_PURPOSE is set to '0010', the base station shall
17			include this field and set it as follows; otherwise, the base
18			station shall omit this field.
19			The base station shall set these fields as specified in 3.7.5.7
20			for the Service Configuration information record.
21			
22			

## 3.7.3.3.2.19 Service Response Message

MSG\_TAG: SRPM

Field	Length (bits)
SERV_REQ_SEQ	3
RESP_PURPOSE	4
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

SERV\_REQ\_SEQ - Service request sequence number.

The base station shall set this field to the value of the SERV\_REQ\_SEQ field in the *Service Request Message* to which it is responding.

RESP\_PURPOSE - Response purpose.

The base station shall set this field to the appropriate RESP\_PURPOSE code from Table 3.7.3.3.2.19-1 to indicate the purpose of the message.

**Table 3.7.3.3.2.19-1. RESP\_PURPOSE Codes**

RESP_PURPOSE (binary)	Meaning
0001	Indicates that the purpose of the message is to reject a proposed service configuration.
0010	Indicates that the purpose of the message is to propose a service configuration.
All other RESP_PURPOSE codes are reserved.	

1	RECORD_TYPE	-	Information record type.
2			If RSP_PURPOSE is set to '0010', the base station shall
3			include this field and set it as follows; otherwise, the base
4			station shall omit this field.
5			The base station shall set this field to the record type value
6			shown in Table 3.7.5-1 corresponding to the Service
7			Configuration information record.
8	RECORD_LEN	-	Information record length.
9			If RSP_PURPOSE is set to '0010', the base station shall
10			include this field and set it as follows; otherwise, the base
11			station shall omit this field.
12			The base station shall set this field to the number of octets
13			included in the type-specific fields of the Service
14			Configuration information record.
15	Type-specific fields	-	Type-specific fields.
16			If RSP_PURPOSE is set to '0010', the base station shall
17			include this field and set it as follows; otherwise, the base
18			station shall omit this field.
19			The base station shall set these fields as specified in 3.7.5.7
20			for the Service Configuration information record.
21			

1 3.7.3.3.2.20 Service Connect Message

2 MSG\_TAG: SCM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
SERV_CON_SEQ	3
RESERVED	2
USE_OLD_SERV_CONFIG	2
SR_ID	0 or 3
SR_ID_RESTORE_BITMAP	0 or 6
SYNC_ID_INCL	1
SYNC_ID_LEN	0 or 4
SYNC_ID	0 or (8 × SYNC_ID_LEN)
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN
RECORD_TYPE	0 or 8
RECORD_LEN	0 or 8
Type-specific fields	0 or 8 × RECORD_LEN

(continues on next page)

4

Field	Length (bits)
CC_INFO_INCL	0 or 1
NUM_CALLS_ASSIGN	0 or 8

NUM\_CALLS\_ASSIGN occurrences of the following record:

{ (NUM\_CALLS\_ASSIGN)

CON_REF	8
RESPONSE_IND	1
TAG	0 or 4
BYPASS_ALERT_ANSWER	0 or 1

} (NUM\_CALLS\_ASSIGN)

USE_TYPE0_PLCM	1
SYNC_ID_BS_INITIATED_IND	0 or 1
SR_ID_RELEASE_BITMAP_INCL	0 or 1
SR_ID_RELEASE_BITMAP	0 or 6

- 1
- 2           USE\_TIME   -   Use action time indicator.
- 3                       This field indicates whether an explicit action time is
- 4                       specified in this message.
- 5                       If an explicit action time is specified in this message, the base
- 6                       station shall set this field to '1'; otherwise, the base station
- 7                       shall set this field to '0'.
- 8           ACTION\_TIME -   Action time.
- 9                       If the USE\_TIME field is set to '1', the base station shall set
- 10                      this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$
- 11                      ms, in units of 80 ms (modulo 64), at which the specified
- 12                      service configuration is to take effect. If the USE\_TIME field
- 13                      is set to '0', the base station shall set this field to '000000'.
- 14           SERV\_CON\_SEQ -   Connect sequence number.
- 15                       The base station shall set this field to the connect sequence
- 16                       number pertaining to this connect message as specified in
- 17                       3.6.4.1.2.1.2.
- 18           RESERVED   -   Reserved bits.
- 19                       The base station shall set this field to '00'.

1	USE_OLD_SERV_CONFIG	- Use stored service configuration indicator.
2		This field may be used by the base station to instruct the
3		mobile station to use the stored service configuration (that is,
4		both the Service Configuration information record and the
5		Non-negotiable Service Configuration information record).
6		If MOB_P_REV is less than seven, the base station shall set
7		this field to '00'.
8		If the base station had sent an <i>Extended Channel Assignment</i>
9		<i>Message</i> with GRANTED_MODE set to '11' or a service
10		configuration has been sent successfully to the mobile
11		station upon entering the <i>Traffic Channel Substate</i> , the base
12		station shall not set this field to '01' or '10'; otherwise, the
13		base station shall set this field according to Table
14		3.7.3.3.2.20-1.
15		

1

**Table 3.7.3.3.2.20-1. USE\_OLD\_SERV\_CONFIG values**

<b>USE_OLD_SERV_CONFIG Field (binary)</b>	<b>Description</b>
00	Mobile Station is to use the SCR and NNSCR included in this message
01	Mobile Station is to use the stored service configuration, where all service option connections are to be restored.
10	Mobile Station is to use the stored service configuration but with the modifications specified by the SCR and NNSCR included in this message
11	Mobile Station is to restore the service option connection record(s) indicated via the SR_ID or SR_ID_RESTORE_BITMAP field and release the service option connection record(s) indicated via the SR_ID_RELEASE_BITMAP.

2

3

SR\_ID – Service reference identifier.

4

5

6

If the USE\_OLD\_SERV\_CONFIG field is not set to '11', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

1			If the mobile station is to restore all remaining service option
2			connections from the stored service configuration, the base
3			station shall set this field to '111'; if the mobile station is to
4			restore more than one but not all remaining service option
5			connections from the stored service configuration, the base
6			station shall set this field to '000'; otherwise, the base station
7			shall set this field to the service reference identifier
8			corresponding to the service option connection to be restored.
9	SR_ID_RESTORE_BITMAP	-	Bitmap of service reference identifiers to be restored.
10			If the SR_ID field is included and set to '000', the base station
11			shall include this field and set it as follows; otherwise, the
12			base station shall omit this field.
13			This field consists of the subfields defined in Table
14			3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
15			indicate that the mobile station is to restore the service option
16			connection of the corresponding service reference identifier;
17			otherwise, the base station shall set the subfield to '0' to
18			indicated that the service option connection of the
19			corresponding service reference identifier is not affected.
20	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
21			indicator.
22			The base station shall set this field to '1' if the SYNC_ID field
23			is included in this message; otherwise, the base station shall
24			set this field to '0'.
25			If MOB_P_REV is less than seven or if MOB_P_REV is less
26			than 11 and USE_OLD_SERV_CONFIG field is set to '01' or
27			'11', the base station shall set this field to '0'.
28	SYNC_ID_LEN	-	Service Configuration synchronization identifier length.
29			If the SYNC_ID_INCL field is set to '0', the base station shall
30			omit this field; otherwise, the base station shall include this
31			field and set it as follows:

1			The base station shall set this field to the length (in octets) of
2			the SYNC_ID field included in this message. The base station
3			shall set this field to a value larger than zero.
4	SYNC_ID	-	Service Configuration synchronization identifier.
5			If the SYNC_ID_INCL field is set to '0', the base station shall
6			omit this field; otherwise, the base station shall include this
7			field and set it as follows:
8			The base station shall set this field to the synchronization
9			identifier corresponding to the service configuration conveyed
10			by this message.
11	RECORD_TYPE	-	Information record type.
12			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
13			station shall omit this field; otherwise the base station shall
14			include this field and set it as follows.
15			The base station shall set this field to the record type value
16			shown in Table 3.7.5-1 corresponding to the Service
17			Configuration information record.
18	RECORD_LEN	-	Information record length.
19			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
20			station shall omit this field; otherwise the base station shall
21			include this field and set it as follows.
22			The base station shall set this field to the number of octets
23			included in the type-specific fields of the Service
24			Configuration information record.
25	Type-specific fields	-	Type-specific fields.
26			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
27			station shall omit this field; otherwise the base station shall
28			include this field and set it as follows.
29			The base station shall set these fields as specified in 3.7.5.7
30			for the Service Configuration information record.
31	RECORD_TYPE	-	Information record type.
32			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
33			station shall omit this field; otherwise the base station shall
34			include this field and set it as follows.
35			The base station shall set this field to the record type value
36			shown in Table 3.7.5-1 corresponding to the Non-Negotiable
37			Service Configuration information record.
38	RECORD_LEN	-	Information record length.
39			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
40			station shall omit this field; otherwise the base station shall
41			include this field and set it as follows.

1			The base station shall set this field to the number of octets
2			included in the type-specific fields of the Non-Negotiable
3			Service Configuration information record.
4	Type-specific fields	-	Type-specific fields.
5			If USE_OLD_SERV_CONFIG is equal to '01' or '11', the base
6			station shall omit this field; otherwise the base station shall
7			include this field and set it as follows.
8			The base station shall set these fields as specified in 3.7.5.20
9			for the Non-Negotiable Service Configuration information
10			record.
11	CC_INFO_INCL	-	Call Control information included indicator.
12			If the USE_OLD_SERV_CONFIG field is set to '01', '10', or '11',
13			the base station shall omit this field; otherwise, the base
14			station shall include this field and set it as follows:
15			The base station shall set this field to '1' if Call Control
16			related parameters (to assign new call(s)) are included in this
17			message; otherwise, the base station shall set this field to '0'.
18	NUM_CALLS_ASSIGN	-	Number of call assignments.
19			If the CC_INFO_INCL field is not included or is included but
20			is set to '0', the base station shall omit this field; otherwise,
21			the base station shall include this field and set it as follows:
22			The base station shall set this field to the number of new call
23			assignments included in this message.
24	The base station shall include NUM_CALLS_ASSIGN occurrences of the following variable		
25	length record.		
26	CON_REF	-	Connection reference.
27			The base station shall set this field to the connection
28			reference of the service option connection corresponding to
29			this call.
30	RESPONSE_IND	-	Response indicator.
31			The base station shall set this field to '1' if this call
32			assignment is a response to an <i>Enhanced Origination</i>
33			<i>Message</i> from the mobile station; otherwise, the base station
34			shall set this field to '0'.
35	TAG	-	Transaction identifier.

1		If the RESPONSE_IND field is set to '0', the base station shall
2		omit this field; otherwise, the base station shall include this
3		field and set it as follows:
4		The base station shall set this field to the value of the TAG
5		field received in the <i>Enhanced Origination Message</i> to which
6		this call assignment is the response.
7	BYPASS_ALERT_ANSWER	- Bypass alert indicator.
8		If the RESPONSE_IND field is set to '1', the base station shall
9		omit this field; otherwise, the base station shall include this
10		field and set it as follows:
11		If the mobile station is to bypass the Waiting for Order
12		Substate and the Waiting for Mobile Station Answer Substate
13		for this call, the base station shall set this field to '1';
14		otherwise, the base station shall set this field to '0'.
15	USE_TYPE0_PLCM	- Use TYPE0 PLCM indicator.
16		If the mobile station is to start using the PLCM defined by
17		PLCM_TYPE of '0000' when P_REV_IN_USE is less than 11 or
18		'0100' when P_REV_IN_USE is greater than or equal to 11
19		(see Table 3.7.2.3.2.21-5), the base station shall set this field
20		to '1'. If the mobile station is to continue using the current
21		long code mask, the base station shall set this field to '0'.
22	SYNC_ID_BS_INITIATED_IND	- SYNC_ID base station initiated indicator.
23		If the SYNC_ID_INCL field is set to '1' and the
24		USE_OLD_SERV_CONFIG field is included and is set to '10',
25		then the base station shall include this field and set it as
26		follows; otherwise, the base station shall omit this field.
27		If the SYNC_ID included in this message is initiated by the
28		base station and is to be used by mobile station to restore the
29		stored configuration, then the base station shall set this field
30		to '1'; otherwise the base station shall set this field to '0'.
31	SR_ID_RELEASE_BITMAP_INCL	- SR_ID release bitmap included indicator.
32		If the USE_OLD_SERV_CONFIG field is not set to '11', the
33		base station shall omit this field; otherwise, the base station
34		shall include this field and set it as follows:
35		If SR_ID_RELEASE_BITMAP is included, base station shall
36		set this field to '1'; otherwise, base station shall set this field
37		to '0'.
38	SR_ID_RELEASE_BITMAP	- SR_ID release bitmap.
39		If the SR_ID_RELEASE_BITMAP_INCL field is not included or
40		is included and is set to '0', the base station shall omit this
41		field; otherwise, the base station shall include this field and
42		set it as follows:

This field consists of the subfields defined in Table 3.7.3.3.2.20-2. The base station shall set a subfield to '1' to indicate that the mobile station is to release the service option connection of the corresponding service reference identifier; otherwise, the base station shall set the subfield to '0' to indicated that the service option connection of the corresponding service reference identifier is not affected.

The base station shall not indicate the mobile station to restore and release the same SR\_ID using this message.

**Table 3.7.3.3.2.20-2. SR\_ID\_RELEASE\_BITMAP Subfields.**

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	sr_id 1 to be released
SR_ID_2	1	sr_id 2 to be released
SR_ID_3	1	sr_id 3 to be released
SR_ID_4	1	sr_id 4 to be released
SR_ID_5	1	sr_id 5 to be released
SR_ID_6	1	sr_id 6 to be released

### 1 3.7.3.3.2.21 Service Option Control Message

2 MSG\_TAG: SOCM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
CON_REF	8
SERVICE_OPTION	16
CTL_REC_LEN	8
Type-specific fields	$8 \times \text{CTL\_REC\_LEN}$

4

5 USE\_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is  
7 specified in this message.

8 If an explicit action time is specified in this message, the base  
9 station shall set this field to '1'; otherwise, the base station  
10 shall set this field to '0'.

11 ACTION\_TIME - Action time.

12 If the USE\_TIME field is set to '1', the base station shall set  
13 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
14 ms, in units of 80 ms (modulo 64), at which the message is to  
15 take effect. If the USE\_TIME field is set to '0', the base station  
16 shall set this field to '000000'.

17 CON\_REF - Service option connection reference.

18 The base station shall set this field to the reference for the  
19 service option connection.

20 SERVICE\_OPTION - Service option.

21 The base station shall set this field to the service option in  
22 use with the service option connection.

23 CTL\_REC\_LEN - Service option control record length.

24 The base station shall set this field to the number of octets  
25 included in the type-specific fields of this service option  
26 control record.

27 Type-specific fields - Type-specific fields.

28 The base station shall set these fields as specified by the  
29 requirements for the service option, which are defined  
30 external to this specification. See relevant service option  
31 specification.

32

1 3.7.3.3.2.22 TMSI Assignment Message

2 MSG\_TAG: TASM

3

Field	Length (bits)
TMSI_ZONE_LEN	4
TMSI_ZONE	$8 \times \text{TMSI\_ZONE\_LEN}$
TMSI_CODE	32
TMSI_EXP_TIME	24

4

5 TMSI\_ZONE\_LEN - TMSI zone length.  
6 The base station shall set this field to the number of octets  
7 included in the TMSI\_ZONE. The base station shall set this  
8 field to a value in the range 1 to 8 inclusive.

9 TMSI\_ZONE - TMSI zone.  
10 The base station shall set this field to the TMSI zone number,  
11 as specified in [27].

12 TMSI\_CODE - Temporary mobile station identity code.  
13 The base station shall set this field to the 32-bit TMSI code  
14 assigned to the mobile station.  
15 If the base station is to deassign the TMSI, the base station  
16 shall set all the bits in this field to '1'.

17 TMSI\_EXP\_TIME - TMSI expiration time.  
18 The base station shall set this field to the System Time in the  
19 units of  $80 \text{ ms} \times 2^{12}$  when the TMSI is to expire.  
20

## 1 3.7.3.3.2.23 Service Redirection Message

2 MSG\_TAG: SRDM

3

Field	Length (bits)
RETURN_IF_FAIL	1
DELETE_TMSI	1
REDIRECT_TYPE	1

One or more occurrences of the following field:

{

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

}

4

5 RETURN\_IF\_FAIL - Return if fail indicator.

6 The base station shall set this field to '1' if the mobile station  
7 is required to return to the system from which it is being  
8 redirected upon failure to obtain service using the redirection  
9 criteria specified in this message; otherwise, the base station  
10 shall set this field to '0'.

11 DELETE\_TMSI - Delete TMSI indicator.

12 The base station shall set this field to '1' if the mobile station  
13 is required to delete the TMSI assigned to the mobile station;  
14 otherwise, the base station shall set this field to '0'.

15 REDIRECT\_TYPE - Redirect indicator.

16 The base station shall set this field to the REDIRECT\_TYPE value  
17 shown in Table 3.7.2.3.2.16-1 corresponding to the redirection  
18 type.

19 The base station shall include one occurrence of the following record:

20 RECORD\_TYPE - Redirection record type.

21 The base station shall set this field to the RECORD\_TYPE value  
22 shown in Table 3.7.2.3.2.16-2 corresponding to the type of  
23 redirection specified by this record.

24 RECORD\_LEN - Redirection record length.

25 If RECORD\_TYPE equals to '00000000', the base station shall  
26 set this field to '00000000'; otherwise, the base station shall  
27 set this field to the number of octets in the type-specific fields  
28 of this redirection record.

1      Type-specific fields      -      Redirection record type-specific fields.

2                   The base station shall include type-specific fields based on  
3                   the RECORD TYPE of this redirection record.

4 If RECORD\_TYPE is equal to '00000000', the base station shall not include the type-  
5 specific fields.

6 If RECORD\_TYPE is equal to '00000010', the base station shall include the following fields:

Subfield	Length (bits)
BAND_CLASS	5
EXPECTED_SID	15
EXPECTED_NID	16
RESERVED	4
NUM_CHANS	4

NUM\_CHANS occurrences of the following field:

{ (NUM\_CHANS)

CDMA_CHAN	11
-----------	----

} (NUM\_CHANS)

RESERVED	0-7 (as needed)
----------	-----------------

8

**9**            **BAND\_CLASS**     -   Band class.

10 The base station shall set this field to the CDMA band class, as  
11 specified in [30].

**12**            **EXPECTED\_SID**        -    Expected SID.

13 If the base station is redirecting the mobile station to a  
14 specific system, the base station shall set this field to the SID  
15 of that system; otherwise, the base station shall set this field  
16 to 0.

17            EXPECTED\_NID       -    Expected NID.

18 If the base station is redirecting the mobile station to a  
19 specific network, the base station shall set this field to the  
20 NID of that network; otherwise, the base station shall set this  
21 field to 65535.

22 RESERVED - Reserved bits.

23 The base station shall set this field to '0000'.

24            NUM\_CHANS    -    Number of CDMA Channels.

25 The base station shall set this field to the number of  
26 occurrences of the CDMA CHAN field in this record.

1	CDMA_CHAN	-	CDMA Channel number.
2			For each CDMA Channel on which the mobile station is to
3			attempt to acquire a CDMA system, the base station shall
4			include one occurrence of this field specifying the associated
5			CDMA Channel number.
6	RESERVED	-	Reserved bits.
7			The base station shall add reserved bits as needed in order to
8			make the length of the entire record equal to an integer
9			number of octets. The base station shall set these bits to '0'.
10			

## 1 3.7.3.3.2.24 Supplemental Channel Assignment Message

2 MSG\_TAG: SCAM

3

Field	Length (bits)
USE_RETRY_DELAY	1
RETRY_DELAY	0 or 8
REV_INCLUDED	1

Include the following record only if REV\_INCLUDED is set to '1':

{

REV_DTX_DURATION	4
EXPL_REV_START_TIME	1
REV_START_TIME	0 or 6
USE_REV_DURATION	1
REV_DURATION	0 or 8
USE_REV_HDM_SEQ	1
REV_LINKED_HDM_SEQ	0 or 2
NUM_REV_CODES	3
USE_T_ADD_ABORT	1
USE_SCRM_SEQ_NUM	1
SCRM_SEQ_NUM	0 or 4
REV_PARMES_INCLUDED	1
T_MULCHAN	0 or 3
BEGIN_PREAMBLE	0 or 3
RESUME_PREAMBLE	0 or 3

}

FOR_INCLUDED	1
--------------	---

(continues on next page)

4

5

1

Field	Length (bits)
-------	---------------

Include the following record only if FOR\_INCLUDED is set to '1':

{

FOR_SUP_CONFIG	2
EXPL_FOR_START_TIME	0 or 1
FOR_START_TIME	0 or 6
USE_FOR_DURATION	1
FOR_DURATION	0 or 8
USE_FOR_HDM_SEQ	0 or 1
FOR_LINKED_HDM_SEQ	0 or 2

Include the following fields and records only if  
FOR\_INCLUDED is set to '1' and  
FOR\_SUP\_CONFIG is set to '10' or '11':

NUM_SUP_PILOTS	3
NUM_FOR_SUP	3

Include NUM\_SUP\_PILOTS occurrences of the following  
record only if FOR\_INCLUDED is set to '1' and  
FOR\_SUP\_CONFIG is set to '10' or '11':

{ (NUM\_SUP\_PILOTS)

PILOT_PN	9
EXPL_CODE_CHAN	1

If EXPL\_CODE\_CHAN is set to '1', for each PILOT\_PN  
include NUM\_FOR\_SUP occurrences of the following field:

{ (NUM\_FOR\_SUP)

SUP_CODE_CHAN	0 or 8
---------------	--------

} (NUM\_FOR\_SUP)

If EXPL\_CODE\_CHAN is set to '0', the following field is  
included:

BASE_CODE_CHAN	0 or 8
----------------	--------

} (NUM\_SUP\_PILOTS)

}

2

3      USE\_RETRY\_DELAY      -      Assign or Retry Indicator.

1		The base station shall set this field to '1' to indicate that this
2		message contains a retry delay time; otherwise, the base
3		station shall set this field to '0' to indicate that no
4		RETRY_DELAY has been included.
5	RETRY_DELAY	- <i>Supplemental Channel Request Message</i> retry delay.
6		If USE_RETRY_DELAY is set to '1', the base station shall
7		include and set this field to the duration of the delay interval
8		in units of 320 ms (4 frames) from the next 80 ms system
9		time boundary during which the mobile station is not
10		permitted to send a <i>Supplemental Channel Request Message</i> .
11		The base station shall set RETRY_DELAY to '11111111' to
12		indicate that the mobile station is to refrain from sending
13		<i>Supplemental Channel Request Messages</i> indefinitely.
14	REV_INCLUDED	- Reverse Supplemental Code Channel configuration indicator.
15		The base station shall set this field to '1' to indicate that this
16		message contains assignment information for Reverse
17		Supplemental Code Channels; otherwise, the base station
18		shall set this field to '0'.
19	If REV_INCLUDED is set to '1', then the base station shall include the following fields,	
20	otherwise the base station shall omit the following fields:	
21	REV_DTX_DURATION	- Reverse Discontinuous Transmission Duration.
22		The base station shall set this field to the maximum duration
23		of time in units of 20 ms that the mobile station is allowed to
24		stop transmission on a Reverse Supplemental Code Channel
25		within the reverse assignment duration. The base station
26		shall set this field to '0000' if the mobile station is to stop
27		using a Reverse Supplemental Code Channel once it has
28		stopped transmitting on that Reverse Supplemental Code
29		Channel. The base station shall set this field to '1111' if the
30		mobile station is allowed to resume transmission on a
31		Reverse Supplemental Code Channel at any time within the
32		reverse assignment duration.
33	EXPL_REV_START_TIME	- Explicit Reverse Supplemental Code Channel assignment
34		start time indicator.
35		This field indicates whether a start time for the specified
36		Reverse Supplemental Code Channel Assignment is specified
37		in this message. If a REV_START_TIME is specified in this
38		message, the base station shall set this field to '1'; otherwise,
39		the base station shall set this field to '0'. If
40		EXPL_REV_START_TIME is set to '1', then the base station
41		shall set USE_REV_HDM_SEQ to '0'.
42	REV_START_TIME	- Explicit start time for Reverse Supplemental Code Channel
43		assignment.

1			If EXPL_REV_START_TIME is included and set to '1', the base
2			station shall include and set this field to the System Time, in
3			units of 80 ms (modulo 64), at which the mobile station may
4			start transmitting on the specified number of Reverse
5			Supplemental Code Channels. If EXPL_REV_START_TIME is
6			omitted or set to '0', the base station shall omit this field.
7	USE_REV_DURATION	-	Use reverse duration indicator.
8			The base station shall set this field to '1' if the
9			REV_DURATION field is included in the message; otherwise,
10			the base station shall set this field to '0'. If the mobile station
11			is granted permission to transmit on Reverse Supplemental
12			Code Channels (i.e., NUM_REV_CODES is not '000') then a
13			value of '0' for this field indicates an infinite Reverse
14			Supplemental Code Channel assignment duration (i.e., the
15			mobile station may transmit on Reverse Supplemental Code
16			Channels until it receives a subsequent <i>Supplemental</i>
17			<i>Channel Assignment Message</i> or a <i>General Handoff Direction</i>
18			<i>Message</i> that specifies an updated REV_DURATION or an
19			updated value of NUM_REV_CODES).
20	REV_DURATION	-	Duration of Reverse Supplemental Code Channel assignment.
21			The base station shall include this field only if the
22			USE_REV_DURATION field is included and set to '1'. If this
23			field is included, this field indicates the allocated duration, in
24			units of 80 ms, during which the mobile station may transmit
25			on Reverse Supplemental Code Channels.
26	USE_REV_HDM_SEQ	-	Use Reverse <i>General Handoff Direction Message</i> sequence
27			number indicator.
28			The base station shall set this field to '1' to indicate that this
29			Reverse Supplemental Code Channel assignment shall take
30			effect at the same time as a corresponding <i>General Handoff</i>
31			<i>Direction Message</i> ; otherwise, the base station shall set this
32			field to '0'. If USE_REV_HDM_SEQ is set to '1', then the base
33			station shall set EXPL_REV_START_TIME to '0'.
34	REV_LINKED_HDM_SEQ	-	Sequence number of the reverse linked <i>General Handoff</i>
35			<i>Direction Message</i> .
36			If USE_REV_HDM_SEQ is included and set to '1', then the
37			base station shall set this field to the sequence number of the
38			<i>General Handoff Direction Message</i> (HDM_SEQ) to which this
39			Reverse Supplemental Code Channel assignment is linked.
40	NUM_REV_CODES	-	Number of Reverse Supplemental Code Channels.
41			The base station shall set this field to the number of Reverse
42			Supplemental Code Channels that are assigned to the mobile
43			station.
44	USE_T_ADD_ABORT	-	Reverse use T_ADD abort indicator.
45			The base station shall set this field to '1' to indicate that the
46			mobile station is to utilize the T_ADD Reverse Supplemental
47			Code Channel abort feature for this reverse assignment;
48			otherwise, the base station shall set this field to '0'.

1	USE_SCRM_SEQ_NUM	-	Use <i>Supplemental Channel Request Message</i> sequence number indicator.
2			
3			The base station shall set this field to '1' if the
4			SCRM_SEQ_NUM field is included in this message; otherwise,
5			the base station shall set this field to '0'.
6	SCRM_SEQ_NUM	-	<i>Supplemental Channel Request Message</i> sequence number.
7			If USE_SCRM_SEQ_NUM is set to '1', the base station shall
8			set this field to the sequence number corresponding to the
9			SCRM_SEQ_NUM field in a <i>Supplemental Channel Request</i>
10			<i>Message</i> to which the mobile station is to match this
11			message; otherwise, the base station shall omit this field.
12	REV_PARMS_INCLUDED	-	Reverse additional parameters included flag.
13			The base station shall set this field to '1' if the following three
14			fields (T_MULCHAN, BEGIN_PREAMBLE, and
15			RESUME_PREAMBLE) are included in this message;
16			otherwise, the base station shall set this field to '0'.
17	T_MULCHAN	-	<i>Supplemental Channel Request Message</i> pilot strength
18			reporting offset.
19			If REV_PARMS_INCLUDED is set to '1', the base station shall
20			include this field and set this field to the threshold offset that
21			the mobile station is to use when reporting neighbor pilot
22			strength measurements in a <i>Supplemental Channel Request</i>
23			<i>Message</i> . The mobile station is to interpret this field as an
24			offset to T_ADD ranging from 0.5 dB (corresponding to
25			T_MULCHAN = '000') to 4.0 dB (corresponding to
26			T_MULCHAN = '111') in 0.5 dB increments.
27	BEGIN_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
28			Channels at the beginning of transmission on Reverse
29			Supplemental Code Channel.
30			If REV_PARMS_INCLUDED is set to '1', the base station shall
31			include this field and set this field to the number of Reverse
32			Supplemental Code Channel preamble frames that the mobile
33			station is to send when beginning transmission on Reverse
34			Supplemental Code Channels.
35	RESUME_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
36			Channels at the resumption of transmission.
37			If REV_PARMS_INCLUDED is set to '1', the base station shall
38			include this field and set this field to the number of Reverse
39			Supplemental Code Channel preamble frames that the mobile
40			station is to send when resuming transmission on a Reverse
41			Supplemental Code Channel following an autonomous
42			suspension of transmission on an allocated Supplemental
43			Code Channel.
44	FOR_INCLUDED	-	Forward Supplemental Code Channel configuration indicator.

1		The base station shall set this field to '1' to indicate that this
2		message contains assignment information for Forward
3		Supplemental Code Channels; otherwise, the base station
4		shall set this field to '0'.
5		If FOR_INCLUDED is set to '1', then the base station shall
6		include the remaining fields in this message, otherwise the
7		base station shall omit all of the following except for
8		RESERVED.
9	FOR_SUP_CONFIG	- Forward Supplemental Code Channel configuration indicator.
10		The base station shall set this field to '00' to indicate that the
11		mobile station is to stop processing the Forward
12		Supplemental Code Channels at the implicit action time of
13		the message.
14		The base station shall set this field to '01' to indicate that the
15		mobile station is to start processing the Forward
16		Supplemental Code Channels in the Code Channel List at the
17		implicit, explicit, or linked start time specified by this
18		message (see 2.6.6.2.5.1).
19		The base station shall set this field to '10' if the Forward
20		Supplemental Code Channels are specified in the message
21		and the mobile station is to update its Code Channel List and
22		stop processing the Forward Supplemental Code Channels at
23		the implicit action time of the message.
24		The base station shall set this field to '11' if the Forward
25		Supplemental Code Channels are specified in the message
26		and the mobile station is to start processing the Forward
27		Supplemental Code Channels at the implicit, explicit, or
28		linked start time specified by this message (see 2.6.6.2.5.1).
29	EXPL_FOR_START_TIME	- Explicit forward start time indicator.
30		This field indicates whether an explicit Forward
31		Supplemental Code Channel start time is specified in this
32		message.
33		The base station shall include this field only if
34		FOR_SUP_CONFIG is set to '01' or '11'. If a FOR_START_TIME
35		is specified in this message, the base station shall set this
36		field to '1'; otherwise, the base station shall set this field to
37		'0'. If EXPL_FOR_START_TIME is set to '1', then the base
38		station shall set USE_FOR_HDM_SEQ to '0'.
39	The following field is included only if EXPL_FOR_START_TIME is included and set to '1':	
40	FOR_START_TIME	- Start time of the Forward Supplemental Code Channel
41		assignment.

1			The base station shall include this field only if
2			FOR_SUP_CONFIG is set to '01' or '11'. If the
3			EXPL_FOR_START_TIME field is set to '1', the base station
4			shall set this field to the System Time, in units of 80 ms
5			(modulo 64), at which the mobile station is to start
6			processing the Forward Supplemental Code Channels. If
7			EXPL_FOR_START_TIME is set to '0', the base station shall
8			omit this field.
9	USE_FOR_DURATION	-	Use forward duration indicator.
10			The base station shall set this field to '1' if FOR_DURATION is
11			included in the message; otherwise, the base station shall set
12			this field to '0'.
13			If FOR_SUP_CONFIG is set to '01' or '11', then the base
14			station may set this field to '0' to indicate that the mobile
15			station is to be assigned an infinite Forward Supplemental
16			Code Channel assignment duration (i.e., the mobile station is
17			to continue processing Forward Supplemental Code Channels
18			until it receives a subsequent <i>Supplemental Channel</i>
19			<i>Assignment Message</i> or a <i>General Handoff Direction Message</i>
20			that specifies an updated FOR_DURATION). Otherwise, the
21			base station may set this field to '1' to indicate that the
22			mobile station is to be given a Forward Supplemental Code
23			Channel assignment for the duration specified by the
24			FOR_DURATION field.
25			If FOR_SUP_CONFIG is set to '00' or '10', then the base
26			station shall set USE_FOR_DURATION to '0'.
27	FOR_DURATION	-	Duration of Forward Supplemental Code Channel
28			assignment.
29			The base station shall include this field only if
30			USE_FOR_DURATION is included and set to '1'. If this field is
31			included, this field indicates allocated duration, in units of 80
32			ms, during which the mobile station is to process the
33			Forward Supplemental Code Channels.
34	USE_FOR_HDM_SEQ	-	Use Forward <i>General Handoff Direction Message</i> sequence
35			number indicator.
36			This field indicates whether processing of the Forward
37			Supplemental Code Channels shall take effect at the same
38			time as a corresponding <i>General Handoff Direction Message</i> .
39			The base station shall include this field only if
40			FOR_SUP_CONFIG is equal to '01' or '11'. If this message is
41			linked with a <i>General Handoff Direction Message</i> , the base
42			station shall set this field to '1'; otherwise, the base station
43			shall set this field to '0'. If USE_FOR_HDM_SEQ is set to '1',
44			then the base station shall set EXPL_FOR_START_TIME to '0'.
45	FOR_LINKED_HDM_SEQ	-	Sequence number of the <i>General Handoff Direction Message</i> .

1			If the USE_FOR_HDM_SEQ field is included and set to '1', the
2			base station shall set this field to the sequence number of the
3			<i>General Handoff Direction Message</i> (HDM_SEQ) to which this
4			Forward Supplemental Code Channel assignment is linked;
5			otherwise, if USE_FOR_HDM_SEQ is not included or is set to
6			'0', then base station shall omit this field.
7	NUM_SUP_PILOTS	-	Number of pilots in the Active Set which have at least one
8			associated Supplemental Code Channel.
9			If FOR_SUP_CONFIG is included and is set to '10' or '11', the
10			base station shall include this field and shall set this field to
11			the number of pilots for which there is at least one associated
12			Supplemental Code Channel. This field shall not be included
13			if FOR_SUP_CONFIG is omitted or is set to '01' or '00'.
14	NUM_FOR_SUP	-	Number of Forward Supplemental Code Channels.
15			If FOR_SUP_CONFIG is included and is set to '10' or '11', the
16			base station shall include this field and shall set this field to
17			the number of Forward Supplemental Code Channels
18			assigned to the mobile station. NUM_FOR_SUP shall not
19			exceed the maximum number of Forward Supplemental Code
20			Channels for the negotiated multiplex option. This field shall
21			not be included if FOR_SUP_CONFIG is omitted or is set to
22			'01' or '00'.
23	If FOR_SUP_CONFIG is included and is set to '10' or '11', the base station shall include		
24	NUM_SUP_PILOTS occurrences of the following record, one for each pilot for which there is		
25	at least one associated Supplemental Code Channel:		
26	PILOT_PN	-	Pilot PN sequence offset index.
27			The base station shall set this field to the pilot PN sequence
28			offset for this pilot in units of 64 PN chips.
29	EXPL_CODE_CHAN	-	Explicit code channel indicator
30			The base station shall set this field to '1' to indicate explicit
31			assignment of each Forward Supplemental Code Channel.
32			The base station shall set this field to '0' if the mobile station
33			is to use NUM_FOR_SUP successive code channels beginning
34			with index BASE_CODE_CHAN (i.e., BASE_CODE_CHAN
35			through BASE_CODE_CHAN + NUM_FOR_SUP - 1). In both
36			cases (i.e., the explicit code channel list format and range
37			format), the order of the code channel indices is the same for
38			all the pilots specified in this message (i.e., the <i>i</i> <sup>th</sup> code
39			channel index in the list for each pilot PN sequence offset
40			indicates the appropriate code channel to be used for the <i>i</i> <sup>th</sup>
41			Forward Supplemental Code Channel).
42	If EXPL_CODE_CHAN is set to '1', then the base station shall include NUM_FOR_SUP		
43	occurrences of the following field, one for each pilot which has been included:		
44	SUP_CODE_CHAN	-	Supplemental Code Channel index.

1                   The base station shall set this field to the code channel index  
2                   (see [2]) in the range 1 to 63 inclusive of the Supplemental  
3                   Code Channel associated with this pilot.

4   If EXPL\_CODE\_CHAN is set to '0', then the base station shall include the following field:

5       BASE\_CODE\_CHAN    -   Base code channel index.

6                   If EXPL\_CODE\_CHAN is equal to '0', the base station shall  
7                   include this field and set it to the base code channel index  
8                   (see [2]) in the range of 1 to (63 - NUM\_FOR\_SUP + 1),  
9                   inclusive, that the mobile station is to use as the first  
10                  Forward Supplemental Code Channel associated with this  
11                  pilot. The mobile station is to use NUM\_FOR\_SUP successive  
12                  code channels beginning with index BASE\_CODE\_CHAN (i.e.,  
13                  BASE\_CODE\_CHAN through BASE\_CODE\_CHAN +  
14                  NUM\_FOR\_SUP - 1) for the Forward Supplemental Code  
15                  Channels associated with this pilot.

16                  The base station shall not include this field if  
17                  EXPL\_CODE\_CHAN is equal to '1' or if EXPL\_CODE\_CHAN is  
18                  not included.

19

## 1 3.7.3.3.2.25 Power Control Message

2 MSG\_TAG: PCNM

3

Field	Length (bits)
PWR_CNTL_STEP	3
USE_TIME	1
ACTION_TIME	0 or 6
FPC_INCL	1
FPC_MODE	0 or 3
FPC_PRI_CHAN	0 or 1
FPC_OLPC_FCH_INCL	0 or 1
FPC_FCH_FER	0 or 5
FPC_FCH_MIN_SETPT	0 or 8
FPC_FCH_MAX_SETPT	0 or 8
FPC_OLPC_DCCH_INCL	0 or 1
FPC_DCCH_FER	0 or 5
FPC_DCCH_MIN_SETPT	0 or 8
FPC_DCCH_MAX_SETPT	0 or 8
FPC_SEC_CHAN	0 or 1
NUM_SUP	0 or 2

Include NUM\_SUP occurrence of the following record:

{ (NUM\_SUP)

SCH_ID	1
FPC_SCH_FER	5
FPC_SCH_MIN_SETPT	8
FPC_SCH_MAX_SETPT	8

} (NUM\_SUP)

FPC_THRESH_INCL	0 or 1
-----------------	--------

(continues on next page)

4

5

1

Field	Length (bits)
FPC_SETPT_THRESH	0 or 8
FPC_THRESH_SCH_INCL	0 or 1
FPC_SETPT_THRESH_SCH	0 or 8
RPC_INCL	1
RPC_NUM_REC	0 or 2

If RPC INCL is set to '1', RPC\_NUM\_REC occurrences of the following record:

{ (RPC\_NUM\_REC)

RPC_ADJ_REC_TYPE	4
RPC_ADJ_REC_LEN	5
EXT_RPC_ADJ_REC_LEN	0 or 10
Type-specific fields	8× RPC_ADJ_REC_LEN, or 8 × EXT_RPC_ADJ_REC_LEN

} (RPC\_NUM\_REC)

REV_PDCH_PARMS_INCL	1
REV_PDCH_NUM_ARQ_ROUNDS_NORMAL	0 or 2
REV_PDCH_NUM_ARQ_ROUNDS_BOOST	0 or 2
FPC_BCMC_CHAN	0 or 1

2

3

PWR\_CNTL\_STEP - Power control step size

4

5

6

7

8

The base station shall set this field to the closed loop power control step size parameter shown in Table 3.7.3.3.2.25-1 corresponding to the power control step size that the mobile station is to use for closed loop power control.

**Table 3.7.3.3.2.25-1. Closed Loop Power Control  
Step Size**

<b>PWR_CNTL_STEP (binary)</b>	<b>Power Control Step Size (dB nominal)</b>
000	1
001	0.5
010	0.25
All other PWR_CNTL_STEP values are reserved.	

**USE\_TIME** - Use action time indicator.

This field indicates whether an ACTION\_TIME is specified in this message.

If an ACTION\_TIME is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**ACTION\_TIME** - Action time.

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE\_TIME field is set to '0', the base station shall omit this field.

**FPC\_INCL** - Forward Link Power Control parameter included indicator.

If the forward power control related information is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**FPC\_MODE** - Forward Power Control Operation Mode Indicator

If FPC\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set the value to the forward power control operation mode (see [2]).

**FPC\_PRI\_CHAN** - Power Control Subchannel indicator.

If FPC\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel. The base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

If only the Fundamental Channel is assigned, the base station shall set this field to '0'. If only the Dedicated Control Channel is assigned, the base station shall set this field to '1'.

If the F-CPCCH is assigned, the base station will multiplex the Power Control Subchannel on the F-CPCCH; otherwise:

If this field is set to '0', the base station will multiplex the Power Control Subchannel on the Forward Fundamental Channel; otherwise, the base station will multiplex the Power Control Subchannel on the Forward Dedicated Control Channel.

**FPC\_OLPC\_FCH\_INCL** - Fundamental Channel Outer Loop Power Control parameter included indicator.

If FPC\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:

If the forward link fundamental channel outer loop power control parameters are included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**FPC\_FCH\_FER** - Fundamental channel target Frame Error Rate.

If FPC\_OLPC\_FCH\_INCL is included and set to '1', the base station shall set this field to the target Frame Error Rate on the Forward Fundamental Channel, as specified in Table 3.7.3.3.2.25-2; otherwise, the base station shall omit this field.

**Table 3.7.3.3.2.25-2. Target Frame Error Rate**

<b>FER (Binary)</b>	<b>Frame Error Rate</b>
00000	0.2%
00001-10100	0.5% -10% (in units of 0.5%)
10101-11001	11% - 15% (in units of 1.0%)
11010-11110	18% - 30% (in units of 3.0%)
11111	Reserved

**FPC\_FCH\_MIN\_SETPT** - Minimum Fundamental Channel Outer Loop Eb/Nt setpoint

If FPC\_OLPC\_FCH\_INCL is included and set to '1', the base station shall set this field to minimum Fundamental Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB; otherwise, the base station shall omit this field.

The base station shall set this field to '11111111', when it directs the mobile station to set this Eb/Nt setpoint to the current setpoint used at the mobile station on this channel.

**FPC\_FCH\_MAX\_SETPT** - Maximum Fundamental Channel Outer Loop Eb/Nt setpoint

If FPC\_OLPC\_FCH\_INCL is included and set to '1', the base station shall set this field to maximum Fundamental Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB; otherwise, the base station shall omit this field.

1		The base station shall set this field to '11111111', when it
2		directs the mobile station to set this Eb/Nt setpoint to the
3		current setpoint used at the mobile station on this channel.
4	FPC_OLPC_DCCH_INCL -	Dedicated Control Channel Outer Loop Power Control
5		parameter included indicator.
6		If FPC_INCL is set to '0', the base station shall omit this field;
7		otherwise, the base station shall set this field as follows:
8		If the forward link Dedicated Control Channel outer loop
9		power control parameters are included in this message, the
10		base station shall set this field to '1'; otherwise, the base
11		station shall set this field to '0'.
12	FPC_DCCH_FER -	Dedicated Control Channel target Frame Error Rate.
13		If FPC_OLPC_DCCH_INCL is included and set to '1', the base
14		station shall set this field to the target Frame Error Rate on
15		the Forward Dedicated Control Channel, as specified in Table
16		3.7.3.3.2.25-2; otherwise, the base station shall omit this
17		field.
18	FPC_DCCH_MIN_SETPT -	Minimum Dedicated Control Channel Outer Loop Eb/Nt
19		setpoint.
20		If FPC_OLPC_DCCH_INCL is included and set to '1', the base
21		station shall set this field to minimum Dedicated Control
22		Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB;
23		otherwise, the base station shall omit this field.
24		The base station shall set this field to '11111111', when it
25		directs the mobile station to set this Eb/Nt setpoint to the
26		current setpoint used at the mobile station on this channel.
27	FPC_DCCH_MAX_SETPT -	Maximum Dedicated Control Channel Outer Loop Eb/Nt
28		setpoint.
29		If FPC_OLPC_DCCH_INCL is included and set to '1', the base
30		station shall set this field to maximum Dedicated Control
31		Channel Outer Loop Eb/Nt setpoint, in units of 0.125 dB;
32		otherwise, the base station shall omit this field.
33		The base station shall set this field to '11111111', when it
34		directs the mobile station to set this Eb/Nt setpoint to the
35		current setpoint used at the mobile station on this channel.
36	FPC_SEC_CHAN -	Master Supplemental channel index.
37		If FPC_INCL is set to '1' and FPC_MODE is set to '001', '010',
38		'101', or '110', the base station shall set this field to the
39		master Supplemental Channel index; otherwise, the base
40		station shall omit this field.
41	NUM_SUP -	Number of Supplemental Channels.
42		If FPC_INCL is set to '0', the base station shall omit this field;
43		otherwise, the base station shall set this field to the total
44		number of the Supplemental Channels.
45	The base station shall include NUM_SUP occurrences of the following record:	

1	SCH_ID	-	Supplemental channel index.
2			The base station shall set this field to the Supplemental
3			Channel index.
4	FPC_SCH_FER	-	Supplemental channel target Frame Error Rate.
5			The base station shall set this field to the target Frame Error
6			Rate on the Supplemental Channel, as specified in Table
7			3.7.3.3.2.25-2.
8	FPC_SCH_MIN_SETPT	-	Minimum Supplemental Channel outer loop Eb/Nt setpoint.
9			The base station shall set this field to minimum
10			Supplemental Channel Outer Loop Eb/Nt setpoint, in units
11			of 0.125 dB.
12			The base station shall set this field to '1111111', when it
13			directs the mobile station to set this Eb/Nt setpoint to the
14			current setpoint used at the mobile station on this channel.
15	FPC_SCH_MAX_SETPT	-	Maximum Supplemental Channel outer loop Eb/Nt setpoint.
16			The base station shall set this field to maximum
17			Supplemental Channel Outer Loop Eb/Nt setpoint, in units
18			of 0.125 dB.
19			The base station shall set this field to '1111111', when it
20			directs the mobile station to set this Eb/Nt setpoint to the
21			current setpoint used at the mobile station on this channel.
22	FPC_THRESH_INCL	-	Setpoint Report Threshold included indicator.
23			If FPC_INCL is set to '0', the base station shall omit this field;
24			otherwise, the base station shall set this field as follows:
25			If FPC_SETPT_THRESH is included in this message, the base
26			station shall set this field to '1'; otherwise, the base station
27			shall set this field to '0'.
28	FPC_SETPT_THRESH	-	Setpoint Report Threshold.
29			If FPC_THRESH_INCL is set to '1', the base station shall set
30			the value to FPC_SETPT_THRESH (in units of 0.125 dB)
31			above which the outer loop report message will be sent by the
32			mobile station; otherwise, the base station shall omit this
33			field.
34	FPC_THRESH_SCH_INCL	-	SCH Setpoint Report Threshold included indicator.
35			If FPC_INCL is set to '0', the base station shall omit this field;
36			otherwise, the base station shall set this field as follows:
37			If FPC_SETPT_THRESH_SCH is included in this message, the
38			base station shall set this field to '1'; otherwise, the base
39			station shall set this field to '0'.
40	FPC_SETPT_THRESH_SCH	-	SCH Setpoint Report Threshold.

1 If FPC\_THRESH\_SCH\_INCL is set to '1', the base station shall  
 2 set the value to FPC\_SETPT\_THRESH\_SCH (in units of 0.125  
 3 dB) above which the outer loop report message will be sent by  
 4 the mobile station; otherwise, the base station shall omit this  
 5 field.

6 **RPC\_INCL** - Reverse Link Power Control parameter included indicator.  
 7 If the reverse power control related information is included in  
 8 this message, the base station shall set this field to '1';  
 9 otherwise, the base station shall set this field to '0'.

10 **RPC\_NUM\_REC** - Number of records for Reverse Link Power Control.  
 11 If RPC\_INCL is set to '0', the base station shall omit this field;  
 12 otherwise, the base station shall set this field to one less than  
 13 the number of records included in this message.

14 If **RPC\_NUM\_REC** is included in this message, the base station shall include  
 15 **RPC\_NUM\_REC** occurrences of the following record:

16 **RPC\_ADJ\_REC\_TYPE** - Reverse Link Power Control adjustment record type.  
 17 The base station shall set this field to the value shown in  
 18 Table 3.7.3.3.2.25-3 corresponding to the type of adjustment  
 19 that is to be used.

20 **Table 3.7.3.3.2.25-3. RPC\_ADJ\_REC\_TYPE and**  
 21 **RPC\_ADJ\_REC\_LEN fields**

<b>Description</b>	<b>RPC_ADJ_REC_TYPE (binary)</b>	<b>RPC_ADJ_REC_LEN</b>
Reverse Channel Adjustment Gain	0000	2-7
Attribute Adjustment Gain for Basic Rates	0001	2-26
Attribute Adjustment Gain for Higher Rates	0010	2-31
Attribute Adjustment Gain for R-CQICH	0011	2-6
Attribute Adjustment Gain for R-PDCCH	0100	13-936
All other values are reserved.		

22  
 23 **RPC\_ADJ\_REC\_LEN** - Reverse Link Power Control adjustment record length.  
 24 If **RPC\_ADJ\_REC\_TYPE** is not equal to '0100', the base  
 25 station shall set this field to the number of octets in the type-  
 26 specific fields of this adjustment record as given in Table  
 27 3.7.3.3.2.25-3.

28 If **RPC\_ADJ\_REC\_TYPE** is equal to '0100', the base station  
 29 shall set this field to '0000'.

1	EXT_RPC_ADJ_REC_LEN-	Reverse Link Power Control adjustment record length.
2		If RPC_ADJ_REC_TYPE is not equal to '0100', the base
3		station shall omit this field; otherwise, the base station shall
4		include this field and set it as follows.
5		If RPC_ADJ_REC_TYPE is equal to '0100', the base station
6		shall set this field to the number of octets in the type-specific
7		fields of this adjustment record as given in Table
8		3.7.3.3.2.25-3.
9	Type-specific fields -	Reverse Link Power Control adjustment record type-specific
10		fields.
11		The base station shall include type-specific fields based on
12		the RPC_ADJ_REC_TYPE of this adjustment record, as
13		specified as below.
14		

1 If RPC\_ADJ\_REC\_TYPE is equal to '0000', the base station shall set type-specific fields as  
 2 specified in Table 3.7.3.3.2.25-4.

3 **Table 3.7.3.3.2.25-4. Type Specific Fields for**  
 4 **RECORD\_TYPE = '0000'**

Fields	Length (Bits)
FCH_INCL	1
FCH_CHAN_ADJ_GAIN	0 or 8
DCCH_INCL	1
DCCH_CHAN_ADJ_GAIN	0 or 8
SCH0_INCL	1
SCH0_CHAN_ADJ_GAIN	0 or 8
SCH1_INCL	1
SCH1_CHAN_ADJ_GAIN	0 or 8
REV_ACKCH_INCL	1
REV_ACKCH_CHAN_ADJ_GAIN	0 or 8
REV_CQICH_INCL	1
REV_CQICH_CHAN_ADJ_GAIN	0 or 8
RESERVED	0-7 (if needed)

5

6

7 FCH\_INCL - FCH channel adjustment gain included indicator.

8 If FCH\_CHAN\_ADJ\_GAIN is included in this message, the  
 9 base station shall set this field to '1'; otherwise, the base  
 10 station shall set this field to '0'.

11 FCH\_CHAN\_ADJ\_GAIN - Channel adjustment gain for Reverse Fundamental Channel.

12 If FCH\_INCL is set to '0', the base station shall omit this field;  
 13 otherwise, the base station shall set each field to the value of  
 14 the gain adjustment that the mobile station is to make for the  
 15 Reverse Fundamental Channel. The base station shall set  
 16 this field to the correction factor expressed as a two's  
 17 complement value in units of 0.125 dB. The base station  
 18 shall set the value in the range from -48 to 48 inclusive.

19 DCCH\_INCL - DCCH channel adjustment gain included indicator.

20 If DCCH\_CHAN\_ADJ\_GAIN is included in this message, the  
 21 base station shall set this field to '1'; otherwise, the base  
 22 station shall set this field to '0'.

23 DCCH\_CHAN\_ADJ\_GAIN - Channel adjustment gain for the Reverse Dedicated Control  
 24 Channel.

1			If DCCH_INCL is set to '0', the base station shall omit this
2			field; otherwise, the base station shall set each field to the
3			value of the gain adjustment that the mobile station is to
4			make for the Reverse Dedicated Control Channel. The base
5			station shall set this field to the correction factor expressed
6			as a two's complement value in units of 0.125 dB. The base
7			station shall set the value in the range from -48 to 48
8			inclusive.
9	SCH0_INCL	-	SCH0 channel adjustment gain included indicator.
10			If SCH0_CHAN_ADJ_GAIN is included in this message, the
11			base station shall set this field to '1'; otherwise, the base
12			station shall set this field to '0'.
13	SCH0_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse Supplemental Channel
14			0.
15			If SCH0_INCL is set to '0', the base station shall omit this
16			field; otherwise, the base station shall set each field to the
17			value of the gain adjustment that the mobile station is to
18			make for the Reverse Supplemental Channel 0. The base
19			station shall set this field to the correction factor expressed
20			as a two's complement value in units of 0.125 dB. The base
21			station shall set the value in the range from -48 to 48
22			inclusive.
23	SCH1_INCL	-	SCH1 channel adjustment gain included indicator.
24			If SCH1_CHAN_ADJ_GAIN is included in this message, the
25			base station shall set this field to '1'; otherwise, the base
26			station shall set this field to '0'.
27	SCH1_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse Supplemental Channel
28			1.
29			If SCH1_INCL is set to '0', the base station shall omit this
30			field; otherwise, the base station shall set each field to the
31			value of the gain adjustment that the mobile station is to
32			make for the Supplemental Channel 1. The base station shall
33			set this field to the correction factor expressed as a two's
34			complement value in units of 0.125 dB. The base station
35			shall set the value in the range from -48 to 48 inclusive.
36	REV_ACKCH_INCL	-	Reverse Acknowledgment Channel channel adjustment gain
37			included indicator.
38			If REV_ACKCH_CHAN_ADJ_GAIN is included in this message,
39			the base station shall set this field to '1'; otherwise, the base
40			station shall set this field to '0'.
41	REV_ACKCH_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse
42			Acknowledgment Channel.

1 If REV\_ACKCH\_INCL is set to '0', the base station shall omit  
2 this field; otherwise, the base station shall set each field to  
3 the value of the gain adjustment that the mobile station is to  
4 make for the Reverse Acknowledgment Channel. The base  
5 station shall set this field to the correction factor expressed  
6 as a two's complement value in units of 0.125 dB. The base  
7 station shall set the value in the range from -24 to 24  
8 inclusive.

9 REV\_CQICH\_INCL - Reverse Channel Quality Indicator Channel channel  
10 adjustment gain included indicator.

11 If REV\_CQICH\_CHAN\_ADJ\_GAIN is included in this message,  
12 the base station shall set this field to '1'; otherwise, the base  
13 station shall set this field to '0'.

14 REV\_CQICH\_CHAN\_ADJ\_GAIN - Channel adjustment gain for Reverse Channel Quality  
15 Indicator Channel.

16 If REV\_CQICH\_INCL is set to '0', the base station shall omit  
17 this field; otherwise, the base station shall set each field to  
18 the value of the gain adjustment that the mobile station is to  
19 make for the Reverse Channel Quality Indicator Channel.  
20 The base station shall set this field to the correction factor  
21 expressed as a two's complement value in units of 0.125 dB.  
22 The base station shall set the value in the range from -16 to  
23 16 inclusive.

24 RESERVED - Reserved bits.

25 The base station shall add reserved bits as needed in order to  
26 make the length of the entire record equal to an integer  
27 number of octets. The base station shall set these bits to '0'.

28 If RPC\_ADJ\_REC\_TYPE is equal to '0001', the base station shall set type-specific fields as  
29 specified in Table 3.7.3.3.2.25-5.

**Table 3.7.3.3.2.25-5. Type Specific Fields for  
RECORD\_TYPE = '0001'**

<b>Fields</b>	<b>Length (Bits)</b>
RL_ATT_ADJ_GAIN_TYPE	1

RESERVED	0-7 (if needed)
----------	-----------------

2

3 RL\_ATT\_ADJ\_GAIN\_TYPE - Reverse Link Attribute Adjustment Gain value type  
4 indicator.

5 If the following fields are set to the nominal attribute gain  
6 adjustment values that the mobile station is to use for the  
7 transmission attributes (relative to Nominal\_Attribute\_Gain  
8 specified in [2]), the base station shall set this field to '0'. If  
9 the following fields are set to the pilot reference level  
10 adjustment values that the mobile station is to use for the  
11 transmission attributes (relative to Pilot\_Reference\_Level  
12 specified in [2]), the base station shall set this field to '1'.

13 RC3\_RC5\_20MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
14 Configuration 3 or 5 of 20 ms frame included indicator.

15 If Reverse Link Attribute adjustment Gain for Radio  
16 Configuration 3 or 5 of 20 ms frame is included in this  
17 message, the base station shall set this field to '1'; otherwise,  
18 the base station shall set this field to '0'.

19 RL\_ATT\_ADJ\_GAIN\_1500- Reverse Link Attribute Adjustment Gain for the transmission  
20 rate 1500 bits/s.

21 If RC3\_RC5\_20MS\_INCL is set to '0', the base station shall  
22 omit this field.

23 If RC3\_RC5\_20MS\_INCL is set to '1' and  
24 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
25 set this field to the value of the nominal attribute gain  
26 adjustment that the mobile station is to make for the  
27 transmission attributes with transmission rate 1500 bits/s,  
28 convolutional code and 20ms frame. The base station shall  
29 set the value in the range from -48 to 48 inclusive.

30 If RC3\_RC5\_20MS\_INCL is set to '1' and  
31 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
32 set this field to the value of the pilot reference level  
33 adjustment that the mobile station is to make for the  
34 transmission attributes with transmission rate 1500 bits/s,  
35 convolutional code and 20ms frame.

1		The base station shall set this field to the correction factor
2		expressed as a two's complement value in units of 0.125 dB.
3	RL_ATT_ADJ_GAIN_2700-	Reverse Link Attribute Adjustment Gain for the transmission
4		rate 2700 bits/s.
5		If RC3_RC5_20MS_INCL is set to '0', the base station shall
6		omit this field.
7		If RC3_RC5_20MS_INCL is set to '1' and
8		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
9		set this field to the value of the nominal attribute gain
10		adjustment that the mobile station is to make for the
11		transmission attributes with transmission rate 2700 bits/s,
12		convolutional code and 20ms frame. The base station shall
13		set the value in the range from -48 to 48 inclusive.
14		If RC3_RC5_20MS_INCL is set to '1' and
15		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
16		set this field to the value of the pilot reference level
17		adjustment that the mobile station is to make for the
18		transmission attributes with transmission rate 2700 bits/s,
19		convolutional code and 20ms frame.
20		The base station shall set this field to the correction factor
21		expressed as a two's complement value in units of 0.125 dB.
22	RL_ATT_ADJ_GAIN_4800-	Reverse Link Attribute Gain Adjustment for the transmission
23		rate 4800 bits/s.
24		If RC3_RC5_20MS_INCL is set to '0', the base station shall
25		omit this field.
26		If RC3_RC5_20MS_INCL is set to '1' and
27		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
28		set this field to the value of the nominal attribute gain
29		adjustment that the mobile station is to make for the
30		transmission attributes with transmission rate 4800 bits/s,
31		convolutional code and 20ms frame. The base station shall
32		set the value in the range from -48 to 48 inclusive.
33		If RC3_RC5_20MS_INCL is set to '1' and
34		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
35		set this field to the value of the pilot reference level
36		adjustment that the mobile station is to make for the
37		transmission attributes with transmission rate 4800 bits/s,
38		convolutional code and 20ms frame.
39		The base station shall set this field to the correction factor
40		expressed as a two's complement value in units of 0.125 dB.
41	RL_ATT_ADJ_GAIN_9600-	Reverse Link Attribute Gain Adjustment for the transmission
42		rate 9600 bits/s.
43		If RC3_RC5_20MS_INCL is set to '0', the base station shall
44		omit this field.

1		If RC3_RC5_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 9600 bits/s,
6		convolutional code and 20ms frame. The base station shall
7		set the value in the range from -48 to 48 inclusive.
8		If RC3_RC5_20MS_INCL is set to '1' and
9		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10		set this field to the value of the pilot reference level
11		adjustment that the mobile station is to make for the
12		transmission attributes with transmission rate 9600 bits/s,
13		convolutional code and 20ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RC4_RC6_20MS_INCL -	Reverse Link Attribute Adjustment Gain for Radio
17		Configuration 4 or 6 of 20ms frame included indicator.
18		If Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 20ms frame is included in this
20		message, the base station shall set this field to '1'; otherwise,
21		the base station shall set this field to '0'.
22	RL_ATT_ADJ_GAIN_1800-	Reverse Link Attribute Gain Adjustment for the transmission
23		rate 1800 bits/s.
24		If RC4_RC6_20MS_INCL is set to '0', the base station shall
25		omit this field.
26		If RC4_RC6_20MS_INCL is set to '1' and
27		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
28		set this field to the value of the nominal attribute gain
29		adjustment that the mobile station is to make for the
30		transmission attributes with transmission rate 1800 bits/s,
31		convolutional code and 20ms frame. The base station shall
32		set the value in the range from -48 to 48 inclusive.
33		If RC4_RC6_20MS_INCL is set to '1' and
34		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
35		set this field to the value of the pilot reference level
36		adjustment that the mobile station is to make for the
37		transmission attributes with transmission rate 1800 bits/s,
38		convolutional code and 20ms frame.
39		The base station shall set this field to the correction factor
40		expressed as a two's complement value in units of 0.125 dB.
41	RL_ATT_ADJ_GAIN_3600-	Reverse Link Attribute Adjustment Gain for the transmission
42		rate 3600 bits/s.
43		If RC4_RC6_20MS_INCL is set to '0', the base station shall
44		omit this field.

1		If RC4_RC6_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 3600 bits/s,
6		convolutional code and 20ms frame. The base station shall
7		set the value in the range from -48 to 48 inclusive.
8		If RC4_RC6_20MS_INCL is set to '1' and
9		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10		set this field to the value of the pilot reference level
11		adjustment that the mobile station is to make for the
12		transmission attributes with transmission rate 3600 bits/s,
13		convolutional code and 20ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RL_ATT_ADJ_GAIN_7200-	Reverse Link Attribute Adjustment Gain for the transmission
17		rate 7200 bits/s.
18		If RC4_RC6_20MS_INCL is set to '0', the base station shall
19		omit this field.
20		If RC4_RC6_20MS_INCL is set to '1' and
21		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
22		set this field to the value of the nominal attribute gain
23		adjustment that the mobile station is to make for the
24		transmission attributes with transmission rate 7200 bits/s,
25		convolutional code and 20ms frame. The base station shall
26		set the value in the range from -48 to 48 inclusive.
27		If RC4_RC6_20MS_INCL is set to '1' and
28		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29		this field to the value of the pilot reference level adjustment
30		that the mobile station is to make for the transmission
31		attributes with transmission rate 7200 bits/s, convolutional
32		code and 20ms frame.
33		The base station shall set this field to the correction factor
34		expressed as a two's complement value in units of 0.125 dB.
35	RL_ATT_ADJ_GAIN_14400-	Reverse Link Attribute Adjustment Gain for the transmission
36		rate 14400 bits/s.
37		If RC4_RC6_20MS_INCL is set to '0', the base station shall
38		omit this field.
39		If RC4_RC6_20MS_INCL is set to '1' and
40		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41		set this field to the value of the nominal gain adjustment that
42		the mobile station is to make for the transmission attributes
43		with transmission rate 14400 bits/s, convolutional code and
44		20ms frame. The base station shall set the value in the range
45		from -48 to 48 inclusive.

1		If RC4_RC6_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3		set this field to the value of the pilot reference level
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 14400 bits/s,
6		convolutional code and 20ms frame.
7		The base station shall set this field to the correction factor
8		expressed as a two's complement value in units of 0.125 dB.
9	5MS_INCL	- 5ms frame Reverse Link Attribute Adjustment Gain included
10		indicator.
11		If Reverse Link Attribute Adjustment Gain for 5ms frame is
12		included in this message, the base station shall set this field
13		to '1'; otherwise, the base station shall set this field to '0'.
14	RL_ATT_ADJ_GAIN_9600_5MS	- Reverse Link Attribute Adjustment Gain for the
15		transmission rate 9600 bits/s with 5ms frame.
16		If 5MS_INCL is set to '0', the base station shall omit this field.
17		If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
18		to '0', the base station shall set this field to the value of the
19		nominal attribute gain adjustment that the mobile station is
20		to make for the transmission attributes with transmission
21		rate 9600 bits/s, convolutional code and 5ms frame. The
22		base station shall set the value in the range from -48 to 48
23		inclusive.
24		If 5MS_INCL is set to '1' and RL_ATT_ADJ_GAIN_TYPE is set
25		to '1', the base station shall set this field to the value of the
26		pilot reference level adjustment that the mobile station is to
27		make for the transmission attributes with transmission rate
28		9600 bits/s, convolutional code and 5ms frame.
29		The base station shall set this field to the correction factor
30		expressed as a two's complement value in units of 0.125 dB.
31	RC3_RC5_40MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
32		Configuration 3 or 5 of 40 ms frame included indicator.
33		If Reverse Link Attribute adjustment Gain for Radio
34		Configuration 3 or 5 of 40 ms frame is included in this
35		message, the base station shall set this field to '1'; otherwise,
36		the base station shall set this field to '0'.
37	RL_ATT_ADJ_GAIN_1350_40MS	- Reverse Link Attribute Adjustment Gain for the
38		transmission rate 1350 bits/s.
39		If RC3_RC5_40MS_INCL is set to '0', the base station shall
40		omit this field.
41		If RC3_RC5_40MS_INCL is set to '1' and
42		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
43		set this field to the value of the nominal attribute gain
44		adjustment that the mobile station is to make for the
45		transmission attributes with transmission rate 1350 bits/s,
46		convolutional code and 40ms frame. The base station shall
47		set the value in the range from -48 to 48 inclusive.

1 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 1350 bits/s,  
 6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_2400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 2400 bits/s.

11 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 2400 bits/s,  
 18 convolutional code and 40ms frame. The base station shall  
 19 set the value in the range from -48 to 48 inclusive.

20 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 2400 bits/s,  
 25 convolutional code and 40ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_4800\_40MS - Reverse Link Attribute Gain Adjustment for the  
 29 transmission rate 4800 bits/s.

30 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 4800 bits/s,  
 37 convolutional code and 40ms frame. The base station shall  
 38 set the value in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 4800 bits/s,  
 44 convolutional code and 40ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_9600\_40MS - Reverse Link Attribute Gain Adjustment for the  
 48 transmission rate 9600 bits/s.

1		If RC3_RC5_40MS_INCL is set to '0', the base station shall
2		omit this field.
3		If RC3_RC5_40MS_INCL is set to '1' and
4		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5		set this field to the value of the nominal attribute gain
6		adjustment that the mobile station is to make for the
7		transmission attributes with transmission rate 9600 bits/s,
8		convolutional code and 40ms frame. The base station shall
9		set the value in the range from -48 to 48 inclusive.
10		If RC3_RC5_40MS_INCL is set to '1' and
11		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12		set this field to the value of the pilot reference level
13		adjustment that the mobile station is to make for the
14		transmission attributes with transmission rate 9600 bits/s,
15		convolutional code and 40ms frame.
16		The base station shall set this field to the correction factor
17		expressed as a two's complement value in units of 0.125 dB.
18	RC4_RC6_40MS_INCL -	Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 40ms frame included indicator.
20		If Reverse Link Attribute Adjustment Gain for Radio
21		Configuration 4 or 6 of 40ms frame is included in this
22		message, the base station shall set this field to '1'; otherwise,
23		the base station shall set this field to '0'.
24	RL_ATT_ADJ_GAIN_1800_40MS -	Reverse Link Attribute Gain Adjustment for the
25		transmission rate 1800 bits/s.
26		If RC4_RC6_40MS_INCL is set to '0', the base station shall
27		omit this field.
28		If RC4_RC6_40MS_INCL is set to '1' and
29		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30		set this field to the value of the nominal attribute gain
31		adjustment that the mobile station is to make for the
32		transmission attributes with transmission rate 1800 bits/s,
33		convolutional code and 40ms frame. The base station shall
34		set the value in the range from -48 to 48 inclusive.
35		If RC4_RC6_40MS_INCL is set to '1' and
36		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
37		set this field to the value of the pilot reference level
38		adjustment that the mobile station is to make for the
39		transmission attributes with transmission rate 1800 bits/s,
40		convolutional code and 40ms frame.
41		The base station shall set this field to the correction factor
42		expressed as a two's complement value in units of 0.125 dB.
43	RL_ATT_ADJ_GAIN_3600_40MS -	Reverse Link Attribute Adjustment Gain for the
44		transmission rate 3600 bits/s.
45		If RC4_RC6_40MS_INCL is set to '0', the base station shall
46		omit this field.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 3 set this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 3600 bits/s,  
 6 convolutional code and 40ms frame. The base station shall  
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 9 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 10 set this field to the value of the pilot reference level  
 11 adjustment that the mobile station is to make for the  
 12 transmission attributes with transmission rate 3600 bits/s,  
 13 convolutional code and 40ms frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_7200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 7200 bits/s.

18 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 22 set this field to the value of the nominal attribute gain  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 7200 bits/s,  
 25 convolutional code and 40ms frame. The base station shall  
 26 set the value in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 28 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 29 this field to the value of the pilot reference level adjustment  
 30 that the mobile station is to make for the transmission  
 31 attributes with transmission rate 7200 bits/s, convolutional  
 32 code and 40ms frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_14400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 36 transmission rate 14400 bits/s.

37 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 38 omit this field.

39 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 41 set this field to the value of the nominal gain adjustment that  
 42 the mobile station is to make for the transmission attributes  
 43 with transmission rate 14400 bits/s, convolutional code and  
 44 40ms frame. The base station shall set the value in the range  
 45 from -48 to 48 inclusive.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 14400 bits/s,  
 6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RC3\_RC5\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 10 Configuration 3 or 5 of 80 ms frame included indicator.

11 If Reverse Link Attribute adjustment Gain for Radio  
 12 Configuration 3 or 5 of 80 ms frame is included in this  
 13 message, the base station shall set this field to '1'; otherwise,  
 14 the base station shall set this field to '0'.

15 RL\_ATT\_ADJ\_GAIN\_1200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 16 transmission rate 1200 bits/s.

17 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 18 omit this field.

19 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 20 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 21 set this field to the value of the nominal attribute gain  
 22 adjustment that the mobile station is to make for the  
 23 transmission attributes with transmission rate 1200 bits/s,  
 24 convolutional code and 80ms frame. The base station shall  
 25 set the value in the range from -48 to 48 inclusive.

26 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 27 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 28 set this field to the value of the pilot reference level  
 29 adjustment that the mobile station is to make for the  
 30 transmission attributes with transmission rate 1200 bits/s,  
 31 convolutional code and 80ms frame.

32 The base station shall set this field to the correction factor  
 33 expressed as a two's complement value in units of 0.125 dB.

34 RL\_ATT\_ADJ\_GAIN\_2400\_80MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 2400 bits/s.

36 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 2400 bits/s,  
 43 convolutional code and 80ms frame. The base station shall  
 44 set the value in the range from -48 to 48 inclusive.

1 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 2400 bits/s,  
 6 convolutional code and 80ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_4800\_80MS - Reverse Link Attribute Gain Adjustment for the  
 10 transmission rate 4800 bits/s.

11 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 4800 bits/s,  
 18 convolutional code and 80ms frame. The base station shall  
 19 set the value in the range from -48 to 48 inclusive.

20 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 4800 bits/s,  
 25 convolutional code and 80ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_9600\_80MS - Reverse Link Attribute Gain Adjustment for the  
 29 transmission rate 9600 bits/s.

30 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 9600 bits/s,  
 37 convolutional code and 80ms frame. The base station shall  
 38 set the value in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 9600 bits/s,  
 44 convolutional code and 80ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RC4\_RC6\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 48 Configuration 4 or 6 of 80ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio  
 2 Configuration 4 or 6 of 80ms frame is included in this  
 3 message, the base station shall set this field to '1'; otherwise,  
 4 the base station shall set this field to '0'.

5 RL\_ATT\_ADJ\_GAIN\_1800\_80MS - Reverse Link Attribute Gain Adjustment for the  
 6 transmission rate 1800 bits/s.

7 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 8 omit this field.

9 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 10 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 11 set this field to the value of the nominal attribute gain  
 12 adjustment that the mobile station is to make for the  
 13 transmission attributes with transmission rate 1800 bits/s,  
 14 convolutional code and 80ms frame. The base station shall  
 15 set the value in the range from -48 to 48 inclusive.

16 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 17 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 18 set this field to the value of the pilot reference level  
 19 adjustment that the mobile station is to make for the  
 20 transmission attributes with transmission rate 1800 bits/s,  
 21 convolutional code and 80ms frame.

22 The base station shall set this field to the correction factor  
 23 expressed as a two's complement value in units of 0.125 dB.

24 RL\_ATT\_ADJ\_GAIN\_3600\_80MS - Reverse Link Attribute Adjustment Gain for the  
 25 transmission rate 3600 bits/s.

26 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 27 omit this field.

28 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 29 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 30 set this field to the value of the nominal attribute gain  
 31 adjustment that the mobile station is to make for the  
 32 transmission attributes with transmission rate 3600 bits/s,  
 33 convolutional code and 80ms frame. The base station shall  
 34 set the value in the range from -48 to 48 inclusive.

35 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 36 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 37 set this field to the value of the pilot reference level  
 38 adjustment that the mobile station is to make for the  
 39 transmission attributes with transmission rate 3600 bits/s,  
 40 convolutional code and 80ms frame.

41 The base station shall set this field to the correction factor  
 42 expressed as a two's complement value in units of 0.125 dB.

43 RL\_ATT\_ADJ\_GAIN\_7200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 44 transmission rate 7200 bits/s.

45 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 46 omit this field.

1 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 3 set this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 7200 bits/s,  
 6 convolutional code and 80ms frame. The base station shall  
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 9 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 10 this field to the value of the pilot reference level adjustment  
 11 that the mobile station is to make for the transmission  
 12 attributes with transmission rate 7200 bits/s, convolutional  
 13 code and 80ms frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_14400\_80MS - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 14400 bits/s.

18 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 22 set this field to the value of the nominal gain adjustment that  
 23 the mobile station is to make for the transmission attributes  
 24 with transmission rate 14400 bits/s, convolutional code and  
 25 80ms frame. The base station shall set the value in the range  
 26 from -48 to 48 inclusive.

27 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 28 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 29 set this field to the value of the pilot reference level  
 30 adjustment that the mobile station is to make for the  
 31 transmission attributes with transmission rate 14400 bits/s,  
 32 convolutional code and 80ms frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RESERVED - Reserved bits.

36 The base station shall add reserved bits as needed in order to  
 37 make the length of the entire record equal to an integer  
 38 number of octets. The base station shall set these bits to '0'.

39 If RPC\_ADJ\_REC\_TYPE is equal to '0010', the base station shall set type-specific fields as  
 40 specified in Table 3.7.3.3.2.25-6.

**Table 3.7.3.3.2.25-6. Type Specific Fields for  
RECORD\_TYPE = '0010'**

3           CODE\_TYPE   -   Coding type indicator.

4                               If the following corresponding gain adjustment fields apply for  
5                               the convolutional code, the base station shall set this field to  
6                               '0'. If the following corresponding gain adjustment fields  
7                               apply for the Turbo code, the base station shall set this field  
8                               to '1'.

9   RL\_ATT\_ADJ\_GAIN\_TYPE   -   Reverse Link Attribute adjustment Gain value type  
10 indicator.

11                              If the following corresponding gain adjustment fields are set  
12                              to the value of the nominal attribute gain adjustment that the  
13                              mobile station is to make for the corresponding transmission  
14                              attributes (relative to Nominal\_Attribute\_Gain specified in  
15                              [2]), the base station shall set this field to '0'. If the following  
16                              corresponding gain adjustment fields are set to the value of  
17                              the pilot reference level adjustment that the mobile station is  
18                              to use for the corresponding transmission attributes (relative  
19                              to Pilot\_Reference\_Level specified in [2]), the base station  
20                              shall set this field to '1'.

21   RC3\_RC5\_20MS\_INCL   -   Reverse Link Attribute Adjustment Gain for Radio  
22                              Configuration 3 or 5 of 20ms frame included indicator.

23                              If Reverse Link Attribute Adjustment Gain for Radio  
24                              Configuration 3 or 5 of 20ms frame is included in this  
25                              message, the base station shall set this field to '1'; otherwise,  
26                              the base station shall set this field to '0'.

1	RL_ATT_ADJ_GAIN_19200	- Reverse Link Attribute Adjustment Gain for the
2		transmission rate 19200 bits/s.
3		If RC3_RC5_20MS_INCL is set to '0', the base station shall
4		omit this field.
5		If RC3_RC5_20MS_INCL is set to '1' and
6		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
7		set this field to the value of the nominal attribute gain
8		adjustment that the mobile station is to make for the
9		transmission attributes with transmission rate 19200 bits/s,
10		and 20ms frame. The base station shall set the value in the
11		range from -48 to 48 inclusive.
12		If RC3_RC5_20MS_INCL is set to '1' and
13		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
14		set this field to the value of the pilot reference level
15		adjustment that the mobile station is to make for the
16		transmission attributes with transmission rate 19200 bits/s
17		and 20ms frame.
18		The base station shall set this field to the correction factor
19		expressed as a two's complement value in units of 0.125 dB.
20	RL_ATT_ADJ_GAIN_38400	- Reverse Link Attribute Adjustment Gain for the
21		transmission rate 38400 bits/s.
22		If RC3_RC5_20MS_INCL is set to '0', the base station shall
23		omit this field.
24		If RC3_RC5_20MS_INCL is set to '1' and
25		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
26		set this field to the value of the nominal attribute gain
27		adjustment that the mobile station is to make for the
28		transmission attributes with transmission rate 38400 bits/s,
29		and 20ms frame. The base station shall set the value in the
30		range from -48 to 48 inclusive.
31		If RC3_RC5_20MS_INCL is set to '1' and
32		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
33		this field to the value of the pilot reference level adjustment
34		that the mobile station is to make for the transmission
35		attributes with transmission rate 38400 bits/s and 20ms
36		frame.
37		The base station shall set this field to the correction factor
38		expressed as a two's complement value in units of 0.125 dB.
39	RL_ATT_ADJ_GAIN_76800	- Reverse Link Attribute Adjustment Gain for the
40		transmission rate 76800 bits/s.
41		If RC3_RC5_20MS_INCL is set to '0', the base station shall
42		omit this field.

1		If RC3_RC5_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 76800 bits/s,
6		and 20ms frame. The base station shall set the value in the
7		range from -48 to 48 inclusive.
8		If RC3_RC5_20MS_INCL is set to '1' and
9		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10		set this field to the value of the pilot reference level
11		adjustment that the mobile station is to make for the
12		transmission attributes with transmission rate 76800 bits/s
13		and 20ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RL_ATT_ADJ_GAIN_153600	- Reverse Link Attribute Adjustment Gain for the
17		transmission rate 153600 bits/s.
18		If RC3_RC5_20MS_INCL is set to '0', the base station shall
19		omit this field.
20		If RC3_RC5_20MS_INCL is set to '1' and
21		NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
22		this field to the value of the nominal attribute gain
23		adjustment that the mobile station is to make for the
24		transmission attributes with transmission rate 153600
25		bits/s, and 20ms frame. The base station shall set the value
26		in the range from -48 to 48 inclusive.
27		If RC3_RC5_20MS_INCL is set to '1' and
28		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29		this field to the value of the pilot reference level adjustment
30		that the mobile station is to make for the transmission
31		attributes with transmission rate 153600 bits/s and 20ms
32		frame.
33		The base station shall set this field to the correction factor
34		expressed as a two's complement value in units of 0.125 dB.
35	RL_ATT_ADJ_GAIN_307200	- Reverse Link Attribute Adjustment Gain for the
36		transmission rate 307200 bits/s.
37		If RC3_RC5_20MS_INCL is set to '0', the base station shall
38		omit this field.
39		If RC3_RC5_20MS_INCL is set to '1' and
40		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41		set this field to the value of the nominal attribute gain
42		adjustment that the mobile station is to make for the
43		transmission attributes with transmission rate 307200
44		bits/s, and 20ms frame. The base station shall set the value
45		in the range from -48 to 48 inclusive.

1		If RC3_RC5_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3		set this field to the value of the pilot reference level
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 307200 bits/s
6		and 20ms frame.
7		The base station shall set this field to the correction factor
8		expressed as a two's complement value in units of 0.125 dB.
9	RL_ATT_ADJ_GAIN_614400	- Reverse Link Attribute Adjustment Gain for the
10		transmission rate 614400 bits/s.
11		If RC3_RC5_20MS_INCL is set to '0', the base station shall
12		omit this field.
13		If RC3_RC5_20MS_INCL is set to '1' and
14		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15		set this field to the value of the nominal attribute gain
16		adjustment that the mobile station is to make for the
17		transmission attributes with transmission rate 614400
18		bits/s, and 20ms frame. The base station shall set the value
19		in the range from -48 to 48 inclusive.
20		If RC3_RC5_20MS_INCL is set to '1' and
21		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22		set this field to the value of the pilot reference level
23		adjustment that the mobile station is to make for the
24		transmission attributes with transmission rate 614400 bits/s
25		and 20ms frame.
26		The base station shall set this field to the correction factor
27		expressed as a two's complement value in units of 0.125 dB.
28	RC4_RC6_20MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
29		Configuration 4 or 6 of 20ms frame included indicator.
30		If Reverse Link Attribute Adjustment Gain for Radio
31		Configuration 4 or 6 of 20ms frame is included in this
32		message, the base station shall set this field to '1'; otherwise,
33		the base station shall set this field to '0'.
34	RL_ATT_ADJ_GAIN_28800	- Reverse Link Attribute Adjustment Gain for the
35		transmission rate 28800 bits/s.
36		If RC4_RC6_20MS_INCL is set to '0', the base station shall
37		omit this field.
38		If RC4_RC6_20MS_INCL is set to '1' and
39		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
40		set this field to the value of the nominal attribute gain
41		adjustment that the mobile station is to make for the
42		transmission attributes with transmission rate 28800 bits/s,
43		and 20ms frame. The base station shall set the value in the
44		range from -48 to 48 inclusive.

1		If RC4_RC6_20MS_INCL is set to '1' and
2		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
3		this field to the value of the pilot reference level adjustment
4		that the mobile station is to make for the transmission
5		attributes with transmission rate 28800 bits/s and 20ms
6		frame.
7		The base station shall set this field to the correction factor
8		expressed as a two's complement value in units of 0.125 dB.
9	RL_ATT_ADJ_GAIN_57600	- Reverse Link Attribute Adjustment Gain for the
10		transmission rate 57600 bits/s.
11		If RC4_RC6_20MS_INCL is set to '0', the base station shall
12		omit this field.
13		If RC4_RC6_20MS_INCL is set to '1' and
14		NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
15		this field to the value of the nominal attribute gain
16		adjustment that the mobile station is to make for the
17		transmission attributes with transmission rate 57600 bits/s,
18		and 20ms frame. The base station shall set the value in the
19		range from -48 to 48 inclusive.
20		If RC4_RC6_20MS_INCL is set to '1' and
21		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
22		this field to the value of the pilot reference level adjustment
23		that the mobile station is to make for the transmission
24		attributes with transmission rate 57600 bits/s and 20ms
25		frame.
26		The base station shall set this field to the correction factor
27		expressed as a two's complement value in units of 0.125 dB.
28	RL_ATT_ADJ_GAIN_115200	- Reverse Link Attribute Adjustment Gain for the
29		transmission rate 115200 bits/s.
30		If RC4_RC6_20MS_INCL is set to '0', the base station shall
31		omit this field.
32		If RC4_RC6_20MS_INCL is set to '1' and
33		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34		set this field to the value of the nominal attribute gain
35		adjustment that the mobile station is to make for the
36		transmission attributes with transmission rate 115200
37		bits/s, and 20ms frame. The base station shall set the value
38		in the range from -48 to 48 inclusive.
39		If RC4_RC6_20MS_INCL is set to '1' and
40		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41		set this field to the value of the pilot reference level
42		adjustment that the mobile station is to make for the
43		transmission attributes with transmission rate 115200 bits/s
44		and 20ms frame.
45		The base station shall set this field to the correction factor
46		expressed as a two's complement value in units of 0.125 dB.
47	RL_ATT_ADJ_GAIN_230400	- Reverse Link Attribute Adjustment Gain for the
48		transmission rate 230400 bits/s.

1 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
2 omit this field.

3 If RC4\_RC6\_20MS\_INCL is set to '1' and  
4 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
5 set this field to the value of the nominal attribute gain  
6 adjustment that the mobile station is to make for the  
7 transmission attributes with transmission rate 230400  
8 bits/s, and 20ms frame. The base station shall set the value  
9 in the range from -48 to 48 inclusive.

10 If RC4\_RC6\_20MS\_INCL is set to '1' and  
11 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
12 set this field to the value of the pilot reference level  
13 adjustment that the mobile station is to make for the  
14 transmission attributes with transmission rate 230400 bits/s  
15 and 20ms frame.

16 The base station shall set this field to the correction factor  
17 expressed as a two's complement value in units of 0.125 dB.

18 RL\_ATT\_ADJ\_GAIN\_460800 - Reverse Link Attribute Adjustment Gain for the  
19 transmission rate 460800 bits/s.

20 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
21 omit this field.

22 If RC4\_RC6\_20MS\_INCL is set to '1' and  
23 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
24 set this field to the value of the nominal attribute gain  
25 adjustment that the mobile station is to make for the  
26 transmission attributes with transmission rate 460800  
27 bits/s, and 20ms frame. The base station shall set the value  
28 in the range from -48 to 48 inclusive.

29 If RC4\_RC6\_20MS\_INCL is set to '1' and  
30 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
31 set this field to the value of the pilot reference level  
32 adjustment that the mobile station is to make for the  
33 transmission attributes with transmission rate 460800 bits/s  
34 and 20ms frame.

35 The base station shall set this field to the correction factor  
36 expressed as a two's complement value in units of 0.125 dB.

37 RL\_ATT\_ADJ\_GAIN\_1036800- Reverse Link Attribute Adjustment Gain for the  
38 transmission rate 1036800 bits/s.

39 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
40 omit this field.

41 If RC4\_RC6\_20MS\_INCL is set to '1' and  
42 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
43 set this field to the value of the nominal attribute gain  
44 adjustment that the mobile station is to make for the  
45 transmission attributes with transmission rate 1036800  
46 bits/s, and 20ms frame. The base station shall set the value  
47 in the range from -48 to 48 inclusive.

1 If RC4\_RC6\_20MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 1306800  
 6 bits/s and 20ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RC3\_RC5\_40MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 10 Configuration 3 or 5 of 40ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio  
 12 Configuration 3 or 5 of 40ms frame is included in this  
 13 message, the base station shall set this field to '1'; otherwise,  
 14 the base station shall set this field to '0'.

15 RL\_ATT\_ADJ\_GAIN\_19200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 16 transmission rate 19200 bits/s.

17 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 18 omit this field.

19 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 20 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 21 set this field to the value of the nominal attribute gain  
 22 adjustment that the mobile station is to make for the  
 23 transmission attributes with transmission rate 19200 bits/s,  
 24 and 40ms frame. The base station shall set the value in the  
 25 range from -48 to 48 inclusive.

26 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 27 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 28 set this field to the value of the pilot reference level  
 29 adjustment that the mobile station is to make for the  
 30 transmission attributes with transmission rate 19200 bits/s  
 31 and 40ms frame.

32 The base station shall set this field to the correction factor  
 33 expressed as a two's complement value in units of 0.125 dB.

34 RL\_ATT\_ADJ\_GAIN\_38400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 38400 bits/s.

36 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 38400 bits/s,  
 43 and 40ms frame. The base station shall set the value in the  
 44 range from -48 to 48 inclusive.

1 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 2 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 3 this field to the value of the pilot reference level adjustment  
 4 that the mobile station is to make for the transmission  
 5 attributes with transmission rate 38400 bits/s and 40ms  
 6 frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_76800\_40MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 76800 bits/s.

11 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 76800 bits/s,  
 18 and 40ms frame. The base station shall set the value in the  
 19 range from -48 to 48 inclusive.

20 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 76800 bits/s  
 25 and 40ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_153600\_40MS - Reverse Link Attribute Adjustment Gain for the  
 29 transmission rate 153600 bits/s.

30 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 33 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
 34 this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 153600  
 37 bits/s, and 40ms frame. The base station shall set the value  
 38 in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 40 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 41 this field to the value of the pilot reference level adjustment  
 42 that the mobile station is to make for the transmission  
 43 attributes with transmission rate 153600 bits/s and 40ms  
 44 frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_307200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 48 transmission rate 307200 bits/s.

1		If RC3_RC5_40MS_INCL is set to '0', the base station shall
2		omit this field.
3		If RC3_RC5_40MS_INCL is set to '1' and
4		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5		set this field to the value of the nominal attribute gain
6		adjustment that the mobile station is to make for the
7		transmission attributes with transmission rate 307200
8		bits/s, and 40ms frame. The base station shall set the value
9		in the range from -48 to 48 inclusive.
10		If RC3_RC5_40MS_INCL is set to '1' and
11		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12		set this field to the value of the pilot reference level
13		adjustment that the mobile station is to make for the
14		transmission attributes with transmission rate 307200 bits/s
15		and 40ms frame.
16		The base station shall set this field to the correction factor
17		expressed as a two's complement value in units of 0.125 dB.
18	RC4_RC6_40MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 40ms frame included indicator.
20		If Reverse Link Attribute Adjustment Gain for Radio
21		Configuration 4 or 6 of 40ms frame is included in this
22		message, the base station shall set this field to '1'; otherwise,
23		the base station shall set this field to '0'.
24	RL_ATT_ADJ_GAIN_28800_40MS	- Reverse Link Attribute Adjustment Gain for the
25		transmission rate 28800 bits/s.
26		If RC4_RC6_40MS_INCL is set to '0', the base station shall
27		omit this field.
28		If RC4_RC6_40MS_INCL is set to '1' and
29		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30		set this field to the value of the nominal attribute gain
31		adjustment that the mobile station is to make for the
32		transmission attributes with transmission rate 28800 bits/s,
33		and 40ms frame. The base station shall set the value in the
34		range from -48 to 48 inclusive.
35		If RC4_RC6_40MS_INCL is set to '1' and
36		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37		this field to the value of the pilot reference level adjustment
38		that the mobile station is to make for the transmission
39		attributes with transmission rate 28800 bits/s and 40ms
40		frame.
41		The base station shall set this field to the correction factor
42		expressed as a two's complement value in units of 0.125 dB.
43	RL_ATT_ADJ_GAIN_57600_40MS	- Reverse Link Attribute Adjustment Gain for the
44		transmission rate 57600 bits/s.
45		If RC4_RC6_40MS_INCL is set to '0', the base station shall
46		omit this field.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
 3 this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 57600 bits/s,  
 6 and 40ms frame. The base station shall set the value in the  
 7 range from -48 to 48 inclusive.

8 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 9 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 10 this field to the value of the pilot reference level adjustment  
 11 that the mobile station is to make for the transmission  
 12 attributes with transmission rate 57600 bits/s and 40ms  
 13 frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_115200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 115200 bits/s.

18 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 22 set this field to the value of the nominal attribute gain  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 115200  
 25 bits/s, and 40ms frame. The base station shall set the value  
 26 in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 28 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 29 set this field to the value of the pilot reference level  
 30 adjustment that the mobile station is to make for the  
 31 transmission attributes with transmission rate 115200 bits/s  
 32 and 40ms frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_230400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 36 transmission rate 230400 bits/s.

37 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 38 omit this field.

39 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 41 set this field to the value of the nominal attribute gain  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 230400  
 44 bits/s, and 40ms frame. The base station shall set the value  
 45 in the range from -48 to 48 inclusive.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 230400 bits/s  
 6 and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_518400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 518400 bits/s.

11 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 518400  
 18 bits/s, and 40ms frame. The base station shall set the value  
 19 in the range from -48 to 48 inclusive.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 518400 bits/s  
 25 and 40ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RC3\_RC5\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 29 Configuration 3 or 5 of 80ms frame included indicator.

30 If Reverse Link Attribute Adjustment Gain for Radio  
 31 Configuration 3 or 5 of 80ms frame is included in this  
 32 message, the base station shall set this field to '1'; otherwise,  
 33 the base station shall set this field to '0'.

34 RL\_ATT\_ADJ\_GAIN\_19200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 19200 bits/s.

36 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 19200 bits/s,  
 43 and 80ms frame. The base station shall set the value in the  
 44 range from -48 to 48 inclusive.

1 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 19200 bits/s  
 6 and 80ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_38400\_80MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 38400 bits/s.

11 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 38400 bits/s,  
 18 and 80ms frame. The base station shall set the value in the  
 19 range from -48 to 48 inclusive.

20 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 21 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 22 this field to the value of the pilot reference level adjustment  
 23 that the mobile station is to make for the transmission  
 24 attributes with transmission rate 38400 bits/s and 80ms  
 25 frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_76800\_80MS - Reverse Link Attribute Adjustment Gain for the  
 29 transmission rate 76800 bits/s.

30 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 76800 bits/s,  
 37 and 80ms frame. The base station shall set the value in the  
 38 range from -48 to 48 inclusive.

39 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 76800 bits/s  
 44 and 80ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_153600\_80MS - Reverse Link Attribute Adjustment Gain for the  
 48 transmission rate 153600 bits/s.

1 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
2 omit this field.

3 If RC3\_RC5\_80MS\_INCL is set to '1' and  
4 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
5 set this field to the value of the nominal attribute gain  
6 adjustment that the mobile station is to make for the  
7 transmission attributes with transmission rate 153600  
8 bits/s, and 80ms frame. The base station shall set the value  
9 in the range from -48 to 48 inclusive.

10 If RC3\_RC5\_80MS\_INCL is set to '1' and  
11 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
12 set this field to the value of the pilot reference level  
13 adjustment that the mobile station is to make for the  
14 transmission attributes with transmission rate 153600 bits/s  
15 and 80ms frame.

16 The base station shall set this field to the correction factor  
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4\_RC6\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
19 Configuration 4 or 6 of 80ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio  
21 Configuration 4 or 6 of 80ms frame is included in this  
22 message, the base station shall set this field to '1'; otherwise,  
23 the base station shall set this field to '0'.

24 RL\_ATT\_ADJ\_GAIN\_28800\_80MS - Reverse Link Attribute Adjustment Gain for the  
25 transmission rate 28800 bits/s.

26 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
27 omit this field.

28 If RC4\_RC6\_80MS\_INCL is set to '1' and  
29 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
30 set this field to the value of the nominal attribute gain  
31 adjustment that the mobile station is to make for the  
32 transmission attributes with transmission rate 28800 bits/s,  
33 and 80ms frame. The base station shall set the value in the  
34 range from -48 to 48 inclusive.

35 If RC4\_RC6\_80MS\_INCL is set to '1' and  
36 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
37 this field to the value of the pilot reference level adjustment  
38 that the mobile station is to make for the transmission  
39 attributes with transmission rate 28800 bits/s and 80ms  
40 frame.

41 The base station shall set this field to the correction factor  
42 expressed as a two's complement value in units of 0.125 dB.

43 RL\_ATT\_ADJ\_GAIN\_57600\_80MS - Reverse Link Attribute Adjustment Gain for the  
44 transmission rate 57600 bits/s.

45 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
46 omit this field.

1 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 2 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
 3 this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 57600 bits/s,  
 6 and 80ms frame. The base station shall set the value in the  
 7 range from -48 to 48 inclusive.

8 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 9 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 10 this field to the value of the pilot reference level adjustment  
 11 that the mobile station is to make for the transmission  
 12 attributes with transmission rate 57600 bits/s and 80ms  
 13 frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_115200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 115200 bits/s.

18 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 22 set this field to the value of the nominal attribute gain  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 115200  
 25 bits/s, and 80ms frame. The base station shall set the value  
 26 in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 28 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 29 set this field to the value of the pilot reference level  
 30 adjustment that the mobile station is to make for the  
 31 transmission attributes with transmission rate 115200 bits/s  
 32 and 80ms frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_259200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 36 transmission rate 259200 bits/s.

37 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
 38 omit this field.

39 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 41 set this field to the value of the nominal attribute gain  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 259200  
 44 bits/s, and 80ms frame. The base station shall set the value  
 45 in the range from -48 to 48 inclusive.

If RC4\_RC6\_80MS\_INCL is set to '1' and RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall set this field to the value of the pilot reference level adjustment that the mobile station is to make for the transmission attributes with transmission rate 259200 bits/s and 80ms frame.

The base station shall set this field to the correction factor expressed as a two's complement value in units of 0.125 dB.

RESERVED - Reserved bits.

The base station shall add reserved bits as needed in order to make the length of the entire record equal to an integer number of octets. The base station shall set these bits to '0'.

If RPC\_ADJ\_REC\_TYPE is equal to '0011', the base station shall set type-specific fields as specified in Table 3.7.3.3.2.25-7.

**Table 3.7.3.3.2.25-7. Type Specific Fields for  
RECORD\_TYPE = '0011'**

Fields	Length (Bits)
RL_CQICH_ATT_ADJ_GAIN_TYPE	1
RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL	1
RL_CQICH_ATT_ADJ_GAIN_HIGH	0 or 8
RL_CQICH_ATT_ADJ_GAIN_LOW_INCL	1
RL_CQICH_ATT_ADJ_GAIN_LOW	0 or 8
RESERVED	0-7 (if needed)

RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE - Reverse Channel Quality Indicator Channel attribute adjustment gain value type indicator

If the following fields are set to the nominal attribute gain adjustment values that the mobile station is to use for the transmission attributes (relative to Nominal\_Attribute\_Gain specified in [2]), the base station shall set this field to '0'. If the following fields are set to the pilot reference level adjustment values that the mobile station is to use for the transmission attributes (relative to Pilot\_Reference\_Level specified in [2]), the base station shall set this field to '1'.

RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL - Reverse Channel Quality Indicator Channel attribute adjustment gain for the high power level included indicator.

If the attribute adjustment gain for the high power level of Reverse Channel Quality Indicator Channel transmission is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

1 RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH - Attribute adjustment gain for Reverse Channel  
 2 Quality Indicator Channel for the high Channel Quality  
 3 Indicator gain power level.

4 If RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL is set to '0', the  
 5 base station shall omit this field; otherwise, the base station  
 6 shall set this field as follows:

7 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base  
 8 station shall set this field to the value of the nominal  
 9 attribute gain adjustment that the mobile station is to make  
 10 for the transmission attributes for the high power level of R-  
 11 CQICH. The base station shall set the value in the range  
 12 from -40 to 16 inclusive.

13 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base  
 14 station shall set this field to the value of the pilot reference  
 15 level adjustment that the mobile station is to make for the  
 16 transmission attributes for the high power level of R-CQICH.

17 The base station shall set this field to the correction factor  
 18 expressed as a two's complement value in units of 0.125 dB.

19 RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW\_INCL - Reverse Channel Quality Indicator Channel  
 20 attribute adjustment gain for the low power level included  
 21 indicator.

22 If the attribute adjustment gain for the low power level of  
 23 Reverse Channel Quality Indicator Channel transmission is  
 24 included in this message, the base station shall set this field  
 25 to '1'; otherwise, the base station shall set this field to '0'.

26 RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW - Attribute adjustment gain for Reverse Channel  
 27 Quality Indicator Channel for the low Channel Quality  
 28 Indicator gain power level.

29 If RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW\_INCL is set to '0', the base  
 30 station shall omit this field; otherwise, the base station shall  
 31 set this field as follows:

32 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base  
 33 station shall set this field to the value of the nominal  
 34 attribute gain adjustment that the mobile station is to make  
 35 for the transmission attributes for the low power level of R-  
 36 CQICH. The base station shall set the value in the range  
 37 from -16 to 16 inclusive.

38 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base  
 39 station shall set this field to the value of the pilot reference  
 40 level adjustment that the mobile station is to make for the  
 41 transmission attributes for the low power level of R-CQICH.

42 The base station shall set this field to the correction factor  
 43 expressed as a two's complement value in units of 0.125 dB.

44 If RPC\_ADJ\_REC\_TYPE is equal to '0100', the base station shall set type-specific fields as  
 45 specified in Table 3.7.3.3.2.25-8.

**Table 3.7.3.3.2.25-8. Type Specific Fields for**

1

**RECORD\_TYPE = '0100'**

<b>Fields</b>	<b>Length (Bits)</b>

1

2 REV\_REQCH\_ADJ\_INCL - Reverse Request Channel Adjustment included field.

3 If the attribute adjustment gains for the Reverse Request  
4 Channel are included in this message, the base station shall  
5 set this field to '1'; otherwise, the base station shall set this  
6 field to '0'.

7 REV\_REQCH\_ADJ\_GAIN - Reverse Request Channel Adjustment Gain.

8 If REV\_REQCH\_ADJ\_INCL is set to '0', the base station shall  
9 omit this field; otherwise, the base station shall include this  
10 field, and set it as follows.

11 The base station shall set this field to the value of the  
12 nominal attribute gain adjustment that the mobile station is  
13 to make for the transmission attributes for the power level of  
14 R-REQCH. The base station shall set the value in the range  
15 from -24 to 40 inclusive.

16 The base station shall set this field to the correction factor  
17 expressed as a two's complement value in units of 0.125 dB.

18 REV\_SPICH\_ADJ\_INCL - Reverse Secondary Pilot Channel Adjustment included field.

19 If the attribute adjustment gains for the Reverse Secondary  
20 Pilot Channel are included in this message, the base station  
21 shall set this field to '1'; otherwise, the base station shall set  
22 this field to '0'.

1	REV_SPICH_ADJ_GAIN	-	Reverse Secondary Pilot Channel Adjustment Gain.
2			If REV_SPICH_ADJ_INCL is set to '0', the base station shall
3			omit this field; otherwise, the base station shall include this
4			field, and set it as follows.
5			The base station shall set this field to the value of the
6			nominal attribute gain adjustment that the mobile station is
7			to make for the transmission attributes for the power level of
8			R-SPICH. The base station shall set the value in the range
9			from -16 to 48 inclusive.
10			The base station shall set this field to the correction factor
11			expressed as a two's complement value in units of 0.125 dB.
12	REV_SPICH_EP_SIZE	-	Minimum Encoder Packet Size for which the Reverse
13			Secondary Pilot Channel is used.
14			If REV_SPICH_ADJ_INCL is set to '0', the base station shall
15			omit this field; otherwise, the base station shall include this
16			field, and set it as follows.
17			The base station shall set this field to the minimum encoder
18			packet size for which the Reverse Secondary Pilot Channel is
19			used (see [2] and [3]).
20			The base station shall set this field to a value in the range 0
21			to 10 inclusive, corresponding to the encoder packet sizes
22			192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384,
23			and 18456 bits respectively.
24	REV_PDCCH_ADJ_INCL	-	Reverse Packet Data Control Channel Adjustment included
25			field.
26			If the attribute adjustment gains for the Reverse Packet Data
27			Control Channel are included in this message, the base
28			station shall set this field to '1'; otherwise, the base station
29			shall set this field to '0'.
30	REV_PDCCH_ADJ_GAIN	-	Reverse Packet Data Control Channel Adjustment Gain.
31			If REV_PDCCH_ADJ_INCL is set to '0', the base station shall
32			omit this field; otherwise, the base station shall include this
33			field, and set it as follows.
34			The base station shall set this field to the value of the
35			nominal attribute gain adjustment that the mobile station is
36			to make for the transmission attributes for the power level of
37			R-PDCCH. The base station shall set the value in the range
38			from -32 to 32 inclusive.
39			The base station shall set this field to the correction factor
40			expressed as a two's complement value in units of 0.125 dB.
41	REV_PDCCH_ATTRIBUTE_ADJ_INCL	-	Reverse Packet Data Control Channel
42			Attribute Adjustment included field.

1 If the attribute adjustment gains for the Reverse Packet Data  
2 Control Channel are included per encoder packet size and per  
3 boost mode in this message, the base station shall set this  
4 field to '1'; otherwise, the base station shall set this field to  
5 '0'.

6 REV\_PDCCH\_EP\_SIZE\_NUM - Number of occurrences of Reverse Packet Data Control  
7 Channel Attribute Adjustment Gains.

8 If REV\_PDCCH\_ATTRIBUTE\_ADJ\_INCL is set to '0', the base  
9 station shall omit this field; otherwise, the base station shall  
10 include this field, and set it as follows.

11 The base station shall set this field to one less than half the  
12 number of occurrences of the field included hereafter. The  
13 records are listed per encoder packet size, in the following  
14 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,  
15 9240, 12312, 15384, 18456 bits.

16

17 If REV\_PDCCH\_ATTRIBUTE\_ADJ\_INCL is set to '1', the base station shall include  
18 REV\_PDCCH\_EP\_SIZE\_NUM+1 occurrences of the following record:

19 The base station shall include 2 occurrences of the following field. The first occurrence of  
20 this field is for the non-boosted mode, while the second is for the boosted mode.

21 REV\_PDCCH\_ATTRIBUTE\_ADJ\_GAIN - Reverse Packet Data Control Channel Attribute  
22 Adjustment Gain.

23 The base station shall set this field to the value of the  
24 nominal attribute gain adjustment that the mobile station is  
25 to make for the transmission attributes for the power level of  
26 R-PDCCH, for the i-th encoder packet size, and for the non-  
27 boosted and boosted modes.

28 The base station shall set the value in the range from -32 to  
29 32 inclusive.

30 The base station shall set this field to the correction factor  
31 expressed as a two's complement value in units of 0.125 dB.

32 REV\_PDCCH\_BOOST\_ADJ\_INCL- Reverse Packet Data Control Channel Boost  
33 Adjustment included field.

34 If the attribute adjustment gains for the Reverse Packet Data  
35 Control Channel per boosted mode are included in this  
36 message, the base station shall set this field to '1'; otherwise,  
37 the base station shall set this field to '0'.

38

39 If REV\_PDCCH\_BOOST\_ADJ\_INCL is set to '1', the base station shall include two  
40 occurrences of the following record:

41 REV\_PDCCH\_BOOST\_ADJ\_GAIN - Reverse Packet Data Control Channel Boost  
42 Adjustment Gains.

1		The base station shall set this field to the value of the
2		nominal attribute gain adjustment that the mobile station is
3		to make for the transmission attributes for the power level of
4		R-PDCCH, for the appropriate mode. The base station shall
5		set the value in the range from -32 to 32 inclusive.
6		The first occurrence of this field is for the non-boosted mode,
7		while the second is for the boosted mode. The base station
8		shall set this field to the correction factor expressed as a
9		two's complement value in units of 0.125 dB.
10	REV_PDCCH_PAYLOAD_ADJ_INCL -	Reverse Packet Data Control Channel Payload
11		Attribute Adjustment inclusion field.
12		If the attribute adjustment gains for the Reverse Packet Data
13		Control Channel are included per encoder packet size in this
14		message, the base station shall set this field to '1'; otherwise,
15		the base station shall set this field to '0'.
16	REV_PDCCH_EP_SIZE_NUM_1 -	Number of occurrences of Reverse Packet Data Control
17		Channel Payload Attribute Adjustment Gain records.
18		If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '0', the base
19		station shall omit this field; otherwise, the base station shall
20		include this field, and set it as follows.
21		The base station shall set this field to one less than the
22		number of occurrences of the field included hereafter. The
23		fields are listed per encoder packet size, in the following
24		ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,
25		9240, 12312, 15384, 18456 bits.
26		
27	If REV_PDCCH_PAYLOAD_ADJ_INCL is set to '1', the base station shall include	
28	(REV_PDCCH_EP_SIZE_NUM_1+1) × 2 occurrences of the following record:	
29	REV_PDCCH_PAYLOAD_ADJ_GAIN -	Reverse Packet Data Control Channel Payload
30		Attribute Adjustment Gain.
31		The base station shall set this field to the value of the
32		nominal attribute gain adjustment that the mobile station is
33		to make for the transmission attributes for the power level of
34		R-PDCCH, for the i-th encoder packet size, and for the non-
35		boosted and boosted modes. In each set for the i-th encoder
36		packet, the first occurrence of this field is for the non-boosted
37		mode, while the second is for the boosted mode.
38		The base station shall set the value in the range from -32 to
39		32 inclusive. The base station shall set this field to the
40		correction factor expressed as a two's complement value in
41		units of 0.125 dB.
42	REV_PDCH_ADJ_INCL -	Reverse Packet Data Channel Adjustment included field.
43		If the attribute adjustment gains for the Reverse Packet Data
44		Channel are included in this message, the base station shall
45		set this field to '1'; otherwise, the base station shall set this
46		field to '0'.

1    REV\_PDCH\_ADJ\_GAIN    -    Reverse Packet Data Channel Adjustment Gain.  
2                                If REV\_PDCH\_ADJ\_INCL is set to '0', the base station shall  
3                                omit this field; otherwise, the base station shall include this  
4                                field, and set it as follows.  
5                                The base station shall set this field to the value of the  
6                                nominal attribute gain adjustment that the mobile station is  
7                                to make for the transmission attributes for the power level of  
8                                R-PDCH. The base station shall set the value in the range  
9                                from -40 to 56 inclusive.  
10                               The base station shall set this field to the correction factor  
11                               expressed as a two's complement value in units of 0.125 dB.

12   REV\_PDCH\_PAYLOAD\_ADJ\_INCL    -    Reverse Packet Data Channel Adjustment included  
13                                field.  
14                                If the attribute adjustment gains for the Reverse Packet Data  
15                                Channel are included per encoder packet size in this  
16                                message, the base station shall set this field to '1'; otherwise,  
17                                the base station shall set this field to '0'.

18   REV\_PDCH\_EP\_SIZE\_NUM    -    Number of occurrences of Reverse Packet Data Channel  
19                                Payload Adjustment Gains.  
20                                If REV\_PDCH\_PAYLOAD\_ADJ\_INCL is set to '0', the base  
21                                station shall omit this field; otherwise, the base station shall  
22                                include this field, and set it as follows.  
23                                The base station shall set this field to one less than the  
24                                number of occurrences of the following field. The fields are  
25                                listed per encoder packet size, in the following ascending  
26                                order: 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312,  
27                                15384, 18456 bits

28   If REV\_PDCH\_PAYLOAD\_ADJ\_INCL is set to '1', the base station shall include  
29   REV\_PDCH\_EP\_SIZE\_NUM+1 occurrences of the following record:

30   REV\_PDCH\_PAYLOAD\_ADJ\_GAIN    -    Reverse Packet Data Channel Payload Adjustment  
31                                Gain.  
32                                The base station shall set this field to the value of the  
33                                nominal attribute gain adjustment that the mobile station is  
34                                to make for the transmission attributes for the power level of  
35                                R-PDCH, for the i-th encoder packet size. The base station  
36                                shall set the value in the range from -40 to 56 inclusive.  
37                                The base station shall set this field to the correction factor  
38                                expressed as a two's complement value in units of 0.125 dB.

39   REV\_PDCH\_BOOST\_ADJ\_INCL    -    Reverse Packet Data Channel Adjustment included  
40                                field.  
41                                If the attribute adjustment gains for the Reverse Packet Data  
42                                Channel are included per boosted mode in this message, the  
43                                base station shall set this field to '1'; otherwise, the base  
44                                station shall set this field to '0'.

45

1 If REV\_PDCH\_BOOST\_ADJ\_INCL is set to '1', the base station shall include two  
 2 occurrences of the following record. The first occurrence of this record is for the non-  
 3 boosted mode, while the second is for the boosted mode.

4 REV\_PDCH\_BOOST\_ADJ\_GAIN - Reverse Packet Data Channel Boost-dependent  
 5 Adjustment Gain.

6 The base station shall set this field to the value of the  
 7 nominal attribute gain adjustment that the mobile station is  
 8 to make for the transmission attributes for the power level of  
 9 R-PDCH. The base station shall set the value in the range  
 10 from -40 to 56 inclusive.

11 The first occurrence of this field is for the non-boosted mode,  
 12 while the second is for the boosted mode. The base station  
 13 shall set this field to the correction factor expressed as a  
 14 two's complement value in units of 0.125 dB.

15 REV\_PDCH\_SUBPACKET\_ADJ\_INCL - Reverse Packet Data Channel Subpacket  
 16 Adjustment included field.

17 If the attribute adjustment gains for the Reverse Packet Data  
 18 Channel are included per subpacket transmission round in  
 19 this message, the base station shall set this field to '1';  
 20 otherwise, the base station shall set this field to '0'.

21 REV\_PDCH\_RETRX\_NUM - Number of occurrences of the Reverse Packet Data  
 22 Channel Subpacket Adjustment Gains.

23 If REV\_PDCH\_SUBPACKET\_ADJ\_INCL is set to '0', the base  
 24 station shall omit this field; otherwise, the base station shall  
 25 include this field, and set it as follows.

26 The base station shall set this field to one less than the  
 27 number of occurrences of the following field.

28 If REV\_PDCH\_SUBPACKET\_ADJ\_INCL is set to '1', the base station shall include  
 29 (REV\_PDCH\_RETRX\_NUM+1) occurrences of the following record:

30 REV\_PDCH\_SUBPACKET\_ADJ\_GAIN - Reverse Packet Data Channel Subpacket  
 31 Adjustment Gain.

32 The base station shall set this field to the value of the  
 33 nominal attribute gain adjustment that the mobile station is  
 34 to make for the transmission attributes for the power level of  
 35 R-PDCH, on the i-th transmission round. The base station  
 36 shall set the value in the range from -40 to 56 inclusive.

37 The base station shall set this field to the correction factor  
 38 expressed as a two's complement value in units of 0.125 dB.

39 REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL - Reverse Packet Data Channel Attribute  
 40 Adjustment included field.

41 If the attribute adjustment gains for the Reverse Packet Data  
 42 Channel are included per encoder packet size and per  
 43 subpacket transmission round in this message, the base  
 44 station shall set this field to '1'; otherwise, the base station  
 45 shall set this field to '0'.

1 REV\_PDCH\_EP\_SIZE\_NUM\_1 - Number of occurrences of the Reverse Packet Data  
2 Channel Attribute Adjustment Gains record.

3 If REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL is set to '0', the base  
4 station shall omit this field; otherwise, the base station shall  
5 include this field, and set it as follows.

6 The base station shall set this field to one less than the  
7 number of occurrences of the following subrecord. The  
8 subrecords are listed per encoder packet size, in the following  
9 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,  
10 9240, 12312, 15384, 18456 bits.

11

12 If REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL is set to '1', the base station shall include  
13 (REV\_PDCH\_EP\_SIZE\_NUM\_1+1) occurrences of the following subrecord:

14 REV\_PDCH\_RETRX\_NUM\_1 - Number of occurrences of the Reverse Packet Data  
15 Channel Subpacket Adjustment Gains.

16 The base station shall set this field to one less than the  
17 number of occurrences of the Reverse Packet Data Channel  
18 Subpacket Adjustment Gains record.

19

20 The base station shall include (REV\_PDCH\_RETRX\_NUM\_1+1) occurrences of the following  
21 record:

22 The base station shall include 2 occurrences of the following field. The first occurrence of  
23 this field is for the non-boosted mode, while the second is for the boosted mode.

24 REV\_PDCH\_ATTRIBUTE\_ADJ\_GAIN - Reverse Packet Data Channel Attribute  
25 Adjustment Gain.

26 The base station shall set this field to the value of the  
27 nominal attribute gain adjustment that the mobile station is  
28 to make for the transmission attributes for the power level of  
29 R-PDCH, for the i-th encoder packet size on a j-th  
30 transmission round, using the non-boosted or boosted mode.

31 The base station shall set the value in the range from -40 to  
32 56 inclusive. The base station shall set this field to the  
33 correction factor expressed as a two's complement value in  
34 units of 0.125 dB.

35 REV\_PDCH\_PARMS\_INCL - Reverse Packet Data Channel related parameters included  
36 indicator.

37 The base station shall set this field to '1' if the R-PDCH  
38 parameters are included in this message; otherwise, the base  
39 station shall set this field to '0'.

40 REV\_PDCH\_NUM\_ARQ\_ROUNDS\_NORMAL - Maximum number of allowed ARQ rounds  
41 on the Reverse PDCH in the non-boosted mode.

42 If REV\_PDCH\_PARMS\_INCL is set to '0', the base station shall  
43 omit this field; otherwise, the base station shall include this  
44 field and set it as follows:

1		The base station shall set this field to one less the maximum
2		number of allowed ARQ rounds on the Reverse PDCH in the
3		non-boosted mode. The base station shall set this field to 0,
4		1, or 2 corresponding to 1, 2, or 3 rounds respectively (See
5		[3]).
6	REV_PDCH_NUM_ARQ_ROUNDS_BOOST	- Maximum number of allowed HARQ
7		retransmissions on the Reverse PDCH in the boosted mode.
8		If REV_PDCH_PARMS_INCL is set to '0', the base station shall
9		omit this field; otherwise, the base station shall include this
10		field and set it as follows:
11		The base station shall set this field to one less the maximum
12		number of allowed ARQ rounds on the Reverse PDCH in the
13		boosted mode. The base station shall set this field to 0, 1, or
14		2 corresponding to 1, 2, or 3 rounds respectively (See [3]).
15	FPC_BCMC_CHAN	- Channel used for secondary power control subchannel.
16		If FPC_INCL is set to '1' and FPC_MODE is set to '001', '010',
17		'101', or '110', the base station shall include this field and set
18		it as follows; otherwise, the base station shall omit this field.
19		If F-FCH is associated with secondary power control
20		subchannel, the base station shall set this field to '1';
21		otherwise, base station shall set this field to '0' to indicate
22		that FPC_SEC_CHAN points to the channel associated with
23		secondary power control subchannel.
24	RESERVED	- Reserved bits.
25		The base station shall add reserved bits as needed in order to
26		make the length of the entire record equal to an integer
27		number of octets. The base station shall set these bits to '0'.
28		

## 1 3.7.3.3.2.26 Extended Neighbor List Update Message

} (NUM\_NGHBR)

- 1
- 2           PILOT\_INC   -   Pilot PN sequence offset index increment.
- 3                           A mobile station searches for Remaining Set pilots at pilot PN
- 4                           sequence index values that are multiples of this value.
- 5                           The base station shall set this field to the pilot PN sequence
- 6                           increment, in units of 64 PN chips, that mobile stations are to
- 7                           use for searching the Remaining Set. The base station
- 8                           should set this field to the largest increment such that the
- 9                           pilot PN sequence offsets of all its neighbor base stations are
- 10                          integer multiples of that increment.
- 11                          The base station shall set this field to a value in the range 1
- 12                          to 15 inclusive.
- 13   NGHBR\_SRCH\_MODE   -   Search mode.
- 14                           The base station shall set this field to the value specified in
- 15                           Table 3.7.3.3.2.26-1 corresponding to the search mode.
- 16

**Table 3.7.3.3.2.26-1. NGHBR\_SRCH\_MODE Field**

<b>Value (binary)</b>	<b>Description</b>
00	No search priorities or search windows
01	Search priorities
10	Search windows
11	Search windows and search priorities

**SRCH\_WIN\_N** - Default search window size for the Neighbor Set.

The base station shall set this field to the value specified in Table 2.6.6.2.1-1 corresponding to the default search window size to be used by the mobile station for its Neighbor Set. The mobile station uses the default search window size for all pilots in its Neighbor Set when the search window is not specified for each pilot individually (NGHBR\_SRCH\_MODE is set to a value other than '10' and '11').

**USE\_TIMING** - Use timing indicator.

If base station timing information is included for neighbor base stations, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**GLOBAL\_TIMING\_INCL** - Global timing included.

If USE\_TIMING is set to '1', the base station shall include the field GLOBAL\_TIMING\_INCL and set this field as described below; otherwise, the base station shall omit this field.

If base station timing information is included globally for all neighbor base stations with TIMING\_INCL equal to '1', the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

**GLOBAL\_TX\_DURATION** - Global neighbor transmit time duration.

If GLOBAL\_TIMING\_INCL is included and is set to '1', the base station shall include the field GLOBAL\_TX\_DURATION and shall set this field as described below; otherwise, the base station shall omit this field.

The base station shall set this field to the duration of the base station transmit window, during each period, in units of 80 ms. The base station should set this field to a value of 3 or greater.

**GLOBAL\_TX\_PERIOD** - Global neighbor transmit time period.

If GLOBAL\_TIMING\_INCL is included and is set to '1', the base station shall include the field GLOBAL\_TX\_PERIOD and shall set this field as described below; otherwise, the base station shall omit this field.

1 The base station shall set this field to duration of the period,  
2 in units of 80 ms.

3 NUM\_NGHR - Number of neighbor pilot PN sequences.

4 The base station shall set this field to the number of  
5 neighbors included in the message.

6 The base station shall include one occurrence of the following record for each pilot that a  
7 mobile station is to place in its Neighbor Set

8 NGHR\_PN - Neighbor pilot PN sequence offset index.

9 The base station shall include one occurrence of this field for  
10 each pilot in its neighbor list. The base station shall set this  
11 field to the pilot's PN sequence offset, in units of 64 PN chips.

12 SEARCH\_PRIORITY - Pilot Channel search priority.

13 If NGHR\_SRCH\_MODE is set to '01' or '11', then the base  
14 station shall set this field to the search priority for this  
15 neighbor. The base station shall set the search priority as  
16 specified in Table 3.7.3.3.2.26-2. If NGHR\_SRCH\_MODE is  
17 set to any other value, the base station shall omit this field.  
18

19 **Table 3.7.3.3.2.26-2. SEARCH\_PRIORITY Field**

Value (binary)	Search Priority
00	Low
01	Medium
10	High
11	Very High

20

21 SRCH\_WIN\_NGHR - Neighbor pilot channel search window size.

22 If NGHR\_SRCH\_MODE is set to '10' or '11', then the base  
23 station shall set this field to the value specified in Table  
24 2.6.6.2.1-1 corresponding to the search window size to be  
25 used by the mobile stations for this neighbor. If  
26 NGHR\_SRCH\_MODE is set to any other value, the base  
27 station shall omit this field.

28 TIMING\_INCL - Timing included indicator.

29 If USE\_TIMING is set to '1', the base station shall include the  
30 field TIMING\_INCL and set this field as described below;  
31 otherwise, the base station shall omit this field.

32 If base station timing information is included for this  
33 neighbor base station, the base station shall set this field to  
34 '1'; otherwise, the base station shall set this field to '0'.

35 NGHR\_TX\_OFFSET - Neighbor transmit time offset.

- 1 If TIMING\_INCL is included and is set to '1', the base station  
 2 shall include the field NGHBR\_TX\_OFFSET and set this field  
 3 as described below; otherwise, the base station shall omit  
 4 this field.
- 5 The base station shall set this field to the time offset, in units  
 6 of 80 ms, from the beginning of the neighbor timing period to  
 7 the beginning of the first base station transmit window within  
 8 the period. The beginning of the neighbor timing period  
 9 occurs when  $\lfloor t/4 \rfloor \bmod (16384) = 0$ .
- 10 NGHBR\_TX\_DURATION - Neighbor transmit time duration.
- 11 If TIMING\_INCL is included and is set to '1' and  
 12 GLOBAL\_TIMING\_INCL is set to '0', the base station shall  
 13 include the field NGHBR\_TX\_DURATION and set this field as  
 14 described below; otherwise, the base station shall omit this  
 15 field.
- 16 The base station shall set this field to duration of the base  
 17 station transmit window, during each period, in units of  
 18 80 ms. The base station should set this field to a value of 3  
 19 or greater.
- 20 NGHBR\_TX\_PERIOD - Neighbor transmit time period.
- 21 If TIMING\_INCL is included and is set to '1' and  
 22 GLOBAL\_TIMING\_INCL is set to '0', the base station shall  
 23 include the field NGHBR\_TX\_PERIOD and set this field as  
 24 described below; otherwise, the base station shall omit this  
 25 field.
- 26 The base station shall set this field to duration of the period,  
 27 in units of 80 ms.
- 28 SRCH\_OFFSET\_INCL - Neighbor pilot channel search window offset included.
- 29 If NGHBR\_SRCH\_MODE = '10' or '11' and if the  
 30 SRCH\_OFFSET\_NGHBR field is included in the following  
 31 records, the base station shall set this bit to '1'; otherwise,  
 32 the base station shall set this bit to '0'.
- 33 The base station shall include one occurrence of the following record for each pilot that a  
 34 mobile station is to place in its Neighbor Set. The base station shall use the same order for  
 35 the following record as is used for previous pilots which are listed in this message.  
 36 Specifically, the  $i^{th}$  occurrence of the following record shall correspond the  $i^{th}$  pilot in this  
 37 message.
- 38 ADD\_PILOT\_REC\_INCL - Additional pilot information included indicator.
- 39 The base station shall set this field to '1' if additional pilot  
 40 information listed in NGHBR\_PILOT\_REC\_TYPE and  
 41 RECORD\_LEN fields are included. The base station shall set  
 42 this field to '0' if the corresponding pilot is the common pilot  
 43 and there is no additional pilot information included.
- 44 NGHBR\_PILOT\_REC\_TYPE - Neighbor Pilot record type

1 If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall  
 2 set this field to the NGHBR\_PILOT\_REC\_TYPE value shown in  
 3 Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record  
 4 specified by this record.

5 If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall  
 6 omit this field.

7 RECORD\_LEN - Pilot record length.

8 If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall  
 9 set this field to the number of octets in the type-specific fields  
 10 of this pilot record.

11 If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall  
 12 omit this field.

13 Type-specific fields - Pilot record type-specific fields.

14 If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall  
 15 include type-specific fields based on the  
 16 NGHBR\_PILOT\_REC\_TYPE of this pilot record.

17 If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall  
 18 omit this field.

19

20 If NGHBR\_PILOT\_REC\_TYPE is equal to '000', the base station shall include the following  
 21 fields:

22

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

23

24 TD\_POWER\_LEVEL - TD Transmit Power Level.

25 The base station shall set this field to the TD transmit power  
 26 level relative to that of the Forward Pilot Channel as specified  
 27 in Table 3.7.2.3.2.26-4.

28 TD\_MODE - Transmit Diversity mode.

29 The base station shall set this field to the Transmit Diversity  
 30 mode, as specified in Table 3.7.2.3.2.26-3.

31 RESERVED - Reserved bits.

32 The base station shall set this field to '0000'.

33 If NGHBR\_PILOT\_REC\_TYPE is equal to '001', the base station shall include the following  
 34 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

1

2

QOF - Quasi-orthogonal function index.

3

4

The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).

5

WALSH\_LENGTH - Length of the Walsh code.

6

7

8

9

The base station shall set this field to the WALSH\_LENGTH value shown in Table 3.7.2.3.2.22-6 corresponding to the length of the Walsh code for the pilot that is used in as the Auxiliary Pilot.

10

AUX\_PILOT\_WALSH - Walsh code for the Auxiliary Pilot.

11

12

The base station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.

13

RESERVED - Reserved bits.

14

15

The base station shall set all the bits of this field to '0' to make the entire record octet-aligned.

16

If NGHBR\_PILOT\_REC\_TYPE is equal to '010', the base station shall include the following fields:

17

18

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

19

20

21

QOF - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.

22

23

The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).

24

WALSH\_LENGTH - Length of the Walsh code.

- 1 The base station shall set this field to the WALSH\_LENGTH  
2 value shown in 3.7.2.3.2.22-6 corresponding to the length of  
3 the Walsh code for the pilots that are used as Auxiliary pilot  
4 in the transmit diversity mode.
- 5 AUX\_WALSH - Walsh code for the Auxiliary Pilot.
- 6 The base station shall set this field to the Walsh code  
7 corresponding to the Auxiliary Pilot.
- 8 AUX\_TD\_POWER\_LEVEL - Auxiliary Transmit Diversity Pilot power level.
- 9 The base station shall set this field to the Auxiliary Transmit  
10 Diversity Pilot transmit power level relative to that of the  
11 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.
- 12 TD\_MODE - Transmit Diversity mode.
- 13 The base station shall set this field to the Transmit Diversity  
14 mode, as specified in Table 3.7.2.3.2.26-3.
- 15 RESERVED - Reserved bits.
- 16 The base station shall set all the bits of this field to '0' to  
17 make the entire record octet-aligned.
- 18 If NGHBR\_PILOT\_REC\_TYPE is equal to '011', the base station shall include the following  
19 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- 20
- 21 SR3\_PRIMARY\_PILOT - Primary SR3 pilot.
- 22 The base station shall set this field to the value shown in  
23 Table 3.7.2.3.2.26-5 corresponding to the position of the  
24 primary SR3 pilot.
- 25 SR3\_PILOT\_POWER1 - The primary SR3 pilot power level relative to that of the pilot  
26 on the lower frequency of the two remaining SR3 frequencies.
- 27 The base station shall set this field to the value shown in  
28 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
29 primary pilot with respect to the pilot on the lower frequency  
30 of the two remaining SR3 frequencies.
- 31 SR3\_PILOT\_POWER2 - The primary SR3 pilot power level relative to that of the pilot  
32 on the higher frequency of the two remaining SR3  
33 frequencies.
- 34 The base station shall set this field to the value shown in  
35 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
36 primary pilot with respect to the pilot on the higher frequency  
37 of the two remaining SR3 frequencies.
- 38

- 1 If NGHBR\_PILOT\_REC\_TYPE is equal to '100', the base station shall include the following  
 2 fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

3

4 SR3\_PRIMARY\_PILOT– Primary SR3 pilot.

5 The base station shall set this field to the value shown in  
 6 Table 3.7.2.3.2.26-5 corresponding to the position of the  
 7 primary SR3 pilot.

8 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot  
 9 on the lower frequency of the two remaining SR3 frequencies.

10 The base station shall set this field to the value shown in  
 11 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 12 primary pilot with respect to the pilot on the lower frequency  
 13 of the two remaining SR3 frequencies.

14 SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot  
 15 on the higher frequency of the two remaining SR3  
 16 frequencies.

17 The base station shall set this field to the value shown in  
 18 Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 19 primary pilot with respect to the pilot on the higher frequency  
 20 of the two remaining SR3 frequencies.

21 QOF – Quasi-orthogonal function index.

1			The base station shall set this field to the index of the Quasi-
2			orthogonal function (see [2]) on the frequency of the primary
3			pilot.
4	WALSH_LENGTH	-	Length of the Walsh Code.
5			The base station shall set this field to the WALSH_LENGTH
6			value shown in Table 3.7.2.3.2.22-6 corresponding to the
7			length of the Walsh code for the pilot that is used as the
8			Auxiliary pilot on the frequency of the primary pilot.
9	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
10			The base station shall set this field to the Walsh code
11			corresponding to the Auxiliary pilot on the frequency of the
12			primary pilot.
13	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
14			frequency of the two remaining SR3 frequencies.
15			If the additional information for the pilot on the lower
16			frequencies of the two remaining SR3 frequencies is the same
17			as pilot on the primary frequency, the base station shall set
18			this field to '0'; otherwise, the base station shall set this field
19			to '1'.
20	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
21			frequency of the two remaining SR3 frequencies.
22			If ADD_INFO_INCL1 is set to '0', the base station shall omit
23			this field; otherwise, the base station shall set this field as
24			follows:
25			The base station shall set this field to the index of the Quasi-
26			orthogonal function (see [2]) on the lower frequency of the two
27			remaining SR3 frequencies.
28	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
29			of the two remaining SR3 frequencies.
30			If ADD_INFO_INCL1 is set to '0', the base station shall omit
31			this field; otherwise, the base station shall set this field as
32			follows:
33			The base station shall set this field to the WALSH_LENGTH
34			value shown in Table 3.7.2.3.2.22-6 corresponding to the
35			length of the Walsh code for the pilot that is used as the
36			Auxiliary pilot on the lower frequency of the two remaining
37			SR3 frequencies.
38	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
39			the two remaining SR3 frequencies.
40			If ADD_INFO_INCL1 is set to '0', the base station shall omit
41			this field; otherwise, the base station shall set this field as
42			follows:
43			The base station shall set this field to the Walsh code
44			corresponding to the Auxiliary pilot on the lower frequency of
45			the two remaining SR3 frequencies.

1	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
2			frequency of the two remaining SR3 frequencies.
3			If the additional information for the pilot on the higher
4			frequencies of the two remaining SR3 frequencies is the same
5			as pilot on the primary frequency, the base station shall set
6			this field to '0'; otherwise, the base station shall set this field
7			to '1'.
8	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
9			frequency of the two remaining SR3 frequencies.
10			If ADD_INFO_INCL2 is set to '0', the base station shall omit
11			this field; otherwise, the base station shall set this field as
12			follows:
13			The base station shall set this field to the index of the Quasi-
14			orthogonal function (see [2]) on the higher frequency of the
15			two remaining SR3 frequencies.
16	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher
17			frequency of the two remaining SR3 frequencies.
18			If ADD_INFO_INCL2 is set to '0', the base station shall omit
19			this field; otherwise, the base station shall set this field as
20			follows:
21			The base station shall set this field to the WALSH_LENGTH
22			value shown in Table 3.7.2.3.2.22-6 corresponding to the
23			length of the Walsh code for the pilot that is used as the
24			Auxiliary pilot on the higher frequency of the two remaining
25			SR3 frequencies.
26	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
27			the two remaining SR3 frequencies.
28			If ADD_INFO_INCL2 is set to '0', the base station shall omit
29			this field; otherwise, the base station shall set this field as
30			follows:
31			The base station shall set this field to the Walsh code
32			corresponding to the Auxiliary pilot on the higher frequency
33			of the two remaining SR3 frequencies.
34	RESERVED	-	Reserved bits.
35			The base station shall set all the bits of this field to '0' to
36			make the entire record octet-aligned.
37	SRCH_OFFSET_NGHR	-	Neighbor pilot channel search window offset.
38			If SRCH_OFFSET_INCL equals to '1', then the base station
39			shall set this field to the value shown in Table 2.6.6.2.1-2
40			corresponding to the search window offset to be used by the
41			mobile station for this neighbor; otherwise, the base station
42			shall omit this field.
43	RESQ_ENABLED	-	Call rescue feature enabled indicator.

1			The base station shall set this field to '1' if the call rescue
2			feature is enabled and there is at least one occurrence of
3			NGHBR_RESQ_CONFIGURED set to '1' in this message;
4			otherwise, the base station shall set this field to '0'.
5	RESQ_DELAY_TIME	-	Call rescue delay timer value.
6			If RESQ_ENABLED is set to '0', the base station shall omit
7			this field; otherwise, the base station shall include this field
8			and set it as follows:
9			The base station shall set this field to the value of the call
10			rescue delay timer to be used by the mobile station, in units
11			of 80 ms.
12	RESQ_ALLOWED_TIME	-	Call rescue allowed timer value.
13			If RESQ_ENABLED is set to '0', the base station shall omit
14			this field; otherwise, the base station shall include this field
15			and set it as follows:
16			The base station shall set this field to the value of the call
17			rescue allowed timer to be used by the mobile station, in
18			units of 80 ms.
19	RESQ_ATTEMPT_TIME	-	Call rescue attempt timer value.
20			If RESQ_ENABLED is set to '0', the base station shall omit
21			this field; otherwise, the base station shall include this field
22			and set it as follows:
23			The base station shall set this field to the value of the call
24			rescue attempt timer to be used by the mobile station, in
25			units of 40 ms.
26	RESQ_CODE_CHAN	-	Code channel index for the Rescue Channel.
27			If RESQ_ENABLED is set to '0', the base station shall omit
28			this field; otherwise, the base station shall include this field
29			and set it as follows:
30			The base station shall set this field to the code channel index
31			(see [2]) that the mobile station is to use on the Forward
32			Fundamental Channel when attempting Call Rescue Soft
33			Handoff with the associated neighbor pilot.
34			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
35			station shall set this field in the range 1 to 63 inclusive. If
36			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
37			station shall set this field in the range 1 to 127 inclusive. If
38			Radio Configuration 7 or 9 is used, the base station shall set
39			this field in the range 1 to 255 inclusive.
40	RESQ_QOF	-	Quasi-Orthogonal Function mask identifier for the Rescue
41			Channel.
42			If RESQ_ENABLED is set to '0', the base station shall omit
43			this field; otherwise, the base station shall include this field
44			and set it as follows:

1		The base station shall set this field to the quasi-orthogonal
2		function mask identifier (see [2]) that the mobile station is to
3		use on the Forward Fundamental Channel when attempting
4		Call Rescue Soft Handoff with the associated neighbor pilot.
5	RESQ_MIN_PERIOD_INCL	- Minimum time between consecutive rescues included
6		indicator.
7		If RESQ_ENABLED is set to '0', the base station shall omit
8		this field; otherwise, the base station shall include this field
9		and set it as follows:
10		The base station shall set this field to '1' if the
11		RESQ_MIN_PERIOD field is included in this message;
12		otherwise, the base station shall set this field to '0'.
13		This field is set to '0' if there is no minimum time restriction
14		between consecutive rescues.
15	RESQ_MIN_PERIOD	- Minimum time between consecutive rescues.
16		If RESQ_MIN_PERIOD_INCL is not included, or is included
17		and set to '0', the base station shall omit this field; otherwise,
18		the base station shall include this field and set it as follows:
19		The base station shall set this field to one less than the
20		minimum time after a successful call rescue (i.e. receipt of
21		N <sub>3m</sub> good frames by the mobile station after the rescue
22		attempt timer is enabled) before any subsequent call rescue
23		attempts can be initiated, in units of 2 seconds.
24	RESQ_NUM_TOT_TRANS_INCL	- The required number of transmissions before
25		declaring L2 Acknowledgment Failure when Call Rescue is
26		enabled included indicator.
27		If RESQ_ENABLED is set to '0', the base station shall omit
28		this field; otherwise, the base station shall include this field
29		and set it as follows:
30		If the required number of transmissions of a regular PDU and
31		mini PDU before declaring L2 Acknowledgment Failure when
32		Call Rescue is enabled is included in this message, the base
33		station shall set this field to '1'; otherwise, the base station
34		shall set this field to '0'.
35	RESQ_NUM_TOT_TRANS_20MS	- The required number of transmissions of a regular
36		PDU before declaring L2 Acknowledgment Failure when Call
37		Rescue is enabled.
38		If RESQ_NUM_TOT_TRANS_INCL field is not included or is
39		included and is set to '0', the base station shall omit this
40		field; otherwise, the base station shall include this field and
41		set it as follows:
42		The base station shall set this field to the required number of
43		transmissions of a regular PDU before declaring L2
44		Acknowledgment Failure when Call Rescue is enabled.
45		The base station shall not set this field to a value greater
46		than N <sub>1m</sub> .

1 RESQ\_NUM\_TOT\_TRANS\_5MS – The required number of transmissions of a mini PDU  
2 before declaring L2 Acknowledgment Failure when Call  
3 Rescue is enabled.

4 If RESQ\_NUM\_TOT\_TRANS\_INCL field is not included or is  
5 included and is set to '0', the base station shall omit this  
6 field; otherwise, the base station shall include this field and  
7 set it as follows:

8 The base station shall set this field to the required number of  
9 transmissions of a mini PDU before declaring L2  
10 Acknowledgment Failure when Call Rescue is enabled.

11 The base station shall not set this field to a value greater  
12 than  $N_{15m}$ .

13 RESQ\_NUM\_PREAMBLE – The Traffic Channel preamble Length for Call Rescue Soft  
14 Handoff.

15 If RESQ\_ENABLED is set to '0', the base station shall omit  
16 this field; otherwise, the base station shall include this field  
17 and set it to the length of Traffic Channel preamble that the  
18 mobile station is to send when performing a call rescue soft  
19 handoff, as follows:

20 If Radio configuration 1 or Radio configuration 2 is being  
21 used, the base station shall set this field to the Traffic  
22 Channel preamble length in 20 ms units; otherwise, the base  
23 station shall set this field to the value shown in Table  
24 3.7.3.3.2.17-1 corresponding to the Traffic Channel preamble  
25 length in 1.25 ms units.

26 RESQ\_POWER\_DELTA – The power level adjustment to be applied to the last closed-  
27 loop power level when re-enabling the transmitter for call  
28 rescue soft handoff.

29 If RESQ\_ENABLED is set to '0', the base station shall omit  
30 this field; otherwise, the base station shall set this field to a  
31 value by which mobile stations are to adjust the last closed-  
32 loop power level when re-enabling the transmitter for call  
33 rescue, expressed as a two's complement value in units of  
34 1 dB.

35 The base station shall include NUM\_NGHBR occurrences of the following one-field record  
36 if RESQ\_ENABLED is set to '1'. The base station shall use the same order for the following  
37 field as is used for the NGHBR\_PN fields listed in this message.

38 NGHBR\_RESQ\_CONFIGURED – Neighbor Rescue Channel configured indicator.

39 The base station shall set this field to '1' if a Rescue Channel  
40 is configured for this neighbor pilot; otherwise, the base  
41 station shall set this field to '0'.  
42

1 3.7.3.3.2.27 Candidate Frequency Search Request Message

2 MSG\_TAG: CFSRQM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
RESERVED_1	4
CFSRM_SEQ	2
SEARCH_TYPE	2
SEARCH_PERIOD	4
SEARCH_MODE	4
MODE_SPECIFIC_LEN	8
Mode-specific fields	8 × MODE_SPECIFIC_LEN
ALIGN_TIMING	1
SEARCH_OFFSET	0 or 6

4

5 USE\_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is  
7 specified in this message.

8 If an explicit action time is specified in this message, the base  
9 station shall set this field to '1'; otherwise, the base station  
10 shall set this field to '0'.

11 If the base station requests the mobile station to perform an  
12 aligned search (see 2.6.6.2.8.3), the base station shall specify  
13 an explicit action time for the message.

14 ACTION\_TIME - Action time.

15 If the USE\_TIME field is set to '1', the base station shall set  
16 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
17 ms, in units of 80 ms (modulo 64), at which the message is to  
18 take effect. If the USE\_TIME field is set to '0', the base station  
19 shall set this field to '000000'.

20 RESERVED\_1 - Reserved bits.

21 The base station shall set this field to '0000'.

22 CFSRM\_SEQ - *Candidate Frequency Search Request Message* sequence  
23 number.

The base station shall set this field to the *Candidate Frequency Search Request Message* sequence number, as specified in 2.6.6.2.2.3.

**SEARCH\_TYPE** - Search command.

The base station shall set this field to the appropriate **SEARCH\_TYPE** code from Table 3.7.3.3.2.27-1 to indicate the purpose of the message.

**Table 3.7.3.3.2.27-1. SEARCH\_TYPE Codes**

<b>SEARCH_TYPE (binary)</b>	<b>Meaning</b>
00	Directs the mobile station to stop any periodic search in progress (see 2.6.6.2.8.3.4 and 2.6.6.2.10.4)
01	Directs the mobile station to perform a single search (see 2.6.6.2.8.3.1 and 2.6.6.2.10.1).
11	Directs the mobile station to perform a periodic search (see 2.6.6.2.8.3.2 and 2.6.6.2.10.2).
10	Reserved.

**SEARCH\_PERIOD** - Time between successive searches on the Candidate Frequency for periodic searches.

The base station shall set this field to the **SEARCH\_PERIOD** value shown in Table 2.6.6.2.8.3.2-1 corresponding to the search period to be used by the mobile station, i.e., the time between the beginning of successive searches on the Candidate Frequency.

**SEARCH\_MODE** - Search mode.

The base station shall set this field to the **SEARCH\_MODE** value specified in Table 3.7.3.3.2.27-2 corresponding to the type of search specified by this message.

1

**Table 3.7.3.3.2.27-2. SEARCH\_MODE Types**

<b>SEARCH_MODE (binary)</b>	<b>Description</b>
0000	Searches for CDMA pilots on a Candidate Frequency.
0001	Reserved (Previously: Searches for analog channels)
0010	Searches for Direct Spread (DS) neighbor cell (see [32]).
0011-1111	Reserved

2

3    **MODE\_SPECIFIC\_LEN**    -    Length of mode-specific fields.4                                    The base station shall set this field to the number of octets in  
5                                    the mode-specific fields of this message.6        **Mode-specific fields**    -    Search mode-specific fields.7                                    The base station shall include mode-specific fields based on  
8                                    the SEARCH\_MODE field.

9    If SEARCH\_MODE is equal to '0000', the base station shall include the following fields:

10

Field	Length (bits)
BAND_CLASS	5
CDMA_FREQ	11
SF_TOTAL_EC_THRESH	5
SF_TOTAL_EC_I0_THRESH	5
DIFF_RX_PWR_THRESH	5
MIN_TOTAL_PILOT_EC_I0	5
CF_T_ADD	6
TF_WAIT_TIME	4
CF_PILOT_INC	4
CF_SRCH_WIN_N	4
CF_SRCH_WIN_R	4
RESERVED_2	5
PILOT_UPDATE	1
NUM_PILOTS	0 or 6
CF_NGHR_SRCH_MODE	0 or 2

NUM\_PILOTS occurrences of the following record:

{ (0 or NUM\_PILOTS)

NGHR_PN	9
SEARCH_SET	1
SEARCH_PRIORITY	0 or 2
SRCH_WIN_NGHR	0 or 4

} (0 or NUM\_PILOTS)

NUM\_PILOTS occurrences of the following record:

CF_SRCH_OFFSET_INCL	1
---------------------	---

(continues on next page)

1

Field	Length (bits)
NUM_PILOTS occurrences of the following record: { (0 or NUM_PILOTS)	
ADD_PILOT_REC_INCL	1
NGHBR_PILOT_REC_TYPE	0 or 3
RECORD_LEN	0 or 3
Type-specific fields	0 or $8 \times \text{RECORD\_LEN}$
SRCH_OFFSET_NGHBR	0 or 3
} (0 or NUM_PILOTS)	
RESERVED_3	0 - 7 (as needed)

2

3 BAND\_CLASS - Band class.

4 The base station shall set this field to the CDMA band class  
5 of the Candidate Frequency.

6 CDMA\_FREQ - Frequency assignment.

7 The base station shall set this field to the CDMA frequency  
8 assignment for the Candidate Frequency.9 SF\_TOTAL\_EC\_THRESH - Serving Frequency total pilot  $E_c$  threshold.10 If the mobile station is not to use the measurement of total  $E_c$   
11 of the pilots in the Serving Frequency Active Set in the  
12 Candidate Frequency periodic search procedure, the base  
13 station shall set this field to '11111'; otherwise, the base  
14 station shall set this field to

15 
$$\lceil (10 \times \log_{10}(\text{total\_ec\_thresh}) + 120) / 2 \rceil$$

16 where *total\_ec\_thresh* is defined by the following rule: The  
17 mobile station is not to visit the CDMA Candidate Frequency  
18 to search for pilots if the total  $E_c$  of the pilots in the Serving  
19 Frequency Active Set is greater than *total\_ec\_thresh*.20 SF\_TOTAL\_EC\_I0\_THRESH - Serving Frequency total pilot  $E_c/I_0$  threshold.21 If the mobile station is not to use the measurement of total  
22  $E_c/I_0$  of the pilots in the Serving Frequency Active Set in the  
23 Candidate Frequency periodic search procedure, the base  
24 station shall set this field to '11111'; otherwise, the base  
25 station shall set this field to

26 
$$\lfloor -20 \times \log_{10}(\text{total\_ec\_i0\_thresh}) \rfloor$$

1 where *total\_ec\_i0\_thresh* is defined by the following rule: The  
2 mobile station is not to visit the CDMA Candidate Frequency  
3 to search for pilots if the total  $E_c/I_0$  of the pilots in the  
4 Serving Frequency Active Set is greater than  
5 *total\_ec\_i0\_thresh*.

6 DIFF\_RX\_PWR\_THRESH - Minimum difference in received power.  
7 If this message is used for the Candidate Frequency single or  
8 periodic search procedure:  
9 If the mobile station is to search for pilots on the CDMA  
10 Candidate Frequency irrespective of the received power on  
11 the Candidate Frequency, the base station shall set this  
12 field to '00000'; otherwise, the base station shall set this  
13 field to  
14  $\lceil (minimum\_power\_diff + 30) / 2 \rceil$   
15 where *minimum\_power\_diff* is determined by the following  
16 rule: The mobile station is not to search for pilots on the  
17 CDMA Candidate Frequency if (*cand\_freq\_pwr* -  
18 *serving\_freq\_pwr*) is less than *minimum\_power\_diff* (in  
19 dB), where *cand\_freq\_pwr* is the received power on the  
20 CDMA Candidate Frequency, in dBm / 1.23 MHz, and  
21 *serving\_freq\_pwr* is the received power on the Serving  
22 Frequency, in dBm / 1.23 MHz.

23 If this message is used for the Hard Handoff with Return on  
24 Failure procedure:  
25 If the mobile station is to continue hard handoff  
26 procedures irrespective of the received power on the  
27 Target Frequency, the base station shall set this field to  
28 '00000'; otherwise, the base station shall set this field to  
29  $\lceil (minimum\_power\_diff + 30) / 2 \rceil$   
30 where *minimum\_power\_diff* is determined by the following  
31 rule: The mobile station is to declare the handoff attempt  
32 to be unsuccessful if (*target\_freq\_pwr* - *serving\_freq\_pwr*)  
33 is less than *minimum\_power\_diff* (in dB), where  
34 *target\_freq\_pwr* is the received power on the CDMA Target  
35 Frequency, in dBm / 1.23 MHz, and *serving\_freq\_pwr* is  
36 the received power on the Serving Frequency, in dBm /  
37 1.23 MHz.

38 MIN\_TOTAL\_PILOT\_EC\_I0 - Minimum total pilot  $E_c/I_0$ .  
39 If this message is used for the Candidate Frequency periodic  
40 search procedure:  
41 If the mobile station is to search for pilots on the CDMA  
42 Candidate Frequency irrespective of the strength of pilots  
43 in the Candidate Frequency Search Set, the base station  
44 shall set this field to '00000'; otherwise, the base station  
45 shall set this field to  
46  $\lfloor -20 \times \log_{10} total\_pilot\_threshold \rfloor$

1			where <i>total_pilot_threshold</i> is defined by the following
2			rule: The mobile station is not to send the <i>Candidate</i>
3			<i>Frequency Search Report Message</i> if the sum of $E_c/I_0$ of
4			all pilots in the mobile station's Candidate Frequency
5			Search Set that measure above CF_T_ADD is less than
6			<i>total_pilot_threshold</i> .
7			If this message is used for the Hard Handoff with Return on
8			Failure procedure:
9			If the mobile station is to attempt to demodulate the
10			Forward Traffic Channels irrespective of the strength of
11			pilots in the Active Set, the base station shall set this field
12			to '00000'; otherwise, the base station shall set this field
13			to
14			$\lfloor -20 \times \log_{10} total\_pilot\_threshold \rfloor$
15			where <i>total_pilot_threshold</i> is defined by the following
16			rule: The mobile station is not to attempt to demodulate
17			the Forward Traffic Channels if the sum of $E_c/I_0$ of all
18			pilots in the mobile station's Active Set is less than
19			<i>total_pilot_threshold</i> .
20	CF_T_ADD	-	Pilot detection threshold for the CDMA Candidate Frequency.
21			This value is used by the mobile station to trigger the sending
22			of the <i>Candidate Frequency Search Report Message</i> during a
23			periodic search of the CDMA Candidate Frequency (see
24			2.6.6.2.8.3.2).
25			The base station shall set this field to the pilot detection
26			threshold, expressed as an unsigned binary number equal to
27			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
28	TF_WAIT_TIME	-	The total maximum wait time on the CDMA Target
29			Frequency.
30			The base station shall set this field to the maximum wait
31			time, in units of 80 ms, that the mobile station is to spend
32			waiting for a period of $(N_{11m} \times 20)$ ms with sufficient signal
33			quality (e.g. good frames) on the CDMA Target Frequency.
34	CF_PILOT_INC	-	Pilot PN sequence offset index increment to be used on the
35			CDMA Candidate Frequency after handoff.
36			The base station shall set this field to the pilot PN sequence
37			increment, in units of 64 PN chips, that the mobile station is
38			to use for searching the Remaining Set, after a handoff to the
39			CDMA Candidate Frequency is successfully completed. The
40			base station should set this field to the largest increment
41			such that the pilot PN sequence offsets of all its neighbor
42			base stations are integer multiples of that increment.
43	CF_SRCH_WIN_N	-	Default search window size for the Candidate Frequency
44			Search Set.

1			The base station shall set this field to the value specified in
2			Table 2.6.6.2.1-1 corresponding to the default search window
3			size to be used by the mobile station for its Candidate
4			Frequency Search Set. The mobile station uses the default
5			search window size for all pilots in its Candidate Frequency
6			Search Set when the search window has not been specified
7			for each pilot individually.
8	CF_SRCH_WIN_R	-	Search window size for the Remaining Set on the CDMA
9			Candidate Frequency.
10			The base station shall set this field to the window size
11			parameter shown in Table 2.6.6.2.1-1 corresponding to the
12			number of PN chips that the mobile station is to search for
13			pilots in the Remaining Set on the CDMA Candidate
14			Frequency after a handoff is successfully completed.
15	RESERVED_2	-	Reserved bits.
16			The base station shall set this field to '00000'.
17	PILOT_UPDATE	-	Pilot search parameter update indicator.
18			If the mobile station is to change its pilot search parameters,
19			the base station shall set this field to '1'; otherwise, the base
20			station shall set this field to '0'.
21	NUM_PILOTS	-	Number of pilots included in the message.
22			If the PILOT_UPDATE field is set to '0', the base station shall
23			omit this field; otherwise, the base station shall include this
24			field and set it as follows:
25			The base station shall set this field to the number of the
26			CDMA Candidate Frequency pilots included in this message.
27			The base station shall set this field to a value from 0 to $N_{gm}$ ,
28			inclusive.
29	CF_NGHR_SRCH_MODE	-	Search mode for Candidate Frequency Search Set.
30			If the PILOT_UPDATE field is set to '0', the base station shall
31			omit this field; otherwise, the base station shall include this
32			field and set it as follows:
33			The base station shall set this field to the value shown in
34			Table 3.7.3.3.2.27-3 corresponding to the search mode.
35			

**Table 3.7.3.3.2.27-3. CF\_NGHR\_SRCH\_MODE Field**

Value (binary)	Description
00	No search priorities or search windows specified
01	Search priorities specified
10	Search windows specified
11	Search windows and search priorities specified

1	The base station shall include NUM_PILOTS occurrences of the following four-field record,		
2	one for each included CDMA Candidate Frequency pilot.		
3	NGHBR_PN	-	Neighbor pilot PN sequence offset index.
4	The base station shall set this field to the pilot's PN sequence		
5	offset, in units of 64 PN chips.		
6	SEARCH_SET	-	Flag to indicate if the corresponding pilot is to be searched.
7	The base station shall set this field to '1' if the mobile station		
8	should add the corresponding pilot to its Candidate		
9	Frequency Search Set; otherwise, the base station shall set		
10	this field to '0'.		
11	SEARCH_PRIORITY	-	Pilot Channel search priority.
12	If CF_NGHBR_SRCH_MODE is set to '01' or '11', then the		
13	base station shall set this field to the search priority for this		
14	neighbor. The base station shall set the search priority as		
15	specified in Table 3.7.3.3.2.26-2. If		
16	CF_NGHBR_SRCH_MODE is set to any other value, the base		
17	station shall omit this field.		
18	SRCH_WIN_NGHBR	-	Neighbor pilot channel search window size.
19	If CF_NGHBR_SRCH_MODE is set to '10' or '11', then the		
20	base station shall set this field to the value specified in		
21	Table 2.6.6.2.1-1 corresponding to the search window size to		
22	be used by mobile stations for this neighbor. If the		
23	CF_NGHBR_SRCH_MODE is set to any other value, the base		
24	station shall omit this field.		
25	CF_SRCH_OFFSET_INCL	-	Neighbor pilot channel search window offset included.
26	If PILOT_UPDATE is set to '0', the base station shall omit this		
27	field; otherwise, the base station shall include this field and		
28	set it as follows:		
29	If CF_NGHBR_SRCH_MODE is set to '10' or '11' and if		
30	SRCH_OFFSET_NGHBR is included in the message, the base		
31	station shall set this bit to '1'; otherwise, the base station		
32	shall set this bit to '0'.		
33	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
34	The base station shall set this field to '1' if additional pilot		
35	information listed in NGHBR_PILOT_REC_TYPE and		
36	RECORD_LEN fields are included. The base station shall set		
37	this field to '0' if the corresponding pilot is the common pilot		
38	and there is no additional pilot information included.		
39	NGHBR_PILOT_REC_TYPE	-	Neighbor Pilot record type
40	If ADD_PILOT_REC_INCL is set to '1', the base station shall		
41	set this field to the NGHBR_PILOT_REC_TYPE value shown in		
42	Table 3.7.2.3.2.22-5 corresponding to the type of Pilot Record		
43	specified by this record.		
44	If ADD_PILOT_REC_INCL is set to '0', the base station shall		
45	omit this field.		

- 1            **RECORD\_LEN**    -    Pilot record length.
- 2                                    If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall
- 3                                    set this field to the number of octets in the type-specific fields
- 4                                    of this pilot record.
- 5                                    If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall
- 6                                    omit this field.
- 7            **Type-specific fields**    -    Pilot record type-specific fields.
- 8                                    If ADD\_PILOT\_REC\_INCL is set to '1', the base station shall
- 9                                    include type-specific fields based on the
- 10                                    NGHBR\_PILOT\_REC\_TYPE of this pilot record.
- 11                                    If ADD\_PILOT\_REC\_INCL is set to '0', the base station shall
- 12                                    omit this field.

13 If NGHBR\_PILOT\_REC\_TYPE is equal to '000', the base station shall include the following

14 fields:

15

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

16

- 17            **TD\_POWER\_LEVEL**    -    TD Transmit Power Level.
- 18                                    The base station shall set this field to the TD transmit power
- 19                                    level relative to that of the Forward Pilot Channel as specified
- 20                                    in Table 3.7.2.3.2.26-4.
- 21            **TD\_MODE**    -    Transmit Diversity mode.
- 22                                    The base station shall set this field to the Transmit Diversity
- 23                                    mode, as specified in Table 3.7.2.3.2.26-3.
- 24            **RESERVED**    -    Reserved bits.
- 25                                    The base station shall set these bits to '0000'.

26 If NGHBR\_PILOT\_REC\_TYPE is equal to '001', the base station shall include the following

27 fields:

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

28

- 29            **QOF**    -    Quasi-orthogonal function index.

- 1 The base station shall set this field to the index of the Quasi-orthogonal function (see [2]).
- 2
- 3 **WALSH\_LENGTH** - Length of the Walsh code.
- 4 The base station shall set this field to the **WALSH\_LENGTH**
- 5 value shown in Table 3.7.2.3.2.22-6 corresponding to the
- 6 length of the Walsh code for the pilot that is used in as the
- 7 Auxiliary pilot.
- 8 **AUX\_PILOT\_WALSH** - Walsh code for the Auxiliary Pilot.
- 9 The base station shall set this field to the Walsh code
- 10 corresponding to the Auxiliary Pilot.
- 11 **RESERVED** - Reserved bits.
- 12 The base station shall set all the bits of this field to '0' to
- 13 make the entire record octet-aligned.

14 If **NGHBR\_PILOT\_REC\_TYPE** is equal to '010', the base station shall include the following

15 fields:

16

Field	Length (bits)
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

17

- 18 **QOF** - Quasi-orthogonal function index for the Auxiliary Transmit
- 19 Diversity Pilot.
- 20 The base station shall set this field to the index of the Quasi-
- 21 orthogonal function (see [2]).
- 22 **WALSH\_LENGTH** - Length of the Walsh code.
- 23 The base station shall set this field to the **WALSH\_LENGTH**
- 24 value shown in 3.7.2.3.2.22-6 corresponding to the length of
- 25 the Walsh code for the pilots that are used as Auxiliary pilot
- 26 in the transmit diversity mode.
- 27 **AUX\_WALSH** - Walsh code for the Auxiliary Pilot.
- 28 The base station shall set this field to the Walsh code
- 29 corresponding to the Auxiliary Pilot.
- 30 **AUX\_TD\_POWER\_LEVEL** - Auxiliary Transmit Diversity Pilot power level.
- 31 The base station shall set this field to the Auxiliary Transmit
- 32 Diversity Pilot transmit power level relative to that of the
- 33 Auxiliary Pilot as specified in Table 3.7.2.3.2.22-7.

- 1            TD\_MODE    -   Transmit Diversity mode.  
 2                            The base station shall set this field to the Transmit Diversity  
 3                            mode, as specified in Table 3.7.2.3.2.26-3.  
 4            RESERVED   -   Reserved bits.  
 5                            The base station shall set all the bits of this field to '0' to  
 6                            make the entire record octet-aligned.

7    If NGHBR\_PILOT\_REC\_TYPE is equal to '011', the base station shall include the following  
 8    fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- 9  
 10   SR3\_PRIMARY\_PILOT   -   Primary SR3 pilot.  
 11                            The base station shall set this field to the value shown in  
 12                            Table 3.7.2.3.2.26-5 corresponding to the position of the  
 13                            primary SR3 pilot.  
 14   SR3\_PILOT\_POWER1   -   The primary SR3 pilot power level relative to that of the pilot  
 15                            on the lower frequency of the two remaining SR3 frequencies.  
 16                            The base station shall set this field to the value shown in  
 17                            Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 18                            primary pilot with respect to the pilot on the lower frequency  
 19                            of the two remaining SR3 frequencies.  
 20   SR3\_PILOT\_POWER2   -   The primary SR3 pilot power level relative to that of the pilot  
 21                            on the higher frequency of the two remaining SR3  
 22                            frequencies.  
 23                            The base station shall set this field to the value shown in  
 24                            Table 3.7.2.3.2.26-6 corresponding to the power level of the  
 25                            primary pilot with respect to the pilot on the higher frequency  
 26                            of the two remaining SR3 frequencies.

27  
 28   If NGHBR\_PILOT\_REC\_TYPE is equal to '100', the base station shall include the following  
 29   fields:

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

- 1
- 2 SR3\_PRIMARY\_PILOT– Primary SR3 pilot.
- 3 The base station shall set this field to the value shown in
- 4 Table 3.7.2.3.2.26-5 corresponding to the position of the
- 5 primary SR3 pilot.
- 6 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot
- 7 on the lower frequency of the two remaining SR3 frequencies.
- 8 The base station shall set this field to the value shown in
- 9 Table 3.7.2.3.2.26-6 corresponding to the power level of the
- 10 primary pilot with respect to the pilot on the lower frequency
- 11 of the two remaining SR3 frequencies.
- 12 SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot
- 13 on the higher frequency of the two remaining SR3
- 14 frequencies.
- 15 The base station shall set this field to the value shown in
- 16 Table 3.7.2.3.2.26-6 corresponding to the power level of the
- 17 primary pilot with respect to the pilot on the higher frequency
- 18 of the two remaining SR3 frequencies.
- 19 QOF – Quasi-orthogonal function index.
- 20 The base station shall set this field to the index of the Quasi-
- 21 orthogonal function (see [2]) on the frequency of the primary
- 22 pilot.

1	WALSH_LENGTH	-	Length of the Walsh Code.
2			The base station shall set this field to the WALSH_LENGTH
3			value shown in Table 3.7.2.3.2.22-6 corresponding to the
4			length of the Walsh code for the pilot that is used as the
5			Auxiliary pilot on the frequency of the primary pilot.
6	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
7			The base station shall set this field to the Walsh code
8			corresponding to the Auxiliary pilot on the frequency of the
9			primary pilot.
10	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower
11			frequency of the two remaining SR3 frequencies.
12			If the additional information for the pilot on the lower
13			frequencies of the two remaining SR3 frequencies is the same
14			as pilot on the primary frequency, the base station shall set
15			this field to '0'; otherwise, the base station shall set this field
16			to '1'.
17	QOF1	-	Quasi-orthogonal function index for the pilot on the lower
18			frequency of the two remaining SR3 frequencies.
19			If ADD_INFO_INCL1 is set to '0', the base station shall omit
20			this field; otherwise, the base station shall set this field as
21			follows:
22			The base station shall set this field to the index of the Quasi-
23			orthogonal function (see [2]) on the lower frequency of the two
24			remaining SR3 frequencies.
25	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency
26			of the two remaining SR3 frequencies.
27			If ADD_INFO_INCL1 is set to '0', the base station shall omit
28			this field; otherwise, the base station shall set this field as
29			follows:
30			The base station shall set this field to the WALSH_LENGTH
31			value shown in Table 3.7.2.3.2.22-6 corresponding to the
32			length of the Walsh code for the pilot that is used as the
33			Auxiliary pilot on the lower frequency of the two remaining
34			SR3 frequencies.
35	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
36			the two remaining SR3 frequencies.
37			If ADD_INFO_INCL1 is set to '0', the base station shall omit
38			this field; otherwise, the base station shall set this field as
39			follows:
40			The base station shall set this field to the Walsh code
41			corresponding to the Auxiliary pilot on the lower frequency of
42			the two remaining SR3 frequencies.
43	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
44			frequency of the two remaining SR3 frequencies.

1			If the additional information for the pilot on the higher
2			frequencies of the two remaining SR3 frequencies is the same
3			as pilot on the primary frequency, the base station shall set
4			this field to '0'; otherwise, the base station shall set this field
5			to '1'.
6	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
7			frequency of the two remaining SR3 frequencies.
8			If ADD_INFO_INCL2 is set to '0', the base station shall omit
9			this field; otherwise, the base station shall set this field as
10			follows:
11			The base station shall set this field to the index of the Quasi-
12			orthogonal function (see [2]) on the higher frequency of the
13			two remaining SR3 frequencies.
14	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher
15			frequency of the two remaining SR3 frequencies.
16			If ADD_INFO_INCL2 is set to '0', the base station shall omit
17			this field; otherwise, the base station shall set this field as
18			follows:
19			The base station shall set this field to the WALSH_LENGTH
20			value shown in Table 3.7.2.3.2.22-6 corresponding to the
21			length of the Walsh code for the pilot that is used as the
22			Auxiliary pilot on the higher frequency of the two remaining
23			SR3 frequencies.
24	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
25			the two remaining SR3 frequencies.
26			If ADD_INFO_INCL2 is set to '0', the base station shall omit
27			this field; otherwise, the base station shall set this field as
28			follows:
29			The base station shall set this field to the Walsh code
30			corresponding to the Auxiliary pilot on the higher frequency
31			of the two remaining SR3 frequencies.
32	RESERVED	-	Reserved bits.
33			The base station shall set all the bits of this field to '0' to
34			make the entire record octet-aligned.
35	SRCH_OFFSET_NGHR	-	Neighbor pilot channel search window offset.
36			If CF_SRCH_OFFSET_INCL is included and equals to '1', then
37			the base station shall set this field to the value specified in
38			Table 2.6.6.2.1-2 corresponding to the search window offset
39			to be used by the mobile station for this neighbor; otherwise,
40			the base station shall omit this field.
41	RESERVED_3	-	Reserved bits.
42			The base station shall add reserved bits as needed in order to
43			make the length of the Mode-specific fields equal to an
44			integer number of octets. The base station shall set these
45			bits to '0'.
46	ALIGN_TIMING	-	Align timing indicator.

1                    If the base station requests that the mobile station offset the  
2                    start of the first search from the action time of this message  
3                    (or of a subsequent *Candidate Frequency Search Control*  
4                    *Message* that starts a search) by a delay specified by the  
5                    SEARCH\_OFFSET field, the base station shall set this field to  
6                    '1'; otherwise, the base station shall set this field to '0'.

7                    SEARCH\_OFFSET    -    Search offset.

8                    If the ALIGN\_TIMING field is set to '0', the base station shall  
9                    omit this field; otherwise, the base station shall include this  
10                    field and set it to

11                    
$$\min ( 63, \lceil search\_offset\_time / 0.00125 \rceil )$$

12                    where *search\_offset\_time* is the time offset, in seconds, of the  
13                    start of the first search from the action time of this message  
14                    (or of a subsequent *Candidate Frequency Search Control*  
15                    *Message* that starts a search).

2 MSG\_TAG: CFSCNM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	6
CFSCM_SEQ	2
SEARCH_TYPE	2
ALIGN_TIMING	1

4

5 USE\_TIME - Use action time indicator.

6 This field indicates whether an explicit action time is  
7 specified in this message.

8 If an explicit action time is specified in this message, the base  
9 station shall set this field to '1'; otherwise, the base station  
10 shall set this field to '0'.

11 If the base station requests the mobile station to perform an  
12 aligned search (see 2.6.6.2.8.3), the base station shall specify  
13 an explicit action time for the message.

14 ACTION\_TIME - Action time.

15 If the USE\_TIME field is set to '1', the base station shall set  
16 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
17 ms, in units of 80 ms (modulo 64), at which the message is to  
18 take effect. If the USE\_TIME field is set to '0', the base station  
19 shall set this field to '000000'.

20 CFSCM\_SEQ - *Candidate Frequency Search Control Message* sequence  
21 number.

22 The base station shall set this field to the *Candidate*  
23 *Frequency Search Control Message* sequence number, as  
24 specified in 3.6.6.2.2.5.

25 SEARCH\_TYPE - Search command.

26 The base station shall set this field to the appropriate  
27 SEARCH\_TYPE code from Table 3.7.3.3.2.27-1 to indicate the  
28 purpose of the message.

29 ALIGN\_TIMING - Align timing indicator.

1  
2  
3  
4  
5  
6  
7

If the base station requests that the mobile station offset the start of the first search from the action time of this message by a delay specified by the SEARCH\_OFFSET field of the last *Candidate Frequency Search Request Message* sent to the mobile station, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

PUF_FREQ_INCL	1
PUF_BAND_CLASS	0 or 5
PUF_CDMA_FREQ	0 or 11

4

5           USE\_TIME    -   Use action time indicator.

6                            The base station shall set this field to '1'.

7           ACTION\_TIME   -   Action time.

8                            The base station shall set this field to the System Time minus  
9                            FRAME\_OFFSET<sub>S</sub> × 1.25 ms, in units of 80 ms (modulo 64),  
10                           used in calculating the start of the first PUF probe.

11   ACTION\_TIME\_FRAME   -   Action time frame.

12                            The base station shall set this field to the number of frames  
13                            after ACTION\_TIME that the mobile station is to begin the  
14                            first PUF probe.

15           PUF\_SETUP\_SIZE   -   Number of PUF setup power control groups.

16                            The base station shall set this field to one less than the  
17                            number of power control groups that the mobile station is to  
18                            transmit at nominal power prior to transmitting a PUF pulse.  
19                            The base station shall set the values of PUF\_SETUP\_SIZE and  
20                            PUF\_PULSE\_SIZE so that  $[PUF\_SETUP\_SIZE + 1 +$   
21                             $PUF\_PULSE\_SIZE + 1] \bmod 16$  is not equal to 0.

22           PUF\_PULSE\_SIZE   -   Number of PUF pulse power control groups.

1		The base station shall set this field to one less than the
2		number of power control groups that the mobile station is to
3		transmit at elevated power level during the PUF pulse. The
4		base station shall set the values of PUF_SETUP_SIZE and
5		PUF_PULSE_SIZE so that $[PUF\_SETUP\_SIZE + 1 +$
6		$PUF\_PULSE\_SIZE + 1] \bmod 16$ is not equal to 0.
7	PUF_INTERVAL	- PUF interval.
8		The base station shall set this field to the number of frames
9		between the start of each PUF probe.
10	PUF_INIT_PWR	- Power increase of initial PUF pulse.
11		The base station shall set this field to the amount (in dB) that
12		the mobile station is to increase its mean output power for
13		the first PUF pulse.
14	PUF_PWR_STEP	- PUF power step.
15		The base station shall set this field to the value (in dB) by
16		which the mobile station is to increment the power of a PUF
17		pulse above nominal power from one PUF pulse to the next.
18	TOTAL_PUF_PROBES	- Total number of PUF probes.
19		The base station shall set this field to one less than the
20		maximum number of PUF probes the mobile station is to
21		transmit in a PUF attempt.
22	MAX_PWR_PUF	- Maximum number of PUF probes transmitted at full power.
23		The base station shall set this field to one less than the
24		number of PUF pulses that the mobile station is to transmit
25		at maximum power level.
26	PUF_FREQ_INCL	- Frequency included indicator.
27		If the mobile station is to change PUF_BAND_CLASS or
28		PUF_CDMA_FREQ, the base station shall set this field to '1';
29		otherwise, the base station shall set this field to '0'.
30	PUF_BAND_CLASS	- Band class.
31		If PUF_FREQ_INCL is set to '1', the base station shall include
32		this field and set it to the CDMA band class corresponding to
33		the CDMA frequency assignment for the CDMA Channel as
34		specified in [30]; otherwise, the base station shall omit this
35		field.
36	PUF_CDMA_FREQ	- Frequency assignment.
37		If PUF_FREQ_INCL is set to '1', the base station shall include
38		this field and set it to the CDMA Channel number, in the
39		specified CDMA band class, corresponding to the CDMA
40		frequency for the CDMA Channel as specified in [2];
41		otherwise, the base station shall omit this field.

3

Field	Length (bits)
RESERVED	6
LOC_IND	1
RESERVED_1	0 or 3
MS_LAT	0 or 22
MS_LONG	0 or 23
MS_LOC_TSTAMP	0 or 24

4

5 RESERVED - Reserved bits.

6 The base station shall set these bits to '000000'.

7 LOC\_IND - Location indicator

8 If the base station is to include MS\_LAT, MS\_LONG, and  
9 MS\_LOC\_TSTAMP in this message, the base station shall set  
10 this field to '1'; otherwise, the base station shall set this field  
11 to '0'.

12 RESERVED\_1 - Reserved bits.

13 If LOC\_IND is equal to '1', the base station shall set these bits  
14 to '000'; otherwise, the base station shall not include this  
15 field.

16 MS\_LAT - Mobile station latitude.

17 If LOC\_IND is equal to '1', the base station shall set this field  
18 to the mobile station's latitude in units of 0.25 second,  
19 expressed as a two's complement signed number with  
20 positive numbers signifying North latitudes. The base station  
21 shall set this field to a value in the range -1296000 to  
22 1296000 inclusive (corresponding to a range of -90° to +90°).

23 Otherwise, the base station shall not include this field.

24 MS\_LONG - Mobile station longitude.

25 If LOC\_IND is equal to '1', the base station shall set this field  
26 to the mobile station's longitude in units of 0.25 second,  
27 expressed as a two's complement signed number with  
28 positive numbers signifying East longitude. The base station  
29 shall set this field to a value in the range -2592000 to  
30 2592000 inclusive (corresponding to a range of -180° to  
31 +180°).

32 Otherwise, the base station shall not include this field.

33 MS\_LOC\_TSTAMP - Time stamp.

1 If LOC\_IND is equal to '1', the base station shall set this field  
2 to the time at which the mobile station's location parameters  
3 were received; otherwise, the base station shall not include  
4 this field.

5 This field is formatted as shown below.  
6

Field	Length (bits)
HOURS	8
MINUTES	8
SECONDS	8
Note: All subfields contain two 4-bit BCD numbers giving the decimal value of the subfield. For example, if the minute is 53, the MINUTES subfield contains '01010011'.	

- 7
- 8           HOURS    -   Current hour (UTC).  
9                    The base station shall set this field to the current hour (UTC),  
10                   in the range 0-23.
- 11           MINUTES -   Current minutes (UTC).  
12                   The base station shall set this field to the current minutes  
13                   (UTC), in the range 0-59.
- 14           SECONDS -   Current seconds (UTC).  
15                   The base station shall set this field to the current seconds  
16                   (UTC), in the range 0-59.

3

USE\_TIME - Use action time indicator.

4

This field indicates whether an explicit action time is specified in this message.

5

6

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

7

8

9

ACTION\_TIME - Action time.

10

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms, in units of 80 ms (modulo 64), at which the handoff is to take effect. If the USE\_TIME field is set to '0', the base station shall omit this field.

11

12

13

14

15

HDM\_SEQ - *General Handoff Direction Message* sequence number.

16

This field is used by the mobile station in the *Power Measurement Report Message* to identify the order in which the reported pilot strengths are sent.

17

18

19

The base station shall set this field to the handoff message sequence number, as specified in 3.6.6.2.2.10.

20

21

SEARCH\_INCLUDED - Pilot search parameters included.

22

If the mobile station is to change its pilot search parameters, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

23

24

25

SRCH\_WIN\_A - Search window size for the Active Set and Candidate Set.

26

If SEARCH\_INCLUDED is set to '1', the base station shall include the field SRCH\_WIN\_A and set this field to the window size parameter shown in Table 2.6.6.2.1-1 corresponding to the number of PN chips that the mobile station is to search for pilots in the Active Set and the Candidate Set; otherwise, the base station shall omit this field.

27

28

29

30

31

32

33

SRCH\_WIN\_N - Search window size for the Neighbor Set.

1			If SEARCH_INCLUDED is set to '1', the base station shall
2			include the field SRCH_WIN_N and set this field to the
3			window size parameter shown in Table 2.6.6.2.1-1
4			corresponding to the search window size to be used by mobile
5			stations for the Neighbor Set after completion of the handoff;
6			otherwise, the base station shall omit this field.
7	SRCH_WIN_R	-	Search window size for the Remaining Set.
8			If SEARCH_INCLUDED is set to '1', the base station shall
9			include the field SRCH_WIN_R and set this field to the
10			window size parameter shown in Table 2.6.6.2.1-1
11			corresponding to the search window size to be used by mobile
12			stations for the Remaining Set after completion of the
13			handoff; otherwise, the base station shall omit this field.
14	T_ADD	-	Pilot detection threshold.
15			This value is used by the mobile station to trigger the transfer
16			of a pilot from the Neighbor Set or Remaining Set to the
17			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
18			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
19			<i>Strength Measurement Message</i> initiating the handoff process
20			(see 2.6.6.2.5.2).
21			If SEARCH_INCLUDED is set to '1', the base station shall
22			include the field T_ADD and set this field to the pilot
23			detection threshold, expressed as an unsigned binary
24			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base
25			station shall omit this field.
26	T_DROP	-	Pilot drop threshold.
27			This value is used by mobile stations to start a handoff drop
28			timer for pilots in the Active Set and the Candidate Set (see
29			2.6.6.2.3).
30			If SEARCH_INCLUDED is set to '1', the base station shall
31			include the field T_DROP and set this field to the pilot drop
32			threshold, expressed as an unsigned binary number equal to
33			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base station shall omit
34			this field.
35	T_COMP	-	Active Set versus Candidate Set comparison threshold.
36			The mobile station transmits a <i>Pilot Strength Measurement</i>
37			<i>Message</i> or <i>Extended Pilot Strength Measurement Message</i>
38			when the strength of a pilot in the Candidate Set exceeds that
39			of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
40			If SEARCH_INCLUDED is set to '1', the base station shall
41			include the field T_COMP and set this field to the threshold
42			Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
43			otherwise, the base station shall omit this field.

1	T_TDROP	-	Drop timer value.
2			Timer value after which an action is taken by the mobile
3			station for a pilot that is a member of the Active Set or
4			Candidate Set, and whose strength has not become greater
5			than T_DROP. If the pilot is a member of the Active Set, a
6			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
7			<i>Strength Measurement Message</i> is issued. If the pilot is a
8			member of the Candidate Set, it will be moved to the Neighbor
9			Set.
10			If SEARCH_INCLUDED is set to '1', the base station shall
11			include the field T_TDROP and set this field to the T_TDROP
12			value shown in Table 2.6.6.2.3-1 corresponding to the drop
13			timer value to be used by the mobile station; otherwise, the
14			base station shall omit this field.
15	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
16			active set, or dropping a pilot from the active set (see
17			2.6.6.2.3 and 2.6.6.2.5.2).
18			If SEARCH_INCLUDED is set to '1', the base station shall
19			include the field SOFT_SLOPE in the additional fields and set
20			this field as an unsigned binary number; otherwise, the base
21			station shall omit this field.
22	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
23			the active set (see 2.6.6.2.5.2).
24			If SEARCH_INCLUDED is set to '1', the base station shall
25			include the field ADD_INTERCEPT in the additional fields and
26			set this field as a two's complement signed binary number in
27			units of 0.5 dB; otherwise, the base station shall omit this
28			field.
29	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
30			from the active set (see 2.6.6.2.3).
31			If SEARCH_INCLUDED is set to '1', the base station shall
32			include the field DROP_INTERCEPT in the additional fields
33			and set this field as a two's complement signed binary number
34			in units of 0.5 dB; otherwise, the base station shall omit this
35			field.
36	EXTRA_PARMS	-	Extra parameters included.
37			If the mobile station is to change FRAME_OFFSET,
38			PRIVATE_LCM, ENCRYPT_MODE, NOM_PWR, BAND_CLASS,
39			or CDMA_FREQ, or the mobile station is to perform a reset of
40			the acknowledgment procedures, or the mobile station is to
41			reset Forward Traffic Channel power control counters, the
42			base station shall set this field to '1'; otherwise, the base
43			station shall set this field to '0'.
44	P_REV	-	Protocol revision level.
45			If EXTRA_PARMS is set to '1', the base station shall set this
46			field to the base station protocol revision level that the mobile
47			station is to use after completion of the handoff; otherwise,
48			the base station shall omit this field.

1	PACKET_ZONE_ID	-	Packet data services zone identifier.
2			If EXTRA_PARMS is set to '1', the base station shall include
3			the field PACKET_ZONE_ID and set this field as described
4			below; otherwise, the base station shall omit this field.
5			If the base station supports a packet data service zone, the
6			base station shall set this field to the non-zero packet data
7			services zone identifier that the mobile station is to use after
8			completion of the handoff.
9			If the base station does not support a packet data service
10			zone, the base station shall set this field to '00000000'.
11	FRAME_OFFSET	-	Frame offset.
12			The Forward and Reverse Traffic Channel frames are delayed
13			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
14			If EXTRA_PARMS is set to '1', the base station shall include
15			the field FRAME_OFFSET and set this field to the Forward
16			and Reverse Traffic Channel frame offset; otherwise, the base
17			station shall omit this field.
18	PRIVATE_LCM	-	Private long code mask indicator.
19			This field is used to change the long code mask after a hard
20			handoff.
21			If EXTRA_PARMS is set to '1', the base station shall include
22			the field PRIVATE_LCM and set this field as described below;
23			otherwise, the base station shall omit this field.
24			If the private long code mask is to be used after the handoff,
25			the base station shall set this field to '1'; otherwise, the base
26			station shall set this field to '0'.
27	RESET_L2	-	Reset acknowledgment procedures command.
28			This field is used to reset acknowledgment processing in the
29			mobile station.
30			If EXTRA_PARMS is set to '1', the base station shall include
31			the field RESET_L2 and set this field as described below;
32			otherwise, the base station shall omit this field.
33			If the field is included and the mobile station is to reset its
34			acknowledgment procedures, the base station shall set this
35			field to '1'; otherwise, the base station shall set this field to
36			'0'.
37	RESET_FPC	-	Reset Forward Traffic Channel power control.
38			This field is used to reset the Forward Traffic Channel power
39			control counters.
40			If EXTRA_PARMS is set to '1', the base station shall include
41			the field RESET_FPC and set this field as described below;
42			otherwise, the base station shall omit this field.

1			The base station shall set this field to '0' if the Forward Traffic
2			Channel power control counters are to be maintained after
3			completion of the handoff. If the counters are to be initialized
4			as specified in 2.6.4.1.1.1, then the base station shall set this
5			field to '1'.
6	SERV_NEG_TYPE	-	Service negotiation type.
7			If EXTRA_PARMS is set to '1', the base station shall include
8			the field SERV_NEG_TYPE and set this field as described
9			below; otherwise, the base station shall omit this field.
10			If the mobile station is to use service negotiation, the base
11			station shall set this field to '1'. If the mobile station is to use
12			service option negotiation, the base station shall set this field
13			to '0'.
14	ENCRYPT_MODE	-	Message encryption mode.
15			If EXTRA_PARMS is set to '1', the base station shall include
16			the field ENCRYPT_MODE and set this field to the
17			ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2
18			corresponding to the encryption mode that is to be used for
19			messages sent on the Forward and Reverse Traffic Channels,
20			as specified in 2.3.12.2; otherwise, the base station shall omit
21			this field.
22	NOM_PWR_EXT	-	Extended nominal transmit power.
23			If EXTRA_PARMS is set to '1', the base station shall include
24			this field and set this field as described below; otherwise, the
25			base station shall omit this field.
26			If the mobile station is being handed off to a base station
27			operating in Band Class 0 or Band Class 3, the base station
28			shall set this field to '0'; otherwise, the base station shall set
29			it as follows:
30			If the correction factor to be used by the mobile station in the
31			open loop power estimate is between -24 dB and -9 dB
32			inclusive, the base station shall set this field to '1'; otherwise
33			(the correction factor is in the range -8 dB to 7 dB inclusive),
34			the base station shall set this field to '0'.
35	NOM_PWR	-	Nominal transmit power offset.
36			If EXTRA_PARMS is set to '1', the base station shall include
37			the field NOM_PWR and set this field to the correction factor
38			to be used by the mobile station in the open loop power
39			estimate, expressed as a two's complement value in units of 1
40			dB (see [2]); otherwise, the base station shall omit this field.
41	NUM_PREAMBLE	-	Traffic Channel preamble length.
42			If EXTRA_PARMS is set to '0', the base station shall omit the
43			NUM_PREAMBLE field; otherwise, the base station shall
44			include this field and set it to the length of Traffic Channel
45			preamble that the mobile station is to send when performing
46			a handoff; as follows:

1		If, after the handoff, radio configuration 1 or radio
2		configuration 2 is to be used, the base station shall set
3		NUM_PREAMBLE to the Traffic Channel preamble length in
4		20 ms units; otherwise, the base station shall set
5		NUM_PREAMBLE to the value shown in Table 3.7.3.3.2.17-1
6		corresponding to the Traffic Channel preamble length in 1.25
7		ms units.
8	BAND_CLASS	- Band class.
9		If EXTRA_PARMS is set to '1', the base station shall include
10		the field BAND_CLASS and set this field to the CDMA band
11		class corresponding to the CDMA frequency assignment for
12		the CDMA Channel as specified in [30]; otherwise, the base
13		station shall omit this field.
14	CDMA_FREQ	- Frequency assignment.
15		If EXTRA_PARMS is set to '1', the base station shall include
16		the field CDMA_FREQ and set this field to the CDMA Channel
17		number, in the specified CDMA band class, corresponding to
18		the CDMA frequency assignment for the CDMA Channel as
19		specified in [2]; otherwise, the base station shall omit this
20		field.
21	RETURN_IF_HANDOFF_FAIL	- Return on failure flag.
22		If EXTRA_PARMS is set to '1', the base station shall include
23		the field RETURN_IF_HANDOFF_FAIL and set this field as
24		described below; otherwise, the base station shall omit this
25		field.
26		If the base station includes this field, it shall set this field to
27		'1' if the mobile station is to resume the use of the Active Set
28		on the Serving Frequency following an unsuccessful hard
29		handoff attempt, as specified in 2.6.6.2.8.2; otherwise, the
30		base station shall set this field to '0'.
31	COMPLETE_SEARCH	- Flag to complete search.
32		If RETURN_IF_HANDOFF_FAIL is included and is set to '1',
33		the base station shall include the field COMPLETE_SEARCH
34		and set this field as described below; otherwise, the base
35		station shall omit this field.
36		If the base station includes this field, it shall set this field to
37		'1' if the mobile station is to complete the search of the
38		Candidate Frequency Search Set before resuming the use of
39		the Active Set on the Serving Frequency when an inter-
40		frequency handoff attempt is unsuccessful, as specified in
41		2.6.6.2.8.2; otherwise, the base station shall set this field to
42		'0'.
43	PERIODIC_SEARCH	- Flag to search the Candidate Frequency periodically.
44		If EXTRA_PARMS is set to '1', the base station shall include
45		the field PERIODIC_SEARCH and set this field as described
46		below; otherwise, the base station shall omit this field.

1			If the base station includes this field, it shall set this field to
2			'1' if the mobile station is to periodically search the Candidate
3			Frequency, as specified in 2.6.6.2.8.3; otherwise, the base
4			station shall set this field to '0'.
5	SCR_INCLUDED	-	Service Configuration Record included indicator.
6			If EXTRA_PARMS is set to '1', the base station shall include
7			the field SCR_INCLUDED and shall set this field as described
8			below; otherwise, the base station shall omit this field.
9			The base station shall set this field to '1' if it includes Service
10			Configuration Record in the message; otherwise, the base
11			station shall set this field to '0'.
12	SERV_CON_SEQ	-	Connect sequence number.
13			If SCR_INCLUDED is included and is set to '1', the base
14			station shall include the field SERV_CON_SEQ and shall set
15			this field to the connect sequence number pertaining to this
16			service configuration as specified in 3.6.4.1.2.1.2.
17	If SCR_INCLUDED is included and is set to '1', the base station shall include one		
18	occurrence of the following three-field record to specify the service configuration.		
19	RECORD_TYPE	-	Information record type.
20			If SCR_INCLUDED is included and is set to '1', the base
21			station shall include the field RECORD_TYPE and shall set
22			this field to the record type value shown in Table 3.7.5-1
23			corresponding to the Service Configuration information
24			record.
25	RECORD_LEN	-	Information record length.
26			If SCR_INCLUDED is included and is set to '1', the base
27			station shall include the field RECORD_LEN and shall set
28			this field to the number of octets included in the type-specific
29			fields of the Service Configuration information record.
30	Type-specific fields	-	Type-specific fields.
31			If SCR_INCLUDED is included and is set to '1', the base
32			station shall include the type specific fields and shall set
33			these fields as specified in 3.7.5.7 for the Service
34			Configuration information record.
35	SUP_CHAN_PARMS_INCLUDED	-	Supplemental code channel parameters included
36			indicator.
37			The base station shall set this field to '1' if the base station
38			includes the FOR_INCLUDED, REV_INCLUDED, and
39			REV_PARMS_INCLUDED fields in the message; otherwise, the
40			base station shall set this field to '0'.
41	FOR_INCLUDED	-	Forward assignment information included indicator.
42			If SUP_CHAN_PARMS_INCLUDED is set to '1', the base
43			station shall include the field FOR_INCLUDED and set this
44			field as described below; otherwise, the base station shall
45			omit this field.

1			If the base station includes this field, it shall set this field to
2			'1' if Forward Supplemental Code Channel assignment
3			information is included in the message; otherwise, the base
4			station shall set this field to '0'.
5	FOR_SUP_CONFIG	-	Forward Supplemental Code Channel configuration indicator.
6			If FOR_INCLUDED is included and is set to '1', the base
7			station shall include the field FOR_SUP_CONFIG and set this
8			field according to the following rules:
9			The base station shall set this field to '00' if Forward
10			Supplemental Code Channels are not specified in the
11			message, and the mobile station is to stop processing all
12			Forward Supplemental Code Channels.
13			The base station shall set this field to '01' if Forward
14			Supplemental Code Channels are not specified in the
15			message, and the mobile station is to start processing the
16			Forward Supplemental Code Channels previously stored in
17			its Code Channel List, CODE_CHAN_LIST <sub>S</sub> .
18			The base station shall set this field to '10' if the Forward
19			Supplemental Code Channels are specified in the message,
20			and the mobile station is to stop processing all Forward
21			Supplemental Code Channels in CODE_CHAN_LIST <sub>S</sub> , and to
22			update the CODE_CHAN_LIST <sub>S</sub> , according to the information
23			contained in the message.
24			The base station shall set this field to '11' if the Forward
25			Supplemental Code Channels are specified in the message,
26			and the mobile station is to update its Code Channel List,
27			CODE_CHAN_LIST <sub>S</sub> , according to the information contained
28			in the message and to start processing the Forward
29			Supplemental Code Channels.
30	NUM_FOR_SUP	-	Number of Forward Supplemental Code Channels.
31			If FOR_SUP_CONFIG is included and is set to '10' or '11', the
32			base station shall include the field NUM_FOR_SUP and set it
33			to the number of Forward Supplemental Code Channels
34			assigned to the mobile station; otherwise, the base station
35			shall omit this field. NUM_FOR_SUP shall not exceed the
36			maximum number of Forward Supplemental Code Channels
37			for the negotiated multiplex option.
38	USE_FOR_DURATION	-	Use forward duration indicator.
39			If FOR_SUP_CONFIG is included and is set to '01' or '11', the
40			base station shall include the field USE_FOR_DURATION and
41			set this field as described below; otherwise the base station
42			shall omit this field.
43			The base station shall set this field to '1' if the
44			FOR_DURATION field is included in the message and the
45			mobile station is to process the Forward Supplemental Code
46			Channels for a time duration indicated by FOR_DURATION.

1			The base station shall set this field to '0' if the mobile station
2			is to process the Forward Supplemental Code Channels for
3			an indefinite duration (i.e., the mobile station is to continue
4			processing Forward Supplemental Code Channels until it
5			receives a subsequent <i>Supplemental Channel Assignment</i>
6			<i>Message</i> or a <i>General Handoff Direction Message</i> that
7			specifies a different Forward Supplemental Code Channel
8			assignment.
9	FOR_DURATION	-	Duration of Forward Supplemental Code Channel
10			assignment.
11			If USE_FOR_DURATION is included and is set to '1', the base
12			station shall include the field FOR_DURATION and set this
13			field to the allocated duration, in units of 80 ms, for which
14			the mobile station is to process the Forward Supplemental
15			Code Channels; otherwise, the base station shall omit this
16			field.
17	REV_INCLUDED	-	Reverse assignment information included indicator.
18			If SUP_CHAN_PARMS_INCLUDED is set to '1', the base
19			station shall include the field REV_INCLUDED and set this
20			field as described below; otherwise, the base station shall
21			omit this field.
22			If the base station includes this field, it shall set this field to
23			'1' if Reverse Supplemental Code Channel assignment
24			information is included in the message; otherwise, the base
25			station shall set this field to '0'.
26	REV_DTX_DURATION	-	Reverse Discontinuous Transmission Duration.
27			If REV_INCLUDED is included and is set to '1', the base
28			station shall include the field REV_DTX_DURATION;
29			otherwise the base station shall omit this field.
30			If the base station includes this field, it shall set this field to
31			the maximum duration of time in units of 20 ms that the
32			mobile station is allowed to stop transmission on a Reverse
33			Supplemental Code Channel within the reverse assignment
34			duration. The base station shall set this field to '0000' if the
35			mobile station is to stop using a Reverse Supplemental Code
36			Channel once it has stopped transmitting on that Reverse
37			Supplemental Code Channel. The base station shall set this
38			field to '1111' if the mobile station is allowed to resume
39			transmission on a Reverse Supplemental Code Channel at
40			any time within the reverse assignment duration.
41	CLEAR_RETRY_DELAY	-	Clear retry delay indicator.
42			If REV_INCLUDED is included and is set to '1', the base
43			station shall include the field CLEAR_RETRY_DELAY and set
44			this field as described below; otherwise the base station shall
45			omit this field.

1			The base station shall set this field to '1' to indicate that the
2			mobile station is to clear any existing retry delay which it has
3			stored (see 2.6.6.2.5.1); otherwise, the base station shall set
4			this field to '0'.
5	USE_REV_DURATION	-	Use reverse duration indicator.
6			If REV_INCLUDED is included and is set to '1', the base
7			station shall include the field USE_REV_DURATION and set
8			this field as described below; otherwise the base station shall
9			omit this field.
10			The base station shall set this field to '1' if the
11			REV_DURATION field is included in the message and the
12			mobile station is allowed to transmit on the Reverse
13			Supplemental Code Channels for a time duration indicated by
14			REV_DURATION.
15			The base station shall set this field to '0' if the mobile station
16			is allowed to transmit on the Reverse Supplemental Code
17			Channels for an indefinite duration (i.e., the mobile station
18			may continue to transmit on the Reverse Supplemental Code
19			Channels until it receives a subsequent <i>Supplemental</i>
20			<i>Channel Assignment Message</i> or a <i>General Handoff Direction</i>
21			<i>Message</i> that specifies a different Reverse Supplemental Code
22			Channel assignment.
23	REV_DURATION	-	Duration of Reverse Supplemental Code Channel
24			Assignment.
25			If USE_REV_DURATION is included and is set to '1', the base
26			station shall include the field REV_DURATION and set this
27			field to the allocated duration, in units of 80 ms, for which
28			the mobile station may transmit on Reverse Supplemental
29			Code Channels; otherwise the base station shall omit this
30			field.
31	NUM_REV_CODES	-	Number of Reverse Supplemental Code Channels.
32			If REV_INCLUDED is included and is set to '1', the base
33			station shall include the field NUM_REV_CODES and set this
34			field to the number of Reverse Supplemental Code Channels
35			which are assigned to the mobile station; otherwise the base
36			station shall omit this field.
37	USE_T_ADD_ABORT	-	Reverse use T_ADD abort indicator.
38			If REV_INCLUDED is included and is set to '1', the base
39			station shall include the field USE_T_ADD_ABORT and set
40			this field as described below; otherwise the base station shall
41			omit this field.
42			The base station shall set this field to '1' to indicate that the
43			mobile station is to use the T_ADD Reverse Supplemental
44			Code Channel abort feature for this reverse assignment;
45			otherwise, the base station shall set this field to '0'.
46	REV_PARMS_INCLUDED	-	Reverse assignment parameters included indicator.

1			If SUP_CHAN_PARMS_INCLUDED is set to '1', the base
2			station shall include the field REV_PARMS_INCLUDED and
3			set this field as described below; otherwise, the base station
4			shall omit this field.
5			If the base station includes this field, it shall set this field to
6			'1' if the following three fields are included in the message;
7			otherwise, the base station shall set this field to '0'.
8	T_MULCHAN	-	<i>Supplemental Channel Request Message</i> pilot strength
9			reporting offset.
10			If REV_PARMS_INCLUDED is included and is set to '1', the
11			base station shall include the field T_MULCHAN and set this
12			field as described below; otherwise the base station shall omit
13			this field.
14			The base station shall set this field to the threshold offset
15			that the mobile station is to use when reporting neighbor
16			pilot strength measurements in a <i>Supplemental Channel</i>
17			<i>Request Message</i> . The mobile station is to interpret this field
18			as an offset to T_ADD ranging from 0.5 dB (corresponding to
19			T_MULCHAN = '000') to 4.0 dB (corresponding to
20			T_MULCHAN = '111'), in 0.5 dB increments.
21	BEGIN_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
22			Channels at the beginning of transmission on Reverse
23			Supplemental Code Channel.
24			If REV_PARMS_INCLUDED is included and is set to '1', the
25			base station shall include the field BEGIN_PREAMBLE and
26			set this field to the number of Reverse Supplemental Code
27			Channel preamble frames that the mobile station is to send
28			when beginning transmission on Reverse Supplemental Code
29			Channels; otherwise the base station shall omit this field.
30	RESUME_PREAMBLE	-	Number of preamble frames on Reverse Supplemental Code
31			Channels at the resumption of transmission.
32			If REV_PARMS_INCLUDED is included and is set to '1', the
33			base station shall include the field RESUME_PREAMBLE and
34			set this field to the number of Reverse Supplemental Code
35			Channel preamble frames that the mobile station is to send
36			when resuming transmission on a Reverse Supplemental
37			Code Channel following an autonomous suspension of
38			transmission on an allocated Supplemental Code Channel;
39			otherwise the base station shall omit this field.
40	USE_PWR_CNTL_STEP	-	Power control step size indicator.
41			The base station shall set this field to '1' if the field
42			PWR_CNTL_STEP is included in the message.
43	PWR_CNTL_STEP	-	Power control step size.
44			If USE_PWR_CNTL_STEP is set to '1', then the base station
45			shall include the field PWR_CNTL_STEP and set this field to
46			the step size that the mobile station is to use for closed loop
47			power control, according to Table 3.7.3.3.2.25-1; otherwise,
48			the base station shall omit this field.

1	NUM_PILOTS	-	Number of pilots included in the message.
2			The base station shall set this field to the number of pilots
3			included in the message. The base station shall set this field
4			to an integer that is equal to or greater than 1.
5			
6	The base station shall include one occurrence of the following four-part record for each of		
7	the NUM_PILOTS pilots included in the message:		
8	PILOT_PN	-	Pilot PN sequence offset index.
9			The base station shall set this field to the pilot PN sequence
10			offset for this pilot in units of 64 PN chips.
11	PWR_COMB_IND	-	Power control symbol combining indicator.
12			If the Forward Traffic Channel associated with this pilot will
13			carry the same closed-loop power control subchannel bits as
14			that of the previous pilot in this message, the base station
15			shall set this field to '1'; otherwise, the base station shall set
16			this field to '0'. The base station shall set this field to '0' in
17			the first record in the pilot list.
18	FOR_FUND_CODE_CHAN	-	Forward Fundamental Channel.
19			The base station shall set this field to the code channel index
20			to be used for the Forward Fundamental Channel associated
21			with this pilot.
22	FOR_SUP_INCLUDED	-	Forward Supplemental Code Channel included.
23			The base station shall include this field if FOR_SUP_CONFIG
24			is included and is set to '10' or '11'. If included, the base
25			station shall set this field to '1' if there are Supplemental
26			Code Channels associated with this pilot.
27	FOR_SUP_CHAN_REC	-	Forward Supplemental Code Channel record
28			If FOR_SUP_INCLUDED is set to '1', the base station shall
29			include the record FOR_SUP_CHAN_REC and set its fields as
30			described below; otherwise, the base station shall omit this
31			record.
32			FOR_SUP_CHAN_REC contains information about Forward
33			Supplemental Code Channels associated with this pilot, and
34			consists of the field EXPL_CODE_CHAN, and either the
35			BASE_CODE_CHAN field or NUM_FOR_SUP occurrences of
36			the FOR_SUP_CODE_CHAN field, as shown below.
37			

EXPL_CODE_CHAN	1
BASE_CODE_CHAN	0 or 8

If EXPL\_CODE\_CHAN is equal to '1', NUM\_FOR\_SUP occurrences of the following field:

{ (NUM\_FOR\_SUP)

FOR_SUP_CODE_CHAN	8
-------------------	---

} (NUM\_FOR\_SUP)

1

2 EXPL\_CODE\_CHAN - Explicit code channel indicator.

3 The base station shall set this field to '1' to indicate explicit  
4 assignment of each Forward Supplemental Code Channel by  
5 means of the field FOR\_SUP\_CODE\_CHAN. The base station  
6 shall set this field to '0' if the mobile station is to use  
7 NUM\_FOR\_SUP adjacent code channels beginning with index  
8 BASE\_CODE\_CHAN (i.e., BASE\_CODE\_CHAN through  
9 BASE\_CODE\_CHAN + NUM\_FOR\_SUP - 1).

10 In both cases (i.e., the explicit code channel list format and  
11 range format), the order of the code channel indices is the  
12 same for all pilots specified in this message (i.e., for each  
13 pilot, the  $i^{th}$  entry in the list indicates the code channel index  
14 to be used for the  $i^{th}$  Forward Supplemental Code Channel  
15 associated with that pilot).

16 BASE\_CODE\_CHAN - Base code channel index.

17 If the EXPL\_CODE\_CHAN field is included and is set to '0',  
18 the base station shall include the field BASE\_CODE\_CHAN  
19 and set this field as described below; otherwise the base  
20 station shall omit this field.

21 The base station shall set this field to the base code channel  
22 index (see [2]) in the range of 1 to (63 - NUM\_FOR\_SUP + 1),  
23 inclusive, that the mobile station is to use as the first  
24 Forward Supplemental Code Channel associated with this  
25 pilot. The mobile station is to use code channel index  
26 (BASE\_CODE\_CHAN +  $i$  - 1), where  $i$  ranges from 1 to  
27 NUM\_FOR\_SUP, for the  $i^{th}$  Forward Supplemental Code  
28 Channel associated with this pilot.

29 FOR\_SUP\_CODE\_CHAN - Forward Supplemental Code Channel.

30 If EXPL\_CODE\_CHAN is included and is set to '1', the base  
31 station shall include NUM\_FOR\_SUP occurrences of the field  
32 FOR\_SUP\_CODE\_CHAN and set this field as described below;  
33 otherwise the base station shall omit this field.

34 The base station shall set the  $i^{th}$  occurrence of this field to  
35 the code channel index (see [2]), in the range 1 to 63  
36 inclusive, that the mobile station is to use for the  $i^{th}$  Forward  
37 Code Channel associated with this pilot.

1	FPC_SUBCHAN_GAIN	-	Forward power control subchannel relative gain.
2			The base station shall set FPC_SUBCHAN_GAIN equal to the
3			power level of the forward link power control subchannel
4			relative to that of 20 ms frames at a 9600 bps or 14400 bps
5			rate on the Forward Fundamental Channel or the Forward
6			Dedicated Control Channel indicated by FPC_PRI_CHAN <sub>S</sub> .
7			The base station shall set the value in units of 0.25 dB.
8	USE_PC_TIME	-	Use power control action time indicator.
9			This field indicates whether an explicit time
10			[PC_ACTION_TIME] at which a new value for Power Control
11			Subchannel to traffic ratio (FPC_SUBCHAN_GAIN) takes effect
12			is specified in the message.
13			If an explicit action time is specified in this message, the base
14			station shall set this field to '1'; otherwise, the base station
15			shall set this field to '0'.
16	PC_ACTION_TIME	-	Power Control Subchannel gain action time.
17			If the USE_PC_TIME field is set to '1', the base station shall
18			set this field to the System Time minus FRAME_OFFSET <sub>S</sub> ×
19			1.25 ms, in units of 80 ms (modulo 64), at which
20			FPC_SUBCHAN_GAIN specified in this message is to take
21			effect. If the USE_PC_TIME field is set to '0', the base station
22			shall omit this field.
23	RLGAIN_TRAFFIC_PILOT	-	Gain adjustment of the Reverse Traffic Channel relative to the
24			Reverse Pilot Channel power for Radio Configurations greater
25			than 2.
26			If EXTRA_PARMS is set to '1', the base station shall include
27			this field and set it to the correction factor to be used by
28			mobile stations in setting the power of a code channel,
29			expressed as a two's complement value in units of 0.125 dB
30			(see [2]); otherwise, the base station shall omit this field.
31	DEFAULT_RLAG	-	Default reverse link attribute gain used indicator.
32			If EXTRA_PARMS is set to '0', the base station shall omit this
33			field; otherwise, the base station shall set this field as follows.
34			If the mobile station is to use the default values for the
35			reverse link attribute gain, as specified in [2] after completion
36			of handoff, the base station shall set this field to '1';
37			otherwise, the base station shall set this field to '0'.
38	NNSCR_INCLUDED	-	Non-negotiable Service Configuration Record included
39			indicator.
40			The base station shall omit this field, if EXTRA_PARMS is set
41			to '0'; otherwise, the base station shall include this field and
42			set this field as described below:
43			The base station shall set this field to '1', if the Non-
44			negotiable Service Configuration record is included in this
45			message; otherwise, the base station shall set this field to '0'.

- 1 If NNSCR\_INCLUDED is included and is set to '1', the base station shall include one  
 2 occurrence of the following three-field record to specify the non-negotiable service  
 3 configuration parameters.
- 4       RECORD\_TYPE    -   Information record type.
- 5                        If NNSCR\_INCLUDED is included and is set to '1', the base  
 6 station shall include the field RECORD\_TYPE and shall set  
 7 this field to the record type value shown in Table 3.7.5-1  
 8 corresponding to the Non-Negotiable Service Configuration  
 9 information record.
- 10       RECORD\_LEN     -   Information record length.
- 11                        If NNSCR\_INCLUDED is included and is set to '1', the base  
 12 station shall include the field RECORD\_LEN and shall set  
 13 this field to the number of octets included in the type-specific  
 14 fields of the Non-Negotiable Service Configuration information  
 15 record.
- 16       Type-specific fields   -   Type-specific fields.
- 17                        If NNSCR\_INCLUDED is included and is set to '1', the base  
 18 station shall include the type specific fields and shall set  
 19 these fields as specified in 3.7.5.20 for the Non-Negotiable  
 20 Service Configuration information record.
- 21       REV\_FCH\_GATING\_MODE   -   Reverse eighth gating mode indicator.
- 22                        The base station shall set this field to '1' if the mobile station  
 23 is allowed to perform the reverse eighth gating mode after  
 24 handoff; otherwise, the base station shall set this field to '0'.
- 25       REV\_PWR\_CNTL\_DELAY\_INCL   -   Reverse power control delay included indicator.
- 26                        If REV\_FCH\_GATING\_MODE is set to '0', the base station  
 27 shall omit this field; otherwise, the base station shall include  
 28 this field and set it as follows:
- 29                        The base station shall set this field to '1' if  
 30 REV\_PWR\_CNTL\_DELAY is included in this message;  
 31 otherwise, the base station shall set this field to '0'.
- 32       REV\_PWR\_CNTL\_DELAY   -   The reverse power control delay.
- 33                        If REV\_PWR\_CNTL\_DELAY\_INCL is set to '0', the base station  
 34 shall omit this field; otherwise, the base station shall include  
 35 this field and set it as follows:
- 36                        The base station shall set this field to the closed-loop reverse  
 37 power control delay minus one (the closed-loop reverse power  
 38 control delay is the time between the end of a gated-on  
 39 reverse PCG and the beginning of the reverse PCG where the  
 40 corresponding feedback is sent on the Forward Power Control  
 41 Subchannel, (see [2]), in units of 1.25 ms.
- 42       D\_SIG\_ENCRYPT\_MODE   -   Dedicated channel encryption mode indicator.

1			If ENCRYPT_MODE is included and is set to '11', the base station
2			shall include this field and shall set it to the dedicated channel
3			signaling encryption mode, as shown in Table 3.7.4.5-1;
4			otherwise the base station shall omit this field.
5	ENC_KEY_SIZE	-	Encryption key size indication.
6			If ENCRYPT_MODE is included and is set to '10' or '11', the
7			base station shall include this field and set it to the
8			encryption key size, as shown in Table 3.7.4.5-2; otherwise,
9			the base station shall omit this field.
10	SYNC_ID_INCL	-	Service Configuration synchronization identifier included
11			indicator.
12			If either the SCR_INCLUDED field is included and is set to '1'
13			or the NNSCR_INCLUDED field is included and is set to '1',
14			the base station shall include this field; otherwise, the base
15			station shall omit this field. If included, the base station shall
16			set this field as follows:
17			The base station shall set this field to '1' if the SYNC_ID field
18			is included in this message; otherwise, the base station shall
19			set this field to '0'.
20	SYNC_ID_LEN	-	Service Configuration synchronization identifier length.
21			If the SYNC_ID_INCL field is not included or is included and
22			is set to '0', the base station shall omit this field; otherwise,
23			the base station shall include this field and set it as follows:
24			The base station shall set this field to the length (in octets) of
25			the SYNC_ID field included in this message. The base station
26			shall set this field to a value larger than zero.
27	SYNC_ID	-	Service Configuration synchronization identifier.
28			If the SYNC_ID_INCL field is not included or is included and
29			is set to '0', the base station shall omit this field; otherwise,
30			the base station shall include this field and set it as follows:
31			The base station shall set this field to the synchronization
32			identifier corresponding to the service configuration conveyed
33			by this message.
34	CS_SUPPORTED	-	Concurrent Services supported indicator.
35			If the base station supports concurrent services, the base
36			station shall set this field to '1'; otherwise, the base station
37			shall set this field to '0'.
38			

## 3.7.3.3.2.32 Resource Allocation Message

MSG\_TAG: RAM

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
FPC_PRI_CHAN	1

USE\_TIME - Use action time indicator.

This field indicates whether an explicit action time is specified in this message.

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

ACTION\_TIME - Action time.

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms, in units of 80 ms (modulo 64), at which this message is to take effect. If the USE\_TIME field is set to '0', the base station shall omit this field.

FPC\_PRI\_CHAN - Power Control Subchannel indicator.

The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel. The base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

If the F-CPCCH is assigned, the base station will multiplex the Power Control Subchannel on the F-CPCCH; otherwise:

If this field is set to '0', the base station will multiplex the Power Control Subchannel on the Forward Fundamental Channel; otherwise, the base station will multiplex the Power Control Subchannel on the Forward Dedicated Control Channel.

## 3.7.3.3.2.33 Resource Allocation Mini Message

MSG\_TAG: RAMM

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
FPC_PRI_CHAN	1

USE\_TIME - Use action time indicator.

This field indicates whether an ACTION\_TIME is specified in this message.

If an ACTION\_TIME is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

ACTION\_TIME - Action time.

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$  ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE\_TIME field is set to '0', the base station shall omit this field.

FPC\_PRI\_CHAN - Power Control Subchannel indicator.

The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel. The base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

If the F-CPCCH is assigned, the base station will multiplex the Power Control Subchannel on the F-CPCCH; otherwise:

If this field is set to '0', the base station will multiplex the Power Control Subchannel on the Forward Fundamental Channel; otherwise, the base station will multiplex the Power Control Subchannel on the Forward Dedicated Control Channel.

$\} (NUM\_LPM\_ENTRIES + 1)$   
 $\} (NUM\_FLOW\_DISCRIMINATOR+1) \text{ or } 1$   
 $\} (NUM\_BCMC\_PROGRAMS + 1)$

USE\_TIME - Use action time indicator.

This field indicates whether an explicit action time is specified in this message.

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

ACTION\_TIME - Action time.

If the USE\_TIME field is set to '1', the base station shall set this field to the System Time minus  $FRAME\_OFFSET_s \times 1.25$  ms, in units of 80 ms (modulo 64), at which the message is to take effect. If the USE\_TIME field is set to '0', the base station shall omit this field.

CH\_IND - Channel Indicator.

The base station shall set this field as shown in Table 3.7.3.3.2.34-1, to release physical resources.

**Table 3.7.3.3.2.34-1. Channel Indicator**

CH_IND (binary)	Physical Resource(s) Released
000	No Fundamental Channel, Dedicated Control Channel, or Continuous Reverse Pilot Channel released
001	Fundamental Channel
010	Dedicated Control Channel
011	Reserved
100	Continuous Reverse Pilot Channel
101	Fundamental Channel and Continuous Reverse Pilot Channel
110	Reserved
111	Fundamental Channel, Dedicated Control Channel, and Continuous Reverse Pilot Channel

GATING\_RATE\_INCL - Reverse pilot gating rate included flag.

1 The base station shall set this field to '1' if the  
 2 PILOT\_GATING\_RATE field is included, otherwise it shall set  
 3 this field to '0'.

4 PILOT\_GATING\_RATE - Actual Reverse Pilot gating Rate.

5 If the GATING\_RATE\_INCL field is set to '1', then the base  
 6 station shall set this field to the PILOT\_GATING\_RATE field  
 7 shown in Table 3.7.3.3.2.34-2 corresponding to the actual  
 8 gating rate on the Reverse Pilot Channel; otherwise, the base  
 9 station shall omit this field.

10

11 **Table 3.7.3.3.2.34-2. Actual Reverse Pilot Gating rate**

PILOT_GATING_RATE field (binary)	Meaning
00	Gating rate 1
01	Gating rate $\frac{1}{2}$
10	Gating rate $\frac{1}{4}$
11	Reserved

12

13 USE\_EXT\_CH\_IND - Use EXT\_CH\_IND to set channel configuration

14 The base station shall set this field to '1' if the EXT\_CH\_IND  
 15 field is included in this message and is used to set the  
 16 channel configuration; otherwise, the base station shall set  
 17 this field to '0'.

18 EXT\_CH\_IND - Extended Channel Indicator.

19 If the USE\_EXT\_CH\_IND field is set to '0', the base station  
 20 shall omit this field; otherwise, the base station shall include  
 21 this field and set it as follows:

22 The base station shall set this field to the desired channel  
 23 configuration shown in Table 2.7.1.3.2.4-11.

24 PDCH\_CONTROL\_HOLD - Packet Data Channel Control Hold mode indication.

25 If the USE\_EXT\_CH\_IND field is set to '0', the base station  
 26 shall omit this field; otherwise, the base station shall include  
 27 this field and set it as follows:

28 The base station shall set this field to '1' to instruct the  
 29 mobile station to transition to the Packet Data Channel  
 30 Control Hold Mode.

31 If EXT\_CH\_IND signals the allocation of F-FCH, this field  
 32 shall be set to '0'.

33 Table 3.7.3.3.2.34-3 shows the valid combinations of CH\_IND, EXT\_CH\_IND, and  
 34 PDCH\_CONTROL\_HOLD.

1 **Table 3.7.3.3.2.34-3. Valid CH\_IND, EXT\_CH\_IND, and PDCH\_CONTROL\_HOLD**

1	SWITCHING_PARMES_INCL	- R-CQICH switching parameters included indicator.
2		If the USE_EXT_CH_IND or the GATING_RATE_INCL field is
3		set to '0', the base station shall omit this field; otherwise, the
4		base station shall include this field and set it as follows:
5		The base station shall set this field to '1' if the parameters for
6		R-CQICH soft and softer switching are included in this
7		message; otherwise, the base station shall set this field to '0'.
8	NUM_SOFT_SWITCHING_FRAMES_CHM	- Number of frames for R-CQICH soft
9		switching while in Control Hold.
10		If SWITCHING_PARMES_INCL is not included or included and
11		set to '0', then the base station shall omit this field;
12		otherwise, the base station shall include this field and set it
13		as follows:
14		The base station shall set this field to the duration of the cell
15		switching period, in units of 20 ms, minus one, during which
16		the mobile station, while in Control Hold, is to transmit the
17		cell switch sequence on the R-CQICH when it switches
18		between two pilots which are in different groups.
19	NUM_SOFTER_SWITCHING_FRAMES_CHM	- Number of frames for R-CQICH softer
20		switching while in Control Hold.
21		If SWITCHING_PARMES_INCL is not included or included and
22		set to '0', then the base station shall omit this field;
23		otherwise, the base station shall include this field and set it
24		as follows:
25		The base station shall set this field to the duration of the cell
26		switching period, in units of 20 ms, minus one, during which
27		the mobile station, while in Control Hold, is to transmit the
28		cell switch sequence on the R-CQICH when it switches
29		between two pilots which are in the same group.
30	DIRECT_TO_IDLE_INFO_INCL	- Direct to Idle information included.
31		If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
32		'111' or the physical channels indicated by the two least
33		significant bits of CH_IND includes all the physical channels
34		(FCH, DCCH, or both) currently being processed by the
35		mobile station, the base station shall set this field as follows:
36		• If DIRECT TO IDLE record is included, the base station
37		shall set this field to '1'; otherwise base station shall set
38		this field to '0'.
39		Otherwise the base station shall set this field to '0'.
40	RELEASE_TYPE	- Release type.
41		If DIRECT_TO_IDLE_INFO_INCL is set to '0', the base station
42		shall omit this field; otherwise, the base station shall include
43		this field and shall set it as follows:
44		The base station shall set this field as specified in Table
45		3.7.3.3.2.34-4.

1

**Table 3.7.3.3.2.34-4 Release Type**

<b>Value (binary)</b>	<b>Release Type/Usage</b>
000	Release to <i>Mobile Station Idle State</i> on the PCH
001	Release to <i>Mobile Station Idle State</i> on the Primary BCCH.
010	Release to <i>Mobile Station Idle State</i> on the Primary BCCH that supports Transmit Diversity.
011	Release to <i>System Determination Substate</i> of the <i>Mobile Station Initialization State</i> .
100-111	Reserved.

2

3

SID - System identification.

4

5

6

7

8

If RELEASE\_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it to the system identification number for the wireless system that the mobile station is being directed to (see 2.6.5.2).

9

NID - Network identification.

10

11

12

13

If RELEASE\_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it as follows:

14

15

This field serves as a sub-identifier of a system as defined by the owner of the SID.

16

17

18

The base station shall set this field to the network identification number for the network that the mobile station is being directed to (see 2.6.5.2).

19

FREQ\_INCL - Frequency included indicator.

20

21

22

23

If RELEASE\_TYPE field is not included or is included and equals '011', the base station shall omit this field; otherwise, the base station shall include this field and shall set it as follows:

24

25

26

If the CDMA\_FREQ and BAND\_CLASS fields are included, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

27

CDMA\_FREQ - Frequency assignment.

1			If the FREQ_INCL field is not included or is included and set
2			to '0', the base station shall omit this field; otherwise, the
3			base station shall set this field to the CDMA Channel number
4			corresponding to the CDMA frequency assignment for the
5			CDMA Channel containing the Paging Channel or Primary
6			Broadcast Control Channel.
7	BAND_CLASS	-	Band class.
8			If the FREQ_INCL field is not included or is included and set
9			to '0', the base station shall omit this field; otherwise, the
10			base station shall set this field to the CDMA band class, as
11			specified in [30], corresponding to the CDMA frequency
12			assignment for the CDMA Channel containing the Paging
13			Channel or Primary Broadcast Control Channel.
14	PAGE_CH	-	Paging Channel.
15			If RELEASE_TYPE field is included and equals '000', the base
16			station shall set this field to the Paging Channel number of
17			the Paging Channel that the mobile station is being directed
18			to; otherwise, the base station shall omit this field.
19	PRAT	-	Paging Channel data rate.
20			If RELEASE_TYPE field is included and equals '000', the base
21			station shall set this field to the PRAT field value shown in
22			Table 3.7.2.3.2.26-1 corresponding to the data rate used by
23			the Paging Channel that the mobile station is being directed
24			to; otherwise, the base station shall omit this field.
25	SR1_BCCH_CODE_CHAN_NON_TD	-	Walsh code for the Spreading Rate 1 BCCH in non
26			Transmit Diversity mode.
27			If RELEASE_TYPE field is not included or is included and is
28			not equal to '001', the base station shall omit this field;
29			otherwise, the base station shall set this field to the Walsh
30			code corresponding to the Spreading Rate 1 BCCH in non
31			Transmit Diversity mode that the mobile station is being
32			directed to.
33	SR1_CRAT_NON_TD	-	BCCH code rate in non Transmit Diversity mode for
34			Spreading Rate 1.
35			If RELEASE_TYPE field is not included or is included and is
36			not equal to '001', the base station shall omit this field;
37			otherwise the base station shall set this field as follows:
38			The base station shall set this field to '0' if the BCCH Code
39			Rate is 1/4 (see [2]). The base station shall set this field to '1'
40			if the BCCH code rate is 1/2 (see [2]).
41	SR1_BRAT_NON_TD	-	BCCH data rate in non Transmit Diversity mode for
42			Spreading Rate 1.
43			If RELEASE_TYPE field is not included or is included and is
44			not equal to '001', the base station shall omit this field;
45			otherwise, the base station shall set this field as follows:

1		The base station shall set this field to the BRAT field value
2		shown in Table 3.7.2.3.2.26-2 corresponding to the data rate
3		used by the Primary Broadcast Control Channel that the
4		mobile station is being directed to.
5	SR1_TD_MODE	- Spreading Rate 1 Transmit Diversity Mode.
6		If RELEASE_TYPE field is included and equals '010', the base
7		station shall set this field to the value shown in Table
8		3.7.2.3.2.26-3; otherwise, the base station shall omit this
9		field.
10	SR1_BCCH_CODE_CHAN_TD	- Walsh Code for Spreading Rate 1 BCCH in Transmit
11		Diversity mode.
12		If RELEASE_TYPE field is included and equals '010', the base
13		station shall set this field to the Walsh Code corresponding to
14		the Spreading Rate 1 BCCH in Transmit Diversity mode that
15		the mobile station is being directed to; otherwise, the base
16		station shall omit this field
17	SR1_CRAT_TD	- BCCH code rate in Transmit Diversity mode for Spreading
18		Rate 1.
19		If RELEASE_TYPE field is not included or is included and is
20		not equal to '010', the base station shall omit this field;
21		otherwise, the base station shall set this field as follows:
22		The base station shall set this field to '0' if the BCCH Code
23		Rate is $\frac{1}{4}$ (see [2]). The base station shall set this field to '1' if
24		the BCCH Code Rate is $\frac{1}{2}$ (see [2]).
25	SR1_BRAT_TD	- BCCH data rate in Transmit Diversity mode for Spreading
26		Rate 1.
27		If RELEASE_TYPE field is included and equals '010', the base
28		station shall set this field to the BRAT field value shown in
29		Table 3.7.2.3.2.26-2 corresponding to the data rate used by
30		the Primary Broadcast Control Channel that the mobile
31		station is being directed to; otherwise, the base station shall
32		omit this field.
33	SR1_TD_POWER_LEVEL	- Spreading Rate 1 TD transmit power level.
34		If RELEASE_TYPE field is not included or is included and is
35		not equal to '010', the base station shall omit this field;
36		otherwise, the base station shall set this field as follows:
37		The base station shall set this field to the TD transmit power
38		level relative to that of the Forward Pilot Channel, as specified
39		in Table 3.7.2.3.2.26-4.
40	NUM_PILOTS_D2I_INCL	- Number of Pilots (Direct to Idle) Included Indicator.
41		If RELEASE_TYPE field is not included or is included and is
42		equal to '011', the base station shall omit this field;
43		otherwise, the base station shall include this field and shall
44		set it as follows:

1		The base station shall set this field to '0' to indicate any pilot
2		can be used for direct to idle transition; otherwise, the base
3		station shall set this field to '1'.
4	NUM_PILOTS_D2I	- Number of Pilots (Direct to Idle).
5		If NUM_PILOTS_D2I_INCL field is not included or is included
6		and is equal to '0', the base station shall omit this field;
7		otherwise, the base station shall include this field and shall
8		set it as follows:
9		The base station shall set this field to '000' to indicate any
10		pilot in the active set can be used for direct to idle transition;
11		otherwise, the base station shall set this field to number of
12		pilots included in this DIRECT TO IDLE record.
13	If NUM_PILOTS_D2I field is included, the base station shall include NUM_PILOTS_D2I	
14	occurrences of the following record:	
15	PILOT_PN	- Pilot PN sequence offset index.
16		The base station shall set this field to the pilot PN sequence
17		offset for this pilot in units of 64 PN chips.
18	RER_MODE_ENABLED	- Radio environment reporting mode enabled indicator.
19		If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
20		'111', or the physical channels indicated by the two least
21		significant bits of CH_IND includes all the physical channels
22		(FCH, DCCH, or both) currently being processed by the
23		mobile station, the base station shall set this field as follows:
24		• If the radio environment reporting mode is enabled in this
25		message, the base station shall set this field to '1';
26		otherwise, the base station shall set this field to '0'.
27		Otherwise, the base station shall set this field to '0'.
28	RER_MAX_NUM_MSG_IDX	- Maximum number of <i>Radio Environment Messages</i>
29		permitted while in radio environment reporting mode index.
30		If RER_MODE_ENABLED is set to '0', the base station shall
31		omit this field; otherwise, the base station shall include this
32		field and set it as follows:
33		The base station shall set this field to the maximum number
34		of <i>Radio Environment Messages</i> that the mobile station is
35		allowed to transmit while in radio environment reporting
36		mode, expressed as $2^{\text{RER\_MAX\_NUM\_MSG\_IDX}}$ where $0 \leq$
37		$\text{RER\_MAX\_NUM\_MSG\_IDX} \leq 6$ . If the mobile station is
38		allowed to transmit an unlimited number of <i>Radio</i>
39		<i>Environment Message</i> , then the base station shall set this
40		field to '111'.
41	RER_TIME	- Radio environment report timer value.
42		If RER_MODE_ENABLED is set to '0', the base station shall
43		omit this field; otherwise, the base station shall include this
44		field and set it as follows:

The base station shall set this field to the value of the radio-environment report timer, expressed as  $2^{\text{RER\_TIME}}$  where  $0 \leq \text{RER\_TIME} \leq 6$  and in units of RER\_TIME\_UNIT. If the value of the radio-environment report timer is infinite, then the base station shall set this field to '111'.

**RER\_TIME\_UNIT** - Radio environment report timer value units.

If RER\_MODE\_ENABLED is set to '1' and RER\_TIME is not set to '111', the base station shall include this field and shall set it according to Table 3.7.3.3.2.34-5; otherwise, the base station shall omit this field.

**Table 3.7.3.3.2.34-5 RER\_TIME\_UNIT values**

<b>RER_TIME _UNIT (binary)</b>	<b>Meaning</b>
00	Seconds
01	Minutes
10	Hours
11	Reserved

**MAX\_RER\_PILOT\_LIST\_SIZE** - Maximum number of pilots to maintain in RER\_PILOT\_LIST.

If RER\_MODE\_ENABLED is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the maximum number of pilots that the mobile station is to maintain in RER\_PILOT\_LIST (see [4]). The base station shall set this field to a value in the range 1 to 6 inclusive.

**RSC\_MODE\_SUPPORTED** - Reduced slot cycle mode supported indicator.

If USE\_EXT\_CH\_IND is equal to '0' and CH\_IND is equal to '111', or the physical channels indicated by the two least significant bits of CH\_IND includes all the physical channels (FCH, DCCH, or both) currently being processed by the mobile station, the base station shall set this field as follows:

- If the fields related to reduced slot cycle mode are included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

Otherwise, the base station shall set this field to '0'.

1	MAX_RSC_END_TIME_UNIT	-	Maximum reduced slot cycle mode end time unit.
2			If RSC_MODE_SUPPORTED is equal to '0', the base station
3			shall omit this field; otherwise, the base station shall set this
4			field according to Table 2.7.3.5-1 to indicate the units of the
5			MAX_RSC_END_TIME_VALUE field.
6	MAX_RSC_END_TIME_VALUE	-	Maximum reduced slot cycle mode end time value.
7			If RSC_MODE_SUPPORTED is equal to '0', the base station
8			shall omit this field; otherwise, the base station shall include
9			this field and set it as follows:
10			The base station shall set this field to the maximum system
11			time, in units of time specified by
12			MAX_RSC_END_TIME_UNIT (modulo 16), at which the mobile
13			station is to exit the reduced slot cycle mode.
14	REQ_RSCI_INCL	-	REQ_RSCI included indicator.
15			If RSC_MODE_SUPPORTED is equal to '1', the base station
16			shall include this field and set it as specified below;
17			otherwise, the base station shall omit this field.
18			If the base station is requesting the mobile station to operate
19			in the reduced slot cycle mode following release of the traffic
20			channel, the base station shall set this field to '1'; otherwise,
21			the base station shall set this field to '0'.
22	REQ_RSCI	-	Requested reduced slot cycle index.
23			If REQ_RSCI_INCL is included and equal to '1', the base
24			station shall set this field as specified in Table 2.7.1.3.2.1-8
25			to the reduced slot cycle index value that it is requesting the
26			mobile station to operate with; otherwise, the base station
27			shall omit this field.
28	IGNORE_QPCH	-	Ignore QPCH indicators.
29			If RSC_MODE_SUPPORTED is equal to '1', the base station
30			shall include this field and set it as specified below;
31			otherwise, the base station shall omit this field.
32			The base station shall set this field to '1' to indicate to the
33			mobile station that it is not to check its assigned paging
34			indicators on the QPCH while operating in the reduced slot
35			cycle mode if the reduced slot cycle index is -3 or -4;
36			otherwise, the base station shall set this field to '0'.
37	TKZ_MODE_ENABLED	-	Tracking zone mode enabled indicator.
38			If USE_EXT_CH_IND is equal to '0' and CH_IND is equal to
39			'111', or the physical channels indicated by the two least
40			significant bits of CH_IND includes all the physical channels
41			(FCH, DCCH, or both) currently being processed by the
42			mobile station, the base station shall set this field as follows:
43			• If the tracking zone mode is enabled in this message, the
44			base station shall set this field to '1'; otherwise, the base
45			station shall set this field to '0'.

1		Otherwise, the base station shall set this field to '0'.
2	TKZ_ID	- Tracking zone identifier.
3		If TKZ_MODE_ENABLED is set to '0', the base station shall
4		omit this field; otherwise, the base station shall set this field
5		to its tracking zone identifier.
6	TKZ_MAX_NUM_MSG_IDX	- Maximum number of <i>Radio Environment Messages</i>
7		permitted while in tracking zone mode index.
8		If TKZ_MODE_ENABLED is set to '0', the base station shall
9		omit this field; otherwise, the base station shall include this
10		field and set it as follows:
11		The base station shall set this field to the maximum number
12		of <i>Radio Environment Messages</i> that the mobile station is
13		allowed to transmit while in tracking zone mode, expressed
14		as $2^{\text{TKZ\_MAX\_NUM\_MSG\_IDX}}$ where 0 •
15		TKZ_MAX_NUM_MSG_IDX • 6. If the mobile station is
16		allowed to transmit an unlimited number of <i>Radio</i>
17		<i>Environment Messages</i> , then the base station shall set this
18		field to '111'.
19	TKZ_UPDATE_PRD	- Tracking zone update period.
20		If TKZ_MODE_ENABLED is set to '0', the base station shall
21		omit this field; otherwise, the base station shall include this
22		field and set it as follows:
23		The base station shall set this field such that the desired
24		tracking zone update timer value is $2^{\text{TKZ\_UPDATE\_PRD}+6}$
25		seconds. If the value of the timer is infinite, then the base
26		station shall set this field to '1111'.
27	TKZ_LIST_LEN	- Tracking zone list length.
28		If TKZ_MODE_ENABLED is set to '0', the base station shall
29		omit this field; otherwise, the base station shall include this
30		field and set it as follows:
31		The base station shall set this field to the length of the
32		tracking zone list minus one.
33	TKZ_TIMER	- Tracking zone timer.
34		If TKZ_MODE_ENABLED is set to '0', the base station shall
35		omit this field; otherwise, the base station shall include this
36		field and set it as follows:
37		The base station shall set this field to the value of the
38		tracking zone timer (in units of seconds) minus one.
39	TBR_RAND_SUPPR_ENABLE	- Timer Based Registration Randomization Suppression
40		enable indicator.
41		The base station shall set this field to '1', if the mobile station
42		is allowed to suppress timer-based registration randomization
43		in order to eliminate unnecessary timer-based registrations
44		(see 2.6.5.1.3.1); otherwise, the base station shall set this
45		field to '0'.

1	TBR_RAND_WINDOW	-	Timer-based registration randomization window.
2			The base station shall set this field to the value shown in
3			Table 2.6.5.1.3-1 corresponding to the randomization for
4			timer-based registration (see 2.6.5.1.3).
5	BCMC_INFO_INCL	-	BCMC information Included Indicator
6			If RELEASE_TYPE field is not included or is included and is
7			equal to '011', the base station shall omit this field;
8			otherwise, the base station shall include this field and shall
9			set it as follows:
10			The base station shall set this field to '1' if BCMC information
11			is included in this message; otherwise, the base station shall
12			set this field to '0'.
13			The BCMC information included in this message is applicable
14			to all the pilots indicated by the DIRECT TO IDLE record in
15			this message.
16	NUM_FSCH	-	Number of Forward Supplemental Channels.
17			If BCMC_INFO_INCL field is not included or is included and
18			is equal to '0', the base station shall omit this field; otherwise,
19			the base station shall include this field and shall set it as
20			follows:
21			The base station shall set this field to the number of Forward
22			Supplemental Channels for which information is included in
23			this message minus one.
24	NUM_BCMC_PROGRAMS	-	Number of BCMC Programs
25			If BCMC_INFO_INCL field is not included or is included and
26			is equal to '0', the base station shall omit this field; otherwise,
27			the base station shall include this field and shall set it as
28			follows:
29			The base station shall set this field to the number of BCMC
30			programs for which information is included in this message
31			minus one.
32			
33	If NUM_FSCH field is included, the base station shall include NUM_FSCH plus one		
34	occurrences of the following variable length record:		
35	FSCH_RECORD_LEN	-	Forward Supplemental Channel record length.
36			The base station shall set this field to the number of octets
37			included in this Forward Supplemental Channel record
38			including this field.
39	FSCH_CODE_CHAN	-	Code channel index of the Forward Supplemental Channel.
40			The base station shall set this field to the code channel index
41			of this Forward Supplemental Channel as specified in [2].
42	FSCH_MUX_OPTION	-	Multiplex Option of the Forward Supplemental Channel

1		The base station shall set this field to the multiplex option of
2		this Forward Supplemental Channel as specified in [3].
3	FSCH_RC	- Radio configuration of the Forward Supplemental Channel.
4		The base station shall set this field to the radio configuration
5		of this Forward Supplemental Channel as specified in [2].
6	FSCH_CODING	- Coding type of the Forward Supplemental Channel.
7		The base station shall set this field to '1' if Convolutional
8		Coding will be used when the number of channel bits per
9		frame is less than 360 and Turbo Coding when the number of
10		channel bits per frame is equal to or greater than 360. The
11		base station shall set this field to '0' if Convolution Coding
12		will be used for all block sizes.
13	FSCH_OUTERCODE_INCL	- Forward Supplemental Channel Outer Code included
14		indicator.
15		The base station shall set this field to '1' if the Forward
16		Supplemental Channel outer code information is included in
17		this message; otherwise, the base station shall set this field
18		to '0'.
19	FSCH_OUTERCODE_RATE	- Outer Code Rate of the Forward Supplemental Channel.
20		If the FSCH_OUTERCODE_INCL field is set to '0', the base
21		station shall omit this field; otherwise, the base station shall
22		include this field and set it as follows:
23		The base station shall set this field to the outer code rate of
24		the Forward Supplemental Channel as specified in Table
25		3.7.2.3.2.38-3.
26	FSCH_OUTERCODE_OFFSET	- Outer Coding Buffer Offset of the Forward
27		Supplemental Channel.
28		If the FSCH_OUTERCODE_INCL field is set to '0', the base
29		station shall omit this field; otherwise, the base station shall
30		include this field and set it as follows:
31		The base station shall set this field to the outer coding buffer
32		offset of the Forward Supplemental Channel in units of 20ms
33		as specified in [2].
34	FSCH_RATE	- Data Rate of the Forward Supplemental Channel.
35		The base station shall set this field to the data rate of this
36		Forward Supplemental Channel as specified in [2].
37	FSCH_FRAME_40_USED	- Forward Supplemental Channel 40ms frame used indicator.
38		The base station shall set this field to '1' if 40ms frame is
39		used on this Forward Supplemental Channel; otherwise, the
40		base station shall set this field to '0'.
41		The base station shall not set both FSCH_FRAME_40_USED
42		and FSCH_FRAME_80_USED fields to '1'.
43	FSCH_FRAME_80_USED	- Forward Supplemental Channel 80ms frame used indicator.

1                   The base station shall set this field to '1' if 80ms frame is  
2                   used on this Forward Supplemental Channel; otherwise, the  
3                   base station shall set this field to '0'.

4                   The base station shall not set both FSCH\_FRAME\_40\_USED  
5                   and FSCH\_FRAME\_80\_USED fields to '1'.

6

7   FSCH\_RECORD\_RESERVED -   Forward Supplemental Channel record Reserved bits.

8                   The base station shall add reserved bits as needed in order to  
9                   make the length of this Forward Supplemental Channel  
10                  record equal to an integer number of octets. The base station  
11                  shall set these bits to '0'.

12   If NUM\_BCMC\_PROGRAMS field is included, the base station shall include  
13   NUM\_BCMC\_PROGRAMS plus one occurrences of the following variable length record:

14   BCMC\_PROGRAM\_ID\_LEN   -   Length of BCMC\_PROGRAM\_ID field

15                   The base station shall set this field to one less than the  
16                   length in bits of the BCMC\_PROGRAM\_ID of this program.

17   BCMC\_PROGRAM\_ID       -   BCMC program Identifier

18                   The length of this field shall be one more than the value of  
19                   BCMC\_PROGRAM\_ID\_LEN bits.

20                   The base station shall set this field to the BCMC program  
21                   identifier of this program.

22   BCMC\_FLOW\_DISCRIMINATOR\_LEN   -   Length of BCMC\_FLOW\_DISCRIMINATOR field

23                   The base station shall set this field to the length in bits of the  
24                   BCMC\_FLOW\_DISCRIMINATOR of this program.

25   NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators.

26                   The length of this field shall be determined by the value of  
27                   the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
28                   BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
29                   is omitted; otherwise, the length of this field shall be  
30                   BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

31                   The base station shall set this field to the number of flow  
32                   discriminators included for this program minus one.

33   If NUM\_FLOW\_DISCRIMINATOR field is included, the base station shall include  
34   NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
35   otherwise, the base station shall include 1 occurrence of the following variable length  
36   record:

37   BCMC\_FLOW\_DISCRIMINATOR -   BCMC flow discriminator

38                   The length of this field shall be determined by the value of  
39                   the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
40                   BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
41                   is omitted; otherwise, the length of this field shall be  
42                   BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

1			The base station shall set this field to the BCMC flow
2			discriminator of this flow.
3	NUM_LPM_ENTRIES	-	Number of Logical-to-Physical Mapping Entries
4			The base station shall set this field to one less than the
5			number of logical to physical mapping included for this
6			BCMC flow.
7	The base station shall include NUM_LPM_ENTRIES plus one occurrences of the following		
8	variable-length record:		
9	FSCH_ID	-	Forward Supplemental Channel Identifier
10			The base station shall set this field to the identifier
11			corresponding to the Forward Supplemental Channel on
12			which the above BCMC flow is being transmitted.
13			The F-SCH included first in this message is given the
14			FSCH_ID of '0000000', the second one listed is given the
15			FSCH_ID of '0000001', and so on.
16	BSR_ID	-	BCMC Service Reference Identifier
17			The base station shall set this field to the BCMC Service
18			Reference identifier corresponding to this BCMC flow on this
19			Forward Supplemental Channel.
20			The base station shall not set this field to a value of 0.
21			
22			

1 3.7.3.3.2.35 Extended Release Mini Message

2 MSG\_TAG: ERMM

3

Field	Length (bits)
USE_TIME	1
ACTION_TIME	0 or 6
CH_IND	3
GATING_RATE_INCL	1
PILOT_GATING_RATE	0 or 2
USE_EXT_CH_IND	1
EXT_CH_IND	0 or 5
PDCH_CONTROL_HOLD	0 or 1

4

5 USE\_TIME - Use action time indicator.

6 This field indicates whether an ACTION\_TIME is specified in  
7 this message.

8 If an ACTION\_TIME is specified in this message, the base  
9 station shall set this field to '1'; otherwise, the base station  
10 shall set this field to '0'.

11 ACTION\_TIME - Action time.

12 If the USE\_TIME field is set to '1', the base station shall set  
13 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
14 ms, in units of 80 ms (modulo 64), at which the message is to  
15 take effect. If the USE\_TIME field is set to '0', the base station  
16 shall omit this field.

17 CH\_IND - Channel Indicator.

18 The base station shall set this field as shown in Table  
19 3.7.3.3.2.34-1, to release physical resources.

20 GATING\_RATE\_INCL - Reverse pilot gating rate included flag.

21 The base station shall set this field to '1' if the  
22 PILOT\_GATING\_RATE field is included, otherwise it shall set  
23 this field to '0'.

24 PILOT\_GATING\_RATE - Actual Reverse Pilot gating Rate.

25 If the GATING\_RATE\_INCL field is set to '1', then the base  
26 station shall set this field to the PILOT\_GATING\_RATE field  
27 shown in Table 3.7.3.3.2.34-2 corresponding to the actual  
28 gating rate on the Reverse Pilot Channel; otherwise, the base  
29 station shall omit this field.

30 USE\_EXT\_CH\_IND - Use EXT\_CH\_IND to set channel configuration

1		The base station shall set this field to '1' if the EXT_CH_IND
2		is included in this message and is used to set the channel
3		configuration; otherwise, the base station shall set this field
4		to '0'.
5	EXT_CH_IND	- Extended Channel Indicator.
6		If the USE_EXT_CH_IND field is set to '0', the base station
7		shall omit this field; otherwise, the base station shall include
8		this field and set it as follows:
9		The base station shall set this field to the desired channel
10		configuration shown in Table 2.7.1.3.2.4-11.
11	PDCH_CONTROL_HOLD	- Packet Data Channel Control Hold mode indication.
12		If the USE_EXT_CH_IND field is set to '0', the base station
13		shall omit this field; otherwise, the base station shall include
14		this field and set it as follows:
15		The base station shall set this field to '1' to instruct the
16		mobile station to transition to the Packet Data Channel
17		Control Hold Mode.
18		If EXT_CH_IND signals the allocation of F-FCH, this field
19		shall be set to '0'.
20	Table 3.7.3.3.2.34-3 shows the valid combinations of CH_IND, EXT_CH_IND, and	
21	PDCH_CONTROL_HOLD.	
22

2

3

USE\_TIME - Use action time indicator.

4

5

This field indicates whether an explicit action time is specified in this message.

6

7

8

If an explicit action time is specified in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

9

ACTION\_TIME - Action time.

1			If the USE_TIME field is set to '1', the base station shall set
2			this field to the System Time minus $\text{FRAME\_OFFSET}_S \times 1.25$
3			ms, in units of 80 ms (modulo 64), at which the handoff is to
4			take effect. If the USE_TIME field is set to '0', the base station
5			shall omit this field.
6	HDM_SEQ	-	<i>Universal Handoff Direction Message</i> sequence number.
7			This field is used by the mobile station in the <i>Power</i>
8			<i>Measurement Report Message</i> to identify the order in which
9			the reported pilot strengths are sent.
10			The base station shall set this field to the handoff message
11			sequence number, as specified in 2.6.6.2.2.10.
12	PARMS_INCL	-	Parameters included indicator.
13			The base station shall set this field to '1', if P_REV and
14			SERV_NEG_TYPE are included; otherwise, the base station
15			shall set this field '0'.
16	P_REV	-	Protocol revision level.
17			If PARMS_INCL is set to '1', the base station shall set this
18			field to the base station protocol revision level that the mobile
19			station is to use after completion of the handoff; otherwise,
20			the base station shall omit this field.
21	SERV_NEG_TYPE	-	Service negotiation type.
22			If PARMS_INCL is set to '1', the base station shall include the
23			field SERV_NEG_TYPE and set this field as described below;
24			otherwise, the base station shall omit this field.
25			If the mobile station is to use service negotiation, the base
26			station shall set this field to '1'. If the mobile station is to use
27			service option negotiation, the base station shall set this field
28			to '0'.
29	SEARCH_INCLUDED	-	Pilot search parameters included.
30			If the mobile station is to change its pilot search parameters,
31			the base station shall set this field to '1'; otherwise, the base
32			station shall set this field to '0'.
33	SRCH_WIN_A	-	Search window size for the Active Set and Candidate Set.
34			If SEARCH_INCLUDED is set to '1', the base station shall
35			include the field SRCH_WIN_A and set this field to the
36			window size parameter shown in Table 2.6.6.2.1-1
37			corresponding to the number of PN chips that the mobile
38			station is to search for pilots in the Active Set and the
39			Candidate Set; otherwise, the base station shall omit this
40			field.
41	SRCH_WIN_N	-	Search window size for the Neighbor Set.

1			If SEARCH_INCLUDED is set to '1', the base station shall
2			include the field SRCH_WIN_N and set this field to the
3			window size parameter shown in Table 2.6.6.2.1-1
4			corresponding to the search window size to be used by mobile
5			stations for the Neighbor Set after completion of the handoff;
6			otherwise, the base station shall omit this field.
7	SRCH_WIN_R	-	Search window size for the Remaining Set.
8			If SEARCH_INCLUDED is set to '1', the base station shall
9			include the field SRCH_WIN_R and set this field to the
10			window size parameter shown in Table 2.6.6.2.1-1
11			corresponding to the search window size to be used by mobile
12			stations for the Remaining Set after completion of the
13			handoff; otherwise, the base station shall omit this field.
14	T_ADD	-	Pilot detection threshold.
15			This value is used by the mobile station to trigger the transfer
16			of a pilot from the Neighbor Set or Remaining Set to the
17			Candidate Set (see 2.6.6.2.6) and to trigger the sending of the
18			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
19			<i>Strength Measurement Message</i> initiating the handoff process
20			(see 2.6.6.2.5.2).
21			If SEARCH_INCLUDED is set to '1', the base station shall
22			include the field T_ADD and set this field to the pilot
23			detection threshold, expressed as an unsigned binary
24			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base
25			station shall omit this field.
26	T_DROP	-	Pilot drop threshold.
27			This value is used by mobile stations to start a handoff drop
28			timer for pilots in the Active Set and the Candidate Set (see
29			2.6.6.2.3).
30			If SEARCH_INCLUDED is set to '1', the base station shall
31			include the field T_DROP and set this field to the pilot drop
32			threshold, expressed as an unsigned binary number equal to
33			$\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ ; otherwise, the base station shall omit
34			this field.
35	T_COMP	-	Active Set versus Candidate Set comparison threshold.
36			The mobile station transmits a <i>Pilot Strength Measurement</i>
37			<i>Message</i> or <i>Extended Pilot Strength Measurement Message</i>
38			when the strength of a pilot in the Candidate Set exceeds that
39			of a pilot in the Active Set by this margin (see 2.6.6.2.5.2).
40			If SEARCH_INCLUDED is set to '1', the base station shall
41			include the field T_COMP and set this field to the threshold
42			Candidate Set pilot to Active Set pilot ratio, in units of 0.5 dB;
43			otherwise, the base station shall omit this field.

1	T_TDROP	-	Drop timer value.
2			Timer value after which an action is taken by the mobile
3			station for a pilot that is a member of the Active Set or
4			Candidate Set, and whose strength has not become greater
5			than T_DROP. If the pilot is a member of the Active Set, a
6			<i>Pilot Strength Measurement Message</i> or <i>Extended Pilot</i>
7			<i>Strength Measurement Message</i> is issued. If the pilot is a
8			member of the Candidate Set, it will be moved to the Neighbor
9			Set.
10			If SEARCH_INCLUDED is set to '1', the base station shall
11			include the field T_TDROP and set this field to the T_TDROP
12			value shown in Table 2.6.6.2.3-1 corresponding to the drop
13			timer value to be used by the mobile station; otherwise, the
14			base station shall omit this field.
15	SOFT_SLOPE	-	The slope in the inequality criterion for adding a pilot to the
16			Active Set, or dropping a pilot from the Active Set (see
17			2.6.6.2.3 and 2.6.6.2.5.2).
18			If SEARCH_INCLUDED is set to '1', the base station shall
19			include the field SOFT_SLOPE in the additional fields and set
20			this field as an unsigned binary number; otherwise, the base
21			station shall omit this field.
22	ADD_INTERCEPT	-	The intercept in the inequality criterion for adding a pilot to
23			the Active Set (see 2.6.6.2.5.2).
24			If SEARCH_INCLUDED is set to '1', the base station shall
25			include the field ADD_INTERCEPT in the additional fields and
26			set this field as a two's complement signed binary number in
27			units of 0.5 dB; otherwise, the base station shall omit this
28			field.
29	DROP_INTERCEPT	-	The intercept in the inequality criterion for dropping a pilot
30			from the Active Set (see 2.6.6.2.3).
31			If SEARCH_INCLUDED is set to '1', the base station shall
32			include the field DROP_INTERCEPT in the additional fields
33			and set this field as a two's complement signed binary
34			number in units of 0.5 dB; otherwise, the base station shall
35			omit this field.
36	EXTRA_PARMS	-	Extra parameters included.
37			If the base station includes the fields PACKET_ZONE_ID,
38			FRAME_OFFSET, PRIVATE_LCM, RESET_L2, RESET_FPC,
39			SERV_NEG_TYPE, ENCRYPT_MODE, NOM_PWR_EXT,
40			NOM_PWR, RLGAİN_TRAFFIC_PILOT, DEFAULT_RLAG,
41			NUM_PREAMBLE, BAND_CLASS, PERIODIC_SEARCH, or
42			CDMA_FREQ in this message, the base station shall set this
43			field to '1'; otherwise, the base station shall set this field to
44			'0'.
45	PACKET_ZONE_ID	-	Packet data services zone identifier.
46			If EXTRA_PARMS is set to '1', the base station shall include
47			the field PACKET_ZONE_ID and set this field as described
48			below; otherwise, the base station shall omit this field.

1			If the base station supports a packet data service zone, the
2			base station shall set this field to the non-zero packet data
3			services zone identifier that the mobile station is to use after
4			completion of the handoff.
5			If the base station does not support a packet data service
6			zone, the base station shall set this field to '00000000'.
7	FRAME_OFFSET	-	Frame offset.
8			The Forward and Reverse Traffic Channel frames are delayed
9			FRAME_OFFSET $\times$ 1.25 ms relative to system timing (see [2]).
10			If EXTRA_PARMS is set to '1', the base station shall include
11			the field FRAME_OFFSET and set this field to the Forward
12			and Reverse Traffic Channel frame offset (the frame offset
13			does not apply to the F-PDCH); otherwise, the base station
14			shall omit this field.
15	PRIVATE_LCM	-	Private long code mask indicator.
16			This field is used to change the long code mask after a hard
17			handoff.
18			If EXTRA_PARMS is set to '1', the base station shall include
19			the field PRIVATE_LCM and set this field as described below;
20			otherwise, the base station shall omit this field.
21			If the private long code mask is to be used after the handoff,
22			the base station shall set this field to '1'; otherwise, the base
23			station shall set this field to '0'.
24	RESET_L2	-	Reset acknowledgment procedures command.
25			This field is used to reset acknowledgment processing in the
26			mobile station.
27			If EXTRA_PARMS is set to '1', the base station shall include
28			the field RESET_L2 and set this field as described below;
29			otherwise, the base station shall omit this field.
30			If the field is included and the mobile station is to reset its
31			acknowledgment procedures, the base station shall set this
32			field to '1'; otherwise, the base station shall set this field to
33			'0'.
34	RESET_FPC	-	Reset Forward Traffic Channel power control.
35			This field is used to reset the Forward Traffic Channel power
36			control counters.
37			If EXTRA_PARMS is set to '1', the base station shall include
38			the field RESET_FPC and set this field as described below;
39			otherwise, the base station shall omit this field.
40			The base station shall set this field to '0' if the Forward Traffic
41			Channel power control counters are to be maintained after
42			completion of the handoff. If the counters are to be initialized
43			as specified in 2.6.4.1.1.1, then the base station shall set this
44			field to '1'.

1	ENCRYPT_MODE	-	Message encryption mode.
2			If EXTRA_PARMS is set to '1', the base station shall include
3			the field ENCRYPT_MODE and set this field to the
4			ENCRYPT_MODE value shown in Table 3.7.2.3.2.8-2
5			corresponding to the encryption mode that is to be used for
6			messages sent on the Forward and Reverse Traffic Channels,
7			as specified in 2.3.12.2; otherwise, the base station shall omit
8			this field.
9	NOM_PWR_EXT	-	Extended nominal transmit power.
10			If EXTRA_PARMS is set to '1', the base station shall include
11			this field and set this field as described below; otherwise, the
12			base station shall omit this field.
13			If the mobile station is being handed off to a base station
14			operating in Band Class 0 or Band Class 3, the base station
15			shall set this field to '0'; otherwise, the base station shall set
16			it as follows:
17			If the correction factor to be used by the mobile station in the
18			open loop power estimate is between -24 dB and -9 dB
19			inclusive; otherwise (the correction factor is in the range -8
20			dB to 7 dB inclusive), the base station shall set this field to
21			'0'.
22	NOM_PWR	-	Nominal transmit power offset.
23			If EXTRA_PARMS is set to '1', the base station shall include
24			the field NOM_PWR and set this field to the correction factor
25			to be used by the mobile station in the open loop power
26			estimate, expressed as a two's complement value in units of 1
27			dB (see [2]); otherwise, the base station shall omit this field.
28	RLGAIN_TRAFFIC_PILOT	-	Gain adjustment of the Reverse Traffic Channel relative to the
29			Reverse Pilot Channel power for Radio configurations greater
30			than 2.
31			If EXTRA_PARMS is set to '1', the base station shall include
32			this field and set it to the correction factor to be used by
33			mobile stations in setting the power of a reverse traffic
34			channel, expressed as a two's complement value in units of
35			0.125 dB (see [2]); otherwise, the base station shall omit this
36			field.
37	DEFAULT_RLAG	-	Default reverse link attribute gain used indicator.
38			If EXTRA_PARMS is set to '0', the base station shall omit this
39			field; otherwise, the base station shall set this field as follows:
40			If the mobile station is to use the default values for the
41			reverse link attribute gain, as specified in [2] after completion
42			of handoff, the base station shall set this field to '1';
43			otherwise, the base station shall set this field to '0'.
44	NUM_PREAMBLE	-	Number of Traffic Channel preamble.

1 If EXTRA\_PARMS is set to '0', the base station shall omit the  
2 NUM\_PREAMBLE field; otherwise, the base station shall  
3 include this field and set it to the length of Traffic Channel  
4 preamble that the mobile station is to send when performing  
5 a handoff; as follows:

6 If, after the handoff, radio configuration 1 or radio  
7 configuration 2 is to be used, the base station shall set  
8 NUM\_PREAMBLE to the Traffic Channel preamble length in  
9 20 ms units; otherwise, the base station shall set  
10 NUM\_PREAMBLE to the value shown in Table 3.7.3.3.2.17-1  
11 corresponding to the Traffic Channel preamble length in 1.25  
12 ms units.

13 BAND\_CLASS - Band class.

14 If EXTRA\_PARMS is set to '1', the base station shall include  
15 the field BAND\_CLASS and set this field to the CDMA band  
16 class corresponding to the CDMA frequency assignment for  
17 the CDMA Channel as specified in [30]; otherwise, the base  
18 station shall omit this field.

19 CDMA\_FREQ - Frequency assignment.

20 If EXTRA\_PARMS is set to '0', the base station shall omit this  
21 field; otherwise, the base station shall set this field as follows:

22 If a Radio Configuration associated with Spreading Rate 1 is  
23 used, the base station shall set this field to the CDMA  
24 Channel number, in the specified CDMA band class,  
25 corresponding to the CDMA frequency assignment for the  
26 CDMA Channel as specified in [2]. If a Radio Configuration  
27 associated with Spreading Rate 3 is used, the base station  
28 shall include the field CDMA\_FREQ and set this field to the  
29 CDMA Channel number, in the specified CDMA band class,  
30 corresponding to the CDMA center SR3 frequency assignment  
31 for the CDMA Channel.

32 RETURN\_IF\_HANDOFF\_FAIL - Return on failure flag.

33 If EXTRA\_PARMS is set to '1', the base station shall include  
34 the field RETURN\_IF\_HANDOFF\_FAIL and set this field as  
35 described below; otherwise, the base station shall omit this  
36 field.

37 If the base station includes this field, it shall set this field to  
38 '1' if the mobile station is to resume the use of the Active Set  
39 on the Serving Frequency following an unsuccessful hard  
40 handoff attempt, as specified in 2.6.6.2.8.2; otherwise, the  
41 base station shall set this field to '0'.

42 COMPLETE\_SEARCH - Flag to complete search.

43 If RETURN\_IF\_HANDOFF\_FAIL is included and is set to '1',  
44 the base station shall include the field COMPLETE\_SEARCH  
45 and set this field as described below; otherwise, the base  
46 station shall omit this field.

1			If the base station includes this field, it shall set this field to
2			'1' if the mobile station is to complete the search of the
3			Candidate Frequency Search Set before resuming the use of
4			the Active Set on the Serving Frequency when an inter-
5			frequency handoff attempt is unsuccessful, as specified in
6			2.6.6.2.8.2; otherwise, the base station shall set this field to
7			'0'.
8	PERIODIC_SEARCH	-	Flag to search the Candidate Frequency periodically.
9			If EXTRA_PARMS is set to '1', the base station shall include
10			the field PERIODIC_SEARCH and set this field as described
11			below; otherwise, the base station shall omit this field.
12			If the base station includes this field, it shall set this field to
13			'1' if the mobile station is to periodically search the Candidate
14			Frequency, as specified in 2.6.6.2.8.3; otherwise, the base
15			station shall set this field to '0'.
16	SCR_INCLUDED	-	Service Configuration Record included indicator.
17			If EXTRA_PARMS is set to '1', the base station shall include
18			the field SCR_INCLUDED and shall set this field as described
19			below; otherwise, the base station shall omit this field.
20			The base station shall set this field to '1' if it includes the
21			Service Configuration Record in the message; otherwise, the
22			base station shall set this field to '0'.
23	SERV_CON_SEQ	-	Connect sequence number.
24			If SCR_INCLUDED is included and is set to '1', the base
25			station shall include the field SERV_CON_SEQ and shall set
26			this field to the connect sequence number pertaining to this
27			service configuration as specified in 3.6.4.1.2.1.2.
28	If SCR_INCLUDED is included and is set to '1', the base station shall include one		
29	occurrence of the following three-field record to specify the service configuration.		
30	RECORD_TYPE	-	Information record type.
31			If SCR_INCLUDED is included and is set to '1', the base
32			station shall include the field RECORD_TYPE and shall set
33			this field to the record type value shown in Table 3.7.5-1
34			corresponding to the Service Configuration information
35			record.
36	RECORD_LEN	-	Information record length.
37			If SCR_INCLUDED is included and is set to '1', the base
38			station shall include the field RECORD_LEN and shall set
39			this field to the number of octets included in the type-specific
40			fields of the Service Configuration information record.
41	Type-specific fields	-	Type-specific fields.
42			If SCR_INCLUDED is included and is set to '1', the base
43			station shall include the type specific fields and shall set
44			these fields as specified in 3.7.5.7 for the Service
45			Configuration information record.

1	NNSCR_INCLUDED	-	Non-negotiable Service Configuration Record Included indicator
2			
3			The base station shall omit this field, if EXTRA_PARMS is set to '0'; otherwise, the base station shall include this field and set this field as described below:
4			
5			
6			The base station shall set this field to '1', if the Non-negotiable Service Configuration record is included in this message; otherwise, the base station shall set this field to '0'.
7			
8			
9	If NNSCR_INCLUDED is included and is set to '1', the base station shall include one occurrence of the following three-field record to specify the non-negotiable service configuration.		
10			
11			
12	RECORD_TYPE	-	Information record type.
13			If NNSCR_INCLUDED is included and is set to '1', the base station shall include the field RECORD_TYPE and shall set this field to the record type value shown in Table 3.7.5-1 corresponding to the Non-Negotiable Service Configuration information record.
14			
15			
16			
17			
18	RECORD_LEN	-	Information record length.
19			If NNSCR_INCLUDED is included and is set to '1', the base station shall include the field RECORD_LEN and shall set this field to the number of octets included in the type-specific fields of the Non-Negotiable Service Configuration information record.
20			
21			
22			
23			
24	Type-specific fields	-	Type-specific fields.
25			If NNSCR_INCLUDED is included and is set to '1', the base station shall include the type specific fields and shall set these fields as specified in 3.7.5.20 for the Non-Negotiable Service Configuration information record.
26			
27			
28			
29	USE_PWR_CNTL_STEP	-	Power control step size indicator.
30			The base station shall set this field to '1' if the field PWR_CNTL_STEP is included in the message.
31			
32	PWR_CNTL_STEP	-	Power control step size.
33			If USE_PWR_CNTL_STEP is set to '1', then the base station shall include the field PWR_CNTL_STEP and set this field to the step size that the mobile station is to use for closed loop power control, according to Table 3.7.3.3.2.25-1; otherwise, the base station shall omit this field.
34			
35			
36			
37			
38	CLEAR_RETRY_DELAY	-	Clear retry delay indicator.
39			The base station shall set this field to '1' if the mobile station is to clear any existing retry delay which it has stored (see 2.6.6.2.5.1); otherwise, the base station shall set this field to '0'.
40			
41			
42			
43	SCH_INCL	-	Supplemental Channel related parameters included indicator.

1                   The base station shall set this field to '1' if this message  
2                   includes the NUM\_FOR\_ASSIGN, NUM\_REV\_ASSIGN,  
3                   NUM\_FOR\_SCH, NUM\_REV\_SCH, and NUM\_SCH fields.  
4                   Otherwise, the base station shall set this field to '0'.

5       NUM\_FOR\_ASSIGN   -   Number of Forward Supplemental Channel assigned.  
6                            If SCH\_INCL is set to '0', the base station shall omit this field;  
7                            otherwise, the base station shall set this field to the number  
8                            of Forward Supplemental Channel assigned.

9       The base station shall include NUM\_FOR\_ASSIGN occurrences of the following five fields  
10       (FOR\_SCH\_ID, FOR\_SCH\_DURATION, FOR\_SCH\_START\_TIME\_INCL,  
11       FOR\_SCH\_START\_TIME, and SCCL\_INDEX).

12       FOR\_SCH\_ID     -   Forward Supplemental Channel identifier.  
13                            The base station shall set this field to the Identifier of the  
14                            Forward Supplemental Channel.

15       FOR\_SCH\_DURATION   -   Duration of Forward Supplemental Channel assignment.  
16                            The base station shall set this field to the duration (see Table  
17                            3.7.3.3.2.37-3), starting at the start time of the message  
18                            specified by FOR\_SCH\_START\_TIME, during which the  
19                            mobile station is to process the Forward Supplemental  
20                            Channel.

21                            The base station shall set this field to '0000' to indicate that  
22                            the mobile station should stop processing the Forward  
23                            Supplemental Channel starting at the explicit start time of  
24                            the message specified by FOR\_SCH\_START\_TIME or at the  
25                            implicit start time if FOR\_SCH\_START\_TIME\_INCL is set to  
26                            '0'.

27                            The base station shall set this field to '1111' to indicate that  
28                            the mobile station should process the Forward Supplemental  
29                            Channel, starting at the start time of the message specified by  
30                            FOR\_SCH\_START\_TIME, until the start time specified by a  
31                            subsequent Forward Supplemental Channel assignment  
32                            corresponding to the same forward Supplemental Channel  
33                            (see 2.6.6.2.5.1.1).

34       FOR\_SCH\_START\_TIME\_INCL   -   Start time included indicator.  
35                            If FOR\_SCH\_DURATION is not equal to '0000', the base  
36                            station shall set this field to '1'. If FOR\_SCH\_DURATION is  
37                            equal to '0000', the base station shall set this field as follows:  
38                            The base station shall set this field to '1' if  
39                            FOR\_SCH\_START\_TIME is included in this message;  
40                            otherwise, the base station shall set this field to '0'.

41       FOR\_SCH\_START\_TIME   -   Start time for Forward Supplemental Channel Assignment.

1		If FOR_SCH_START_TIME_INCL is set to '0', the base station
2		shall omit this field; otherwise, the base station shall set this
3		field to the System Time, in units of time specified by
4		START_TIME_UNIT, (modulo 32) at which the mobile station
5		is to start processing (if FOR_SCH_DURATION is not equal to
6		'0000') or stop processing (if FOR_SCH_DURATION is equal to
7		'0000') the Forward Supplemental Channel specified in this
8		message. The explicit start time to start or stop processing
9		the Forward Supplemental Channels is the time for which
10		$\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{FOR\_SCH\_START\_TIME} \bmod 32 =$
11		0,
12		where t is the System Time in units of 20 ms.
13	SCCL_INDEX	- Supplemental Channel Code list index.
14		The base station shall set this field to the index of the record
15		in the Forward Supplemental Channel Code list
16		corresponding to the FOR_SCH_ID. The base station shall
17		include an SCCL_INDEX whose SCH Active Set is a subset of
18		the Active Set of the Fundamental Channel, Dedicated
19		Control Channel, or both.
20	NUM_REV_ASSIGN	- Number of Reverse Supplemental Channel assigned.
21		If SCH_INCL is set to '0', the base station shall omit this field;
22		otherwise, the base station shall set this field to the number
23		of Reverse Supplemental Channel assigned.
24	The base station shall include NUM_REV_ASSIGN occurrences of the following five fields	
25	(REV_SCH_ID, REV_SCH_DURATION, REV_SCH_START_TIME_INCL,	
26	REV_SCH_START_TIME, and REV_SCH_NUM_BITS_IDX).	
27	REV_SCH_ID	- Reverse Supplemental Channel Identifier.
28		The base station shall set this field to the identifier of the
29		Reverse Supplemental Channel.
30	REV_SCH_DURATION	- Duration of Reverse Supplemental Channel assignment.
31		The base station shall set this field to '0000' to indicate that
32		the mobile station is to stop transmitting on the Reverse
33		Supplemental Channel specified by REV_SCH_ID at the
34		explicit start time specified by REV_SCH_START_TIME or at
35		the implicit start time if REV_SCH_START_TIME_INCL is set
36		to '0'. The base station shall set this field to '1111' to indicate
37		that the mobile station may transmit on the Reverse
38		Supplemental Channel specified by REV_SCH_ID, starting at
39		the explicit start time specified by REV_SCH_START_TIME in
40		this message, until the start time specified by a subsequent
41		Reverse Supplemental Channel assignment corresponding to
42		the same Supplemental Channel (see 2.6.6.2.5.1.1). The base
43		station shall set this field to the duration according to Table
44		3.7.3.3.2.37-3, starting at the explicit start time specified by
45		REV_SCH_START_TIME, during which the mobile station
46		may transmit on the Reverse Supplemental Channel specified
47		by REV_SCH_ID.

1	REV_SCH_START_TIME_INCL	-	Start time included indicator.
2			If REV_SCH_DURATION is not equal to '0000', the base
3			station shall set this field to '1'. If REV_SCH_DURATION is
4			equal to '0000', the base station shall set this field as follows:
5			The base station shall set this field to '1' if
6			REV_SCH_START_TIME is included in this message;
7			otherwise, the base station shall set this field to '0'.
8	REV_SCH_START_TIME	-	Start time for Reverse Supplemental Channel Assignment.
9			If REV_SCH_START_TIME_INCL is set to '0', the base station
10			shall omit this field; otherwise, the base station shall set this
11			field to the System Time, in units of time specified by
12			START_TIME_UNIT, (modulo 32) at which the mobile station
13			may start transmitting (if REV_SCH_DURATION is not equal
14			to '0000') or stop transmitting (if REV_SCH_DURATION is
15			equal to '0000') on the Reverse Supplemental Channel
16			specified in this message. The explicit start time to start or
17			stop transmitting on the Reverse Supplemental Channel is
18			the time for which
19			$\lfloor t / (\text{START\_TIME\_UNIT}_s + 1) \rfloor - \text{REV\_SCH\_START\_TIME} \bmod$
20			$32 = 0,$
21			where t is the System Time in units of 20 ms.
22	REV_SCH_NUM_BITS_IDX	-	Reverse Supplemental Channel number of bits per frame
23			index granted by the base station.
24			If USE_FLEX_NUM_BITS is equal to '0' or if
25			USE_FLEX_NUM_BITS is equal to '1' and
26			RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
27			the base station shall set this field according to Table
28			3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
29			number of information bits per frame and the number of CRC
30			bits per frame, that the mobile station may transmit on the
31			reverse Supplemental Channel identified by REV_SCH_ID.
32			If USE_FLEX_NUM_BITS is equal to '1' and
33			RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
34			then the base station shall set this field to indicate the
35			Reverse Supplemental Channel number of information bits
36			per frame that the mobile station may transmit on the
37			Reverse Supplemental Channel identified by REV_SCH_ID to
38			be NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
39			[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
40			Channel number of CRC bits per frame that the mobile
41			station may transmit on the Reverse Supplemental Channel
42			identified by REV_SCH_ID to be
43			CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
44			[REV_SCH_NUM_BITS_IDX].
45	FPC_SUBCHAN_GAIN	-	Forward power control subchannel relative gain.

1			The base station shall set FPC_SUBCHAN_GAIN equal to the
2			power level of the forward link power control subchannel
3			relative to that of 20 ms frames at a 9600 bps or 14400 bps
4			rate on the Forward Fundamental Channel or the Forward
5			Dedicated Control Channel indicated by FPC_PRI_CHAN <sub>S</sub> .
6			The base station shall set the value in units of 0.25 dB.
7	USE_PC_TIME	-	Use power control action time indicator.
8			This field indicates whether an explicit time
9			[PC_ACTION_TIME] at which a new value for power control
10			sub-channel to traffic ratio [FPC_SUBCHAN_GAIN] takes
11			effect is specified in the message.
12			If an explicit action time is specified in this message, the base
13			station shall set this field to '1'; otherwise, the base station
14			shall set this field to '0'.
15	PC_ACTION_TIME	-	Power Control Subchannel gain action time.
16			If the USE_PC_TIME field is set to '1', the base station shall
17			set this field to the System Time minus FRAME_OFFSET <sub>S</sub> ×
18			1.25 ms, in units of 80 ms (modulo 64), at which
19			FPC_SUBCHAN_GAIN specified in this message is to take
20			effect. If the USE_PC_TIME field is set to '0', the base station
21			shall omit this field.
22	CH_IND	-	Channel Indicator.
23			The base station shall set this field as shown in Table
24			3.7.3.3.2.36-1.

1

**Table 3.7.3.3.2.36-1. Channel Indicator**

<b>CH_IND (Binary)</b>	<b>Physical Resource(s) Allocated</b>
000	Refer to EXT_CH_IND.
001	Reserved
010	Dedicated Control Channel
011	Reserved
100	Reserved
101	For Radio Configuration greater than 2, Fundamental Channel and Continuous Reverse Pilot Channel; For Radio Configuration 1 or 2, Fundamental Channel only.
110	Dedicated Control Channel and Continuous Reverse Pilot Channel
111	Fundamental Channel, Dedicated Control Channel and Continuous Reverse Pilot Channel

2

3 ACTIVE\_SET\_REC\_LEN - Active Set record length.

4 The base station shall set this field to the number of octets in  
5 the ACTIVE\_SET\_REC\_FIELDS included in this message.

6 ACTIVE\_SET\_REC\_FIELDS - Active Set record fields.

7 The Active Set record fields are determined by the value of  
8 CH\_IND, as described below.

9 REV\_FCH\_GATING\_MODE - Reverse eighth gating mode indicator.

10 If CH\_IND is set to '010' or '110', or if EXT\_CH\_IND does not  
11 signal allocation of R-FCH, then the base station shall omit  
12 this field; otherwise, the base station include this field and  
13 set it as follows:14 The base station shall set this field to '1' if the mobile station  
15 is allowed to perform the reverse eighth gating mode after  
16 handoff; otherwise, the base station shall set this field to '0'.

17 REV\_PWR\_CNTL\_DELAY\_INCL - Reverse power control delay included indicator.

18 If REV\_FCH\_GATING\_MODE is not included, or is included  
19 and set to '0', then the base station shall omit this field;  
20 otherwise, the base station shall include this field and set it  
21 as follows.22 The base station shall set this field to '1' if  
23 REV\_PWR\_CNTL\_DELAY is included in this message;  
24 otherwise, the base station shall set this field to '0'.

1	REV_PWR_CNTL_DELAY	-	The reverse power control delay.
2			If REV_PWR_CNTL_DELAY_INCL is not included, or is
3			included and set to '0', then the base station shall omit this
4			field; otherwise, the base station shall include this field and
5			set it as follows:
6			The base station shall set this field to the closed-loop reverse
7			power control delay minus one (the closed-loop reverse power
8			control delay is the time between the end of a gated-on
9			reverse PCG and the beginning of the reverse PCG where the
10			corresponding feedback is sent on the Forward Power Control
11			Subchannel, see [2]), in units of 1.25 ms.
12	D_SIG_ENCRYPT_MODE	-	Dedicated channel signaling encryption mode indicator.
13			If ENCRYPT_MODE is included and is set to '11', the base station
14			shall include this field and shall set it to the dedicated channel
15			signaling encryption mode, as shown in Table 3.7.4.5-1;
16			otherwise the base station shall omit this field.
17	ENC_KEY_SIZE	-	Encryption key size indication.
18			If ENCRYPT_MODE is included and is set to '10' or '11', the
19			base station shall include this field and set it to the
20			encryption key size, as shown in Table 3.7.4.5-2; otherwise,
21			the base station shall omit this field.
22	3XFL_1XRL_INCL	-	3X Forward Link and 1X Reverse Link indicator.
23			The base station shall set this field to '1' if the base station is
24			assigning 3X traffic channel on the Forward Link and 1X
25			traffic channel on the Reverse Link; otherwise, the base
26			station shall set this field to '0'.
27	1XRL_FREQ_OFFSET	-	1X Reverse Link frequency offset.
28			If 3XFL_1XRL_INCL is set to '0', the base station shall omit
29			this field; otherwise, the base station shall set this field as
30			follows:
31			The base station shall set this field to the value shown in
32			Table 3.7.2.3.2.21-8 corresponding to the frequency offset of
33			the 1X reverse link.

1	SYNC_ID_INCL	-	Service Configuration synchronization identifier included indicator.
2			
3			If the SCR_INCLUDED field is included and is set to '1' or the
4			NNSCR_INCLUDED field is included and is set to '1', or
5			P_REV_IN_USE is equal or greater than 11, the base station
6			shall include this field; otherwise, the base station shall omit
7			this field. If included, the base station shall set this field as
8			follows:
9			The base station shall set this field to '1' if the SYNC_ID field
10			is included in this message; otherwise, the base station shall
11			set this field to '0'.
12	SYNC_ID_LEN	-	Service Configuration synchronization identifier length.
13			If the SYNC_ID_INCL field is not included or is included and
14			is set to '0', the base station shall omit this field; otherwise,
15			the base station shall include this field and set it as follows:
16			The base station shall set this field to the length (in octets) of
17			the SYNC_ID field included in this message. The base station
18			shall set this field to a value larger than zero.
19	SYNC_ID	-	Service Configuration synchronization identifier.
20			If the SYNC_ID_INCL field is not included or is included and
21			is set to '0', the base station shall omit this field; otherwise,
22			the base station shall include this field and set it as follows:
23			If the SCR_INCLUDED field is included and is set to '1' or the
24			NNSCR_INCLUDED field is included and is set to '1', the base
25			station shall set this field to the synchronization identifier
26			corresponding to the service configuration conveyed by this
27			message; otherwise, the base station shall set this field to the
28			updated synchronization identifier corresponding to the
29			current service configuration.
30	CC_INFO_INCL	-	Call Control information included indicator.
31			If the SCR_INCLUDED field is not included or is included but
32			is set to '0', the base station shall omit this field; otherwise,
33			the base station shall include this field and set it as follows:
34			The base station shall set this field to '1' if Call Control
35			related parameters (to assign new call(s)) are included in this
36			message; otherwise, the base station shall set this field to '0'.
37	NUM_CALLS_ASSIGN	-	Number of call assignments.

1 If the CC\_INFO\_INCL field is not included or is included but  
 2 is set to '0', the base station shall omit this field; otherwise,  
 3 the base station shall include this field and set it as follows:

4 The base station shall set this field to the number of new call  
 5 assignments included in this message.

6 The base station shall include NUM\_CALLS\_ASSIGN occurrences of the following variable  
 7 length record (CON\_REF, RESPONSE\_IND, TAG, BYPASS\_ALERT\_ANSWER as per the  
 8 following requirements).

9 CON\_REF - Connection reference.

10 The base station shall set this field to the connection  
 11 reference of the service option connection corresponding to  
 12 this call.

13 RESPONSE\_IND - Response indicator.

14 The base station shall set this field to '1' if this call  
 15 assignment is a response to an *Enhanced Origination*  
 16 *Message* from the mobile station; otherwise, the base station  
 17 shall set this field to '0'.

18 TAG - Transaction identifier.

19 If the RESPONSE\_IND field is set to '0', the base station shall  
 20 omit this field; otherwise, the base station shall include this  
 21 field and set it as follows:

22 The base station shall set this field to the value of the TAG  
 23 field received in the *Enhanced Origination Message* to which  
 24 this call assignment is the response.

25 BYPASS\_ALERT\_ANSWER - Bypass alert indicator.

26 If the RESPONSE\_IND field is set to '1', the base station shall  
 27 omit this field; otherwise, the base station shall include this  
 28 field and set it as follows:

29 If the mobile station is to bypass the *Waiting for Order*  
 30 *Substate* and the *Waiting for Mobile Station Answer Substate*  
 31 for this call, the base station shall set this field to '1';  
 32 otherwise, the base station shall set this field to '0'.

33 CS\_SUPPORTED - Concurrent Services supported indicator.

34 If the base station supports concurrent services, the base  
 35 station shall set this field to '1'; otherwise, the base station  
 36 shall set this field to '0'.

1	CHM_SUPPORTED	-	Control Hold Mode supported indicator.
2			The base station shall set this field to '1' to indicate that the
3			base station supports the Control Hold Mode; otherwise, the
4			base station shall set this field to '0'.
5	CDMA_OFF_TIME_REP_SUP_IND	-	CDMA off time report supported indicator.
6			If the base station supports mobile station report for CDMA
7			off time information using the <i>CDMA Off Time Report</i>
8			<i>Message</i> , the base station shall set this field to '1'; otherwise,
9			the base station shall set this field to '0'.
10	CDMA_OFF_TIME_REP_THRESHOLD_UNIT	-	CDMA off time report threshold unit
11			If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
12			station shall omit this field; otherwise, the base station shall
13			include this field and set it as follows:
14			The base station shall set this field to the time unit used in
15			CDMA_OFF_TIME_REP_THRESHOLD, as specified in Table
16			3.7.2.3.2.13-5
17	CDMA_OFF_TIME_REP_THRESHOLD	-	CDMA off time report threshold
18			If CDMA_OFF_TIME_REP_SUP_IND is set to '0', the base
19			station shall omit this field; otherwise, the base station shall
20			include this field and set it as follows:
21			The base station shall set this field to the time in units of
22			CDMA_OFF_TIME_REP_THRESHOLD_UNIT such that if the
23			mobile station goes away from the CDMA traffic channel
24			longer than this value, the mobile station is to send a <i>CDMA</i>
25			<i>Off Time Report Message</i> .
26	RELEASE_TO_IDLE_IND	-	Release to Idle State allowed indicator.
27			If the mobile station is allowed to return to the <i>Mobile Station</i>
28			<i>Idle State</i> upon call release, the base station shall set this
29			field to '1'; otherwise, the base station shall set this field to
30			'0'.
31	MSG_INTEGRITY_SUP	-	Message integrity supported indicator.
32			If the base station supports message integrity, the base
33			station shall set this field to '1'; otherwise, the base station
34			shall set this field to '0'.
35	GEN_2G_KEY	-	Generate 2G encryption key indicator.
36			If the base station is to generate a new CMEKEY from the
37			current CK, the base station shall set this field to '1' to order
38			the mobile station to perform similar procedures; otherwise,
39			the base station shall set this field to '0'.
40	REGISTER_IN_IDLE	-	Register in idle state indicator.
41			If the mobile station is to perform registration after
42			transitioning back to the <i>Mobile Station Idle State</i> , the base
43			station shall set this field to '1'; otherwise, the base station
44			shall set this field to '0'.

1	PLCM_TYPE_INCL	-	The Public Long Code Mask type Included Indicator.
2			If the mobile station is to change its public long code mask
3			after handoff, the base station shall set this field to '1';
4			otherwise, the base station shall set this field to '0'.
5	PLCM_TYPE	-	The Public Long Code Mask Type.
6			If PLCM_TYPE_INCL is set to '0', the base station shall omit
7			this field; otherwise, the base station shall include this field
8			and set it as follows:
9			The base station shall set this field to the Public Long Code
10			Mask type to be used by the mobile station after the handoff
11			as specified in Table 3.7.2.3.2.21-5.
12			PLCM_TYPE '0010' shall not be used when the mobile station
13			is not in its home country (i.e., the MCC of the mobile station
14			is different from the MCC of this base station).
15			PLCM_TYPE '0011' shall not be used when the mobile station
16			is not in its home network (i.e., the MCC or MNC of the
17			mobile station is different from the MCC or MNC of this base
18			station).
19	PLCM_39	-	The 39 LSBs of the Public Long Code Mask.
20			If PLCM_TYPE is included and set to '0001', the base station
21			shall include this field and set it to the 39 least significant
22			bits of the public long code mask to be used by the mobile
23			station after the handoff as defined in Table 3.6.4.1.10;
24			otherwise, the base station shall omit this field.
25	T_TDROP_RANGE_INCL	-	Drop timer range value included indicator.
26			If SEARCH_INCLUDED is set to '0', the base station shall
27			omit this field; otherwise, the base station shall include this
28			field and set it as follows:
29			The base station shall set this field to '1' if the
30			T_TDROP_RANGE field is included in this message;
31			otherwise, the base station shall set this field to '0'.
32	T_TDROP_RANGE	-	Drop timer range value.
33			Timer range value to use in association with the T_TDROP
34			parameter when determining the drop timer expiration.
35			If T_TDROP_RANGE_INCL is not included, or included and
36			set to '0', the base station shall omit this field; otherwise, the
37			base station shall set this field to the T_TDROP_RANGE value
38			shown in Table 2.6.6.2.3-2 corresponding to the timer
39			expiration range value to be used by the mobile station.
40	FOR_PDCH_SUPPORTED	-	Forward Packet Data Channel supported indicator.
41			If the base station supports Forward Packet Data Channel,
42			the base station shall set this field to '1'; otherwise, the base
43			station shall set this field to '0'.
44	PDCH_CHM_SUPPORTED	-	PDCH Control Hold Mode supported indicator.

1		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
2		omit this field; otherwise, the base station shall include this
3		field and set it as follows:
4		The base station shall set this field to '1' to indicate that the
5		base station supports the PDCH Control Hold Mode; otherwise,
6		the base station shall set this field to '0'.
7	PILOT_INFO_REQ_SUPPORTED	- Pilot information request supported indicator.
8		If the base station supports mobile station request for pilot
9		information using the "Pilot Information" record in the <i>Base</i>
10		<i>Station Status Request Message</i> , the base station shall set
11		this field to '1'; otherwise, the base station shall set this field
12		to '0'.
13	ENC_SUPPORTED	- Encryption fields included.
14		The base station shall set this field to '1' if the encryption
15		related fields are included; otherwise, the base station shall
16		set this field to '0'.
17	SIG_ENCRYPT_SUP	- Signaling Encryption supported indicator.
18		If ENC_SUPPORTED is equal to '1', the base station shall
19		include this field; otherwise, the base station shall omit this
20		field. If this field is included, this field indicates which
21		signaling encryption algorithms are supported by the base
22		station.
23		This field consists of the subfields shown in Table
24		2.7.1.3.2.1-5.
25		If this field is included, the base station shall set the
26		subfields as follows:
27		The base station shall set the CMEA subfield to '1'.
28		The base station shall set each other subfield to '1' if the
29		corresponding signaling algorithm is supported by the base
30		station; otherwise, the base station shall set the subfield to
31		'0'.
32		The base station shall set the RESERVED subfield to '00000'.
33	UI_ENCRYPT_SUP	- User information Encryption supported indicator.
34		If ENC_SUPPORTED is equal to '1', the base station shall
35		include this field; otherwise, the base station shall omit this
36		field. If this field is included, the base station shall set this
37		field to indicate the supported user information encryption
38		algorithms.
39		This field consists of the subfields shown in Table
40		2.7.1.3.2.4-9.
41		The base station shall set each subfield to '1' if the
42		corresponding user information encryption algorithm is
43		supported by the base station; otherwise, the base station
44		shall set the subfield to '0'.
45	USE_SYNC_ID	- Sync ID supported indicator.

1			The base station shall set this field to '1' to indicate that the
2			mobile station is permitted to include the SYNC_ID field in
3			the <i>Page Response Message</i> , the <i>Reconnect Message</i> , the
4			<i>Origination Message</i> , and the <i>Enhanced Origination Message</i> ;
5			otherwise, the base station shall set this field to '0'.
6	SID_INCL	-	SID included indicator.
7			If the SID field is included in this message, the base station
8			shall set this field to '1'; otherwise, the base station shall set
9			this field to '0'.
10	SID	-	System identification.
11			If the SID_INCL field is set to '0', the base station shall omit
12			this field; otherwise, the base station shall include this field
13			and set it as follows:
14			The base station shall set this field to the system
15			identification number for this wireless system (see 2.6.5.2).
16	NID_INCL	-	NID included indicator.
17			If the NID field is included in this message, the base station
18			shall set this field to '1'; otherwise, the base station shall set
19			this field to '0'.
20	NID	-	Network identification.
21			If the NID_INCL field is set to '0', the base station shall omit
22			this field; otherwise, the base station shall include this field
23			and set it as follows:
24			This field serves as a sub-identifier of a system as defined by
25			the owner of the SID.
26			The base station shall set this field to the network
27			identification number for this network (see 2.6.5.2).
28	SDB_SUPPORTED	-	Short Data Burst supported indicator.
29			The base station shall set this field to '1' if the mobile station
30			is permitted to send a Short Data Burst; otherwise, the base
31			station shall set this field to '0'.
32	MOB_QOS	-	Indicator granting permission to the mobile station to request
33			QoS parameter settings in the <i>Origination Message</i> ,
34			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
35			<i>Message</i> .
36			If CS_SUPPORTED is equal to '0', the base station shall omit
37			this field; otherwise the base station shall include this field
38			and shall set it as follows:
39			The base station shall set this field to '1', if the mobile station
40			is allowed to include a QoS record in the <i>Origination Message</i> ,
41			<i>Origination Continuation Message</i> , or <i>Enhanced Origination</i>
42			<i>Message</i> ; otherwise, the base station shall set this field to '0'.
43	MS_INIT_POS_LOC_SUP_IND	-	Mobile station initiated position location
44			determination supported indicator.

1		If the target base station supports mobile station initiated
2		position determination, the base station shall set this field to
3		'1'; otherwise, the base station shall set this field to '0'.
4	REV_PDCH_SUPPORTED	- Reverse Packet Data Channel supported indicator.
5		If FOR_PDCH_SUPPORTED is set to '0', the base station shall
6		omit this field; otherwise, the base station shall include this
7		field and set it as follows:
8		If the base station supports the Reverse Packet Data Channel
9		(R-PDCH), the base station shall set this field to '1';
10		otherwise, the base station shall set this field to '0'.
11	PZ_HYST_ENABLED	- Packet zone hysteresis enabled.
12		If the PACKET_ZONE_ID field is set to '00000000', the base
13		station shall omit this field; otherwise, the base station shall
14		include this field and set it as follows:
15		If the packet zone hysteresis feature is to be enabled at the
16		mobile station, the base station shall set this field to '1';
17		otherwise, the base station shall set this field to '0'.
18	PZ_HYST_INFO_INCL	- Packet zone hysteresis information included indicator.
19		If the PZ_HYST_ENABLED field is included and is set to '1',
20		the base station shall include this field and set it as follows;
21		otherwise, the base station shall omit this field.
22		If the base includes the PZ_HYST_LIST_LEN,
23		PZ_HYST_ACT_TIMER and packet zone hysteresis timer
24		related fields, the base station shall set this field to '1';
25		otherwise, the base station shall set this field to '0'.
26	PZ_HYST_LIST_LEN	- Packet zone hysteresis list length.
27		If the PZ_HYST_INFO_INCL field is included and is set to '1',
28		the base station shall include this field and set it as follows;
29		otherwise, the base station shall omit this field.
30		The base station shall set this field to the length of the packet
31		zone hysteresis list. This field shall be within the range '0001'
32		through '1111', inclusive.
33	PZ_HYST_ACT_TIMER	- Packet zone hysteresis activation timer.
34		If the PZ_HYST_INFO_INCL field is included and is set to '1',
35		the base station shall include this field and set it as follows;
36		otherwise, the base station shall omit this field.
37		The base station shall set to the value of the packet zone
38		hysteresis activation timer (in units of seconds). This field
39		shall be within the range '00000001' through '11111111',
40		inclusive.
41	PZ_HYST_TIMER_MUL	- Packet zone hysteresis timer multiplier.
42		If the PZ_HYST_INFO_INCL field is included and is set to '1',
43		the base station shall include this field and set it as follows;
44		otherwise, the base station shall omit this field.

1		The base station shall set the field to $x$ , where $x \times 8^y$
2		seconds is the value of the hysteresis timer and $y$ is the value
3		indicated in the PZ_HYST_TIMER_EXP field. The base station
4		shall set this field to a value that is between 1 and 7
5		inclusive. The value 0 is reserved.
6	PZ_HYST_TIMER_EXP	- Packet zone hysteresis timer exponent.
7		If the PZ_HYST_INFO_INCL field is included and is set to '1',
8		the base station shall include this field and set it as follows;
9		otherwise, the base station shall omit this field.
10		The base station shall set the field to $y$ , where $x \times 8^y$
11		seconds is the value of the hysteresis timer and $x$ is the value
12		indicated in the PZ_HYST_TIMER_MUL field. The base station
13		shall set this field to a value that is between 0 and 4
14		inclusive. All the other values are reserved.
15	BCMC_ON_TRAFFIC_SUP	- BCMC on traffic channel supported indicator.
16		The base station shall set this field to '1' to indicate that the
17		BCMC feature is supported on traffic channel; otherwise, the
18		base station shall set this field to '0'.
19	AUTO_REQ_TRAF_ALLOWED_IND	- Autonomous BCMC request on traffic channel
20		allowed indicator.
21		If the BCMC_ON_TRAFFIC_SUP field is set to '0', the base
22		station shall omit this field; otherwise, the base station shall
23		include this field and set it as follows:
24		The base station shall set this field to '1' to indicate that the
25		mobile station is allowed to request for a BCMC flow
26		autonomously on traffic channel; otherwise, the base station
27		shall set this field to '0'.
28	SCH_BCMC_IND	- BCMC on supplemental channel Indicator.
29		If the BCMC_ON_TRAFFIC_SUP field is set to '0', or if
30		NUM_FOR_ASSIGN field is not included or is included and is
31		set to '00', the base station shall omit this field; otherwise,
32		the base station shall include this field and set it as follows:
33		If the channel assignment in this message contains a
34		Forward Supplemental Channel used for BCMC
35		transmission, the base station shall set this field to '1';
36		otherwise, the base station shall set this field to '0'.
37	ADD_PLCM_FOR_SCH_INCL	- Additional PLCM for forward SCH included indicator.
38		If the SCH_BCMC_IND field is not included or is included and
39		is set to '0', the base station shall omit this field; otherwise,
40		the base station shall include this field and set it as follows:
41		If the additional PLCM for forward SCH is included in this
42		message, the base station shall set this field to '1'; otherwise,
43		the base station shall set this field to '0'.

1 ADD\_PLCM\_FOR\_SCH\_TYPE- The Additional Public Long Code Mask for forward SCH  
2 type indicator.  
3 If ADD\_PLCM\_FOR\_SCH\_INCL is not included or is included  
4 and is set to '0', the base station shall omit this field;  
5 otherwise, the base station shall include this field and set it  
6 as follows:  
7 The base station shall set this field to '1' to indicate PLCM  
8 specified by the base station. The field value '0' is reserved.

9 ADD\_PLCM\_FOR\_SCH\_35 - The 35 LSB bits of the additional Public Long Code Mask  
10 for forward SCH.  
11 If ADD\_PLCM\_FOR\_SCH\_TYPE field is included and is set to  
12 '1', the base station shall include this field and set it to the 35  
13 least significant bits of the public long code mask used by the  
14 mobile station; otherwise, the base station shall omit this  
15 field.

16 If SCH\_BCNC\_IND field is included and is set to '1', the base station shall include  
17 NUM\_FOR\_ASSIGN occurrences of the following record:

18 USE\_ADD\_PLCM\_FOR\_SCH - Use additional PLCM indicator for forward SCH.  
19 The base station shall set this field to '1' if the additional  
20 PLCM included for forward SCH in this message is to be used  
21 for this Forward Supplemental Channel; otherwise, the base  
22 station shall set this field to '0'.

23 FSCH\_OUTERCODE\_INCL - Forward Supplemental Channel Outer Code included  
24 indicator.  
25 The base station shall set this field to '1' if the Forward  
26 Supplemental Channel outer code information is included in  
27 this message; otherwise, the base station shall set this field  
28 to '0'.

29 FSCH\_OUTERCODE\_RATE - Outer Code Rate of the Forward Supplemental Channel.  
30 If the FSCH\_OUTERCODE\_INCL field is not included or is  
31 included and is set to '0', the base station shall omit this  
32 field; otherwise, the base station shall include this field and  
33 set it as follows:  
34 The base station shall set this field to the outer code rate of  
35 the Forward Supplemental Channel as specified in Table  
36 3.7.2.3.2.38-3.

37 FSCH\_OUTERCODE\_OFFSET - Outer Coding Buffer Offset of the Forward  
38 Supplemental Channel.  
39 If the FSCH\_OUTERCODE\_INCL field is not included or is  
40 included and is set to '0', the base station shall omit this  
41 field; otherwise, the base station shall include this field and  
42 set it as follows:  
43 The base station shall set this field to the outer coding buffer  
44 offset of the Forward Supplemental Channel in units of 20ms  
45 as specified in [2].

- 1 MAX\_ADD\_SERV\_INSTANCE- Maximum number of additional service reference  
 2 identifiers allowed in origination
- 3 If the CS\_SUPPORTED field is set to '0', the base station shall  
 4 omit this field; otherwise, the base station shall include this  
 5 field and set it as follows:
- 6 The base station shall set this field to the maximum number  
 7 of additional service reference identifiers that can be included  
 8 in the *Origination Message* or *Enhanced Origination Message*.
- 9 USE\_CH\_CFG\_RRM - Channel configuration request allowed indicator.
- 10 The base station shall set this field to '1' to indicate that the  
 11 mobile station is permitted to include the CH\_IND and  
 12 EXT\_CH\_IND fields in the *Resource Request Message*, and the  
 13 *Resource Request Mini Message*; otherwise, the base station  
 14 shall set this field to '0'.
- 15 TX\_PWR\_LIMIT\_INCL - Transmit Power Limit inclusion for the current base station
- 16 If TX\_PWR\_LIMIT\_DEFAULT is included in this message, the  
 17 base station shall set this field to '1'; otherwise, the base  
 18 station shall set this field to '0'.
- 19 TX\_PWR\_LIMIT\_DEFAULT - Use the Default Transmit Power Limit
- 20 If TX\_PWR\_LIMIT\_INCL is set to '0', the base station shall  
 21 omit this field; otherwise, the base station shall include this  
 22 field and set to as follows.
- 23 The base station shall set this field to '1' if the mobile station  
 24 is to limit its transmission power in the 1915MHz – 1920MHz  
 25 block of the PCS band to no more than the default value  
 26 defined in [11]; otherwise, the base station shall set this field  
 27 to '0' if the mobile station is to limit its transmission power to  
 28 no more than the value indicated by TX\_PWR\_LIMIT.
- 29 TX\_PWR\_LIMIT - Transmit Power Limit for the current base station
- 30 If TX\_PWR\_LIMIT\_DEFAULT is omitted, or if it is included and  
 31 set to '1', the base station shall omit this field; otherwise, the  
 32 base station shall include this field and set to as follows.
- 33 The base station shall set this field to thirty dB more than  
 34 transmit power limit in dBm EIRP, in steps of 1 dB. This field  
 35 can take the values 30 to 53 corresponding to maximum  
 36 transmit power values 0 dBm to 23 dBm.
- 37 If the CH\_IND field is set to '101', the base station shall include the following fields:
- 38 NUM\_FOR\_SCH - Number of Forward Supplemental Channel records.
- 39 If SCH\_INCL is set to '0', the base station shall omit this field;  
 40 otherwise, the base station shall set this field as follows:
- 41 The base station shall set this field to the number of the  
 42 Forward Supplemental Channel records need to be updated.
- 43 If NUM\_FOR\_SCH is included and not equal to '00000', the base station shall include

1 NUM\_FOR\_SCH occurrence of the following three fields:

2       FOR\_SCH\_ID   -   Forward Supplemental Channel identifier.

3                    The base station shall set this field to the identifier of the

4                    Forward Supplemental Channel.

5       SCCL\_INDEX   -   Supplemental Channel Code list index.

6                    The base station shall set this field to the index of the record

7                    in the Supplemental Channel Code list.

8       FOR\_SCH\_NUM\_BITS\_IDX - Forward Supplemental Channel number of information

9                    bits index.

10                   If USE\_FLEX\_NUM\_BITS is equal to '0' or if

11                   USE\_FLEX\_NUM\_BITS is equal to '1' and

12                   FSCH\_NBIT\_TABLE\_ID for FOR\_SCH\_ID is equal to '0000',

13                   then the base station shall set this field according to Table

14                   3.7.3.3.2.37-4 to indicate the number of information bits per

15                   frame and the length of the CRC field for the Forward

16                   Supplemental Channel identified by FOR\_SCH\_ID

17                   corresponding to SCCL\_INDEX.

18                   If USE\_FLEX\_NUM\_BITS<sub>s</sub> is equal to '1' and

19                   FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID] is not equal to '0000',

20                   then the base station shall set this field to indicate that the

21                   number of information bits per frame for the Forward

22                   Supplemental channel identified by FOR\_SCH\_ID to be

23                   NUM\_BITS[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_SCH\_

24                   NUM\_BITS\_IDX] and the number of CRC bits per frame for

25                   the Forward Supplemental channel identified by

26                   FOR\_SCH\_ID to be

27                   CRC\_LEN\_IDX[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_S

28                   CH\_NUM\_BITS\_IDX].

29       NUM\_REV\_SCH   -   Number of Reverse Supplemental Channel records.

30                    If SCH\_INCL is set to '0', the base station shall omit this field;

31                    otherwise, the base station shall set this field as follows:

32                    The base station shall set this field to the number of the

33                    Reverse Supplemental Channels need to be updated.

34   If NUM\_REV\_SCH is included and not equal to '00000', the base station shall include

35   NUM\_REV\_SCH occurrence of the following three fields:

36       REV\_SCH\_ID   -   Reverse Supplemental Channel identifier.

37                    The base station shall set this field to the identifier of the

38                    Reverse Supplemental Channel.

39       REV\_WALSH\_ID   -   Reverse Supplemental Channel Walsh cover Identifier.

1		The base station shall set this field according to Table
2		3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
3		station is to use when transmitting at the rate specified by
4		REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
5		Channel specified by REV_SCH_ID. If only one reverse
6		supplemental channel is assigned, the base station should set
7		this field to the default value for the REV_WALSH_ID as
8		specified in 2.6.4.2.
9	REV_SCH_NUM_BITS_IDX	- Reverse Supplemental Channel number of bits per frame
10		index.
11		If USE_FLEX_NUM_BITS is equal to '0' or if
12		USE_FLEX_NUM_BITS is equal to '1' and
13		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
14		the base station shall set this field according to Table
15		3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
16		number of information bits per frame and the CRC bits per
17		frame, corresponding to REV_WALSH_ID field.
18		If USE_FLEX_NUM_BITS is equal to '1' and
19		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
20		then the base station shall set this field to indicate the
21		Reverse Supplemental Channel number of information bits
22		per frame, corresponding to REV_WALSH_ID field to be
23		NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
24		[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
25		Channel number of CRC bits per frame corresponding to
26		REV_WALSH_ID field to be
27		CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
28		[REV_SCH_NUM_BITS_IDX].
29	NUM_PILOTS	- Number of pilots included in the message.
30		The base station shall set this field to the number of pilots
31		included in the message. The base station shall set this field
32		to an integer that is equal to or greater than 1.
33	SRCH_OFFSET_INCL	- Target pilot channel search window offset included.
34		If the SRCH_OFFSET field is included in the following
35		records, the base station shall set this field to '1'; otherwise,
36		the base station shall set this field to '0'.
37	The base station shall include one occurrence of the following record for each of the	
38	NUM_PILOTS pilots included in the message:	
39	PILOT_PN	- Pilot PN sequence offset index.
40		The base station shall set this field to the pilot PN sequence
41		offset for this pilot in units of 64 PN chips.
42	SRCH_OFFSET	- Target pilot channel search window offset.
43		If SRCH_OFFSET_INCL equals to '1', then the base station
44		shall set this field to the value shown in Table 2.6.6.2.1-2
45		corresponding to the search window offset to be used by the
46		mobile station for this target pilot. Otherwise, the base
47		station shall omit this field.

1	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
2			The base station shall set this field to '1' if additional pilot
3			information listed in PILOT_REC_TYPE and RECORD_LEN
4			fields are included. The base station shall set this field to '0'
5			if the corresponding pilot is the common pilot and there is no
6			additional pilot information included.
7	PILOT_REC_TYPE	-	Pilot record type.
8			If ADD_PILOT_REC_INCL is set to '1', the base station shall
9			set this field to the PILOT_REC_TYPE value shown in Table
10			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
11			specified by this record.
12			If ADD_PILOT_REC_INCL is set to '0', the base station shall
13			omit this field.
14	RECORD_LEN	-	Pilot record length.
15			If ADD_PILOT_REC_INCL is set to '1', the base station shall
16			set this field to the number of octets in the type-specific fields
17			of this pilot record.
18			If ADD_PILOT_REC_INCL is set to '0', the base station shall
19			omit this field.
20	Type-specific fields	-	Pilot record type-specific fields.
21			If ADD_PILOT_REC_INCL is set to '1', the base station shall
22			include type-specific fields based on the PILOT_REC_TYPE of
23			this pilot record as described in 3.7.6.1.
24			If ADD_PILOT_REC_INCL is set to '0', the base station shall
25			omit this field.
26	PWR_COMB_IND	-	Power control symbol combining indicator.
27			If the Forward Traffic Channel associated with this pilot will
28			carry the same closed-loop power control subchannel bits as
29			that of the previous pilot in this message, the base station
30			shall set this field to '1'; otherwise, the base station shall set
31			this field to '0'. The base station shall set this field to '0' in
32			the first record in the pilot list.
33	CODE_CHAN_FCH	-	Code channel on the Fundamental Channel.
34			If a Radio Configuration associated with Spreading Rate 1 is
35			used, the base station shall set this field to the code channel
36			index (see [2]) that the mobile station is to use on the
37			Fundamental Channel of the Forward Traffic Channel. If a
38			Radio Configuration associated with Spreading Rate 3 is
39			used, the base station shall set this field to the code channel
40			index that the mobile station is to use for the Fundamental
41			Channel on the center SR3 frequency.

1			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
2			station shall set this field in the range 1 to 63 inclusive. If
3			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
4			station shall set this field in the range 1 to 127 inclusive. If
5			Radio Configuration 7 or 9 is used, the base station shall set
6			this field in the range 1 to 255 inclusive.
7	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
8			Channel.
9			If a Radio Configuration associated with Spreading Rate 1 is
10			used, the base station shall set this field to the index of the
11			Quasi-orthogonal function (see [2]). If a Radio Configuration
12			associated with Spreading Rate 3 is used, the base station
13			shall set this field to the index of the Quasi-orthogonal
14			function on the center SR3 frequency.
15	NUM_SCH	-	Number of Supplemental Channel records.
16			If SCH_INCL is set to '0', the base station shall omit this field;
17			otherwise, the base station shall set this field as follows:
18			The base station shall set this field to the number of the
19			Supplemental Channel records need to be updated.
20	If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH		
21	occurrence of the following five fields:		
22	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
23			The base station shall set this field the identifier of the
24			Forward Supplemental Channel pertaining to this record.
25	SCCL_INDEX	-	Supplemental Channel Code list index.
26			The base station shall set this field to the index of the record
27			in the Supplemental Channel Code list.
28	PILOT_INCL	-	The corresponding pilot included in Supplemental Channel
29			Active Set indicator.
30			The base station shall set this field to '1' if the corresponding
31			pilot is included in the Active Set of Supplemental Channel;
32			otherwise, the base station shall set this field to '0'.
33	CODE_CHAN_SCH	-	Code channel on the Supplemental Channel.
34			If PILOT_INCL is included and set to '1', the base station shall
35			set this field as follows; otherwise, the base station shall omit
36			this field.
37			The base station shall set this field to the code channel index
38			(see [2]) that the mobile station is to use on the Supplemental
39			Channel of the Forward Traffic Channel indexed by
40			SCCL_INDEX.
41	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
42			Channel.
43			If PILOT_INCL is included and set to '1', the base station shall
44			set this field as follows; otherwise, the base station shall omit
45			this field.

1		The base station shall set this field to the index of the Quasi-
2		orthogonal function (see [2]).
3	3X_FCH_INFO_INCL	- 3X Fundamental Channel information included indicator.
4		If the 3X Fundamental Channel information is included, the
5		base station shall set this field to '1'; otherwise, the base
6		station shall set this field to '0'.
7	The base station shall include NUM_PILOTS occurrences of the following record if	
8	3X_FCH_INFO_INCL is set to '1'. The base station shall use the same order for the	
9	following fields as is used for the PILOT_PN fields listed in this message.	
10	3X_FCH_LOW_INCL	- FCH code channel on the lowest SR3 frequency included
11		indicator.
12		If the Fundamental Channel on the lowest SR3 frequencies
13		has a different code channel than the Fundamental Channel
14		on the center SR3 frequency, the base station shall set this
15		field to '1'; otherwise, the base station shall set this field to
16		'0'.
17	QOF_MASK_ID_FCH_LOW	- QOF index for the Fundamental Channel on the lowest
18		SR3 frequency.
19		If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
20		this field; otherwise, the base station shall set this field as
21		follows:
22		The base station shall set this field to the index of the Quasi-
23		orthogonal function (see [2]) corresponding to the QOF index
24		for the Fundamental Channel on the lowest SR3 frequency.
25	CODE_CHAN_FCH_LOW	- Code channel for the Fundamental Channel on the lowest
26		SR3 frequency.
27		If 3X_FCH_LOW_INCL is set to '0', the base station shall omit
28		this field; otherwise, the base station shall set this field as
29		follows:
30		The base station shall set this field to the code channel index
31		(see [2]) that the mobile station is to use on the Fundamental
32		Channel on the lowest SR3 frequency. If Radio Configuration
33		6 or 8 is used, the base station shall set this field in the range
34		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
35		base station shall set this field in the range 1 to 255
36		inclusive.
37	3X_FCH_HIGH_INCL	- FCH code channel on the highest SR3 frequency included
38		indicator.
39		If the Fundamental Channel on the highest SR3 frequencies
40		has a different code channel than the Fundamental Channel
41		on the center SR3 frequency, the base station shall set this
42		field to '1'; otherwise, the base station shall set this field to
43		'0'.
44	QOF_MASK_ID_FCH_HIGH	- QOF index for the Fundamental Channel on the
45		highest SR3 frequency.

1		If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
2		this field; otherwise, the base station shall set this field as
3		follows:
4		The base station shall set this field to the index of the Quasi-
5		orthogonal function (see [2]) corresponding to the QOF index
6		for the Fundamental Channel on the highest SR3 frequency.
7	CODE_CHAN_FCH_HIGH	- Code channel for the Fundamental Channel on the
8		highest SR3 frequency.
9		If 3X_FCH_HIGH_INCL is set to '0', the base station shall omit
10		this field; otherwise, the base station shall set this field as
11		follows:
12		The base station shall set this field to the code channel index
13		(see [2]) that the mobile station is to use on the Fundamental
14		Channel on the highest SR3 frequency. If Radio
15		Configuration 6 or 8 is used, the base station shall set this
16		field in the range 1 to 127 inclusive. If Radio Configuration 7
17		or 9 is used, the base station shall set this field in the range 1
18		to 255 inclusive.
19	3X_SCH_INFO_INCL	- 3X Supplemental Channel information included indicator.
20		If SCH_INCL is set to '0', the base station shall omit this field;
21		otherwise, the base station shall set this field as follows:
22		If the 3X Supplemental Channel information is included, the
23		base station shall set this field to '1'; otherwise, the base
24		station shall set this field to '0'.
25	The base station shall include NUM_SCH occurrences of the following seven fields record if	
26	3X_SCH_INFO_INCL is included and set to '1'.	
27	FOR_SCH_ID	- Forward Supplemental Channel identifier.
28		The base station shall set this field the identifier of the
29		Forward Supplemental Channel pertaining to this record.
30	3X_SCH_LOW_INCL	- SCH code channel on the lowest SR3 frequency included
31		indicator.
32		If the Supplemental Channel on the lowest SR3 frequencies
33		has a different code channel than the Supplemental Channel
34		on the center SR3 frequency, the base station shall set this
35		field to '1'; otherwise, the base station shall set this field to
36		'0'.
37	QOF_MASK_ID_SCH_LOW	- QOF index for the Supplemental Channel on the lowest
38		SR3 frequency.
39		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
40		this field; otherwise, the base station shall set this field as
41		follows:
42		The base station shall set this field to the index of the Quasi-
43		orthogonal function (see [2]) corresponding to the QOF index
44		for the Supplemental Channel on the lowest SR3 frequency.

1	CODE_CHAN_SCH_LOW -	Code channel for the Supplemental Channel on the lowest
2		SR3 frequency.
3		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
4		this field; otherwise, the base station shall set this field as
5		follows:
6		The base station shall set this field to the code channel index
7		(see [2]) that the mobile station is to use on the Supplemental
8		Channel on the lowest SR3 frequency. If Radio Configuration
9		6 or 8 is used, the base station shall set this field in the range
10		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
11		base station shall set this field in the range 1 to 255
12		inclusive.
13	3X_SCH_HIGH_INCL -	SCH code channel on the highest SR3 frequency included
14		indicator.
15		If the Supplemental Channel on the highest SR3 frequencies
16		has a different code channel than the Supplemental Channel
17		on the center SR3 frequency, the base station shall set this
18		field to '1'; otherwise, the base station shall set this field to
19		'0'.
20	QOF_MASK_ID_SCH_HIGH -	QOF index for the Supplemental Channel on the
21		highest SR3 frequency.
22		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
23		this field; otherwise, the base station shall set this field as
24		follows:
25		The base station shall set this field to the index of the Quasi-
26		orthogonal function (see [2]) corresponding to the QOF index
27		for the Supplemental Channel on the highest SR3 frequency.
28	CODE_CHAN-_SCH_HIGH -	Code channel for the Supplemental Channel on the
29		highest SR3 frequency.
30		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
31		this field; otherwise, the base station shall set this field as
32		follows:
33		The base station shall set this field to the code channel index
34		(see [2]) that the mobile station is to use on the Supplemental
35		Channel on the highest SR3 frequency. If Radio
36		Configuration 6 or 8 is used, the base station shall set this
37		field in the range 1 to 127 inclusive. If Radio Configuration 7
38		or 9 is used, the base station shall set this field in the range 1
39		to 255 inclusive.
40	CCSH_INCLUDED -	Code Combining Soft Handoff information included indicator.
41		The base station shall set this field to '1' if Code Combining
42		Soft Handoff information is included in this message;
43		otherwise, the base station shall set this field to '0'.
44	USE_CCSH_ENCODER_TIME -	Use Code Combining Soft Handoff Turbo Encoder
45		swapping action time indicator.

1 If the CASH\_INCLUDED field is set to '0', the base station  
2 shall omit this field; otherwise, the base station shall include  
3 this field and set it as follows.

4 If an explicit action time at which Turbo Encoder types  
5 (CASH\_ENCODER\_TYPE) included in this message takes  
6 effect is specified, the base station shall set this field to '1';  
7 otherwise, the base station shall set this field to '0'.

8 CASH\_ENCODER\_ACTION\_TIME - Code Combining Soft Handoff Turbo Encoder  
9 swapping action time.

10 If the USE\_CASH\_ENCODER\_TIME field is included and set  
11 to '1', the base station shall set this field to the System Time  
12 minus FRAME\_OFFSET<sub>s</sub> × 1.25 ms, in units of 80ms (modulo  
13 64), at which Turbo Encoder types included in this message  
14 are to take effect; otherwise, the base station shall omit this  
15 field.

16 If the CASH\_INCLUDED field is set to '1', the base station shall include one occurrence of  
17 the following one field for each of the Forward Supplemental Channel records (as specified  
18 by NUM\_PILOTS and NUM\_SCH) with PILOT\_INCL field set to '1'. The base station shall  
19 use the same order for the following field as is used for the Forward Supplemental Channel  
20 records.

21 CASH\_ENCODER\_TYPE - Code Combining Soft Handoff Turbo Encoder type.

22 The base station shall set this field to '0' if the Turbo Encoder  
23 type to be used on the Forward Supplemental Channel  
24 identified by FOR\_SCH\_ID and SCCL\_INDEX is the default  
25 encoder type. The base station shall set this field to '1' if the  
26 Turbo Encoder to be used is the complementary type.

27 RESERVED - Reserved bits.

28 The base station shall add reserved bits as needed in order to  
29 make the length of the ACTIVE\_SET\_REC\_FIELDS record  
30 equal to an integer number of octets. The base station shall  
31 set these bits to '0'.

32 If the CH\_IND field is set to '010' or '110', the base station shall include the following  
33 fields:

34 NUM\_FOR\_SCH - Number of Forward Supplemental Channel records.

35 If SCH\_INCL is set to '0', the base station shall omit this field;  
36 otherwise, the base station shall set this field as follows:

37 The base station shall set this field to the number of the  
38 Forward Supplemental Channel records need to be updated.

39 If NUM\_FOR\_SCH is included and not equal to '00000', the base station shall include  
40 NUM\_FOR\_SCH occurrence of the following three fields:

41 FOR\_SCH\_ID - Forward Supplemental Channel identifier.

42 The base station shall set this field to identifier of the  
43 Forward Supplemental Channel.

44 SCCL\_INDEX - Supplemental Channel Code list index.

1		The base station shall set this field to the index of the record
2		in the Supplemental Channel Code list.
3	FOR_SCH_NUM_BITS_IDX	- Forward Supplemental Channel number of information
4		bits index.
5		If USE_FLEX_NUM_BITS is equal to '0' or if
6		USE_FLEX_NUM_BITS is equal to '1' and
7		FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
8		then the base station shall set this field according to Table
9		3.7.3.3.2.37-4 to indicate the number of information bits per
10		frame and the length of the CRC field for the Forward
11		Supplemental Channel identified by FOR_SCH_ID
12		corresponding to SCCL_INDEX.
13		If USE_FLEX_NUM_BITS <sub>s</sub> is equal to '1' and
14		FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
15		then the base station shall set this field to indicate that the
16		number of information bits per frame for the Forward
17		Supplemental channel identified by FOR_SCH_ID to be
18		NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
19		NUM_BITS_IDX] and the number of CRC bits per frame for
20		the Forward Supplemental channel identified by
21		FOR_SCH_ID to be
22		CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_S
23		CH_NUM_BITS_IDX].
24	NUM_REV_SCH	- Number of Reverse Supplemental Channel records.
25		If SCH_INCL is set to '0', the base station shall omit this field;
26		otherwise, the base station shall set this field as follows:
27		The base station shall set this field to the number of the
28		Reverse Supplemental Channels need to be updated.
29	If NUM_REV_SCH is included and not equal to '00000', the base station shall include	
30	NUM_REV_SCH occurrence of the following three fields:	
31	REV_SCH_ID	- Reverse Supplemental Channel identifier.
32		The base station shall set this field to the identifier of the
33		Reverse Supplemental Channel.
34	REV_WALSH_ID	- Reverse Supplemental Channel Walsh cover Identifier.
35		The base station shall set this field according to Table
36		3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
37		station is to use when transmitting at the rate specified by
38		REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
39		Channel specified by REV_SCH_ID. If only one reverse
40		supplemental channel is assigned, the base station should
41		set this field to the default value for the REV_WALSH_ID as
42		specified in 2.6.4.2.
43	REV_SCH_NUM_BITS_IDX	- Reverse Supplemental Channel number of bits per frame
44		index.

1			If USE_FLEX_NUM_BITS is equal to '0' or if
2			USE_FLEX_NUM_BITS is equal to '1' and
3			RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
4			the base station shall set this field according to Table
5			3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
6			number of information bits per frame and the number of CRC
7			bits per frame, corresponding to REV_WALSH_ID field.
8			If USE_FLEX_NUM_BITS is equal to '1' and
9			RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
10			then the base station shall set the REV_SCH_NUM_BITS_IDX
11			field to indicate the Reverse Supplemental Channel number
12			of information bits per frame, corresponding to
13			REV_WALSH_ID field to be
14			NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
15			[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
16			Channel number of CRC bits per frame, corresponding to
17			REV_WALSH_ID field to be
18			CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
19			[REV_SCH_NUM_BITS_IDX].
20	NUM_PILOTS	-	Number of pilots included in the message.
21			The base station shall set this field to the number of pilots
22			included in the message. The base station shall set this field
23			to an integer that is equal to or greater than 1.
24	SRCH_OFFSET_INCL	-	Target pilot channel search window offset included.
25			If the SRCH_OFFSET field is included in the following
26			records, the base station shall set this field to '1'; otherwise,
27			the base station shall set this field to '0'.
28	The base station shall include one occurrence of the following record for each of the		
29	NUM_PILOTS pilots included in the message:		
30	PILOT_PN	-	Pilot PN sequence offset index.
31			The base station shall set this field to the pilot PN sequence
32			offset for this pilot in units of 64 PN chips.
33	SRCH_OFFSET	-	Target pilot channel search window offset.
34			If SRCH_OFFSET_INCL equals to '1', then the base station
35			shall set this field to the value shown in Table 2.6.6.2.1-2
36			corresponding to the search window offset to be used by the
37			mobile station for this target pilot. Otherwise, the base
38			station shall omit this field.
39	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
40			The base station shall set this field to '1' if additional pilot
41			information listed in PILOT_REC_TYPE and RECORD_LEN
42			fields are included. The base station shall set this field to '0'
43			if the corresponding pilot is the common pilot and there is no
44			additional pilot information included.
45	PILOT_REC_TYPE	-	Pilot record type.

1			If ADD_PILOT_REC_INCL is set to '1', the base station shall
2			set this field to the PILOT_REC_TYPE value shown in Table
3			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
4			specified by this record.
5			If ADD_PILOT_REC_INCL is set to '0', the base station shall
6			omit this field.
7	RECORD_LEN	-	Pilot record length.
8			If ADD_PILOT_REC_INCL is set to '1', the base station shall
9			set this field to the number of octets in the type-specific fields
10			of this pilot record.
11			If ADD_PILOT_REC_INCL is set to '0', the base station shall
12			omit this field.
13	Type-specific fields	-	Pilot record type-specific fields.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			include type-specific fields based on the PILOT_REC_TYPE of
16			this pilot record as described in 3.7.6.1.
17			If ADD_PILOT_REC_INCL is set to '0', the base station shall
18			omit this field.
19	PWR_COMB_IND	-	Power control symbol combining indicator.
20			If this pilot will carry the same closed-loop power control
21			subchannel bits as that of the previous pilot in this message,
22			the base station shall set this field to '1'; otherwise, the base
23			station shall set this field to '0'. The base station shall set
24			this field to '0' in the first record in the pilot list.
25	CODE_CHAN_DCCH	-	Code channel on the Dedicated Control Channel.
26			If a Radio Configuration associated with Spreading Rate 1 is
27			used, the base station shall set this field to the code channel
28			index (see [2]), in the range of 1 to 127 inclusive, that the
29			mobile station is to use on the Dedicated Control Channel of
30			the Forward Traffic Channel. If a Radio Configuration
31			associated with Spreading Rate 3, the base station shall set
32			this field to the code channel index (see [2]), in the range of 1
33			to 255 inclusive, that the mobile station is to use for the
34			Dedicated Control Channel on the center SR3 frequency.
35			If Radio Configuration 3 or 5 (see [2]) is used, the base station
36			shall set this field in the range 1 to 63 inclusive. If Radio
37			Configuration 4, 6 or 8 is used, the base station shall set this
38			field in the range 1 to 127 inclusive. If Radio Configuration 7
39			or 9 is used, the base station shall set this field in the range 1
40			to 255 inclusive.
41	QOF_MASK_ID_DCCH	-	Quasi-orthogonal function index on the Dedicated Control
42			Channel.

1			If a Radio Configuration associated with Spreading Rate 1 is
2			used, the base station shall set this field to the index of the
3			Quasi-orthogonal function (see [2]). If a Radio Configuration
4			associated with Spreading Rate 3 is used, the base station
5			shall set this field to the index of the Quasi-orthogonal
6			function (see [2]).
7	NUM_SCH	-	Number of Supplemental Channel records.
8			If SCH_INCL is set to '0', the base station shall omit this field;
9			otherwise, the base station shall set this field as follows:
10			The base station shall set this field to the number of the
11			Supplemental Channel records need to be updated.
12	If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH		
13	occurrence of the following five fields:		
14	FOR_SCH_ID	-	Forward Supplemental Channel identifier
15			The base station shall set this field to the identifier of the
16			Forward Supplemental Channel pertaining to this record.
17	SCCL_INDEX	-	Supplemental Channel Code list index.
18			The base station shall set this field to the index of the record
19			in the Supplemental Channel Code list.
20	PILOT_INCL	-	The corresponding pilot included in Supplemental Channel
21			Active Set indicator.
22			The base station shall set this field to '1' if the corresponding
23			pilot is included in the Active Set of Supplemental Channel;
24			otherwise, the base station shall set this field to '0'.
25	CODE_CHAN_SCH	-	Code channel on the Supplemental Channel.
26			The base station shall set this field to the code channel index
27			(see [2]) that the mobile station is to use on the Supplemental
28			Channel of the Forward Traffic Channel indexed by
29			SCCL_INDEX.
30	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
31			Channel.
32			If SCH_INCL is set to '0', the base station shall omit this field;
33			otherwise, the base station shall set this field as follows:
34			The base station shall set this field to the index of the Quasi-
35			orthogonal function (see [2]).
36	3X_DCCH_INFO_INCL	-	3X Dedicated Control Channel information included
37			indicator.
38			If the 3X Dedicated Control Channel information is included,
39			the base station shall set this field to '1'; otherwise, the base
40			station shall set this field to '0'.
41	The base station shall include NUM_PILOTS occurrences of the following record if		
42	3X_DCCH_INFO_INCL is set to '1'. The base station shall use the same order for the		
43	following fields as is used for the PILOT_PN fields listed in this message.		

1	3X_DCCH_LOW_INCL	-	DCCH code channel on the lowest SR3 frequency included
2			indicator.
3			If the Dedicated Control Channel on the lowest SR3
4			frequencies has a different code channel than the Dedicated
5			Control Channel on the center SR3 frequency, the base
6			station shall set this field to '1'; otherwise, the base station
7			shall set this field to '0'.
8	QOF_MASK_ID_DCCH_LOW	-	QOF index for the Dedicated Control Channel on the
9			lowest SR3 frequency.
10			If 3X_DCCH_LOW_INCL is set to '0', the base station shall
11			omit this field; otherwise, the base station shall set this field
12			as follows:
13			The base station shall set this field to the index of the Quasi-
14			orthogonal function (see [2]) corresponding to the QOF index
15			for the Dedicated Control Channel on the lowest SR3
16			frequency.
17	CODE_CHAN_DCCH_LOW	-	Code channel for the Dedicated Control Channel on the
18			lowest SR3 frequency.
19			If 3X_DCCH_LOW_INCL is set to '0', the base station shall
20			omit this field; otherwise, the base station shall set this field
21			as follows:
22			The base station shall set this field to the code channel index
23			(see [2]) that the mobile station is to use on the Dedicated
24			Control Channel on the lowest SR3 frequency. If Radio
25			Configuration 6 or 8 is used, the base station shall set this
26			field in the range 1 to 127 inclusive. If Radio Configuration 7
27			or 9 is used, the base station shall set this field in the range 1
28			to 255 inclusive.
29	3X_DCCH_HIGH_INCL	-	DCCH code channel on the highest SR3 frequency included
30			indicator.
31			If the Dedicated Control Channel on the highest SR3
32			frequencies has a different code channel than the Dedicated
33			Control Channel on the center SR3 frequency, the base
34			station shall set this field to '1'; otherwise, the base station
35			shall set this field to '0'.
36	QOF_MASK_ID_DCCH_HIGH	-	QOF index for the Dedicated Control Channel on
37			the highest SR3 frequency.
38			If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
39			omit this field; otherwise, the base station shall set this field
40			as follows:
41			The base station shall set this field to the index of the Quasi-
42			orthogonal function (see [2]) corresponding to the QOF index
43			for the Dedicated Control Channel on the highest SR3
44			frequency.

1	CODE_CHAN_DCCH_HIGH	-	Code channel for the Dedicated Control Channel on the
2			highest SR3 frequency.
3			If 3X_DCCH_HIGH_INCL is set to '0', the base station shall
4			omit this field; otherwise, the base station shall set this field
5			as follows:
6			The base station shall set this field to the code channel index
7			(see [2]) that the mobile station is to use on the Dedicated
8			Control Channel on the highest SR3 frequency. If Radio
9			Configuration 6 or 8 is used, the base station shall set this
10			field in the range 1 to 127 inclusive. If Radio Configuration 7
11			or 9 is used, the base station shall set this field in the range 1
12			to 255 inclusive.
13	3X_SCH_INFO_INCL	-	3X Supplemental Channel information included indicator.
14			If SCH_INCL is set to '0', the base station shall omit this field;
15			otherwise, the base station shall set this field as follows:
16			If the 3X Supplemental Channel information is included, the
17			base station shall set this field to '1'; otherwise, the base
18			station shall set this field to '0'.
19	The base station shall include NUM_SCH occurrences of the following seven fields record if		
20	3X_SCH_INFO_INCL is included and set to '1'.		
21	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
22			The base station shall set this field the identifier of the
23			Forward Supplemental Channel pertaining to this record.
24	3X_SCH_LOW_INCL	-	SCH code channel on the lowest SR3 frequency included
25			indicator.
26			If the Supplemental Channel on the lowest SR3 frequencies
27			has a different code channel than the Supplemental Channel
28			on the center SR3 frequency, the base station shall set this
29			field to '1'; otherwise, the base station shall set this field to
30			'0'.
31	QOF_MASK_ID_SCH_LOW	-	QOF index for the Supplemental Channel on the lowest
32			SR3 frequency.
33			If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
34			this field; otherwise, the base station shall set this field as
35			follows:
36			The base station shall set this field to the index of the Quasi-
37			orthogonal function (see [2]) corresponding to the QOF index
38			for the Supplemental Channel on the lowest SR3 frequency.
39	CODE_CHAN_SCH_LOW	-	Code channel for the Supplemental Channel on the lowest
40			SR3 frequency.
41			If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
42			this field; otherwise, the base station shall set this field as
43			follows:

1		The base station shall set this field to the code channel index
2		(see [2]) that the mobile station is to use on the Supplemental
3		Channel on the lowest SR3 frequency. If Radio Configuration
4		6 or 8 is used, the base station shall set this field in the range
5		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
6		base station shall set this field in the range 1 to 255
7		inclusive.
8	3X_SCH_HIGH_INCL	- Supplemental Channel code channel on the highest SR3
9		frequency included indicator.
10		If the Supplemental Channel on the highest SR3 frequencies
11		has a different code channel than the Supplemental Channel
12		on the center SR3 frequency, the base station shall set this
13		field to '1'; otherwise, the base station shall set this field to
14		'0'.
15	QOF_MASK_ID_SCH_HIGH	- QOF index for the Supplemental Channel on the
16		highest SR3 frequency.
17		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
18		this field; otherwise, the base station shall set this field as
19		follows:
20		The base station shall set this field to the index of the Quasi-
21		orthogonal function (see [2]) corresponding to the QOF index
22		for the Supplemental Channel on the highest SR3 frequency.
23	CODE_CHAN_SCH_HIGH	- Code channel for the Supplemental Channel on the
24		highest SR3 frequency.
25		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
26		this field; otherwise, the base station shall set this field as
27		follows:
28		The base station shall set this field to the code channel index
29		(see [2]) that the mobile station is to use on the Supplemental
30		Channel on the highest SR3 frequency. If Radio
31		Configuration 6 or 8 is used, the base station shall set this
32		field in the range 1 to 127 inclusive. If Radio Configuration 7
33		or 9 is used, the base station shall set this field in the range 1
34		to 255 inclusive.
35	CCSH_INCLUDED	- Code Combining Soft Handoff information included indicator.
36		The base station shall set this field to '1' if Code Combining
37		Soft Handoff information is included in this message;
38		otherwise, the base station shall set this field to '0'.
39	USE_CCSH_ENCODER_TIME	- Use Code Combining Soft Handoff Turbo Encoder
40		swapping action time indicator.
41		If the CCSH_INCLUDED field is set to '0', the base station
42		shall omit this field; otherwise, the base station shall include
43		this field and set it as follows.
44		If an explicit action time at which Turbo Encoder types
45		(CCSH_ENCODER_TYPE) included in this message takes
46		effect is specified, the base station shall set this field to '1';
47		otherwise, the base station shall set this field to '0'.

- 1 CSH\_ENCODER\_ACTION\_TIME - Code Combining Soft Handoff Turbo Encoder  
 2 swapping action time.
- 3 If the USE\_CCSH\_ENCODER\_TIME field is included and set  
 4 to '1', the base station shall set this field to the System Time  
 5 minus  $\text{FRAME\_OFFSET}_s \times 1.25$  ms, in units of 80ms (modulo  
 6 64), at which Turbo Encoder types included in this message  
 7 are to take effect; otherwise, the base station shall omit this  
 8 field.
- 9 If the CCSH\_INCLUDED field is set to '1', the base station shall include one occurrence of  
 10 the following one field for each of the Forward Supplemental Channel records (as specified  
 11 by NUM\_PILOTS and NUM\_SCH) with PILOT\_INCL field set to '1'. The base station shall  
 12 use the same order for the following field as is used for the Forward Supplemental Channel  
 13 records.
- 14 CSH\_ENCODER\_TYPE - Code Combining Soft Handoff Turbo Encoder type.
- 15 The base station shall set this field to '0' if the Turbo Encoder  
 16 type to be used on the Forward Supplemental Channel  
 17 identified by FOR\_SCH\_ID and SCCL\_INDEX is the default  
 18 encoder type. The base station shall set this field to '1' if the  
 19 Turbo Encoder to be used is the complementary type.
- 20 FUNDICATED\_BCNC\_IND - BCNC on fundicated channel Indicator.
- 21 If the channel assignment in this message contains a  
 22 Forward Fundicated Channel used for BCNC transmission,  
 23 the base station shall set this field to '1'; otherwise, the base  
 24 station shall set this field to '0'.
- 25 If FUNDICATED\_BCNC\_IND field is set to '1', the base station shall include NUM\_PILOT  
 26 occurrences of the following record:
- 27 FOR\_CPCCH\_WALSH - The Forward Common Power Control Channel Walsh code  
 28 assignment.
- 29 The base station shall set this field to the Walsh code  
 30 assignment for the Forward Common Power Control Channel.
- 31 FOR\_CPCSCH - The Forward Common Power Control Channel Subchannel.
- 32 The base station shall set this field to the Forward Common  
 33 Power Control Channel Subchannel associated with this base  
 34 station.
- 35 RESERVED - Reserved bits.
- 36 The base station shall add reserved bits as needed in order to  
 37 make the length of the ACTIVE\_SET\_REC\_FIELDS record  
 38 equal to an integer number of octets. The base station shall  
 39 set these bits to '0'.
- 40 If the CH\_IND field is set to '111', the base station shall include the following fields:
- 41 NUM\_FOR\_SCH - Number of Forward Supplemental Channel records.
- 42 If SCH\_INCL is set to '0', the base station shall omit this field;  
 43 otherwise, the base station shall set this field as follows:

1                   The base station shall set this field to the number of the  
2                   Forward Supplemental Channel records need to be updated.

3   If NUM\_FOR\_SCH is included and not equal to '00000', the base station shall include  
4   NUM\_FOR\_SCH occurrence of the following three fields:

5           FOR\_SCH\_ID   -   Forward Supplemental Channel identifier.  
6                   The base station shall set this field to the identifier of the  
7                   Forward Supplemental Channel.

8           SCCL\_INDEX   -   Supplemental Channel Code list index.  
9                   The base station shall set this field to the index of the record  
10                  in the Supplemental Channel Code list.

11   FOR\_SCH\_NUM\_BITS\_IDX -   Forward Supplemental Channel number of information  
12                   bits index.

13                   If USE\_FLEX\_NUM\_BITS is equal to '0' or if  
14                   USE\_FLEX\_NUM\_BITS is equal to '1' and  
15                   FSCH\_NBIT\_TABLE\_ID for FOR\_SCH\_ID is equal to '0000',  
16                   then the base station shall set this field according to Table  
17                   3.7.3.3.2.37-4 to indicate the number of information bits per  
18                   frame and the length of the CRC field for the Forward  
19                   Supplemental Channel identified by FOR\_SCH\_ID  
20                   corresponding to SCCL\_INDEX.

21                   If USE\_FLEX\_NUM\_BITS<sub>s</sub> is equal to '1' and  
22                   FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID] is not equal to '0000',  
23                   then the base station shall set this field to indicate that the  
24                   number of information bits per frame for the Forward  
25                   Supplemental channel identified by FOR\_SCH\_ID to be  
26                   NUM\_BITS[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_SCH\_  
27                   NUM\_BITS\_IDX] and the number of CRC bits per frame for  
28                   the Forward Supplemental channel identified by  
29                   FOR\_SCH\_ID to be  
30                   CRC\_LEN\_IDX[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_S  
31                   CH\_NUM\_BITS\_IDX].

32           NUM\_REV\_SCH   -   Number of Reverse Supplemental Channel records.  
33                   If SCH\_INCL is set to '0', the base station shall omit this field;  
34                   otherwise, the base station shall set this field as follows:  
35                   The base station shall set this field to the number of the  
36                   Reverse Supplemental Channels need to be updated.

37   If NUM\_REV\_SCH is included and not equal to '00000', the base station shall include  
38   NUM\_REV\_SCH occurrence of the following three fields:

39           REV\_SCH\_ID   -   Reverse Supplemental Channel identifier.  
40                   The base station shall set this field to the identifier of the  
41                   Reverse Supplemental Channel.

42           REV\_WALSH\_ID   -   Reverse Supplemental Channel Walsh cover Identifier.

1		The base station shall set this field according to Table
2		3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
3		station is to use when transmitting at the rate specified by
4		REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
5		Channel specified by REV_SCH_ID. If only one reverse
6		supplemental channel is assigned, the base station should set
7		this field to the default value for the REV_WALSH_ID as
8		specified in 2.6.4.2.
9	REV_SCH_NUM_BITS_IDX	- Reverse Supplemental Channel number of bits per frame
10		index.
11		If USE_FLEX_NUM_BITS is equal to '0' or if
12		USE_FLEX_NUM_BITS is equal to '1' and
13		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
14		the base station shall set this field according to Table
15		3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
16		number of information bits per frame and the number of CRC
17		bits per frame, corresponding to REV_WALSH_ID field.
18		If USE_FLEX_NUM_BITS is equal to '1' and
19		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
20		then the base station shall set the REV_SCH_NUM_BITS_IDX
21		field to indicate the Reverse Supplemental Channel number
22		of information bits per frame, corresponding to
23		REV_WALSH_ID field to be
24		NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
25		[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
26		Channel number of information bits per frame, corresponding
27		to REV_WALSH_ID field to be to be
28		CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
29		[REV_SCH_NUM_BITS_IDX].
30	NUM_PILOTS	- Number of pilots included in the message.
31		The base station shall set this field to the number of pilots
32		included in the message. The base station shall set this field
33		to an integer that is equal to or greater than 1.
34	SRCH_OFFSET_INCL	- Target pilot channel search window offset included.
35		If the SRCH_OFFSET field is included in the following
36		records, the base station shall set this field to '1'; otherwise,
37		the base station shall set this field to '0'.
38	The base station shall include one occurrence of the following record for each of the	
39	NUM_PILOTS pilots included in the message:	
40	PILOT_PN	- Pilot PN sequence offset index.
41		The base station shall set this field to the pilot PN sequence
42		offset for this pilot in units of 64 PN chips.

1	SRCH_OFFSET	-	Target pilot channel search window offset.
2			If SRCH_OFFSET_INCL equals to '1', then the base station
3			shall set this field to the value shown in Table 2.6.6.2.1-2
4			corresponding to the search window offset to be used by the
5			mobile station for this target pilot. Otherwise, the base
6			station shall omit this field.
7	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
8			The base station shall set this field to '1' if additional pilot
9			information listed in PILOT_REC_TYPE and RECORD_LEN
10			fields are included. The base station shall set this field to '0'
11			if the corresponding pilot is the common pilot and there is no
12			additional pilot information included.
13	PILOT_REC_TYPE	-	Pilot record type.
14			If ADD_PILOT_REC_INCL is set to '1', the base station shall
15			set this field to the PILOT_REC_TYPE value shown in Table
16			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
17			specified by this record.
18			If ADD_PILOT_REC_INCL is set to '0', the base station shall
19			omit this field.
20	RECORD_LEN	-	Pilot record length.
21			If ADD_PILOT_REC_INCL is set to '1', the base station shall
22			set this field to the number of octets in the type-specific fields
23			of this pilot record.
24			If ADD_PILOT_REC_INCL is set to '0', the base station shall
25			omit this field.
26	Type-specific fields	-	Pilot record type-specific fields.
27			If ADD_PILOT_REC_INCL is set to '1', the base station shall
28			include type-specific fields based on the PILOT_REC_TYPE of
29			this pilot record as described in 3.7.6.1.
30			If ADD_PILOT_REC_INCL is set to '0', the base station shall
31			omit this field.
32	PWR_COMB_IND	-	Power control symbol combining indicator.
33			If this pilot will carry the same closed-loop power control
34			subchannel bits as that of the previous pilot in this message,
35			the base station shall set this field to '1'; otherwise, the base
36			station shall set this field to '0'. The base station shall set
37			this field to '0' in the first record in the pilot list.
38	CODE_CHAN_FCH	-	Code Channel on the Fundamental Channel.
39			If a Radio Configuration associated with Spreading Rate 1 is
40			used, the base station shall set this field to the code channel
41			index (see [2]) that the mobile station is to use on the
42			Fundamental Channel of the Forward Traffic Channel. If a
43			Radio Configuration associated with Spreading Rate 3 is
44			used, the base station shall set this field to the code channel
45			index that the mobile station is to use for the Fundamental
46			Channel on the center SR3 frequency.

1			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
2			station shall set this field in the range 1 to 63 inclusive. If
3			Radio Configuration 4, 6, 8, 11, or 12 is used, the base
4			station shall set this field in the range 1 to 127 inclusive. If
5			Radio Configuration 7 or 9 is used, the base station shall set
6			this field in the range 1 to 255 inclusive.
7	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
8			Channel.
9			If a Radio Configuration associated with Spreading Rate 1 is
10			used, the base station shall set this field to the index of the
11			Quasi-orthogonal function (see [2]). If a Radio Configuration
12			associated with Spreading Rate 3 is used, the base station
13			shall set this field to the index of the Quasi-orthogonal
14			function on the center SR3 frequency.
15	CODE_CHAN_DCCH	-	Code channel on the Dedicated Control Channel.
16			If a Radio Configuration associated with Spreading Rate 1 is
17			used, the base station shall set this field to the code channel
18			index (see [2]), in the range of 1 to 127 inclusive, that the
19			mobile station is to use on the Dedicated Control Channel of
20			the Forward Traffic Channel. If a Radio Configuration
21			associated with Spreading Rate 3 is used, the base station
22			shall set this field to the code channel index in the range of 1
23			to 255 inclusive, that the mobile station is to use for the
24			Dedicated Control Channel on the center SR3 frequency.
25			If Radio Configuration 3 or 5 (see [2]) is used, the base station
26			shall set this field in the range 1 to 63 inclusive. If Radio
27			Configuration 4, 6 or 8 is used, the base station shall set this
28			field in the range 1 to 127 inclusive. If Radio Configuration 7
29			or 9 is used, the base station shall set this field in the range 1
30			to 255 inclusive.
31	QOF_MASK_ID_DCCH	-	Quasi-orthogonal function index on the Dedicated Control
32			Channel.
33			If a Radio Configuration associated with Spreading Rate 1 is
34			used, the base station shall set this field to the index of the
35			Quasi-orthogonal function (see [2]). If a Radio Configuration
36			associated with Spreading Rate 1 is used, the base station
37			shall set this field to the index of the Quasi-orthogonal
38			function on the center SR3 frequency.
39	NUM_SCH	-	Number of Supplemental Channel records.
40			The base station shall set this field to the number of the
41			Supplemental Channel records need to be updated.
42	If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH		
43	occurrence of the following fields:		
44	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
45			The base station shall set this field to the identifier of the
46			Forward Supplemental Channel pertaining to this record.
47	SCCL_INDEX	-	Supplemental Channel Code list index.

1			The base station shall set this field to the index of the record
2			in the Supplemental Channel Code List Table.
3	PILOT_INCL	-	The corresponding pilot included in Supplemental Channel
4			Active Set indicator.
5			The base station shall set this field to '1' if the corresponding
6			pilot is included in the Active Set of Supplemental Channel;
7			otherwise, the base station shall set this field to '0'.
8	CODE_CHAN_SCH	-	Code Channel on the Supplemental Channel.
9			If SCH_INCL is set to '0', the base station shall omit this field;
10			otherwise, the base station shall set this field as follows:
11			The base station shall set this field to the code channel index
12			(see [2]) that the mobile station is to use on the Supplemental
13			Channel of the Forward Traffic Channel indexed by
14			SCCL_INDEX.
15	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
16			Channel.
17			If SCH_INCL is set to '0', the base station shall omit this field;
18			otherwise, the base station shall set this field as follows:
19			The base station shall set this field to the index of the Quasi-
20			orthogonal function (see [2]).
21	3X_FCH_INFO_INCL	-	3X Fundamental Channel information included indicator.
22			If the 3X Fundamental Channel information is included, the
23			base station shall set this field to '1'; otherwise, the base
24			station shall set this field to '0'.
25	3X_DCCH_INFO_INCL	-	3X Dedicated Control Channel information included
26			indicator.
27			If the 3X Dedicated Control Channel information is included,
28			the base station shall set this field to '1'; otherwise, the base
29			station shall set this field to '0'.
30	The base station shall include NUM_PILOTS occurrences of the following record if		
31	3X_FCH_INFO_INCL or 3X_FCH_INFO_INCL is set to '1'. The base station shall use the		
32	same order for the following fields as is used for the PILOT_PN fields listed in this message.		
33	3X_FCH_LOW_INCL	-	FCH code channel on the lowest SR3 frequency included
34			indicator.
35			If 3X_FCH_INFO_INCL is set to '0', the base station shall set
36			omit this field; otherwise, the base station shall set this field
37			as follows:
38			If the Fundamental Channel on the lowest SR3 frequencies
39			has a different code channel than the Fundamental Channel
40			on the center SR3 frequency, the base station shall set this
41			field to '1'; otherwise, the base station shall set this field to
42			'0'.
43	QOF_MASK_ID_FCH_LOW	-	QOF index for the Fundamental Channel on the lowest
44			SR3 frequency.

1		If 3X_FCH_LOW_INCL is included and set to '1', the base
2		station shall set this field as follows; otherwise, the base
3		station shall omit this field:
4		The base station shall set this field to the index of the Quasi-
5		orthogonal function (see [2]) corresponding to the QOF index
6		for the Fundamental Channel on the lowest SR3 frequency.
7	CODE_CHAN_FCH_LOW -	Code channel for the Fundamental Channel on the lowest
8		SR3 frequency.
9		If 3X_FCH_LOW_INCL is included and set to '1', the base
10		station shall set this field as follows; otherwise, the base
11		station shall omit this field:
12		The base station shall set this field to the code channel index
13		(see [2]) that the mobile station is to use on the Fundamental
14		Channel on the lowest SR3 frequency. If Radio Configuration
15		6 or 8 is used, the base station shall set this field in the range
16		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
17		base station shall set this field in the range 1 to 255
18		inclusive.
19	3X_FCH_HIGH_INCL -	FCH code channel on the highest SR3 frequency included
20		indicator.
21		If 3X_FCH_INFO_INCL is set to '0', the base station shall omit
22		this field; otherwise, the base station shall set this field as
23		follows:
24		If the Fundamental Channel on the highest SR3 frequencies
25		has a different code channel than the Fundamental Channel
26		on the center SR3 frequency, the base station shall set this
27		field to '1'; otherwise, the base station shall set this field to
28		'0'.
29	QOF_MASK_ID_FCH_HIGH -	QOF index for the Fundamental Channel on the
30		highest SR3 frequency.
31		If 3X_FCH_HIGH_INCL is included and set to '1', the base
32		station shall set this field as follows; otherwise, the base
33		station shall omit this field:
34		The base station shall set this field to the index of the Quasi-
35		orthogonal function (see [2]) corresponding to the QOF index
36		for the Fundamental Channel on the highest SR3 frequency.
37	CODE_CHAN_FCH_HIGH -	Code channel for the Fundamental Channel on the
38		highest SR3 frequency.
39		If 3X_FCH_HIGH_INCL is included and set to '1', the base
40		station shall set this field as follows; otherwise, the base
41		station shall omit this field:

1			The base station shall set this field to the code channel index
2			(see [2]) that the mobile station is to use on the Fundamental
3			Channel on the highest SR3 frequency. If Radio
4			Configuration 6 or 8 is used, the base station shall set this
5			field in the range 1 to 127 inclusive. If Radio Configuration 7
6			or 9 is used, the base station shall set this field in the range 1
7			to 255 inclusive.
8	3X_DCCH_LOW_INCL	-	DCCH code channel on the lowest SR3 frequency included
9			indicator.
10			If 3X_DCCH_INFO_INCL is set to '0', the base station shall
11			omit this field; otherwise, the base station shall set this field
12			as follows:
13			If the Dedicated Control Channel on the lowest SR3
14			frequencies has a different code channel than the Dedicated
15			Control Channel on the center SR3 frequency, the base
16			station shall set this field to '1'; otherwise, the base station
17			shall set this field to '0'.
18	QOF_MASK_ID_DCCH_LOW	-	QOF index for the Dedicated Control Channel on the
19			lowest SR3 frequency.
20			If 3X_DCCH_LOW_INCL is included and set to '1', the base
21			station shall set this field as follows; otherwise, the base
22			station shall omit this field:
23			The base station shall set this field to the index of the Quasi-
24			orthogonal function (see [2]) corresponding to the QOF index
25			for the Dedicated Control Channel on the lowest SR3
26			frequency.
27	CODE_CHAN_DCCH_LOW	-	Code channel for the Dedicated Control Channel on the
28			lowest SR3 frequency.
29			If 3X_DCCH_LOW_INCL is included and set to '1', the base
30			station shall set this field as follows; otherwise, the base
31			station shall omit this field:
32			The base station shall set this field to the code channel index
33			(see [2]) that the mobile station is to use on the Dedicated
34			Control Channel on the lowest SR3 frequency. If Radio
35			Configuration 6 or 8 is used, the base station shall set this
36			field in the range 1 to 127 inclusive. If Radio Configuration 7
37			or 9 is used, the base station shall set this field in the range 1
38			to 255 inclusive.
39	3X_DCCH_HIGH_INCL	-	DCCH code channel on the highest SR3 frequency included
40			indicator.
41			If 3X_DCCH_INFO_INCL is set to '0', the base station shall
42			omit this field; otherwise, the base station shall set this field
43			as follows:
44			If the Dedicated Control Channel on the highest SR3
45			frequencies has a different code channel than the Dedicated
46			Control Channel on the center SR3 frequency, the base
47			station shall set this field to '1'; otherwise, the base station
48			shall set this field to '0'.

1	QOF_MASK_ID_DCCH_HIGH	-	QOF index for the Dedicated Control Channel on
2			the highest SR3 frequency.
3			If 3X_DCCH_HIGH_INCL is included and set to '1', the base
4			station shall set this field as follows; otherwise, the base
5			station shall omit this field:
6			The base station shall set this field to the index of the Quasi-
7			orthogonal function (see [2]) corresponding to the QOF index
8			for the Dedicated Control Channel on the highest SR3
9			frequency.
10	CODE_CHAN_DCCH_HIGH	-	Code channel for the Dedicated Control Channel on the
11			highest SR3 frequency.
12			If 3X_DCCH_HIGH_INCL is included and set to '1', the base
13			station shall set this field as follows; otherwise, the base
14			station shall omit this field:
15			The base station shall set this field to the code channel index
16			(see [2]) that the mobile station is to use on the Dedicated
17			Control Channel on the highest SR3 frequency. If Radio
18			Configuration 6 or 8 is used, the base station shall set this
19			field in the range 1 to 127 inclusive. If Radio Configuration 7
20			or 9 is used, the base station shall set this field in the range 1
21			to 255 inclusive.
22	3X_SCH_INFO_INCL	-	3X Supplemental Channel information included indicator.
23			If SCH_INCL is set to '0', the base station shall omit this field;
24			otherwise, the base station shall set this field as follows:
25			If the 3X Supplemental Channel information is included, the
26			base station shall set this field to '1'; otherwise, the base
27			station shall set this field to '0'.
28	The base station shall include NUM_SCH occurrences of the following seven fields record if		
29	3X_SCH_INFO_INCL is included and set to '1'.		
30	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
31			The base station shall set this field the identifier of the
32			Forward Supplemental Channel pertaining to this record.
33	3X_SCH_LOW_INCL	-	SCH code channel on the lowest SR3 frequency included
34			indicator.
35			If the Supplemental Channel on the lowest SR3 frequencies
36			has a different code channel than the Supplemental Channel
37			on the center SR3 frequency, the base station shall set this
38			field to '1'; otherwise, the base station shall set this field to
39			'0'.
40	QOF_MASK_ID_SCH_LOW	-	QOF index for the Supplemental Channel on the lowest
41			SR3 frequency.
42			If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
43			this field; otherwise, the base station shall set this field as
44			follows:

1		The base station shall set this field to the index of the Quasi-
2		orthogonal function (see [2]) corresponding to the QOF index
3		for the Supplemental Channel on the lowest SR3 frequency.
4	CODE_CHAN_SCH_LOW -	Code channel for the Supplemental Channel on the lowest
5		SR3 frequency.
6		If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
7		this field; otherwise, the base station shall set this field as
8		follows:
9		The base station shall set this field to the code channel index
10		(see [2]) that the mobile station is to use on the Supplemental
11		Channel on the lowest SR3 frequency. If Radio Configuration
12		6 or 8 is used, the base station shall set this field in the range
13		1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
14		base station shall set this field in the range 1 to 255
15		inclusive.
16	3X_SCH_HIGH_INCL -	SCH code channel on the highest SR3 frequency included
17		indicator.
18		If the Supplemental Channel on the highest SR3 frequencies
19		has a different code channel than the Supplemental Channel
20		on the center SR3 frequency, the base station shall set this
21		field to '1'; otherwise, the base station shall set this field to
22		'0'.
23	QOF_MASK_ID_SCH_HIGH -	QOF index for the Supplemental Channel on the highest
24		SR3 frequency.
25		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
26		this field; otherwise, the base station shall set this field as
27		follows:
28		The base station shall set this field to the index of the Quasi-
29		orthogonal function (see [2]) corresponding to the QOF index
30		for the Supplemental Channel on the highest SR3 frequency.
31	CODE_CHAN_SCH_HIGH -	Code channel for the Supplemental Channel on the
32		highest SR3 frequency.
33		If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
34		this field; otherwise, the base station shall set this field as
35		follows:
36		The base station shall set this field to the code channel index
37		(see [2]) that the mobile station is to use on the Supplemental
38		Channel on the highest SR3 frequency. If Radio
39		Configuration 6 or 8 is used, the base station shall set this
40		field in the range 1 to 127 inclusive. If Radio Configuration 7
41		or 9 is used, the base station shall set this field in the range 1
42		to 255 inclusive.
43	CCSH_INCLUDED -	Code Combining Soft Handoff information included indicator.
44		The base station shall set this field to '1' if Code Combining
45		Soft Handoff information is included in this message;
46		otherwise, the base station shall set this field to '0'.

1	USE_CCSH_ENCODER_TIME	- Use Code Combining Soft Handoff Turbo Encoder
2		swapping action time indicator.
3		If the CCSH_INCLUDED field is set to '0', the base station
4		shall omit this field; otherwise, the base station shall include
5		this field and set it as follows.
6		If an explicit action time at which Turbo Encoder types
7		(CCSH_ENCODER_TYPE) included in this message takes
8		effect is specified, the base station shall set this field to '1';
9		otherwise, the base station shall set this field to '0'.
10	CCSH_ENCODER_ACTION_TIME	- Code Combining Soft Handoff Turbo Encoder
11		swapping action time.
12		If the USE_CCSH_ENCODER_TIME field is included and set
13		to '1', the base station shall set this field to the System Time
14		minus $\text{FRAME\_OFFSET}_s \times 1.25 \text{ ms}$ , in units of 80ms (modulo
15		64), at which Turbo Encoder types included in this message
16		are to take effect; otherwise, the base station shall omit this
17		field.
18	If the CCSH_INCLUDED field is set to '1', the base station shall include one occurrence of	
19	the following one field for each of the Forward Supplemental Channel records (as specified	
20	by NUM_PILOTS and NUM_SCH) with PILOT_INCL field set to '1'. The base station shall	
21	use the same order for the following field as is used for the Forward Supplemental Channel	
22	records.	
23	CCSH_ENCODER_TYPE	- Code Combining Soft Handoff Turbo Encoder type.
24		The base station shall set this field to '0' if the Turbo Encoder
25		type to be used on the Forward Supplemental Channel
26		identified by FOR_SCH_ID and SCCL_INDEX is the default
27		encoder type. The base station shall set this field to '1' if the
28		Turbo Encoder to be used is the complementary type.
29	FUNDICATED_BCNC_IND	- BCNC on fundicated channel Indicator.
30		If the channel assignment in this message contains a
31		Forward Fundicated Channel used for BCNC transmission,
32		the base station shall set this field to '1'; otherwise, the base
33		station shall set this field to '0'.
34	REV_FCH_ASSIGNED	- Reverse FCH channel assigned indicator.
35		If the FUNDICATED_BCNC_IND field is set to '0', the base
36		station shall omit this field; otherwise, the base station shall
37		include this field and set it as follows:
38		If the reverse FCH is assigned in this message, the base
39		station shall set this field to '1'; otherwise, the base station
40		shall set this field to '0'.
41	ADD_PLCM_FOR_FCH_INCL	- Additional PLCM for forward FCH included indicator.
42		If the FUNDICATED_BCNC_IND field is set to '0', the base
43		station shall omit this field; otherwise, the base station shall
44		include this field and set it as follows:

1		If the additional PLCM for forward FCH is included in this
2		message, the base station shall set this field to '1'; otherwise,
3		the base station shall set this field to '0'.
4	ADD_PLCM_FOR_FCH_TYPE-	The Additional Public Long Code Mask for forward FCH
5		type indicator.
6		If ADD_PLCM_FOR_FCH_INCL not included or is included
7		and is set to '0', the base station shall omit this field;
8		otherwise, the base station shall include this field and set it
9		as follows.
10		The base station shall set this field to '1' to indicate PLCM
11		specified by the base station. The field value '0' is reserved.
12	ADD_PLCM_FOR_FCH_39	- The 39 LSB bits of the additional Public Long Code Mask
13		for forward FCH.
14		If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
15		'1', the base station shall include this field and set it to the 39
16		least significant bits of the public long code mask used by the
17		mobile station; otherwise, the base station shall omit this
18		field.
19	FOR_CPCCH_INFO_INCL -	CPCCH information included indicator.
20		If the FUNDICATED_BCNC_IND field is set to '0', the base
21		station shall omit this field; otherwise, the base station shall
22		include this field and set it as follows:
23		If the F-CPCCH information is included in this message, the
24		base station shall set this field to '1'; otherwise, the base
25		station shall set this field to '0'.
26	If FOR_CPCCH_INFO_INCL field is included and is set to '1', the base station shall include	
27	NUM_PILOT occurrences of the following record:	
28	FOR_CPCCH_WALSH	- The Forward Common Power Control Channel Walsh code
29		assignment.
30		The base station shall set this field to the Walsh code
31		assignment for the Forward Common Power Control Channel.
32	FOR_CPCSCH	- The Forward Common Power Control Channel Subchannel.
33		The base station shall set this field to the Forward Common
34		Power Control Channel Subchannel associated with this base
35		station.
36	RESERVED	- Reserved bits.
37		The base station shall add reserved bits as needed in order to
38		make the length of the ACTIVE_SET_REC_FIELDS record
39		equal to an integer number of octets. The base station shall
40		set these bits to '0'.
41	If the CH_IND field is set to '000', the base station shall include the following fields:	
42	EXT_CH_IND	- Extended Channel Indicator.
43		The base station shall set this field as shown in
44		Table 2.7.1.3.2.4-11.

1	RESERVED	-	Reserved bits for octet alignment.
2			Reserved bits to align the octets between ACTIVE_SET-
3			_REC_FIELDS and EXT_ACTIVE_SET_REC_FIELDS so that
4			the latter has a length of ACTIVE_SET_REC_LEN-1 bytes.
5	EXT_ACTIVE_SET_REC_FIELDS	-	Extended Active Set record fields.
6			The Active Set record fields are determined by the value of
7			EXT_CH_IND, as described below.
8	The EXT_ACTIVE_SET_REC_FIELDS shall be:		
9	PDCH_CONTROL_HOLD	-	Packet Data Channel Control Hold mode indication.
10			The base station shall set this field to '1' to instruct the
11			mobile station to transition to the Packet Data Channel
12			Control Hold Mode.
13			If EXT_CH_IND signals the allocation of a F-FCH this field
14			shall be set to '0'.
15	FULL_CI_FEEDBACK_IND	-	Full C/I feedback rate indicator.
16			If the mobile station is to send full C/I feedback every 1.25
17			ms, the base station shall set this field to '1'. If the mobile
18			station is to transmit full C/I feedback every 20 ms, the base
19			station shall set this field to '0'.
20	FOR_CPCCH_RATE	-	The Forward Common Power Control Channel Rate.
21			If EXT_CH_IND equals '01000', the base station shall include
22			this field and shall set it as follows; otherwise, the base
23			station shall omit this field.
24			The base station shall set this field to the rate of the Forward
25			Common Power Control Channel as specified in Table
26			3.7.2.3.2.21-12. See [2].
27	FOR_CPCCH_UPDATE_RATE	-	Forward Common Power Control update rate.
28			If EXT_CH_IND equals '01000', the base station shall include
29			this field and shall set it as follows; otherwise, the base
30			station shall omit this field.
31			The base station shall set this field to the update rate of the
32			Forward Common Power Control as specified in Table
33			3.7.2.3.2.21-13. See [2].
34	REV_CQICH_FRAME_OFFSET	-	Reverse Channel Quality Indicator Channel Frame
35			Offset.
36			The C/I feedback reports on the Reverse Channel Quality
37			Indicator Channel are delayed REV_CQICH_FRAME_OFFSET
38			× 1.25 ms relative to system timing (see [2]).
39			The base station shall set this field to the Reverse Channel
40			Quality Indicator Channel frame offset.
41	REV_CQICH_REPS	-	Reverse Channel Quality Indicator Channel repetition factor.

1		The base station shall set this field according to Table
2		3.7.3.3.2.49-1.
3	REV_ACKCH_REPS	- Reverse Acknowledgment Channel repetition factor.
4		The base station shall set this field according to Table
5		3.7.3.3.2.49-2.
6	NUM_FOR_SCH	- Number of Forward Supplemental Channel records.
7		If EXT_CH_IND does not signal the allocation of neither a F-
8		FCH nor a F-DCCH, or if SCH_INCL is set to '0', the base
9		station shall omit this field; otherwise, the base station shall
10		include this field and shall set it as follows:
11		The base station shall set this field to the number of Forward
12		Supplemental Channel records that need to be updated.
13	If NUM_FOR_SCH is included and not equal to '00000', the base station shall include	
14	NUM_FOR_SCH occurrence of the following three fields:	
15	FOR_SCH_ID	- Forward Supplemental Channel identifier.
16		The base station shall set this field to the identifier of the
17		Forward Supplemental Channel.
18	SCCL_INDEX	- Supplemental Channel Code list index.
19		The base station shall set this field to the index of the record
20		in the Supplemental Channel Code list.
21	FOR_SCH_NUM_BITS_IDX	- Forward Supplemental Channel number of information
22		bits index.
23		If USE_FLEX_NUM_BITS is equal to '0' or if
24		USE_FLEX_NUM_BITS is equal to '1' and
25		FSCH_NBIT_TABLE_ID for FOR_SCH_ID is equal to '0000',
26		then the base station shall set this field according to Table
27		3.7.3.3.2.37-4 to indicate the number of information bits per
28		frame and the length of the CRC field for the Forward
29		Supplemental Channel identified by FOR_SCH_ID
30		corresponding to SCCL_INDEX.
31		If USE_FLEX_NUM_BITS <sub>s</sub> is equal to '1' and
32		FSCH_NBIT_TABLE_ID[FOR_SCH_ID] is not equal to '0000',
33		then the base station shall set this field to indicate that the
34		number of information bits per frame for the Forward
35		Supplemental channel identified by FOR_SCH_ID to be
36		NUM_BITS[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_SCH_
37		NUM_BITS_IDX] and the number of CRC bits per frame for
38		the Forward Supplemental channel identified by
39		FOR_SCH_ID to be
40		CRC_LEN_IDX[FSCH_NBIT_TABLE_ID[FOR_SCH_ID]][FOR_S
41		CH_NUM_BITS_IDX].
42	NUM_REV_SCH	- Number of Reverse Supplemental Channel records.
43		If SCH_INCL is set to '0', the base station shall omit this field;
44		otherwise, the base station shall include this field and shall
45		set it as follows:

1		The base station shall set this field to the number of the
2		Reverse Supplemental Channels need to be updated.
3	If NUM_REV_SCH is included and not equal to '00000', the base station shall include	
4	NUM_REV_SCH occurrence of the following three fields:	
5	REV_SCH_ID	- Reverse Supplemental Channel identifier.
6		The base station shall set this field to the identifier of the
7		Reverse Supplemental Channel.
8	REV_WALSH_ID	- Reverse Supplemental Channel Walsh cover Identifier.
9		The base station shall set this field according to Table
10		3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile
11		station is to use when transmitting at the rate specified by
12		REV_SCH_NUM_BITS_IDX on the Reverse Supplemental
13		Channel specified by REV_SCH_ID. If only one reverse
14		supplemental channel is assigned, the base station should
15		set this field to the default value for the REV_WALSH_ID as
16		specified in 2.6.4.2.
17	REV_SCH_NUM_BITS_IDX	- Reverse Supplemental Channel number of bits per frame
18		index.
19		If USE_FLEX_NUM_BITS is equal to '0' or if
20		USE_FLEX_NUM_BITS is equal to '1' and
21		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
22		the base station shall set this field according to Table
23		3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
24		number of information bits per frame and the CRC bits per
25		frame, corresponding to REV_WALSH_ID field.
26		If USE_FLEX_NUM_BITS is equal to '1' and
27		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
28		then the base station shall set this field to indicate the
29		Reverse Supplemental Channel number of information bits
30		per frame, corresponding to REV_WALSH_ID field to be
31		NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
32		[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
33		Channel number of CRC bits per frame corresponding to
34		REV_WALSH_ID field to be
35		CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
36		[REV_SCH_NUM_BITS_IDX].
37	NUM_PILOTS	- Number of pilots included in the message.
38		The base station shall set this field to the number of pilots
39		included in the message. The base station shall set this field
40		to an integer that is equal to or greater than 1.
41	SRCH_OFFSET_INCL	- Target pilot channel search window offset included.
42		If the SRCH_OFFSET field is included in the following
43		records, the base station shall set this field to '1'; otherwise,
44		the base station shall set this field to '0'.
45	PDCH_GROUP_IND_INCL	- Packet Data Channel Group Indicator included flag.

1		The base station shall set this field to '1' if the
2		PDCH_GROUP_IND fields are included; otherwise, the base
3		station shall set this field to '0'.
4		If this field is set to '0', the mobile station is to use
5		PWR_COMB_IND to determine whether the softer or soft
6		reselection parameters are used when re-pointing between
7		pilots in its Active Set (see [3]).
8	FOR_PDCH_PARDS_INCL	- Indicator of the inclusion of Forward Packet Data Channel
9		configuration fields.
10		The base station shall set this field to '1' if the Forward
11		Packet Data Channel configuration fields are included;
12		otherwise, the base station shall set this field to '0'.
13	FOR_PDCH_RLGAIN_INCL	- Forward Packet Data Channel parameters related to
14		reverse link adjustment gains included indicator.
15		If FOR_PDCH_PARDS_INCL is omitted, or if it is included and
16		set to '0', the base station shall omit this field; otherwise, the
17		base station shall include this field, and set it as follows.
18		The base station shall set this field to '1' if the following F-
19		PDCH gain related fields are included in this message;
20		otherwise, the base station shall set this field to '0'.
21	RLGAIN_ACKCH_PILOT	- Reverse Acknowledgment Channel to pilot adjustment gain.
22		If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included
23		and set to '0', the base station shall omit this field; otherwise,
24		the base station shall include this field, and set it as follows.
25		The base station shall set this field to the Reverse
26		Acknowledgment Channel to pilot adjustment gain expressed
27		as a two's complement value in units of 0.125 dB (see [2]).
28	RLGAIN_CQICH_PILOT	- Reverse Channel Quality Indicator Channel to pilot
29		adjustment gain.
30		If FOR_PDCH_RLGAIN_INCL is omitted, or if it is included
31		and set to '0', the base station shall omit this field; otherwise,
32		the base station shall include this field, and set it as follows.
33		The base station shall set this field to the Reverse Channel
34		Quality Indicator Channel to pilot adjustment gain expressed
35		as a two's complement value in units of 0.125 dB (see [2]).
36	NUM_SOFT_SWITCHING_FRAMES	- Number of frames for R-CQICH soft switching.
37		If FOR_PDCH_PARDS_INCL is equal to '0', the base station
38		shall omit this field; otherwise, the base station shall include
39		this field and set it as follows:
40		The base station shall set this field to the duration of the cell
41		switching period, in units of 20 ms, minus one, during which
42		the mobile station is to transmit the cell switch sequence on
43		the R-CQICH channel when it switches between two pilots
44		which are in different groups.

1                   If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
2                   indicated by PDCH\_GROUP\_IND; otherwise, they are  
3                   indicated by PWR\_COMB\_IND.

4   NUM\_SOFTSWITCHING\_FRAMES - Number of frames for R-CQICH softer  
5                   switching.

6                   If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station  
7                   shall omit this field; otherwise, the base station shall include  
8                   this field and set it as follows:

9                   The base station shall set this field to the duration of the cell  
10                  switching period, in units of 20 ms, minus one, during which  
11                  the mobile station is to transmit the cell switch sequence on  
12                  the R-CQICH channel when it switches between two pilots  
13                  which are in the same group.

14                  If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
15                  indicated by PDCH\_GROUP\_IND; otherwise, they are  
16                  indicated by PWR\_COMB\_IND.

17

18   NUM\_SOFTSWITCHING\_SLOTS - Number of slots per frame for R-CQICH soft  
19                   switching.

20                  If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station  
21                  shall omit this field; otherwise, the base station shall include  
22                  this field and set it as follows:

23                  The base station shall set this field to the duration of the cell  
24                  switching slots within a switching frame, in units of 1.25 ms  
25                  as specified in Table 3.7.2.3.2.21-10, during which the mobile  
26                  station is to transmit the cell switch indication by using  
27                  Walsh cover of target on the R-CQICH when it switches  
28                  between two pilots which are in different groups.

29                  If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
30                  indicated by PDCH\_GROUP\_IND; otherwise, they are  
31                  indicated by PWR\_COMB\_IND.

32   NUM\_SOFTSWITCHING\_SLOTS - Number of slots per frame for R-CQICH softer  
33                   switching.

34                  If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station  
35                  shall omit this field; otherwise, the base station shall include  
36                  this field and set it as follows:

37                  The base station shall set this field to the duration of the cell  
38                  switching slots within a switching frame, in units of 1.25 ms  
39                  as specified in Table 3.7.2.3.2.21-10, during which the mobile  
40                  station is to transmit the cell switch indication by using  
41                  Walsh cover of target on the R-CQICH when it switches  
42                  between two pilots which are in the same group.

43                  If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
44                  indicated by PDCH\_GROUP\_IND; otherwise, they are  
45                  indicated by PWR\_COMB\_IND.

46   CHM\_SWITCHING\_PARMES\_INCL - Control Hold Mode fields included indicator.

1 If FOR\_PDCH\_PARMS\_INCL is equal to '0', the base station  
2 shall omit this field; otherwise, the base station shall include  
3 this field and set it as follows.

4 The base station shall set this field to '1' if the switching  
5 parameters for Control Hold Mode are included; otherwise,  
6 the base station shall set this field to '0'.

7 NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH soft  
8 switching while in Control Hold.

9 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
10 the base station shall omit this field; otherwise, the base  
11 station shall include this field and set it as follows:

12 The base station shall set this field to the duration of the cell  
13 switching period, in units of 20 ms, minus one, during which  
14 the mobile station, while in Control Hold, is to transmit the  
15 cell switch sequence on the R-CQICH when it switches  
16 between two pilots which are in different groups.

17 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
18 indicated by PDCH\_GROUP\_IND; otherwise, they are  
19 indicated by PWR\_COMB\_IND.

20 NUM\_SOFTSWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH softer  
21 switching while in Control Hold.

22 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
23 the base station shall omit this field; otherwise, the base  
24 station shall include this field and set it as follows:

25 The base station shall set this field to the duration of the cell  
26 switching period, in units of 20 ms, minus one, during which  
27 the mobile station, while in Control Hold, is to transmit the  
28 cell switch sequence on the R-CQICH when it switches  
29 between two pilots which are in the same group.

30 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
31 indicated by PDCH\_GROUP\_IND; otherwise, they are  
32 indicated by PWR\_COMB\_IND.

33 NUM\_SOFT\_SWITCHING\_SLOTS\_CHM - Number of slots per frame for R-CQICH soft  
34 switching while in Control Hold.

35 If CHM\_SWITCHING\_PARMS\_INCL is omitted or equal to '0',  
36 the base station shall omit this field; otherwise, the base  
37 station shall include this field and set it as follows:

38 The base station shall set this field to the duration of the cell  
39 switching slots within a switching frame, in units of 1.25 ms  
40 as specified in Table 3.7.2.3.2.21-10, during which the mobile  
41 station, while in Control Hold, is to transmit the cell switch  
42 indication by using Walsh cover of target on the R-CQICH  
43 when it switches between two pilots which are in different  
44 groups.

45 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
46 indicated by PDCH\_GROUP\_IND; otherwise, they are  
47 indicated by PWR\_COMB\_IND.

1 NUM\_SOFTEN\_SWITCHING\_SLOTS\_CHM - Number of slots per frame for R-CQICH  
2 softer switching while in Control Hold.

3 If CHM\_SWITCHING\_PARMES\_INCL is omitted or equal to '0',  
4 the base station shall omit this field; otherwise, the base  
5 station shall include this field and set it as follows:

6 The base station shall set this field to the duration of the cell  
7 switching slots within a switching frame, in units of 1.25 ms  
8 as specified in Table 3.7.2.3.2.21-10, during which the mobile  
9 station, while in Control Hold, is to transmit the cell switch  
10 indication by using Walsh cover of target on the R-CQICH  
11 when it switches between two pilots which are in the same  
12 group.

13 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
14 indicated by PDCH\_GROUP\_IND; otherwise, they are  
15 indicated by PWR\_COMB\_IND.

16 PDCH\_SOFT\_SWITCHING\_DELAY - F-PDCH Soft Switching Delay.

17 If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station  
18 shall omit this field; otherwise, the base station shall include  
19 this field and set it as follows:

20 The base station shall set this field to the minimum  
21 interruption seen by the mobile station, in units of 10 ms,  
22 minus one, when the mobile station is to transmit the cell  
23 switch sequence on the R-CQICH when it switches between  
24 two pilots which are in different groups.

25 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
26 indicated by PDCH\_GROUP\_IND; otherwise, they are  
27 indicated by PWR\_COMB\_IND.

28 PDCH\_SOFTEN\_SWITCHING\_DELAY - F-PDCH Soft Switching Delay.

29 If FOR\_PDCH\_PARMES\_INCL is equal to '0', the base station  
30 shall omit this field; otherwise, the base station shall include  
31 this field and set it as follows:

32 The base station shall set this field to the minimum  
33 interruption seen by the mobile station, in units of 10 ms,  
34 minus one, when the mobile station is to transmit the cell  
35 switch sequence on the R-CQICH when it switches between  
36 two pilots which are in the same group.

37 If PDCH\_GROUP\_IND\_INCL is set to '1', these groups are  
38 indicated by PDCH\_GROUP\_IND; otherwise, they are  
39 indicated by PWR\_COMB\_IND.

40 FOR\_PDCH\_COMMON\_PARMES - Common Forward Packet Data Channel configuration  
41 fields indicator.

42 If FOR\_PDCH\_PARMES\_INCL is set to '1', the base station shall  
43 include this field and set it as follows; otherwise, the base  
44 station shall omit this field.

1		The base station shall set this field to '1' if the following
2		Forward Packet Data Channel configuration fields
3		(WALSH_TABLE_ID, NUM_PDCCH, and
4		FOR_PDCCH_WALSH) are common for all the pilots in the
5		Active Set; otherwise, it shall be set to '0'.
6	WALSH_TABLE_ID	- The index of the Walsh Table used.
7		If FOR_PDCH_COMMON_PARMS is included and set to '1',
8		the base station shall include this field and set it as follows;
9		otherwise, the base station shall omit this field.
10		The base station shall set this field to the index of the Walsh
11		Table being used by the Packet Data Channel. (See [3]).
12	NUM_PDCCH	- The number of Packet Data Control Channels supported.
13		If FOR_PDCH_COMMON_PARMS is included and set to '1',
14		the base station shall include this field and set it as follows;
15		otherwise, the base station shall omit this field.
16		The base station shall set this field to '000' if the pilot
17		supports one Packet Data Control Channel. The base station
18		shall set this field to '001' if the pilot supports two Packet
19		Data Control Channels. The base station shall not set this
20		field to any other value.
21	The base station shall include NUM_PDCCH+1 occurrences of the following one-field	
22	record:	
23	FOR_PDCCH_WALSH	- Forward Packet Data Control Channel Walsh code
24		assignment.
25		If FOR_PDCH_COMMON_PARMS is included and set to '1',
26		the base station shall include this field and set it as follows;
27		otherwise, the base station shall omit this field.
28		The base station shall set this field to the Walsh code
29		assignment for the Forward Packet Data Control Channel.
30		If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
31		shall be included first, followed by the Walsh code for
32		PDCCH1.
33	TX_DISABLED_TIMER_INCL	- Transmitter disabled timer included flag.
34		The base station shall set this field to '1' if the following
35		TX_DISABLED_TIMER field is included; otherwise, the base
36		station shall set this field to '0'.
37	TX_DISABLED_TIMER	- Transmitter disabled timer.
38		If TX_DISABLED_TIMER_INCL is equal to '0', the base station
39		shall omit this field; otherwise, the base station shall include
40		this field and set it as follows:

1		The base station shall set this field to the maximum time, in
2		units of 20ms, the mobile station's transmitter can be
3		disabled before the MAC Layer is to perform Forward Packet
4		Data Channel initialization (see [3]).
5	FOR_GCH_ASSIGNED -	Forward Grant Channel assignment indicator.
6		If EXT_CH_IND signals the allocation of a R-PDCH, the base
7		station shall include this field and shall set it as follows;
8		otherwise, the base station shall omit this field.
9		The base station shall set this field to '1' if the mobile station
10		is to listen to grants on the Forward Grant Channel;
11		otherwise, the base station shall set this field to '0' (see [3]).
12	FOR_RCCH_ASSIGNED -	Forward Rate Control Channel assignment indicator.
13		If EXT_CH_IND signals the allocation of a R-PDCH, the base
14		station shall include this field and shall set it as follows;
15		otherwise, the base station shall omit this field.
16		The base station shall set this field to '1' if the mobile station
17		is to follow rate control indicators on the Forward Rate
18		Control Channel; otherwise, the base station shall set this
19		field to '0' (see [3]).
20	FOR_RCCH_DRC_MODE -	Forward Rate Control Channel Dedicated Rate Control Mode
21		Indicator.
22		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
23		set to '0', the base station shall omit this field; otherwise, the
24		base station shall include this field and set it as follows.
25		The base station shall set this field to '1' if the dedicated rate
26		control mode is being used on the Forward Rate Control
27		Channel; otherwise, the base station shall set this field to '0'
28		if the common rate control mode is being used (see [3]).
29	FOR_RCCH_REPETITION -	Forward Rate Control Subchannel repetition factor.
30		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
31		set to '0', the base station shall omit this field; otherwise, the
32		base station shall include this field and set it as follows.
33		The base station shall set this field to the subchannel
34		repetition factor of the Rate Control Subchannel on all pilots
35		as specified in Table 3.7.2.3.2.21-11 (see [2]).
36	FOR_RCCH_UPDATE_RATE -	Forward Rate Control Subchannel update rate.
37		If FOR_RCCH_ASSIGNED is omitted, or if it is included and
38		set to '0', the base station shall omit this field; otherwise, the
39		base station shall include this field and set it as follows.
40		The base station shall set this field to the update rate of the
41		Rate Control Subchannel on all pilots as specified in Table
42		3.7.2.3.2.21-13. See [2].
43	FOR_ACKCH_ASSIGNED -	Forward Acknowledgment Channel assignment indicator.

1		If EXT_CH_IND signals the allocation of a R-PDCH, the base
2		station shall include this field and shall set it as follows;
3		otherwise, the base station shall omit this field.
4		The base station shall set this field to '1' if the mobile station
5		is to listen to acknowledgments on the Forward
6		Acknowledgment Channel; otherwise, the base station shall
7		set this field to '0' (see [2] and [3]).
8	FOR_ACKCH_MODE	- Forward Acknowledgment Channel Mode.
9		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
10		set to '0', the base station shall omit this field; otherwise, the
11		base station shall include this field and set it as follows.
12		The base station shall set this field to the Acknowledgement
13		Channel mode identifier that governs how the
14		Acknowledgment channel is demodulated. See [2] and [3] for
15		the details.
16		The base station shall set this field to '00' if the mobile
17		station is to attempt the reception of the Forward
18		Acknowledgment Channel from all members of the reduced
19		active set of the Forward Packet Data Channel.
20		The base station shall set this field to '01' if the mobile
21		station is to attempt reception of the Forward
22		Acknowledgment Channel from all members of the reduced
23		active set, and is to combine the acknowledgments from all
24		sectors in the same combining indicator set.
25		The base station shall set this field to '10' if the mobile
26		station is to attempt reception of the Forward
27		Acknowledgment Channel from the serving sector only.
28		The base station shall set this field to '11' if the mobile
29		station is to combine the Forward Acknowledgment Channel
30		from all sectors in the same combining indicator set as the
31		serving sector.
32	FOR_ACKCH_COMB_SEL	- Forward Acknowledgment Channel Combining method
33		selector.
34		If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
35		set to '0', or if FOR_ACKCH_MODE is omitted, or if it is
36		included and set to '00' or '10', or if PDCH_GROUP_IND_INCL
37		is set to '0', the base station shall omit this field; otherwise, it
38		shall include it and set it as follows.
39		The base station shall set this field to '0' if the mobile station
40		is to use PWR_COMB_IND as a combining indicator when
41		receiving the Forward Acknowledgment Channel; otherwise, it
42		shall set it to '1' if the mobile station is to use
43		PDCH_GROUP_IND as the indicator for combining sectors.
44	REV_PDCH_PARMS_INCL	- Reverse Packet Data Channel related parameters included
45		indicator.

1		If EXT_CH_IND signals the allocation of a R-PDCH, the base
2		station shall include this field and shall set it as follows;
3		otherwise, the base station shall omit this field.
4		The base station shall set this field to '1' if the following R-
5		PDCH parameters are included in this message; otherwise,
6		the base station shall set this field to '0'.
7	REV_PDCH_RLGAIN_INCL	- Reverse Packet Data Channel parameters related to
8		reverse link adjustment gains included indicator.
9		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
10		set to '0', the base station shall omit this field; otherwise, the
11		base station shall include this field, and set it as follows.
12		The base station shall set this field to '1' if the following R-
13		PDCH gain related fields are included in this message;
14		otherwise, the base station shall set this field to '0'.
15	RLGAIN_SPICH_PILOT	- Reverse Secondary Pilot Channel to pilot adjustment gain.
16		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
17		and set to '0', the base station shall omit this field; otherwise,
18		the base station shall include this field, and set it as follows.
19		The base station shall set this field to the Reverse Secondary
20		Pilot Channel to pilot adjustment gain expressed as a two's
21		complement value in units of 0.125 dB (see [2]).
22	RLGAIN_REQCH_PILOT	- Reverse Request Channel to pilot adjustment gain.
23		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
24		and set to '0', the base station shall omit this field; otherwise,
25		the base station shall include this field, and set it as follows.
26		The base station shall set this field to the Reverse Request
27		Channel to pilot adjustment gain expressed as a two's
28		complement value in units of 0.125 dB (see [2]).
29	RLGAIN_PDCCH_PILOT	- Reverse Packet Data Control Channel to pilot adjustment
30		gain.
31		If REV_PDCH_RLGAIN_INCL is omitted, or if it is included
32		and set to '0', the base station shall omit this field; otherwise,
33		the base station shall include this field, and set it as follows.
34		The base station shall set this field to the Reverse Packet
35		Data Channel to pilot adjustment gain expressed as a two's
36		complement value in units of 0.125 dB (see [2]).
37	REV_PDCH_PARMS_1_INCL	- Reverse Packet Data Channel parameters subset included
38		indicator.
39		If REV_PDCH_PARMS_INCL is omitted, or if it is included and
40		set to '0', the base station shall omit this field; otherwise, the
41		base station shall include this field, and set it as follows.
42		The base station shall set this field to '1' if the following R-
43		PDCH parameters are included in this message; otherwise,
44		the base station shall set this field to '0'.
45	REV_PDCH_TABLE_SEL	- Reverse Packet Data Channel Table selector.

1		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
2		and set to '0', the base station shall omit this field; otherwise,
3		the base station shall include this field, and set it as follows.
4		The base station shall set this field to the Reverse Packet
5		Data Channel Table selector (see [2]).
6	REV_PDCH_MAX_AUTO_TPR	- Reverse Packet Data Channel maximum traffic to pilot
7		ratio for autonomous transmission.
8		If REV_PDCH_PARMS_1_INCL is omitted, or if it is included
9		and set to '0', the base station shall omit this field; otherwise,
10		the base station shall include this field and set it as follows.
11		The base station shall set this field to the maximum traffic to
12		pilot ratio for autonomous transmission on the Reverse
13		Packet Data Channel (see [2] and [3]).
14		The base station shall set this field to a value in the range 0
15		to 18 dB inclusive in units of 0.125 dB.
16	The base station shall include NUM_PILOTS occurrences of the following record:	
17	PILOT_PN	- Pilot PN sequence offset index.
18		The base station shall set this field to the pilot PN sequence
19		offset for this pilot in units of 64 PN chips.
20	SRCH_OFFSET	- Target pilot channel search window offset.
21		If SRCH_OFFSET_INCL equals to '1', then the base station
22		shall include this field and set it to the value shown in Table
23		2.6.6.2.1-2 corresponding to the search window offset to be
24		used by the mobile station for this target pilot; otherwise, the
25		base station shall omit this field.
26	ADD_PILOT_REC_INCL	- Additional pilot information included indicator.
27		The base station shall set this field to '1' if additional pilot
28		information listed in PILOT_REC_TYPE and RECORD_LEN
29		fields are included. The base station shall set this field to '0'
30		if the corresponding pilot is the common pilot and there is no
31		additional pilot information included.
32	PILOT_REC_TYPE	- Pilot record type.
33		If ADD_PILOT_REC_INCL is set to '1', the base station shall
34		set this field to the PILOT_REC_TYPE value shown in Table
35		3.7.2.3.2.21-9 corresponding to the type of Pilot Record
36		specified by this record.
37		If ADD_PILOT_REC_INCL is set to '0', the base station shall
38		omit this field.
39	RECORD_LEN	- Pilot record length.
40		If ADD_PILOT_REC_INCL is set to '1', the base station shall
41		set this field to the number of octets in the type-specific fields
42		of this pilot record.
43		If ADD_PILOT_REC_INCL is set to '0', the base station shall
44		omit this field.

1	Type-specific fields	- Pilot record type-specific fields.
2		If ADD_PILOT_REC_INCL is set to '1', the base station shall
3		include type-specific fields based on the PILOT_REC_TYPE of
4		this pilot record as described in 3.7.6.1.
5		If ADD_PILOT_REC_INCL is set to '0', the base station shall
6		omit this field.
7	FOR_PDCH_INCL	- Forward Packet Data Channel configuration field included
8		indicator.
9		The base station shall set this field to '1' if the MS is assigned
10		resources on the PDCH channel; otherwise, the base station
11		shall set this field to '0'. This field shall be set to '1' for at
12		least one of the pilots included in this message.
13	WALSH_TABLE_ID	- The index of the Walsh Table used.
14		If FOR_PDCH_INCL is set to '1', and if
15		FOR_PDCH_COMMON_PARMs is included and set to '0', the
16		base station shall include this field and set it as follows;
17		otherwise, the base station shall omit this field.
18		The base station shall set this field to the index of the Walsh
19		Table being used by the Packet Data Channel. (See [3]).
20	NUM_PDCCH	- The number of Packet Data Control Channels supported.
21		If FOR_PDCH_INCL is set to '1', and if
22		FOR_PDCH_COMMON_PARMs is included and set to '0', the
23		base station shall include this field and set it as follows;
24		otherwise, the base station shall omit this field.
25		The base station shall set this field to '000' if the pilot
26		supports one Packet Data Control Channel. The base station
27		shall set this field to '1' if the pilot supports two Packet Data
28		Control Channels. The base station shall not set this field to
29		any other value.
30	The base station shall include <i>NUM_PDCCH+1</i> occurrences of the following one-field	
31	record:	
32	FOR_PDCCH_WALSH	- Forward Packet Data Control Channel Walsh code
33		assignment.
34		If FOR_PDCH_INCL is set to '1', and if
35		FOR_PDCH_COMMON_PARMs is included and set to '0', the
36		base station shall include this field and set it as follows;
37		otherwise, the base station shall omit this field.
38		The base station shall set this field to the Walsh code
39		assignment for the Forward Packet Data Control Channel.
40		If NUM_PDCCH is set to '001', the Walsh code of PDCCH0
41		shall be included first, followed by the Walsh code for
42		PDCCH1.
43	MAC_ID	- Medium Access Control index.

1			If FOR_PDCH_INCL is set to '0', the base station shall omit
2			this field; otherwise, the base station shall include this field
3			and set it as follows:
4			The base station shall set this field to the MAC index
5			assigned to the mobile station by this pilot.
6			The base station shall set this field to an integer value larger
7			than 63.
8	REV_CQICH_COVER	-	Reverse Channel Quality Indicator Channel cover.
9			If FOR_PDCH_INCL is set to '0', the base station shall omit
10			this field; otherwise, the base station shall include this field
11			and set it as follows:
12			The base station shall set this field to the index of the R-
13			CQICH cover associated with this pilot.
14			If this pilot is a member of the mobile station's current Active
15			Set, the base station should assign the same value for the
16			Walsh cover that is in the mobile station's current Active Set.
17			If this pilot is not a member of the mobile station's current
18			Active Set, the base station should assign a value for the
19			Walsh cover that was not recently assigned (See [2]).
20	FOR_CPCCH_WALSH	-	The Forward Common Power Control Channel Walsh code
21			assignment.
22			If EXT_CH_IND signals the allocation of a F-CPCCH, and
23			either of the following conditions is true:
24		-	EXT_CH_IND signals the allocation of a F-FCH or a F-
25			DCCH
26		-	all of the following conditions are true:
27		+	FOR_PDCH_INCL is set to '1'
28		+	EXT_CH_IND does not signal allocation of a F-FCH
29		+	EXT_CH_IND does not signal allocation of a F-DCCH
30			the base station shall include this field and shall set it as
31			follows; otherwise, the base station shall omit this field
32			The base station shall set this field to the Walsh code
33			assignment for the Forward Common Power Control Channel.
34	FOR_CPCSCH	-	The Forward Common Power Control Channel Subchannel.
35			If EXT_CH_IND signals the allocation of a F-CPCCH, and
36			either of the following conditions is true:
37		-	EXT_CH_IND signals the allocation of a F-FCH or a F-
38			DCCH
39		-	all of the following conditions are true:
40		+	FOR_PDCH_INCL is set to '1'
41		+	EXT_CH_IND does not signal allocation of a F-FCH
42		+	EXT_CH_IND does not signal allocation of a F-DCCH

1		the base station shall include this field and shall set it as
2		follows; otherwise, the base station shall omit this field
3		The base station shall set this field to the Forward Common
4		Power Control Channel Subchannel associated with this base
5		station.
6		If FOR_CPCCH_RATE is omitted, or if it is included and set to
7		'00', the base station shall set this field to a value in the
8		range 0 to 23 inclusive. If FOR_CPCCH_RATE is included and
9		set set to '01', the base station shall set this field to a value in
10		the range 0 to 47 inclusive. If FOR_CPCCH_RATE is included
11		and set set to '10', the base station shall set this field to a
12		value in the range 0 to 95 inclusive.
13	PWR_COMB_IND	- Power control symbol combining indicator.
14		If the Forward Traffic Channel or Forward Common Power
15		Control Channel associated with this pilot will carry the same
16		closed-loop power control subchannel bits as that of the
17		previous pilot in this message, the base station shall set this
18		field to '1'; otherwise, the base station shall set this field to
19		'0'. The base station shall set this field to '0' in the first
20		record in the pilot list.
21	PDCH_GROUP_IND	- Packet Data Channel Group Indicator.
22		If PDCH_GROUP_IND_INCL is set to '1', the base station shall
23		include this field and shall set it as follows; otherwise, the
24		base station shall omit this field.
25		If the mobile station is to use the softer reselection
26		parameters when re-pointing between this pilot and the
27		previous pilot in this message that has a F-PDCH assigned to
28		this mobile station (i.e. FOR_PDCH_INCL is set to '1'), the
29		base station shall set this field to '1' (See [3]).
30		If the mobile station is to use the soft reselection parameters
31		when re-pointing between this pilot and the previous pilot in
32		this message that has a F-PDCH assigned to this mobile
33		station (i.e. FOR_PDCH_INCL is set to '1'), the base station
34		shall set this field to '0' (See [3]).
35		The base station shall set this field to '0' in the first record in
36		the pilot list that has a F-PDCH assigned to this mobile
37		station (i.e. FOR_PDCH_INCL is set to '1').
38	CODE_CHAN_FCH	- Code channel on the Fundamental Channel.
39		If EXT_CH_IND signals the allocation of a F-FCH, the base
40		station shall include this field and shall set it as follows;
41		otherwise it shall be omitted.
42		The base station shall set this field to the code channel index
43		(see [2]) that the mobile station is to use on the Fundamental
44		Channel of the Forward Traffic Channel.

1			If Radio Configuration 1, 2, 3, or 5 (see [2]) is used, the base
2			station shall set this field in the range 1 to 63 inclusive. If
3			Radio Configuration 4, 11, or 12 is used, the base station
4			shall set this field in the range 1 to 127 inclusive.
5	QOF_MASK_ID_FCH	-	Quasi-orthogonal function index on the Fundamental
6			Channel.
7			If EXT_CH_IND signals the allocation of a F-FCH, the base
8			station shall include this field and shall set it as follows;
9			otherwise it shall be omitted.
10			The base station shall set this field to the index of the Quasi-
11			orthogonal function (see [2]).
12	CODE_CHAN_DCCH	-	Code channel on the Dedicated Control Channel.
13			If EXT_CH_IND signals the allocation of a F-DCCH, the base
14			station shall include this field and shall set it as follows;
15			otherwise it shall be omitted.
16			The base station shall set this field to the code channel index
17			(see [2]), in the range of 1 to 127 inclusive, that the mobile
18			station is to use on the Dedicated Control Channel of the
19			Forward Traffic Channel.
20			If Radio Configuration 3 or 5 (see [2]) is used, the base station
21			shall set this field in the range 1 to 63 inclusive. If Radio
22			Configuration 4 is used, the base station shall set this field in
23			the range 1 to 127 inclusive.
24	QOF_MASK_ID_DCCH	-	Quasi-orthogonal function index on the Dedicated Control
25			Channel.
26			If EXT_CH_IND signals the allocation of a F-DCCH', the base
27			station shall include this field and shall set it as follows;
28			otherwise it shall be omitted.
29			The base station shall set this field to the index of the Quasi-
30			orthogonal function (see [2]).
31	FOR_ACKCH_WALSH_INDEX	-	Walsh Code for the Forward Acknowledgment
32			Channel.
33			If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
34			set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
35			does not signal the allocation of a R-PDCH, the base station
36			shall omit this field; otherwise, it shall include it and set it as
37			follows.
38			The base station shall set this field to the Walsh code of the
39			Forward Acknowledgment Channel (see [2]).
40	FOR_ACKSCH_INDEX	-	Forward Acknowledgment Subchannel Index.
41			If FOR_ACKCH_ASSIGNED is omitted, or if it is included and
42			set to '0', or if FOR_PDCH_INCL is set to '0', or if EXT_CH_IND
43			does not signal the allocation of a R-PDCH, the base station
44			shall omit this field; otherwise, it shall include it and set it as
45			follows.

1		The base station shall set this field to the subchannel index
2		of the Forward Acknowledgment Channel (see [2]). The base
3		station should not use FOR_ACKSCH_INDEX = 0, 1, 2, 96, 97,
4		or 98.
5	FOR_RCCH_INCL	- Forward Rate Control Subchannel included flag.
6		If FOR_PDCH_INCL is set to '0', or if FOR_RCCH_ASSIGNED
7		is omitted, or if it is included and set to '0', the base station
8		shall omit this field; otherwise, the base station shall include
9		this field and set it as follows.
10		The base station shall set this field to '1' if a Forward Rate
11		Control Channel Subchannel is allocated on this pilot (see
12		[2]); otherwise, the base station shall set this field to '0'.
13		The base station shall set this field to a non zero value for at
14		least one pilot in this message.
15	FOR_RCCH_WALSH_INDEX	- Walsh Code for the Forward Rate Control Channel
16		Subchannel.
17		If FOR_RCCH_INCL is omitted, or if it is included and set to
18		'0', the base station shall omit this field; otherwise, the base
19		station shall include this field and set it as follows.
20		The base station shall set this field to the Walsh code of the
21		Forward Rate Control Channel Subchannel (see [2]).
22	FOR_RCSCH_INDEX	- Forward Rate Control Subchannel.
23		If FOR_RCCH_INCL is omitted, or if it is included and set to
24		'0', the base station shall omit this field; otherwise, the base
25		station shall include this field and set it as follows.
26		The base station shall set this field to the subchannel index
27		of the Rate Control Subchannel on this pilot (see [2]).
28		If FOR_RCCH_REPETITION is set to '00' this field shall take
29		values in the range 0 to 96. If FOR_RCCH_REPETITION is set
30		to '01' this field shall take values in the range 0 to 48. If
31		FOR_RCCH_REPETITION is set to '10' this field shall take
32		values in the range 0 to 24.
33	NUM_FOR_GCH	- Number of Forward Grant Channels
34		If FOR_PDCH_INCL is set to '0', or if FOR_GCH_ASSIGNED is
35		omitted, or if it is included and set to '0', the base station
36		shall omit this field; otherwise, the base station shall include
37		this field and set it as follows.
38		The base station shall set this field to the number of assigned
39		Forward Grant Channels on this pilot. The base station shall
40		set this field to 0, 1, or 2.
41		The base station shall set this field to a non zero value for at
42		least one pilot in this message.
43	If FOR_PDCH_INCL is set to '1', and if FOR_GCH_ASSIGNED is included and set to '1', the	
44	base station shall include NUM_FOR_GCH occurrences of the field	
45	FOR_GCH_WALSH_INDEX:	

1	FOR_GCH_WALSH_INDEX	-	Walsh Code for the Forward Grant Channel.
2			The base station shall set this field to the Walsh code of the
3			Forward Grant Channels (see [2]).
4	NUM_SCH	-	Number of Supplemental Channel records.
5			If SCH_INCL is set to '0', the base station shall omit this field;
6			otherwise, the base station shall include this field and shall
7			set it as follows:
8			The base station shall set this field to the number of the
9			Supplemental Channel records need to be updated.
10	If NUM_SCH is included and not equal to '00000', the base station shall include NUM_SCH		
11	occurrence of the following five fields:		
12	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
13			The base station shall set this field the identifier of the
14			Forward Supplemental Channel pertaining to this record.
15	SCCL_INDEX	-	Supplemental Channel Code list index.
16			The base station shall set this field to the index of the record
17			in the Supplemental Channel Code list.
18	PILOT_INCL	-	The corresponding pilot included in Supplemental Channel
19			Active Set indicator.
20			The base station shall set this field to '1' if the corresponding
21			pilot is included in the Active Set of Supplemental Channel;
22			otherwise, the base station shall set this field to '0'.
23	CODE_CHAN_SCH	-	Code channel on the Supplemental Channel.
24			If PILOT_INCL is included and set to '1', the base station shall
25			include this field and shall set it as follows; otherwise, the
26			base station shall omit this field.
27			The base station shall set this field to the code channel index
28			(see [2]) that the mobile station is to use on the Supplemental
29			Channel of the Forward Traffic Channel indexed by
30			SCCL_INDEX.
31	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
32			Channel.
33			If PILOT_INCL is included and set to '1', the base station shall
34			include this field and shall set it as follows; otherwise, the
35			base station shall omit this field.
36			The base station shall set this field to the index of the Quasi-
37			orthogonal function (see [2]).
38	CCSH_INCLUDED	-	Code Combining Soft Handoff information included indicator.
39			The base station shall set this field to '1' if Code Combining
40			Soft Handoff information is included in this message;
41			otherwise, the base station shall set this field to '0'.
42	USE_CCSH_ENCODER_TIME	-	Use Code Combining Soft Handoff Turbo Encoder
43			swapping action time indicator.

1 If the CESH\_INCLUDED field is set to '0', the base station  
2 shall omit this field; otherwise, the base station shall include  
3 this field and set it as follows.

4 If an explicit action time at which Turbo Encoder types  
5 (CESH\_ENCODER\_TYPE) included in this message takes  
6 effect is specified, the base station shall set this field to '1';  
7 otherwise, the base station shall set this field to '0'.

8 CESH\_ENCODER\_ACTION\_TIME - Code Combining Soft Handoff Turbo Encoder  
9 swapping action time.

10 If the USE\_CESH\_ENCODER\_TIME field is included and set  
11 to '1', the base station shall set this field to the System Time  
12 minus FRAME\_OFFSET<sub>s</sub> × 1.25 ms, in units of 80ms (modulo  
13 64), at which Turbo Encoder types included in this message  
14 are to take effect; otherwise, the base station shall omit this  
15 field.

16 If the CESH\_INCLUDED field is set to '1', the base station shall include one occurrence of  
17 the following one field for each of the Forward Supplemental Channel records (as specified  
18 by NUM\_PILOTS and NUM\_SCH) with PILOT\_INCL field set to '1'. The base station shall  
19 use the same order for the following field as is used for the Forward Supplemental Channel  
20 records.

21 CESH\_ENCODER\_TYPE - Code Combining Soft Handoff Turbo Encoder type.

22 The base station shall set this field to '0' if the Turbo Encoder  
23 type to be used on the Forward Supplemental Channel  
24 identified by FOR\_SCH\_ID and SCCL\_INDEX is the default  
25 encoder type. The base station shall set this field to '1' if the  
26 Turbo Encoder to be used is the complementary type.

27 FUNDICATED\_BCNC\_IND - BCNC on fundicated channel Indicator.

28 If the channel assignment in this message contains a  
29 Forward Fundicated Channel used for BCNC transmission,  
30 the base station shall set this field to '1'; otherwise, the base  
31 station shall set this field to '0'.

32 ADD\_PLCM\_FOR\_FCH\_INCL - Additional PLCM for forward FCH included indicator.

33 If the FUNDICATED\_BCNC\_IND field is set to '0', the base  
34 station shall omit this field; otherwise, the base station shall  
35 include this field and set it as follows:

36 If the additional PLCM for forward FCH is included in this  
37 message, the base station shall set this field to '1'; otherwise,  
38 the base station shall set this field to '0'.

39 ADD\_PLCM\_FOR\_FCH\_TYPE - The Additional Public Long Code Mask for forward FCH  
40 type indicator.

41 If ADD\_PLCM\_FOR\_FCH\_INCL not included or is included  
42 and is set to '0', the base station shall omit this field;  
43 otherwise, the base station shall include this field and set it  
44 as follows.

45 The base station shall set this field to '1' to indicate PLCM  
46 specified by the base station. The field value '0' is reserved.

1	ADD_PLCM_FOR_FCH_39	-	The 39 LSB bits of the additional Public Long Code Mask
2			for forward FCH.
3			If ADD_PLCM_FOR_FCH_TYPE field is included and is set to
4			'1', the base station shall include this field and set it to the 39
5			least significant bits of the public long code mask used by the
6			mobile station; otherwise, the base station shall omit this
7			field.
8	RESERVED	-	Reserved bits.
9			The base station shall add reserved bits as needed in order to
10			make the length of the ACTIVE_SET_REC_FIELDS record
11			equal to an integer number of octets. The base station shall
12			set these bits to '0'.
13			

## 1 3.7.3.3.2.37 Extended Supplemental Channel Assignment Message

2 MSG\_TAG: ESCAM

Field	Length (bits)

FSCH_OUTERCODE_INCL	1
FSCH_OUTERCODE_RATE	0 or 3
FSCH_OUTERCODE_OFFSET	0 or 6

} (NUM\_FOR\_SCH)

FPC_BCMC_CHAN	0 or 1
---------------	--------

1		
2	START_TIME_UNIT	- Unit for start time.
3		The base station shall set this field to indicate the units of
4		start time included in <i>Extended Supplemental Channel</i>
5		<i>Assignment Message</i> , <i>Forward Supplemental Channel</i>
6		<i>Assignment Mini Message</i> , <i>Reverse Supplemental Channel</i>
7		<i>Assignment Mini Message</i> , and <i>Universal Handoff Direction</i>
8		<i>Message</i> . The base station shall set this field to one less than
9		the number of 20 ms frames that determines the
10		START_TIME_UNIT.
11	REV_SCH_DTX_DURATION	- Discontinuous Transmission on Reverse Supplemental
12		Channel.
13		The base station shall set this field to the maximum duration
14		of time in units of 20 ms that the mobile station is allowed to
15		stop transmission on a Reverse Supplemental Channel within
16		the reverse assignment duration. The base station shall set
17		this field to '0000' if the mobile station is to stop using a
18		Reverse Supplemental Channel once it has stopped
19		transmitting on that Reverse Supplemental Channel. The
20		base shall set this field to '1111' if the mobile station is
21		allowed to resume transmission on a Reverse Supplemental
22		Channel at any time within the reverse assignment duration.
23	USE_T_ADD_ABORT	- Reverse use T_ADD abort indicator.
24		The base station shall set this field to '1' to indicate that the
25		mobile station is to utilize the T_ADD Reverse Supplemental
26		Channel abort feature for this reverse assignment; otherwise,
27		the base station shall set this field to '0'.
28	USE_SCRM_SEQ_NUM	- Use Supplemental Channel Request Message sequence
29		number indicator.
30		The base station shall set this field to '1' if the
31		SCRM_SEQ_NUM field is included in this message; otherwise,
32		the base station shall set this field to '0'.
33	SCRM_SEQ_NUM	- Supplemental Channel Request Message sequence number.
34		If USE_SCRM_SEQ_NUM is set to '1', the base station shall
35		set this field to the sequence number corresponding to the
36		SCRM_SEQ_NUM field in a <i>Supplemental Channel Request</i>
37		<i>Message</i> to which the mobile station is to match this
38		message; otherwise, the base station shall omit this field.
39	ADD_INFO_INCL	- Additional information included indicator.
40		If the message is to contain the FPC_PRI_CHAN field, the base
41		station shall set this field to '1'; otherwise, the base station
42		shall set this field to '0'.
43		The base station shall set this field to '0' if any of the
44		following conditions holds:

- |    |   |   |  |
|----|---|---|--|
| 1  |   | - | The message does not contain any Supplemental Channel assignment.  |
| 2  |   |   |  |
| 3  |   | - | The mobile station is currently in the Active mode.  |
| 4  | FPC_PRI_CHAN  | - | Power Control Subchannel Indicator.  |
| 5  |   |   | If the ADD_INFO_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall set this field as follows:   |
| 6  |   |   |  |
| 7  |   |   |  |
| 8  |   |   | The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel. The base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel. If the F-CPCCH is assigned, the base station shall multiplex the Power Control Subchannel on the F-CPCCH; otherwise: |
| 9  |   |   |  |
| 10 |   |   | If this field is set to '0', the base station shall multiplex the Power Control Subchannel on the Forward Fundamental Channel; otherwise, the base station shall multiplex the Power Control Subchannel on the Forward Dedicated Control Channel.  |
| 11 |   |   |  |
| 12 |   |   |  |
| 13 |   |   |  |
| 14 |   |   |  |
| 15 |   |   |  |
| 16 |   |   |  |
| 17 |   |   |  |
| 18 |   |   |  |
| 19 |   |   |  |
| 20 |   |   |  |
| 21 | REV_CFG_INCLUDED  | - | Reverse Supplemental Channel configuration included.   |
| 22 |   |   | The base station shall set this field to '1' if this message contains a Reverse Supplemental Channel configuration. Otherwise, the base station shall set this field to '0'.   |
| 23 |   |   |  |
| 24 |   |   |  |
| 25 | NUM_REV_CFG_RECS  | - | Number of the Reverse Supplemental Channel configuration Records.  |
| 26 |   |   | If REV_CFG_INCLUDED is set to '1', the base station shall set this field to one less than the number of reverse supplemental channel configuration records consisting of the following three fields that are included in this message; otherwise, the base station shall omit this field.  |
| 27 |   |   |  |
| 28 |   |   |  |
| 29 |   |   |  |
| 30 |   |   |  |
| 31 |   |   |  |
| 32 | The base station shall include NUM_REV_CFG_RECS+1 occurrences of the following three fields only if the REV_CFG_INCLUDED field is set to '1'. |   |  |
| 33 |   |   |  |
| 34 | REV_SCH_ID  | - | Reverse Supplemental Channel Identifier.   |
| 35 |   |   | The base station shall set this field to the identifier of the Reverse Supplemental Channel.   |
| 36 |   |   |  |
| 37 | REV_WALSH_ID  | - | Reverse Supplemental Channel Walsh cover Identifier.   |
| 38 |   |   | The base station shall set this field according to Table 3.7.3.3.2.37-1 to indicate the Walsh cover ID that the mobile station is to use when transmitting number of bits per frame specified by REV_NUM_BITS_IDX on the Reverse Supplemental Channel specified by REV_SCH_ID. If only one reverse supplemental channel is assigned, the base station should set this field to the default value for the REV WALSH ID as specified in 2.6.4.2.             |
| 39 |   |   |  |
| 40 |   |   |  |
| 41 |   |   |  |
| 42 |   |   |  |
| 43 |   |   |  |
| 44 |   |   |  |
| 45 |   |   |  |

**Table 3.7.3.3.2.37-1. REV\_WALSH\_ID Field**

REV_WALSH_ID (binary)	Walsh Cover	
	SCH_ID = '0'	SCH_ID = '1'
0	+-	++--
1	+++	++++++

REV\_SCH\_NUM\_BITS\_IDX - Reverse Supplemental Channel number of bits per frame index.

If USE\_FLEX\_NUM\_BITS is equal to '0' or if USE\_FLEX\_NUM\_BITS is equal to '1' and RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID] is equal to '0000', then the base station shall set this field according to Table 3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel number of information bits per frame and the number of CRC bits per frame, corresponding to REV\_WALSH\_ID field.

If USE\_FLEX\_NUM\_BITS is equal to '1' and RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID] is not equal to '0000', then the base station shall set this field to indicate the Reverse Supplemental Channel number of information bits per frame, corresponding to REV\_WALSH\_ID field to be NUM\_BITS[RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID]] [REV\_SCH\_NUM\_BITS\_IDX] and the Reverse Supplemental Channel number of CRC bits per frame, corresponding to REV\_WALSH\_ID field to be CRC\_LEN\_IDX[RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID]] [REV\_SCH\_NUM\_BITS\_IDX].

**Table 3.7.3.3.2.37-2. R-SCH Number of Information Bits per Frame**

REV_SCH_NUM_BITS_IDX (binary)	Number of information bits per frame		Number of CRC bits per frame
	RC 3, 5	RC 4, 6	
0000	172	267	12
0001	360	552	16
0010	744	1,128	16
0011	1,512	2,280	16
0100	3,048	4,584	16
0101	6,120	Reserved	16
0110	12,264	9,192	16

<b>REV_SCH_NUM_BITS_IDX</b>	<b>Number of information bits per frame</b>		<b>Number of CRC bits</b>
0111	Reserved	Reserved	Reserved
1000	Reserved	20,712	16
RESERVED	All other values are reserved		

**1**

2      NUM\_REV\_SCH      -      Number of Reverse Supplemental Channels assigned.

3 The base station shall set this field to the number of Reverse  
4 Supplemental Channel assigned. The base station shall set  
5 this field to '00' if the assignment of Supplemental Channel is  
6 not included.

7 The base station shall include NUM\_REV\_SCH occurrences of the following five fields  
8 (REV\_SCH\_ID, REV\_SCH\_DURATION, REV\_SCH\_START\_TIME\_INCL,  
9 REV\_SCH\_START\_TIME, and REV\_SCH\_NUM\_BITS IDX).

10           REV\_SCH\_ID     -   Reverse Supplemental Channel Identifier.

11 The base station shall set this field to the identifier of the  
12 Reverse Supplemental Channel.

13    **REV\_SCH\_DURATION**    -    Duration of Reverse Supplemental Channel assignment

14 The base station shall set this field to '0000' to indicate that  
15 the mobile station is to stop transmitting on the Reverse  
16 Supplemental Channel specified by REV\_SCH\_ID at the  
17 explicit start time specified by REV\_SCH\_START\_TIME or at  
18 the implicit start time if REV\_SCH\_START\_TIME\_INCL is set  
19 to '0'. The base station shall set this field to '1111' to indicate  
20 that the mobile station may transmit on the Reverse  
21 Supplemental Channel specified by REV\_SCH\_ID, starting at  
22 the explicit start time specified by REV\_SCH\_START\_TIME in  
23 this message, until the start time specified by a subsequent  
24 Reverse Supplemental Channel assignment corresponding to  
25 the same Supplemental Channel (see 2.6.6.2.5.1.1). The base  
26 station shall set this field to the duration according to Table  
27 3.7.3.3.2.37-3, starting at the start time specified by  
28 REV\_SCH\_START\_TIME, during which the mobile station  
29 may transmit on the Reverse Supplemental Channel specified  
30 by REV\_SCH\_ID.

**Table 3.7.3.3.2.37-3. FOR\_SCH\_DURATION and  
REV\_SCH\_DURATION Fields**

FOR_SCH_DURATION REV_SCH_DURATION (binary)	Duration in 20 ms
0001	1
0010	2
0011	3

<b>FOR_SCH_DURATION REV_SCH_DURATION (binary)</b>	<b>Duration in 20 ms</b>
0100	4
0101	5
0110	6
0111	7
1000	8
1001	16
1010	32
1011	64
1100	96
1101	128
1110	256
1111	Infinity

1 REV\_SCH\_START\_TIME\_INCL - Start time included indicator.

2 If REV\_SCH\_DURATION is not equal to '0000', the base  
3 station shall set this field to '1'. If REV\_SCH\_DURATION is  
4 equal to '0000', the base station shall set this field as follows:

5 The base station shall set this field to '1' if  
6 REV\_SCH\_START\_TIME is included in this message;  
7 otherwise, the base station shall set this field to '0'.

8 REV\_SCH\_START\_TIME - Start time for Reverse Supplemental Channel assignment.

9 If REV\_SCH\_START\_TIME\_INCL is set to '0', the base station  
10 shall omit this field; otherwise, the base station shall set this  
11 field to the System Time, in units of time specified by  
12 START\_TIME\_UNIT, (modulo 32) at which the mobile station  
13 may start transmitting (if REV\_SCH\_DURATION is not equal  
14 to '0000') or stop transmitting (if REV\_SCH\_DURATION is  
15 equal to '0000') on the Reverse Supplemental Channel  
16 specified in this message. The explicit start time to start or  
17 stop transmitting on the Reverse Supplemental Channel is  
18 the time for which

19  $\lfloor t / (\text{START\_TIME\_UNIT}_S + 1) \rfloor - \text{REV\_SCH\_START\_TIME} \pmod{32} = 0,$   
20

21 where t is the System Time in units of 20 ms.

22 REV\_SCH\_NUM\_BITS\_IDX - Reverse Supplemental Channel number of bits per frame  
23 index.

1		If USE_FLEX_NUM_BITS is equal to '0' or if
2		USE_FLEX_NUM_BITS is equal to '1' and
3		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
4		the base station shall set this field according to Table
5		3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
6		number of information bits per frame and the number of CRC
7		bits per frame, corresponding to REV_WALSH_ID field.
8		If USE_FLEX_NUM_BITS is equal to '1' and
9		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
10		then the base station shall set this field to indicate the
11		Reverse Supplemental Channel number of information bits
12		per frame, corresponding to REV_WALSH_ID field to be
13		NUM_BITS[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
14		[REV_SCH_NUM_BITS_IDX] and the Reverse Supplemental
15		Channel number of CRC bits per frame, corresponding to
16		REV_WALSH_ID field to be
17		CRC_LEN_IDX[RSCH_NBIT_TABLE_ID[REV_SCH_ID]]
18		[REV_SCH_NUM_BITS_IDX].
19	FOR_CFG_INCLUDED	- Forward Supplemental Channel configuration included.
20		The base station shall set this field to '1' if this message
21		contains a Forward Supplemental Channel configuration.
22		Otherwise, the base station shall set this field to '0'.
23	FOR_SCH_FER_REP	- Forward Supplemental Channel FER report indicator.
24		If FOR_CFG_INCLUDED is set to '0', the base station shall
25		omit this field, otherwise, the base station shall include this
26		field and set it as follows:
27		The base station shall set this field to '1' if the mobile station
28		is to report the Supplemental Channel frame counts (see
29		2.6.4.1.1); otherwise, the base station shall set this field to '0'.
30	NUM_FOR_CFG_RECS	- Number of the Forward Supplemental Channel configuration
31		Records.
32		If FOR_CFG_INCLUDED is set to '1', the base station shall set
33		this field to one less than the number of forward
34		supplemental channel configuration records consisting of the
35		following fields that are included in this message; otherwise,
36		the base station shall omit this field.
37	The base station shall include NUM_FOR_CFG_RECS+1 occurrences of the following fields	
38	only if the FOR_CFG_INCLUDED field is set to '1'.	
39	FOR_SCH_ID	- Forward Supplemental Channel identifier
40		The base station shall set this field to the identifier of the
41		Forward Supplemental Channel.
42	SCCL_INDEX	- Supplemental Channel Code list index.
43		The base station shall set this field to the index of the record
44		in the Supplemental Channel Code list.
45	FOR_SCH_NUM_BITS_IDX	- Forward Supplemental Channel number of information
46		bits index.

If USE\_FLEX\_NUM\_BITS is equal to '0' or if USE\_FLEX\_NUM\_BITS is equal to '1' and FSCH\_NBIT\_TABLE\_ID for FOR\_SCH\_ID is equal to '0000', then the base station shall set this field according to Table 3.7.3.3.2.37-4 to indicate the number of information bits per frame and the length of the CRC field for the Forward Supplemental Channel identified by FOR\_SCH\_ID corresponding to SCCL\_INDEX.

**Table 3.7.3.3.2.37-4. F-SCH Number of Information Bits per Frame**

FOR_SCH_NUM _BITS_IDX (binary)	Number of information bits per frame		Number of CRC bits per frame
	RC 3, 4, 6, 7	RC 5, 8, 9	
0000	172	267	12
0001	360	552	16
0010	744	1,128	16
0011	1,512	2,280	16
0100	3,048	4,584	16
0101	6,120	Reserved	16
0110	12,264	9,192	16
0111	Reserved	Reserved	Reserved
1000	Reserved	20,712	16
RESERVED	All other values are reserved		

If USE\_FLEX\_NUM\_BITS<sub>s</sub> is equal to '1' and FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID] is not equal to '0000', then the base station shall set this field to indicate that the number of information bits per frame for the Forward Supplemental channel identified by FOR\_SCH\_ID to be NUM\_BITS[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_SCH\_NUM\_BITS\_IDX] that the number of CRC bits per frame for the Forward Supplemental channel identified by FOR\_SCH\_ID to be CRC\_LEN\_IDX[FSCH\_NBIT\_TABLE\_ID[FOR\_SCH\_ID]][FOR\_SCH\_NUM\_BITS\_IDX].

NUM\_SUP\_SHO - Number of Forward Supplemental Channels in Soft Handoff

The base station shall set this field to the size of the Forward Supplemental Channel Active Set minus one.

The base station shall include NUM\_SUP\_SHO+1 occurrences of the following fields for each Forward Supplemental channel corresponding to the FOR\_SCH\_ID and the SCCL\_INDEX whose frames may be soft-combined by the mobile station:

1			
2	PILOT_PN	-	Pilot PN sequence offset index.
3			The base station shall set this field to the pilot PN sequence
4			offset for this pilot in units of 64 PN chips.
5	ADD_PILOT_REC_INCL	-	Additional pilot information included indicator.
6			The base station shall set this field to '1' if additional pilot
7			information listed in PILOT_REC_TYPE and RECORD_LEN
8			fields are included. The base station shall set this field to '0'
9			if the corresponding pilot is the common pilot and there is no
10			additional pilot information included.
11	PILOT_REC_TYPE	-	Pilot record type
12			If ADD_PILOT_REC_INCL is set to '1', the base station shall
13			set this field to the PILOT_REC_TYPE value shown in Table
14			3.7.2.3.2.21-9 corresponding to the type of Pilot Record
15			specified by this record.
16			If ADD_PILOT_REC_INCL is set to '0', the base station shall
17			omit this field.
18	RECORD_LEN	-	Pilot record length.
19			If ADD_PILOT_REC_INCL is set to '1', the base station shall
20			set this field to the number of octets in the type-specific fields
21			of this pilot record.
22			If ADD_PILOT_REC_INCL is set to '0', the base station shall
23			omit this field.
24	Type-specific fields	-	Pilot record type-specific fields.
25			If ADD_PILOT_REC_INCL is set to '1', the base station shall
26			include type-specific fields based on the
27			ACTIVE_PILOT_REC_TYPE of this pilot record as described in
28			3.7.6.1.
29			If ADD_PILOT_REC_INCL is set to '0', the base station shall
30			omit this field.
31	CODE_CHAN_SCH	-	Code channel on the Supplemental Channel.
32			The base station shall set this field to the code channel index
33			(see [2]) that the mobile station is to use on the Supplemental
34			Channel of the Forward Traffic Channel indexed by
35			SCCL_INDEX.
36	QOF_MASK_ID_SCH	-	Quasi-orthogonal function index on the Supplemental
37			Channel.
38			The base station shall set this field to the index of the Quasi-
39			orthogonal function (see [2]).
40	NUM_FOR_SCH	-	Number of Forward Supplemental Channels assigned.
41			The base station shall set this field to the number of forward
42			Supplemental Channel assigned. The base station shall set
43			this field to '00' if the assignment of Supplemental Channel is
44			not included.

1 The base station shall include NUM\_FOR\_SCH occurrences of the following five fields  
2 (FOR\_SCH\_ID, FOR\_SCH\_DURATION, FOR\_SCH\_START\_TIME\_INCL,  
3 FOR\_SCH\_START\_TIME, and SCCL\_INDEX).

4       FOR\_SCH\_ID   - Forward Supplemental Channel identifier.  
5                    The base station shall set this field to the identifier of the  
6                    Forward Supplemental Channel pertaining to this record.

7       FOR\_SCH\_DURATION - Duration of Forward Supplemental Channel assignment.  
8                    The base station shall set this field to the duration (see Table  
9                    3.7.3.3.2.37-3), starting at the start time of the message  
10                   specified by FOR\_SCH\_START\_TIME, during which the  
11                   mobile station is to process the Forward Supplemental  
12                   Channel.  
13                    The base station shall set this field to '0000' to indicate that  
14                   the mobile station should stop processing the Forward  
15                   Supplemental Channel starting at the explicit start time of  
16                   the message specified by FOR\_SCH\_START\_TIME or at the  
17                   implicit start time if FOR\_SCH\_START\_TIME\_INCL is set to  
18                   '0'.  
19                    The base station shall set this field to '1111' to indicate that  
20                   the mobile station should process the Forward Supplemental  
21                   Channel, starting at the start time of the message specified by  
22                   FOR\_SCH\_START\_TIME, until the start time specified by a  
23                   subsequent Forward Supplemental Channel assignment  
24                   corresponding to the same Supplemental Channel (see  
25                   2.6.6.2.5.1.1).

26       FOR\_SCH\_START\_TIME\_INCL - Start time included indicator.  
27                    If FOR\_SCH\_DURATION is not equal to '0000', the base  
28                   station shall set this field to '1'. If FOR\_SCH\_DURATION is  
29                   equal to '0000', the base station shall set this field as follows:  
30                    The base station shall set this field to '1' if  
31                   FOR\_SCH\_START\_TIME is included in this message;  
32                   otherwise, the base station shall set this field to '0'.

33       FOR\_SCH\_START\_TIME - Start time for Forward Supplemental Channel assignment.  
34                    If FOR\_SCH\_START\_TIME\_INCL is set to '0', the base station  
35                   shall omit this field; otherwise, the base station shall set this  
36                   field to the System Time, in units of time specified by  
37                   START\_TIME\_UNIT, (modulo 32) at which the mobile station  
38                   is to start processing (if FOR\_SCH\_DURATION is not equal to  
39                   '0000') or stop processing (if FOR\_SCH\_DURATION is equal to  
40                   '0000') the Forward Supplemental Channel specified in this  
41                   message. The explicit start time to start or stop processing  
42                   the Forward Supplemental Channels is the time for which  
43                   
$$\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{FOR\_SCH\_START\_TIME} \pmod{32} = 0,$$
  
44                   where t is the System Time in units of 20 ms.  
45                    The base station shall set this field to the System Time, in units of time specified by  
46                   START\_TIME\_UNIT, (modulo 32) at which the mobile station is to start processing (if FOR\_SCH\_DURATION is not equal to '0000') or stop processing (if FOR\_SCH\_DURATION is equal to '0000') the Forward Supplemental Channel specified in this message. The explicit start time to start or stop processing the Forward Supplemental Channels is the time for which

46       SCCL\_INDEX   - Supplemental Channel Code list index.

1			The base station shall set this field to the index of the record
2			in the Forward Supplemental Channel Code list
3			corresponding to the FOR_SCH_ID. The base station shall
4			include an SCCL_INDEX whose SCH Active Set is a subset of
5			the Active Set of the Fundamental Channel, Dedicated
6			Control Channel, or both.
7	FPC_INCL	-	Forward Link Power Control parameter included indicator.
8			If the forward power control related information is included in
9			this message, the base station shall set this field to '1';
10			otherwise, the base station shall set this field to '0'.
11	FPC_MODE_SCH	-	Forward Power Control operational mode indicator used
12			during forward Supplemental Channel assignment interval.
13			If FPC_INCL is set to '1', the base station shall set the value to
14			the forward power control operation mode (see [2]); otherwise,
15			the base station shall omit this field.
16	FPC_SCH_INIT_SETPT_OP	-	Initial Supplemental Channel Outer Loop Eb/Nt setpoint
17			option.
18			If FPC_INCL is set to '0', the base station shall omit this field;
19			otherwise, the base station shall set this field as follows:
20			The base station shall set this field to '0' to indicate that
21			FPC_SCH_INIT_SETPT contains the absolute value of the
22			initial F-SCH Eb/Nt setpoint. The base station shall set this
23			field to '1' to indicate that FPC_SCH_INIT_SETPT contains the
24			offset value of the initial F-SCH Eb/Nt setpoint relative to the
25			current value used in the mobile station for the channel
26			carrying the Forward Power Control Subchannel.
27	FPC_SEC_CHAN	-	Master Supplemental channel index.
28			If FPC_INCL is set to '1' and FPC_MODE_SCH is set to '001',
29			'010', '101', or '110', the base station shall set this field to the
30			master Supplemental Channel index; otherwise, the base
31			station shall omit this field.
32	NUM_SUP	-	Number of Supplemental Channels.
33			If FPC_INCL is set to '0', the base station shall omit this field;
34			otherwise, the base station shall set this field to the total
35			number of the Supplemental Channels.
36	The base station shall include NUM_SUP occurrences of the following record:		
37	SCH_ID	-	Supplemental Channel index.
38			The base station shall set this field to the Supplemental
39			Channel index.
40	FPC_SCH_FER	-	Supplemental Channel target Frame Error Rate.
41			The base station shall set this field to the target Frame Error
42			Rate on the Supplemental Channel, as specified in Table
43			3.7.3.3.2.25-2.
44	FPC_SCH_INIT_SETPT	-	Initial Supplemental Channel Output Loop Eb/Nt setpoint

1		The base station shall set this field to initial Supplemental
2		Channel Outer Loop Eb/Nt setpoint (absolute value or offset
3		value as indicated by FPC_SCH_INIT_SETPT_OP) as follows:
4		• If FPC_SCH_INIT_SETPT_OP is set to '0', the unit is
5		0.125 dB;
6		• If FPC_SCH_INIT_SETPT_OP is set to '1', the unit is 0.125
7		dB and the offset is expressed as two's complement
8		signed number.
9	FPC_SCH_MIN_SETPT	- Minimum Supplemental Channel outer loop Eb/Nt setpoint.
10		The base station shall set this field to minimum
11		Supplemental Channel Outer Loop Eb/Nt setpoint, in units
12		of 0.125 dB.
13	FPC_SCH_MAX_SETPT	- Maximum Supplemental Channel outer loop Eb/Nt setpoint.
14		The base station shall set this field to maximum
15		Supplemental Channel Outer Loop Eb/Nt setpoint, in units
16		of 0.125 dB.
17	FPC_THRESH_SCH_INCL	- Supplemental Channel Setpoint Report Threshold Included
18		Indicator.
19		If FPC_INCL is set to '0', the base station shall omit this field;
20		otherwise, the base station shall set this field as follows:
21		If Supplemental Channel setpoint report threshold is
22		included in this message, the base station shall set this field
23		to '1'; otherwise, the base station shall set this field to '0'.
24	FPC_SETPT_THRESH_SCH	- Supplemental Channel Setpoint Report Threshold.
25		If FPC_THRESH_SCH_INCL is set to '1', the base station shall
26		set this field to the value of the Supplemental Channel
27		setpoint threshold (in units of 0.125 dB) above which the
28		outer loop report message will be sent by the mobile station;
29		otherwise, the base station shall omit this field.
30	RPC_INCL	- Reverse Power Control parameter included indicator.
31		The base station shall set this field to '1' if RPC_NUM_SUP is
32		included in this message; otherwise the base station shall set
33		this field to '0'.
34	RPC_NUM_SUP	- Number of Supplemental Channels.
35		If RPC_INCL is set to '1', the base station shall set this field to
36		the total number of the Supplemental Channels minus one;
37		otherwise, the base station shall omit this field.
38	The base station shall include RPC_NUM_SUP +1 occurrences of the following record:	
39	SCH_ID	- Supplemental Channel index.
40		The base station shall set this field to the Supplemental
41		Channel index.

1	RLGAIN_SCH_PILOT	-	Supplemental Channel power offset adjustment relative to
2			Reverse Pilot Channel power for radio configurations greater
3			than 2.
4			The base station shall set this field to the correction factor to
5			be used by mobile stations setting the power of a
6			Supplemental Channel, expressed as a two's complement
7			value in units of 0.125 dB.
8	3X_SCH_INFO_INCL	-	3X Supplemental Channel information included indicator.
9			If the 3X Supplemental Channel information is included, the
10			base station shall set this field to '1'; otherwise, the base
11			station shall set this field to '0'.
12			If FOR_CFG_INCLUDED is set to '0', the base station shall set
13			this field to '0'.
14	NUM_3X_CFG	-	Number of 3X Supplemental Channels to be configured
15			If 3X_SCH_INFO_INCL is set to '0', the base station shall omit
16			this field; otherwise, the base station shall set this field as
17			follows:
18			The base station shall set this field to the number of 3X
19			Forward Supplemental Channels to be configured. The base
20			station shall set this field to '00' if the configuration of
21			Supplemental Channel is not included.
22	The base station shall include NUM_3X_CFG occurrences of the following record if		
23	3X_SCH_INFO_INCL is included and set to '1'.		
24	FOR_SCH_ID	-	Forward Supplemental Channel identifier.
25			The base station shall set this field the identifier of the
26			Forward Supplemental Channel pertaining to this record.
27	NUM_3X_REC	-	Number of 3X records
28			The base station shall set this field to the number of
29			instances of the following record minus one included in this
30			message.
31	The base station shall include NUM_3X_REC+1 occurrences of the following variable-		
32	length record.		
33	SCCL_INDEX	-	Supplemental Channel Code list index.
34			The base station shall set this field to the index of the record
35			in the Supplemental Channel Code list.
36	The base station shall include NUM_SUP_SHO+1 occurrences of the following fields for		
37	each Forward Supplemental channel corresponding to the FOR_SCH_ID and the		
38	SCCL_INDEX whose frames may be soft-combined by the mobile station:		
39	3X_SCH_LOW_INCL	-	SCH code channel on the lowest SR3 frequency included
40			indicator.
41			If the Supplemental Channel on the lowest SR3 frequencies
42			has a different code channel than the Supplemental Channel
43			on the center SR3 frequency, the base station shall set this
44			field to '1'; otherwise, the base station shall set this field to
45			'0'.

1	QOF_MASK_ID_SCH_LOW	-	QOF index for the Supplemental Channel on the lowest
2			SR3 frequency.
3			If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
4			this field; otherwise, the base station shall set this field as
5			follows:
6			The base station shall set this field to the index of the Quasi-
7			orthogonal function (see [2]) corresponding to the QOF index
8			for the Supplemental Channel on the lowest SR3 frequency.
9	CODE_CHAN_SCH_LOW	-	Code channel for the Supplemental Channel on the lowest
10			SR3 frequency.
11			If 3X_SCH_LOW_INCL is set to '0', the base station shall omit
12			this field; otherwise, the base station shall set this field as
13			follows:
14			The base station shall set this field to the code channel index
15			(see [2]) that the mobile station is to use on the Supplemental
16			Channel on the lowest SR3 frequency. If Radio Configuration
17			6 or 8 is used, the base station shall set this field in the range
18			1 to 127 inclusive. If Radio Configuration 7 or 9 is used, the
19			base station shall set this field in the range 1 to 255
20			inclusive.
21	3X_SCH_HIGH_INCL	-	SCH code channel on the highest SR3 frequency included
22			indicator.
23			If the Supplemental Channel on the highest SR3 frequencies
24			has a different code channel than the Supplemental Channel
25			on the center SR3 frequency, the base station shall set this
26			field to '1'; otherwise, the base station shall set this field to
27			'0'.
28	QOF_MASK_ID_SCH_HIGH	-	QOF index for the Supplemental Channel on the highest
29			SR3 frequency.
30			If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
31			this field; otherwise, the base station shall set this field as
32			follows:
33			The base station shall set this field to the index of the Quasi-
34			orthogonal function (see [2]) corresponding to the QOF index
35			for the Supplemental Channel on the highest SR3 frequency.
36	CODE_CHAN_SCH_HIGH	-	Code channel for the Supplemental Channel on the
37			highest SR3 frequency.
38			If 3X_SCH_HIGH_INCL is set to '0', the base station shall omit
39			this field; otherwise, the base station shall set this field as
40			follows:
41			The base station shall set this field to the code channel index
42			(see [2]) that the mobile station is to use on the Supplemental
43			Channel on the highest SR3 frequency. If Radio
44			Configuration 6 or 8 is used, the base station shall set this
45			field in the range 1 to 127 inclusive. If Radio Configuration 7
46			or 9 is used, the base station shall set this field in the range 1
47			to 255 inclusive.

- 1       CCSH\_INCLUDED   -   Code Combining Soft Handoff information included indicator.  
2                        The base station shall set this field to '1' if Code Combining  
3                        Soft Handoff information is included in this message;  
4                        otherwise, the base station shall set this field to '0'.
- 5   If the CCSH\_INCLUDED field is set to '1', the base station shall include one occurrence of  
6   the following one field for each of the Forward Supplemental Channel records included in  
7   this message (as specified by NUM\_FOR\_CFG\_RECS and NUM\_SUP\_SHO). The base  
8   station shall use the same order for the following field as is used for the Forward  
9   Supplemental Channel records.
- 10   CCSH\_ENCODER\_TYPE   -   Code Combining Soft Handoff Turbo Encoder type.  
11                        The base station shall set this field to '0' if the Turbo Encoder  
12                        type to be used on the Forward Supplemental Channel  
13                        indexed by FOR\_SCH\_ID and SCCL\_INDEX is the default  
14                        encoder type. The base station shall set this field to '1' if the  
15                        Turbo Encoder to be used is the complementary type.
- 16   FOR\_SCH\_CC\_INCL   -   Channel configuration for the Forward Supplemental  
17   Channel included indicator.  
18                        The base station shall set this field to '1' if the channel  
19                        configuration information for the Forward Supplemental  
20                        Channel is included; otherwise, the base station shall set this  
21                        field to '0'.  
22                        The base station shall set FOR\_SCH\_CC\_INCL to '0' if  
23                        NUM\_FOR\_SCH is set to '00' or if FOR\_SCH\_DURATION is set  
24                        to '0000'.
- 25   If FOR\_SCH\_CC\_INCL is set to '1', the base station shall include NUM\_FOR\_SCH  
26   occurrences of the following three-field record.
- 27       FOR\_SCH\_ID   -   Forward Supplemental Channel Identifier.  
28                        The base station shall set this field to the identifier of the  
29                        Forward Supplemental Channel pertaining to this record.  
30                        The base station shall set this field to the Supplemental  
31                        Channel identifier, shown in Table 3.7.5.7-5.
- 32   FOR\_SCH\_MUX   -   Forward Supplemental Channel Multiplex Option.  
33                        The base station shall set this field to the Multiplex Option  
34                        associated with the maximum data rate for this Forward  
35                        Supplemental Channel (see [3]).
- 36   SCH\_CC\_Type-specific field   -   Supplemental Channel Configuration Information.  
37                        The base station shall set this field as defined in 3.7.5.7.1 for  
38                        this Forward Supplemental Channel.
- 39   REV\_SCH\_CC\_INCL   -   Channel configuration for the Reverse Supplemental Channel  
40   included indicator.  
41                        The base station shall set this field to '1' if the channel  
42                        configuration information for the Reverse Supplemental  
43                        Channel is included; otherwise, the base station shall set this  
44                        field to '0'.

1		The base station shall set REV_SCH_CC_INCL to '0' if
2		NUM_REV_SCH is set to '00' or if REV_SCH_DURATION is set
3		to '0000'.
4	If REV_SCH_CC_INCL is set to '1', the base station shall include NUM_REV_SCH	
5	occurrences of the following three-field record.	
6	REV_SCH_ID	- Reverse Supplemental Channel Identifier.
7		The base station shall set this field to the identifier of the
8		Reverse Supplemental Channel pertaining to this record.
9		The base station shall set this field to the Supplemental
10		Channel identifier, shown in Table 3.7.5.7-5.
11	REV_SCH_MUX	- Reverse Supplemental Channel Multiplex Option.
12		The base station shall set this field to the Multiplex Option
13		associated with the maximum data rate for this Reverse
14		Supplemental Channel (see [3]).
15	SCH_CC_Type-specific field	- Supplemental Channel Configuration Information.
16		The base station shall set this field as defined in 3.7.5.7.1 for
17		this Reverse Supplemental Channel
18	SCH_BCMC_IND	- BCMC on supplemental channel Indicator.
19		If NUM_FOR_SCH field is set to '00', the base station shall
20		omit this field; otherwise, the base station shall include this
21		field and set it as follows:
22		If the channel assignment in this message contains a
23		Forward Supplemental Channel used for BCMC
24		transmission, the base station shall set this field to '1';
25		otherwise, the base station shall set this field to '0'.
26	ADD_PLCM_FOR_SCH_INCL	- Additional PLCM for forward SCH included indicator.
27		If the SCH_BCMC_IND field is not included or is included and
28		is set to '0', the base station shall omit this field; otherwise,
29		the base station shall include this field and set it as follows:
30		If the additional PLCM for forward SCH is included in this
31		message, the base station shall set this field to '1'; otherwise,
32		the base station shall set this field to '0'.
33	ADD_PLCM_FOR_SCH_TYPE	- The Additional Public Long Code Mask for forward SCH
34		type indicator.
35		If ADD_PLCM_FOR_SCH_INCL is not included or is included
36		and is set to '0', the base station shall omit this field;
37		otherwise, the base station shall include this field and set it
38		as follows:
39		The base station shall set this field to '1' to indicate PLCM
40		specified by the base station. The field value '0' is reserved.
41	ADD_PLCM_FOR_SCH_35	- The 35 LSB bits of the additional Public Long Code Mask
42		for forward SCH.

1 If ADD\_PLCM\_FOR\_SCH\_TYPE field is included and is set to  
2 '1', the base station shall include this field and set it to the 35  
3 least significant bits of the public long code mask used by the  
4 mobile station; otherwise, the base station shall omit this  
5 field.

6 If SCH\_BCMC\_IND field is included and is set to '1', the base station shall include  
7 NUM\_FOR\_SCH occurrences of the following record:

8 USE\_ADD\_PLCM\_FOR\_SCH - Use additional PLCM for forward SCH indicator.  
9 The base station shall set this field to '1' if the additional  
10 PLCM for forward SCH included in this message is to be used  
11 for this Forward Supplemental Channel; otherwise, the base  
12 station shall set this field to '0'.

13 FSCH\_OUTERCODE\_INCL - Forward Supplemental Channel Outer Code included  
14 indicator.  
15 The base station shall set this field to '1' if the Forward  
16 Supplemental Channel outer code information is included in  
17 this message; otherwise, the base station shall set this field  
18 to '0'.

19 FSCH\_OUTERCODE\_RATE - Outer Code Rate of the Forward Supplemental Channel.  
20 If the FSCH\_OUTERCODE\_INCL field is not included or is  
21 included and is set to '0', the base station shall omit this  
22 field; otherwise, the base station shall include this field and  
23 set it as follows:  
24 The base station shall set this field to the outer code rate of  
25 the Forward Supplemental Channel as specified in Table  
26 3.7.2.3.2.38-3.

27 FSCH\_OUTERCODE\_OFFSET - Outer Coding Buffer Offset of the Forward  
28 Supplemental Channel.  
29 If the FSCH\_OUTERCODE\_INCL field is not included or is  
30 included and is set to '0', the base station shall omit this  
31 field; otherwise, the base station shall include this field and  
32 set it as follows:  
33 The base station shall set this field to the outer coding buffer  
34 offset of the Forward Supplemental Channel in units of 20ms  
35 as specified in [2].

36 FPC\_BCMC\_CHAN - Channel used for secondary power control subchannel.  
37 If FPC\_INCL is set to '1' and FPC\_MODE\_SCH is set to '001',  
38 '010', '101', or '110', the base station shall include this field  
39 and set it as follows; otherwise, the base station shall omit  
40 this field.  
41 If F-FCH is associated with secondary power control  
42 subchannel, the base station shall set this field to '1';  
43 otherwise, base station shall set this field to '0' to indicate  
44 that FPC\_SEC\_CHAN points to the channel associated with  
45 secondary power control subchannel.  
46

- 1 3.7.3.3.2.38 Forward Supplemental Channel Assignment Mini Message
- 2 MSG\_TAG: FSCAMM
- 3

Field	Length (bits)
FOR_SCH_ID	1
FOR_SCH_DURATION	4
FOR_SCH_START_TIME	5
SCCL_INDEX	4

1	FOR_SCH_ID	- Forward Supplemental Channel identifier.
2		The base station shall set this field to the identifier of the
3		Forward Supplemental Channel.
4	FOR_SCH_DURATION	- Duration of Forward Supplemental Channel assignment.
5		The base station shall set this field to the duration (see Table
6		3.7.3.3.2.37-3), starting at the start time of the message
7		specified by FOR_SCH_START_TIME, during which the mobile
8		station is to process the Forward Supplemental Channel.
9		The base station shall set this field to '0000' to indicate that
10		the mobile station should stop processing the Forward
11		Supplemental Channel starting at the start time of the
12		message specified by FOR_SCH_START_TIME.
13		The base station shall set this field to '1111' to indicate that
14		the mobile station should process the Forward Supplemental
15		Channel, starting at the explicit start time of the message
16		specified by FOR_SCH_START_TIME, until the start time of a
17		subsequent Forward Supplemental Channel assignment
18		corresponding to the same Forward Supplemental Channel
19		(see 2.6.6.2.5.1.1).
20	FOR_SCH_START_TIME	- Start time for Forward Supplemental Channel assignment.
21		The base station shall set this field to the System Time, in
22		units of time specified by START_TIME_UNIT, (modulo 32) at
23		which the mobile station is to start processing the Forward
24		Supplemental Channel specified in this message. The start
25		time for processing Forward Supplemental Channels is the
26		time for which
27		$\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{FOR\_SCH\_START\_TIME} \bmod 32$
28		= 0,
29		where t is the System Time in units of 20 ms.
30	SCCL_INDEX	- Supplemental Channel Code list index.
31		The base station shall set this field to the index of the record
32		in the Forward Supplemental Channel Code list
33		corresponding to the FOR_SCH_ID. The base station shall
34		include an SCCL_INDEX whose SCH Active Set is a subset of
35		the Active Set of the Fundamental Channel, Dedicated
36		Control Channel, or both.
37		

- 1 3.7.3.3.2.39 Reverse Supplemental Channel Assignment Mini Message
- 2 MSG\_TAG: RSCAMM
- 3

Field	Length (bits)
REV_SCH_ID	1
REV_SCH_DURATION	4
REV_SCH_START_TIME	5
REV_SCH_NUM_BITS_IDX	4

1		
2	REV_SCH_ID	- Reverse Supplemental Channel identifier.
3		The base station shall set this field to the identifier of the
4		Reverse Supplemental Channel.
5	REV_SCH_DURATION	- Duration of Reverse Supplemental Channel assignment.
6		The base station shall set this field to '0000' to indicate that
7		the mobile station is to stop transmitting on the Reverse
8		Supplemental Channel specified by REV_SCH_ID at the start
9		time specified by START_TIME. The base station shall set this
10		field to '1111' to indicate that the mobile station may transmit
11		on the Reverse Supplemental Channel specified by
12		REV_SCH_ID, starting at the start time specified by
13		REV_SCH_START_TIME in this message, until the start time
14		specified by a subsequent Reverse Supplemental Channel
15		assignment corresponding to the same Supplemental Channel
16		(see 2.6.6.2.5.1.1). The base station shall set this field to the
17		duration according to Table 3.7.3.3.2.37-3, starting at the
18		explicit start time specified by REV_SCH_START_TIME, during
19		which the mobile station may transmit on the Reverse
20		Supplemental Channel specified by REV_SCH_ID.
21	REV_SCH_START_TIME	- Start time for <i>Reverse Supplemental Channel Assignment Mini</i>
22		<i>Message</i> .
23		The base station shall set this field to the System Time, in
24		units of time specified by START_TIME_UNIT, (modulo 32) at
25		which the mobile station may start transmitting on the
26		Reverse Supplemental Channel specified in this message. The
27		explicit start time for transmitting on the Reverse
28		Supplemental Channel is the time for which
29		$(\lfloor t / (\text{START\_TIME\_UNIT} + 1) \rfloor - \text{REV\_SCH\_START\_TIME}) \bmod 32$
30		= 0,
31		where t is the System Time in units of 20 ms.
32	REV_SCH_NUM_BITS_IDX	- Reverse Supplemental Channel number of information
33		bits per frame index.
34		If USE_FLEX_NUM_BITS is equal to '0' or if
35		USE_FLEX_NUM_BITS is equal to '1' and
36		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is equal to '0000', then
37		the base station shall set this field according to Table
38		3.7.3.3.2.37-2 to indicate the Reverse Supplemental Channel
39		number of information bits per frame and the number of CRC
40		bits per frame, that the mobile station may transmit on the
41		reverse Supplemental Channel identified by REV_SCH_ID.
42		If USE_FLEX_NUM_BITS <sub>s</sub> is equal to '1' and
43		RSCH_NBIT_TABLE_ID[REV_SCH_ID] is not equal to '0000',
44		then the base station shall set the REV_SCH_NUM_BITS_IDX
45		field to indicate the Reverse Supplemental Channel number of

1 information bits per frame that the mobile station may  
2 transmit on the Reverse Supplemental Channel identified by  
3 REV\_SCH\_ID to be  
4 NUM\_BITS[RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID]]  
5 [REV\_SCH\_NUM\_BITS\_IDX] and the Reverse Supplemental  
6 Channel number of CRC bits per frame that the mobile station  
7 may transmit on the Reverse Supplemental Channel identified  
8 by REV\_SCH\_ID to be  
9 CRC\_LEN\_IDX[RSCH\_NBIT\_TABLE\_ID[REV\_SCH\_ID]]  
10 [REV\_SCH\_NUM\_BITS\_IDX].  
11  
12

## 1 3.7.3.3.2.40 Mobile Assisted Burst Operation Parameters Message

## 2 MSG\_TAG: MABOPM

Field	Length (bits)
ORDER_FLAG	1

If ORDER\_FLAG is set to '1', the base station shall include following record:

PS_MIN_DELTA	3
ORDER_INTERVAL	3

PERIODIC_FLAG	1
---------------	---

If PERIODIC\_FLAG is set to '1', the base station shall include following record:

NUM_PILOTS	3
PERIODIC_INTERVAL	6

THRESHOLD_FLAG	1
----------------	---

If THRESHOLD\_FLAG is set to '1', the base station shall include following record:

PS_FLOOR_HIGH	6
PS_FLOOR_LOW	6
PS_CEILING_HIGH	6
PS_CEILING_LOW	6
THRESHOLD_INTERVAL	6

3

4 ORDER\_FLAG - Order change reporting flag.

5 The base station shall set this field to '1' to indicate that the  
6 mobile station is to send a *Pilot Strength Measurement Mini*  
7 *Message* to the base station whenever a received pilot  
8 strength measurement changes its relative order with respect  
9 to all other reported pilot strength measurements during  
10 supplemental channel burst operations; otherwise, the base  
11 station shall set this field to '0'.

12 If ORDER\_FLAG is set to '1', the base stations shall include the following two-field record:

13 PS\_MIN\_DELTA - Minimum power strength delta.

1			The base station shall set this field to one less than the
2			minimum pilot strength measurement difference between two
3			pilots (in units of 0.5 dB) that must be measured in order for
4			the mobile station to send a <i>Pilot Strength Measurement Mini</i>
5			<i>Messages</i> when the rank order mode is enabled. A difference
6			in pilot strength of at least (PS_MIN_DELTA + 1), in units of
7			0.5 dB, must be measured for ORDER_INTERVAL successive
8			20 ms intervals before a rank order based <i>Pilot Strength</i>
9			<i>Measurement Mini Message</i> is generated.
10	ORDER_INTERVAL	-	Order interval.
11			The base station shall set this field to the minimum interval
12			(in 20 ms units) during which the indicated pilot strength
13			measurement difference greater than or equal to
14			(PS_MIN_DELTA + 1), in units of 0.5 dB, must be measured
15			by the mobile station in order for the mobile station to send a
16			<i>Pilot Strength Measurement Mini Messages</i> when the rank
17			order mode is enabled.
18	PERIODIC_FLAG	-	Periodic report flag.
19			The base station shall set this field to '1' to indicate that the
20			mobile station is to send <i>Pilot Strength Measurement Mini</i>
21			<i>Messages</i> periodically during supplemental channel burst
22			operations; otherwise the base station shall set this field to
23			'0'.
24	If PERIODIC_FLAG is set to '1', the base station shall include the following two-field		
25	record:		
26	NUM_PILOTS	-	Number of pilots.
27			The base station shall set this field to the number of pilots for
28			which the mobile station is to send <i>Pilot Strength</i>
29			<i>Measurement Mini Messages</i> when the periodic mode is
30			enabled.
31	PERIODIC_INTERVAL	-	Periodic interval.
32			The base station shall set this field to the interval (in 20 ms
33			units) between <i>Pilot Strength Measurement Mini Messages</i>
34			when the periodic mode is enabled.
35	THRESHOLD_FLAG	-	Threshold reporting flag.
36			The base station shall set this field to '1' to indicate that the
37			mobile station is to send <i>Pilot Strength Measurement Mini</i>
38			<i>Messages</i> whenever a measured pilot crosses below a lower
39			bound or exceeds an upper bound during Supplemental
40			channel burst operations; otherwise the base station shall set
41			this field to '0'.
42	If THRESHOLD_FLAG is set to '1', the base station shall include the following five-field		
43	record:		
44	PS_FLOOR_HIGH	-	Lower bound reporting high water mark.

1			The base station shall set this field to the high water mark for
2			the lower bound below which the mobile station is to send
3			<i>Pilot Strength Measurement Mini Messages</i> when the
4			threshold mode is enabled.
5			The base station shall set this field as an unsigned binary
6			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
7	PS_FLOOR_LOW	-	Lower bound reporting low water mark.
8			The base station shall set this field to the low water mark for
9			the lower bound below which the mobile station is to send
10			<i>Pilot Strength Measurement Mini Messages</i> when the
11			threshold mode is enabled.
12			The base station shall set this field as an unsigned binary
13			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
14	PS_CEILING_HIGH	-	Upper bound reporting high water mark.
15			The base station shall set this field to the high water mark for
16			the upper bound above which the mobile station is to send
17			<i>Pilot Strength Measurement Mini Messages</i> when the
18			threshold mode is enabled.
19			The base station shall set this field as an unsigned binary
20			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
21	PS_CEILING_LOW	-	Upper bound reporting low water mark.
22			The base station shall set this field to the low water mark for
23			the upper bound above which the mobile station is to send
24			<i>Pilot Strength Measurement Mini Messages</i> when the
25			threshold mode is enabled.
26			The base station shall set this field as an unsigned binary
27			number equal to $\lfloor -2 \times 10 \times \log_{10} E_c/I_0 \rfloor$ .
28	THRESHOLD_INTERVAL	-	Threshold reporting interval.
29			The base station shall set this field to the interval (in 20 ms
30			units) between <i>Pilot Strength Measurement Mini Messages</i>
31			when the threshold reporting mode is enabled.
32			

## 1 3.7.3.3.2.41 User Zone Reject Message

2 MSG\_TAG: UZRM

Field	Length (bits)
REJECT_UZID	16
REJECT_ACTION_INDI	3
UZID_ASSIGN_INCL	1
ASSIGN_UZID	0 or 16

3 REJECT\_UZID - Rejected User Zone identifier.

4 The base station shall set this field to the User Zone identifier  
5 of the User Zone rejected by the base station.

6 REJECT\_ACTION\_INDI - Rejection action indicator.

7 The base station shall set this field to the value shown in  
8 Table 3.7.2.3.2.29-1 corresponding to the User Zone  
9 rejection action field to identify the mobile station action.

10 UZID\_ASSIGN\_INCL - User Zone identifier assignment included indicator.

11 If assigned UZID information is included, the base station  
12 shall set this field to '1'; otherwise, the base station shall set  
13 this field to '0'.

14 ASSIGN\_UZID - Assigned User Zone identifiers.

15 The base station shall set this field to the User Zone identifier  
16 of the User Zone assigned to the mobile station.

17

1     3.7.3.3.2.42 User Zone Update Message

2     MSG\_TAG: UZUM

3

Specific Field	Length (bits)
UZID	16

4                 UZID     -     User Zone identifier.

5                                 The base station shall set this field to the User Zone identifier

6                                 supported by the base station.

7

## 1 3.7.3.3.2.43 Call Assignment Message

## 2 MSG\_TAG: CLAM

Field	Length (bits)
RESPONSE_IND	1
TAG	0 or 4
ACCEPT_IND	0 or 1
REJECT_PKTDATA_IND	0 or 1
BYPASS_ALERT_ANSWER	0 or 1
SO_INCL	1
SO	0 or 16
CON_REF_INCL	1
CON_REF	0 or 8
USE_OLD_SERV_CONFIG	0 or 1
SR_ID	0 or 3
SR_ID_RESTORE_BITMAP	0 or 6
ADD_CALL_INFO_INCLUDED	0 or 1
NUM_ADD_CALL_RECORDS	0 or 3

NUM\_ADD\_CALL\_RECORDS + 1 occurrences of the following record:

{ (NUM\_ADD\_CALL\_RECORDS + 1)

ADD_TAG	0 or 4
ADD_ACCEPT_IND	0 or 1
ADD_REJECT_PKTDATA_IND	0 or 1
ADD_SO_INCL	1
ADD_SO	0 or 16
ADD_CON_REF_INCL	1
ADD_CON_REF	0 or 8

} (NUM\_ADD\_CALL\_RECORDS + 1)

1	RESPONSE_IND	-	Response indicator.
2			The base station shall set this field to '1' if this message is a
3			response to an <i>Enhanced Origination Message</i> from the
4			mobile station; otherwise, the base station shall set this field
5			to '0'.
6	TAG	-	Transaction identifier.
7			If the RESPONSE_IND field is set to '0', the base station shall
8			omit this field; otherwise, the base station shall include this
9			field and set it as follows:
10			The base station shall set this field to the value of the TAG or
11			ADD_TAG field of the <i>Enhanced Origination Message</i> to which
12			this message is the response.
13	ACCEPT_IND	-	Accepted indicator.
14			If the RESPONSE_IND field is set to '0', the base station shall
15			omit this field; otherwise, the base station shall include this
16			field and shall set it as follows:
17			If the base station accepts the call request from the mobile
18			station, the base station shall set this field to '1'; otherwise,
19			the base station shall set this field to '0'.
20	REJECT_PKTDATA_IND	-	Packet data service option rejection indicator.
21			If the ACCEPT_IND field is not included or is included and is
22			set to '1', the base station shall omit this field; otherwise, the
23			base station shall include this field and shall set it as follows:
24			The base station shall set this field to '1' to indicate rejection
25			of the packet data service option requested by the mobile
26			station; otherwise, the base station shall set this field to '0'.
27	BYPASS_ALERT_ANSWER	-	Bypass alert indicator.
28			If the RESPONSE_IND field is set to '1', the base station shall
29			omit this field; otherwise, the base station shall include this
30			field and shall set it as follows:
31			If the mobile station is to bypass the <i>Waiting for Order</i>
32			<i>Substate</i> and the <i>Waiting for Mobile Station Answer Substate</i>
33			for this call, the base station shall set this field to '1';
34			otherwise, the base station shall set this field to '0'.
35	SO_INCL	-	Service option included indicator.
36			The base station shall set this field to '1' if the SO field is
37			included in this message; otherwise, it the base station shall
38			set this field to '0'.
39			If the USE_OLD_SERV_CONFIG is included and is set to '1',
40			the base station shall set this field to '0'.
41	SO	-	Service option.
42			If the SO_INCL field is set to '0', the base station shall omit
43			this field; otherwise, the base station shall include this field
44			and shall set it to the value of the service option number (as
45			specified in [30]) that the base station proposes for this call.

1	CON_REF_INCL	-	Connection reference included indicator.
2			If the ACCEPT_IND field is not included or is included but is
3			set to '1', the base station shall set this field to '1'; otherwise,
4			the base station shall set this field to '0'.
5			If the USE_OLD_SERV_CONFIG is included and is set to '1',
6			the base station shall set this field to '0'.
7	CON_REF	-	Connection reference.
8			If the CON_REF_INCL field is set to '0', the base station shall
9			omit this field; otherwise, the base station shall include this
10			field and shall set it to the value of the connection reference
11			that was/will be assigned to the service option connection
12			corresponding to this call.
13	USE_OLD_SERV_CONFIG	-	Use stored service option connection record(s) indicator.
14			This field may be used by the base station to instruct the
15			mobile station to use the stored service option connection
16			record(s).
17			If the ACCEPT_IND field is included and is set to '0', the base
18			station shall omit this field; otherwise, the base station shall
19			include this field and shall set it as follows:
20			If the mobile station is to restore one or more service option
21			connection record(s) from the stored service configuration,
22			the base station shall set this field to '1'; otherwise, the base
23			station shall set this field to '0'.
24	SR_ID	-	Service reference identifier.
25			If the USE_OLD_SERV_CONFIG field is not included or is
26			included and is set to '0', the base station shall omit this
27			field; otherwise, the base station shall include this field and
28			set it as follows.
29			If the mobile station is to restore all remaining service option
30			connections record from the stored service configuration, the
31			base station shall set this field to '111'; if the mobile station is
32			to restore more than one but not all remaining service option
33			connections from the stored service configuration, the base
34			station shall set this field to '000'; otherwise, the base station
35			shall set this field to the service reference identifier
36			corresponding to the service option connection to be
37			restored.

1	SR_ID_RESTORE_BITMAP	-	Bitmap of service reference identifiers to be restored.
2			If the SR_ID field is included and set to '000', the base station
3			shall include this field and set it as follows; otherwise, the
4			base station shall omit this field.
5			This field consists of the subfields defined in Table
6			3.7.2.3.2.21-6. The base station shall set a subfield to '1' to
7			indicate that the mobile station is to restore the service
8			option connection of the corresponding service reference
9			identifier; otherwise, the base station shall set the subfield to
10			'0'.
11	ADD_CALL_INFO_INCLUDED	-	Additional call information included indicator.
12			If USE_OLD_SERV_CONFIG is not included, or is included
13			and is set to '1', the base station shall omit this field;
14			otherwise, the base station shall include this field and set it
15			as follows:
16			If at least one occurrence of the additional call record is
17			included in this message, the base station shall set this field
18			to '1'; otherwise, the base station shall set this field to '0'.
19	NUM_ADD_CALL_RECORDS	-	Number of additional call records included.
20			If ADD_CALL_INFO_INCLUDED is not included or is included
21			and set to '0', the base station shall omit this field; otherwise,
22			the base station shall include this field and set it to one less
23			than the number of occurrences of the call records included
24			in this message.
25	If NUM_ADD_CALL_RECORDS is included, the base station shall include		
26	NUM_ADD_CALL_RECORDS + 1 occurrences of the following variable-field record:		
27	ADD_TAG	-	Additional transaction identifier.
28			If the RESPONSE_IND field is set to '0', the base station shall
29			omit this field; otherwise, the base station shall include this
30			field and set it as follows:
31			The base station shall set this field to the value of the TAG or
32			ADD_TAG field of the <i>Enhanced Origination Message</i> to which
33			this message is the response.
34	ADD_ACCEPT_IND	-	Additional accepted indicator.
35			If the RESPONSE_IND field is set to '0', the base station shall
36			omit this field; otherwise, the base station shall include this
37			field and set it as follows:
38			If the base station accepts the call request from the mobile
39			station, the base station shall set this field to '1'; otherwise,
40			the base station shall set this field to '0'.
41	ADD_REJECT_PKTDATA_IND	-	Additional packet data service option rejection
42			indicator.

1			If the ADD_ACCEPT_IND field is not included or is included
2			and is set to '1', the base station shall omit this field;
3			otherwise, the base station shall include this field and shall
4			set it as follows:
5			The base station shall set this field to '1' to indicate rejection
6			of the packet data service option requested by the mobile
7			station; otherwise, the base station shall set this field to '0'.
8	ADD_SO_INCL	-	Additional service option included indicator.
9			The base station shall set this field to '1' if the ADD_SO field
10			is included in this message; otherwise, it the base station
11			shall set this field to '0'.
12	ADD_SO	-	Additional service option.
13			If the ADD_SO_INCL field is set to '0', the base station shall
14			omit this field; otherwise, the base station shall include this
15			field and shall set it to the value of the service option number
16			(as specified in [30]) that the base station proposes for this
17			call.
18	ADD_CON_REF_INCL	-	Additional connection reference included indicator.
19			If the ACCEPT_IND field is not included or is included but is
20			set to '1', the base station shall set this field to '1'; otherwise,
21			the base station shall set this field to '0'.
22	ADD_CON_REF	-	Connection reference.
23			If the ADD_CON_REF_INCL field is set to '0', the base station
24			shall omit this field; otherwise, the base station shall include
25			this field and shall set it to the value of the connection
26			reference that was/will be assigned to the service option
27			connection corresponding to this call.
28			
29			

1 3.7.3.3.2.44 Extended Alert With Information Message

2 MSG\_TAG: EAWIM

3

Field	Length (bits)
CON_REF_INCL	1
CON_REF	0 or 8
NUM_REC	4

NUM\_REC occurrences of the following record:

{ (NUM\_REC)

RECORD_TYPE	8
RECORD_LEN	8
Type-specific fields	8 × RECORD_LEN

} (NUM\_REC)

4

5 CON\_REF\_INCL – Connection reference included indicator.

6 The base station shall set this field to ‘1’ if the connection  
7 reference field is included in this message; otherwise, it shall  
8 set this field to ‘0’.

9 CON\_REF – Connection reference.

10 If the CON\_REF\_INCL field is set to ‘0’, the base station shall  
11 omit this field; otherwise, the base station shall include this  
12 field and shall set it to the value of the connection reference  
13 assigned to the service option connection of the call, to which  
14 this message corresponds.

15 NUM\_REC – Number of records.

16 The base station shall set this field to the number of  
17 information records included with this message.

18 The base station shall include NUM\_REC occurrences of the following record as specified  
19 in 3.7.5.

1	RECORD_TYPE	-	Information record type.
2			The base station shall set this field as specified in 3.7.5.
3	RECORD_LEN	-	Information record length.
4			The base station shall set this field to the number of octets in
5			the type-specific fields included in this record.
6	Type-specific fields	-	Type-specific fields.
7			The base station shall include type-specific fields as specified
8			in 3.7.5.
9

D_SIG_ENCRYPT_MODE	3
NUM_RECS	3

NUM\_RECS occurrences of the following record

{ (NUM\_RECS)

CON_REF	8
UI_ENCRYPT_MODE	3

} (NUM\_RECS)

ENC_KEY_SIZE	0 or 3
C_SIG_ENCRYPT_MODE_INCL	1
C_SIG_ENCRYPT_MODE	0 or 3
MSG_INT_INFO_INCL	1
CHANGE_KEYS	0 or 1
USE_UAK	0 or 1

3

4 USE\_TIME - Use action time indicator.

5 This field indicates whether an ACTION\_TIME is specified in  
6 this message.

7 If an ACTION\_TIME is specified in this message, the base  
8 station shall set this field to '1'; otherwise, the base station  
9 shall set this field to '0'.

10 ACTION\_TIME - Action time.

11 If the USE\_TIME field is set to '1', the base station shall set  
12 this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$   
13 ms, in units of 80 ms (modulo 64), at which the message is to  
14 take effect. If the USE\_TIME field is set to '0', the base station  
15 shall omit this field.

16 D\_SIG\_ENCRYPT\_MODE - Dedicated channel encryption mode indicator.

17 The base station shall set it to signaling encryption mode, as  
18 shown in Table 3.7.4.5-1.

19 NUM\_REC - Number of user information encryption records.

20 The base station shall set this field to the number of user  
21 information encryption records included in this message.

1	The base station shall include NUM_REC occurrences of the following two-field record		
2	CON_REF	-	Connection reference corresponding to the service option
3			connection requesting for encryption.
4			If this field is included, the base station shall set this field to
5			the connection reference of the service option connection
6			corresponding to this user information encryption.
7	UI_ENCRYPT_MODE	-	Encryption mode indicator for user information privacy.
8			The base station shall set this field to user information
9			encryption mode for the service option connection identified
10			by CON_REF as shown in Table 3.7.5.7-3.
11	ENC_KEY_SIZE	-	Key Size used for user information and signaling encryption
12			If D_SIG_ENCRYPT_MODE is equal to '001' or '010', the base
13			station shall include this field and set this field to the
14			encryption key size as shown in Table 3.7.4.5-2; otherwise,
15			the base station shall omit this field.
16	C_SIG_ENCRYPT_MODE_INCL	-	Common channel signaling encryption mode included
17			indicator.
18			If C_SIG_ENCRYPT_MODE is included in this message, the
19			base station shall set this field to '1'; otherwise, the base
20			station shall set this field to '0'.
21	C_SIG_ENCRYPT_MODE	-	Common channel signaling encryption mode indicator.
22			If C_SIG_ENCRYPT_MODE_INCL is set to '1', the base station
23			shall include this field and shall set it to the common
24			channel signaling encryption mode, as shown in Table
25			3.7.4.5-1; otherwise, the base station shall omit this field.
26	MSG_INT_INFO_INCL	-	Message integrity information included indicator
27			The base station shall set this field to '1' if the base station
28			supports message integrity; otherwise, the base station shall
29			set this field to '0'.
30	CHANGE_KEYS	-	Change keys indicator
31			If MSG_INT_INFO_INCL is set to '0', the base station shall
32			omit this field; otherwise, the base station shall include this
33			field and set it as follows:
34			The base station shall set this field to '0' to command the
35			mobile station not to update the encryption key and integrity
36			key. The base station shall set this field to '1' to command the
37			mobile station to update the encryption key and integrity key
38			to the latest being generated.
39	USE_UAK	-	Use UAK indicator
40			If MSG_INT_INFO_INCL is set to '0', the base station shall
41			omit this field; otherwise, the base station shall include this
42			field and set it as follows:

1  
2  
3  
4  
5  
6

If the base station receives an authentication vector with a UAK, the base station shall set this field to '1' to indicate that the mobile station is to use UMAC; otherwise, the base station shall set this field to '0' to indicate that the mobile station is to use MAC-I.

## 3.7.3.3.2.47 Base Station Status Response Message

MSG\_TAG: BSSRSPM

Field	Length (bits)
QUAL_INFO_TYPE	8
QUAL_INFO_LEN	3
Type-specific fields.	$8 \times \text{QUAL\_INFO\_LEN}$
NUM_RECORDS	4

NUM\_RECORDS occurrences of the following record:

{ (NUM\_RECORDS)

RECORD_TYPE	8
RECORD_LENGTH	8
Record type specific fields	variable
RESERVED	0-7 (as required)

} (NUM\_RECORDS)

QUAL\_INFO\_TYPE - Qualification information type.

The base station shall set this field to the QUAL\_INFO\_TYPE field in the corresponding *Base Station Status Request Message*.

QUAL\_INFO\_LEN - Qualification information length.

The base station shall set this field to the QUAL\_INFO\_LEN field in the corresponding *Base Station Status Request Message*.

Type-specific fields - Type-specific fields.

The base station shall set these fields to the qualification information in the corresponding *Base Station Status Request Message*.

NUM\_RECORDS - Number of records included in this message.

The base station shall set this field to the number of occurrences of RECORD\_TYPE field in this message.

The base station shall include one occurrence of the following variable-length record for each information record that is included:

RECORD\_TYPE - Information record type.

The base station shall set this field to the record type value shown in Table 3.7.3.3.2.47-1 corresponding to the information record included.

**Table 3.7.3.3.2.47-1. Base Station Status Response Information Record Types**

Information Record Requested	Record Type
Pilot Information	00000000
Reserved	00000001- 11111111

- RECORD\_LENGTH** - Information record length.
- The base station shall set this field to the length, in octets, of the record type specific fields included in this record.
- Record type specific fields** - Record type specific fields
- The base station shall set this field to the type specific fields corresponding to this record type.
- If the **RECORD\_TYPE** field is set to '00000000', the base station shall set the record type specific field as follows:

1

Field	Length (bits)
NUM_PILOTS	4
SID_NID_IND	1

NUM\_PILOTS occurrences of the following record:

{ (NUM\_PILOTS)

RECORD_LEN	4
PILOT_PN	9
BASE_ID	16
SID_NID_INCL	0 or 1
SID	0 or 15
NID	0 or 16
BASE_LAT_LONG_INCL	1
BASE_LAT	0 or 22
BASE_LONG	0 or 23
RESERVED_1	0–7 (as required)

} (NUM\_PILOTS)

2

3           NUM\_PILOTS   -   Number of Pilots reported.

4                           The base station shall set this field to the number of pilots  
5                           whose information is reported in this message.

6                           The base station shall set this field to a number equal or  
7                           greater than one.

8           SID\_NID\_IND   -   SID, NID included indicator.

9                           The base station shall set this field to '1' if SID, NID  
10                          information is included in this message; otherwise, it shall  
11                          set this field to '0'.

12   The base station shall include NUM\_PILOTS occurrences of the following variable length  
13   record:

1	RECORD_LEN	-	Record Length.
2			The base station shall set this field to the length in octets of
3			this record.
4	PILOT_PN	-	Pilot PN sequence offset index.
5			The base station shall set this field to the pilot PN sequence
6			offset for this base station, in units of 64 PN chips.
7	BASE_ID	-	Base station identification.
8			The base station shall set this field to the Base Station
9			identification number corresponding to this pilot.
10	SID_NID_INCL	-	SID, NID included indicator.
11			If the SID_NID_IND field is set to '0', the base station shall
12			omit this field; otherwise, the base station shall include this
13			field and set it as follows:
14			If this is the first pilot included in this message, the base
15			station shall set this field to '1'; otherwise, the base station
16			shall set this field as follows:
17			If the SID and NID of this pilot are same as the SID and NID
18			of the previous pilot, the base station shall set this field to '0';
19			otherwise, the base station shall set this field to '1'.
20	SID	-	System identification.
21			If the SID_NID_INCL field is not included or is included and is
22			set to '0', the base station shall omit this field; otherwise, the
23			base station shall include this field and set it as follows:
24			The base station shall set this field to the system
25			identification number of the system corresponding to this
26			pilot (see 2.6.5.2).
27	NID	-	Network identification.
28			If the SID_NID_INCL field is not included or is included and is
29			set to '0', the base station shall omit this field; otherwise, the
30			base station shall include this field and set it as follows:
31			The base station shall set this field to the network
32			identification number of the network corresponding to this
33			pilot (see 2.6.5.2).
34	BASE_LAT_LONG_INCL	-	Base station LAT/LONG included indicator.

1			The base station shall set this field to '1' if the base station
2			LAT/LONG fields are included in this message; otherwise, the
3			base station shall set this field to '0'.
4	BASE_LAT	-	Base station latitude.
5			If the BASE_LAT_LONG_INCL is set to '0', the base station
6			shall omit this field; otherwise, the base station shall include
7			this field and set it as follows:
8			The base station shall set this field to its latitude in units of
9			0.25 second, expressed as a two's complement signed
10			number with positive numbers signifying North latitudes.
11			The base station shall set this field to a value in the range -
12			1296000 to 1296000 inclusive (corresponding to a range of -
13			90° to +90°).
14	BASE_LONG	-	Base station longitude.
15			If the BASE_LAT_LONG_INCL is set to '0', the base station
16			shall omit this field; otherwise, the base station shall include
17			this field and set it as follows:
18			The base station shall set this field to its longitude in units of
19			0.25 second, expressed as a two's complement signed
20			number with positive numbers signifying East longitude. The
21			base station shall set this field to a value in the range -
22			2592000 to 2592000 inclusive (corresponding to a range of -
23			180° to +180°).
24	RESERVED_1	-	Reserved bits.
25			The base station shall add reserved bits as needed in order to
26			make the length of the pilot specific record equal to an integer
27			number of octets. The base station shall set these bits to '0'.
28	RESERVED	-	Reserved bits.
29			The base station shall add reserved bits as needed in order to
30			make the length of the record equal to an integer number of
31			octets. The base station shall set these bits to '0'.
32			

1 3.7.3.3.2.48 Authentication Request Message

2 MSG\_TAG: AUREQM

3

Field	Length (bits)
RANDA	128
CON_SQN	48
AMF	16
MAC_A	64

4

5           RANDA    -   The Random Challenge Number.  
6                    The base station shall set this field to the value of the  
7                    Random Challenge Number in the authentication vector.

8           CON\_SQN -   Concealed Sequence Number.  
9                    The base station shall set this field to the value of the  
10                    Concealed Sequence Number in the authentication vector.

11           AMF     -   Authentication Management Field.  
12                    The base station shall set this field to the value of the  
13                    Authentication Management Field in the authentication  
14                    vector.

15           MAC\_A   -   Message Authentication Code.  
16                    The base station shall set this field to the value of the  
17                    Message Authentication Code in the authentication vector.

18

- 1 3.7.3.3.2.49 Rate Change Message
- 2 MSG\_TAG: RATCHGM

Fields	Length (Bits)
USE_TIME	1
ACTION_TIME	6
REV_CQICH_RATE_CHANGE_INCL	1
FULL_CI_FEEDBACK_IND	0 or 1
REV_CQICH_REPS	0 or 2
SWITCHING_PARMS_INCL	0 or 1
NUM_SOFT_SWITCHING_FRAMES	0 or 4
NUM_SOFTER_SWITCHING_FRAMES	0 or 4
CHM_SWITCHING_PARMS_INCL	0 or 1
NUM_SOFT_SWITCHING_FRAMES_CHM	0 or 4
NUM_SOFTER_SWITCHING_FRAMES_CHM	0 or 4
RL_CQICH_ATT_ADJ_GAIN_INCL	0 or 1
NUM_RECS	0 or 1

If NUM\_RECS is included NUM\_RECS + 1 occurrences of the following variable length record:

*{ (NUM\_RECS + 1)*

RL_CQICH_ATT_ADJ_GAIN_TYPE	1
RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL	1
RL_CQICH_ATT_ADJ_GAIN_HIGH	0 or 8
RL_CQICH_ATT_ADJ_GAIN_LOW_INCL	1
RL_CQICH_ATT_ADJ_GAIN_LOW	0 or 8

REV_PDCH_MAX_AUTO_TPR	0 or 8
REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET	0 or 4
REV_PDCH_PARMS_INCL	1
REV_PDCH_NUM_ARQ_ROUNDS_NORMAL	0 or 2
REV_PDCH_NUM_ARQ_ROUNDS_BOOST	0 or 2

1

2

USE\_TIME - Use action time indicator.

1		This field indicates whether an explicit action time is
2		specified in this order.
3		If an explicit action time is specified in this message, the base
4		station shall set this field to '1'; otherwise, the base station
5		shall set this field to '0'.
6	ACTION_TIME	- Action time.
7		If the USE_TIME field is set to '1', the base station shall set
8		this field to the System Time minus $\text{FRAME\_OFFSET}_S \times 1.25$
9		ms, in units of 80 ms (modulo 64), at which the rate change
10		is to take effect. If the USE_TIME field is set to '0', the base
11		station shall set this field to '000000'.
12	REV_CQICH_RATE_CHANGE_INCL	- Reverse Channel Quality Indicator Channel rate
13		change included indicator.
14		If the base station determines to change the rate of R-CQICH,
15		the base station shall set this field to '1'; otherwise, the base
16		station shall set this field to '0'.
17	FULL_CI_FEEDBACK_IND	- Full C/I feedback rate indicator.
18		If REV_CQICH_RATE_CHANGE_INCL is equal to '0', the base
19		station shall omit this field; otherwise, the base station shall
20		set this field as follows:
21		If the mobile station is to send full C/I feedback every 1.25
22		ms, the base station shall set this field to '1'. If the mobile
23		station is to transmit full C/I feedback every 20 ms, the base
24		station shall set this field to '0'.
25	REV_CQICH_REPS	- Reverse Channel Quality Indicator Channel repetition factor.
26		If REV_CQICH_RATE_CHANGE_INCL is equal to '0', the base
27		station shall omit this field; otherwise, the base station shall
28		set this field according to the Table 3.7.3.3.2.49-1.

**Table 3.7.3.3.2.49-1 R-CQICH Repetition Factor**

REV_CQICH_REPS (Binary)	Value
00	1
01	2
10	4
11	Reserved

30	SWITCHING_PARMS_INCL	- R-CQICH switching parameters included indicator.
31		If the REV_CQICH_RATE_CHANGE_INCL field is set to '0', the
32		base station shall omit this field; otherwise, the base station
33		shall include this field and set it as follows:
34		The base station shall set this field to '1' if the parameters for
35		R-CQICH soft and softer switching are included in this
36		message; otherwise, the base station shall set this field to '0'.

- 1    NUM\_SOFT\_SWITCHING\_FRAMES - Number of frames for R-CQICH soft switching.  
2                                    If SWITCHING\_PARMS\_INCL is not included or included and  
3                                    set to '0', then the base station shall omit this field;  
4                                    otherwise, the base station shall include this field and set it  
5                                    as follows:  
6                                    The base station shall set this field to the duration of the cell  
7                                    switching period, in units of 20 ms, minus one, during which  
8                                    the mobile station is to transmit the cell switch sequence on  
9                                    the R-CQICH channel when it switches between two pilots  
10                                   which are in different groups.
- 11   NUM\_SOFT\_SWITCHING\_FRAMES - Number of frames for R-CQICH softer  
12                                   switching.  
13                                   If SWITCHING\_PARMS\_INCL is not included or included and  
14                                   set to '0', then the base station shall omit this field;  
15                                   otherwise, the base station shall include this field and set it  
16                                   as follows:  
17                                   The base station shall set this field to the duration of the cell  
18                                   switching period, in units of 20 ms, minus one, during which  
19                                   the mobile station is to transmit the cell switch sequence on  
20                                   the R-CQICH channel when it switches between two pilots  
21                                   which are in the same group.
- 22   CHM\_SWITCHING\_PARMS\_INCL- Control Hold Mode fields included indicator.  
23                                   If SWITCHING\_PARMS\_INCL is omitted or equal to '0', the  
24                                   base station shall omit this field; otherwise, the base station  
25                                   shall include this field and set it as follows.  
26                                   The base station shall set this field to '1' if the switching  
27                                   parameters for Control Hold Mode are included; otherwise,  
28                                   the base station shall set this field to '0'.
- 29   NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH soft  
30                                   switching while in Control Hold.  
31                                   If CHM\_SWITCHING\_PARMS\_INCL is not included or  
32                                   included and set to '0', then the base station shall omit this  
33                                   field; otherwise, the base station shall include this field and  
34                                   set it as follows:  
35                                   The base station shall set this field to the duration of the cell  
36                                   switching period, in units of 20 ms, minus one, during which  
37                                   the mobile station, while in Control Hold, is to transmit the  
38                                   cell switch sequence on the R-CQICH when it switches  
39                                   between two pilots which are in different groups.
- 40   NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH softer  
41                                   switching while in Control Hold.  
42                                   If CHM\_SWITCHING\_PARMS\_INCL is not included or  
43                                   included and set to '0', then the base station shall omit this  
44                                   field; otherwise, the base station shall include this field and  
45                                   set it as follows:

1                   The base station shall set this field to the duration of the cell  
2                   switching period, in units of 20 ms, minus one, during which  
3                   the mobile station, while in Control Hold, is to transmit the  
4                   cell switch sequence on the R-CQICH when it switches  
5                   between two pilots which are in the same group.

6   RL\_CQICH\_ATT\_ADJ\_GAIN\_INCL   -   Attribute adjustment gain for Reverse Channel  
7                   Quality Indicator Channel included indicator.

8                   If REV\_CQICH\_RATE\_CHANGE\_INCL is equal to '0', the base  
9                   station shall omit this field; otherwise, the base station shall  
10                  set this field as follows:

11                  If the attribute adjustment gain for Reverse Channel Quality  
12                  Indicator Channel is included in this message, the base  
13                  station shall set this field to '1'; otherwise, the base station  
14                  shall set this field to '0'.

15                  NUM\_RECS       -   Number of the records.

16                  If RL\_CQICH\_ATT\_ADJ\_GAIN\_INCL is omitted, or if it is  
17                  included and set to '0', the base station shall omit this field.

18                  Otherwise, the base station shall set this field to one less  
19                  than the number of occurrences of the records included in  
20                  this message.

21   If NUM\_RECS is included in this message, the base station shall include NUM\_RECS+1  
22   occurrences of the following record:

23   RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE   -   Reverse Channel Quality Indicator Channel  
24                   attribute adjustment gain value type indicator

25                   If the following fields are set to the nominal attribute gain  
26                   adjustment values that the mobile station is to use for the  
27                   transmission attributes (relative to Nominal\_Attribute\_Gain  
28                   specified in [2]), the base station shall set this field to '0'. If  
29                   the following fields are set to the pilot reference level  
30                   adjustment values that the mobile station is to use for the  
31                   transmission attributes (relative to Pilot\_Reference\_Level  
32                   specified in [2]), the base station shall set this field to '1'.

33   RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL -   Attribute adjustment gain for the high power  
34                   level of Reverse Channel Quality Indicator Channel  
35                   transmission included indicator.

36                   If the attribute adjustment gain for the high power level of  
37                   Reverse Channel Quality Indicator Channel transmission is  
38                   included in this message, the base station shall set this field  
39                   to '1'; otherwise, the base station shall set this field to '0'.

40   RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH   -   Attribute adjustment gain for the high power level  
41                   of Reverse Channel Quality Indicator Channel transmission  
42                   for the corresponding rate indicated in REV\_CQICH\_REPS.

43                   If RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL is not included or  
44                   included but is set to '0', the base station shall omit this field;  
45                   otherwise, the base station shall include this field and set it  
46                   as follows:

1		If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
2		station shall set this field to the value of the nominal
3		attribute gain adjustment that the mobile station is to make
4		for the transmission attributes for the high power level of R-
5		CQICH. The base station shall set the value in the range from
6		-40 to 16 inclusive.
7		If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
8		station shall set this field to the value of the pilot reference
9		level adjustment that the mobile station is to make for the
10		transmission attributes for the high power level of R-CQICH.
11		The base station shall set this field to the correction factor
12		expressed as a two's complement value in units of 0.125 dB.
13	RL_CQICH_ATT_ADJ_GAIN_LOW_INCL -	Attribute adjustment gain for Reverse Channel
14		Quality Indicator Channel transmission Included Indicator.
15		If the attribute adjustment gain for the low power level of
16		Reverse Channel Quality Indicator Channel transmission is
17		included in this message, the base station shall set this field
18		to '1'; otherwise, the base station shall set this field to '0'.
19	RL_CQICH_ATT_ADJ_GAIN_LOW -	Attribute adjustment gain for the low power level
20		of Reverse Channel Quality Indicator Channel transmission
21		for the corresponding rate indicated in REV_CQICH_REPS.
22		If RL_CQICH_ATT_ADJ_GAIN_LOW_INCL is not included or
23		included but is set to '0', the base station shall omit this field;
24		otherwise, the base station shall include this field and set it
25		as follows:
26		If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '0', the base
27		station shall set this field to the value of the nominal
28		attribute gain adjustment that the mobile station is to make
29		for the transmission attributes for the low power level of R-
30		CQICH. The base station shall set the value in the range from
31		-16 to 16 inclusive.
32		If RL_CQICH_ATT_ADJ_GAIN_TYPE is set to '1', the base
33		station shall set this field to the value of the pilot reference
34		level adjustment that the mobile station is to make for the
35		transmission attributes for the low power level of R-CQICH.
36		The base station shall set this field to the correction factor
37		expressed as a two's complement value in units of 0.125 dB.
38	REV_ACKCH_RATE_CHANGE_INCL -	Reverse Acknowledgment Channel rate change
39		included indicator
40		If the base station determines to change the rate of R-ACKCH,
41		the base station shall set this field to '1'; otherwise, the base
42		station shall set this field to '0'.
43		If REV_CQICH_RATE_CHANGE_INCL is set to '0',
44		REV_ACKCH_RATE_CHANGE_INCL shall be set to '1'.
45	REV_ACKCH_REPS -	Reverse Acknowledgment Channel repetition factor.

If REV\_ACKCH\_RATE\_CHANGE\_INCL is equal to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it according to the Table 3.7.3.3.2.49-2.

**Table 3.7.3.3.2.49-2 R-ACKCH Repetition Factor**

<b>REV_ACKCH_REPS (Binary)</b>	<b>Value</b>
'00'	1
'01'	2
'10'	4
'11'	Reserved

REV\_PDCH\_MAX\_PARMS\_INCL - Reverse Packet Data Channel maximum traffic to pilot ratio included indicator.

The base station shall set this field to '1' if the Reverse Packet Data Channel maximum traffic to pilot ratio for autonomous transmission is included; otherwise, the base station shall set this field to '0'.

REV\_PDCH\_MAX\_AUTO\_TPR - Reverse Packet Data Channel maximum traffic to pilot ratio for autonomous transmission.

If REV\_PDCH\_MAX\_PARMS\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the maximum traffic to pilot ratio for autonomous transmission on the Reverse Packet Data Channel (see [2] and [3]).

The base station shall set this field to values in the range 0 to 18 dB inclusive in units of 0.125 dB.

REV\_PDCH\_MAX\_SIZE\_ALLOWED\_ENCODER\_PACKET - Maximum Allowed Reverse PDCH encoder packet size.

If REV\_PDCH\_MAX\_PARMS\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the maximum size encoder packet that the mobile station is allowed to use. (see [2] and [3]).

The base station shall set this field to a value in the range 0 to 10 inclusive, corresponding to the encoder packet sizes 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, and 18456 bits respectively.

REV\_PDCH\_PARMS\_INCL - Reverse Packet Data Channel related parameters included indicator.

1                   The base station shall set this field to '1' if the R-PDCH  
2                   parameters are included in this message; otherwise, the base  
3                   station shall set this field to '0'.

4   REV\_PDCH\_NUM\_ARQ\_ROUNDS\_NORMAL -   Maximum number of allowed ARQ rounds  
5                   on the Reverse PDCH in the non-boosted mode.

6                   If REV\_PDCH\_PARMS\_INCL is set to '0', the base station shall  
7                   omit this field; otherwise, the base station shall include this  
8                   field and set it as follows:

9                   The base station shall set this field to one less the maximum  
10                  number of allowed ARQ rounds on the Reverse PDCH in the  
11                  non-boosted mode. The base station shall set this field to 0,  
12                  1, or 2 corresponding to 1, 2, or 3 rounds respectively (See  
13                  [3]).

14   REV\_PDCH\_NUM\_ARQ\_ROUNDS\_BOOST -   Maximum   number   of   allowed   HARQ  
15                  retransmissions on the Reverse PDCH in the boosted mode.

16                  If REV\_PDCH\_PARMS\_INCL is set to '0', the base station shall  
17                  omit this field; otherwise, the base station shall include this  
18                  field and set it as follows:

19                  The base station shall set this field to one less the maximum  
20                  number of allowed ARQ rounds on the Reverse PDCH in the  
21                  boosted mode. The base station shall set this field to 0, 1, or  
22                  2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

23

24

## 1 3.7.3.3.2.50 In-Traffic BCMC Service Parameters Message

2 MSG\_TAG: ITBSPM

Field	Length (bits)
AUTO_REQ_TRAF_ALLOWED_IND	1
BCMC_ON_IDLE_SUP_IND	1
BCMC_FLOWS_ON_TRAFFIC_ONLY_IN D	0 or 1
AUTH_SIGNATURE_REQUIRED	1
NON_DEFAULT_VALUE_INCLUDED	0 or 1
ACH_TIME_STAMP_SHORT_LENGTH	0 or 8
TIME_STAMP_LONG_LENGTH	0 or 8
TIME_STAMP_UNIT	0 or 4
NUM_BCMC_PROGRAMS	8

NUM\_BCMC\_PROGRAMS plus one occurrences of the following variable length record:

*{ (NUM\_BCMC\_PROGRAMS+1)*

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	BCMC_PROGRAM_I D_LEN+1
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISC RIMINATOR_LEN

NUM\_FLOW\_DISCRIMINATOR+1 or 1 occurrences of the following variable length record:

*{ (NUM\_FLOW\_DISCRIMINATOR+1) or 1*

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISC RIMINATOR_LEN
AUTH_SIGNATURE_REQ_IND	0 or 1
BCMC_FLOW_ON_TRAFFIC_IDLE_IND	0 or 2

*} (NUM\_FLOW\_DISCRIMINATOR+1) or 1*

*} (NUM\_BCMC\_PROGRAMS+1)*

3

4 AUTO\_REQ\_TRAF\_ALLOWED\_IND - Autonomous BCMC request on traffic channel  
5 allowed indicator.

1                   The base station shall set this field to '1' to indicate that the  
2                   mobile station is allowed to request for a BCMC flow on traffic  
3                   channel that is not included in this message; otherwise, the  
4                   base station shall set this field to '0'.

5    BCMC\_ON\_IDLE\_SUP    -   BCMC on idle state supported indicator.

6                   The base station shall set this field to '1' to indicate that the  
7                   BCMC feature is supported on idle state; otherwise, the base  
8                   station shall set this field to '0'.

9    BCMC\_FLOWS\_ON\_TRAFFIC\_ONLY\_IND   -   BCMC flows on traffic channel only  
10                   indicator.

11                   If the BCMC\_ON\_IDLE\_SUP\_IND field is set to '0', the base  
12                   station shall omit this field; otherwise, the base station shall  
13                   include this field and set it as follows:

14                   The base station shall set this field to '1' if this message  
15                   contains information only about BCMC flows on traffic  
16                   channel; otherwise, the base station shall set this field to '0'.

17   AUTH\_SIGNATURE\_REQUIRED   -   Authorization signature required indication.

18                   The base station shall set this field to '1' to indicate that the  
19                   mobile station is to include the authorization signature in the  
20                   Origination Message, Page Response Message and Enhanced  
21                   Origination Message that include BCMC\_FLOW\_ID (see  
22                   2.6.13.11) for BCMC flows indicated in this message is  
23                   included in that message; otherwise, the base station shall  
24                   set this field to '0'.

25   NON\_DEFAULT\_VALUE\_INCLUDED   -   Non-default values for Authorization signature  
26                   included indicator.

27                   If the AUTH\_SIGNATURE\_REQUIRED field is set to '0', the  
28                   base station shall omit this field; otherwise, the base station  
29                   shall include this field and set it as follows:

30                   The base station shall set this field to '0' if default values are  
31                   to be used to generate the Authorization signature; otherwise,  
32                   the base station shall set this field to '1'.

33   ACH\_TIME\_STAMP\_SHORT\_LENGTH   -   Length of time stamp for use on r-csch.

34                   If the NON\_DEFAULT\_VALUE\_INCLUDED field is not  
35                   included or is included and is set to '0', the base station shall  
36                   omit this field; otherwise, the base station shall include this  
37                   field and set it as follows:

38                   The base station shall set this field to the length of the time  
39                   stamp, in units of bits, included on the Origination Message,  
40                   Page Response Message and Enhanced Origination Message.

41   TIME\_STAMP\_LONG\_LENGTH   -   Length of time stamp.

42                   If the NON\_DEFAULT\_VALUE\_INCLUDED field is not  
43                   included or is included and is set to '0', the base station shall  
44                   omit this field; otherwise, the base station shall include this  
45                   field and set it as follows:

1                   The base station shall set this field to the length of the time  
2                   stamp, in units of bits, used to generate the Authorization  
3                   signature.

4       TIME\_STAMP\_UNIT   -   Unit for time stamp length.

5                   If the NON\_DEFAULT\_VALUE\_INCLUDED field is not  
6                   included or is included and is set to '0', the base station shall  
7                   omit this field; otherwise, the base station shall include this  
8                   field and set it as follows:

9                   The base station shall set this field to the unit of the time  
10                  stamp length field as follows: the unit of the time stamp field  
11                  shall be 2 to the power of the value of this field.

12    NUM\_BCMC\_PROGRAMS   -   Number of BCMC Programs.

13                  The base station shall set this field to the number of BCMC  
14                  programs available in this base station in any one of the  
15                  frequencies minus one.

16    The base station shall include NUM\_BCMC\_PROGRAMS plus one occurrences of the  
17    following variable length record:

18    BCMC\_PROGRAM\_ID\_LEN   -   Length of BCMC\_PROGRAM\_ID field

19                  The base station shall set this field to one less than the  
20                  length in bits of the BCMC\_PROGRAM\_ID of this program.

21    BCMC\_PROGRAM\_ID       -   BCMC program Identifier

22                  The length of this field shall be one more than the value of  
23                  BCMC\_PROGRAM\_ID\_LEN bits.

24                  The base station shall set this field to the BCMC program  
25                  identifier of this program.

26    BCMC\_FLOW\_DISCRIMINATOR\_LEN   -   Length of BCMC\_FLOW\_DISCRIMINATOR field

27                  The base station shall set this field to the length in bits of the  
28                  BCMC\_FLOW\_DISCRIMINATOR of this program.

29    NUM\_FLOW\_DISCRIMINATOR   -   Number of BCMC flow discriminators

30                  The length of this field shall be determined by the value of  
31                  the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
32                  BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
33                  is omitted; otherwise, the length of this field shall be  
34                  BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

35                  The base station shall set this field to the number of flow  
36                  discriminators included for this program minus one.

37    If NUM\_FLOW\_DISCRIMINATOR field is included, the base station shall include  
38    NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
39    otherwise, the base station shall include 1 occurrence of the following variable length  
40    record:

41    BCMC\_FLOW\_DISCRIMINATOR   -   BCMC flow discriminator

1 The length of this field shall be determined by the value of  
 2 the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
 3 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
 4 is omitted; otherwise, the length of this field shall be  
 5 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

6 The base station shall set this field to the BCMC flow  
 7 discriminator of this flow.

8 AUTH\_SIGNATURE\_REQ\_IND - Authorization signature required indicator

9 If the AUTH\_SIGNATURE\_REQUIRED field is set to '0', the  
 10 base station shall omit this field; otherwise, the base station  
 11 shall include this field and set it as follows:

12 The base station shall set this field to '1' if the mobile station  
 13 is to include the authorization signature in the Origination  
 14 Message, Page Response Message, and Enhanced Origination  
 15 Message for this BCMC flow; otherwise, the base station shall  
 16 set this field to '0'.

17 BCMC\_FLOW\_ON\_TRAFFIC\_IDLE\_IND - BCMC flow on traffic state or idle state  
 18 supported indicator.

19 If the BCMC\_FLOWS\_ON\_TRAFFIC\_ONLY\_IND field is not  
 20 included or is included and set to '1', the base station shall  
 21 omit this field; otherwise, the base station shall include this  
 22 field and set it as follows:

23 The base station shall set this field as specified in Table  
 24 3.7.3.3.2.50-1 to indicate the availability of this flow in the  
 25 traffic state or idle state.

26 **Table 3.7.3.3.2.50-1. BCMC Flow Availability**

<b>BCMC_FLOW_ON_TRAFFIC_IDLE_IND (Binary)</b>	<b>Availability</b>
00	Available in Idle State only
01	Available in Traffic State only
10	Available in both Idle State and Traffic State
11	Reserved

} (NUM\_RC\_PARAMS\_RECORDS)

- 1
- 2           USE\_TIME    -   Use action time indicator.
- 3                        This field indicates whether an explicit action time is
- 4                        specified in this message.
- 5                        If an explicit action time is specified in this message, the base
- 6                        station shall set this field to '1'; otherwise, the base station
- 7                        shall set this field to '0'.
- 8           ACTION\_TIME   -   Action time.
- 9                        If the USE\_TIME field is set to '1', the base station shall set
- 10                       this field to the System Time minus  $\text{FRAME\_OFFSET}_S \times 1.25$
- 11                       ms, in units of 80 ms (modulo 64), at which the message is to
- 12                       take effect. If the USE\_TIME field is set to '0', the base station
- 13                       shall omit this field.
- 14   FOR\_FCH\_ACK\_MASK\_RL\_BLANKING\_INC -   Ack mask for F-FCH RC11 and RC12 when
- 15                       RL Blanking is enabled is included
- 16                       If the FOR\_FCH\_ACK\_MASK\_RL\_BLANKING field is included
- 17                       in this message, then the base station shall set this field to
- 18                       '1'. Otherwise, the base station shall set this field to '0'.
- 19   FOR\_FCH\_ACK\_MASK\_RL\_BLANKING   -   Ack mask for F-FCH RC11 and RC12 when RL
- 20                       Blanking is enabled.
- 21                       If the FOR\_FCH\_ACK\_MASK\_RL\_BLANKING\_INC field is set to
- 22                       '0', then the base station shall omit this field. Otherwise, the
- 23                       base station shall include this field and set it to ack mask for
- 24                       F-FCH RC11 and RC12 when RL Blanking is enabled as
- 25                       describe below:
- 26                       This field consists of the subfields shown in Table
- 27                       3.7.3.3.2.51-1. The base station shall set the subfields
- 28                       corresponding to the PCGs where Ack can be sent to '1', and
- 29                       shall set the remaining subfields to '0'.

1

**Table 3.7.3.3.2.51-1. Ack Mask**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
ACK_MASK_0	1	Ack allowed in PCG 0
ACK_MASK_1	1	Ack allowed in PCG 1
ACK_MASK_2	1	Ack allowed in PCG 2
ACK_MASK_3	1	Ack allowed in PCG 3
ACK_MASK_4	1	Ack allowed in PCG 4
ACK_MASK_5	1	Ack allowed in PCG 5
ACK_MASK_6	1	Ack allowed in PCG 6
ACK_MASK_7	1	Ack allowed in PCG 7
ACK_MASK_8	1	Ack allowed in PCG 8
ACK_MASK_9	1	Ack allowed in PCG 9
ACK_MASK_10	1	Ack allowed in PCG 10
ACK_MASK_11	1	Ack allowed in PCG 11
ACK_MASK_12	1	Ack allowed in PCG 12
ACK_MASK_13	1	Ack allowed in PCG 13
ACK_MASK_14	1	Ack allowed in PCG 14
ACK_MASK_15	1	Ack allowed in PCG 15

2

3 FOR\_FCH\_ACK\_MASK\_NO\_RL\_BLANKING\_INC - Ack mask for F-FCH RC11 and  
4 RC12 when RL Blanking is disabled is included

5 If the FOR\_FCH\_ACK\_MASK\_NO\_RL\_BLANKING field is  
6 included in this message, then the base station shall set this  
7 field to '1'. Otherwise, the base station shall set this field to  
8 '0'.

9 FOR\_FCH\_ACK\_MASK\_NO\_RL\_BLANKING - Ack mask for F-FCH RC11 and RC12 when  
10 RL Blanking is disabled.

11 If the FOR\_FCH\_ACK\_MASK\_NO\_RL\_BLANKING\_INC field is  
12 set to '0'; then the base station shall omit this field.  
13 Otherwise, the base station shall include this field and set it  
14 to ack mask for F-FCH RC11 and RC12 when RL Blanking is  
15 disabled as describe below:

16 This field consists of the subfields shown in Table  
17 3.7.3.3.2.51-1. The base station shall set the subfields  
18 corresponding to the PCGs where Ack can be sent to '1', and  
19 shall set the remaining subfields to '0'.

20 REV\_FCH\_ACK\_MASK\_INC - Ack mask for R-FCH RC08 included

1 If the REV\_FCH\_ACK\_MASK field is included in this message,  
2 then the base station shall set this field to '1'. Otherwise, the  
3 base station shall set this field to '0'.

4 REV\_FCH\_ACK\_MASK - Ack mask for R-FCH RC08

5 If the REV\_FCH\_ACK\_MASK\_INC field is set to '0', then the  
6 base station shall omit this field. Otherwise, the base station  
7 shall include this field and set it to ack mask for R-FCH RC08  
8 as describe below:

9 This field consists of the subfields shown in Table  
10 3.7.3.3.2.51-1. The base station shall set the subfields  
11 corresponding to the PCGs where Ack can be sent to '1', and  
12 shall set the remaining subfields to '0'.

13 FOR\_SCH\_ACK\_MASK\_RL\_BLANKING\_INC - Ack mask for F-SCH RC11 and RC12 when  
14 RL Blanking is enabled is included

15 If the FOR\_SCH\_ACK\_MASK\_RL\_BLANKING field is included  
16 in this message, then the base station shall set this field to  
17 '1'. Otherwise, the base station shall set this field to '0'.

18 FOR\_SCH\_ACK\_MASK\_RL\_BLANKING - Ack mask for F-SCH RC11 and RC12 when RL  
19 Blanking is enabled.

20 If the FOR\_SCH\_ACK\_MASK\_RL\_BLANKING\_INC field is set to  
21 '0', then the base station shall omit this field. Otherwise, the  
22 base station shall include this field and set it to ack mask for  
23 F-SCH RC11 and RC12 when RL Blanking is enabled as  
24 describe below:

25 This field consists of the subfields shown in Table  
26 3.7.3.3.2.51-1. The base station shall set the subfields  
27 corresponding to the PCGs where Ack can be sent to '1', and  
28 shall set the remaining subfields to '0'.

29 FOR\_SCH\_ACK\_MASK\_NO\_RL\_BLANKING\_INC - Ack mask for F-SCH RC11 and  
30 RC12 when RL Blanking is disabled is included

31 If the FOR\_SCH\_ACK\_MASK\_NO\_RL\_BLANKING field is  
32 included in this message, then the base station shall set this  
33 field to '1'. Otherwise, the base station shall set this field to  
34 '0'.

35 FOR\_SCH\_ACK\_MASK\_NO\_RL\_BLANKING - Ack mask for F-SCH RC11 and RC12 when  
36 RL Blanking is disabled.

37 If the FOR\_SCH\_ACK\_MASK\_NO\_RL\_BLANKING\_INC field is  
38 set to '0'; then the base station shall omit this field.  
39 Otherwise, the base station shall include this field and set it  
40 to ack mask for F-SCH RC11 and RC12 when RL Blanking is  
41 disabled as describe below:

42 This field consists of the subfields shown in Table  
43 3.7.3.3.2.51-1. The base station shall set the subfields  
44 corresponding to the PCGs where Ack can be sent to '1', and  
45 shall set the remaining subfields to '0'.

46 REV\_SCH\_ACK\_MASK\_INC - Ack mask for R-SCH RC08 included

If the REV\_SCH\_ACK\_MASK field is included in this message, then the base station shall set this field to '1'. Otherwise, the base station shall set this field to '0'.

REV\_SCH\_ACK\_MASK - Ack mask for R-SCH RC08

If the REV\_SCH\_ACK\_MASK\_INC field is set to '0', then the base station shall omit this field. Otherwise, the base station shall include this field and set it to ack mask for R-SCH RC08 as describe below:

This field consists of the subfields shown in Table 3.7.3.3.2.51-1. The base station shall set the subfields corresponding to the PCGs where Ack can be sent to '1', and shall set the remaining subfields to '0'.

FOR\_N2M\_IND - N<sub>2m</sub> for Forward Link RC11 and RC12 Indicator

The base station shall set this field to the value shown in Table 3.7.3.3.2.51-3 corresponding to the number of guaranteed transmission frames received with insufficient signal quality that will cause the mobile station to disable its transmitter when RC11 and RC12 is used on F-FCH.

**Table 3.7.3.3.2.51-3. N<sub>2m</sub> value for Forward Link RC11 and RC12**

Value (binary)	Number of bad frames
000	2
001	4
010	6
011	8
All other values are reserved.	

RPC\_MODE - Power control mode

The base station shall set this field as follows:

- Set to '00' if power control rate is 200 to 400 bps.
- Set to '01' if power control rate is 200 bps.

The base station shall not set this field to '10' or '11'.

PWR\_CNTL\_STEP\_ZERO\_RATE - Power control step size during RL Blanking

The base station shall set this field to the closed loop power control step size parameter shown in Table 3.7.3.3.2.51-4 corresponding to the power control step size that the mobile station is to use for closed loop power control during RL Blanking.

**Table 3.7.3.3.2.51-4. Closed Loop Power Control  
Step Size**

<b>PWR_CNTL_STEP_ ZERO_RATE (binary)</b>	<b>Power Control Step Size (dB nominal)</b>
000	1
001	0.5
010	0.25
011	1.5
100	2.0
All other values are reserved.	

**FOR\_FCH\_BLANKING\_DUTYCYCLE** - N (duty cycle) value for Forward Link RC11 and RC12.

The base station shall set this field to the value shown in Table 3.7.3.3.2.51-5 corresponding to the duty cycle value to be used on Forward Link RC11 and RC12.

**Table 3.7.3.3.2.51-5. N (duty cycle) value for FL RC11,  
RC12 and RL RC08**

<b>Value (binary)</b>	<b>N</b>	<b>Description</b>
000	1	Blanking Disabled
001	4	At least 1 out of 4 frames transmitted
010	8	At least 1 out of 8 frames transmitted
All other values are reserved.		

**REV\_FCH\_BLANKING\_DUTYCYCLE** - N (duty cycle) value for Reverse Link RC08.

The base station shall set this field to the value shown in Table 3.7.3.3.2.51-5 corresponding to the duty cycle value to be used on Reverse Link RC08.

**REV\_ACKCH\_GAIN\_ADJ\_ACS1\_INC** - Channel adjustment gain for Reverse Acknowledgment Channel 1, Reverse Acknowledgment Channel 2, and Reverse Acknowledgment Channel 3 for RC11 and RC12 when number of cells in the active set equals 1 is included.

If the REV\_ACKCH\_GAIN\_ADJ\_ACS1 field is included in this message, then the base station shall set this field to '1'. Otherwise, the base station shall set this field to '0'.

1 REV\_ACKCH\_GAIN\_ADJ\_ACS1 - Channel adjustment gain for Reverse Acknowledgment  
2 Channel 1, Reverse Acknowledgment Channel 2, and Reverse  
3 Acknowledgment Channel 3 for RC11 and RC12 when number of  
4 cells in the active set equals 1.

5 If REV\_ACKCH\_GAIN\_ADJ\_ACS1\_INC is set to '0', the base  
6 station shall omit this field; otherwise, the base station shall  
7 set this field to the value of the gain adjustment that the  
8 mobile station is to make for the Reverse Acknowledgment  
9 Channel 1, Reverse Acknowledgment Channel 2, and Reverse  
10 Acknowledgment Channel 3. The base station shall set this  
11 field to the correction factor expressed as a two's complement  
12 value in units of 0.125 dB. The base station shall set the  
13 value in the range from -8 to 8 inclusive.

14 REV\_ACKCH\_GAIN\_ADJ\_ACS2PLUS\_INC - Channel adjustment gain for Reverse  
15 Acknowledgment Channel 1, Reverse Acknowledgment Channel  
16 2, and Reverse Acknowledgment Channel 3 for RC11 and RC12  
17 when number of cells in the active set exceeds 1 is included.

18 If the REV\_ACKCH\_GAIN\_ADJ\_ACS2PLUS field is included in  
19 this message, then the base station shall set this field to '1'.  
20 Otherwise, the base station shall set this field to '0'.

21 REV\_ACKCH\_GAIN\_ADJ\_ACS2PLUS - Channel adjustment gain for Reverse  
22 Acknowledgment Channel 1, Reverse Acknowledgment Channel  
23 2, and Reverse Acknowledgment Channel 3 for RC11 and RC12  
24 when number of cells in the active set exceeds 1.

25 If REV\_ACKCH\_GAIN\_ADJ\_ACS2PLUS\_INC is set to '0', the  
26 base station shall omit this field; otherwise, the base station  
27 shall set this field to the value of the gain adjustment that the  
28 mobile station is to make for the Reverse Acknowledgment  
29 Channel 1, Reverse Acknowledgment Channel 2, and Reverse  
30 Acknowledgment Channel 3. The base station shall set this  
31 field to the correction factor expressed as a two's complement  
32 value in units of 0.125 dB. The base station shall set the  
33 value in the range from -8 to 8 inclusive.

34 NUM\_RC\_PARAMS\_RECORDS - Number of RC Parameters Records

35 The base station shall set this field to number of RC  
36 Parameters records included in this message.

37 PILOT\_PN - Pilot PN sequence offset index.

38 The base station shall set this field to the pilot PN sequence  
39 offset for this base station, in units of 64 PN chips.

40 QOF\_SET\_IN\_USE - QOF Set in use

41 This field consists of the subfields shown in Table  
42 3.7.3.3.2.51-2. The base station shall set the subfields  
43 corresponding to the QOF Sets that are in use for this  
44 PILOT\_PN to '1', and shall set the remaining subfields to '0'.

1

**Table 3.7.3.3.2.51-2. QOF Set in use**

<b>Subfield</b>	<b>Length (bits)</b>	<b>Subfield Description</b>
QOF_SET_1	1	QOF SET 1
QOF_SET_2	1	QOF SET 2
QOF_SET_3	1	QOF SET 3

- 2    **REV\_SCH0\_ACK\_BIT\_INC**    -    Reverse SCH0 Ack bit assignment included
- 3       If the REV\_SCH0\_ACK\_CH\_WALSH and REV\_SCH0\_ACK\_BIT
- 4       fields are included, then the base station shall set this field to
- 5       '1'. Otherwise, the base station shall set this field to '0'.
- 6    **REV\_SCH0\_ACK\_CH\_WALSH**    -    Reverse SCH0 Ack Channel Walsh Code Assignment
- 7       for RC08
- 8       If the REV\_SCH0\_ACK\_BIT\_INC field is set to '0', then the
- 9       base station shall omit this field. Otherwise, the base station
- 10       shall include this field and set it as follows:
- 11       The base station shall set this field to the Walsh code
- 12       assignment for the Ack Channel used for RC08.
- 13    **REV\_SCH0\_ACK\_BIT**    -    Reverse SCH0 Ack Bit for RC08
- 14       If the REV\_SCH0\_ACK\_BIT\_INC field is set to '0', then the
- 15       base station shall omit this field. Otherwise, the base station
- 16       shall include this field and set it as follows:
- 17       The base station shall set this field to Ack Bit (on Ack
- 18       Channel in the REV\_SCH0\_ACK\_CH\_WALSH field) used for
- 19       RC08.
- 20    **REV\_SCH1\_ACK\_BIT\_INC**    -    Reverse SCH1 Ack bit assignment included
- 21       If the REV\_SCH1\_ACK\_CH\_WALSH and REV\_SCH1\_ACK\_BIT
- 22       fields are included, then the base station shall set this field to
- 23       '1'. Otherwise, the base station shall set this field to '0'.
- 24    **REV\_SCH1\_ACK\_CH\_WALSH**    -    Reverse SCH1 Ack Channel for RC08
- 25       If the REV\_SCH1\_ACK\_BIT\_INC field is set to '0', then the
- 26       base station shall omit this field. Otherwise, the base station
- 27       shall include this field and set it as follows:
- 28       The base station shall set this field to the Walsh code
- 29       assignment for the Ack Channel used for RC08.
- 30    **REV\_SCH1\_ACK\_BIT**    -    Reverse SCH1 Ack Bit for RC08
- 31       If the REV\_SCH1\_ACK\_BIT\_INC field is set to '0', then the
- 32       base station shall omit this field. Otherwise, the base station
- 33       shall include this field and set it as follows:
- 34       The base station shall set this field to Ack Bit (on Ack
- 35       Channel in the REV\_SCH1\_ACK\_CH\_WALSH field) used for
- 36       RC08.

1     FOR\_FCH\_CCSH\_INTERLEAVER\_TYPE -     Interleaver type used for Forward FCH RC12  
2  
3             The base station shall set this field to '0' for all RCs other  
4             than RC12, and may set this bit to '1' for RC12. The base  
5             station shall set this bit to '1' to indicate that alternate  
6             interleaver type is being used.

1 3.7.3.3.2.52 Handoff Supplementary Information Solicit Message

2 MSG\_TAG: HOSISM

3

Field	Length (bits)
NUM_PILOT_PN	8

NUM\_PILOT\_PN occurrences of the following field:

PILOT_PN	9 x NUM_PILOT_PN
----------	------------------

- 4 NUM\_PILOT\_PN - Number of Pilot PN being solicited.
- 5 The base station shall set this field based on the number of
- 6 Pilot PN included in this message following this field.
- 7 PILOT\_PN - Pilot PN sequence offset index.
- 8 The base station shall set this field to the pilot PN sequence
- 9 offset, in units of 64 PN chips, that the base station is
- 10 soliciting supplementary handoff information.
- 11

- 1 3.7.3.3.2.53 General Extension Message
- 2 Please see section 3.7.2.3.2.44.
- 3

#### 1 3.7.4 Orders

2 *Order Messages* are sent by the base station on the f-csch and the f-dsch. The general  
3 PDU format used on the f-csch is defined in 3.7.2.3.2.7, and the general PDU format used  
4 on the f-dsch is defined in 3.7.3.3.2.1. There are many specific types of *Order Messages*,  
5 as shown in Table 3.7.4-1.

6 The base station may send on the f-csch any type of order shown in Table 3.7.4-1 with a 'Y'  
7 in the first column, but shall not send on the f-csch any type of order with an 'N' in the  
8 first column. The base station may send on the f-dsch any type of order shown in  
9 Table 3.7.4-1 with a 'Y' in the second column, but shall not send on the f-dsch any type of  
10 order with an 'N' in the second column.

11 An order consists of a 6-bit order code and zero or more order-specific fields. The base  
12 station shall set the ORDER field in the *Order Message* to the order code shown in Table  
13 3.7.4-1 corresponding to the type of order being sent.

14 If the order qualification code in the fourth column of Table 3.7.4-1 is '00000000' and  
15 there are no other additional fields as shown by an 'N' in the sixth column, the base  
16 station shall include no order qualification code or other order-specific fields in the *Order*  
17 *Message*. The order qualification code of such a message is implicitly '00000000'.

18 If the order qualification code is not '00000000' and there are no other additional fields as  
19 shown in Table 3.7.4-1 by an 'N' in the sixth column, the base station shall include the  
20 order qualification code as the only order specific field in the *Order Message*.

21 If there are other additional fields as shown in Table 3.7.4-1 by a 'Y' in the sixth column,  
22 the base station shall include order-specific fields as specified in the corresponding  
23 subsection of this section.

24

1 **Table 3.7.4-1. Order and Order Qualification Codes Used on the f-csch and the f-dsch**  
2 **(Part 1 of 5)**

<b>f-csch Order</b>	<b>f-dsch Order</b>	<b>Order Code, ORDER (binary)</b>	<b>Order Qual- ification Code, ORDQ (binary)</b>	<b>ACTION_ TIME can be specified</b>	<b>Addi- tional Fields other than ORDQ</b>	<b>P_REV_I N_USE<sup>18</sup></b>	<b>Name/Function</b>
Y	N	000001	00000000	N	N	All	<i>Abbreviated Alert Order</i>
Y	Y	000010	00000000	N	Y	All	<i>Base Station Challenge Confirmation Order</i> (see 3.7.4.1)
N	Y	000011	000000nn	Y	N	All	<i>Message Encryption Mode Order</i> (where nn is the mode per Table 3.7.2.3.2.8-2)
Y	N	000100	00000000	N	N	All	<i>Reorder Order</i>
N	Y	000101	0000nnnn	N	N	All	<i>Parameter Update Order</i> (where 'nnnn' is the Request Number)
Y	Y	000110	00000000	N	N	All	<i>Audit Order</i>
Y	N	001001	00000000	N	N	All	<i>Intercept Order</i>
N	Y	001010	00000000	N	N	All	<i>Maintenance Order</i>
Y	Y	010000	00000000	N	N	All	<i>Base Station Acknowledgment Order</i> (see [4])
N	Y	010001	00000000	N	N	All	<i>Pilot Measurement Request Order</i>
N	Y	010001	Nnnnnnnn (in the range of 00000001 to 11111111)	N	Y	≥ 4	<i>Periodic Pilot Measurement Request Order</i> (see 3.7.4.6)
Y	Y	010010	0001nnnn	N	N	All	<i>Lock Until Power-Cycled Order</i> (where nnnn is the lock reason)
Y	Y	010010	0010nnnn	N	N	All	<i>Maintenance Required Order</i> (where nnnn is the maintenance reason)
Y	N	010010	11111111	N	N	All	<i>Unlock Order</i>

<sup>18</sup> P\_REV\_IN\_USE equal to "All" implies all values applicable to the Band Class.

Y	N	100100	00000001	N	Y	≥ 11	<i>Fast Call Setup Order</i> (indicates base station response to mobile station's request to operate in fast call setup mode, see 3.7.4.11)
Y	Y	100101	00000000	N	Y	≥ 11	<i>Service Status Order</i> (indicates status of requested services; see 3.7.4.12)
Y	Y	100110	00000001	N	Y	≥ 11	<i>Location Services Order</i> (indicates mobile station is to release current location services session(s), see 3.7.4.13)
N	Y	100111	00000000	N	N	≥ 11	<i>Shared Channel Configuration Order</i> (indicates R-FCH assignment)
N	Y	100111	00000001	N	N	≥ 11	<i>Shared Channel Configuration Order</i> (indicates R-FCH release)
All other codes are reserved.							

1    3.7.4.1 Base Station Challenge Confirmation Order

2    The *Base Station Challenge Confirmation Order* can be sent on either the f-csch or on the f-  
3    dsch.

4

Order Specific Field	Length (bits)
ORDQ	8
AUTHBS	18
RESERVED	6

5

6            ORDQ    -    Order qualification code.  
7                            The base station shall set this field to '00000000'.

8            AUTHBS    -    Challenge response.  
9                            The base station shall set this field as specified in 2.3.12.1.5.

10          RESERVED    -    Reserved bits.  
11                            The base station shall set this field to '000000'.

12

## 3.7.4.2 Service Option Request Order

The *Service Option Request Order* can be sent only on the f-dsch.

Order Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

ORDQ - Order qualification code.

The base station shall set this field to '00000000'.

SERVICE\_OPTION - Service option.

The base station shall set this field to the service option code shown in [30], corresponding to the requested or alternative service option.

## 1 3.7.4.3 Service Option Response Order

2 The *Service Option Response Order* can be sent only on the f-dsch.

3

Order Specific Field	Length (bits)
ORDQ	8
SERVICE_OPTION	16

4

5           ORDQ    -   Order qualification code.

6                           The base station shall set this field to '00000000'.

7           SERVICE\_OPTION   -   Service option.

8                           The base station shall set this field to the service option code  
9                           shown in [30], corresponding to the accepted service option,  
10                          or to '0000000000000000' to reject the last service option  
11                          requested by the mobile station.

12

## 3.7.4.4 Status Request Order

The *Status Request Order* can be sent only on the f-dsch. The ORDQ field of the *Status Request Order* specifies the information record to be returned by the mobile station in the *Status Message*.

Order Specific Field	Length (bits)
ORDQ	8

ORDQ - Order qualification code.

The base station shall set this field to the order qualification code corresponding to the information record type to be returned by the mobile station in the *Status Message*, as shown in Table 3.7.4.4-1.

If MOB\_P\_REV is equal to or greater than seven, the base station shall not request the Call Mode information record (record type '00000111' in Table 3.7.2.3.2.15-2).

**Table 3.7.4.4-1. Status Request ORDQ Values**

Information Record Requested	ORDQ (binary)
Reserved	00000110
Call Mode	00000111
Terminal Information	00001000
Roaming Information	00001001
Security Status	00001010
IMSI	00001100
ESN	00001101
IMSI_M	00001110
IMSI_T	00001111
All other ORDQ values are reserved.	

### 3.7.4.5 Registration Accepted Order

The *Registration Accepted Order* can be sent only on the f-csch.

Order Specific Field	Length (bits)
ORDQ	8
ROAM_INDI	0 or 8
C_SIG_ENCRYPT_MODE	0 or 3
ENC_KEY_SIZE	0 or 3
MSG_INT_INFO_INCL	0 or 1
CHANGE_KEYS	0 or 1
USE_UAK	0 or 1
RESERVED	0 – 7 (as needed)

4

5           ORDQ    -   Order qualification code.

6                    If only ORDQ is included in the order, the base station shall set  
7                    this field to '00000000'. If only ORDQ and ROAM\_INDI are  
8                    included in the order, the base station shall set this field to  
9                    '00000101'. If ORDQ, ROAM\_INDI, and the signaling encryption  
10                   related fields are included in the order, the base station shall set  
11                   this field to '00000111'.

12           ROAM\_INDI   -   Roaming display indication.

13                    If ORDQ is set to '00000000', the base station shall omit this  
14                    field.

15                    If ORDQ is set to '00000101' or '00000111', the base station shall  
16                    include this field and set it as follows; otherwise, the base station  
17                    shall omit this field.

18                    The base station shall set it to the appropriate ROAM\_INDI code  
19                    corresponding to the MS roaming condition. These values are  
20                    defined in [30].

21   C\_SIG\_ENCRYPT\_MODE -   Common channel signaling encryption mode indicator.

22                    If ORDQ is set to '00000111', the base station shall include this  
23                    field and shall set it as follows; otherwise, the base station shall  
24                    omit this field.

25                    The base station shall set it to the common channel signaling  
26                    encryption mode, as shown in Table 3.7.4.5-1; otherwise the  
27                    base station shall omit this field.

1                                    **Table 3.7.4.5-1. (Part 1 of 2) Signaling Message Encryption Modes**

<b>C_SIG_ENCRYPT_MOD E Field (binary)</b>	<b>Encryption Mode Used</b>
000	Common Channel Signaling encryption disabled
001	Enhanced Cellular Message Encryption Algorithm enabled
010	Rijndael Encryption Algorithm enabled
011 - 111	Reserved

2

3

**Table 3.7.4.5-1 (Part 2 of 2). Signaling Message Encryption Modes**

<b>D_SIG_ENCRYPT_MODE Field (binary)</b>	<b>Encryption Mode Used</b>
000	<p>If D_SIG_ENCRYPT_MODE<sub>r</sub> is included and is set to '000' in a <i>Channel Assignment Message</i> or <i>Extended Channel Assignment Message</i>, the mobile station is to continue to use the current common channel encryption mode and algorithm for the dedicated channel.</p> <p>If D_SIG_ENCRYPT_MODE<sub>r</sub> is included and is set to '000' in a <i>Security Mode Command Message</i>, <i>General Handoff Direction Message</i> or <i>Universal Handoff Direction Message</i>, the mobile station is to disable dedicated channel Signaling encryption.</p>
001	Enhanced Cellular Message Encryption Algorithm enabled
010	Rijndael Encryption Algorithm enabled
011 - 111	Reserved

ENC\_KEY\_SIZE – Key size used for encryption

If C\_SIG\_ENCRYPT\_MODE is included and set to '001', or '010', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field.

The base station shall set this field to the encryption key\_size as shown in Table 3.7.4.5-2;

**Table 3.7.4.5-2. ENC\_KEY\_SIZE Values**

<b>ENC_KEY_SIZE (binary)</b>	<b>Descriptions</b>
000	Reserved
001	64 bits
010	128 bits
011-111	Reserved

MSG\_INT\_INFO\_INCL – Message integrity information included indicator

1		If ORDQ is set to '00000111', the base station shall include this
2		field and shall set it as follows; otherwise, the base station shall
3		omit this field.
4		The base station shall set this field to '1' if the base station
5		supports message integrity; otherwise, the base station shall
6		set this field to '0'.
7	CHANGE_KEYS	- Change keys indicator
8		If MSG_INT_INFO_INCL is included and set to '0', the base
9		station shall omit this field; otherwise, the base station shall
10		include this field and set it as follows:
11		The base station shall set this field to '0' to command the
12		mobile station not to update the encryption key and integrity
13		key. The base station shall set this field to '1' to command the
14		mobile station to update the encryption key and integrity key
15		to the latest being generated.
16	USE_UAK	- Use UAK indicator
17		If MSG_INT_INFO_INCL is included and set to '0', the base
18		station shall omit this field; otherwise, the base station shall
19		include this field and set it as follows:
20		If the base station receives an authentication vector with a
21		UAK, the base station shall set this field to '1' to indicate that
22		the mobile station is to use UMAC; otherwise, the base
23		station shall set this field to '0' to indicate that the mobile
24		station is to use MAC-I.
25	RESERVED	- Reserved bits.
26		The base station shall add reserved bits as needed in order to
27		make the total length of the fields included in this order equal
28		to an integer number of octets. The base station shall set
29		these bits to '0'.
30		
31		

### 1 3.7.4.6 Periodic Pilot Measurement Request Order

2 The *Periodic Pilot Measurement Request Order* can be sent only on the f-dsch.

3

Order Specific Field	Length (bits)
ORDQ	8
MIN_PILOT_PWR_THRESH	5
MIN_PILOT_EC_I0_THRESH	5
INCL_SETPT	1
RESERVED	5

4

5 ORDQ - Order qualification code.

6 If INCL\_SETPT equals '0', the base station shall set this field  
 7 to a report period, in units of 0.08 seconds, in the range of  
 8 '00001010' to '1111110' inclusive; otherwise, the base station  
 9 shall set this field to a report period, in units of 0.08 seconds,  
 10 in the range of '00000001' to '11111110' inclusive. The base  
 11 station shall set this field to '11111111' to request a one time  
 12 *Periodic Pilot Strength Measurement Message*.

13 MIN\_PILOT\_PWR\_THRESH - The threshold of the total received  $E_c$  of the pilots in the  
 14 Active Set.

15 If the mobile station is to report pilot strength measurements  
 16 periodically to the base station irrespective of the pilot power  
 17 of the Active Set, the base station shall set this field to  
 18 '11111'; otherwise, the base station shall set this field to the  
 19 total  $E_c$  threshold, expressed as an unsigned binary number  
 20 equal to:

$$21 \quad \lceil (10 \times \log_{10}(\text{pilot\_ec\_thresh}) + 120) / 2 \rceil$$

22 where *pilot\_ec\_thresh* is the threshold of the mobile station  
 23 received total  $E_c$  (in mW) of the pilots in the Active Set below  
 24 which the mobile station is to send the pilot strength  
 25 measurements periodically to the base station.

26 MIN\_PILOT\_EC\_I0\_THRESH - Pilot Strength Threshold of Serving Frequency.

27 If the mobile station is to ignore this threshold, the base  
 28 station shall set this field to '11111'; otherwise, the base  
 29 station shall set this field to the total  $E_c/I_0$  threshold,  
 30 expressed as an unsigned binary number equal to:

$$31 \quad \lceil -20 \times \log_{10} \text{pilot\_streng\_thresh} \rceil,$$

1		where <i>pilot_streng_thresh</i> is the threshold of the total received
2		$E_c/I_0$ of the pilots in Active Set (see 2.6.6.2.2) below which
3		the mobile station is to send the pilot strength measurements
4		periodically to the base station.
5	INCL_SETPT	- Include Setpoint information indicator.
6		The base station shall set this field to '1' to indicate that the
7		mobile station shall include outer loop $E_b/N_t$ setpoint
8		information in the <i>Periodic Pilot Strength Measurement</i>
9		<i>Message</i> ; otherwise, the base station shall set this field to '0'.
10	RESERVED	- Reserved bits.
11		The base station shall set this field to '00000'.
12		

1     3.7.4.7 Retry Order

2     The *Retry Order* can be sent on either the f-csch or on the f-dsch to indicate the requested  
3     service is rejected and specify the retry delay.

4

Order Specific Field	Length (bits)
ORDQ	8
RETRY_TYPE	3
RETRY_DELAY	0 or 8
RESERVED	5

5             ORDQ     -   Order qualification code.  
6                        The base station shall set this field to '00000000'.  
7             RETRY\_TYPE -   Retry delay type.  
8                        The base station shall set this field specified as in Table  
9                        3.7.4.7-1.

**Table 3.7.4.7-1 Retry Delay Type**

<b>Value (binary)</b>	<b>Retry Type</b>	<b>Usage</b>
000	Clear all	The <i>Retry Order</i> is used to clear any existent retry delay
001	Origination	The <i>Retry Order</i> specifies the RETRY_DELAY for a <i>Packet Data Origination Message</i> , <i>Reconnect Message</i> , or <i>Enhanced Origination Message</i>
010	Resource Request	The <i>Retry Order</i> specifies the RETRY_DELAY for a <i>Resource Request Message</i> or <i>Resource Request Mini Message</i>
011	Supplemental Channel Request	The <i>Retry Order</i> specifies the RETRY_DELAY for a <i>Supplemental Channel Request Message</i> or <i>Supplemental Channel Request Mini Message</i>
100	Short Data Burst	The <i>Retry Order</i> specifies the RETRY_DELAY for Short Data Burst <sup>19</sup> (see [30], [42])
101	Origination and Short Data Burst	The <i>Retry Order</i> specifies the RETRY_DELAY for both Short Data Burst (see [30], [42]) and <i>Packet Data Origination Message</i> , <i>Reconnect Message</i> , or <i>Enhanced Origination Message</i>
100-111	Reserved	

2

3

RETRY\_DELAY - Retry delay.

4

5

6

If RETRY\_TYPE is set to '000', the base station shall omit this field. Otherwise the base station shall include this field and set it as follows:

---

<sup>19</sup> Short Data Burst can be included in *Data Burst Message* or *Reconnect Message*

If RETRY\_TYPE is set to '001', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send an *Origination Message*, *Reconnect Message*, or an *Enhanced Origination Message* with a Packet Data Service Option<sup>20</sup>. The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

**Table 3.7.4.7-2 Retry Delay for RETRY\_TYPE '001'**

Bits	Description
7 (MSB)	Unit for the Retry Delay '0' – unit is 1s '1' – unit is 1 min
6 to 0	Retry Delay interval

If RETRY\_TYPE is set to '010' or '011', the base station shall set this field to the duration of the delay interval in units of 320 ms during which the mobile station is not permitted to send another *Supplemental Channel Request (Mini) Message* or *Resource Request (Mini) Message*. The base station shall set RETRY\_DELAY to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay. The base station shall set RETRY\_DELAY to '11111111' to indicate that the mobile station is to refrain from sending the request indefinitely.

If RETRY\_TYPE is set to '100', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send a Short Data Burst (see [30], [42]). The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

If RETRY\_TYPE is set to '101', the base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.7-2, during which the mobile station is not permitted to send a Short Data Burst (see [30], [42]) and the mobile station is not permitted to send an *Origination Message*, *Reconnect Message*, or an *Enhanced Origination Message* with a Packet Data Service Option. The base station shall set this field to '00000000' to indicate that there is no retry delay or to clear a previously set retry delay.

RESERVED - Reserved bits.

<sup>20</sup> Packet data service option refers to SO 60, SO 61 or any service option in Service Option Group 4 and 5 in [30]

- 1 The base station shall set this field to '00000'.
- 2
- 3
- 4
- 5

1 3.7.4.8 Reserved.  
2

## 3.7.4.9 Base Station Reject Order

The *Base Station Reject Order* can be sent on either the f-csch or on the f-dsch to indicate the base station does not accept a message from a mobile station due to encryption error, message integrity error, or both.

Order Specific Field	Length (bits)
ORDQ	8
REJECT_REASON	4
REJECTED_MSG_TYPE	8
REJECTED_MSG_SEQ	3

ORDQ - Order qualification code.

The base station shall set this field to '00000010'.

REJECT\_REASON - Reason of rejection.

The base station shall set this field as specified in Table 3.7.4.9-1.

**Table 3.7.4.9-1 Reject Reason Type**

Value (binary)	Reject Reason	Usage
0000	The MACI field is missing	The <i>Base Station Reject Order</i> is used to indicate that the MACI field required in the message is missing.
0001	The MACI field is present but invalid	The <i>Base Station Reject Order</i> is used to indicate that the MACI field is present but is invalid.
0010	The security sequence number is invalid	The <i>Base Station Reject Order</i> is used to indicate that the security sequence number is invalid.
0011	The base station has failed to decrypt an encrypted message	The <i>Base Station Reject Order</i> is used to indicate that the base station has failed to decrypt an encrypted message from the mobile station.
0100-1111	Reserved	Reserved

1	REJECTED_MSG_TYPE	-	Message type of the rejected message.
2			The base station shall set this field to the value of the
3			MSG_TYPE or the MSG_ID (see [4]) field of the message being
4			rejected.
5			If the MSG_TYPE or the MSG_ID (see [4]) field is not 8 bits,
6			the base station shall set the least significant bits of this field
7			to the value of the MSG_TYPE field and set all the remaining
8			bits to '0'.
9	REJECTED_MSG_SEQ	-	The Layer 2 message sequence number (see [4]) of the
10			rejected message.
11			The base station shall set this field to the Layer 2 message
12			sequence number (see [4]) of the rejected message.
13			

## 3.7.4.10 BCMC Order

The *BCMC Order* is sent on f-csch or f-dsch to provide information on the requested BCMC flows.

Order Specific Field	Length (bits)
ORDQ	8
ALL_BCMC_FLOWS_IND	1
CLEAR_ALL_RETRY_DELAY	0 or 1
ALL_BCMC_REASON	0 or 4
ALL_BCMC_RETRY_DELAY	0 or 8
NUM_BCMC_PROGRAMS	0 or 6

If NUM\_BCMC\_PROGRAMS field is included,  
NUM\_BCMC\_PROGRAMS plus one occurrences of the  
following record

{ (NUM\_BCMC\_PROGRAMS+1)

BCMC_PROGRAM_ID_LEN	5
BCMC_PROGRAM_ID	BCMC_PROGRAM_ID_LEN+1
BCMC_FLOW_DISCRIMINATOR_LEN	3
NUM_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN

NUM\_FLOW\_DISCRIMINATOR+1 or 1 occurrences of the  
following variable length record:

{ (NUM\_FLOW\_DISCRIMINATOR+1) or 1

BCMC_FLOW_DISCRIMINATOR	BCMC_FLOW_DISCRIMINATOR_LEN
SAME_AS_PREVIOUS_BCMC_FLOW	1
CLEAR_RETRY_DELAY	0 or 1
BCMC_REASON	0 or 4
BCMC_RETRY_DELAY	0 or 8

} (NUM\_FLOW\_DISCRIMINATOR+1) or 1

} (NUM\_BCMC\_PROGRAMS+1)

ORDQ - Order qualification code.

The base station shall set this field to '00000000'.

1 ALL\_BCMC\_FLOWS\_IND - All BCMC flows indicator.

2 The base station shall set this field to '1' to indicate the  
3 ALL\_BCMC\_REASON applies to all flows for which mobile  
4 station is expecting a response; otherwise the base station  
5 shall set this field to '0'.

6 CLEAR\_ALL\_RETRY\_DELAY - Clear all retry delay indicator

7 If ALL\_BCMC\_FLOWS\_IND is set to '0', the base station shall  
8 omit this field; otherwise, the base station shall include this  
9 field and set it as follows:

10 The base station shall set this field to '1' to indicate that the  
11 mobile station should clear all retry delays associated with  
12 each BCMC Flow; otherwise the base station shall set this  
13 field to '0'.

14 ALL\_BCMC\_REASON - All BCMC reason.

15 If ALL\_BCMC\_FLOWS\_IND is set to '0' or if  
16 CLEAR\_ALL\_RETRY\_DELAY is set to '1', the base station shall  
17 omit this field; otherwise, the base station shall include this  
18 field and set it as follows:

19 The base station shall set this field as specified in Table  
20 3.7.4.10-1 to indicate the purpose of this order.

21 **Table 3.7.4.10-1 BCMC Reason**

<b>Value (binary)</b>	BCMC_REASON/ALL_BCMC_REASON
0000	BCMC_FLOW_ID not available
0001	BCMC_FLOW_ID not transmitted
0010	BCMC_FLOW_ID available in idle state
0011	BCMC Registration Accepted; requested BCMC flow will be transmitted at a later time
0100	Authorization failure
0101	Retry later
0110-1111	Reserved

22 ALL\_BCMC\_RETRY\_DELAY - All BCMC retry delay.

If the ALL\_BCMC\_REASON field is not included or is included and is not set to '0101', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the duration of the delay interval, as shown in Table 3.7.4.10-2, during which the mobile station is not permitted to request any BCMC flows. The base station shall not set this field to '00000000'.

**Table 3.7.4.10-2 BCMC Retry Delay**

Bits	Description
7 (MSB)	Unit for the Retry Delay '0' – unit is 1s '1' – unit is 1 min
6 to 0	BCMC Retry Delay interval

NUM\_BCMC\_PROGRAMS – Number of BCMC programs included.

If ALL\_BCMC\_FLOWS\_IND is set to '1', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to the number of BCMC programs included in this message minus one.

If the NUM\_BCMC\_PROGRAMS field is included, the base station shall include NUM\_BCMC\_PROGRAMS plus one occurrences of the following record:

BCMC\_PROGRAM\_ID\_LEN - Length of BCMC\_PROGRAM\_ID field

The base station shall set this field to one less than the length in bits of the BCMC\_PROGRAM\_ID of this program.

BCMC\_PROGRAM\_ID - BCMC program Identifier

The length of this field shall be one more than the value of BCMC\_PROGRAM\_ID\_LEN bits.

The base station shall set this field to the BCMC program identifier of this program.

BCMC\_FLOW\_DISCRIMINATOR\_LEN - Length of BCMC\_FLOW\_DISCRIMINATOR field

The base station shall set this field to the length in bits of the BCMC\_FLOW\_DISCRIMINATOR of this program.

1 NUM\_FLOW\_DISCRIMINATOR - Number of BCMC flow discriminators.

2 The length of this field shall be determined by the value of  
3 the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
4 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
5 is omitted; otherwise, the length of this field shall be  
6 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

7 The base station shall set this field to the number of flow  
8 discriminators included for this program minus one.

9 If NUM\_FLOW\_DISCRIMINATOR field is included, the base station shall include  
10 NUM\_FLOW\_DISCRIMINATOR+1 occurrences of the following variable length record;  
11 otherwise, the base station shall include 1 occurrence of the following variable length  
12 record:

13 BCMC\_FLOW\_DISCRIMINATOR – BCMC Flow discriminator.

14 The length of this field shall be determined by the value of  
15 the BCMC\_FLOW\_DISCRIMINATOR\_LEN as follows: if  
16 BCMC\_FLOW\_DISCRIMINATOR\_LEN is set to '000', this field  
17 is omitted; otherwise, the length of this field shall be  
18 BCMC\_FLOW\_DISCRIMINATOR\_LEN bits.

19 The base station shall set this field to the discriminator of the  
20 BCMC flow.

21 SAME\_AS\_PREVIOUS\_BCMC\_FLOW – Same As Previous BCMC Flow Identifier.

22 If CLEAR\_RETRY\_DELAY, BCMC\_REASON and  
23 BCMC\_RETRY\_DELAY are the same for this BCMC\_FLOW\_ID  
24 (see 2.6.13.11) as for the previous BCMC\_FLOW\_ID, the base  
25 station shall set this field to '1'; otherwise, the base station  
26 shall set this field to '0'.

27 CLEAR\_RETRY\_DELAY - Clear retry delay indicator

28 If SAME\_AS\_PREVIOUS\_BCMC\_FLOW is set to '1', the base  
29 station shall omit this field; otherwise, the base station shall  
30 set this field as follows:

31 The base station shall set this field to '1' to indicate that the  
32 mobile station should clear retry delay associated with this  
33 BCMC Flow; otherwise the base station shall set this field to  
34 '0'.

35 BCMC\_REASON - BCMC reason.

36 If SAME\_AS\_PREVIOUS\_BCMC\_FLOW is set to '1' or if  
37 CLEAR\_RETRY\_DELAY is set to '1', the base station shall  
38 omit this field; otherwise, the base station shall set this field  
39 as follows:

40 The base station shall set this field as specified in Table  
41 3.7.4.10-1 to indicate the purpose for this order.

1    BCMC\_RETRY\_DELAY    -    BCMC retry delay.  
2  
3                            If the BCMC\_REASON field is not included or is included and  
4                            is not set to '0101', the base station shall omit this field;  
5                            otherwise, the base station shall include this field and set it  
6                            as follows:  
7                            The base station shall set this field to the duration of the  
8                            delay interval, as shown in Table 3.7.4.10-2, during which  
9                            the mobile station is not permitted to request this  
10                            BCMC\_FLOW\_ID. The base station shall not set this field to  
11                            '00000000'.

### 3.7.4.11 Fast Call Setup Order

Order Specific Field	Length (bits)
ORDQ	8
RSC_MODE_SUPPORTED	1
MAX_RSC_END_TIME_UNIT	0 or 2
MAX_RSC_END_TIME_VALUE	0 or 4
REQ_RSCI	0 or 4
IGNORE_QPCH	0 or 1
RER_MODE_INCL	1
RER_MODE_ENABLED	0 or 1
RER_MAX_NUM_MSG_IDX	0 or 3
RER_TIME	0 or 3
RER_TIME_UNIT	0 or 2
MAX_RER_PILOT_LIST_SIZE	0 or 3
TKZ_MODE_INCL	1
TKZ_MODE_ENABLED	0 or 1
TKZ_MAX_NUM_MSG_IDX	0 or 3
TKZ_UPDATE_PRD	0 or 4
TKZ_LIST_LEN	0 or 4
TKZ_TIMER	0 or 8

**ORDQ** - Order qualification code.

The base station shall set this field to the ORDQ value shown in Table 3.7.4-1.

**RSC\_MODE\_SUPPORTED** - Reduced slot cycle mode supported indicator.

The base station shall set this field to '1' if it supports the reduced slot cycle mode; otherwise, the base station shall set this field to '0'.

1	MAX_RSC_END_TIME_UNIT	-	Maximum reduced slot cycle mode end time unit.
2			If RSC_MODE_SUPPORTED is equal to '0', the base station
3			shall omit this field; otherwise, the base station shall set this
4			field according to Table 2.7.3.5-1 to indicate the units of the
5			MAX_RSC_END_TIME_VALUE field.
6	MAX_RSC_END_TIME_VALUE	-	Maximum reduced slot cycle mode end time value.
7			If RSC_MODE_SUPPORTED is equal to '0', the base station
8			shall omit this field; otherwise, the base station shall include
9			this field and set it as follows:
10			The base station shall set this field to the maximum system
11			time, in units of time specified by
12			MAX_RSC_END_TIME_UNIT (modulo 16), at which the mobile
13			station is to exit the reduced slot cycle mode.
14	REQ_RSCI	-	Requested reduced slot cycle index.
15			If ORDQ is equal to '00000000' and
16			RSC_MODE_SUPPORTED is equal to '1', the base station
17			shall set this field as specified in Table 2.7.1.3.2.1-8 to the
18			reduced slot cycle index value that it is requesting the mobile
19			station to operate with; otherwise, the base station shall omit
20			this field.
21	IGNORE_QPCH	-	Ignore QPCH indicators.
22			If RSC_MODE_SUPPORTED is equal to '0', the base station
23			shall omit this field; otherwise, the base station shall include
24			this field and set it as follows:
25			The base station shall set this field to '1' to indicate to the
26			mobile station that it is not to check its assigned paging
27			indicators on the QPCH while operating in the reduced slot
28			cycle mode if the reduced slot cycle index is -3 or -4;
29			otherwise, the base station shall set this field to '0'.
30	RER_MODE_INCL	-	Radio environment reporting mode information included
31			indicator.
32			If radio environment reporting mode related fields are
33			included in this message, the base station shall set this field
34			to '1'; otherwise, the base station shall set this field to '0'.
35	RER_MODE_ENABLED	-	Radio environment reporting mode enabled indicator.
36			If RER_MODE_INCL is set to '0', the base station shall omit
37			this field; otherwise, the base station shall include this field
38			and set it as follows:
39			If the radio environment reporting mode is enabled in this
40			message, the base station shall set this field to '1'; otherwise,
41			the base station shall set this field to '0'.
42	RER_MAX_NUM_MSG_IDX	-	Maximum number of <i>Radio Environment Messages</i>
43			permitted while in radio environment reporting mode index.

1			If RER_MODE_ENABLED is not included, or is included and
2			set to '0', the base station shall omit this field; otherwise, the
3			base station shall include this field and set it as follows:
4			The base station shall set this field to the maximum number
5			of <i>Radio Environment Messages</i> that the mobile station is
6			allowed to transmit while in radio environment reporting
7			mode, expressed as $2^{\text{RER\_MAX\_NUM\_MSG\_IDX}}$ where $0 \leq$
8			$\text{RER\_MAX\_NUM\_MSG\_IDX} \leq 6$ . If the mobile station is
9			allowed to transmit an unlimited number of <i>Radio</i>
10			<i>Environment Messages</i> , then the base station shall set this
11			field to '111'.
12	RER_TIME	-	Radio environment report timer value.
13			If RER_MODE_ENABLED is not included, or is included and
14			set to '0', the base station shall omit this field; otherwise, the
15			base station shall include this field and set it as follows:
16			The base station shall set this field to the value of the radio-
17			environment report timer, expressed as $2^{\text{RER\_TIME}}$ where $0 \leq$
18			$\text{RER\_TIME} \leq 6$ and in units of RER_TIME_UNIT. If the value
19			of the radio-environment report timer is infinite, then the
20			base station shall set this field to '111'.
21	RER_TIME_UNIT	-	Radio environment report timer value units.
22			If RER_MODE_ENABLED is included and set to '1', and
23			RER_TIME is not set to '111', the base station shall include
24			this field and shall set it according to Table 3.7.3.3.2.34-5;
25			otherwise, the base station shall omit this field.
26	MAX_RER_PILOT_LIST_SIZE	-	Maximum number of pilots to maintain in
27			RER_PILOT_LIST.
28			If RER_MODE_ENABLED is not included, or is included and
29			set to '0', the base station shall omit this field; otherwise, the
30			base station shall include this field and set it as follows:
31			The base station shall set this field to the maximum number
32			of pilots that the mobile station is to maintain in
33			RER_PILOT_LIST (see [4]). The base station shall set this
34			field to a value in the range 1 to 6 inclusive.
35	TKZ_MODE_INCL	-	Tracking zone mode information included indicator.
36			If tracking zone mode related fields are included in this
37			message, the base station shall set this field to '1'; otherwise,
38			the base station shall set this field to '0'.
39	TKZ_MODE_ENABLED	-	Tracking zone mode enabled indicator.
40			If TKZ_MODE_INCL is set to '0', the base station shall omit
41			this field; otherwise, the base station shall include this field
42			and set it as follows:
43			If the tracking zone mode is enabled in this message, the base
44			station shall set this field to '1'; otherwise, the base station
45			shall set this field to '0'.

1	TKZ_MAX_NUM_MSG_IDX	-	Maximum number of <i>Radio Environment Messages</i>
2			permitted while in tracking zone mode index.
3			If TKZ_MODE_ENABLED is not included, or is included and
4			set to '0', the base station shall omit this field; otherwise, the
5			base station shall include this field and set it as follows:
6			The base station shall set this field to the maximum number
7			of <i>Radio Environment Messages</i> that the mobile station is
8			allowed to transmit while in tracking zone mode, expressed
9			as $2^{\text{TKZ\_MAX\_NUM\_MSG\_IDX}}$ where 0 •
10			TKZ_MAX_NUM_MSG_IDX • 6. If the mobile station is
11			allowed to transmit an unlimited number of <i>Radio</i>
12			<i>Environment Messages</i> , then the base station shall set this
13			field to '111'.
14	TKZ_UPDATE_PRD	-	Tracking zone update period.
15			If TKZ_MODE_ENABLED is not included, or is included and
16			set to '0', the base station shall omit this field; otherwise, the
17			base station shall include this field and set it as follows:
18			The base station shall set this field such that the desired
19			tracking zone update timer value is $2^{\text{TKZ\_UPDATE\_PRD}+6}$
20			seconds. If the value of the timer is infinite, then the base
21			station shall set this field to '1111'.
22	TKZ_LIST_LEN	-	Tracking zone list length.
23			If TKZ_MODE_ENABLED is not included, or is included and
24			set to '0', the base station shall omit this field; otherwise, the
25			base station shall include this field and set it as follows:
26			The base station shall set this field to the length of the
27			tracking zone list minus one.
28	TKZ_TIMER	-	Tracking zone timer.
29			If TKZ_MODE_ENABLED is not included, or is included and
30			set to '0', the base station shall omit this field; otherwise, the
31			base station shall include this field and set it as follows:
32			The base station shall set this field to the value of the
33			tracking zone timer (in units of seconds) minus one.
34			

### 3.7.4.12 Service Status Order

The *Service Status Order* can be sent on f-csch or f-dsch to indicate the status of the services requested by the mobile station.

Order Specific Field	Length (bits)
ORDQ	8
SR_ID_BITMAP	6
{ ( weight of SR_ID_BITMAP)	
SERVICE_STATUS	3
} ( weight of SR_ID_BITMAP)	
RESERVED	0 – 7 (as needed)

ORDQ – Order qualification code.

The base station shall set this field to '00000000'.

SR\_ID\_BITMAP – Service Reference Identifier Bitmap.

This field consists of the subfields defined in Table 3.7.4.12-1. The base station shall set a subfield to '1' to indicate that the service status information corresponding to the service reference identifier is included in this message; otherwise, the base station shall set the subfield to '0'.

**Table 3.7.4.12-1. SR\_ID\_BITMAP Subfields.**

Subfield	Length (bits)	Subfield Description
SR_ID_1	1	SR_ID 1 service status included indicator
SR_ID_2	1	SR_ID 2 service status included indicator
SR_ID_3	1	SR_ID 3 service status included indicator
SR_ID_4	1	SR_ID 4 service status included indicator
SR_ID_5	1	SR_ID 5 service status included indicator
SR_ID_6	1	SR_ID 6 service status included indicator

The base station shall include the following subrecord for each bit set to '1' in SR\_ID\_BITMAP:

SERVICE\_STATUS – Service Status.

The base station shall set this field to the SERVICE\_STATUS value shown in Table 3.7.4.12-2 indicating the service status corresponding to this service reference identifier.

1  
  
  
2  
3  
4  
5  
6  
7

**Table 3.7.4.12-2. Service Status Values**

<b>SERVICE_STATUS Value (binary)</b>	<b>Service Status</b>
000	Service request accepted
001	Service request rejected
All other values are reserved.	

RESERVED - Reserved bits.

The base station shall add reserved bits as needed in order to make the total length of the fields included in this order equal to an integer number of octets. The base station shall set these bits to '0'.

1 3.7.4.13 Location Services Order

2

Order Specific Field	Length (bits)
ORDQ	8
REGULATORY_IND_INCL	1
REGULATORY_IND	0 or 2

3

ORDQ - Order qualification code.

4

The base station shall set this field to the ORDQ value shown in Table 3.7.4-1.

5

6

REGULATORY\_IND\_INCL - Regulatory indicator included.

7

The base station shall set this field to '0' to indicate that the mobile station is to release all current location sessions associated with *Data Burst Message* transport; the base station shall set this field to '1' to indicate that the mobile station is to release the current location session that is associated with *Data Burst Message* transport corresponding to the regulatory type specified by this message.

8

9

10

11

12

13

14

REGULATORY\_IND - Regulatory indication.

15

If the REGULATORY\_IND\_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

16

17

18

The base station shall set this field to indicate the regulatory type, as specified in [43], of the position location session that the mobile station is to release.

19

20

21

1    3.7.5 Information Records

2    On the f-csch, information records may be included in the *Feature Notification Message*.  
3    On the f-dsch, information records may be included in the *Alert with Information Message*,  
4    the *Flash with Information Message*, the *Extended Alert with Information Message*, the  
5    *Extended Flash with Information Message*, the *Service Request Message*, the *Service*  
6    *Response Message*, the *Service Connect Message*, the *General Handoff Direction Message*,  
7    and the *Universal Handoff Direction Message*. Table 3.7.5-1 lists the information record  
8    type values that may be used with each message type. The following sections describe the  
9    contents of each of the record types in detail.

1

**Table 3.7.5-1. Information Record Types (Part 1 of 3)**

<b>Information Record</b>	<b>Record Type (binary)</b>	<b>Message Type</b>	<b>f-csch</b>	<b>f-dsch</b>	<b>P_REV_IN_USE<sup>21</sup></b>
Display	00000001	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Called Party Number	00000010	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Calling Party Number	00000011	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Connected Number	00000100	FWI	N	Y	All
Signal	00000101	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Message Waiting	00000110	FNM	Y	N	All
		AWI	N	Y	
		FWI	N	Y	
Service Configuration	00000111	SRQM	N	Y	1, ≥ 3
		SRPM	N	Y	
		SCM	N	Y	
		GHDM	N	Y	
		UHDM	N	Y	
Called Party Subaddress	00001000	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	

2

3

---

<sup>21</sup> P\_REV\_IN\_USE equal to "All" implies all values applicable to the Band Class.

1

**Table 3.7.5-1. Information Record Types (Part 2 of 3)**

<b>Information Record</b>	<b>Record Type (binary)</b>	<b>Message Type</b>	<b>f-csch</b>	<b>f-dsch</b>	<b>P_REV_IN_USE</b>
Calling Party Subaddress	00001001	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Connected Subaddress	00001010	FWI	N	Y	≥ 4
Redirecting Number	00001011	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Redirecting Subaddress	00001100	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Meter Pulses	00001101	AWI	N	Y	≥ 4
		FWI	N	Y	
Parametric Alerting	00001110	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	
Line Control	00001111	AWI	N	Y	≥ 4

Extended Display	00010000	FNM	Y	N	≥ 4
		AWI	N	Y	
		FWI	N	Y	

2

3

1

**Table 3.7.5-1. Information Record Types (Part 3 of 3)**

Information Record	Record Type (binary)	Message Type	f-csch	f-dsch	P_REV_IN_USE
Non-Negotiable Service Configuration	00010011	SCM	N	Y	≥ 6
		GHDM	N	Y	
		UHDM	N	Y	
Multiple Character Extended Display	00010100	FNM	Y	N	≥ 7 but < 9
		AWI	N	Y	
		FWI	N	Y	
Call Waiting Indicator	00010101	AWI	N	Y	≥ 7
		FWI	N	Y	
Enhanced Multiple Character Extended Display	00010110	FNM	Y	N	≥ 9
		AWI	N	Y	
		FWI	N	Y	
Extended Record Type – International	11111110	Country-Specific			≥ 4
All other record type values are reserved.					
“AWI” refers to either the <i>Alert With Information Message</i> or the <i>Extended Alert With Information Message</i> .					
“FWI” refers to either the <i>Flash With Information Message</i> or the <i>Extended Flash With Information Message</i> .					

2

## 1 3.7.5.1 Display

2 This information record allows the network to supply display information that may be  
3 displayed by the mobile station.

4

Type-Specific Field	Length (bits)
---------------------	---------------

One or more occurrences of the following field:

{

CHARi	8
-------	---

}

5

6 CHARi - Character.

7 The base station shall include one occurrence of this field for  
8 each character to be displayed. The base station shall set  
9 each occurrence of this field to the ASCII representation  
10 corresponding to the character entered, as specified in [9],  
11 with the most significant bit set to '0'.  
12

### 3.7.5.2 Called Party Number

This information record identifies the called party's number.

3

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	1
----------	---

4

5        NUMBER\_TYPE    -    Type of number.

6                            The base station shall set this field to the NUMBER\_TYPE  
7                            value shown in Table 2.7.1.3.2.4-2 corresponding to the type  
8                            of the called number, as defined in [7], Section 4.5.9.

9        NUMBER\_PLAN    -    Numbering plan.

10                           The base station shall set this field to the NUMBER\_PLAN  
11                           value shown in Table 2.7.1.3.2.4-3 corresponding to the  
12                           numbering plan used for the called number, as defined in [7],  
13                           Section 4.5.9.

14                        CHARi    -    Character.

15                           The base station shall include one occurrence of this field for  
16                           each character in the called number. The base station shall  
17                           set each occurrence of this field to the ASCII representation  
18                           corresponding to the character, as specified in [9], with the  
19                           most significant bit set to '0'.

20                        RESERVED    -    Reserved bits.

21                           The base station shall set this field to '0'.

22

## 3.7.5.3 Calling Party Number

This information record identifies the calling party's number.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

NUMBER\_TYPE - Type of number.

The base station shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the calling number, as defined in [7], Section 4.5.9.

NUMBER\_PLAN - Numbering plan.

The base station shall set this field to the NUMBER\_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the calling number, as defined in [7], Section 4.5.9.

PI - Presentation indicator.

This field indicates whether or not the calling number should be displayed.

The base station shall set this field to the PI value shown in Table 2.7.4.4-1 corresponding to the presentation indicator, as defined in [7], Section 4.5.9.

SI - Screening indicator.

This field indicates how the calling number was screened.

The base station shall set this field to the SI value shown in Table 2.7.4.4-2 corresponding to the screening indicator value, as defined in [7], Section 4.5.9.

1	CHARi	-	Character.
2			The base stations shall include one occurrence of this field
3			for each character in the calling number. The base station
4			shall set each occurrence of this field to the ASCII
5			representation corresponding to the character, as specified in
6			[9], with the most significant bit set to '0'.
7	RESERVED	-	Reserved bits.
8			The base station shall set this field to '00000'.
9			

## 3.7.5.4 Connected Number

This information record identifies the responding party to a call.

Type-Specific Field	Length (bits)
NUMBER_TYPE	3
NUMBER_PLAN	4
PI	2
SI	2

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

RESERVED	5
----------	---

NUMBER\_TYPE - Type of number.

The base station shall set this field to the NUMBER\_TYPE value shown in Table 2.7.1.3.2.4-2 corresponding to the type of the connected number, as defined in [7], Section 4.5.9.

NUMBER\_PLAN - Numbering plan.

The base station shall set this field to the NUMBER\_PLAN value shown in Table 2.7.1.3.2.4-3 corresponding to the numbering plan used for the connected number, as defined in [7], Section 4.5.9.

PI - Presentation indicator.

This field indicates whether or not the connected number should be displayed.

The base station shall set this field to the PI value shown in Table 2.7.4.4-1 corresponding to the presentation indicator, as defined in [7], Section 4.5.9.

SI - Screening indicator.

This field indicates how the connected number was screened.

The base station shall set this field to the SI value shown in Table 2.7.4.4-2 corresponding to the screening indicator value, as defined in [7], Section 4.5.9.

1	CHARi	-	Character.
2			The base station shall include one occurrence of this field for
3			each character in the connected number. The base station
4			shall set each occurrence of this field to the ASCII
5			representation corresponding to the character, as specified in
6			[9], with the most significant bit set to '0'.
7	RESERVED	-	Reserved bits.
8			The base station shall set this field to '00000'.
9			

## 3.7.5.5 Signal

This information record allows the network to convey information to a user by means of tones and other alerting signals.

The Standard Alert is defined as SIGNAL\_TYPE = '10', ALERT\_PITCH = '00' and SIGNAL = '000001'.

Type-Specific Field	Length (bits)
SIGNAL_TYPE	2
ALERT_PITCH	2
SIGNAL	6
RESERVED	6

SIGNAL\_TYPE - Signal type.

The base station shall set this field to the signal type value shown in Table 3.7.5.5-1.

**Table 3.7.5.5-1. Signal Type**

Description	SIGNAL_TYPE (binary)
Tone signal	00
ISDN Alerting	01
IS-54B Alerting	10
Reserved	11

ALERT\_PITCH - Pitch of the alerting signal.

This field is ignored by the mobile station unless SIGNAL\_TYPE is '10', IS-54B Alerting.

If SIGNAL\_TYPE is '10', the base station shall set this field to the alert pitch shown in Table 3.7.5.5-2; otherwise, the base station shall set this field to '00'.

1

**Table 3.7.5.5-2. Alert Pitch**

<b>Description</b>	<b>ALERT_PITCH (binary)</b>
Medium pitch (standard alert)	00
High pitch	01
Low pitch	10
Reserved	11

2

3

**SIGNAL** - Signal code.

4

5

6

7

8

9

The base station shall set this field to the specific signal desired. If SIGNAL\_TYPE is '00', the base station shall set this field as described in Table 3.7.5.5-3. If SIGNAL\_TYPE is '01', the base station shall set this field as described in Table 3.7.5.5-4. If SIGNAL\_TYPE is '10', the base station shall set this field as described in Table 3.7.5.5-5.

10

1

**Table 3.7.5.5-3. Tone Signals (SIGNAL\_TYPE = '00')**

<b>Description</b>	<b>SIGNAL (binary)</b>
Dial tone on: a continuous 350 Hz tone added to a 440 Hz tone.	000000
Ring back tone on: a 440 Hz tone added to a 480 Hz tone repeated in a 2 s on, 4 s off pattern.	000001
Intercept tone on: alternating 440 Hz and 620 Hz tones, each on for 250 ms.	000010
Abbreviated intercept: alternating 440 Hz and 620 Hz tones, each on for 250 ms, repeated for four seconds.	000011
Network congestion (reorder) tone on: a 480 Hz tone added to a 620 Hz tone repeated in a 250 ms on, 250 ms off cycle.	000100
Abbreviated network congestion (reorder): a 480 Hz tone added to a 620 Hz tone repeated in a 250 ms on, 250 ms off cycle for four seconds.	000101
Busy tone on: a 480 Hz tone added to a 620 Hz tone repeated in a 500 ms on, 500 ms off cycle.	000110
Confirm tone on: a 350 Hz tone added to a 440 Hz tone repeated 3 times in a 100 ms on, 100 ms off cycle.	000111
Answer tone on: answer tone is not presently used in North American networks.	001000
Call waiting tone on: a 300 ms burst of 440 Hz tone.	001001
Pip tone on: four bursts of 480 Hz tone (0.1 s on, 0.1 s off).	001010
Tones off	111111
All other SIGNAL values are reserved	

2

3

1

**Table 3.7.5.5-4. ISDN Alerting (SIGNAL\_TYPE = '01')**

<b>Description</b>	<b>SIGNAL (binary)</b>
Normal Alerting: 2.0 s on, 4.0 s off, repeating	000000
Intergroup Alerting: 0.8 s on, 0.4 s off, 0.8 s on, 4.0 s off, repeating	000001
Special/Priority Alerting: 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 4.0 s off, repeating	000010
Reserved (ISDN Alerting pattern 3)	000011
"Ping ring": single burst of 500 ms	000100
Reserved (ISDN Alerting pattern 5)	000101
Reserved (ISDN Alerting pattern 6)	000110
Reserved (ISDN Alerting pattern 7)	000111
Alerting off	001111
All other SIGNAL values are reserved	

2

1

**Table 3.7.5.5-5. IS-54B Alerting (SIGNAL\_TYPE = '10')**

<b>Description</b>	<b>SIGNAL (binary)</b>
<i>No Tone:</i> Off	000000
<i>Long:</i> 2.0 s on, 4.0 s off, repeating (standard alert)	000001
<i>Short-Short:</i> 0.8 s on, 0.4 s off, 0.8 s on, 4.0 s off, repeating	000010
<i>Short-Short-Long:</i> 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 4.0 s off, repeating	000011
<i>Short-Short-2:</i> 1.0 s on, 1.0 s off, 1.0 s on, 3.0 s off, repeating.	000100
<i>Short-Long-Short:</i> 0.5 s on, 0.5 s off, 1.0 s on, 0.5 s off, 0.5 s on, 3.0 s off, repeating.	000101
<i>Short-Short-Short-Short:</i> 0.5 s on, 0.5 s off, 0.5 s on, 0.5 s off, 0.5 s on, 0.5 s off, 0.5 s on, 2.5 s off, repeating.	000110
<i>PBX Long:</i> 1.0 s on, 2.0 s off, repeating.	000111
<i>PBX Short-Short:</i> 0.4 s on, 0.2 s off, 0.4 s on, 2.0 off, repeating.	001000
<i>PBX Short-Short-Long:</i> 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.8 s on, 1.0 s off, repeating.	001001
<i>PBX Short-Long-Short:</i> 0.4 s on, 0.2 s off, 0.8 s on, 0.2 s off, 0.4 s on, 1.0 s off, repeating.	001010
<i>PBX Short-Short-Short-Short:</i> 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.4 s on, 0.2 s off, 0.4 s on, 0.8 s off, repeating.	001011
<i>Pip-Pip-Pip-Pip:</i> 0.1 s on, 0.1 s off, 0.1 s on, 0.1 s off, 0.1 s on, 0.1 s off, 0.1 s on.	001100
All other SIGNAL values are reserved	

2

3

RESERVED - Reserved bits.

4

The base station shall set this field to '000000'.

5

1    3.7.5.6 Message Waiting

2    This information record conveys to the user the number of messages waiting.

3

Type-Specific Field	Length (bits)
MSG_COUNT	8

4

5            MSG\_COUNT    -    Number of waiting messages.

6                            The base station shall set this field to the number of

7                            messages waiting.

8

### 1 3.7.5.7 Service Configuration

2 For the mobile station, this record is included in a *Status Response Message* to return the  
 3 current service configuration, and in a *Service Request Message* and a *Service Response*  
 4 *Message* to propose a service configuration.

5 For a base station, this record is included in a *Service Request Message* and a *Service*  
 6 *Response Message* to propose a service configuration. It is included in a *Service Connect*  
 7 *Message* to specify an actual service configuration to be used. It can be included in a  
 8 *General Handoff Direction Message* and *Universal Handoff Direction Message* to specify an  
 9 actual service configuration to be used.

10

Type-Specific Field	Length (bits)
FOR_MUX_OPTION	16
REV_MUX_OPTION	16
FOR_NUM_BITS	8
REV_NUM_BITS	8
NUM_CON_REC	8

NUM\_CON\_REC occurrences of the following variable-length record:

{ (NUM\_CON\_REC)

RECORD_LEN	8
CON_REF	8
SERVICE_OPTION	16
FOR_TRAFFIC	4
REV_TRAFFIC	4
UI_ENCRYPT_MODE	3
SR_ID	3
RLP_INFO_INCL	1
RLP_BLOB_LEN	0 or 4
RLP_BLOB	0 or (8 × RLP_BLOB_LEN)
QOS_PARMS_INCL	1
QOS_PARMS_LEN	0 or 5
QOS_PARMS	0 or variable
QOS_RESERVED	0-7
RESERVED	0-7 (as needed)

} (NUM\_CON\_REC)

FCH_CC_INCL	1
FCH_FRAME_SIZE	0 or 1
FOR_FCH_RC	0 or 5
REV_FCH_RC	0 or 5
DCCH_CC_INCL	1
DCCH_FRAME_SIZE	0 or 2
FOR_DCCH_RC	0 or 5
REV_DCCH_RC	0 or 5

(continues on next page)

1

Type-Specific Field	Length (bits)
FOR_SCH_CC_INCL	1
NUM_FOR_SCH	0 or 2

NUM\_FOR\_SCH occurrences of the following record

{ (NUM\_FOR\_SCH)

FOR_SCH_ID	2
FOR_SCH_MUX	16
SCH_CC_Type-specific field	Variable (see 3.7.5.7.1)

} (NUM\_FOR\_SCH)

REV_SCH_CC_INCL	1
NUM_REV_SCH	0 or 2

NUM\_REV\_SCH occurrences of the following record

{ (NUM\_REV\_SCH)

REV_SCH_ID	2
REV_SCH_MUX	16
SCH_CC_Type-specific field	Variable (see 3.7.5.7.1)

} (NUM\_REV\_SCH)

2

3 FOR\_MUX\_OPTION - Forward multiplex option.

4 If P\_REV\_IN\_USE<sub>S</sub> is less than eight, the mobile station shall  
5 set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, if both are present (e.g., 1 corresponds to Multiplex Option 1).

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, if both are present.

If  $P\_REV\_IN\_USE_s$  is greater than or equal to eight, the mobile station shall set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both (e.g., 1 corresponds to Multiplex Option 1), according to the value as specified by  $FCH\_DCCH\_MUX\_OPTION\_IND$ .

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, according to the value as specified by  $FCH\_DCCH\_MUX\_OPTION\_IND$ .

If neither the Forward Fundamental Channel nor Forward Dedicated Control Channel configuration is assigned, then the mobile station shall set this field to 0.

If  $MOB\_P\_REV$  is less than eight, the base station shall set this field as follows:

For a *Service Request Message* and a *Service Response Message*, the base station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, if both are present.

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, if both are present.

If  $MOB\_P\_REV$  is greater than or equal to eight, the base station shall set this field as follows:

For a *Service Request Message* and a *Service Response Message*, the base station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the number of the multiplex option for the Forward Fundamental Channel, Forward Dedicated Control Channel, or both, according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

If neither the Forward Fundamental Channel nor Forward Dedicated Control Channel configuration is assigned, the base station shall set this field to 0.

REV\_MUX\_OPTION - Reverse multiplex option.

If P\_REV\_IN\_USE<sub>s</sub> is less than eight, the mobile station shall set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, if both are present (e.g., 1 corresponds to Multiplex Option 1).

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, if both are present.

If P\_REV\_IN\_USE<sub>s</sub> is greater than or equal to eight, the mobile station shall set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both [e.g., 1 corresponds to Multiplex Option 1), according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

If neither the Reverse Fundamental Channel nor Reverse Dedicated Control Channel configuration is assigned, the mobile station shall set this field to 0.

If MOB\_P\_REV is less than eight, the base station shall set this field as follows:

For a *Service Request Message* and a *Service Response Message*, the base station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, if both are present.

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, if both are present.

If MOB\_P\_REV is greater than or equal to eight, the base station shall set this field as follows:

For a *Service Request Message* and a *Service Response Message*, the base station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the number of the multiplex option for the Reverse Fundamental Channel, Reverse Dedicated Control Channel, or both, according to the value as specified by FCH\_DCCH\_MUX\_OPTION\_IND.

FOR\_NUM\_BITS - Set of number of bits per frame of the Forward Fundamental Channel.

The mobile station shall set this field as follows:

The mobile station shall use the Forward Fundamental Channel transmission set of number of bits per frame specified in 2.7.4.28 for the specified Forward Traffic Channel multiplex option.

For a *Status Response Message*, the mobile station shall set the subfields corresponding to the Forward Traffic Channel transmission set of number of bits per frame of the current service configuration to '1', and shall set the remaining subfields to '0'. If FOR\_MUX\_OPTION is equal to 1 or 2, the mobile station shall set RESERVED to '0000'. If the Forward Fundamental Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

1 For a *Service Request Message* and a *Service Response*  
 2 *Message*, the mobile station shall set the subfields  
 3 corresponding to the Forward Traffic Channel  
 4 transmission set of number of bits per frame of the  
 5 proposed service configuration to '1', and shall set the  
 6 remaining subfields to '0'. If FOR\_MUX\_OPTION is equal  
 7 to 1 or 2, the mobile station shall set RESERVED to  
 8 '0000'. If the Forward Fundamental Channel  
 9 configuration is not specified in this record, then the  
 10 mobile station shall set this field to 0.

11 The base station shall set this field as follows:

12 The base station shall set this field to the Forward  
 13 Fundamental Channel transmission set of number of bits  
 14 per frame specified in 2.7.4.28 for the specified Forward  
 15 Traffic Channel multiplex option.

16 For a *Service Request Message* or a *Service Response*  
 17 *Message*, the base station shall set the subfields  
 18 corresponding to the Forward Fundamental Channel  
 19 transmission set of number of bits per frame of the  
 20 proposed service configuration to '1', and shall set the  
 21 remaining subfields to '0'. If FOR\_MUX\_OPTION is equal  
 22 to 1 or 2, the base station shall set RESERVED to '0000'.  
 23 If the Forward Fundamental Channel configuration is not  
 24 specified in this record, then the base station shall set  
 25 this field to 0.

26 For a *Service Connect Message*, *General Handoff Direction*  
 27 *Message*, and a *Universal Handoff Direction Message*, the  
 28 base station shall set the subfields corresponding to the  
 29 Forward Fundamental Channel transmission set of  
 30 number of bits per frame of the actual service  
 31 configuration to be used to '1', and shall set the  
 32 remaining subfields to '0'. If FOR\_MUX\_OPTION is equal  
 33 to 1 or 2, the base station shall set RESERVED to '0000'.  
 34 If the Forward Fundamental Channel configuration is not  
 35 specified in this record, then the base station shall set  
 36 this field to 0.

37 REV\_NUM\_BITS - Set of number of bits per frame of the Reverse Fundamental  
 38 Channel.

39 The mobile station shall set this field as follows:

40 The mobile station shall use the Reverse Fundamental  
 41 Channel transmission set of number of bits per frame  
 42 specified in 2.7.4.28 for the specified Reverse Traffic  
 43 Channel multiplex option.

1 For a *Status Response Message*, the mobile station shall  
 2 set the subfields corresponding to the Reverse Traffic  
 3 Channel transmission set of number of bits per frame of  
 4 the current service configuration to '1', and shall set the  
 5 remaining subfields to '0'. If REV\_MUX\_OPTION is equal  
 6 to 1 or 2, the mobile station shall set RESERVED to  
 7 '0000'.

8 For a *Service Request Message* and a *Service Response*  
 9 *Message*, the mobile station shall set the subfields  
 10 corresponding to the Reverse Traffic Channel  
 11 transmission set of number of bits per frame of the  
 12 proposed service configuration to '1', and shall set the  
 13 remaining subfields to '0'. If REV\_MUX\_OPTION is equal  
 14 to 1 or 2, the mobile station shall set RESERVED to  
 15 '0000'.

16 The base station shall set this field as follows:

17 The base station shall set this field to the Reverse  
 18 Fundamental Channel transmission set of number of bits  
 19 per frame specified in 2.7.4.28 for the specified Reverse  
 20 Traffic Channel multiplex option.

21 For a *Service Request Message* or a *Service Response*  
 22 *Message*, the base station shall set the subfields  
 23 corresponding to the Reverse Fundamental Channel  
 24 transmission set of number of bits per frame of the  
 25 proposed service configuration to '1', and shall set the  
 26 remaining subfields to '0'. If REV\_MUX\_OPTION is equal  
 27 to 1 or 2, the base station shall set RESERVED to '0000'.

28 For a *Service Connect Message*, *General Handoff Direction*  
 29 *Message*, and a *Universal Handoff Direction Message*, the  
 30 base station shall set the subfields corresponding to the  
 31 Reverse Fundamental Channel transmission set of  
 32 number of bits per frame of the actual service  
 33 configuration to be used to '1', and shall set the  
 34 remaining subfields to '0'. If REV\_MUX\_OPTION is equal  
 35 to 1 or 2, the base station shall set RESERVED to '0000'.

36 NUM\_CON\_REC - Number of service option connection records.

37 The mobile station shall set this field as follows:

38 The mobile station shall set this field to the number of  
 39 service option connection records included in the  
 40 message.

41 The base station shall set this field as follows:

42 The base station shall set this field to the number of  
 43 service option connection records included in the  
 44 message.

For a *Status Response Message*, the mobile station shall include one occurrence of the following variable-length record for each service option connection of the current service configuration. For a *Service Request Message* and a *Service Response Message*, the mobile station shall include one occurrence of the following variable-length record for each service option connection of the proposed service configuration.

For a *Service Request Message* or a *Service Response Message*, the base station shall include one occurrence of the following variable-length record for each service option connection of the proposed service configuration.

For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall include one occurrence of the following variable-length record for each service option connection of the actual service configuration to be used.

RECORD\_LEN - Service option connection record length.

The mobile station shall set this field as follows:

The mobile station shall set this field to the number of octets included in this service option connection record including this field.

The base station shall set this field as follows:

The base station shall set this field to the number of octets included in this service option connection record including this field.

CON\_REF - Service option connection reference.

The mobile station shall set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the service option connection reference.

For a *Service Request Message* and a *Service Response Message*, if the service option connection is part of the current service configuration, the mobile station shall set this field to the service option connection reference; otherwise, the mobile station shall set this field to '00000000'.

The base station shall set this field as follows:

For a *Service Request Message* or a *Service Response Message*: if the service option connection is part of the current service configuration, the base station shall set this field to the service option connection reference; otherwise, the base station shall set this field to '00000000'.

1 For a *Service Connect Message*, *General Handoff Direction*  
2 *Message*, and a *Universal Handoff Direction Message*, the  
3 base station shall set this field to the service option  
4 connection reference assigned to the service option  
5 connection.

6 SERVICE\_OPTION - Service option.

7 The mobile station shall set this field as follows:

8 For a *Status Response Message*, the mobile station shall  
9 set this field to the service option in use with the service  
10 option connection.

11 For a *Service Request Message* and a *Service Response*  
12 *Message*, the mobile station shall set this field to the  
13 service option to be used with the service option  
14 connection.

15 The base station shall set this field as follows:

16 The base station shall set this field to the service option to  
17 be used with the service option connection.

18       FOR\_TRAFFIC     -   Forward Traffic Channel traffic type.

19 The mobile station shall set this field as follows:

For a *Status Response Message*, the mobile station shall set this field to the FOR\_TRAFFIC code shown in Table 3.7.5.7-1 corresponding to the Forward Traffic Channel traffic type in use with the service option connection.

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the FOR\_TRAFFIC code shown in Table 3.7.5.7-1 corresponding to the Forward Traffic Channel traffic type to be used with the service option connection.

30 The base station shall set this field as follows:

31 The base station shall set this field to the FOR\_TRAFFIC  
32 code shown in Table 3.7.5.7-1 corresponding to the  
33 Forward Traffic Channel traffic type to be used with the  
34 service option connection.

1

**Table 3.7.5.7-1. FOR\_TRAFFIC Codes**

<b>FOR_TRAFFIC (binary)</b>	<b>Description</b>
0000	The service option connection does not use Forward Traffic Channel traffic.
0001	The service option connection uses primary traffic on the Forward Traffic Channel.
0010	The service option connection uses secondary traffic on the Forward Traffic Channel.
0011	The service option connection uses signaling traffic on the Forward Traffic Channel.
0100	The service option connection uses the Forward Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other FOR_TRAFFIC codes are reserved.	

2

3

REV\_TRAFFIC - Reverse Traffic Channel traffic type.

4

The mobile station shall set this field as follows:

5

6

7

8

9

For a *Status Response Message*, the mobile station shall set this field to the REV\_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type in use with the service option connection.

10

11

12

13

14

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the REV\_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type to be used with the service option connection.

15

The base station shall set this field as follows:

16

17

18

19

20

The base station shall set this field to the REV\_TRAFFIC code shown in Table 3.7.5.7-2 corresponding to the Reverse Traffic Channel traffic type to be used with the service option connection.

1

**Table 3.7.5.7-2. REV\_TRAFFIC Codes**

<b>REV_TRAFFIC (binary)</b>	<b>Description</b>
0000	The service option connection does not use Reverse Traffic Channel traffic.
0001	The service option connection uses primary traffic on the Reverse Traffic Channel.
0010	The service option connection uses secondary traffic on the Reverse Traffic Channel.
0011	The service option connection uses signaling traffic on the Reverse Traffic Channel.
0100	The service option connection uses the Reverse Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other REV_TRAFFIC codes are reserved.	

2

3 UI\_ENCRYPT\_MODE - Encryption mode indicator for user information privacy.

4

The mobile station shall set this field as follows:

5

For a *Status Response Message*, the mobile station shall set this field to indicate the current user information encryption mode as shown in Table 3.7.5.7-3.

6

7

8

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to indicate the proposed user information encryption mode as shown in Table 3.7.5.7-3.

9

10

11

12

The base station shall set this field as follows:

13

For a *Service Request Message* or a *Service Response Message*: the base station shall set this field to the proposed user information encryption mode, as shown in Table 3.7.5.7-3.

14

15

16

17

For a *Service Connect Message*, *General Handoff Direction Message*, and a *Universal Handoff Direction Message*, the base station shall set this field to the assigned user information encryption mode, as shown in Table 3.7.5.7-3.

18

19

20

21

1

**Table 3.7.5.7-3. User information Encryption Modes**

<b>UI_ENCRYPT_MODE Field (binary)</b>	<b>Encryption Mode Used</b>
000	User information Encryption disabled
001	User information Encryption with ORYX encryption algorithm enabled (not applicable to voice service option). Encryption procedures specified in the service option standard shall be performed.
010	<p>If P_REV_IN_USE is less than nine, this value indicates that User information Encryption uses the Rijndael encryption algorithm. Encryption procedures defined in 2.3.12.4.2.1 shall be performed.</p> <p>If P_REV_IN_USE is greater than or equal to nine, this value indicates that User information Encryption uses the Rijndael encryption algorithm. Encryption procedures defined in the corresponding service option specification shall be performed. (Encryption of voice service option is defined in this document).</p>
011- 111	Reserved

2                   SR\_ID    –   Service reference identifier.

3                                   The mobile station shall set this field as follows:

4                                   For a *Status Response Message*, the mobile station shall  
5                                   set this field to the service reference identifier in use.

6                                   For a *Service Request Message* and a *Service Response*  
7                                   *Message*, the mobile station shall set this field as follows:

If the service option connection is a part of the current service configuration, the mobile station shall set this field to the service reference identifier in use.

If the service option connection is not a part of the current service configuration, the mobile station shall perform the following:

- If this service option connection request is initiated by the base station, the mobile station shall set this field to the value sent by the base station.
- If this service option connection request is initiated by the mobile station, the mobile station shall perform the following: if the service instance provides a service reference identifier, the mobile station shall set this field to the service reference identifier specified by the service instance; otherwise, the mobile station shall set this field to the smallest unused service reference identifier value between 1 and 6 inclusive.

The base station shall set this field as follows:

For a *Service Request Message*, a *Service Response Message*, a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall set this field as follows:

If the service option connection is a part of the current service configuration, the base station shall set this field to the service reference identifier in use.

If the service option connection is not a part of the current service configuration, the base station shall perform the following:

- If this service option connection request is initiated by the mobile station, the base station shall set this field to the value sent by the mobile station.
- If this service option connection request is initiated by the base station, the base station shall perform the following: if the service instance provides a service reference identifier, the base station shall set this field to the service reference identifier specified by the service instance; otherwise, the base station shall set this field to the highest unused service reference identifier value between 1 and 6 inclusive.

RLP\_INFO\_INCL - RLP information included indicator.

The mobile station shall set this field as follows:

The mobile station shall set this field to '1' if the RLP\_BLOB field is included in this record; otherwise, it shall set this field to '0'.

1                               The base station shall set this field as follows:

2                               The base station shall set this field to '1' if the RLP\_BLOB

3                               field is included in this record; otherwise, it shall set this

4                               field to '0'.

5               RLP\_BLOB\_LEN   -   RLP information block of bits length.

6                               The mobile station shall set this field as follows:

7                               If the RLP\_INFO\_INCL field is set to '0', the mobile station

8                               shall omit this field; otherwise, it shall include this field

9                               and set it as follows:

10                              The mobile station shall set this field to the size of the

11                              RLP\_BLOB field in integer number of octets.

12                              The base station shall set this field as follows:

13                              If the RLP\_INFO\_INCL field is set to '0', the base station

14                              shall omit this field; otherwise, it shall include this field

15                              and set it as follows:

16                              The base station shall set this field to the size of the

17                              RLP\_BLOB field in integer number of octets.

18               RLP\_BLOB       -   Radio Link Protocol block of bits.

19                              The mobile station shall set this field as follows:

20                              If the RLP\_INFO\_INCL field is set to '0', the mobile station

21                              shall omit this field; otherwise, the mobile station shall

22                              include this field and set it as follows:

23                              For a *Status Response Message*, the mobile station shall

24                              set this field to the Radio Link Protocol block of bits for

25                              this service option connection.

26                              For a *Service Request Message* or *Service Response*

27                              *Message*, the mobile station shall set this field to the

28                              proposed Radio Link Protocol block of bits for this service

29                              option connection, and shall add '0' bits to the end of the

30                              field as needed in order to make the length of this field

31                              equal to an integer number of octets.

32                              The base station shall set this field as follows:

1 If the RLP\_INFO\_INCL field is set to '0', the base station  
2 shall omit this field; otherwise, the base station shall  
3 include this field and set it as follows:

4                   The base station shall set this field to the Radio Link  
5                   Protocol block of bits for this service option connection,  
6                   and shall add '0' bits to the end of the field as needed in  
7                   order to make the length of this field equal to an integer  
8                   number of octets.

9 QOS\_PARMS\_INCL - Presence indicator for the QoS parameters.

10 The mobile station shall set this field as follows:

11           The mobile station shall set this field to '1', if  
12           QOS\_PARMS field is included in the record; otherwise the  
13           base station shall set this field to '0'.

14 The base station shall set this field as follows:

15                   The base station shall set this field to '1', if QOS\_PARMS  
16                   field is included in the record; otherwise, the base station  
17                   shall set this field to '0'.

18      QOS\_PARMS\_LEN      -      Length of the block of QoS parameters.

19 The mobile station shall set this field as follows:

20 If QOS\_PARMS\_INCL is set to '1', the mobile station shall  
21 set this field to the combined length in octets, of the  
22 QOS\_PARMS field and the immediately following  
23 QOS\_RESERVED field; otherwise, the mobile station shall  
24 omit this field.

25 The base station shall set this field as follows:

26 If QOS\_PARMS\_INCL is set to '1', the base station shall  
27 set this field to the combined length in octets, of the  
28 QOS\_PARMS field and the immediately following  
29 QOS\_RESERVED field; otherwise, the base station shall  
30 omit this field.

31            QOS\_PARMS     -    QoS parameters block.

32 The mobile station shall set this field as follows:

33 If QOS\_PARMS\_INCL is set to '1', the mobile station shall  
34 include this field in the record as follows:

35 For a *Status Response Message*, the mobile station shall  
36 set this field to the set of QoS parameters configured for  
37 this service option connection.

1			For a <i>Service Request Message</i> or <i>Service Response Message</i> , the mobile station shall set this field to the set
2			of QoS parameters requested for the respective
3			connection.
4			
5			The base station shall set this field as follows:
6			If QOS_PARMS_INCL is set to '1', the base station shall
7			include this field in the record and set it to the set of QoS
8			parameters requested or required for the respective
9			connection.
10	QOS_RESERVED	-	Padding bits.
11			The mobile station shall set this field as follows:
12			If QOS_PARMS_INCL is set to '1', the mobile station shall
13			include the minimum number of '0' bits necessary to
14			ensure that the combined length of the QOS_PARMS field
15			and of this field is an integer number of octets; otherwise,
16			the mobile station shall omit this field.
17			The base station shall set this field as follows:
18			If QOS_PARMS_INCL is set to '1', the base station shall
19			include the minimum number of '0' bits necessary to
20			ensure that the combined length of the QOS_PARMS field
21			and of this field is an integer number of octets; otherwise,
22			the base station shall omit this field.
23	RESERVED	-	Reserved bits.
24			The mobile station shall set this field as follows:
25			The mobile station shall add reserved bits as needed in
26			order to make the length of the entire record equal to an
27			integer number of octets. The mobile station shall set
28			these bits to '0'.
29			The base station shall set this field as follows:
30			The base station shall add reserved bits as needed in
31			order to make the length of this record equal to an integer
32			number of octets. The base station shall set these bits to
33			'0'.
34	FCH_CC_INCL	-	Channel configuration for the Fundamental Channel
35			included indicator.
36			The mobile station shall set this field as follows:

1                   The mobile station shall set this field to '1', if  
 2                   Fundamental Channel Configuration information is  
 3                   included in the record; otherwise, the mobile station shall  
 4                   set this field to '0' to indicate the current values of  
 5                   Channel configuration for the Fundamental Channel are  
 6                   to be used.

7                   The base station shall set this field as follows:

8                   The base station shall set this field to '1', if the channel  
 9                   configuration information for the Fundamental Channel is  
 10                  included in this Service Configuration Record; otherwise,  
 11                  the base station shall set this field to '0' to indicate the  
 12                  current values of Channel configuration for the  
 13                  Fundamental Channel are to be used.

14       FCH\_FRAME\_SIZE   -   Fundamental Channel frame size supported indicator.

15                  The mobile station shall set this field as follows:

16                  If FCH\_CC\_INCL field is set to '1', the mobile station shall  
 17                  include this field and set it as described below; otherwise,  
 18                  the mobile station shall omit this field.

19                  For a *Status Response Message*, the mobile station shall  
 20                  set this field to '1', if the 5ms frame size is used in the  
 21                  Forward Fundamental Channel (if specified in this record)  
 22                  and Reverse Fundamental Channel, in addition to the  
 23                  20ms frame size, for the current service configuration;  
 24                  otherwise, the mobile station shall set this field to '0'.

25                  For a *Service Request Message* or a *Service Response*  
 26                  *Message*, the mobile station shall set this field to '1' if the  
 27                  5 ms frame size is used in the Forward Fundamental  
 28                  Channel (if specified in this record) and Reverse  
 29                  Fundamental Channel, in addition to the 20 ms frame  
 30                  size, for the proposed service configuration; otherwise the  
 31                  mobile station shall set this field to '0'

32                  The base station shall set this field as follows:

33                  If the FCH\_CC\_INCL field is set to '0', the base station  
 34                  shall omit this field; otherwise, the base station shall  
 35                  include this field and set it as follows:

36                  The base station shall set this field to '1' if the service  
 37                  configuration includes the use of 5 ms frame size in  
 38                  addition to 20ms frame size for the Forward Fundamental  
 39                  Channel (if specified in this record) and Reverse  
 40                  Fundamental Channel; otherwise, the base station shall  
 41                  set this field to '0'.

42       FOR\_FCH\_RC       -   Forward Fundamental Channel Radio Configuration.

43                  The mobile station shall set this field as follows:

If FCH\_CC\_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set this field to the Forward Fundamental Channel Radio Configuration (see [2]) for the current service configuration. If the Forward Fundamental Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

For a *Service Request Message* or *Service Response Message*, the mobile station shall set this field to the Forward Fundamental Channel Radio Configuration for the proposed service configuration. If the Forward Fundamental Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

The base station shall set this field as follows:

If the FCH\_CC\_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

For a *Service Request Message* or a *Service Response Message*, the base station shall set this field to the Forward Fundamental Channel Radio Configuration (see [2]) in the proposed service configuration. If the Forward Fundamental Channel configuration is not specified in this record, then the base station shall set this field to 0.

For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall set this field to the actual Forward Fundamental Channel Radio Configuration to be used. If the Forward Fundamental Channel configuration is not specified in this record, then the base station shall set this field to 0.

REV\_FCH\_RC - Reverse Fundamental Channel Radio Configuration.

The mobile station shall set this field as follows:

If FCH\_CC\_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set field to the Reverse Fundamental Channel Radio Configuration (see [2]) for the current service configuration.

For a *Service Request Message* or a *Service Response Message*, the mobile station shall set this field to the Reverse Fundamental Channel Radio Configuration for the proposed service configuration.

1 The base station shall set this field as follows:

2 If the FCH\_CC\_INCL field is set to '0', the base station  
3 shall omit this field; otherwise, the base station shall  
4 include this field and set it as follows:

5 For a *Service Request Message* or a *Service Response*  
6 *Message*, the base station shall set this field to the  
7 Reverse Fundamental Channel Radio Configuration (see  
8 [2]) in the proposed service configuration.

9 For a *Service Connect Message*, a *General Handoff*  
10 *Direction Message*, or a *Universal Handoff Direction*  
11 *Message*, the base station shall set this field to the actual  
12 Reverse Fundamental Channel Radio Configuration to be  
13 used.

14 DCCH\_CC\_INCL - Channel configuration for the Dedicated Control Channel  
15 included indicator.

16 The mobile station shall set this field as follows:

17 The mobile station shall set this field to '1', if DCCH  
18 channel configuration information is included in this  
19 record; otherwise, the mobile station shall set this field to  
20 '0' to indicate the current values of Channel configuration  
21 for the Dedicated Control Channel are to be used.

22 The base station shall set this field as follows:

23 The base station shall set this field to '1', if channel  
24 configuration information for the Dedicated Control  
25 Channel is included in this Service Configuration Record;  
26 otherwise, the base station shall set this field to '0' to  
27 indicate the current values of Channel configuration for  
28 the Dedicated Control Channel are to be used.

29 DCCH\_FRAME\_SIZE - Dedicated Control Channel frame size.

30 The mobile station shall set this field as follows:

31 If DCCH\_CC\_INCL field is set to '1', the mobile station  
32 shall include this field and set it as described below;  
33 otherwise, the mobile station shall omit this field.

34 For a *Status Response Message*, the mobile station shall  
35 set this field to the frame size, as defined in Table 3.7.5.7-  
36 4, for the current service configuration.

37 For a *Service Request Message* or a *Service Response*  
38 *Message*, the mobile station shall set this field to the  
39 frame size, as defined in Table 3.7.5.7-4, for the proposed  
40 service configuration.

41 The base station shall set this field as follows:

If the DCCH\_CC\_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it according to the Table 3.7.5.7-4 as follows:

For a *Service Connect Message*, a *General Handoff Direction Message*, or a *Universal Handoff Direction Message*, the base station shall set this field to the Dedicated Control Channel frame size(s) for the actual service configuration.

For a *Service Request Message* or a *Service Response Message*, the base station shall set this field to the Dedicated Control Channel frame size(s) for the proposed service configuration.

**Table 3.7.5.7-4. DCCH Frame Size**

<b>DCCH_FRAME_SIZE (binary)</b>	<b>Description</b>
00	Reserved
01	20 ms frame size only
10	5 ms frame size only
11	Both 5 ms and 20 ms frame sizes

FOR\_DCCH\_RC - Forward Dedicated Control Channel Radio Configuration.

The mobile station shall set this field as follows:

If DCCH\_CC\_INCL field is set to '1', the mobile station shall include this field and set it as described below; otherwise, the mobile station shall omit this field.

For a *Status Response Message*, the mobile station shall set this field to the Forward Dedicated Control Channel Radio Configuration (see [2]) for the current service configuration. If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

For a *Service Request Message* or a *Service Response Message*, the mobile station shall set this field to the Forward Dedicated Control Channel Radio Configuration for the proposed service configuration. If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

The base station shall set this field as follows:

1			If the DCCH_CC_INCL field is set to '0', the base station
2			shall omit this field; otherwise, the base station shall
3			include this field and set it as follows:
4			For a <i>Service Connect Message</i> , a <i>General Handoff</i>
5			<i>Direction Message</i> , or a <i>Universal Handoff Direction</i>
6			<i>Message</i> , the base station shall set this field to the actual
7			Forward Dedicated Control Channel Radio Configuration
8			to be used (see [2]). If the Forward Dedicated Control
9			Channel configuration is not specified in this record, then
10			the mobile station shall set this field to 0.
11			For a <i>Service Request Message</i> or a <i>Service Response</i>
12			<i>Message</i> , the base station shall set this field to the
13			Forward Dedicated Control Channel Radio Configuration
14			in the proposed service configuration. If the Forward
15			Dedicated Control Channel configuration is not specified
16			in this record, then the base station shall set this field to
17			0.
18	REV_DCCH_RC	-	Reverse Dedicated Control Channel Radio Configuration.
19			The mobile station shall set this field as follows:
20			If DCCH_CC_INCL field is set to '1', the mobile station
21			shall include this field and set it as described below;
22			otherwise, the mobile station shall omit this field.
23			For a <i>Status Response Message</i> , the mobile station shall
24			set this field to the Reverse Dedicated Control Channel
25			Radio Configuration (see [2]) for the current service
26			configuration.
27			For a <i>Service Request Message</i> or a <i>Service Response</i>
28			<i>Message</i> , the mobile station shall set this field to the
29			Reverse Dedicated Control Channel Radio Configuration
30			for the proposed service configuration.
31			The base station shall set this field as follows:
32			If the DCCH_CC_INCL field is set to '0', the base station
33			shall omit this field; otherwise, the base station shall
34			include this field and set it as follows:
35			For a <i>Service Connect Message</i> , a <i>General Handoff</i>
36			<i>Direction Message</i> , or a <i>Universal Handoff Direction</i>
37			<i>Message</i> , the base station shall set this field to the actual
38			Reverse Dedicated Control Channel Radio Configuration
39			to be used (see [2]).
40			For a <i>Service Request Message</i> or a <i>Service Response</i>
41			<i>Message</i> , the base station shall set this field to the
42			Reverse Dedicated Control Channel Radio Configuration
43			for the proposed service configuration.
44	FOR_SCH_CC_INCL	-	Channel configuration for the Forward Supplemental
45			Channel included indicator.

1 The mobile station shall set this field as follows:

2 The mobile station shall set this field to '1', if the Forward  
3 Supplemental Channel Configuration information is  
4 included; otherwise, the mobile station shall set this field  
5 to '0' to indicate the current values of Channel  
6 configuration for the Forward Supplemental Channel are  
7 to be used.

8 The base station shall set this field as follows:

9 The base station shall set this field to '1', if the channel  
10 configuration information for the Forward Supplemental  
11 Channel is included in this Service Configuration Record;  
12 otherwise, the base station shall set this field to '0' to  
13 indicate the current values of Channel configuration for  
14 the Forward Supplemental Channel are to be used.

15 NUM\_FOR\_SCH - Number of Forward Supplemental Channels.

16 The mobile station shall set this field as follows:

17 If FOR\_SCH\_CC\_INCL field is set to '1', the mobile station  
18 shall include this field and set it as describe below;  
19 otherwise, the mobile station shall omit this field.

20 For a *Status Response Message*, the mobile station shall  
21 set this field to the number of Forward Supplemental  
22 Channels for the current service configuration and  
23 include one occurrence of the following three-field SCH  
24 record for each Supplemental Channel Configuration.

25 For a *Service Request Message* or a *Service Response*  
26 *Message*, the mobile station shall set this field to the  
27 number of Forward Supplemental Channels for the  
28 proposed service configuration and include one  
29 occurrence of the following three-field SCH record for  
30 each Supplemental Channel Configuration.

31 The base station shall set this field as follows:

32 If the FOR\_SCH\_CC\_INCL field is set to '0', the base  
33 station shall omit this field; otherwise, the base station  
34 shall set this field to the number of Forward  
35 Supplemental Channels associated with this service  
36 configuration.

37 If the FOR\_SCH\_CC\_INCL field is set to '1', the base  
38 station shall not set this field to '00'.

39 If the NUM\_FOR\_SCH field is present, the base station shall include one occurrence of the  
40 following three-field record for each Forward Supplemental Channel included in this  
41 record:

42 FOR\_SCH\_ID - Forward Supplemental Channel Identification

1 The mobile station shall set this field as follows:

2 The mobile station shall set this field to the identification  
3 of the Supplemental Channel included in this Forward  
4 Supplemental Channel Configuration record.

5 The mobile station shall set this field to the Supplemental  
6 Channel identifier, shown in Table 3.7.5.7-5.

7 **Table 3.7.5.7-5. SCH Identifier**

<b>FOR_SCH_ID REV_SCH_ID (binary)</b>	<b>Description</b>
00	Supplemental Channel 0
01	Supplemental Channel 1
10-11	Reserved

8 The base station shall set this field as follows:

9 The base station shall set this field to the identifier of the  
10 Forward Supplemental Channel pertaining to this record.

11 The base station shall set this field to the Supplemental  
12 Channel identifier, shown in Table 3.7.5.7-5.

13

14 **FOR\_SCH\_MUX** - Forward Supplemental Channel Multiplex Option.

15 The mobile station shall set this field as follows:

16 The mobile station shall set this field to the Multiplex  
17 Option associated with the maximum data rate for this  
18 Forward Supplemental Channel (see [3]).

19 The base station shall set this field as follows:

20 The base station shall set this field to the Multiplex  
21 Option associated with the maximum data rate for this  
22 Forward Supplemental Channel (see [3]).

23 **SCH\_CC\_Type-specific field** - Supplemental Channel Configuration Information.

24 The mobile station shall set this field as follows:

25 The mobile station shall set this field to the subfields of  
26 the Channel Configuration record defined in 3.7.5.7.1, for  
27 this Forward Supplemental Channel included in the  
28 service configuration.

29 The base station shall set this field as follows:

1			The base station shall set this field as defined in 3.7.5.7.1
2			for this Forward Supplemental Channel.
3	REV_SCH_CC_INCL	-	Channel configuration for the Reverse Supplemental Channel
4			included indicator.
5			The mobile station shall set this field as follows:
6			The mobile station shall set this field to '1', if the Reverse
7			Supplemental Channel Configuration information is
8			included; otherwise, the mobile station shall set this field
9			to '0' to indicate the current values of Channel
10			configuration for the Reverse Supplemental Channel are
11			to be used.
12			The base station shall set this field as follows:
13			The base station shall set this field to '1' if the channel
14			configuration information for the Reverse Supplemental
15			Channel is included in this service configuration record;
16			otherwise, the base station shall set this field to '0' to
17			indicate the current values of Channel configuration for
18			the Reverse Supplemental Channel are to be used.
19	NUM_REV_SCH	-	Number of Reverse Supplemental Channels.
20			The mobile station shall set this field as follows:
21			If REV_SCH_CC_INCL field is set to '1', the mobile station
22			shall include this field and set it as described below;
23			otherwise, the mobile station shall omit this field.
24			For a <i>Status Response Message</i> , the mobile station shall
25			set this field to the number of Reverse Supplemental
26			Channels for the current service configuration and
27			include one occurrence of the following three-field record
28			for each reverse Supplemental Channel Configuration.
29			For a <i>Service Request Message</i> or a <i>Service Response</i>
30			<i>Message</i> , the mobile station shall set this field to the
31			number of Reverse Supplemental Channels for the
32			proposed service configuration and include one
33			occurrence of the following three-field record for each
34			reverse Supplemental Channel Configuration.
35			The base station shall set this field as follows:
36			If the REV_SCH_CC_INCL field is set to '0', the base
37			station shall omit this field; otherwise, the base station
38			shall set this field to the number of Reverse Supplemental
39			Channels associated with this service configuration.
40			If the REV_SCH_CC_INCL field is set to '1', the base
41			station shall not set this field to '00'.

If the NUM\_REV\_SCH field is present, the base station shall include one occurrence of the following three-field record for each Reverse Supplemental Channel included in this record:

REV\_SCH\_ID - Reverse Supplemental Channel Identification

The mobile station shall set this field as follows:

The mobile station shall set this field to the identifier of the Supplemental Channel included in this Reverse Supplemental Channel Configuration record.

The mobile station shall set this field to the Supplemental Channel identifier, shown in Table 3.7.5.7-5.

The base station shall set this field as follows:

The base station shall set this field to the identifier of the Reverse Supplemental Channel pertaining to this record.

The base station shall set this field to the Supplemental Channel identifier, shown in Table 3.7.5.7-5.

REV\_SCH\_MUX - Reverse Supplemental Channel Multiplex Option

The mobile station shall set this field as follows:

The mobile station shall set this field to the Multiplex Option associated with the maximum data rate for this Reverse Supplemental Channel (see [3]).

The base station shall set this field as follows:

The base station shall set this field to the Multiplex Option associated with the maximum data rate for this Reverse Supplemental Channel (see [3]).

SCH\_CC\_Type-specific field - Supplemental Channel Configuration Information.

The mobile station shall set this field as follows:

The mobile station shall set this field to the subfields of the Channel Configuration record defined in 3.7.5.7.1, for this Reverse Supplemental Channel included in the service configuration.

The base station shall set this field as follows:

The base station shall set this field as defined in 3.7.5.7.1 for this Reverse Supplemental Channel.

FCH\_DCCH\_MUX\_OPTION\_IND - FCH and DCCH Multiplex Option Indicator

The mobile station shall set this field according to Table 3.7.5.7-6.

The base station shall set this field according to Table 3.7.5.7-6.

**Table 3.7.5.7-6. FCH\_DCCH\_MUX\_OPTION\_IND USAGE**

<b>FCH_DCCH_MUX_OPTION_IND</b>	<b>Description</b>
00	FOR_MUX_OPTION applies to both the Forward Fundamental Channel and the Forward Dedicated Control Channel (if specified in this record), and REV_MUX_OPTION applies to both the Reverse Fundamental Channel and the Reverse Dedicated Control Channel
01	FOR_MUX_OPTION applies only to the Forward Fundamental Channel (if specified in this record), and REV_MUX_OPTION applies only to the Reverse Fundamental Channel.
10	FOR_MUX_OPTION applies only to the Forward Dedicated Control Channel (if specified in this record), and REV_MUX_OPTION applies only to the Reverse Dedicated Control Channel.
11	FOR_MUX_OPTION applies only to the Forward Fundamental Channel, and REV_MUX_OPTION applies only to the Reverse Fundamental Channel.  FOR_DCCH_MUX_OPTION is included for the Forward Dedicated Control Channel (if specified in this record), and REV_DCCH_MUX_OPTION is included for the Reverse Dedicated Control Channel.

**FOR\_DCCH\_MUX\_OPTION** – Forward DCCH Multiplex Option.

If FCH\_DCCH\_MUX\_OPTION\_IND is set to a value other than '11', the mobile station shall omit this field; otherwise, the mobile station shall include this field and set as follows:

For a *Status Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Dedicated Control Channel (e.g., 1 corresponds to Multiplex Option 1). If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

For a *Service Request Message* and a *Service Response Message*, the mobile station shall set this field to the number of the multiplex option for the Forward Dedicated Control Channel. If the Forward Dedicated Control Channel configuration is not specified in this record, then the mobile station shall set this field to 0.

If FCH\_DCCH\_MUX\_OPTION\_IND is set to a value other than '11', the base station shall omit this field; otherwise, the base station shall include this field and set as follows:

1 For a *Service Request Message* and a *Service Response*  
2 *Message*, the base station shall set this field to the  
3 number of the multiplex option for the Forward Dedicated  
4 Control Channel. If the Forward Dedicated Control  
5 Channel configuration is not specified in this record, then  
6 the mobile station shall set this field to 0.

7 For a *Service Connect Message*, *General Handoff Direction*  
8 *Message*, and a *Universal Handoff Direction Message*, the  
9 base station shall set this field to the number of the  
10 multiplex option for the Forward Dedicated Control  
11 Channel. If the Forward Dedicated Control Channel  
12 configuration is not specified in this record, then the base  
13 station shall set this field to 0.

14 REV\_DCCH\_MUX\_OPTION - Reverse DCCH Multiplex Option.

15 If FCH\_DCCH\_MUX\_OPTION\_IND is set to a value other than  
16 '11', the mobile station shall omit this field; otherwise, the  
17 mobile station shall include this field and set as follows:

18 For a *Status Response Message*, the mobile station shall  
19 set this field to the number of the multiplex option for the  
20 Reverse Dedicated Control Channel (e.g., 1 corresponds to  
21 Multiplex Option 1).

22 For a *Service Request Message* and a *Service Response*  
23 *Message*, the mobile station shall set this field to the  
24 number of the multiplex option for the Reverse Dedicated  
25 Control Channel.

26 If DCCH\_MUX\_OPTION\_INCL is set to a value other than '11',  
27 the base station shall omit this field; otherwise, the base  
28 station shall include this field and set as follows:

29 For a *Service Request Message* and a *Service Response*  
30 *Message*, the base station shall set this field to the  
31 number of the multiplex option for the Reverse Dedicated  
32 Control Channel.

33 For a *Service Connect Message*, *General Handoff Direction*  
34 *Message*, and a *Universal Handoff Direction Message*, the  
35 base station shall set this field to the number of the  
36 multiplex option for the Reverse Dedicated Control  
37 Channel.

38 FOR\_PDCH\_CC\_INCL - Channel configuration for the Forward Packet Data Channel  
39 included indicator.

40 The mobile station shall set this field as follows:

41 The mobile station shall set this field to '1', if channel  
42 configuration information for the Forward Packet Data  
43 Channel is included in this Service Configuration Record;  
44 otherwise, the mobile station shall set this field to '0' to  
45 indicate the current values of Channel configuration for  
46 the Forward Packet Data Channel are to be used.

1 The base station shall set this field as follows:

2 The base station shall set this field to '1', if channel

3 configuration information for the Forward Packet Data

4 Channel is included in this Service Configuration Record;

5 otherwise, the base station shall set this field to '0' to

6 indicate the current values of Channel configuration for

7 the Forward Packet Data Channel are to be used.

8 FOR\_PDCH\_MUX\_OPTION - Forward Packet Data Channel Multiplex Option.

9 The mobile station shall set this field as follows:

10 If FOR\_PDCH\_CC\_INCL is set to '0', then the mobile

11 station shall omit this field; otherwise, the mobile station

12 shall set this field to the Multiplex Option associated with

13 the Forward Packet Data Channel (see [3]).

14 The base station shall set this field as follows:

15 If FOR\_PDCH\_CC\_INCL is set to '0', then the base station

16 shall omit this field; otherwise, the base station shall set

17 this field to the Multiplex Option associated with the

18 Forward Packet Data Channel (see [3]).

19 FOR\_PDCH\_RC - Forward Packet Data Channel Radio Configuration.

20 The mobile station shall set this field as follows:

21 If FOR\_PDCH\_CC\_INCL is set to '0', then the mobile

22 station shall omit this field; otherwise, the mobile station

23 shall include this field and set it as follows:

24 For a *Status Response Message*, the mobile station shall

25 set this field to the Forward Packet Data Channel Radio

26 Configuration (see [2]) for the current service

27 configuration.

28 For a *Service Request Message* or a *Service Response*

29 *Message*, the mobile station shall set this field to the

30 Forward Packet Data Channel Radio Configuration (see

31 [2]) for the proposed service configuration.

32 The base station shall set this field as follows:

33 If FOR\_PDCH\_CC\_INCL field is set to '0', then the base

34 station shall omit this field; otherwise, the base station

35 shall include this field and set it as follows:

36 For a *Service Connect Message*, a *General Handoff*

37 *Direction Message*, or a *Universal Handoff Direction*

38 *Message*, the base station shall set this field to the actual

39 Forward Packet Data Channel Radio Configuration to be

40 used (see [2]).

1 For a *Service Request Message* or a *Service Response*  
 2 *Message*, the base station shall set this field to the Forward  
 3 Packet Data Channel Radio Configuration (see [2]) for the  
 4 proposed service configuration.

5 REV\_PDCH\_CC\_INCL - Channel configuration for the Reverse Packet Data Channel  
 6 included indicator.

7 The mobile station shall set this field as follows:

8 The mobile station shall set this field to '1', if channel  
 9 configuration information for the Reverse Packet Data  
 10 Channel is included in this Service Configuration Record;  
 11 otherwise, the mobile station shall set this field to '0' to  
 12 indicate the current values of Channel configuration for  
 13 the Reverse Packet Data Channel are to be used.

14 The base station shall set this field as follows:

15 The base station shall set this field to '1', if channel  
 16 configuration information for the Reverse Packet Data  
 17 Channel is included in this Service Configuration Record;  
 18 otherwise, the base station shall set this field to '0' to  
 19 indicate the current values of Channel configuration for  
 20 the Reverse Packet Data Channel are to be used.

21 REV\_PDCH\_MUX\_OPTION\_HIGH\_RATE - Reverse Packet Data Channel Multiplex Option  
 22 for Higher Data Rates.

23 The mobile station shall set this field as follows:

24 If REV\_PDCH\_CC\_INCL is set to '0', then the mobile  
 25 station shall omit this field; otherwise, the mobile station  
 26 shall include this field and set it as follows:

27 For a *Status Response Message*, the mobile station shall  
 28 set this field to the Multiplex Option for Higher Data  
 29 Rates associated with the Reverse Packet Data Channel  
 30 (see [3]) for the current service configuration.

31 For a *Service Request Message* or a *Service Response*  
 32 *Message*, the mobile station shall set this field to the  
 33 Multiplex Option for Higher Data Rates associated with  
 34 the Reverse Packet Data Channel (see [3]) for the  
 35 proposed service configuration.

36 The base station shall set this field as follows:

37 If REV\_PDCH\_CC\_INCL field is set to '0', then the base  
 38 station shall omit this field; otherwise, the base station  
 39 shall include this field and set it as follows:

40 For a *Service Connect Message*, a *General Handoff*  
 41 *Direction Message*, or a *Universal Handoff Direction*  
 42 *Message*, the base station shall set this field to the actual  
 43 Multiplex Option for Higher Data Rates associated with  
 44 the Reverse Packet Data Channel to be used (see [3]).

1 For a *Service Request Message* or a *Service Response*  
2 *Message*, the base station shall set this field to the  
3 Multiplex Option for Higher Data Rates associated with  
4 the Reverse Packet Data Channel (see [3]) for the  
5 proposed service configuration.

6 REV\_PDCH\_MUX\_OPTION\_LOW\_RATE - Reverse PDCH Mux Option for Lower Data Rates

7 The mobile station shall set this field as follows:

8 If REV\_PDCH\_CC\_INCL is set to '0', then the mobile  
9 station shall omit this field; otherwise, the mobile station  
10 shall include this field and set it as follows:

11 This field shall be set to 0x1, 0x1301, or 0x1305.

12 For a *Status Response Message*, the mobile station shall  
13 set this field to the Multiplex Option for Lower Data Rates  
14 associated with the Reverse Packet Data Channel (see [3])  
15 for the current service configuration.

16 For a *Service Request Message* or a *Service Response*  
17 *Message*, the mobile station shall set this field to the  
18 Multiplex Option for Lower Data Rates associated with the  
19 Reverse Packet Data Channel (see [3]) for the proposed  
20 service configuration

21 The base station shall set this field as follows:

22 If REV\_PDCH\_CC\_INCL field is set to '0', then the base  
23 station shall omit this field; otherwise, the base station  
24 shall include this field and set it as follows:

25 For a *Service Connect Message*, a *General Handoff*  
26 *Direction Message*, or a *Universal Handoff Direction*  
27 *Message*, the base station shall set this field to the actual  
28 Multiplex Option for Lower Data Rates associated with the  
29 Reverse Packet Data Channel to be used (see [3])

30 For a *Service Request Message* or a *Service Response*  
31 *Message*, the base station shall set this field to the  
32 Multiplex Option for Lower Data Rates associated with the  
33 Reverse Packet Data Channel (see [3]) for the proposed  
34 service configuration.

35 REV\_PDCH\_RC - Reverse Packet Data Channel Radio Configuration.

36 The mobile station shall set this field as follows:

37 If REV\_PDCH\_CC\_INCL is set to '0', then the mobile  
38 station shall omit this field; otherwise, the mobile station  
39 shall include this field and set it as follows:

1			For a <i>Status Response Message</i> , the mobile station shall
2			set this field to the Reverse Packet Data Channel Radio
3			Configuration (see [2]) for the current service
4			configuration.
5			For a <i>Service Request Message</i> or a <i>Service Response</i>
6			<i>Message</i> , the mobile station shall set this field to the
7			Reverse Packet Data Channel Radio Configuration (see
8			[2]) for the proposed service configuration.
9			The base station shall set this field as follows:
10			If REV_PDCH_CC_INCL field is set to '0', then the base
11			station shall omit this field; otherwise, the base station
12			shall include this field and set it as follows:
13			For a <i>Service Connect Message</i> , a <i>General Handoff</i>
14			<i>Direction Message</i> , or a <i>Universal Handoff Direction</i>
15			<i>Message</i> , the base station shall set this field to the actual
16			Reverse Packet Data Channel Radio Configuration to be
17			used (see [2]).
18			For a <i>Service Request Message</i> or a <i>Service Response</i>
19			<i>Message</i> , the base station shall set this field to the
20			Reverse Packet Data Channel Radio Configuration (see
21			[2]) for the proposed service configuration.
22	RESERVED	-	Reserved bits.
23			The mobile station shall set this field as follows:
24			The mobile station shall add reserved bits as needed in
25			order to make the length of the entire information record
26			equal to an integer number of octets. The mobile station
27			shall set these bits to '0'.
28			The base station shall set this field as follows:
29			The base station shall add reserved bits as needed in
30			order to make the length of the entire message equal to an
31			integer number of octets. The base station shall set these
32			bits to '0'.
33			

### 3.7.5.7.1 Channel Configuration for the Supplemental Channel

The channel configuration information for the Supplemental Channel consists of the following subfields:

Subfields	Length (bits)
SCH_REC_LEN	4
SCH_RC	5
CODING	1
FRAME_40_USED	1
FRAME_80_USED	1
MAX_RATE	4

**SCH\_REC\_LEN** - Supplemental Channel channel configuration record length.  
The mobile station or base station shall set this field to the number of octets included in this Supplemental Channel channel configuration record including this SCH\_REC\_LEN field.

**SCH\_RC** - Supplemental Channel Radio Configuration.  
The mobile station or base station shall set this field to the Radio Configuration for this Supplemental Channel. Radio Configurations are defined in [2].

**CODING** - Coding type.  
The mobile station or base station shall set this field to '1' if the mobile station or the base station is to use Convolutional Coding when the number of channel bits per frame is less than 360 and Turbo Coding when the number of channel bits per frame is equal to or greater than 360. The mobile station or base station shall set this field to '0' if the mobile station or the base station uses Convolution Coding for all block sizes.

**FRAME\_40\_USED** - 40ms frame used indicator  
The mobile station or base station shall set this field to '1' if 40ms frame is used; otherwise, the mobile station or base station shall set this field to '0'.  
If a f-dtch logical channel corresponding to the same sr\_id is mapped to both forward Supplemental Channels 0 and 1, then the mobile station or base station shall specify the same frame length for both forward Supplemental Channels 0 and 1.

1			If a r-dtch logical channel corresponding to the same sr_id is
2			mapped to both reverse Supplemental Channels 0 and 1,
3			then the mobile station or base station shall specify the same
4			frame length for both forward Supplemental Channels 0 and
5			1.
6			The base station shall not set both FRAME_40_USED and
7			FRAME_80_USED fields set to '1'.
8			
9	FRAME_80_USED	-	80ms frame used indicator.
10			The mobile station or base station shall set this field to '1' if
11			80ms frame is to be used; otherwise, the mobile station or
12			base station shall set this field to '0'.
13			If a f-dtch logical channel corresponding to the same sr_id is
14			mapped to both forward Supplemental Channels 0 and 1,
15			then the mobile station or base station shall specify the same
16			frame length for both forward Supplemental Channels 0 and
17			1.
18			If a r-dtch logical channel corresponding to the same sr_id is
19			mapped to both reverse Supplemental Channels 0 and 1,
20			then the mobile station or base station shall specify the same
21			frame length for both reverse Supplemental Channels 0 and
22			1.
23			Then the base station shall not set both FRAME_40_USED
24			and FRAME_80_USED fields set to '1'.
25	MAX_RATE	-	Maximum supplemental channel rate
26			The mobile station or base station shall set this field
27			according to Table 2.7.4.27.3-2 to indicate the maximum
28			forward or reverse supplemental channel data rate supported.
29			

## 3.7.5.8 Called Party Subaddress

This information record identifies the called party subaddress.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

EXTENSION\_BIT - The extension bit.

The base station shall set this field to '1'.

SUBADDRESS\_TYPE - Type of subaddress.

The base station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.8.

ODD/EVEN\_INDICATOR - The indicator of odd/even bits.

The base station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.8. It is only used when the type of subaddress is "User specified" and the coding is BCD.

RESERVED - Reserved bits.

The base station shall set this field to '000'.

CHAR<sub>i</sub> - Character.

The base station shall include one occurrence of this field for each character in the called party subaddress.

When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

When the SUBADDRESS\_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

### 3.7.5.9 Calling Party Subaddress

This information record identifies the calling party subaddress.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

4

5       EXTENSION\_BIT   -   The extension bit.

6                       The base station shall set this field to '1'.

7       SUBADDRESS\_TYPE   -   Type of subaddress.

8                       The base station shall set this field to the  
9       SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1  
10      corresponding to the type of the subaddress, as defined in [7],  
11      Section 4.5.10.

12      ODD/EVEN INDICATOR   -   The indicator of odd/even bits.

13                       The base station shall set this field to the  
14      ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2  
15      corresponding to the indicator of even/odd bits, as defined in  
16      [7], Section 4.5.10. It is only used when the type of  
17      subaddress is "User specified" and the coding is BCD.

18      RESERVED       -   Reserved bits.

19                       The base station shall set this field to '000'.

20                       CHAR<sub>i</sub>   -   Character.

21                       The base station shall include one occurrence of this field for  
22      each character in the calling party subaddress.

23                       When the SUBADDRESS\_TYPE field is equal to '000', the  
24      NSAP address shall be encoded using the preferred binary  
25      encoding specified in [35].

26                       When the SUBADDRESS\_TYPE field is set to '010', user-  
27      specified subaddress field is encoded according to the user  
28      specification, subject to a maximum length of 20 octets.  
29      When interworking with [36] networks, BCD coding should  
30      be applied.

31

## 3.7.5.10 Connected Subaddress

This information record identifies the subaddress of the responding party.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

EXTENSION\_BIT - The extension bit.

The base station shall set this field to '1'.

SUBADDRESS\_TYPE - Type of subaddress.

The base station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [7], Section 4.5.14.

ODD/EVEN INDICATOR - The indicator of odd/even bits.

The base station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [7], Section 4.5.14. It is only used when the type of subaddress is "User specified" and the coding is BCD.

RESERVED - Reserved bits.

The base station shall set this field to '000'.

CHAR<sub>i</sub> - Character.

The base station shall include one occurrence of this field for each character in the connected subaddress.

When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

When the SUBADDRESS\_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

### 3.7.5.11 Redirecting Number

This information record identifies the Redirecting Number.

3

Type-Specific Field	Length (bits)
EXTENSION_BIT_1	1
NUMBER_TYPE	3
NUMBER_PLAN	4
EXTENSION_BIT_2	0 or 1
PI	0 or 2
RESERVED	0 or 3
SI	0 or 2
EXTENSION_BIT_3	0 or 1
RESERVED	0 or 3
REDIRECTION_REASON	0 or 4

Zero or more occurrences of the following field:

{

CHARi	8
-------	---

}

4

5 EXTENSION\_BIT\_1 - The extension bit.

6 If the PI and SI are included in this record, the base station  
7 shall set this field to '0'; otherwise, the base station shall set  
8 this field to '1'.

9 NUMBER\_TYPE - Type of number.

10 The base station shall set this field to the NUMBER\_TYPE  
11 value shown in Table 2.7.1.3.2.4-2 corresponding to the type  
12 of the redirecting number, as defined in [34].

13 NUMBER\_PLAN - Numbering plan.

14 The base station shall set this field to the NUMBER\_PLAN  
15 value shown in Table 2.7.1.3.2.4-3 corresponding to the  
16 numbering plan used for the redirecting number, as defined  
17 in [34].

18 EXTENSION\_BIT\_2 - The extension bit.

1			If the EXTENSION_BIT_1 is set to '0' and
2			REDIRECTION_REASON is included in this record, the base
3			station shall set this field to '0'. If the EXTENSION_BIT_1 is
4			set to '0' and REDIRECTION_REASON is not included in this
5			record, the base station shall set this field to '1'. If the
6			EXTENSION_BIT_1 is set to '1', the base station shall omit
7			this field.
8	PI	-	Presentation indicator.
9			This field indicates whether or not the redirecting number
10			should be displayed.
11			if the EXTENSION_BIT_1 is set to '0', the base station shall
12			set this field to the PI value shown in Table 2.7.4.4-1
13			corresponding to the presentation indicator, as defined in
14			[34]; otherwise, the base station shall omit this field.
15	RESERVED	-	Reserved bits.
16			If the EXTENSION_BIT_1 is set to '0', the base station shall
17			set this field to '000'; otherwise, the base station shall omit
18			this field.
19	SI	-	Screening indicator.
20			This field indicates how the redirecting number was screened.
21			If the EXTENSION_BIT_1 is set to '0', the base station shall
22			set this field to the SI value shown in Table 2.7.4.4-2
23			corresponding to the screening indicator value, as defined in
24			[34]; otherwise, the base station shall omit this field.
25	EXTENSION_BIT_3	-	The extension bit.
26			If the EXTENSION_BIT_2 is set to '0', the base station shall
27			set this field to '1'; otherwise, the base station shall omit this
28			field.
29	RESERVED	-	Reserved bits.
30			If the EXTENSION_BIT_2 is set to '0', the base station shall
31			set this field to '000'; otherwise, the base station shall omit
32			this field.
33	REDIRECTION_REASON	-	The reason for redirection.
34			If the EXTENSION_BIT_2 is set to '0', the base station shall
35			set this field to the REDIRECTION_REASON value shown in
36			Table 3.7.5.5.11-1 corresponding to the redirection reason, as
37			defined in [34]; otherwise, the base station shall omit this
38			field.
39			

1

**Table 3.7.5.11-1. Redirection Reason**

<b>Description</b>	<b>REDIRECTION- REASON (binary)</b>
Unknown	0000
Call forwarding busy or called DTE busy	0001
Call forwarding no reply (circuit-mode only)	0010
Called DTE out of order (packet-mode only)	1001
Call forwarding by the called DTE (packet-mode only)	1010
Call forwarding unconditional or Systematic call redirection	1111
Reserved	others

2

3

**CHARi** - Character.

4

5

6

7

8

9

The base stations shall include one occurrence of this field for each character in the Redirecting Number. The base station shall set each occurrence of this field to the ASCII representation corresponding to the character, as specified in [9], with the most significant bit set to '0'.

## 3.7.5.12 Redirecting Subaddress

This information record identifies the subaddress of the responding party.

Type-Specific Field	Length (bits)
EXTENSION_BIT	1
SUBADDRESS_TYPE	3
ODD/EVEN_INDICATOR	1
RESERVED	3

Zero or more occurrences of the following field:

{

CHAR <sub>i</sub>	8
-------------------	---

}

EXTENSION\_BIT - The extension bit.

The base station shall set this field to '1'.

SUBADDRESS\_TYPE - Type of subaddress.

The base station shall set this field to the SUBADDRESS\_TYPE value shown in Table 2.7.4.19-1 corresponding to the type of the subaddress, as defined in [34].

ODD/EVEN INDICATOR - The indicator of odd /even bits.

The base station shall set this field to the ODD/EVEN\_INDICATOR value shown in Table 2.7.4.19-2 corresponding to the indicator of even/odd bits, as defined in [34]. It is only used when the type of subaddress is "User specified" and the coding is BCD.

RESERVED - Reserved bits.

The base station shall set this field to '000'.

CHAR<sub>i</sub> - Character.

The base station shall include one occurrence of this field for each character in the redirecting subaddress.

When the SUBADDRESS\_TYPE field is equal to '000', the NSAP address shall be encoded using the preferred binary encoding specified in [35].

When the SUBADDRESS\_TYPE field is set to '010', user-specified subaddress field is encoded according to the user specification, subject to a maximum length of 20 octets. When interworking with [36] networks, BCD coding should be applied.

1    3.7.5.13 Meter Pulses

2    This information record identifies the number of meter pulses and frequency of the alert  
3    tone.

4

Type-Specific Field	Length (bits)
PULSE_FREQUENCY	11
PULSE_ON_TIME	8
PULSE_OFF_TIME	8
PULSE_COUNT	4
RESERVED	1

5

6    PULSE\_FREQUENCY    -    Pulse frequency.

7    The base station shall set this field to the frequency of the  
8    alert signals in units of 10 Hz or to zero to indicate that line  
9    polarity control is to be used. If this field is set to zero, the  
10   PULSE\_ON\_TIME and PULSE\_OFF\_TIME shall be the period  
11   of line polarity reversal and normal line polarity, respectively.

12       PULSE\_ON\_TIME    -    Pulse on time.

13    The base station shall set this field to the period of the meter  
14    pulses in units of 5 ms.

15       PULSE\_OFF\_TIME    -    Pulse off time.

16    The base station shall set this field to the period of the inter-  
17    pulse spacing in units of 5 ms.

18       PULSE\_COUNT    -    Pulse count.

19    The base station shall set this field to the number of meter  
20    pulses.

21       RESERVED    -    Reserved bits.

22    The base station shall set this field to '0'.

23

## 3.7.5.14 Parametric Alerting

This information record allows the network to convey information to a user by means of programmable alerting signals.

Type-Specific Field	Length (bits)
CADENCE_COUNT	8
NUM_GROUPS	4

NUM\_GROUPS occurrences of the following record:

{ (NUM\_GROUPS)

AMPLITUDE	8
FREQ_1	10
FREQ_2	10
ON_TIME	8
OFF_TIME	8
REPEAT	4
DELAY	8

} (NUM\_GROUPS)

CADENCE_TYPE	2
RESERVED	2

CADENCE\_COUNT - Cadence count.

The base station shall set this field to the number of times the cadence of tone groups will be generated between 0x01 and 0xFE. The base station shall set this field to 0x00 to indicate that the mobile station should end alert tone generation. The base station shall set this field to 0xFF to indicate that the cadence will repeat indefinitely.

NUM\_GROUPS - Number of groups.

The base station shall set this field to the number of groups.

AMPLITUDE - Amplitude.

The base station shall set this field to the amplitude level of the tone group in units of -1 dBm.

FREQ\_1 - Tone frequency 1.

The base station shall set this field to the first frequency of the tone group in units of 5 Hz.

FREQ\_2 - Tone frequency 2.

- 1 The base station shall set this field to the second frequency of  
 2 the tone group in units of 5 Hz. Setting this field to zero  
 3 creates a single frequency tone.
- 4 ON\_TIME - On time.
- 5 The base station shall set this field to the duration of the tone  
 6 group in units of 50 ms.
- 7 OFF\_TIME - Off time.
- 8 The base station shall set this field to the duration of the  
 9 spacing between tones in units of 50 ms.
- 10 REPEAT - Repeat.
- 11 The base station shall set this field to the number of times  
 12 the tone group should repeat. The base station shall set this  
 13 field to 0xFF to indicate that the tone group will repeat  
 14 indefinitely.
- 15 DELAY - Delay.
- 16 The base station shall set this field to the length of time  
 17 before the next tone group begins in units of 50 ms.
- 18 CADENCE\_TYPE - Parametric Alerting cadence type.
- 19 The base station shall set this field to indicate that the alert  
 20 should be conveyed to the user as specified in Table 3.7.5.14.

**Table 3.7.5.14. Cadence Types**

<b>CADENCE_TYPE</b>	<b>Meaning</b>
00	Not specified
01	Acoustic earpiece or similar device
10	Device other than acoustic earpiece or similar device (Eg. Ringer)
11	Reserved

- 23 RESERVED - Reserved bits.
- 24 The base station shall set this field to '00'.
- 25

## 3.7.5.15 Line Control

This information record allows the network to convey line control information.

Type-Specific Field	Length (bits)
POLARITY_INCLUDED	1
TOGGLE_MODE	0 or 1
REVERSE_POLARITY	0 or 1
POWER_DENIAL_TIME	8
RESERVED	0 - 7 (as needed)

- POLARITY\_INCLUDED** - Polarity parameter included.
- If the mobile station is to change the line polarity, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- TOGGLE\_MODE** - If POLARITY\_INCLUDED is set to '1', the base station shall include this field and set it to '1' to toggle the line polarity or to '0' to set the polarity to the absolute value indicated in the REVERSE\_POLARITY field.
- REVERSE\_POLARITY** - Reverse polarity.
- If POLARITY\_INCLUDED is set to '1' and TOGGLE\_MODE is equal to '0', the base station shall include this field and set it to '1' to reverse the tip and ring polarity or to '0' to use normal polarity. If POLARITY\_INCLUDED is set to '1' and TOGGLE\_MODE is set to '1', the base station shall include this field and set it to '0'; otherwise, the base station shall omit this field.
- POWER\_DENIAL\_TIME** - Power denial timeout.
- The base station shall include this field and set it to the duration of the power denial in increments of 5 ms.
- RESERVED** - Reserved bits.
- The base station shall add reserved bits as needed in order to make the length of the entire message equal to an integer number of octets. The base station shall set these bits to '0'.

### 3.7.5.16 Extended Display

This information record allows the network to supply supplementary service display information that may be displayed by the mobile station.

Type-Specific Field	Length (bits)
EXT_DISPLAY_IND	1
DISPLAY_TYPE	7

One or more occurrences of the following record:

{

DISPLAY_TAG	8
DISPLAY_LEN	8

DISPLAY\_LEN occurrences of the following field if the DISPLAY\_TAG field is not equal to '10000000' or '10000001':

{ (DISPLAY\_LEN)

CHAR <sub>i</sub>	8
-------------------	---

} (DISPLAY\_LEN)

}

5

6 EXT\_DISPLAY\_IND - The indicator of Extended Display Information record.

7 The base station shall set this field to '1'.

8 DISPLAY\_TYPE - The type of display.

9 The base station shall set this field to the DISPLAY\_TYPE  
10 value shown in Table 3.7.5.16-1 corresponding to the type of  
11 display, as defined in [8] Annex D.

12

**Table 3.7.5.16-1. Display Type**

Description	DISPLAY_TYPE (binary)
Normal	0000000
All other DISPLAY_TYPE values are reserved.	

14

15 DISPLAY\_TAG - The indicator of the display information.

16 There are three types of display tags: mandatory control tags  
17 (Blank and Skip), display text tags, and optional control tags,  
18 see [8] Annex D.

1  
2  
3  
4  
5  
6

The base station shall set this field to the DISPLAY\_TAG value shown in Table 3.7.5.16-2 corresponding to the type of information contained in the following CHARi field, as defined in [8] Annex D.

1  
2

**Table 3.7.5.16-2. Mandatory Control Tags and Display Text Tags**

<b>Description</b>	<b>DISPLAY_TAG (binary)</b>
Blank	10000000
Skip	10000001
Continuation	10000010
Called Address	10000011
Cause	10000100
Progress Indicator	10000101
Notification Indicator	10000110
Prompt	10000111
Accumulated Digits	10001000
Status	10001001
Inband	10001010
Calling Address	10001011
Reason	10001100
Calling Party Name	10001101
Called Party Name	10001110
Original Called Name	10001111
Redirecting Name	10010000
Connected Name	10010001
Originating Restrictions	10010010
Date & Time of Day	10010011
Call Appearance ID	10010100
Feature Address	10010101
Redirection Name	10010110
Redirection Number	10010111
Redirecting Number	10011000
Original Called Number	10011001
Connected Number	10011010
Text (e.g., ASCII)	10011110

3

1	DISPLAY_LEN	-	The display length.
2			The base station shall set this field to the number of octets of
3			display text. See [8] Annex D.
4	CHARi	-	Character.
5			The base station shall include DISPLAY_LEN occurrences of
6			this field, one for each character to be displayed, except for
7			blank and skip. The base station shall set each occurrence of
8			this field to the ASCII representation corresponding to the
9			character entered, as specified in [9], with the most
10			significant bit set to '0'.
11			

1    3.7.5.17 Extended Record Type - International

2    The use of this record type is country-specific. The first ten bits of the type-specific fields  
3    shall include the Mobile Country Code (MCC) associated with the national standards  
4    organization administering the use of the record type. Encoding of the MCC shall be as  
5    specified in 2.3.1.3. The remaining six bits of the first two octets of the type-specific fields  
6    shall be used to specify the country-specific record type.

7

1 3.7.5.18 Reserved

2

1 3.7.5.19 Reserved  
2

1    3.7.5.20 Non-Negotiable Service Configuration

2    This record is included in a *Service Connect Message* to specify the non-negotiable service  
3    configuration parameters to be used by the mobile station. This record can be included in  
4    a *General Handoff Direction Message* or a *Universal Handoff Direction Message* to specify  
5    the non-negotiable service configuration parameters to be used by the mobile station.

6

Type Specific Field	Length (bits)
FPC_INCL	1
FPC_PRI_CHAN	0 or 1
FPC_MODE	0 or 3
FPC_OLPC_FCH_INCL	0 or 1
FPC_FCH_FER	0 or 5
FPC_FCH_MIN_SETPT	0 or 8
FPC_FCH_MAX_SETPT	0 or 8
FPC_OLPC_DCCH_INCL	0 or 1
FPC_DCCH_FER	0 or 5
FPC_DCCH_MIN_SETPT	0 or 8
FPC_DCCH_MAX_SETPT	0 or 8

GATING_RATE_INCL	1
PILOT_GATING_RATE	0 or 2

FOR_SCH_INCL	1
NUM_FOR_SCH	0 or 2

If FOR\_SCH\_INCL = '1', include NUM\_FOR\_SCH occurrences of the following record:

{ (NUM\_FOR\_SCH)

FOR_SCH_ID	2
FOR_SCH_FRAME_OFFSET	2

} (NUM\_FOR\_SCH)

REV_SCH_INCL	1
NUM_REV_SCH	0 or 2

If REV\_SCH\_INCL = '1', include NUM\_REV\_SCH occurrences of the following record:

{ (NUM\_REV\_SCH)

REV_SCH_ID	2
REV_SCH_FRAME_OFFSET	2

} (NUM\_REV\_SCH)

LPM_IND	2
NUM_LPM_ENTRIES	0 or 4

If LPM\_IND = '01', include NUM\_LPM\_ENTRIES occurrences of the following record:

{ (NUM\_LPM\_ENTRIES)

SR_ID	3
LOGICAL_RESOURCE	4
PHYSICAL_RESOURCE	4
FORWARD_FLAG	1
REVERSE_FLAG	1
PRIORITY	4

} (NUM\_LPM\_ENTRIES)

NUM_REC	3

3

4

5

FPC\_INCL - Forward power control information included indicator.

6

7

8

The base station shall set this field to '1' if the forward power control information parameters are included in this record; otherwise, it shall set this field to '0'.

9

FPC\_PRI\_CHAN - Power Control Subchannel indicator.

10

11

12

If the FPC\_INCL field is set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

13

14

15

16

17

18

The base station shall set this field to '0' if the mobile station is to perform the primary inner loop estimation on the received Forward Fundamental Channel; the base station shall set this field to '1' if the mobile station is to perform the primary inner loop estimation on the received Forward Dedicated Control Channel.

1			If only Fundamental Channel is assigned, the base station
2			shall set this field to '0'. If only the Dedicated Control
3			Channel is assigned, the base station shall set this field to '1'.
4			If the F-CPCCH is assigned, the base station will multiplex
5			the Power Control Subchannel on the F-CPCCH; otherwise:
6			If this field is set to '0', the base station will multiplex the
7			Power Control Subchannel on the Forward Fundamental
8			Channel; otherwise, the base station will multiplex the Power
9			Control Subchannel on the Forward Dedicated Control
10			Channel.
11	FPC_MODE	-	Forward Power Control operation mode indicator.
12			If the FPC_INCL field is set to '0', the base station shall omit
13			this field; otherwise, the base station shall include this field
14			and set it as follows:
15			The base station shall set this field to the value of the forward
16			power control operation mode (see [2]).
17	FPC_OLPC_FCH_INCL	-	Fundamental Channel Outer Loop Power Control
18			parameter included indicator.
19			If the FPC_INCL field is set to '0', the base station shall omit
20			this field; otherwise, the base station shall include this field
21			and set it as follows:
22			If the forward link Fundamental Channel outer loop power
23			control parameters are included in this record, the base
24			station shall set this field to '1'; otherwise, the base station
25			shall set this field to '0'.
26	FPC_FCH_FER	-	Fundamental Channel target Frame Error Rate.
27			If FPC_OLPC_FCH_INCL is included and set to '1', the base
28			station shall set this field to the target Frame Error Rate on
29			the Forward Fundamental Channel, as specified in Table
30			3.7.3.3.2.25-2; otherwise, the base station shall omit this
31			field.
32	FPC_FCH_MIN_SETPT	-	Minimum Fundamental Channel Outer Loop Eb/Nt setpoint.
33			If FPC_OLPC_FCH_INCL is included and set to '1', the base
34			station shall set this field to minimum Fundamental Channel
35			Outer Loop Eb/Nt setpoint, in units of 0.125dB; otherwise,
36			the base station shall omit this field.
37	FPC_FCH_MAX_SETPT	-	Maximum Fundamental Channel Outer Loop Eb/Nt setpoint.
38			If FPC_OLPC_FCH_INCL is set to '1', the base station shall set
39			this field to maximum Fundamental Channel Outer Loop
40			Eb/Nt setpoint, in units of 0.125dB; otherwise, the base
41			station shall omit this field.
42	FPC_OLPC_DCCH_INCL	-	Dedicated Control Channel Outer Loop Power Control
43			parameter included indicator.
44			If the FPC_INCL field is set to '0', the base station shall omit
45			this field; otherwise, the base station shall include this field
46			and set it as follows:

- 1 If the forward link Dedicated Control Channel outer loop  
 2 power control parameters are included in this message, the  
 3 base station shall set this field to '1'; otherwise, the base  
 4 station shall set this field to '0'.
- 5 **FPC\_DCCH\_FER** - Dedicated Control Channel target Frame Error Rate.  
 6 If FPC\_OLPC\_DCCH\_INCL is included and set to '1', the base  
 7 station shall set this field to the target Frame Error Rate on  
 8 the Forward Dedicated Control Channel, as specified in Table  
 9 3.7.3.3.2.25-2; otherwise, the base station shall omit this  
 10 field.
- 11 **FPC\_DCCH\_MIN\_SETPT** - Minimum Dedicated Control Channel Outer Loop Eb/Nt  
 12 setpoint.  
 13 If FPC\_OLPC\_DCCH\_INCL is included and set to '1', the base  
 14 station shall set this field to minimum Dedicated Control  
 15 Channel Outer Loop Eb/Nt setpoint, in units of 0.125dB;  
 16 otherwise, the base station shall omit this field.
- 17 **FPC\_DCCH\_MAX\_SETPT** - Maximum Dedicated Control Channel Outer Loop Eb/Nt  
 18 setpoint.  
 19 If FPC\_OLPC\_DCCH\_INCL is included and set to '1', the base  
 20 station shall set this field to maximum Dedicated Control  
 21 Channel Outer Loop Eb/Nt setpoint, in units of 0.125dB;  
 22 otherwise, the base station shall omit this field.
- 23 **GATING\_RATE\_INCL** - Reverse Pilot Channel Gating rate included flag.  
 24 The base station shall set this field to '1' if the  
 25 PILOT\_GATING\_RATE field is included; otherwise, it shall set  
 26 this field to '0'.
- 27 **PILOT\_GATING\_RATE** - Reverse Pilot Channel Gating rate.  
 28 If the GATING\_RATE\_INCL field is set to '0', the base station  
 29 shall omit this field; otherwise, the base station shall set this  
 30 field as follows: The base station shall set this field to the  
 31 PILOT\_GATING\_RATE field shown in Table 3.7.5.20-1  
 32 corresponding to the gating rate on the Reverse Pilot  
 33 Channel.

**Table 3.7.5.20-1. Reverse Pilot Gating rate**

<b>PILOT_GATING_RATE field (binary)</b>	<b>Meaning</b>
00	Gating rate 1
01	Gating rate $\frac{1}{2}$
10	Gating rate $\frac{1}{4}$
11	Reserved

- 35
- 36 **FOR\_SCH\_INCL** - Forward Supplemental Channel information included  
 37 indicator.

1		The base station shall set this field to '1', if the forward
2		Supplemental Channel information is included; otherwise,
3		the base station shall set this field to '0'.
4	NUM_FOR_SCH	- Number of Forward Supplemental Channels.
5		If the FOR_SCH_INCL field is set to '0', the base station shall
6		omit this field; otherwise, the base station shall set this field
7		to the number of Forward Supplemental Channels associated
8		with this service configuration.
9	If the NUM_FOR_SCH field is present and is set to any value other than '00', the base	
10	station shall include one occurrence of the following two field record for each Forward	
11	Supplemental Channel included in this record:	
12	FOR_SCH_ID	- Forward Supplemental Channel Identification.
13		The base station shall set this field to the identifier of the
14		Forward Supplemental Channel pertaining to this record.
15	FOR_SCH_FRAME_OFFSET	- Forward Supplemental Channel multiple frame offset.
16		The base station shall set this field to the multiple frame
17		offset of this Forward Supplemental Channel. The frames of
18		this Forward Supplemental Channel are delayed by
19		$(\text{FRAME\_OFFSET} \times 1.25 + \text{FOR\_SCH\_FRAME\_OFFSET} \times 20)$
20		ms relative to system timing (see [2]).
21	REV_SCH_INCL	- Reverse Supplemental Channel information included
22		indicator.
23		The base station shall set this field to '1' if the reverse
24		Supplemental Channel information is included; otherwise,
25		the base station shall set this field to '0'.
26	NUM_REV_SCH	- Number of Reverse Supplemental Channels.
27		If the REV_SCH_INCL field is set to '0', the base station shall
28		omit this field; otherwise, the base station shall set this field
29		to the number of Reverse Supplemental Channels associated
30		with this service configuration.
31	If the NUM_REV_SCH field is present and is set to any value other than '00', the base	
32	station shall include one occurrence of the following two-field record for each Reverse	
33	Supplemental Channel included in this record:	
34	REV_SCH_ID	- Reverse Supplemental Channel Identification.
35		The base station shall set this field to the identifier of the
36		Reverse Supplemental Channel pertaining to this record.
37	REV_SCH_FRAME_OFFSET	- Reverse Supplemental Channel multiple frame offset.
38		The base station shall set this field to the multiple frame
39		offset with this Reverse Supplemental Channel. The frames
40		of this Reverse Supplemental Channel are delayed by
41		$(\text{FRAME\_OFFSET} \times 1.25 + \text{REV\_SCH\_FRAME\_OFFSET} \times 20)$
42		ms relative to system timing (see [2]).
43	LPM_IND	- Logical to Physical Mapping indicator.

The base station shall set this field to the LPM\_IND field value shown in Table 3.7.5.20-2 corresponding to the Logical to Physical Mapping indicator.

The base station shall not set this field to '00' if there is more than one service option connection in the current Service Configuration information record.

**Table 3.7.5.20-2. Logical to Physical Mapping indicator**

<b>LPM_IND Field (binary)</b>	<b>Logical-to-Physical Mapping indicator</b>
00	Use the default Logical-to-Physical Mapping
01	Use the Logical-to-Physical Mapping included in this record
10	Use the previously stored Logical-to-Physical Mapping
11	Reserved

**NUM\_LPM\_ENTRIES** - Number of Logical-to-Physical Mapping entries.

If the LPM\_IND field is set to '01', the base station shall include this field and set it as follows; otherwise, the base station shall omit this field:

The base station shall set this field to the number of Logical-to-Physical Mapping entries that are included in this record.

If the NUM\_LPM\_ENTRIES field is included and is not equal to '0000', the base station shall include NUM\_LPM\_ENTRIES occurrences of the following six-field record for each Logical-to-Physical Mapping entry:

**SR\_ID** - Service reference identifier.

The base station shall set this field to the identifier of the service reference to which this Logical to Physical Mapping entry applies.

For the signaling service, the base station shall set this field to '000'.

**LOGICAL\_RESOURCE** - Logical resource identifier.

The base station shall set this field to the logical resource identifier shown in Table 3.7.5.20-3 which is to be mapped by this Logical to Physical Mapping entry.

**Table 3.7.5.20-3. Logical Resource Identifier.**

<b>LOGICAL_RESOURCE (binary)</b>	<b>Logical Resource</b>
0000	dtch
0001	dsch
0010 – 1111	Reserved

**PHYSICAL\_RESOURCE** - Physical resource identifier.

The base station shall set this field to the physical resource identifier shown in Table 3.7.5.20-4 to which the logical channel specified in this Logical to Physical Mapping entry is to be mapped.

If the LOGICAL\_RESOURCE field of this record is set to '0001', then the base station shall not set this field to '0010' or '0011'.

**Table 3.7.5.20-4. Physical Resource Identifier.**

<b>PHYSICAL_RESOURCE (binary)</b>	<b>Physical Resource</b>
0000	FCH
0001	DCCH
0010	SCH0
0011	SCH1
0100	PDCH
0101 – 1111	Reserved

**FORWARD\_FLAG** - Forward mapping indicator.

The base station shall set this field to '1' if the logical to physical channel mapping specified in this record applies to forward logical channels; otherwise, the base station shall set this field to '0'.

**REVERSE\_FLAG** - Reverse mapping indicator.

The base station shall set this field to '1' if the logical to physical channel mapping specified in this record applies to reverse logical channels; otherwise, the base station shall set this field to '0'.

**PRIORITY** - Multiplexing priority.

The base station shall set this field to '0000'.

**NUM\_REC** - Number of service-specific records.

1		The base station shall set this field to the number of the
2		following variable-length records included in the message.
3	The base station shall include one occurrence of the following variable-length record for	
4	each service option connection for which this record needs to be specified.	
5	RECORD_LEN	- Record length.
6		The base station shall set this field to the number of octets
7		included in this variable-length record including this field.
8	SR_ID	- Service reference identifier.
9		The base station shall set this field to the identifier of the
10		service reference associated with this service-specific record.
11	SDB_SO_OMIT	- Short Data Burst service option number omitted indicator.
12		The base station shall set this field to '1' if the mobile station
13		is required to omit the service option number when sending
14		Short Data Burst (see IS-707-A-2) for this service option
15		connection; otherwise, the base station shall set this field to
16		'0'.
17	RESERVED	- Reserved bits.
18		The base station shall add reserved bits as needed in order to
19		make the length of this record equal to an integer number of
20		octets. The base station shall set these bits to '0'.
21	USE_FLEX_NUM_BITS	- Use flexible (non-default) number of bits per frame indicator.
22		The base station shall set this field to '0' to indicate that the
23		mapping between the number of information bits per frame
24		[NUM_BITS], and a four-bit index field [NUM_BITS_IDX], shall
25		follow the default mapping identified in Table 3.7.3.3.2.37-2
26		and Table 3.7.3.3.2.37-4.
27		The base station shall set this field to '1' to indicate a non-
28		default mapping between the number of information bits per
29		frame, [NUM_BITS], and a four-bit index field
30		[NUM_BITS_IDX] is used for at least a forward or reverse
31		traffic channel.
32	NUM_BITS_TABLES_INCL	- Flexible Rate Tables included indicator.
33		If the USE_FLEX_NUM_BITS field is equal to '0', the base
34		station shall omit this field; otherwise, the base station shall
35		include this field and set this field as follows:
36		If the Flexible Rate Tables are included in this message, the
37		base station shall set this field to '1'; otherwise, the base
38		station shall set this field to '0'.
39	NUM_BITS_TABLES_COUNT	- Number of instances of the Flexible Rate Table included
40		in this message.

1 If the NUM\_BITS\_TABLES\_INCL field is included and is equal  
2 to '1', the base station shall include this field and set this  
3 field to one less than the number of instances of the Flexible  
4 Rate Table included in this message; otherwise, the base  
5 station shall omit this field.

6 If NUM\_TABLES\_INCL is included and is equal to '1', the base station shall include  
7 NUM\_BITS\_TABLES\_COUNT+1 instances of the Flexible Rate Table

8 NUM\_BITS\_TABLE\_ID - Flexible Rate Table ID.  
9 The base station shall set this field to the ID of the Flexible  
10 Rate Table that follows. The base station shall not set this  
11 field to '0000'.

12 NUM\_RECS - Number of records in the Flexible Rate Table.  
13 The base station shall set this field to one less than the  
14 number of three-field records that follows

15 The base station shall include NUM\_RECS+1 instances of the following three-field record:

16 NUM\_BITS\_IDX - Index to the number of bits array.  
17 The base station shall set this field to the index to the array  
18 that identifies the number of bits per frame.

19 NUM\_BITS - Number of bits array.  
20 The base station shall set this field to the number of  
21 information bits per frame corresponding to the index  
22 specified by NUM\_BITS\_IDX. The base station shall set the  
23 number of information bits per frame in accordance with the  
24 number of information bits per frame specified by the service  
25 option numbers included in the service configuration record.

26 CRC\_LEN\_IDX - Array of Number of CRC bits.  
27 The base station shall set this field to specify the number of  
28 CRC bits per frame corresponding to the index specified by  
29 NUM\_BITS\_IDX according to Table 3.7.5.20-5. The base  
30 station shall not specify more than one value of the CRC  
31 length for the same number of bits per frame for a specific  
32 channel (i.e., for a given channel, the number of information  
33 bits per frame uniquely specifies the length of the CRC field).

1

**Table 3.7.5.20-5. CRC\_LEN\_IDX**

<b>CRC_LEN_IDX (binary)</b>	<b>Number of CRC bits per frame</b>
000	0
001	6
010	8
011	10
100	12
101	16
110-111	Reserved

2

3        **USE\_VAR\_RATE**        -    Use variable rate on supplemental channels indicator.

4                                The base station shall set this field to '1' to indicate that at  
5                                least one of the forward or reverse supplemental channels is  
6                                to operate in the variable rate mode (i.e., the rate of the  
7                                supplemental channel can be picked from a pre-determined  
8                                set of rates autonomously).

9                                The base station shall set this bit to '0' to indicate that  
10                                variable rate on supplemental channels are not allowed.

11        **VAR\_TABLES\_INCL**        -    Variable Rate Tables included indicator.

12                                If the **USE\_VAR\_RATE** field is equal to '0', the base station  
13                                shall omit this field; otherwise, the base station shall include  
14                                this field and set this field as follows:

15                                If the Variable Rate Tables are included in this message, the  
16                                base station shall set this field to '1'; otherwise, the base  
17                                station shall set this field to '0'.

18        **VAR\_RATE\_TABLES\_COUNT** -    Number of instances of the Variable Rate Mask Table  
19                                included in this message.

20                                If **VAR\_TABLES\_INCL** is included and is equal to '1', the base  
21                                station shall include this field and set this field to one less  
22                                than the number of instances of the Variable Rate Mask table  
23                                included in this message as follows; otherwise, the base  
24                                station shall omit this field:

25        If **VAR\_TABLES\_INCL** is included and is equal to '1', the base station shall include  
26        **VAR\_RATE\_TABLES\_COUNT** +1 instances of the Variable Rate Mask table

27        **VAR\_RATE\_TABLE\_ID**        -    Variable Rate Mask table ID.

28                                The base station shall set this field to the ID of the Variable  
29                                Rate Mask table that follows.    The base station shall not set  
30                                this field to '000'.

31        **NUM\_RECS**        -    Number of records in the Variable Rate Mask table.

1		The base station shall set this field to one less than the
2		number of two-field records that follows
3	The base station shall include NUM_RECS+1 instances of the following two fields:	
4	NUM_BITS_IDX	- Index to the number of bits array.
5		The base station shall set this field to the index to the array
6		that identifies the number of bits per supplemental channel
7		frame.
8	MASK	- Number of bits array.
9		The base station shall set this field to a mask that identifies
10		the other members of the Variable Rate Set. The base station
11		shall set the $i^{\text{th}}$ LSB bit ( $i=1, \dots, \text{NUM\_BITS\_IDX}$ ) of this field
12		to '1' to indicates that the number of bits per frame specified
13		by the index NUM_BITS_IDX-i is to be included in the
14		Supplemental Variable Rate Set.
15	USE_OLD_FLEX_MAPPING	- Use the previously downloaded mapping between the
16		channels and Flexible Rate Tables.
17		If the USE_FLEX_NUM_BITS field is equal to '0', the base
18		station shall omit this field; otherwise, the base station shall
19		include this field and set this field as follows:
20		The base station shall set this field to '1' to indicate that the
21		mobile station is to use the previously downloaded mapping
22		between the channels and Flexible Rate Tables. The base
23		station shall set this field to '0', if the following eight fields are
24		included in this message.
25	FSCH0_NBIT_TABLE_ID	- Forward Supplemental Channel 0 Flexible Rate Table ID.
26		If the USE_OLD_FLEX_MAPPING field is included and is
27		equal to '0', the base station shall include this field and set
28		this field as follows; otherwise, the base station shall omit
29		this field:
30		The base station shall set this field to the ID of the Flexible
31		Rate Table corresponding to Forward Supplemental Channel
32		0. The base station shall set this field to '0000' to indicate
33		that the Flexible Rate feature is not used for Forward
34		Supplemental 0 and the default table specified in
35		3.7.3.3.2.37-4 shall be used.
36	RSCH0_NBIT_TABLE_ID	- Reverse Supplemental Channel 0 Flexible Rate Table ID.
37		If the USE_OLD_FLEX_MAPPING field is included and is
38		equal to '0', the base station shall include this field and set
39		this field as follows; otherwise, the base station shall omit
40		this field:

1		The base station shall set this field to the ID of the Flexible
2		Rate Table corresponding to Reverse Supplemental Channel
3		0. The base station shall set this field to '0000' to indicate
4		that the Flexible Rate feature is not used for Reverse
5		Supplemental 0 and the default table specified in
6		3.7.3.3.2.37-2 shall be used.
7	FSCH1_NBIT_TABLE_ID -	Forward Supplemental Channel 1 Flexible Rate Table ID.
8		If the USE_OLD_FLEX_MAPPING field is included and is
9		equal to '0', the base station shall include this field and set
10		this field as follows; otherwise, the base station shall omit
11		this field:
12		The base station shall set this field to the ID of the Flexible
13		Rate Table corresponding to Forward Supplemental Channel
14		1. The base station shall set this field to '0000' to indicate
15		that the Flexible Rate feature is not used for Forward
16		Supplemental 1 and the default table specified in
17		3.7.3.3.2.37-4 shall be used.
18	RSCH1_NBIT_TABLE_ID -	Reverse Supplemental Channel 1 Flexible Rate Table ID.
19		If the USE_OLD_FLEX_MAPPING field is included and is
20		equal to '0', the base station shall include this field and set
21		this field as follows; otherwise, the base station shall omit
22		this field:
23		The base station shall set this field to the ID of the Flexible
24		Rate Table corresponding to Reverse Supplemental Channel
25		1. The base station shall set this field to '0000' to indicate
26		that the Flexible Rate feature is not used for Reverse
27		Supplemental 1 and the default table specified in
28		3.7.3.3.2.37-2 shall be used.
29	FFCH_NBIT_TABLE_ID -	Forward Fundamental Channel Flexible Rate Table ID.
30		If the USE_OLD_FLEX_MAPPING field is included and is
31		equal to '0', the base station shall include this field and set
32		this field as follows; otherwise, the base station shall omit
33		this field:
34		The base station shall set this field to the ID of the Flexible
35		Rate Table corresponding to the Forward Fundamental
36		Channel. The base station shall set this field to '0000' to
37		indicate that the Flexible Rate feature is not used for the
38		Forward Fundamental Channel.
39	RFCH_NBIT_TABLE_ID -	Reverse Fundamental Channel Flexible Rate Table ID.
40		If the USE_OLD_FLEX_MAPPING field is included and is
41		equal to '0', the base station shall include this field and set
42		this field as follows; otherwise, the base station shall omit
43		this field:
44		The base station shall set this field to the ID of the Flexible
45		Rate Table corresponding to the Reverse Fundamental
46		Channel. The base station shall set this field to '0000' to
47		indicate that the Flexible Rate feature is not used for the
48		Reverse Fundamental Channel.

1	FDCCH_NBIT_TABLE_ID	-	Forward Dedicated Control Channel Flexible Rate Table ID.
2			If the USE_OLD_FLEX_MAPPING field is included and is
3			equal to '0', the base station shall include this field and set
4			this field as follows; otherwise, the base station shall omit
5			this field:
6			The base station shall set this field to the ID of the Flexible
7			Rate Table corresponding to the Forward Dedicated Control
8			Channel. The base station shall set this field to '0000' to
9			indicate that the Flexible Rate feature is not used for the
10			Forward Dedicated Control Channel.
11	FDCCH_NBITS_IDX	-	Forward Dedicated Control Channel number of information
12			bits per frame index.
13			If the FDCCH_NBIT_TABLE_ID field is included and is not
14			equal to '0000', the base station shall include this field and
15			set this field to indicate the number of information bits per
16			Forward Dedicated Control Channel frame; otherwise, the
17			base station shall omit this field.
18			The number of information bits per frame is specified by the
19			Flexible Rate Table associated with Forward Dedicated
20			Control Channel and FDCCH_NBITS_IDX as the index to the
21			table (i.e.,
22			NUM_BITS <sub>s</sub> [FDCCH_NBIT_TABLE_ID <sub>r</sub> ][FDCCH_NBITS_IDX].
23	RDCCH_NBIT_TABLE_ID	-	Reverse Dedicated Control Channel Flexible Rate Table ID.
24			If the USE_OLD_FLEX_MAPPING field is included and is
25			equal to '0', the base station shall include this field and set
26			this field as follows; otherwise, the base station shall omit
27			this field:
28			The base station shall set this field to the ID of the Flexible
29			Rate Table corresponding to the Reverse Dedicated Control
30			Channel. The base station shall set this field to '0000' to
31			indicate that the Flexible Rate feature is not used for the
32			Reverse Dedicated Control Channel.
33	RDCCH_NBITS_IDX	-	Reverse Dedicated Control Channel number of information
34			bits per frame index.
35			If the RDCCH_NBIT_TABLE_ID field is included and is not
36			equal to '0000', the base station shall include this field and
37			set this field to indicate the number of information bits per
38			Reverse Dedicated Control Channel frame; otherwise, the
39			base station shall omit this field.
40			The number of information bits per frame is specified by the
41			Flexible Rate Table associated with Reverse Dedicated
42			Control Channel and RDCCH_NBITS_IDX as the index to the
43			table (i.e.,
44			NUM_BITS <sub>s</sub> [RDCCH_NBIT_TABLE_ID <sub>r</sub> ][RDCCH_NBITS_IDX].

1	USE_OLD_VAR_MAPPING	-	Use the previously downloaded mapping between the
2			channels and Variable Rate Mask Tables.
3			If the USE_VAR_RATE field is equal to '0', the base station
4			shall omit this field; otherwise, the base station shall include
5			this field and set this field as follows:
6			The base station shall set this field to '1' to indicate that the
7			mobile station is to use the previously downloaded mapping
8			between the channels and Variable Rate Mask Tables. The
9			base station shall set this field to '0', if the following four
10			fields are included in this message.
11	FSCH0_VAR_TABLE_ID	-	Forward Supplemental Channel 0 Variable Rate Mask Table
12			ID.
13			If the USE_OLD_VAR_MAPPING field is included and is equal
14			to '0', the base station shall include this field and set this
15			field as follows; otherwise, the base station shall omit this
16			field:
17			The base station shall set this field to the ID of the Variable
18			Rate Mask Table corresponding to Forward Supplemental
19			Channel 0. The base station shall set this field to '000' to
20			indicate that no variable rate operation is performed on the F-
21			SCH0.
22	RSCH0_VAR_TABLE_ID	-	Reverse Supplemental Channel 0 Variable Rate Mask Table
23			ID.
24			If the USE_OLD_VAR_MAPPING field is included and is equal
25			to '0', the base station shall include this field and set this
26			field as follows; otherwise, the base station shall omit this
27			field:
28			The base station shall set this field to the ID of the Variable
29			Rate Mask Table corresponding to Reverse Supplemental
30			Channel 0. The base station shall set this field to '000' to
31			indicate that the mobile station is not to autonomously
32			change the rate of the R-SCH0.
33	FSCH1_VAR_TABLE_ID	-	Forward Supplemental Channel 1 Variable Rate Mask Table
34			ID.
35			If the USE_OLD_VAR_MAPPING field is included and is equal
36			to '0', the base station shall include this field and set this
37			field as follows; otherwise, the base station shall omit this
38			field:
39			The base station shall set this field to the ID of the Variable
40			Rate Mask Table corresponding to Forward Supplemental
41			Channel 1. The base station shall set this field to '000' to
42			indicate that no variable rate operation is performed on the F-
43			SCH1.
44	RSCH1_VAR_TABLE_ID	-	Reverse Supplemental Channel 1 Variable Rate Mask Table
45			ID.

1		If the USE_OLD_VAR_MAPPING field is included and is equal
2		to '0', the base station shall include this field and set this
3		field as follows; otherwise, the base station shall omit this
4		field:
5		The base station shall set this field to the ID of the Variable
6		Rate Mask Table corresponding to Reverse Supplemental
7		Channel 1. The base station shall set this field to '000' to
8		indicate that the mobile station is not to autonomously
9		change the rate of the R-SCH1.
10	R_INC_RATE_ALLOWED	- Reverse increase rate within Variable Rate Set Allowed
11		indicator.
12		If the USE_VAR_RATE field is included and is equal to '1', the
13		base station shall include this field and set this field as
14		follows; otherwise, the base station shall omit this field:
15		The base station shall set this field to '1' to indicate that the
16		mobile station is allowed to switch between any of the rates
17		(i.e., number of bits per frame) in the Variable Rate Set for the
18		Reverse Supplemental channels. The base station shall set
19		this field to '0' to indicate that only a downward transition in
20		rate within the rates (i.e., number of bits per frame) in the
21		Variable Rate Set for the Reverse Supplemental channels is
22		allowed.
23	F_INC_RATE_ALLOWED	- Forward increase rate within Variable Rate Set Allowed
24		indicator.
25		If the USE_VAR_RATE field is included and is equal to '1', the
26		base station shall include this field and set this field as
27		follows; otherwise, the base station shall omit this field:
28		The base station shall set this field to '1' to indicate that the
29		base station is allowed to switch between any of the rates
30		(i.e., number of bits per frame) in the Variable Rate Set for the
31		Forward Supplemental channels. The base station shall set
32		this field to '0' to indicate that only a downward transition in
33		rate within the rates (i.e., number of bits per frame) in the
34		Variable Rate Set for the Forward Supplemental channels is
35		possible.
36	LTU_INFO_INCL	- LTU Tables included indicator.
37		The base station shall set this field to '1' if the base station
38		includes LTU related information in this message; otherwise,
39		the base station shall set this field to '0'.
40		The base station shall set this field to '0' if the mobile station
41		indicates that it does not support downloadable LTU Table in
42		the capability information (i.e., the
43		F_SCH_LTU_TAB_SUPPORTED and
44		R_SCH_LTU_TAB_SUPPORTED fields in the capability
45		information are equal to '0').
46	LTU_TABLES_INCL	- LTU Tables included indicator.

1 If the LTU\_INFO\_INCL field is equal to '0', the base station  
2 shall omit this field; otherwise, the base stations shall  
3 include this field and set this field as follows:

4 If the LTU Tables are included in this message, the base  
5 station shall set this field to '1'; otherwise, the base station  
6 shall set this field to '0'.

7 If LTU\_TABLES\_INCL is included and is equal to '1', the base station shall include the  
8 following fields related to the LTU Table information:

9 NUM\_LTU\_TABLES - Number of LTU tables included.  
10 The base station shall set this field to the number of LTU  
11 Tables minus one included in this message.

12 If LTU\_TABLES\_INCL is included and is equal to '1', then the base station shall include  
13 NUM\_LTU\_TABLES + 1 occurrences of the following fields:

14 LTU\_TABLE\_ID - LTU Table ID.  
15 The base station shall set this field to the ID of the LTU Table  
16 that follows. The base station shall not set this field to '000'.

17 NUM\_ROWS - Number of configurations associated with the LTU Table  
18 identified by LTU\_TABLE\_ID.  
19 The base station shall set this field to one less than the  
20 number of rows of the LTU Table identified by  
21 LTU\_TABLE\_ID.

22 If LTU\_TABLES\_INCL is included and is equal to '1', then the base station shall include the  
23 NUM\_ROWS + 1 occurrences of the following fields:

24 NBITS\_IDX - Number of bits per frame index.  
25 The base station shall set this field to the 4-bit index that  
26 specified the number of information bits per supplemental  
27 channel frame.

28 NUM\_LTUS - Number of LTUs per physical layer supplemental channel  
29 frame.  
30 The base station shall specify the number of LTUs per  
31 physical layer supplemental channel frame corresponding to  
32 the number of information bits per supplemental channel  
33 frame specified by NBITS\_IDX according to Table 3.7.5.20-6.  
34 The base station shall set this field to '0000' to indicate that  
35 no LTUs are supported for the number of information bits per  
36 frame specified by NBITS\_IDX.

1

**Table 3.7.5.20-6. NUM\_LTUS**

<b>NUM_LTUS (binary)</b>	<b>Number of LTUS per supplemental channel frame</b>
0000	0
0001	2
0010	3
0011	4
0100	5
0101	6
0110	7
0111	8
1000-1111	Reserved

2

3

4 **USE\_OLD\_LTU\_MAPPING** - Use the previously downloaded mapping between the  
5 channels and LTU Tables.

6 If the LTU\_INFO\_INCL field is equal to '0', the base station  
7 shall omit this field; otherwise, the base station shall include  
8 this field and set this field as follows:

9 The base station shall set this field to '1' to indicate that the  
10 mobile station is to use the previously downloaded mapping  
11 between the channels and LTU Tables. The base station shall  
12 set this field to '0' if the following four fields are included in  
13 this message.

14 **FSCH0\_LTU\_TAB\_ID** - Forward Supplemental Channel LTU Table ID.

15 If **USE\_OLD\_LTU\_MAPPING** is included and is equal to '0',  
16 the base station shall include this field and set this field as  
17 follows; otherwise, the base station shall omit this field:

18 The base station shall set this field to the LTU Table ID to be  
19 used for the Forward Supplemental Channel 0. The base  
20 station shall set this field to '000' to indicate that the default  
21 number of LTUs are to be used (see [3]). The base station  
22 shall set this field to '000' if MuxPDU Type 5 is not used on  
23 this channel (see [3]).

24 **RSCH0\_LTU\_TAB\_ID** - Reverse Supplemental Channel LTU Table ID.

25 If **USE\_OLD\_LTU\_MAPPING** is included and is equal to '0',  
26 the base station shall include this field and set this field as  
27 follows; otherwise, the base station shall omit this field:

1			The base station shall set this field to the LTU Table ID to be
2			used for the Reverse Supplemental Channel 0. The base
3			station shall set this field to '000' to indicate that the default
4			number of LTUs are to be used (see [3]). The base station
5			shall set this field to '000' if MuxPDU Type 5 is not used on
6			this channel (see [3]).
7	FSCH1_LTU_TAB_ID	-	Forward Supplemental Channel LTU Table ID.
8			If USE_OLD_LTU_MAPPING is included and is equal to '0',
9			the base station shall include this field and set this field as
10			follows; otherwise, the base station shall omit this field:
11			The base station shall set this field to the LTU Table ID to be
12			used for the Forward Supplemental Channel 1. The base
13			station shall set this field to '000' to indicate that the default
14			number of LTUs are to be used (see [3]). The base station
15			shall set this field to '000' if MuxPDU Type 5 is not used on
16			this channel (see [3]).
17	RSCH1_LTU_TAB_ID	-	Reverse Supplemental Channel LTU Table ID.
18			If USE_OLD_LTU_MAPPING is included and is equal to '0',
19			the base station shall include this field and set this field as
20			follows; otherwise, the base station shall omit this field:
21			The base station shall set this field to the LTU Table ID to be
22			used for the Reverse Supplemental Channel 1. The base
23			station shall set this field to '000' to indicate that the default
24			number of LTUs are to be used (see [3]). The base station
25			shall set this field to '000' if MuxPDU Type 5 is not used on
26			this channel (see [3]).
27	PARTITION_TABLES_INFO_INCL	-	Partition Tables information included indicator.
28			If USE_FLEX_NUM_BITS is equal to '0', the base station shall
29			omit this field; otherwise, the base station shall include this
30			field and set this field as follows:
31			If Partition Tables information is included in this message,
32			the base station shall set this field to '1'; otherwise, the base
33			station shall set this field to '0'.
34	PARTITION_TABLES_INCL	-	Partition Tables included indicator.
35			If PARTITION_TABLES_INFO_INCL is equal to '0', the base
36			station shall omit this field; otherwise, the base station shall
37			include this field and set this field as follows:
38			If the Partition Tables are included in this message, the base
39			station shall set this field to '1'; otherwise, the base station
40			shall set this field to '0'.
41			
42	If PARTITION_TABLES_INCL is included and is equal to '1', then the base station shall		
43	include the following fields		
44	NUM_PARTITION_TABLES	-	Number of partition tables.

- 1                   The base station shall set this field to one less than the  
 2                   number of Partition Tables corresponding to an FCH or  
 3                   DCCH included in this message.
- 4   If PARTITION\_TABLES\_INCL is included and is equal to '1', then the base station shall  
 5   include the NUM\_PARTITION\_TABLES + 1 occurrences of the following fields:
- 6   PARTITION\_TABLE\_ID   -   Partition Table ID.
- 7                   The base station shall set this field to the ID of the Partition  
 8                   Table that follows. The base station shall not set this field to  
 9                   '000'.
- 10           NUM\_ROWS   -   Number of configurations associated with the Partition Table  
 11           identified by PARTITION\_TABLE\_ID.
- 12           The base station shall set this field to one less than the  
 13           number of rows of the Partition Table identified by  
 14           PARTITION\_TABLE\_ID.
- 15   If PARTITION\_TABLES\_INCL is included and is equal to '1', then the base station shall  
 16   include NUM\_ROWS + 1 occurrences of the following fields:
- 17           CATEGORY   -   Category number.
- 18           The base station shall set this field to the category number of  
 19           the entry of the Partition Table identified by number of bits  
 20           per each service as specified below. The base station shall  
 21           not set this field to '00001' or '00010'. The base station shall  
 22           place rows of the Partition Table corresponding to the same  
 23           number of total information bits per frame consecutively. See  
 24           [3].
- 25   MUX\_HEADER\_LEN   -   Multiplex Sublayer Header Length.
- 26           The base station shall set this field to the length of the  
 27           multiplex sublayer header corresponding to the entry of the  
 28           Partition Table identified by number of bits per each service  
 29           as specified below.
- 30   MUX\_HEADER       -   Multiplex Sublayer Header.
- 31           The base station shall set this field to the multiplex sublayer  
 32           header corresponding to the entry of the Partition Table  
 33           identified by number of bits per each service as specified  
 34           below.<sup>22</sup>
- 35   NUM\_PARTITIONS   -   Number of partitions.

---

<sup>22</sup> The values of the MUX\_HEADER corresponding to a specific number of bits per frame, shall be encoded using prefix-free codes. Prefix-free code is defined to be a code constructed so that any partial code word, beginning at the start of a code word but terminating prior to the end of that code word, is not a valid code word.

1                   The base station shall set this field to one less than the  
2                   number of partitions corresponding to each service (including  
3                   signaling) included in the entry of the Partition Table  
4                   identified by CATEGORY.

5   If PARTITION\_TABLES\_INCL is included and is equal to '1', then the base station shall  
6   include NUM\_PARTITIONS + 1 occurrences of the following fields:

7                   SR\_ID     -   Service Reference ID.

8                   The base station shall set this field to the sr\_id of the service  
9                   (sr\_id = '000' for signaling) present in this category.

10                  SRV\_NUM\_BITS   -   Number of bits allocated to the service.

11                   The base station shall set this field to the number of bits  
12                   allocated to the service (including signaling) identified by  
13                   SR\_ID.

14   USE\_OLD\_PART\_MAPPING   -   Use the previously downloaded mapping between the  
15   channels and Partition Tables.

16                   If PARTITION\_TABLES\_INFO\_INCL is equal to '1', the base  
17                   station shall include this field and set this field as follows;  
18                   otherwise, the base station shall omit this field:

19                   The base station shall set this field to '1' to indicate that the  
20                   mobile station is to use the previously downloaded mapping  
21                   between the channels and Partition Tables. The base station  
22                   shall set this field to '0', if the following four fields are  
23                   included in this message.

24   FFCH\_PART\_TAB\_ID     -   Forward Fundamental Channel Partition Table ID.

25                   If USE\_OLD\_PART\_MAPPING is included and is equal to '0',  
26                   the base station shall include this field and set this field as  
27                   follows; otherwise, the base station shall omit this field:

28                   The base station shall set this field to the Partition Table ID  
29                   to be used for the Forward Fundamental Channel. The base  
30                   station shall set this field to '000' to indicate that the default  
31                   number of bits per service is to be used (see MuxPDU Type 1  
32                   and 2 Categories and Formats for the FCH and DCCH in [3]).  
33                   The base station shall set this field to a value other than '000'  
34                   if the FFCH\_NBIT\_TABLE\_ID field is included in this message  
35                   and is not set to '0000'.

36   RFCH\_PART\_TAB\_ID     -   Reverse Fundamental Channel Partition Table ID.

37                   If USE\_OLD\_PART\_MAPPING is included and is equal to '0',  
38                   the base station shall include this field and set this field as  
39                   follows; otherwise, the base station shall omit this field:

40                   The base station shall set this field to the Partition Table ID  
41                   to be used for the Reverse Fundamental Channel. The base  
42                   station shall set this field to '000' to indicate that the default  
43                   number of bits per service is to be used (see MuxPDU Type 1

1		and 2 Categories and Formats for the FCH and DCCH in [3]).
2		The base station shall set this field to a value other than '000'
3		if the RFCH_NBIT_TABLE_ID is included in this message and
4		field is not set to '0000'.
5	FDCCH_PART_TAB_ID	- Forward Dedicated Control Channel Partition Table ID.
6		If USE_OLD_PART_MAPPING is included and is equal to '0',
7		the base station shall include this field and set this field as
8		follows; otherwise, the base station shall omit this field:
9		The base station shall set this field to the Partition Table ID
10		to be used for the Forward Dedicated Control Channel. The
11		base station shall set this field to '000' to indicate that the
12		default number of bits per service is to be used (see MuxPDU
13		Type 1 and 2 Categories and Formats for the FCH and DCCH
14		in [3]). The base station shall set this field to a value other
15		than '000' if the FDCCH_NBIT_TABLE_ID field is included in
16		this message and is not set to '0000'.
17	RDCCH_PART_TAB_ID	- Reverse Dedicated Control Channel Partition Table ID.
18		If USE_OLD_PART_MAPPING is included and is equal to '0',
19		the base station shall include this field and set this field as
20		follows; otherwise, the base station shall omit this field:
21		The base station shall set this field to the Partition Table ID
22		to be used for the Reverse Dedicated Control Channel. The
23		base station shall set this field to '000' to indicate that the
24		default number of bits per service is to be used (see MuxPDU
25		Type 1 and 2 Categories and Formats for the FCH and DCCH
26		in [3]). The base station shall set this field to a value other
27		than '000' if the RDCCH_NBIT_TABLE_ID field is included in
28		this message and is not set to '0000'.
29	USE_ERAM	- Use the Enhanced Rate Adaptation Mode indicator.
30		The base station shall include this field only if
31		USE_FLEX_NUM_BITS or USE_VAR_RATE is equal to '1'. If
32		included, the base station shall set this field to '1' if the base
33		station is to use lower rate turbo codes for RC4 and RC5
34		Forward Supplemental Channel and the mobile station is to
35		use lower rate turbo codes for RC4 Reverse Supplemental
36		Channel to match the desired channel interleaver block size
37		instead of pure code symbol repetition; otherwise, the base
38		station shall set this field to '0'.
39	SWITCHING_PARMS_INCL	- R-CQICH switching parameters included indicator.
40		If the GATING_RATE_INCL field is set to '0', the base station
41		shall omit this field; otherwise, the base station shall include
42		this field and set it as follows:

1 The base station shall set this field to '1' if the parameters for  
2 R-CQICH soft and softer switching are included in this  
3 message; otherwise, the base station shall set this field to '0'.

4 NUM\_SOFT\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH soft  
5 switching while in Control Hold.

6 If SWITCHING\_PARMS\_INCL is not included or included and  
7 set to '0', then the base station shall omit this field;  
8 otherwise, the base station shall include this field and set it  
9 as follows:

10 The base station shall set this field to the duration of the cell  
11 switching period, in units of 20 ms, minus one, during which  
12 the mobile station, while in Control Hold, is to transmit the  
13 cell switch sequence on the R-CQICH when it switches  
14 between two pilots which are in different groups.

15 NUM\_SOFTER\_SWITCHING\_FRAMES\_CHM - Number of frames for R-CQICH softer  
16 switching while in Control Hold.

17 If SWITCHING\_PARMS\_INCL is not included or included and  
18 set to '0', then the base station shall omit this field;  
19 otherwise, the base station shall include this field and set it  
20 as follows:

21 The base station shall set this field to the duration of the cell  
22 switching period, in units of 20 ms, minus one, during which  
23 the mobile station, while in Control Hold, is to transmit the  
24 cell switch sequence on the R-CQICH when it switches  
25 between two pilots which are in the same group.

26 RPC\_INCL - Reverse Link Power Control parameter included indicator.

27 If the reverse power control related information is included in  
28 this message, the base station shall set this field to '1';  
29 otherwise, the base station shall set this field to '0'.

30 RPC\_NUM\_REC - Number of records for Reverse Link Power Control.

31 If RPC\_INCL is set to '0', the base station shall omit this field;  
32 otherwise, the base station shall set this field to one less than  
33 the number of records included in this message.

34 If RPC\_NUM\_REC is included in this message, the base station shall include  
35 RPC\_NUM\_REC occurrences of the following record:

36 RPC\_ADJ\_REC\_TYPE - Reverse Link Power Control adjustment record type.

37 The base station shall set this field to the value shown in  
38 Table 3.7.3.3.2.25-3 corresponding to the type of adjustment  
39 that is to be used.

40 RPC\_ADJ\_REC\_LEN - Reverse Link Power Control adjustment record length.

41 If RPC\_ADJ\_REC\_TYPE is not equal to '0100', the base  
42 station shall set this field to the number of octets in the type-  
43 specific fields of this adjustment record as given in Table  
44 3.7.3.3.2.25-3.

45 If RPC\_ADJ\_REC\_TYPE is equal to '0100', the base station  
46 shall set this field to '0000'.

- EXT\_RPC\_ADJ\_REC\_LEN - Reverse Link Power Control adjustment record length.
- If RPC\_ADJ\_REC\_TYPE is not equal to '0100', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.
- If RPC\_ADJ\_REC\_TYPE is equal to '0100', the base station shall set this field to the number of octets in the type-specific fields of this adjustment record as given in Table 3.7.3.3.2.25-3.
- Type-specific fields - Reverse Link Power Control adjustment record type-specific fields.
- The base station shall include type-specific fields based on the RPC\_ADJ\_REC\_TYPE of this adjustment record, as specified as below.
- If RPC\_ADJ\_REC\_TYPE is equal to '0000', the base station shall set type-specific fields as specified in Table 3.7.5.20-4.

**Table 3.7.5.20-4. Type Specific Fields for RECORD\_TYPE = '0000'**

Fields	Length (Bits)
FCH_INCL	1
FCH_CHAN_ADJ_GAIN	0 or 8
DCCH_INCL	1
DCCH_CHAN_ADJ_GAIN	0 or 8
SCH0_INCL	1
SCH0_CHAN_ADJ_GAIN	0 or 8
SCH1_INCL	1
SCH1_CHAN_ADJ_GAIN	0 or 8
REV_ACKCH_INCL	1
REV_ACKCH_CHAN_ADJ_GAIN	0 or 8
REV_CQICH_INCL	1
REV_CQICH_CHAN_ADJ_GAIN	0 or 8
RESERVED	0-7 (if needed)

- FCH\_INCL - FCH channel adjustment gain included indicator.
- If FCH\_CHAN\_ADJ\_GAIN is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.
- FCH\_CHAN\_ADJ\_GAIN - Channel adjustment gain for Reverse Fundamental Channel.

1			If FCH_INCL is set to '0', the base station shall omit this field;
2			otherwise, the base station shall set each field to the value of
3			the gain adjustment that the mobile station is to make for the
4			Reverse Fundamental Channel. The base station shall set
5			this field to the correction factor expressed as a two's
6			complement value in units of 0.125 dB. The base station
7			shall set the value in the range from -48 to 48 inclusive.
8	DCCH_INCL	-	DCCH channel adjustment gain included indicator.
9			If DCCH_CHAN_ADJ_GAIN is included in this message, the
10			base station shall set this field to '1'; otherwise, the base
11			station shall set this field to '0'.
12	DCCH_CHAN_ADJ_GAIN	-	Channel adjustment gain for the Reverse Dedicated Control
13			Channel.
14			If DCCH_INCL is set to '0', the base station shall omit this
15			field; otherwise, the base station shall set each field to the
16			value of the gain adjustment that the mobile station is to
17			make for the Reverse Dedicated Control Channel. The base
18			station shall set this field to the correction factor expressed
19			as a two's complement value in units of 0.125 dB. The base
20			station shall set the value in the range from -48 to 48
21			inclusive.
22	SCH0_INCL	-	SCH0 channel adjustment gain included indicator.
23			If SCH0_CHAN_ADJ_GAIN is included in this message, the
24			base station shall set this field to '1'; otherwise, the base
25			station shall set this field to '0'.
26	SCH0_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse Supplemental Channel
27			0.
28			If SCH0_INCL is set to '0', the base station shall omit this
29			field; otherwise, the base station shall set each field to the
30			value of the gain adjustment that the mobile station is to
31			make for the Reverse Supplemental Channel 0. The base
32			station shall set this field to the correction factor expressed
33			as a two's complement value in units of 0.125 dB. The base
34			station shall set the value in the range from -48 to 48
35			inclusive.
36	SCH1_INCL	-	SCH1 channel adjustment gain included indicator.
37			If SCH1_CHAN_ADJ_GAIN is included in this message, the
38			base station shall set this field to '1'; otherwise, the base
39			station shall set this field to '0'.
40	SCH1_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse Supplemental Channel
41			1.
42			If SCH1_INCL is set to '0', the base station shall omit this
43			field; otherwise, the base station shall set each field to the
44			value of the gain adjustment that the mobile station is to
45			make for the Supplemental Channel 1. The base station shall
46			set this field to the correction factor expressed as a two's
47			complement value in units of 0.125 dB. The base station
48			shall set the value in the range from -48 to 48 inclusive.

1	REV_ACKCH_INCL	-	Reverse Acknowledgment Channel channel adjustment gain
2			included indicator.
3			If REV_ACKCH_CHAN_ADJ_GAIN is included in this message,
4			the base station shall set this field to '1'; otherwise, the base
5			station shall set this field to '0'.
6	REV_ACKCH_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse
7			Acknowledgment Channel.
8			If REV_ACKCH_INCL is set to '0', the base station shall omit
9			this field; otherwise, the base station shall set each field to
10			the value of the gain adjustment that the mobile station is to
11			make for the Reverse Acknowledgment Channel. The base
12			station shall set this field to the correction factor expressed
13			as a two's complement value in units of 0.125 dB. The base
14			station shall set the value in the range from -24 to 24
15			inclusive.
16	REV_CQICH_INCL	-	Reverse Channel Quality Indicator Channel channel
17			adjustment gain included indicator.
18			If REV_CQICH_CHAN_ADJ_GAIN is included in this message,
19			the base station shall set this field to '1'; otherwise, the base
20			station shall set this field to '0'.
21	REV_CQICH_CHAN_ADJ_GAIN	-	Channel adjustment gain for Reverse Channel Quality
22			Indicator Channel.
23			If REV_CQICH_INCL is set to '0', the base station shall omit
24			this field; otherwise, the base station shall set each field to
25			the value of the gain adjustment that the mobile station is to
26			make for the Reverse Channel Quality Indicator Channel. The
27			base station shall set this field to the correction factor
28			expressed as a two's complement value in units of 0.125 dB.
29			The base station shall set the value in the range from -16 to
30			16 inclusive.
31	RESERVED	-	Reserved bits.
32			The base station shall add reserved bits as needed in order to
33			make the length of the entire record equal to an integer
34			number of octets. The base station shall set these bits to '0'.
35	If RPC_ADJ_REC_TYPE is equal to '0001', the base station shall set type-specific fields as		
36	specified in Table 3.7.5.20-5.		

**Table 3.7.5.20-5. Type Specific Fields for RECORD\_TYPE  
= '0001'**

<b>Fields</b>	<b>Length (Bits)</b>
RL_ATT_ADJ_GAIN_TYPE	1

RESERVED	0-7 (if needed)
----------	-----------------

RL\_ATT\_ADJ\_GAIN\_TYPE - Reverse Link Attribute Adjustment Gain value type indicator.

If the following fields are set to the nominal attribute gain adjustment values that the mobile station is to use for the transmission attributes (relative to Nominal\_Attribute\_Gain specified in [2]), the base station shall set this field to '0'. If the following fields are set to the pilot reference level adjustment values that the mobile station is to use for the transmission attributes (relative to Pilot\_Reference\_Level specified in [2]), the base station shall set this field to '1'.

RC3\_RC5\_20MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio Configuration 3 or 5 of 20 ms frame included indicator.

If Reverse Link Attribute adjustment Gain for Radio Configuration 3 or 5 of 20 ms frame is included in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

RL\_ATT\_ADJ\_GAIN\_1500- Reverse Link Attribute Adjustment Gain for the transmission rate 1500 bits/s.

If RC3\_RC5\_20MS\_INCL is set to '0', the base station shall omit this field.

If RC3\_RC5\_20MS\_INCL is set to '1' and RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall set this field to the value of the nominal attribute gain adjustment that the mobile station is to make for the transmission attributes with transmission rate 1500 bits/s, convolutional code and 20ms frame. The base station shall set the value in the range from -48 to 48 inclusive.

If RC3\_RC5\_20MS\_INCL is set to '1' and RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall set this field to the value of the pilot reference level adjustment that the mobile station is to make for the transmission attributes with transmission rate 1500 bits/s, convolutional code and 20ms frame.

1		The base station shall set this field to the correction factor
2		expressed as a two's complement value in units of 0.125 dB.
3	RL_ATT_ADJ_GAIN_2700-	Reverse Link Attribute Adjustment Gain for the transmission
4		rate 2700 bits/s.
5		If RC3_RC5_20MS_INCL is set to '0', the base station shall
6		omit this field.
7		If RC3_RC5_20MS_INCL is set to '1' and
8		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
9		set this field to the value of the nominal attribute gain
10		adjustment that the mobile station is to make for the
11		transmission attributes with transmission rate 2700 bits/s,
12		convolutional code and 20ms frame. The base station shall
13		set the value in the range from -48 to 48 inclusive.
14		If RC3_RC5_20MS_INCL is set to '1' and
15		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
16		set this field to the value of the pilot reference level
17		adjustment that the mobile station is to make for the
18		transmission attributes with transmission rate 2700 bits/s,
19		convolutional code and 20ms frame.
20		The base station shall set this field to the correction factor
21		expressed as a two's complement value in units of 0.125 dB.
22	RL_ATT_ADJ_GAIN_4800-	Reverse Link Attribute Gain Adjustment for the transmission
23		rate 4800 bits/s.
24		If RC3_RC5_20MS_INCL is set to '0', the base station shall
25		omit this field.
26		If RC3_RC5_20MS_INCL is set to '1' and
27		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
28		set this field to the value of the nominal attribute gain
29		adjustment that the mobile station is to make for the
30		transmission attributes with transmission rate 4800 bits/s,
31		convolutional code and 20ms frame. The base station shall
32		set the value in the range from -48 to 48 inclusive.
33		If RC3_RC5_20MS_INCL is set to '1' and
34		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
35		set this field to the value of the pilot reference level
36		adjustment that the mobile station is to make for the
37		transmission attributes with transmission rate 4800 bits/s,
38		convolutional code and 20ms frame.
39		The base station shall set this field to the correction factor
40		expressed as a two's complement value in units of 0.125 dB.
41	RL_ATT_ADJ_GAIN_9600-	Reverse Link Attribute Gain Adjustment for the transmission
42		rate 9600 bits/s.
43		If RC3_RC5_20MS_INCL is set to '0', the base station shall
44		omit this field.

1		If RC3_RC5_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 9600 bits/s,
6		convolutional code and 20ms frame. The base station shall
7		set the value in the range from -48 to 48 inclusive.
8		If RC3_RC5_20MS_INCL is set to '1' and
9		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10		set this field to the value of the pilot reference level
11		adjustment that the mobile station is to make for the
12		transmission attributes with transmission rate 9600 bits/s,
13		convolutional code and 20ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RC4_RC6_20MS_INCL -	Reverse Link Attribute Adjustment Gain for Radio
17		Configuration 4 or 6 of 20ms frame included indicator.
18		If Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 20ms frame is included in this
20		message, the base station shall set this field to '1'; otherwise,
21		the base station shall set this field to '0'.
22	RL_ATT_ADJ_GAIN_1800-	Reverse Link Attribute Gain Adjustment for the transmission
23		rate 1800 bits/s.
24		If RC4_RC6_20MS_INCL is set to '0', the base station shall
25		omit this field.
26		If RC4_RC6_20MS_INCL is set to '1' and
27		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
28		set this field to the value of the nominal attribute gain
29		adjustment that the mobile station is to make for the
30		transmission attributes with transmission rate 1800 bits/s,
31		convolutional code and 20ms frame. The base station shall
32		set the value in the range from -48 to 48 inclusive.
33		If RC4_RC6_20MS_INCL is set to '1' and
34		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
35		set this field to the value of the pilot reference level
36		adjustment that the mobile station is to make for the
37		transmission attributes with transmission rate 1800 bits/s,
38		convolutional code and 20ms frame.
39		The base station shall set this field to the correction factor
40		expressed as a two's complement value in units of 0.125 dB.
41	RL_ATT_ADJ_GAIN_3600-	Reverse Link Attribute Adjustment Gain for the transmission
42		rate 3600 bits/s.
43		If RC4_RC6_20MS_INCL is set to '0', the base station shall
44		omit this field.

1		If RC4_RC6_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 3600 bits/s,
6		convolutional code and 20ms frame. The base station shall
7		set the value in the range from -48 to 48 inclusive.
8		If RC4_RC6_20MS_INCL is set to '1' and
9		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
10		set this field to the value of the pilot reference level
11		adjustment that the mobile station is to make for the
12		transmission attributes with transmission rate 3600 bits/s,
13		convolutional code and 20ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RL_ATT_ADJ_GAIN_7200-	Reverse Link Attribute Adjustment Gain for the transmission
17		rate 7200 bits/s.
18		If RC4_RC6_20MS_INCL is set to '0', the base station shall
19		omit this field.
20		If RC4_RC6_20MS_INCL is set to '1' and
21		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
22		set this field to the value of the nominal attribute gain
23		adjustment that the mobile station is to make for the
24		transmission attributes with transmission rate 7200 bits/s,
25		convolutional code and 20ms frame. The base station shall
26		set the value in the range from -48 to 48 inclusive.
27		If RC4_RC6_20MS_INCL is set to '1' and
28		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
29		this field to the value of the pilot reference level adjustment
30		that the mobile station is to make for the transmission
31		attributes with transmission rate 7200 bits/s, convolutional
32		code and 20ms frame.
33		The base station shall set this field to the correction factor
34		expressed as a two's complement value in units of 0.125 dB.
35	RL_ATT_ADJ_GAIN_14400-	Reverse Link Attribute Adjustment Gain for the transmission
36		rate 14400 bits/s.
37		If RC4_RC6_20MS_INCL is set to '0', the base station shall
38		omit this field.
39		If RC4_RC6_20MS_INCL is set to '1' and
40		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
41		set this field to the value of the nominal gain adjustment that
42		the mobile station is to make for the transmission attributes
43		with transmission rate 14400 bits/s, convolutional code and
44		20ms frame. The base station shall set the value in the range
45		from -48 to 48 inclusive.

1 If RC4\_RC6\_20MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 14400 bits/s,  
 6 convolutional code and 20ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 5MS\_INCL - 5ms frame Reverse Link Attribute Adjustment Gain included  
 10 indicator.

11 If Reverse Link Attribute Adjustment Gain for 5ms frame is  
 12 included in this message, the base station shall set this field  
 13 to '1'; otherwise, the base station shall set this field to '0'.

14 RL\_ATT\_ADJ\_GAIN\_9600\_5MS - Reverse Link Attribute Adjustment Gain for the  
 15 transmission rate 9600 bits/s with 5ms frame.

16 If 5MS\_INCL is set to '0', the base station shall omit this field.

17 If 5MS\_INCL is set to '1' and RL\_ATT\_ADJ\_GAIN\_TYPE is set  
 18 to '0', the base station shall set this field to the value of the  
 19 nominal attribute gain adjustment that the mobile station is  
 20 to make for the transmission attributes with transmission  
 21 rate 9600 bits/s, convolutional code and 5ms frame. The  
 22 base station shall set the value in the range from -48 to 48  
 23 inclusive.

24 If 5MS\_INCL is set to '1' and RL\_ATT\_ADJ\_GAIN\_TYPE is set  
 25 to '1', the base station shall set this field to the value of the  
 26 pilot reference level adjustment that the mobile station is to  
 27 make for the transmission attributes with transmission rate  
 28 9600 bits/s, convolutional code and 5ms frame.

29 The base station shall set this field to the correction factor  
 30 expressed as a two's complement value in units of 0.125 dB.

31 RC3\_RC5\_40MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 32 Configuration 3 or 5 of 40 ms frame included indicator.

33 If Reverse Link Attribute adjustment Gain for Radio  
 34 Configuration 3 or 5 of 40 ms frame is included in this  
 35 message, the base station shall set this field to '1'; otherwise,  
 36 the base station shall set this field to '0'.

37 RL\_ATT\_ADJ\_GAIN\_1350\_40MS - Reverse Link Attribute Adjustment Gain for the  
 38 transmission rate 1350 bits/s.

39 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 40 omit this field.

41 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 42 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 43 set this field to the value of the nominal attribute gain  
 44 adjustment that the mobile station is to make for the  
 45 transmission attributes with transmission rate 1350 bits/s,  
 46 convolutional code and 40ms frame. The base station shall  
 47 set the value in the range from -48 to 48 inclusive.

1 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 1350 bits/s,  
 6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_2400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 2400 bits/s.

11 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 2400 bits/s,  
 18 convolutional code and 40ms frame. The base station shall  
 19 set the value in the range from -48 to 48 inclusive.

20 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 2400 bits/s,  
 25 convolutional code and 40ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_4800\_40MS - Reverse Link Attribute Gain Adjustment for the  
 29 transmission rate 4800 bits/s.

30 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 4800 bits/s,  
 37 convolutional code and 40ms frame. The base station shall  
 38 set the value in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 4800 bits/s,  
 44 convolutional code and 40ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_9600\_40MS - Reverse Link Attribute Gain Adjustment for the  
 48 transmission rate 9600 bits/s.

1 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
2 omit this field.

3 If RC3\_RC5\_40MS\_INCL is set to '1' and  
4 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
5 set this field to the value of the nominal attribute gain  
6 adjustment that the mobile station is to make for the  
7 transmission attributes with transmission rate 9600 bits/s,  
8 convolutional code and 40ms frame. The base station shall  
9 set the value in the range from -48 to 48 inclusive.

10 If RC3\_RC5\_40MS\_INCL is set to '1' and  
11 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
12 set this field to the value of the pilot reference level  
13 adjustment that the mobile station is to make for the  
14 transmission attributes with transmission rate 9600 bits/s,  
15 convolutional code and 40ms frame.

16 The base station shall set this field to the correction factor  
17 expressed as a two's complement value in units of 0.125 dB.

18 RC4\_RC6\_40MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
19 Configuration 4 or 6 of 40ms frame included indicator.

20 If Reverse Link Attribute Adjustment Gain for Radio  
21 Configuration 4 or 6 of 40ms frame is included in this  
22 message, the base station shall set this field to '1'; otherwise,  
23 the base station shall set this field to '0'.

24 RL\_ATT\_ADJ\_GAIN\_1800\_40MS - Reverse Link Attribute Gain Adjustment for the  
25 transmission rate 1800 bits/s.

26 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
27 omit this field.

28 If RC4\_RC6\_40MS\_INCL is set to '1' and  
29 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
30 set this field to the value of the nominal attribute gain  
31 adjustment that the mobile station is to make for the  
32 transmission attributes with transmission rate 1800 bits/s,  
33 convolutional code and 40ms frame. The base station shall  
34 set the value in the range from -48 to 48 inclusive.

35 If RC4\_RC6\_40MS\_INCL is set to '1' and  
36 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
37 set this field to the value of the pilot reference level  
38 adjustment that the mobile station is to make for the  
39 transmission attributes with transmission rate 1800 bits/s,  
40 convolutional code and 40ms frame.

41 The base station shall set this field to the correction factor  
42 expressed as a two's complement value in units of 0.125 dB.

43 RL\_ATT\_ADJ\_GAIN\_3600\_40MS - Reverse Link Attribute Adjustment Gain for the  
44 transmission rate 3600 bits/s.

45 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
46 omit this field.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 3 set this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 3600 bits/s,  
 6 convolutional code and 40ms frame. The base station shall  
 7 set the value in the range from -48 to 48 inclusive.

8 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 9 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 10 set this field to the value of the pilot reference level  
 11 adjustment that the mobile station is to make for the  
 12 transmission attributes with transmission rate 3600 bits/s,  
 13 convolutional code and 40ms frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_7200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 7200 bits/s.

18 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 22 set this field to the value of the nominal attribute gain  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 7200 bits/s,  
 25 convolutional code and 40ms frame. The base station shall  
 26 set the value in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 28 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 29 this field to the value of the pilot reference level adjustment  
 30 that the mobile station is to make for the transmission  
 31 attributes with transmission rate 7200 bits/s, convolutional  
 32 code and 40ms frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_14400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 36 transmission rate 14400 bits/s.

37 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 38 omit this field.

39 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 41 set this field to the value of the nominal gain adjustment that  
 42 the mobile station is to make for the transmission attributes  
 43 with transmission rate 14400 bits/s, convolutional code and  
 44 40ms frame. The base station shall set the value in the range  
 45 from -48 to 48 inclusive.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 14400 bits/s,  
 6 convolutional code and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RC3\_RC5\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 10 Configuration 3 or 5 of 80 ms frame included indicator.

11 If Reverse Link Attribute adjustment Gain for Radio  
 12 Configuration 3 or 5 of 80 ms frame is included in this  
 13 message, the base station shall set this field to '1'; otherwise,  
 14 the base station shall set this field to '0'.

15 RL\_ATT\_ADJ\_GAIN\_1200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 16 transmission rate 1200 bits/s.

17 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 18 omit this field.

19 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 20 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 21 set this field to the value of the nominal attribute gain  
 22 adjustment that the mobile station is to make for the  
 23 transmission attributes with transmission rate 1200 bits/s,  
 24 convolutional code and 80ms frame. The base station shall  
 25 set the value in the range from -48 to 48 inclusive.

26 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 27 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 28 set this field to the value of the pilot reference level  
 29 adjustment that the mobile station is to make for the  
 30 transmission attributes with transmission rate 1200 bits/s,  
 31 convolutional code and 80ms frame.

32 The base station shall set this field to the correction factor  
 33 expressed as a two's complement value in units of 0.125 dB.

34 RL\_ATT\_ADJ\_GAIN\_2400\_80MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 2400 bits/s.

36 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 2400 bits/s,  
 43 convolutional code and 80ms frame. The base station shall  
 44 set the value in the range from -48 to 48 inclusive.

1 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 2400 bits/s,  
 6 convolutional code and 80ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_4800\_80MS - Reverse Link Attribute Gain Adjustment for the  
 10 transmission rate 4800 bits/s.

11 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 4800 bits/s,  
 18 convolutional code and 80ms frame. The base station shall  
 19 set the value in the range from -48 to 48 inclusive.

20 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 4800 bits/s,  
 25 convolutional code and 80ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_9600\_80MS - Reverse Link Attribute Gain Adjustment for the  
 29 transmission rate 9600 bits/s.

30 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 9600 bits/s,  
 37 convolutional code and 80ms frame. The base station shall  
 38 set the value in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 9600 bits/s,  
 44 convolutional code and 80ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RC4\_RC6\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 48 Configuration 4 or 6 of 80ms frame included indicator.

1 If Reverse Link Attribute Adjustment Gain for Radio  
2 Configuration 4 or 6 of 80ms frame is included in this  
3 message, the base station shall set this field to '1'; otherwise,  
4 the base station shall set this field to '0'.

5 RL\_ATT\_ADJ\_GAIN\_1800\_80MS - Reverse Link Attribute Gain Adjustment for the  
6 transmission rate 1800 bits/s.

7 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
8 omit this field.

9 If RC4\_RC6\_80MS\_INCL is set to '1' and  
10 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
11 set this field to the value of the nominal attribute gain  
12 adjustment that the mobile station is to make for the  
13 transmission attributes with transmission rate 1800 bits/s,  
14 convolutional code and 80ms frame. The base station shall  
15 set the value in the range from -48 to 48 inclusive.

16 If RC4\_RC6\_80MS\_INCL is set to '1' and  
17 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
18 set this field to the value of the pilot reference level  
19 adjustment that the mobile station is to make for the  
20 transmission attributes with transmission rate 1800 bits/s,  
21 convolutional code and 80ms frame.

22 The base station shall set this field to the correction factor  
23 expressed as a two's complement value in units of 0.125 dB.

24 RL\_ATT\_ADJ\_GAIN\_3600\_80MS - Reverse Link Attribute Adjustment Gain for the  
25 transmission rate 3600 bits/s.

26 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
27 omit this field.

28 If RC4\_RC6\_80MS\_INCL is set to '1' and  
29 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
30 set this field to the value of the nominal attribute gain  
31 adjustment that the mobile station is to make for the  
32 transmission attributes with transmission rate 3600 bits/s,  
33 convolutional code and 80ms frame. The base station shall  
34 set the value in the range from -48 to 48 inclusive.

35 If RC4\_RC6\_80MS\_INCL is set to '1' and  
36 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
37 set this field to the value of the pilot reference level  
38 adjustment that the mobile station is to make for the  
39 transmission attributes with transmission rate 3600 bits/s,  
40 convolutional code and 80ms frame.

41 The base station shall set this field to the correction factor  
42 expressed as a two's complement value in units of 0.125 dB.

43 RL\_ATT\_ADJ\_GAIN\_7200\_80MS - Reverse Link Attribute Adjustment Gain for the  
44 transmission rate 7200 bits/s.

45 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
46 omit this field.

1		If RC4_RC6_80MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
3		set this field to the value of the nominal attribute gain
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 7200 bits/s,
6		convolutional code and 80ms frame. The base station shall
7		set the value in the range from -48 to 48 inclusive.
8		If RC4_RC6_80MS_INCL is set to '1' and
9		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
10		this field to the value of the pilot reference level adjustment
11		that the mobile station is to make for the transmission
12		attributes with transmission rate 7200 bits/s, convolutional
13		code and 80ms frame.
14		The base station shall set this field to the correction factor
15		expressed as a two's complement value in units of 0.125 dB.
16	RL_ATT_ADJ_GAIN_14400_80MS	- Reverse Link Attribute Adjustment Gain for the
17		transmission rate 14400 bits/s.
18		If RC4_RC6_80MS_INCL is set to '0', the base station shall
19		omit this field.
20		If RC4_RC6_80MS_INCL is set to '1' and
21		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
22		set this field to the value of the nominal gain adjustment that
23		the mobile station is to make for the transmission attributes
24		with transmission rate 14400 bits/s, convolutional code and
25		80ms frame. The base station shall set the value in the range
26		from -48 to 48 inclusive.
27		If RC4_RC6_40MS_INCL is set to '1' and
28		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
29		set this field to the value of the pilot reference level
30		adjustment that the mobile station is to make for the
31		transmission attributes with transmission rate 14400 bits/s,
32		convolutional code and 80ms frame.
33		The base station shall set this field to the correction factor
34		expressed as a two's complement value in units of 0.125 dB.
35	RESERVED	- Reserved bits.
36		The base station shall add reserved bits as needed in order to
37		make the length of the entire record equal to an integer
38		number of octets. The base station shall set these bits to '0'.
39	If RPC_ADJ_REC_TYPE is equal to '0010', the base station shall set type-specific fields as	
40	specified in Table 3.7.5.20-6.	

**Table 3.7.5.20-6. Type Specific Fields for RECORD\_TYPE  
= '0010'**

1

2

3           CODE\_TYPE    -   Coding type indicator.

4                               If the following corresponding gain adjustment fields apply for  
5                               the convolucional code, the base station shall set this field to  
6                               '0'. If the following corresponding gain adjustment fields  
7                               apply for the Turbo code, the base station shall set this field  
8                               to '1'.

9   RL\_ATT\_ADJ\_GAIN\_TYPE   -   Reverse Link Attribute adjustment Gain value type  
10 indicator.

11                            If the following corresponding gain adjustment fields are set  
12                            to the value of the nominal attribute gain adjustment that the  
13                            mobile station is to make for the corresponding transmission  
14                            attributes (relative to Nominal\_Attribute\_Gain specified in  
15                            [2]), the base station shall set this field to '0'. If the following  
16                            corresponding gain adjustment fields are set to the value of  
17                            the pilot reference level adjustment that the mobile station is  
18                            to use for the corresponding transmission attributes (relative  
19                            to Pilot\_Reference\_Level specified in [2]), the base station  
20                            shall set this field to '1'.

21   RC3\_RC5\_20MS\_INCL   -   Reverse Link Attribute Adjustment Gain for Radio  
22                               Configuration 3 or 5 of 20ms frame included indicator.

23                            If Reverse Link Attribute Adjustment Gain for Radio  
24                            Configuration 3 or 5 of 20ms frame is included in this  
25                            message, the base station shall set this field to '1'; otherwise,  
26                            the base station shall set this field to '0'.

1	RL_ATT_ADJ_GAIN_19200	- Reverse Link Attribute Adjustment Gain for the
2		transmission rate 19200 bits/s.
3		If RC3_RC5_20MS_INCL is set to '0', the base station shall
4		omit this field.
5		If RC3_RC5_20MS_INCL is set to '1' and
6		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
7		set this field to the value of the nominal attribute gain
8		adjustment that the mobile station is to make for the
9		transmission attributes with transmission rate 19200 bits/s,
10		and 20ms frame. The base station shall set the value in the
11		range from -48 to 48 inclusive.
12		If RC3_RC5_20MS_INCL is set to '1' and
13		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
14		set this field to the value of the pilot reference level
15		adjustment that the mobile station is to make for the
16		transmission attributes with transmission rate 19200 bits/s
17		and 20ms frame.
18		The base station shall set this field to the correction factor
19		expressed as a two's complement value in units of 0.125 dB.
20	RL_ATT_ADJ_GAIN_38400	- Reverse Link Attribute Adjustment Gain for the
21		transmission rate 38400 bits/s.
22		If RC3_RC5_20MS_INCL is set to '0', the base station shall
23		omit this field.
24		If RC3_RC5_20MS_INCL is set to '1' and
25		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
26		set this field to the value of the nominal attribute gain
27		adjustment that the mobile station is to make for the
28		transmission attributes with transmission rate 38400 bits/s,
29		and 20ms frame. The base station shall set the value in the
30		range from -48 to 48 inclusive.
31		If RC3_RC5_20MS_INCL is set to '1' and
32		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
33		this field to the value of the pilot reference level adjustment
34		that the mobile station is to make for the transmission
35		attributes with transmission rate 38400 bits/s and 20ms
36		frame.
37		The base station shall set this field to the correction factor
38		expressed as a two's complement value in units of 0.125 dB.
39	RL_ATT_ADJ_GAIN_76800	- Reverse Link Attribute Adjustment Gain for the
40		transmission rate 76800 bits/s.
41		If RC3_RC5_20MS_INCL is set to '0', the base station shall
42		omit this field.

1 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 3 set this field to the value of the nominal attribute gain  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 76800 bits/s,  
 6 and 20ms frame. The base station shall set the value in the  
 7 range from -48 to 48 inclusive.

8 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 9 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 10 set this field to the value of the pilot reference level  
 11 adjustment that the mobile station is to make for the  
 12 transmission attributes with transmission rate 76800 bits/s  
 13 and 20ms frame.

14 The base station shall set this field to the correction factor  
 15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_153600 - Reverse Link Attribute Adjustment Gain for the  
 17 transmission rate 153600 bits/s.

18 If RC3\_RC5\_20MS\_INCL is set to '0', the base station shall  
 19 omit this field.

20 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 21 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
 22 this field to the value of the nominal attribute gain  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 153600  
 25 bits/s, and 20ms frame. The base station shall set the value  
 26 in the range from -48 to 48 inclusive.

27 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 28 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 29 this field to the value of the pilot reference level adjustment  
 30 that the mobile station is to make for the transmission  
 31 attributes with transmission rate 153600 bits/s and 20ms  
 32 frame.

33 The base station shall set this field to the correction factor  
 34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_307200 - Reverse Link Attribute Adjustment Gain for the  
 36 transmission rate 307200 bits/s.

37 If RC3\_RC5\_20MS\_INCL is set to '0', the base station shall  
 38 omit this field.

39 If RC3\_RC5\_20MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 41 set this field to the value of the nominal attribute gain  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 307200  
 44 bits/s, and 20ms frame. The base station shall set the value  
 45 in the range from -48 to 48 inclusive.

1		If RC3_RC5_20MS_INCL is set to '1' and
2		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
3		set this field to the value of the pilot reference level
4		adjustment that the mobile station is to make for the
5		transmission attributes with transmission rate 307200 bits/s
6		and 20ms frame.
7		The base station shall set this field to the correction factor
8		expressed as a two's complement value in units of 0.125 dB.
9	RL_ATT_ADJ_GAIN_614400	- Reverse Link Attribute Adjustment Gain for the
10		transmission rate 614400 bits/s.
11		If RC3_RC5_20MS_INCL is set to '0', the base station shall
12		omit this field.
13		If RC3_RC5_20MS_INCL is set to '1' and
14		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
15		set this field to the value of the nominal attribute gain
16		adjustment that the mobile station is to make for the
17		transmission attributes with transmission rate 614400
18		bits/s, and 20ms frame. The base station shall set the value
19		in the range from -48 to 48 inclusive.
20		If RC3_RC5_20MS_INCL is set to '1' and
21		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
22		set this field to the value of the pilot reference level
23		adjustment that the mobile station is to make for the
24		transmission attributes with transmission rate 614400 bits/s
25		and 20ms frame.
26		The base station shall set this field to the correction factor
27		expressed as a two's complement value in units of 0.125 dB.
28	RC4_RC6_20MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
29		Configuration 4 or 6 of 20ms frame included indicator.
30		If Reverse Link Attribute Adjustment Gain for Radio
31		Configuration 4 or 6 of 20ms frame is included in this
32		message, the base station shall set this field to '1'; otherwise,
33		the base station shall set this field to '0'.
34	RL_ATT_ADJ_GAIN_28800	- Reverse Link Attribute Adjustment Gain for the
35		transmission rate 28800 bits/s.
36		If RC4_RC6_20MS_INCL is set to '0', the base station shall
37		omit this field.
38		If RC4_RC6_20MS_INCL is set to '1' and
39		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
40		set this field to the value of the nominal attribute gain
41		adjustment that the mobile station is to make for the
42		transmission attributes with transmission rate 28800 bits/s,
43		and 20ms frame. The base station shall set the value in the
44		range from -48 to 48 inclusive.

1		If RC4_RC6_20MS_INCL is set to '1' and
2		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
3		this field to the value of the pilot reference level adjustment
4		that the mobile station is to make for the transmission
5		attributes with transmission rate 28800 bits/s and 20ms
6		frame.
7		The base station shall set this field to the correction factor
8		expressed as a two's complement value in units of 0.125 dB.
9	RL_ATT_ADJ_GAIN_57600	- Reverse Link Attribute Adjustment Gain for the
10		transmission rate 57600 bits/s.
11		If RC4_RC6_20MS_INCL is set to '0', the base station shall
12		omit this field.
13		If RC4_RC6_20MS_INCL is set to '1' and
14		NORM_ATT_GAIN_TYPE is set to '0', the base station shall set
15		this field to the value of the nominal attribute gain
16		adjustment that the mobile station is to make for the
17		transmission attributes with transmission rate 57600 bits/s,
18		and 20ms frame. The base station shall set the value in the
19		range from -48 to 48 inclusive.
20		If RC4_RC6_20MS_INCL is set to '1' and
21		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
22		this field to the value of the pilot reference level adjustment
23		that the mobile station is to make for the transmission
24		attributes with transmission rate 57600 bits/s and 20ms
25		frame.
26		The base station shall set this field to the correction factor
27		expressed as a two's complement value in units of 0.125 dB.
28	RL_ATT_ADJ_GAIN_115200	- Reverse Link Attribute Adjustment Gain for the
29		transmission rate 115200 bits/s.
30		If RC4_RC6_20MS_INCL is set to '0', the base station shall
31		omit this field.
32		If RC4_RC6_20MS_INCL is set to '1' and
33		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
34		set this field to the value of the nominal attribute gain
35		adjustment that the mobile station is to make for the
36		transmission attributes with transmission rate 115200
37		bits/s, and 20ms frame. The base station shall set the value
38		in the range from -48 to 48 inclusive.
39		If RC4_RC6_20MS_INCL is set to '1' and
40		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
41		set this field to the value of the pilot reference level
42		adjustment that the mobile station is to make for the
43		transmission attributes with transmission rate 115200 bits/s
44		and 20ms frame.
45		The base station shall set this field to the correction factor
46		expressed as a two's complement value in units of 0.125 dB.
47	RL_ATT_ADJ_GAIN_230400	- Reverse Link Attribute Adjustment Gain for the
48		transmission rate 230400 bits/s.

1 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
2 omit this field.

3 If RC4\_RC6\_20MS\_INCL is set to '1' and  
4 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
5 set this field to the value of the nominal attribute gain  
6 adjustment that the mobile station is to make for the  
7 transmission attributes with transmission rate 230400  
8 bits/s, and 20ms frame. The base station shall set the value  
9 in the range from -48 to 48 inclusive.

10 If RC4\_RC6\_20MS\_INCL is set to '1' and  
11 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
12 set this field to the value of the pilot reference level  
13 adjustment that the mobile station is to make for the  
14 transmission attributes with transmission rate 230400 bits/s  
15 and 20ms frame.

16 The base station shall set this field to the correction factor  
17 expressed as a two's complement value in units of 0.125 dB.

18 RL\_ATT\_ADJ\_GAIN\_460800 - Reverse Link Attribute Adjustment Gain for the  
19 transmission rate 460800 bits/s.

20 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
21 omit this field.

22 If RC4\_RC6\_20MS\_INCL is set to '1' and  
23 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
24 set this field to the value of the nominal attribute gain  
25 adjustment that the mobile station is to make for the  
26 transmission attributes with transmission rate 460800  
27 bits/s, and 20ms frame. The base station shall set the value  
28 in the range from -48 to 48 inclusive.

29 If RC4\_RC6\_20MS\_INCL is set to '1' and  
30 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
31 set this field to the value of the pilot reference level  
32 adjustment that the mobile station is to make for the  
33 transmission attributes with transmission rate 460800 bits/s  
34 and 20ms frame.

35 The base station shall set this field to the correction factor  
36 expressed as a two's complement value in units of 0.125 dB.

37 RL\_ATT\_ADJ\_GAIN\_1036800- Reverse Link Attribute Adjustment Gain for the  
38 transmission rate 1036800 bits/s.

39 If RC4\_RC6\_20MS\_INCL is set to '0', the base station shall  
40 omit this field.

41 If RC4\_RC6\_20MS\_INCL is set to '1' and  
42 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
43 set this field to the value of the nominal attribute gain  
44 adjustment that the mobile station is to make for the  
45 transmission attributes with transmission rate 1036800  
46 bits/s, and 20ms frame. The base station shall set the value  
47 in the range from -48 to 48 inclusive.

1 If RC4\_RC6\_20MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 1306800  
 6 bits/s and 20ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RC3\_RC5\_40MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 10 Configuration 3 or 5 of 40ms frame included indicator.

11 If Reverse Link Attribute Adjustment Gain for Radio  
 12 Configuration 3 or 5 of 40ms frame is included in this  
 13 message, the base station shall set this field to '1'; otherwise,  
 14 the base station shall set this field to '0'.

15 RL\_ATT\_ADJ\_GAIN\_19200\_40MS - Reverse Link Attribute Adjustment Gain for the  
 16 transmission rate 19200 bits/s.

17 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 18 omit this field.

19 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 20 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 21 set this field to the value of the nominal attribute gain  
 22 adjustment that the mobile station is to make for the  
 23 transmission attributes with transmission rate 19200 bits/s,  
 24 and 40ms frame. The base station shall set the value in the  
 25 range from -48 to 48 inclusive.

26 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 27 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 28 set this field to the value of the pilot reference level  
 29 adjustment that the mobile station is to make for the  
 30 transmission attributes with transmission rate 19200 bits/s  
 31 and 40ms frame.

32 The base station shall set this field to the correction factor  
 33 expressed as a two's complement value in units of 0.125 dB.

34 RL\_ATT\_ADJ\_GAIN\_38400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 38400 bits/s.

36 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_40MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 38400 bits/s,  
 43 and 40ms frame. The base station shall set the value in the  
 44 range from -48 to 48 inclusive.

1 If RC3\_RC5\_20MS\_INCL is set to '1' and  
2 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
3 this field to the value of the pilot reference level adjustment  
4 that the mobile station is to make for the transmission  
5 attributes with transmission rate 38400 bits/s and 40ms  
6 frame.

7 The base station shall set this field to the correction factor  
8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_76800\_40MS - Reverse Link Attribute Adjustment Gain for the  
10 transmission rate 76800 bits/s.

11 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
12 omit this field.

13 If RC3\_RC5\_40MS\_INCL is set to '1' and  
14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
15 set this field to the value of the nominal attribute gain  
16 adjustment that the mobile station is to make for the  
17 transmission attributes with transmission rate 76800 bits/s,  
18 and 40ms frame. The base station shall set the value in the  
19 range from -48 to 48 inclusive.

20 If RC3\_RC5\_40MS\_INCL is set to '1' and  
21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
22 set this field to the value of the pilot reference level  
23 adjustment that the mobile station is to make for the  
24 transmission attributes with transmission rate 76800 bits/s  
25 and 40ms frame.

26 The base station shall set this field to the correction factor  
27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_153600\_40MS - Reverse Link Attribute Adjustment Gain for the  
29 transmission rate 153600 bits/s.

30 If RC3\_RC5\_40MS\_INCL is set to '0', the base station shall  
31 omit this field.

32 If RC3\_RC5\_40MS\_INCL is set to '1' and  
33 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
34 this field to the value of the nominal attribute gain  
35 adjustment that the mobile station is to make for the  
36 transmission attributes with transmission rate 153600  
37 bits/s, and 40ms frame. The base station shall set the value  
38 in the range from -48 to 48 inclusive.

39 If RC3\_RC5\_40MS\_INCL is set to '1' and  
40 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
41 this field to the value of the pilot reference level adjustment  
42 that the mobile station is to make for the transmission  
43 attributes with transmission rate 153600 bits/s and 40ms  
44 frame.

45 The base station shall set this field to the correction factor  
46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_307200\_40MS - Reverse Link Attribute Adjustment Gain for the  
48 transmission rate 307200 bits/s.

1		If RC3_RC5_40MS_INCL is set to '0', the base station shall
2		omit this field.
3		If RC3_RC5_40MS_INCL is set to '1' and
4		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5		set this field to the value of the nominal attribute gain
6		adjustment that the mobile station is to make for the
7		transmission attributes with transmission rate 307200
8		bits/s, and 40ms frame. The base station shall set the value
9		in the range from -48 to 48 inclusive.
10		If RC3_RC5_40MS_INCL is set to '1' and
11		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12		set this field to the value of the pilot reference level
13		adjustment that the mobile station is to make for the
14		transmission attributes with transmission rate 307200 bits/s
15		and 40ms frame.
16		The base station shall set this field to the correction factor
17		expressed as a two's complement value in units of 0.125 dB.
18	RC4_RC6_40MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 40ms frame included indicator.
20		If Reverse Link Attribute Adjustment Gain for Radio
21		Configuration 4 or 6 of 40ms frame is included in this
22		message, the base station shall set this field to '1'; otherwise,
23		the base station shall set this field to '0'.
24	RL_ATT_ADJ_GAIN_28800_40MS	- Reverse Link Attribute Adjustment Gain for the
25		transmission rate 28800 bits/s.
26		If RC4_RC6_40MS_INCL is set to '0', the base station shall
27		omit this field.
28		If RC4_RC6_40MS_INCL is set to '1' and
29		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30		set this field to the value of the nominal attribute gain
31		adjustment that the mobile station is to make for the
32		transmission attributes with transmission rate 28800 bits/s,
33		and 40ms frame. The base station shall set the value in the
34		range from -48 to 48 inclusive.
35		If RC4_RC6_40MS_INCL is set to '1' and
36		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37		this field to the value of the pilot reference level adjustment
38		that the mobile station is to make for the transmission
39		attributes with transmission rate 28800 bits/s and 40ms
40		frame.
41		The base station shall set this field to the correction factor
42		expressed as a two's complement value in units of 0.125 dB.
43	RL_ATT_ADJ_GAIN_57600_40MS	- Reverse Link Attribute Adjustment Gain for the
44		transmission rate 57600 bits/s.
45		If RC4_RC6_40MS_INCL is set to '0', the base station shall
46		omit this field.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
2 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
3 this field to the value of the nominal attribute gain  
4 adjustment that the mobile station is to make for the  
5 transmission attributes with transmission rate 57600 bits/s,  
6 and 40ms frame. The base station shall set the value in the  
7 range from -48 to 48 inclusive.

8 If RC4\_RC6\_40MS\_INCL is set to '1' and  
9 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
10 this field to the value of the pilot reference level adjustment  
11 that the mobile station is to make for the transmission  
12 attributes with transmission rate 57600 bits/s and 40ms  
13 frame.

14 The base station shall set this field to the correction factor  
15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_115200\_40MS - Reverse Link Attribute Adjustment Gain for the  
17 transmission rate 115200 bits/s.

18 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
19 omit this field.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
22 set this field to the value of the nominal attribute gain  
23 adjustment that the mobile station is to make for the  
24 transmission attributes with transmission rate 115200  
25 bits/s, and 40ms frame. The base station shall set the value  
26 in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_40MS\_INCL is set to '1' and  
28 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
29 set this field to the value of the pilot reference level  
30 adjustment that the mobile station is to make for the  
31 transmission attributes with transmission rate 115200 bits/s  
32 and 40ms frame.

33 The base station shall set this field to the correction factor  
34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_230400\_40MS - Reverse Link Attribute Adjustment Gain for the  
36 transmission rate 230400 bits/s.

37 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
38 omit this field.

39 If RC4\_RC6\_40MS\_INCL is set to '1' and  
40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
41 set this field to the value of the nominal attribute gain  
42 adjustment that the mobile station is to make for the  
43 transmission attributes with transmission rate 230400  
44 bits/s, and 40ms frame. The base station shall set the value  
45 in the range from -48 to 48 inclusive.

1 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 230400 bits/s  
 6 and 40ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_518400\_40MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 518400 bits/s.

11 If RC4\_RC6\_40MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 518400  
 18 bits/s, and 40ms frame. The base station shall set the value  
 19 in the range from -48 to 48 inclusive.

20 If RC4\_RC6\_40MS\_INCL is set to '1' and  
 21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 22 set this field to the value of the pilot reference level  
 23 adjustment that the mobile station is to make for the  
 24 transmission attributes with transmission rate 518400 bits/s  
 25 and 40ms frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RC3\_RC5\_80MS\_INCL - Reverse Link Attribute Adjustment Gain for Radio  
 29 Configuration 3 or 5 of 80ms frame included indicator.

30 If Reverse Link Attribute Adjustment Gain for Radio  
 31 Configuration 3 or 5 of 80ms frame is included in this  
 32 message, the base station shall set this field to '1'; otherwise,  
 33 the base station shall set this field to '0'.

34 RL\_ATT\_ADJ\_GAIN\_19200\_80MS - Reverse Link Attribute Adjustment Gain for the  
 35 transmission rate 19200 bits/s.

36 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 37 omit this field.

38 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 39 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 40 set this field to the value of the nominal attribute gain  
 41 adjustment that the mobile station is to make for the  
 42 transmission attributes with transmission rate 19200 bits/s,  
 43 and 80ms frame. The base station shall set the value in the  
 44 range from -48 to 48 inclusive.

1 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 19200 bits/s  
 6 and 80ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RL\_ATT\_ADJ\_GAIN\_38400\_80MS - Reverse Link Attribute Adjustment Gain for the  
 10 transmission rate 38400 bits/s.

11 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 12 omit this field.

13 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 14 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 15 set this field to the value of the nominal attribute gain  
 16 adjustment that the mobile station is to make for the  
 17 transmission attributes with transmission rate 38400 bits/s,  
 18 and 80ms frame. The base station shall set the value in the  
 19 range from -48 to 48 inclusive.

20 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 21 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
 22 this field to the value of the pilot reference level adjustment  
 23 that the mobile station is to make for the transmission  
 24 attributes with transmission rate 38400 bits/s and 80ms  
 25 frame.

26 The base station shall set this field to the correction factor  
 27 expressed as a two's complement value in units of 0.125 dB.

28 RL\_ATT\_ADJ\_GAIN\_76800\_80MS - Reverse Link Attribute Adjustment Gain for the  
 29 transmission rate 76800 bits/s.

30 If RC3\_RC5\_80MS\_INCL is set to '0', the base station shall  
 31 omit this field.

32 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 33 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
 34 set this field to the value of the nominal attribute gain  
 35 adjustment that the mobile station is to make for the  
 36 transmission attributes with transmission rate 76800 bits/s,  
 37 and 80ms frame. The base station shall set the value in the  
 38 range from -48 to 48 inclusive.

39 If RC3\_RC5\_80MS\_INCL is set to '1' and  
 40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 41 set this field to the value of the pilot reference level  
 42 adjustment that the mobile station is to make for the  
 43 transmission attributes with transmission rate 76800 bits/s  
 44 and 80ms frame.

45 The base station shall set this field to the correction factor  
 46 expressed as a two's complement value in units of 0.125 dB.

47 RL\_ATT\_ADJ\_GAIN\_153600\_80MS - Reverse Link Attribute Adjustment Gain for the  
 48 transmission rate 153600 bits/s.

1		If RC3_RC5_80MS_INCL is set to '0', the base station shall
2		omit this field.
3		If RC3_RC5_80MS_INCL is set to '1' and
4		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
5		set this field to the value of the nominal attribute gain
6		adjustment that the mobile station is to make for the
7		transmission attributes with transmission rate 153600
8		bits/s, and 80ms frame. The base station shall set the value
9		in the range from -48 to 48 inclusive.
10		If RC3_RC5_80MS_INCL is set to '1' and
11		RL_ATT_ADJ_GAIN_TYPE is set to '1', the base station shall
12		set this field to the value of the pilot reference level
13		adjustment that the mobile station is to make for the
14		transmission attributes with transmission rate 153600 bits/s
15		and 80ms frame.
16		The base station shall set this field to the correction factor
17		expressed as a two's complement value in units of 0.125 dB.
18	RC4_RC6_80MS_INCL	- Reverse Link Attribute Adjustment Gain for Radio
19		Configuration 4 or 6 of 80ms frame included indicator.
20		If Reverse Link Attribute Adjustment Gain for Radio
21		Configuration 4 or 6 of 80ms frame is included in this
22		message, the base station shall set this field to '1'; otherwise,
23		the base station shall set this field to '0'.
24	RL_ATT_ADJ_GAIN_28800_80MS	- Reverse Link Attribute Adjustment Gain for the
25		transmission rate 28800 bits/s.
26		If RC4_RC6_80MS_INCL is set to '0', the base station shall
27		omit this field.
28		If RC4_RC6_80MS_INCL is set to '1' and
29		RL_ATT_ADJ_GAIN_TYPE is set to '0', the base station shall
30		set this field to the value of the nominal attribute gain
31		adjustment that the mobile station is to make for the
32		transmission attributes with transmission rate 28800 bits/s,
33		and 80ms frame. The base station shall set the value in the
34		range from -48 to 48 inclusive.
35		If RC4_RC6_80MS_INCL is set to '1' and
36		NORM_ATT_GAIN_TYPE is set to '1', the base station shall set
37		this field to the value of the pilot reference level adjustment
38		that the mobile station is to make for the transmission
39		attributes with transmission rate 28800 bits/s and 80ms
40		frame.
41		The base station shall set this field to the correction factor
42		expressed as a two's complement value in units of 0.125 dB.
43	RL_ATT_ADJ_GAIN_57600_80MS	- Reverse Link Attribute Adjustment Gain for the
44		transmission rate 57600 bits/s.
45		If RC4_RC6_80MS_INCL is set to '0', the base station shall
46		omit this field.

1 If RC4\_RC6\_80MS\_INCL is set to '1' and  
2 NORM\_ATT\_GAIN\_TYPE is set to '0', the base station shall set  
3 this field to the value of the nominal attribute gain  
4 adjustment that the mobile station is to make for the  
5 transmission attributes with transmission rate 57600 bits/s,  
6 and 80ms frame. The base station shall set the value in the  
7 range from -48 to 48 inclusive.

8 If RC4\_RC6\_80MS\_INCL is set to '1' and  
9 NORM\_ATT\_GAIN\_TYPE is set to '1', the base station shall set  
10 this field to the value of the pilot reference level adjustment  
11 that the mobile station is to make for the transmission  
12 attributes with transmission rate 57600 bits/s and 80ms  
13 frame.

14 The base station shall set this field to the correction factor  
15 expressed as a two's complement value in units of 0.125 dB.

16 RL\_ATT\_ADJ\_GAIN\_115200\_80MS - Reverse Link Attribute Adjustment Gain for the  
17 transmission rate 115200 bits/s.

18 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
19 omit this field.

20 If RC4\_RC6\_80MS\_INCL is set to '1' and  
21 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
22 set this field to the value of the nominal attribute gain  
23 adjustment that the mobile station is to make for the  
24 transmission attributes with transmission rate 115200  
25 bits/s, and 80ms frame. The base station shall set the value  
26 in the range from -48 to 48 inclusive.

27 If RC4\_RC6\_80MS\_INCL is set to '1' and  
28 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
29 set this field to the value of the pilot reference level  
30 adjustment that the mobile station is to make for the  
31 transmission attributes with transmission rate 115200 bits/s  
32 and 80ms frame.

33 The base station shall set this field to the correction factor  
34 expressed as a two's complement value in units of 0.125 dB.

35 RL\_ATT\_ADJ\_GAIN\_259200\_80MS - Reverse Link Attribute Adjustment Gain for the  
36 transmission rate 259200 bits/s.

37 If RC4\_RC6\_80MS\_INCL is set to '0', the base station shall  
38 omit this field.

39 If RC4\_RC6\_80MS\_INCL is set to '1' and  
40 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base station shall  
41 set this field to the value of the nominal attribute gain  
42 adjustment that the mobile station is to make for the  
43 transmission attributes with transmission rate 259200  
44 bits/s, and 80ms frame. The base station shall set the value  
45 in the range from -48 to 48 inclusive.

1 If RC4\_RC6\_80MS\_INCL is set to '1' and  
 2 RL\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base station shall  
 3 set this field to the value of the pilot reference level  
 4 adjustment that the mobile station is to make for the  
 5 transmission attributes with transmission rate 259200 bits/s  
 6 and 80ms frame.

7 The base station shall set this field to the correction factor  
 8 expressed as a two's complement value in units of 0.125 dB.

9 RESERVED - Reserved bits.

10 The base station shall add reserved bits as needed in order to  
 11 make the length of the entire record equal to an integer  
 12 number of octets. The base station shall set these bits to '0'.

13

14 If RPC\_ADJ\_REC\_TYPE is equal to '0011', the base station shall set type-specific fields as  
 15 specified in Table 3.7.5.20-7.

16 **Table 3.7.5.20-7. Type Specific Fields for RECORD\_TYPE**  
 17 **= '0011'**

Fields	Length (Bits)
RL_CQICH_ATT_ADJ_GAIN_TYPE	1
RL_CQICH_ATT_ADJ_GAIN_HIGH_INCL	1
RL_CQICH_ATT_ADJ_GAIN_HIGH	0 or 8
RL_CQICH_ATT_ADJ_GAIN_LOW_INCL	1
RL_CQICH_ATT_ADJ_GAIN_LOW	0 or 8
RESERVED	0-7 (if needed)

18

19 RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE - Reverse Channel Quality Indicator Channel  
 20 attribute adjustment gain value type indicator

21 If the following fields are set to the nominal attribute gain  
 22 adjustment values that the mobile station is to use for the  
 23 transmission attributes (relative to Nominal\_Attribute\_Gain  
 24 specified in [2]), the base station shall set this field to '0'. If  
 25 the following fields are set to the pilot reference level  
 26 adjustment values that the mobile station is to use for the  
 27 transmission attributes (relative to Pilot\_Reference\_Level  
 28 specified in [2]), the base station shall set this field to '1'.

29 RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL - Reverse Channel Quality Indicator Channel  
 30 attribute adjustment gain for the high power level included  
 31 indicator.

32 If the attribute adjustment gain for the high power level of  
 33 Reverse Channel Quality Indicator Channel transmission is  
 34 included in this message, the base station shall set this field  
 35 to '1'; otherwise, the base station shall set this field to '0'.

1 RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH - Attribute adjustment gain for Reverse Channel  
 2 Quality Indicator Channel for the high Channel Quality  
 3 Indicator gain power level.

4 If RL\_CQICH\_ATT\_ADJ\_GAIN\_HIGH\_INCL is set to '0', the  
 5 base station shall omit this field; otherwise, the base station  
 6 shall set this field as follows:

7 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base  
 8 station shall set this field to the value of the nominal  
 9 attribute gain adjustment that the mobile station is to make  
 10 for the transmission attributes for the high power level of R-  
 11 CQICH. The base station shall set the value in the range from  
 12 -40 to 16 inclusive.

13 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base  
 14 station shall set this field to the value of the pilot reference  
 15 level adjustment that the mobile station is to make for the  
 16 transmission attributes for the high power level of R-CQICH.

17 The base station shall set this field to the correction factor  
 18 expressed as a two's complement value in units of 0.125 dB.

19 RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW\_INCL - Reverse Channel Quality Indicator Channel  
 20 attribute adjustment gain for the low power level included  
 21 indicator.

22 If the attribute adjustment gain for the low power level of  
 23 Reverse Channel Quality Indicator Channel transmission is  
 24 included in this message, the base station shall set this field  
 25 to '1'; otherwise, the base station shall set this field to '0'.

26 RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW - Attribute adjustment gain for Reverse Channel  
 27 Quality Indicator Channel for the low Channel Quality  
 28 Indicator gain power level.

29 If RL\_CQICH\_ATT\_ADJ\_GAIN\_LOW\_INCL is set to '0', the base  
 30 station shall omit this field; otherwise, the base station shall  
 31 set this field as follows:

32 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '0', the base  
 33 station shall set this field to the value of the nominal  
 34 attribute gain adjustment that the mobile station is to make  
 35 for the transmission attributes for the low power level of R-  
 36 CQICH. The base station shall set the value in the range from  
 37 -16 to 16 inclusive.

38 If RL\_CQICH\_ATT\_ADJ\_GAIN\_TYPE is set to '1', the base  
 39 station shall set this field to the value of the pilot reference  
 40 level adjustment that the mobile station is to make for the  
 41 transmission attributes for the low power level of R-CQICH.

42 The base station shall set this field to the correction factor  
 43 expressed as a two's complement value in units of 0.125 dB.

- 1 If `RPC_ADJ_REC_TYPE` is equal to '0100', the base station shall set type-specific fields as  
 2 specified in Table 3.7.5.20-8.

3 **Table 3.7.5.20-8. Type Specific Fields for `RECORD_TYPE` = '0100'**

Fields	Length (Bits)

RESERVED	0-7 (if needed)

- 1
- 2 REV\_REQCH\_ADJ\_INCL - Reverse Request Channel Adjustment included field.
- 3 If the attribute adjustment gains for the Reverse Request
- 4 Channel are included in this message, the base station shall
- 5 set this field to '1'; otherwise, the base station shall set this
- 6 field to '0'.
- 7 REV\_REQCH\_ADJ\_GAIN - Reverse Request Channel Adjustment Gain.

1		If REV_REQCH_ADJ_INCL is set to '0', the base station shall
2		omit this field; otherwise, the base station shall include this
3		field, and set it as follows.
4		The base station shall set this field to the value of the
5		nominal attribute gain adjustment that the mobile station is
6		to make for the transmission attributes for the power level of
7		R-REQCH.
8		The base station shall set the value in the range from -24 to
9		40 inclusive. The base station shall set this field to the
10		correction factor expressed as a two's complement value in
11		units of 0.125 dB.
12	REV_SPICH_ADJ_INCL	- Reverse Secondary Pilot Channel Adjustment included
13		field.
14		If the attribute adjustment gains for the Reverse Secondary
15		Pilot Channel are included in this message, the base station
16		shall set this field to '1'; otherwise, the base station shall set
17		this field to '0'.
18	REV_SPICH_ADJ_GAIN	- Reverse Secondary Pilot Channel Adjustment Gain.
19		If REV_SPICH_ADJ_INCL is set to '0', the base station shall
20		omit this field; otherwise, the base station shall include this
21		field, and set it as follows.
22		The base station shall set this field to the value of the
23		nominal attribute gain adjustment that the mobile station is
24		to make for the transmission attributes for the power level of
25		R-SPICH.
26		The base station shall set the value in the range from -16 to
27		48 inclusive. The base station shall set this field to the
28		correction factor expressed as a two's complement value in
29		units of 0.125 dB.
30	REV_SPICH_EP_SIZE	- Minimum Encoder Packet Size for which the Reverse Secondary Pilot
31		Channel is used.
32		If REV_SPICH_ADJ_INCL is set to '0', the base station shall
33		omit this field; otherwise, the base station shall include this
34		field, and set it as follows.
35		The base station shall set this field to the minimum encoder
36		packet size for which the Reverse Secondary Pilot Channel is
37		used (see [2] and [3]).
38		This field shall take the values 0 to 10 corresponding to the
39		encoder packet sizes 192, 408, 792, 1560, 3096, 4632, 6168,
40		9240, 12312, 15384, 18456 bits.
41	REV_PDCCH_ADJ_INCL	- Reverse Packet Data Control Channel Adjustment
42		included field.
43		If the attribute adjustment gains for the Reverse Packet Data
44		Control Channel are included in this message, the base
45		station shall set this field to '1'; otherwise, the base station
46		shall set this field to '0'.

1       REV\_PDCCH\_ADJ\_GAIN - Reverse Packet Data Control Channel Adjustment Gain.

2               If REV\_PDCCH\_ADJ\_INCL is set to '0', the base station shall

3               omit this field; otherwise, the base station shall include this

4               field, and set it as follows.

5               The base station shall set this field to the value of the

6               nominal attribute gain adjustment that the mobile station is

7               to make for the transmission attributes for the power level of

8               R-PDCCH.

9               The base station shall set the value in the range from -32 to

10              32 inclusive. The base station shall set this field to the

11              correction factor expressed as a two's complement value in

12              units of 0.125 dB.

13      REV\_PDCCH\_ATTRIBUTE\_ADJ\_INCL - Reverse Packet Data Control Channel

14              Attribute Adjustment included field.

15              If the attribute adjustment gains for the Reverse Packet Data

16              Control Channel are included per encoder packet size and per

17              boost mode in this message, the base station shall set this

18              field to '1'; otherwise, the base station shall set this field to

19              '0'.

20      REV\_PDCCH\_EP\_SIZE\_NUM - Number of occurrences of Reverse Packet Data Control

21              Channel Attribute Adjustment Gains.

22              If REV\_PDCCH\_ATTRIBUTE\_ADJ\_INCL is set to '0', the base

23              station shall omit this field; otherwise, the base station shall

24              include this field, and set it as follows.

25              The base station shall set this field to one less than half the

26              number of occurrences of the field included hereafter. The

27              records are listed per encoder packet size, in the following

28              ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,

29              9240, 12312, 15384, 18456 bits.

30      If REV\_PDCCH\_ATTRIBUTE\_ADJ\_INCL is set to '1', the base station shall include

31      REV\_PDCCH\_EP\_SIZE\_NUM+1 occurrences of the following record:

32      The base station shall include 2 occurrences of the following field. The first occurrence of

33      this field is for the non-boosted mode, while the second is for the boosted mode.

34      REV\_PDCCH\_ATTRIBUTE\_ADJ\_GAIN - Reverse Packet Data Control Channel Attribute

35              Adjustment Gain.

36              The base station shall set this field to the value of the

37              nominal attribute gain adjustment that the mobile station is

38              to make for the transmission attributes for the power level of

39              R-PDCCH, for the i-th encoder packet size, and for the non-

40              boosted and boosted modes.

41              The base station shall set the value in the range from -32 to

42              32 inclusive. The base station shall set this field to the

43              correction factor expressed as a two's complement value in

44              units of 0.125 dB.

45      REV\_PDCCH\_BOOST\_ADJ\_INCL - Reverse Packet Data Control Channel Boost

1 Adjustment included field.

2 If the attribute adjustment gains for the Reverse Packet Data  
3 Control Channel per boosted mode are included in this  
4 message, the base station shall set this field to '1'; otherwise,  
5 the base station shall set this field to '0'.

6 If REV\_PDCCH\_BOOST\_ADJ\_INCL is set to '1', the base station shall include two  
7 occurrences of the following record:

8 REV\_PDCCH\_BOOST\_ADJ\_GAIN - Reverse Packet Data Control Channel Boost  
9 Adjustment Gains.

10 The base station shall set this field to the value of the  
11 nominal attribute gain adjustment that the mobile station is  
12 to make for the transmission attributes for the power level of  
13 R-PDCCH, for the appropriate mode.

14 The base station shall set the value in the range from -32 to  
15 32 inclusive.

16 The first occurrence of this field is for the non-boosted mode,  
17 while the second is for the boosted mode. The base station  
18 shall set this field to the correction factor expressed as a  
19 two's complement value in units of 0.125 dB.

20 REV\_PDCCH\_PAYLOAD\_ADJ\_INCL - Reverse Packet Data Control Channel Payload  
21 Attribute Adjustment included field.

22 If the attribute adjustment gains for the Reverse Packet Data  
23 Control Channel are included per encoder packet size in this  
24 message, the base station shall set this field to '1'; otherwise,  
25 the base station shall set this field to '0'.

26 REV\_PDCCH\_EP\_SIZE\_NUM\_1 - Number of occurrences of Reverse Packet Data Control  
27 Channel Payload Attribute Adjustment Gain records.

28 If REV\_PDCCH\_PAYLOAD\_ADJ\_INCL is set to '0', the base  
29 station shall omit this field; otherwise, the base station shall  
30 include this field, and set it as follows.

31 The base station shall set this field to one less than the  
32 number of occurrences of the field included hereafter. The  
33 fields are listed per encoder packet size, in the following  
34 ascending order: 192, 408, 792, 1560, 3096, 4632, 6168,  
35 9240, 12312, 15384, 18456 bits.

36 If REV\_PDCCH\_PAYLOAD\_ADJ\_INCL is set to '1', the base station shall include  
37 (REV\_PDCCH\_EP\_SIZE\_NUM\_1+1)x2 occurrences of the following record:

1 REV\_PDCCH\_PAYLOAD\_ADJ\_GAIN - Reverse Packet Data Control Channel Payload  
 2 Attribute Adjustment Gain.

3 The base station shall set this field to the value of the  
 4 nominal attribute gain adjustment that the mobile station is  
 5 to make for the transmission attributes for the power level of  
 6 R-PDCCH, for the i-th encoder packet size, and for the non-  
 7 boosted and boosted modes. In each set for the i-th encoder  
 8 packet, the first occurrence of this field is for the non-boosted  
 9 mode, while the second is for the boosted mode.

10 The base station shall set the value in the range from -32 to  
 11 32 inclusive. The base station shall set this field to the  
 12 correction factor expressed as a two's complement value in  
 13 units of 0.125 dB.

14 REV\_PDCH\_ADJ\_INCL - Reverse Packet Data Channel Adjustment included field.

15 If the attribute adjustment gains for the Reverse Packet Data  
 16 Channel are included in this message, the base station shall  
 17 set this field to '1'; otherwise, the base station shall set this  
 18 field to '0'.

19 REV\_PDCH\_ADJ\_GAIN - Reverse Packet Data Channel Adjustment Gain.

20 If REV\_PDCH\_ADJ\_INCL is set to '0', the base station shall  
 21 omit this field; otherwise, the base station shall include this  
 22 field, and set it as follows.

23 The base station shall set this field to the value of the  
 24 nominal attribute gain adjustment that the mobile station is  
 25 to make for the transmission attributes for the power level of  
 26 R-PDCH.

27 The base station shall set the value in the range from -40 to  
 28 56 inclusive. The base station shall set this field to the  
 29 correction factor expressed as a two's complement value in  
 30 units of 0.125 dB.

31 REV\_PDCH\_PAYLOAD\_ADJ\_INCL - Reverse Packet Data Channel Adjustment included  
 32 field.

33 If the attribute adjustment gains for the Reverse Packet Data  
 34 Channel are included per encoder packet size in this  
 35 message, the base station shall set this field to '1'; otherwise,  
 36 the base station shall set this field to '0'.

37 REV\_PDCH\_EP\_SIZE\_NUM - Number of occurrences of Reverse Packet Data Channel  
 38 Payload Adjustment Gains.

39 If REV\_PDCH\_PAYLOAD\_ADJ\_INCL is set to '0', the base  
 40 station shall omit this field; otherwise, the base station shall  
 41 include this field, and set it as follows.

42 The base station shall set this field to one less than the  
 43 number of occurrences of the following field. The fields are  
 44 listed per encoder packet size, in the following ascending  
 45 order: 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312,  
 46 15384, 18456 bits.

1 If REV\_PDCH\_PAYLOAD\_ADJ\_INCL is set to '1', the base station shall include  
 2 REV\_PDCH\_EP\_SIZE\_NUM+1 occurrences of the following record:

3 REV\_PDCH\_PAYLOAD\_ADJ\_GAIN - Reverse Packet Data Channel Payload Adjustment  
 4 Gain.

5 The base station shall set this field to the value of the  
 6 nominal attribute gain adjustment that the mobile station is  
 7 to make for the transmission attributes for the power level of  
 8 R-PDCH, for the i-th encoder packet size.

9 The base station shall set the value in the range from -40 to  
 10 56 inclusive. The base station shall set this field to the  
 11 correction factor expressed as a two's complement value in  
 12 units of 0.125 dB.

13 REV\_PDCH\_BOOST\_ADJ\_INCL - Reverse Packet Data Channel Adjustment included  
 14 field.

15 If the attribute adjustment gains for the Reverse Packet Data  
 16 Channel are included per boosted mode in this message, the  
 17 base station shall set this field to '1'; otherwise, the base  
 18 station shall set this field to '0'.

19 If REV\_PDCH\_BOOST\_ADJ\_INCL is set to '1', the base station shall include two  
 20 occurrences of the following record. The first occurrence of this field is for the non-boosted  
 21 mode, while the second is for the boosted mode.

22 REV\_PDCH\_BOOST\_ADJ\_GAIN - Reverse Packet Data Channel Boost-dependent  
 23 Adjustment Gain.

24 The base station shall set this field to the value of the  
 25 nominal attribute gain adjustment that the mobile station is  
 26 to make for the transmission attributes for the power level of  
 27 R-PDCH.

28 The base station shall set the value in the range from -40 to  
 29 56 inclusive. The first occurrence of this field is for the non-  
 30 boosted mode, while the second is for the boosted mode. The  
 31 base station shall set this field to the correction factor  
 32 expressed as a two's complement value in units of 0.125 dB.

33 REV\_PDCH\_SUBPACKET\_ADJ\_INCL - Reverse Packet Data Channel Subpacket  
 34 Adjustment included field.

35 If the attribute adjustment gains for the Reverse Packet Data  
 36 Channel are included per subpacket transmission round in  
 37 this message, the base station shall set this field to '1';  
 38 otherwise, the base station shall set this field to '0'.

39 REV\_PDCH\_RETRX\_NUM - Number of occurrences of the Reverse Packet Data  
 40 Channel Subpacket Adjustment Gains.

41 If REV\_PDCH\_SUBPACKET\_ADJ\_INCL is set to '0', the base  
 42 station shall omit this field; otherwise, the base station shall  
 43 include this field, and set it as follows.

44 The base station shall set this field to one less than the  
 45 number of occurrences of the following field.

If REV\_PDCH\_SUBPACKET\_ADJ\_INCL is set to '1', the base station shall include (REV\_PDCH\_RETRX\_NUM+1) occurrences of the following record:

REV\_PDCH\_SUBPACKET\_ADJ\_GAIN - Reverse Packet Data Channel Subpacket Adjustment Gain.

The base station shall set this field to the value of the nominal attribute gain adjustment that the mobile station is to make for the transmission attributes for the power level of R-PDCH on the i-th transmission round.

The base station shall set the value in the range from -40 to 56 inclusive. The base station shall set this field to the correction factor expressed as a two's complement value in units of 0.125 dB.

REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL - Reverse Packet Data Channel Attribute Adjustment included field.

If the attribute adjustment gains for the Reverse Packet Data Channel are included per encoder packet size and per subpacket transmission round in this message, the base station shall set this field to '1'; otherwise, the base station shall set this field to '0'.

REV\_PDCH\_EP\_SIZE\_NUM\_1 - Number of occurrences of the Reverse Packet Data Channel Attribute Adjustment Gains record.

If REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL is set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.

The base station shall set this field to one less than the number of occurrences of the following subrecord. The subrecords are listed per encoder packet size, in the following ascending order: 192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384, 18456 bits.

If REV\_PDCH\_ATTRIBUTE\_ADJ\_INCL is set to '1', the base station shall include (REV\_PDCH\_EP\_SIZE\_NUM\_1+1) occurrences of the following subrecord:

REV\_PDCH\_RETRX\_NUM\_1 - Number of occurrences of the Reverse Packet Data Channel Subpacket Adjustment Gains.

The base station shall set this field to one less than the number of occurrences of the following field.

The base station shall include (REV\_PDCH\_RETRX\_NUM\_1+1) occurrences of the following record:

The base station shall include 2 occurrences of the following field. The first occurrence of this field is for the non-boosted mode, while the second is for the boosted mode.

1	REV_PDCH_ATTRIBUTE_ADJ_GAIN	-	Reverse Packet Data Channel Attribute
2			Adjustment Gain.
3			The base station shall set this field to the value of the
4			nominal attribute gain adjustment that the mobile station is
5			to make for the transmission attributes for the power level of
6			R-PDCH, for the i-th encoder packet size on a j-th
7			transmission round, using the non-boosted or boosted mode.
8			The base station shall set the value in the range from -40 to
9			56 inclusive. The base station shall set this field to the
10			correction factor expressed as a two's complement value in
11			units of 0.125 dB.
12	RESERVED	-	Reserved bits.
13			The base station shall add reserved bits as needed in order to
14			make the length of the entire record equal to an integer
15			number of octets. The base station shall set these bits to '0'.
16	BCMC_LPM_INCL	-	BCMC Logical to Physical Mapping included indicator.
17			The base station shall set this field to '1' if BCMC Logical to
18			Physical Mapping is included in this message; otherwise, the
19			base station shall set this field to '0'.
20	BCMC_LPM_IND	-	BCMC Logical to Physical Mapping indicator.
21			If the BCMC_LPM_INCL field is set to '0', the base station
22			shall omit this field; otherwise, the base station shall include
23			this field and set it as follows:
24			The base station shall set this field to '01' or '10' as shown in
25			Table 3.7.5.20-2 corresponding to the Logical to Physical
26			Mapping indicator.
27	NUM_BCMC_PROGRAMS	-	Number of BCMC Programs
28			If the BCMC_LPM_IND field is not included or is included and
29			is not set to '01', the base station shall omit this field;
30			otherwise, the base station shall include this field and set it
31			as follows:
32			The base station shall set this field to the number of BCMC
33			programs included in this LPM record minus 1.
34	The base station shall include NUM_BCMC_PROGRAMS+1 occurrences of the following		
35	variable length record:		
36	BCMC_PROGRAM_ID_LEN	-	Length of BCMC_PROGRAM_ID field
37			The base station shall set this field to one less than the
38			length, in bits, of the BCMC_PROGRAM_ID of this program.
39	BCMC_PROGRAM_ID	-	BCMC program Identifier
40			The length of this field shall be one more than the value of
41			BCMC_PROGRAM_ID_LEN bits.

1		The base station shall set this field to the identifier of the
2		BCMC program to which this Logical to Physical Mapping
3		entry applies.
4	BCMC_FLOW_DISCRIMINATOR_LEN	- Length of BCMC_FLOW_DISCRIMINATOR field
5		The base station shall set this field to the length, in bits, of
6		the BCMC_FLOW_DISCRIMINATOR of this program.
7	NUM_FLOW_DISCRIMINATOR	- Number of flow discriminators
8		The length of this field shall be determined by the value of the
9		BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
10		BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
11		is omitted; otherwise, the length of this field shall be
12		BCMC_FLOW_DISCRIMINATOR_LEN bits.
13		The base station shall set this field to the number of flow
14		discriminators included for this program.
15	If NUM_FLOW_DISCRIMINATOR field is included, the base station shall include	
16	NUM_FLOW_DISCRIMINATOR+1 occurrences of the following variable length record;	
17	otherwise, the base station shall include 1 occurrence of the following variable length	
18	record:	
19	BCMC_FLOW_DISCRIMINATOR	- BCMC Flow discriminator.
20		The length of this field shall be determined by the value of the
21		BCMC_FLOW_DISCRIMINATOR_LEN as follows: if
22		BCMC_FLOW_DISCRIMINATOR_LEN is set to '000', this field
23		is omitted; otherwise, the length of this field shall be
24		BCMC_FLOW_DISCRIMINATOR_LEN bits.
25		The base station shall set this field to the BCMC flow
26		discriminator to which this Logical to Physical Mapping entry
27		applies.
28	PHYSICAL_RESOURCE	- Physical resource identifier.
29		The base station shall set this field to the physical resource
30		identifier '0000', '0001', '0010', '0011' as shown in Table
31		3.7.5.20-4 to which the logical BCMC traffic channel
32		corresponding to BCMC_FLOW_ID specified in this BCMC
33		Logical to Physical Mapping entry is to be mapped.
34	FORWARD_FLAG	- Forward mapping indicator.
35		The base station shall set this field to '1' if the logical to
36		physical channel mapping specified in this record applies to
37		forward logical channels; otherwise, the base station shall set
38		this field to '0'.
39	REVERSE_FLAG	- Reverse mapping indicator.

- 1 The base station shall set this field to '1' if the logical to  
 2 physical channel mapping specified in this record applies to  
 3 reverse logical channels; otherwise, the base station shall set  
 4 this field to '0'.
- 5       BSR\_ID\_INCL   -   BSR\_ID included indicator.
- 6       The base station shall set this field to '1' if BSR\_ID field is  
 7 included in this message; otherwise, the base station shall  
 8 set this field to '0' and include FOR\_TRAFFIC, REV\_TRAFFIC  
 9 fields in this message.
- 10       BSR\_ID       -   BCMC Service Reference Identifier
- 11       If the BSR\_ID\_INCL field is set to '0', the base station shall  
 12 omit this field; otherwise, the base station shall include this  
 13 field and set it as follows:
- 14       The base station shall set this field to the BCMC Service  
 15 Reference identifier corresponding to this BCMC flow to  
 16 which this Logical to Physical Mapping entry applies.
- 17       The base station shall not set this field to a value of 0 .
- 18       FOR\_TRAFFIC   -   Forward Traffic Channel traffic type.
- 19       If the BSR\_ID\_INCL field is set to '1', the base station shall  
 20 omit this field; otherwise, the base station shall include this  
 21 field and set it as follows:
- 22       The base station shall set this field to the FOR\_TRAFFIC code  
 23 shown in Table 3.7.5.20-5 corresponding to the Forward  
 24 Traffic Channel traffic type to be used with the BCMC flow to  
 25 which this Logical to Physical Mapping entry applies.

26

27

**Table 3.7.5.20-5. FOR\_TRAFFIC Codes**

<b>FOR_TRAFFIC (binary)</b>	<b>Description</b>
0000	The BCMC flow does not use Forward Traffic Channel traffic.
0001	The BCMC flow uses primary traffic on the Forward Traffic Channel.
0010	The BCMC flow uses secondary traffic on the Forward Traffic Channel.
0011	Reserved.
0100	The BCMC flow uses the Forward Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other FOR_TRAFFIC codes are reserved.	

REV\_TRAFFIC - Reverse Traffic Channel traffic type.

If the BSR\_ID\_INCL field is set to '1', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows:

The base station shall set this field to the REV\_TRAFFIC code shown in Table 3.7.5.20-6 corresponding to the Reverse Traffic Channel traffic type to be used with the BCMC flow to which this Logical to Physical Mapping entry applies.

**Table 3.7.5.20-6. REV\_TRAFFIC Codes**

REV_TRAFFIC (binary)	Description
0000	The BCMC flow does not use Reverse Traffic Channel traffic.
0001	The BCMC flow uses primary traffic on the Reverse Traffic Channel.
0010	The BCMC flow uses secondary traffic on the Reverse Traffic Channel.
0011	Reserved.
0100	The BCMC flow uses the Reverse Traffic Channel, but does not classify the traffic as primary, secondary, or signaling traffic.
All other REV_TRAFFIC codes are reserved.	

REV\_PDCH\_PARMS\_INCL - Reverse PDCH Parameters Included indicator.

The base station shall set this field to '1' if the reverse Packet Data Channel parameters are included; otherwise, the base station shall set this field to '0'.

REV\_PDCH\_PARMS\_1\_INCL - Reverse Packet Data Channel parameters subset included indicator.

If REV\_PDCH\_PARMS\_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field, and set it as follows.

The base station shall set this field to '1' if the following R-PDCH parameters are included in this message; otherwise, the base station shall set this field to '0'.

REV\_PDCH\_MAX\_AUTO\_TPR - Reverse Packet Data Channel maximum traffic to pilot ratio for autonomous transmission.

If REV\_PDCH\_PARMS\_1\_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

1		The base station shall set this field to the maximum traffic to
2		pilot ratio for autonomous transmission on the Reverse
3		Packet Data Channel (see [2] and [3]).
4		The base station shall set this field to a value in the range 0
5		to 18 dB inclusive in units of 0.125 dB.
6	REV_PDCH_NUM_ARQ_ROUNDS_NORMAL -	Maximum number of allowed ARQ rounds
7		on the Reverse PDCH in the non-boosted mode.
8		If REV_PDCH_PARMS_1_INCL is set to '0', the base station
9		shall omit this field; otherwise, the base station shall include
10		this field and set it as follows.
11		The base station shall set this field to one less the maximum
12		number of allowed ARQ rounds on the Reverse PDCH in the
13		non-boosted mode. The base station shall set this field to 0,
14		1, or 2 corresponding to 1, 2, or 3 rounds respectively (See
15		[3]).
16	REV_PDCH_OPER_PARMS_INCL -	Reverse Packet Data Channel operational parameters
17		included indicator.
18		If REV_PDCH_PARMS_INCL is set to '0', the base station shall
19		omit this field; otherwise, the base station shall include this
20		field and set it as follows.
21		The base station shall set this field to '1' if the following R-
22		PDCH operational parameters are included in this message;
23		otherwise, the base station shall set this field to '0'.
24	REV_PDCH_MAX_SIZE_ALLOWED_ENCODER_PACKET -	Maximum Allowed Reverse
25		PDCH encoder packet size.
26		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
27		included and set to '0', the base station shall omit this field;
28		otherwise, the base station shall include this field and set it
29		as follows.
30		The base station shall set this field to the maximum size
31		encoder packet that the mobile station is allowed to use. (see
32		[2] and [3]).
33		The base station shall set this field to a value in the range 0
34		to 10 inclusive, corresponding to the encoder packet sizes
35		192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384,
36		and 18456 bits respectively.
37	REV_PDCH_DEFAULT_PERSISTENCE -	Reverse Packet Data Channel default initial
38		persistence.
39		If REV_PDCH_OPER_PARMS_INCL is omitted, or if it is
40		included and set to '0', the base station shall omit this field;
41		otherwise, the base station shall include this field and set it
42		as follows:
43		The base station shall set this field to '1' if the mobile station
44		is to be persistent at the call setup; otherwise, the base
45		station shall set this field to '0' (See [3]).

1 REV\_PDCH\_RESET\_PERSISTENCE - Reverse Packet Data Channel reset persistence  
2 indicator.

3 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
4 included and set to '0', the base station shall omit this field;  
5 otherwise, the base station shall include this field and set it  
6 as follows:

7 The base station shall set this field to '1' if, at the end of a  
8 persistent grant, the mobile station shall reset its persistent  
9 indicator to persistent; otherwise, the base station shall set  
10 this field to '0' if the mobile station shall reset its persistent  
11 indicator to non-persistent (See [3]).

12 REV\_PDCH\_GRANT\_PRECEDENCE - Reverse Packet Data Channel Grant Precedence  
13 Indicator.

14 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
15 included and set to '0', the base station shall omit this field;  
16 otherwise, the base station shall include this field and set it  
17 as follows:

18 The base station shall set this field to '1' if unicast Forward  
19 Grant Channel messages have precedence over Rate Control  
20 commands; otherwise, the base station shall set this field to  
21 '0' to indicate that Rate Control down commands from non-  
22 serving sectors have precedence over Forward Grant Channel  
23 messages (see [3]).

24 REV\_PDCH\_MSIB\_SUPPORTED - Reverse Packet Data Channel MSIB usage indicator.

25 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
26 included and set to '0', the base station shall omit this field;  
27 otherwise, the base station shall include this field and set it  
28 as follows:

29 The base station shall set this field to '1' if the mobile station  
30 is to use the MSIB bit on the Reverse Packet Data Control  
31 Channel; otherwise, the base station shall set this field to  
32 '0'(See [3]).

33 REV\_PDCH\_ALWAYS\_ACK\_FINAL\_ROUND - Reverse Packet Data Channel Final Round  
34 Always Acknowledged

35 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is  
36 included and set to '0', the base station shall omit this field;  
37 otherwise, the base station shall include this field and set it  
38 as follows:

39 The base station shall set this field to '1' if all of the following  
40 conditions are true:

- 41 • The Forward Acknowledgment Channel is assigned to  
42 the mobile station,
- 43 • The base station does not send an acknowledgment  
44 on the assigned Forward Acknowledgment Channel  
45 whenever a Reverse Packet Data Channel  
46 transmission is not successfully decoded on the last

1 ARQ round, and

2 • The base station sends an acknowledgment on the

3 assigned Forward Acknowledgment Channel to the

4 mobile station whenever a Reverse Packet Data

5 Channel transmission is successfully decoded on the

6 last ARQ round,

7 Otherwise, the base station shall set this field to '0'.

8 REV\_PDCH\_SOFT\_HANDOFF\_RESET\_IND - Reverse Packet Data Channel soft handoff

9 reset indicator.

10 If REV\_PDCH\_OPER\_PARMS\_INCL is omitted, or if it is

11 included and set to '0', the base station shall omit this field;

12 otherwise, the base station shall include this field and set it

13 as follows:

14 The base station shall set this field to '1' if the mobile station

15 is to initialize RPDCHCF when soft selection occurs in the

16 FPDCHCF; otherwise, the base station shall set this field to

17 '0' (see [3]).

18 REV\_PDCH\_BOOST\_PARMS\_INCL - Reverse Packet Data Channel boosted mode

19 parameters included indicator.

20 If REV\_PDCH\_PARMS\_INCL is set to '0', the base station shall

21 omit this field; otherwise, the base station shall include this

22 field and set it as follows.

23 The base station shall set this field to '1' if the Reverse Packet

24 Data Channel boosted mode parameters are included;

25 otherwise, the base station shall set this field to '0'.

26 REV\_PDCH\_NUM\_ARQ\_ROUNDS\_BOOST - Maximum number of allowed ARQ rounds

27 on the Reverse PDCH in the boosted mode.

28 If REV\_PDCH\_BOOST\_PARMS\_INCL is omitted, or if it is

29 included and set to '0', the base station shall omit this field;

30 otherwise, the base station shall include this field and set it

31 as follows.

32 The base station shall set this field to one less the maximum

33 number of allowed ARQ rounds on the Reverse PDCH in the

34 boosted mode. The base station shall set this field to 0, 1, or

35 2 corresponding to 1, 2, or 3 rounds respectively (See [3]).

36 REV\_PDCH\_BOOST\_OVERSHOOT - Reverse Packet Data Channel Boost Overshoot.

37 If REV\_PDCH\_BOOST\_PARMS\_INCL is omitted, or if it is

38 included and set to '0', the base station shall omit this field;

39 otherwise, the base station shall include this field and set it

40 as follows.

41 The base station shall set this field to the boosted QoS

42 parameter that defines the overshoot allowed by boosted QoS

43 on the Reverse Packet Data Channel (see [3]).

44 The base station shall set this field to a value in the range 0

45 to 3.875 dB inclusive in units of 0.125 dB.

1	REV_REQCH_ENABLED - Reverse Request Channel Enabled.
2	If REV_PDCH_PARMS_INCL is set to '0', the base station shall
3	omit this field; otherwise, the base station shall include this
4	field and set it as follows.
5	The base station shall set this field to '1' if the mobile station
6	is to enable the Reverse Request Channel; otherwise, the base
7	station shall set this field to '0'.
8	REV_REQCH_PARMS_INCL - Reverse Request Channel Parameters Included Indicator.
9	If REV_REQCH_ENABLED is omitted, or if it is included and
10	is set to '0', the base station shall omit this field; otherwise,
11	the base station shall include this field and set it as follows.
12	The base station shall set this field to '1' if the Reverse
13	Request Channel Parameters are included hereafter;
14	otherwise, the base station shall set this field to '0'.
15	REV_REQCH_QUICK_REPEAT_ALLOWED - Reverse Request Channel Quick Repeat
16	Allowed indicator.
17	If REV_REQCH_PARMS_INCL is omitted, or if it is included
18	and set to '0', the base station shall omit this field; otherwise,
19	the base station shall include this field and set it as follows.
20	The base station shall set this field to '1' if quick repeats are
21	allowed on the Reverse Request Channel; otherwise, the base
22	station shall set this field to '0' (see [3]).
23	REV_REQCH_POWER_REPORTS_PARMS_INCL - Reverse Request Channel Power Report
24	Parameters Included indicator.
25	If REV_REQCH_PARMS_INCL is omitted, or if it is included
26	and set to '0', the base station shall omit this field; otherwise,
27	the base station shall include this field and set it as follows.
28	The base station shall set this field to '1' if the parameters
29	needed for power status reports are included hereafter;
30	otherwise, the base station shall set this field to '0'.
31	REV_REQCH_POWER_HEADROOM_INCREASE - Reverse Request Channel Power
32	headroom increase delta to trigger power report.
33	If REV_REQCH_POWER_REPORTS_PARMS_INCL is omitted,
34	or if it is included and set to '0', the base station shall omit
35	this field; otherwise, the base station shall include this field
36	and set it as follows.
37	The base station shall set this field to the power headroom
38	increase delta that triggers a power report (see [3]).
39	The base station shall set this field to a value in the range 0
40	to 18 dB inclusive in units of 1 dB, or to 31 which means
41	plus infinity.
42	REV_REQCH_POWER_HEADROOM_DECREASE - Reverse Request Channel Power
43	headroom decrease delta to trigger power report.

1		If REV_REQCH_POWER_REPORTS_PARMs_INCL is omitted,
2		or if it is included and set to '0', the base station shall omit
3		this field; otherwise, the base station shall include this field
4		and set it as follows.
5		The base station shall set this field to the power headroom
6		decrease delta that triggers a power report (see [3]).
7		The base station shall set this field to a value in the range 0
8		to 18 dB inclusive in units of 1 dB, or to 31 which means
9		plus infinity.
10	REV_REQCH_HEADROOM_DURATION - Reverse Request Channel minimum power	
11	headroom update trigger interval.	
12		If REV_REQCH_POWER_REPORTS_PARMs_INCL is omitted,
13		or if it is included and set to '0', the base station shall omit
14		this field; otherwise, the base station shall include this field
15		and set it as follows.
16		The base station shall set this field to the minimum power
17		headroom update trigger interval (see [3]).
18		The base station shall set this field to a value in the range 0
19		to 5.10 seconds inclusive in units of 20 ms.
20	REV_REQCH_MAX_POWER_UPDATE_DURATION - Reverse Request Channel	
21	maximum power headroom update trigger interval.	
22		If REV_REQCH_POWER_REPORTS_PARMs_INCL is omitted,
23		or if it is included and set to '0', the base station shall omit
24		this field; otherwise, the base station shall include this field
25		and set it as follows.
26		The base station shall set this field to the maximum power
27		headroom update trigger interval (see [3]).
28		The base station shall set this field to a value in the range
29		0.02 to 5.10 seconds inclusive in units of 20 ms, or to 0
30		which means plus infinity.
31	REV_PDCH_CRC_PARMs_INCL - Reverse Packet Data Channel Common Rate Control	
32	Parameters Included Indicator.	
33		If REV_PDCH_PARMs_INCL is set to '0', the base station shall
34		omit this field; otherwise, the base station shall include this
35		field and set it as follows.
36		The base station shall set this field to '1' if Reverse Packet
37		Data Channel Common Rate Control Parameters are included
38		hereafter; otherwise, the base station shall set this field to '0'.
39	REV_PDCH_INIT_TARGET_TPR - Reverse Packet Data Channel initial target traffic to	
40	pilot ratio.	
41		If REV_PDCH_CRC_PARMs_INCL is omitted, or if it is
42		included and set to '0', the base station shall omit this field;
43		otherwise, the base station shall include this field and set it
44		as follows.
45		The base station shall set this field to the initial target traffic
46		to pilot ratio on the Reverse Packet Data Channel (see [3]).

1		The base station shall set this field to a value in the range 0
2		to 18 dB inclusive in units of 0.125 dB.
3	REV_PDCH_MAX_TARGET_TPR -	Reverse Packet Data Channel maximum target traffic
4		to pilot ratio.
5		If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
6		included and set to '0', the base station shall omit this field;
7		otherwise, the base station shall include this field and set it
8		as follows.
9		The base station shall set this field to the maximum target
10		traffic to pilot ratio on the Reverse Packet Data Channel (see
11		[3]).
12		The base station shall set this field to a value in the range 0
13		to 18 dB inclusive in units of 0.125 dB.
14	REV_PDCH_QUICK_START_THRESH -	Reverse Packet Data Channel quick start
15		threshold.
16		If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
17		included and set to '0', the base station shall omit this field;
18		otherwise, the base station shall include this field and set it
19		as follows.
20		The base station shall set this field to the quick start
21		threshold on the Reverse Packet Data Channel (see [3]).
22		The base station shall set this field to a value in the range 0
23		to 9 dB inclusive in units of 0.125 dB.
24	REV_PDCH_EP_MAP_LEN -	Length of the Reverse PDCH Encoder Packet size map.
25		If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
26		included and set to '0', the base station shall omit this field;
27		otherwise, the base station shall include this field and set it
28		as follows.
29		The base station shall set this field to '0' (the only Encoder
30		Packet size map length supported is 11 bits).
31	REV_PDCH_EP_MAP -	Number of Reverse PDCH Encoder Packet sizes.
32		If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is
33		included and set to '0', the base station shall omit this field;
34		otherwise, the base station shall include this field and set it
35		as follows.
36		The base station shall set the i-th bit to '1' for each encoder
37		packet size for which a subrecord is included hereafter. The
38		first 11 bits correspond to the following encoder packet sizes:
39		192, 408, 792, 1560, 3096, 4632, 6168, 9240, 12312, 15384,
40		18456 bits.
41	If REV_PDCH_CRC_PARMS_INCL is omitted, or if it is included and set to '0', the base	
42	station shall omit the following subrecord; otherwise, the base station shall include the	
43	following subrecord for each bit set to '1' in REV_PDCH_EP_MAP:	
44	REV_PDCH_STEP_UP -	Reverse Packet Data Channel Step "up" for rate control.

1 The base station shall set this field to the step “up” value of  
2 the rate control on the Reverse Packet Data Channel for the i-  
3 th encoder packet size signaled in REV\_PDCH\_EP\_MAP (see  
4 [3]).

5 The base station shall set this field to a value in the range 0  
6 to 7.96875 dB inclusive in units of 0.03125 dB.

7 REV\_PDCH\_STEP\_DOWN - Reverse Packet Data Channel Step “down” for rate  
8 control.

9 The base station shall set this field to the step “down” value  
10 of rate control on the Reverse Packet Data Channel for the i-  
11 th encoder packet size signaled in REV\_PDCH\_EP\_MAP (see  
12 [3]).

13 The base station shall set this field to a value in the range 0  
14 to 7.96875 dB inclusive in units of 0.03125 dB.

15 REV\_PDCH\_SR\_ID\_MAP - Number of Reverse PDCH Encoder Packet sizes.

16 If REV\_PDCH\_PARMS\_INCL is set to ‘0’, the base station shall  
17 omit this field; otherwise, the base station shall include this  
18 field and set it as follows.

19 The base station shall set the i-th bit to ‘1’ for each SR\_ID  
20 associated with the Reverse Packet Data Channel. The LSB  
21 corresponds to SR\_ID 0. The MSB corresponds to SR\_ID 6.

22 The base station shall include the following subrecord for each bit set to ‘1’ in  
23 REV\_PDCH\_SR\_ID\_MAP:

24 REV\_PDCH\_BOOST\_ALLOWED - Reverse PDCH TPR Boost Allowed indicator.

25 If REV\_PDCH\_PARMS\_INCL is omitted or is included and is  
26 set to ‘0’, then the base station shall omit this field;  
27 otherwise, the base station shall include this field and set it  
28 as follows:

29 The base station shall set this field to ‘1’ if TPR (traffic to pilot  
30 ratio) power boost on the Reverse PDCH is allowed; otherwise,  
31 the base station shall set this field to ‘0’.

32 REV\_PDCH\_AUTO\_ALLOWED - Reverse PDCH Autonomous Transmission Allowed  
33 indicator.

34 If REV\_PDCH\_PARMS\_INCL is set to ‘0’, the base station shall  
35 omit this field; otherwise, the base station shall include this  
36 field and set it as follows.

37 The base station shall set this field to ‘1’ if autonomous  
38 transmission on the Reverse PDCH is allowed; otherwise, the  
39 base station shall set this field to ‘0’.

40 If REV\_REQCH\_PARMS\_INCL, is not included or is included and is set to ‘0’, the base  
41 station shall omit the following fields; otherwise, the base station shall include the  
42 following subrecord as described hereafter;

- 43 • The base station shall include an occurrence of the following subrecord for each bit  
44 set to ‘1’ in REV\_PDCH\_SR\_ID\_MAP,

- The base station shall include an additional subrecord for the aggregate traffic across all SR\_ID's, and,
- The base station shall set REV\_REQCH\_USE\_POWER\_REPORTS, REV\_REQCH\_USE\_BUFFER\_REPORTS, or REV\_REQCH\_USE\_WATERMARKS to '1' in at least one of these subrecords.

#### REV\_REQCH\_MIN\_DURATION - Reverse Request Channel Minimum Duration.

The base station shall set this field to the minimum duration between REQCH messages for this sr\_id(see [3]).

The base station shall set this field to a value in the range 0 to 5.10 seconds inclusive in units of 20 ms.

#### REV\_REQCH\_USE\_POWER\_REPORTS - Reverse Request Channel Use of Power Status Reports indicator.

If REV\_REQCH\_POWER\_REPORTS\_PARMs\_INCL is omitted, or if it is included and set to '0', the base station shall omit this field; otherwise, the base station shall include this field and set it as follows.

The base station shall set this field to '1' if power status reports are allowed; otherwise, the base station shall set this field to '0'.

#### REV\_REQCH\_USE\_BUFFER\_REPORTS - Reverse Request Channel Use of Buffer Status Reports indicator.

The base station shall set this field to '1' if buffer status reports are allowed; otherwise, the base station shall set this field to '0'.

#### REV\_REQCH\_USE\_WATERMARKS - Reverse Request Channel Use of Watermark Reports indicator.

The base station shall set this field to '1' if watermark reports are allowed; otherwise, the base station shall set this field to '0'.

#### REV\_REQCH\_USE\_DEFAULT\_TAB - Reverse Packet Data Channel use default buffer size table indicator.

If REV\_REQCH\_USE\_POWER\_REPORTS is included and set to '1', or if REV\_REQCH\_USE\_BUFFER\_REPORTS is set to '1', or if REV\_REQCH\_USE\_WATERMARKS is set to '1', the base station shall include this field and set it according to Table 3.7.5.20.7; otherwise, the base station shall omit this field.

**Table 3.7.5.20.7. Encoding of REV\_REQCH\_USE\_DEFAULT\_TAB**

REV_REQCH_USE_DEFAULT_TAB	Descriptions
'000'	Use the REV_REQCH_BUF_QUANT_PARM_1 field and REV_REQCH_BUF_QUANT_PARM_2 field to generate a buffer size table

'001'	Use the default buffer size table as shown in Table Table 3.7.5.20.8
'010'	Use the default buffer size table as shown in Table Table 3.7.5.20.9
'011' – '111'	Reserved

1  
2 REV\_REQCH\_BUF\_QUANT\_PARM\_1- Reverse Request Channel First Buffer  
3 Quantization Parameter.

4 If REV\_REQCH\_USE\_DEFAULT\_TAB is omitted, or if it is  
5 included and not set to '000', the base station shall omit this  
6 field; otherwise, the base station shall include this field and  
7 set it as follows.

8 The base station shall set this field to the first Reverse Packet  
9 Data Channel buffer size quantization parameter.

10 The base station shall not set this field to '0000000' if  
11 REV\_REQCH\_BUF\_QUANT\_PARM\_2 is equal to '00000000'  
12 (see [3]).

13 REV\_REQCH\_BUF\_QUANT\_PARM\_2- Reverse Request Channel Second Buffer  
14 Quantization Parameter.

15 If REV\_REQCH\_USE\_DEFAULT\_TAB is omitted, or if it is  
16 included and not set to '000', the base station shall omit this  
17 field; otherwise, the base station shall include this field and  
18 set it as follows.

19 The base station shall set this field to the second Reverse  
20 Packet Data Channel buffer size quantization parameter.

21 The base station shall not set this field to '0000000' if  
22 REV\_REQCH\_BUF\_QUANT\_PARM\_1 is equal to '00000000'  
23 (see [3]).

24 REV\_REQCH\_HIGH\_WATERMARK\_1- Reverse Request Channel First High Watermark  
25 Parameter.

26 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
27 station shall omit this field; otherwise, the base station shall  
28 include this field and set it to the first high watermark  
29 parameter (for high priority reports) for this sr\_id:

30 REV\_REQCH\_HIGH\_WATERMARK\_2 - Reverse Request Channel Second High Watermark  
31 Parameter.

32 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
33 station shall omit this field; otherwise, the base station shall  
34 include this field and set it to the second high watermark  
35 parameter (for high priority report) for this sr\_id.

1 REV\_REQCH\_LOW\_WATERMARK\_1 - Reverse Request Channel First Low Watermark  
2 Parameter .  
3 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
4 station shall omit this field; otherwise, the base station shall  
5 include this field and set it to the first low watermark  
6 parameter (for high priority reports) for this sr\_id.

7 REV\_REQCH\_LOW\_WATERMARK\_2 - Reverse Request Channel Second Low  
8 WatermarkParameter.  
9 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
10 station shall omit this field; otherwise, the base station shall  
11 include this field and set it to the second low watermark  
12 parameter (for high priority reports) for this sr\_id.

13 REV\_REQCH\_CEILING\_1 - Reverse Request Channel Ceiling first parameter.  
14 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
15 station shall omit this field; otherwise, the base station shall  
16 include this field and set it to the first high ceiling level  
17 parameter for this sr\_id .

18 REV\_REQCH\_CEILING\_2 - Reverse Request Channel Ceiling second parameter.  
19 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
20 station shall omit this field; otherwise, the base station shall  
21 include this field and set it to the second high ceiling level  
22 parameter for this sr\_id.

23 REV\_REQCH\_FLOOR\_1 - Reverse Request Channel Floor first parameter.  
24 If REV\_REQCH\_USE\_WATERMARKS is equal to '0',the base  
25 station shall omit this field; otherwise, the base station shall  
26 include this field and set it to the first low floor level  
27 parameters for this sr\_id.

28 REV\_REQCH\_FLOOR\_2 - Reverse Request Channel Floor second parameter.  
29 If REV\_REQCH\_USE\_WATERMARKS is equal to '0', the base  
30 station shall omit this field; otherwise, the base station shall  
31 include this field and set it to the second low floor level  
32 parameter for this sr\_id.

33 RESERVED - Reserved bits.  
34 The base station shall add reserved bits as needed in order to  
35 make the length of the entire record equal to an integer  
36 number of octets. The base station shall set these bits to '0'.  
37

## 3.7.5.21 Multiple Character Extended Display

If P\_REV\_IN\_USE is equal to or greater than nine, the base station shall not transmit this information record to the mobile station.

This information record allows the network to supply supplementary service multiple character display information that may be displayed by the mobile station.

Type-Specific Field	Length (bits)
MC_EXT_DISPLAY_IND	1
DISPLAY_TYPE	7

One or more occurrences of the following record:

{

DISPLAY_TAG	8
NUM_RECORD	8

NUM\_RECORD occurrences of the following record

{ (NUM\_RECORD)

DISPLAY_ENCODING	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	Variable
-------------------	----------

} (NUM\_FIELDS)

} (NUM\_RECORDS)

}

RESERVED	0 - 7 (as needed)
----------	-------------------

MC\_EXT\_DISPLAY\_IND - The indicator of Multiple Character Extended Display information record.

The base station shall set this field to '1'.

DISPLAY\_TYPE - The type of display.

The base station shall set this field to the DISPLAY\_TYPE value shown in Table 3.7.5.16-1 corresponding to the type of display, as defined in [8] Annex D.

DISPLAY\_TAG - The indicator of the display information.

There are three types of display tags: mandatory control tags (Blank and Skip), display text tags, and optional control tags, see [8] Annex D.

1			The base station shall set this field to the DISPLAY_TAG
2			value shown in Table 3.7.5.16-2 corresponding to the type of
3			information contained in the following CHARi field, as defined
4			in [8] Annex D.
5	NUM_RECORD	-	The number of records displaying.
6			The base station shall set this field to the number of records
7			of display text.
8			If the DISPLAY_TAG field is equal to '10000000' or
9			'10000001', the base station shall set this field to '00000000'.
10	The base station shall include NUM_RECORD occurrences of the following record.		
11	DISPLAY_ENCODING	-	Display encoding.
12			The three most significant bits of this field shall be set to
13			'000' and the five least significant bit of this field shall be set
14			to a value as specified in [30] to indicate the display encoding
15			type used.
16			Support of an encoding method does not imply that the entire
17			encodable character set must be supported. In general, once
18			the supported character set is determined, various subsets of
19			the character set can be supported. If a message is
20			comprised entirely of characters from a supported subset of a
21			character set, it can be displayed. If a message contains an
22			unsupported character of a character set, it can be discarded.
23	NUM_FIELDS	-	Number of occurrences of the CHARi field.
24			The base station shall set this field to the number of
25			characters included in this record.
26	CHARi	-	Character.
27			The base station shall include NUM_FIELDS occurrences of
28			this field, one for each character to be displayed.
29	RESERVED	-	Reserved bits.
30			The base station shall add reserved bits as needed in order to
31			make the length of the entire record equal to an integer
32			number of octets. The base station shall set these bits to '0'.
33			

## 1 3.7.5.22 Call Waiting Indicator

2 This information record allows the base station to inform the mobile station that a call  
3 waiting call is available. This indicator may be used to suppress the generation of the  
4 local dial tone in mobile stations that provide locally generated dial tone.

5

Type-Specific Field	Length (bits)
CALL_WAITING_INDICATOR	1
RESERVED	7

6

7 CALL\_WAITING\_INDICATOR - Call waiting indicator.

8 The base station shall set this field to a '1' to indicate to the  
9 mobile station that a call is waiting. The base station shall  
10 set this field to a '0' if the call waiting call is not answered by  
11 the mobile station and the call waiting call goes away.

12 RESERVED - Reserved bits.

13 The base station shall set this field to '0000000'.

14

### 3.7.5.23 Enhanced Multiple Character Extended Display

This information record allows the network to supply supplementary service multiple character display information that may be displayed by the mobile station.

Type-Specific Field	Length (bits)
DISPLAY_TYPE	7
NUM_DISPLAYS	8

NUM\_DISPLAYS+1 occurrences of the following variable length record:

{ (NUM\_DISPLAYS)+1

DISPLAY_TAG	8
NUM_RECORD	8

NUM\_RECORD occurrences of the following record

{ (NUM\_RECORD)

RECORD_LENGTH	8
DISPLAY_ENCODING	8
NUM_FIELDS	8

NUM\_FIELDS occurrences of the following field:

{ (NUM\_FIELDS)

CHAR <sub>i</sub>	Variable
-------------------	----------

} (NUM\_FIELDS)

RESERVED	0 - 7 (as needed)
----------	-------------------

} (NUM\_RECORD)

} (NUM\_DISPLAYS)+1

RESERVED_1	0 - 7 (as needed)
------------	-------------------

- 5        DISPLAY\_TYPE    -    The type of display.
- 6                           The base station shall set this field to the DISPLAY\_TYPE
- 7                           value shown in Table 3.7.5.16-1 corresponding to the type of
- 8                           display, as defined in [8] Annex D.
- 9        NUM\_DISPLAYS    -    The number of occurrences of display text included.
- 10                          The base station shall set this field to one less than the
- 11                          number of occurrences of display text included.
- 12                          The base station shall include NUM\_DISPLAYS + 1
- 13                          occurrences of the following variable-field record:
- 14       DISPLAY\_TAG     -    The indicator of the display information.

1		There are three types of display tags: mandatory control tags
2		(Blank and Skip), display text tags, and optional control tags,
3		see [8] Annex D.
4		The base station shall set this field to the DISPLAY_TAG
5		value shown in Table 3.7.5.16-2 corresponding to the type of
6		information contained in the following CHARi field, as defined
7		in [8] Annex D.
8	NUM_RECORD	- The number of records displaying.
9		The base station shall set this field to the number of records
10		of display text.
11		If the DISPLAY_TAG field is equal to '10000000' or
12		'10000001', the base station shall set this field to '00000000'.
13	The base station shall include NUM_RECORD occurrences of the following record.	
14	RECORD_LENGTH	- Display text record length.
15		The base station shall set this field to the number of octets
16		included in this display text record, of specified encoding,
17		including this field.
18	DISPLAY_ENCODING	- Display encoding.
19		The three most significant bits of this field shall be set to
20		'000' and the five least significant bit of this field shall be set
21		to a value as specified in [30] to indicate the display encoding
22		type used.
23		Support of an encoding method does not imply that the entire
24		encodable character set must be supported. In general, once
25		the supported character set is determined, various subsets of
26		the character set can be supported. If a message is
27		comprised entirely of characters from a supported subset of a
28		character set, it can be displayed. If a message contains an
29		unsupported character of a character set, it can be discarded.
30	NUM_FIELDS	- Number of occurrences of the CHARi field.
31		The base station shall set this field to the number of
32		characters included in this record.
33	CHARi	- Character.
34		The base station shall include NUM_FIELDS occurrences of
35		this field, one for each character to be displayed.
36	RESERVED	- Reserved bits.
37		The base station shall add reserved bits as needed in order to
38		make the length of the entire record, of specified encoding,
39		equal to an integer number of octets. The base station shall
40		set these bits to '0'.

1        RESERVED\_1    -    Reserved bits for octet alignment.  
2  
3        The mobile station shall add the minimum number of bits  
4        necessary to make the record length in bits an integral  
5        multiple of 8. The mobile station shall set these bits to '0'.  
6

### 3.7.6 Information Elements

#### 3.7.6.1 Pilot Record Type Specific Fields

If PILOT\_REC\_TYPE is equal to '000', the Pilot Record Type Specific fields include the following fields:

Field	Length (bits)
TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	4

**TD\_POWER\_LEVEL** - TD transmit power level.

The base station or mobile station shall set this field to the TD transmit power level relative to that of the Forward Pilot Channel, as specified in Table 3.7.6.1-1.

**Table 3.7.6.1-1. TD Transmit Power Level**

TD_POWER_LEVEL	Transmit Power Level
00	9 dB below the Forward Pilot Channel transmit power
01	6 dB below the Forward Pilot Channel transmit power
10	3 dB below the Forward Pilot Channel transmit power
11	Same as the Forward Pilot Channel transmit power

**TD\_MODE** - Transmit Diversity mode.

The base station or mobile station shall set this field to the Transmit Diversity mode, as specified in Table 3.7.6.1-2.

1

**Table 3.7.6.1-2. TD Mode**

<b>TD_MODE</b>	<b>Descriptions</b>
00	OTD (Orthogonal Transmit Diversity) mode
01	STS (Space Time Spreading) mode
10-11	Reserved

2

3

RESERVED - Reserved bits.

4

The base station or mobile station shall set this field to '000000'.

5

6

7

If PILOT\_REC\_TYPE is equal to '001', the base station or mobile station shall include the following fields:

8

<b>Field</b>	<b>Length (bits)</b>
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
RESERVED	0 to 7 (as needed)

9

10

QOF - Quasi-orthogonal function index.

11

The base station or mobile station shall set this field to the index of the Quasi-orthogonal function (see [2]).

12

13

WALSH\_LENGTH - Length of the Walsh Code.

14

The base station or mobile station shall set this field to the WALSH\_LENGTH value shown in Table 3.7.6.1-3 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot.

15

16

17

**Table 3.7.6.1-3. Walsh Code Length**

<b>WALSH_LENGTH (binary)</b>	<b>Length of the Walsh Code</b>
'000'	64
'001'	128
'010'	256
'011'	512
'100' – '111'	Reserved

AUX\_PILOT\_WALSH - Walsh Code for the Auxiliary Pilot.

The base station or mobile station shall set this field to the Walsh code corresponding to the Auxiliary pilot.

RESERVED - Reserved bits.

The base station or mobile station shall set all the bits of this field to '0' to make the entire record octet-aligned.

If PILOT\_REC\_TYPE is equal to '010', the base station or mobile station shall include the following fields:

<b>Field</b>	<b>Length (bits)</b>
QOF	2
WALSH_LENGTH	3
AUX_WALSH	WALSH_LENGTH+6
AUX_TD_POWER_LEVEL	2
TD_MODE	2
RESERVED	0 to 7 (as needed)

QOF - Quasi-orthogonal function index for the Auxiliary Transmit Diversity Pilot.

The base station or mobile station shall set this field to the index of the Quasi-orthogonal function (see [2]).

WALSH\_LENGTH - Length of the Walsh code.

The base station or mobile station shall set this field to the WALSH\_LENGTH value shown in 3.7.6.1-3 corresponding to the length of the Walsh code for the pilots that are used as Auxiliary pilot in the transmit diversity mode.

AUX\_WALSH - Walsh Code for the Auxiliary Pilot.

The base station or mobile station shall set this field to the Walsh code corresponding to the Auxiliary Pilot.

- 1    **AUX\_TD\_POWER\_LEVEL** - Auxiliary Transmit Diversity Pilot Power Level.  
 2    The base station or mobile station shall set this field to the  
 3    Auxiliary Transmit Diversity Pilot transmit power level  
 4    relative to that of the Auxiliary Pilot as specified in Table  
 5    3.7.6.1-4.

6                                    **Table 3.7.6.1-4. Auxiliary Transmit Diversity Pilot**  
 7                                    **Transmit Power Level**

<b>AUX_TD_POWER_LEVEL</b>	<b>Transmit Power Level</b>
00	9 dB below the Auxiliary Pilot Channel transmit power
01	6 dB below the Auxiliary Pilot Channel transmit power
10	3 dB below the Auxiliary Pilot Channel transmit power
11	Same as the Auxiliary Pilot Channel transmit power

- 8  
 9                    **TD\_MODE** - Transmit Diversity mode.  
 10    The base station or mobile station shall set this field to the  
 11    Transmit Diversity mode, as specified in Table 3.7.6.1-2.  
 12                    **RESERVED** - Reserved bits.  
 13    The base station or mobile station shall set all the bits of this  
 14    field to '0' to make the entire record octet-aligned.

- 15  
 16    If **PILOT\_REC\_TYPE** is equal to '011', the base station or mobile station shall include the  
 17    following fields:

<b>Field</b>	<b>Length (bits)</b>
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3

- 19  
 20    **SR3\_PRIMARY\_PILOT** - Primary SR3 pilot.  
 21    The base station or mobile station shall set this field to the  
 22    value shown in Table 3.7.6.1-5 corresponding to the position  
 23    of the primary SR3 pilot.

**Table 3.7.6.1-5. The Position of the Primary SR3 Pilot**

<b>SR3_PRIMARY_PILOT (Binary)</b>	<b>Position</b>
00	The primary pilot is on the lowest SR3 frequency
01	The primary pilot is on the center SR3 frequency
10	The primary pilot is on the highest SR3 frequency
11	Reserved

- SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot on the lower frequency of the two remaining SR3 frequencies.
- The base station or mobile station shall set this field to the value shown in Table 3.7.6.1-6 corresponding to the power level of the primary pilot with respect to the pilot on the lower frequency of the two remaining SR3 frequencies.

**Table 3.7.6.1-6. Pilot Transmission Power**

<b>SR3_PILOT_POWER1, SR3_PILOT_POWER2 (Binary)</b>	<b>Relative Transmission Power</b>
000	0dB
001	1dB
010	2dB
011	3dB
100	4dB
101	5dB
110	6dB
111	7dB

- SR3\_PILOT\_POWER2 – The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.

1 The base station or mobile station shall set this field to the  
 2 value shown in Table 3.7.6.1-6 corresponding to the power  
 3 level of the primary pilot with respect to the pilot on the  
 4 higher frequency of the two remaining SR3 frequencies.

5

6 If PILOT\_REC\_TYPE is equal to '100', the base station or mobile station shall include the  
 7 following fields:

8

Field	Length (bits)
SR3_PRIMARY_PILOT	2
SR3_PILOT_POWER1	3
SR3_PILOT_POWER2	3
QOF	2
WALSH_LENGTH	3
AUX_PILOT_WALSH	WALSH_LENGTH+6
ADD_INFO_INCL1	1
QOF1	0 or 2
WALSH_LENGTH1	0 or 3
AUX_PILOT_WALSH1	0 or WALSH_LENGTH1+6
ADD_INFO_INCL2	1
QOF2	0 or 2
WALSH_LENGTH2	0 or 3
AUX_PILOT_WALSH2	0 or WALSH_LENGTH2+6
RESERVED	0 – 7 (as needed)

9

10 SR3\_PRIMARY\_PILOT – Primary SR3 pilot.

11 The base station or mobile station shall set this field to the  
 12 value shown in Table 3.7.6.1-5 corresponding to the position  
 13 of the primary SR3 pilot.

14 SR3\_PILOT\_POWER1 – The primary SR3 pilot power level relative to that of the pilot  
 15 on the lower frequency of the two remaining SR3 frequencies.

16 The base station or mobile station shall set this field to the  
 17 value shown in Table 3.7.6.1-6 corresponding to the power  
 18 level of the primary pilot with respect to the pilot on the lower  
 19 frequency of the two remaining SR3 frequencies.

1	SR3_PILOT_POWER2	-	The primary SR3 pilot power level relative to that of the pilot on the higher frequency of the two remaining SR3 frequencies.
2			
3			
4			The base station or mobile station shall set this field to the value shown in Table 3.7.6.1-6 corresponding to the power level of the primary pilot with respect to the pilot on the higher frequency of the two remaining SR3 frequencies.
5			
6			
7			
8	QOF	-	Quasi-orthogonal function index.
9			The base station or mobile station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the frequency of the primary pilot.
10			
11			
12	WALSH_LENGTH	-	Length of the Walsh Code.
13			The base station or mobile station shall set this field to the WALSH_LENGTH value shown in Table 3.7.6.1-3 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the frequency of the primary pilot.
14			
15			
16			
17			
18	AUX_PILOT_WALSH	-	Walsh Code for the Auxiliary Pilot.
19			The base station or mobile station shall set this field to the Walsh code corresponding to the Auxiliary pilot on the frequency of the primary pilot.
20			
21			
22	ADD_INFO_INCL1	-	Additional information included for the pilot on the lower frequency of the two remaining SR3 frequencies.
23			
24			If the additional information for the pilot on the lower frequencies of the two remaining SR3 frequencies is the same as pilot on the primary frequency, the base station or mobile station shall set this field to '0'; otherwise, the base station or mobile station shall set this field to '1'.
25			
26			
27			
28			
29	QOF1	-	Quasi-orthogonal function index for the pilot on the lower frequency of the two remaining SR3 frequencies.
30			
31			If ADD_INFO_INCL1 is set to '0', the base station or mobile station shall omit this field; otherwise, the base station or mobile station shall set this field as follows:
32			
33			
34			The base station or mobile station shall set this field to the index of the Quasi-orthogonal function (see [2]) on the lower frequency of the two remaining SR3 frequencies.
35			
36			
37	WALSH_LENGTH1	-	Length of the Walsh Code for the pilot on the lower frequency of the two remaining SR3 frequencies.
38			
39			If ADD_INFO_INCL1 is set to '0', the base station or mobile station shall omit this field; otherwise, the base station or mobile station shall set this field as follows:
40			
41			
42			The base station or mobile station shall set this field to the WALSH_LENGTH value shown in Table 3.7.6.1-3 corresponding to the length of the Walsh code for the pilot that is used as the Auxiliary pilot on the lower frequency of the two remaining SR3 frequencies.
43			
44			
45			
46			

1	AUX_PILOT_WALSH1	-	Walsh Code for the Auxiliary Pilot on the lower frequency of
2			the two remaining SR3 frequencies.
3			If ADD_INFO_INCL1 is set to '0', the base station or mobile
4			station shall omit this field; otherwise, the base station or
5			mobile station shall set this field as follows:
6			The base station or mobile station shall set this field to the
7			Walsh code corresponding to the Auxiliary pilot on the lower
8			frequency of the two remaining SR3 frequencies.
9	ADD_INFO_INCL2	-	Additional information included for the pilot on the higher
10			frequency of the two remaining SR3 frequencies.
11			If the additional information for the pilot on the higher
12			frequencies of the two remaining SR3 frequencies is the same
13			as pilot on the primary frequency, the base station or mobile
14			station shall set this field to '0'; otherwise, the base station or
15			mobile station shall set this field to '1'.
16	QOF2	-	Quasi-orthogonal function index for the pilot on the higher
17			frequency of the two remaining SR3 frequencies.
18			If ADD_INFO_INCL2 is set to '0', the base station or mobile
19			station shall omit this field; otherwise, the base station or
20			mobile station shall set this field as follows:
21			The base station or mobile station shall set this field to the
22			index of the Quasi-orthogonal function (see [2]) on the higher
23			frequency of the two remaining SR3 frequencies.
24	WALSH_LENGTH2	-	Length of the Walsh Code for the pilot on the higher
25			frequency of the two remaining SR3 frequencies.
26			If ADD_INFO_INCL2 is set to '0', the base station or mobile
27			station shall omit this field; otherwise, the base station or
28			mobile station shall set this field as follows:
29			The base station or mobile station shall set this field to the
30			WALSH_LENGTH value shown in Table 3.7.6.1-3
31			corresponding to the length of the Walsh code for the pilot
32			that is used as the Auxiliary pilot on the higher frequency of
33			the two remaining SR3 frequencies.
34	AUX_PILOT_WALSH2	-	Walsh Code for the Auxiliary Pilot on the higher frequency of
35			the two remaining SR3 frequencies.
36			If ADD_INFO_INCL2 is set to '0', the base station or mobile
37			station shall omit this field; otherwise, the base station or
38			mobile station shall set this field as follows:
39			The base station or mobile station shall set this field to the
40			Walsh code corresponding to the Auxiliary pilot on the higher
41			frequency of the two remaining SR3 frequencies.
42	RESERVED	-	Reserved bits.
43			The base station or mobile station shall set all the bits of this
44			field to '0' to make the entire record octet-aligned.

## 1 ANNEX B CDMA CALL FLOW EXAMPLES

2 This is an informative annex which contains examples of call flow. The diagrams follow  
3 these conventions:

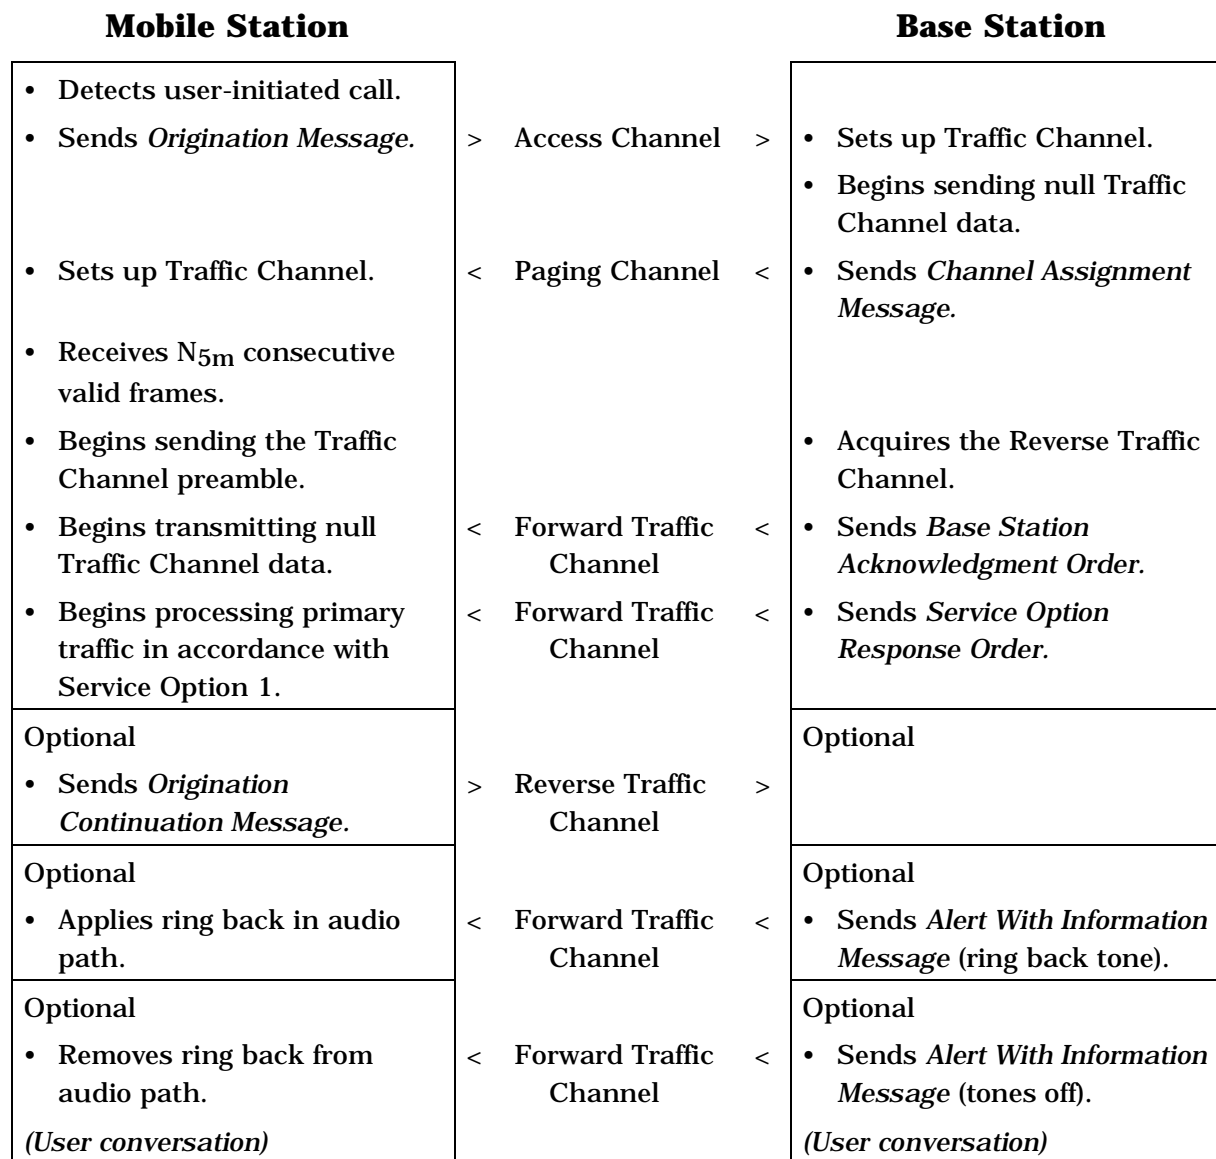

- 4 • All messages are received without error
- 5 • Receipt of messages is not shown except in the handoff examples
- 6 • Acknowledgments are not shown
- 7 • Optional authentication procedures are not shown
- 8 • Optional private long code transitions are not shown

9 For the call flow diagrams B-22 through B-31, the following conventions hold:

- 10 • The following message acronyms are defined:
  - 11 ERRM: Extended Release Response Message
  - 12 ERRMM: Extended Release Response Mini Message
  - 13 RRM: Resource Request Message
  - 14 RRMM: Resource Request Mini Message
  - 15 RRRM: Resource Release Request Message
  - 16 RRRMM: Resource Release Request Mini Message
  - 17 SreqM: Service Request Message
  - 18 SCRM: Supplemental Channel Request Message
  - 19 SCRMM: Supplemental Channel Request Mini Message
  - 20 ERM: Extended Release Message
  - 21 ERMM: Extended Release Mini Message
  - 22 RAM: Resource Allocation Message
  - 23 RAMM: Resource Allocation Mini Message
  - 24 SCM: Service Connect Message
  - 25 GHDM: General Handoff Direction Message
  - 26 UHDM: Universal Handoff Direction Message
  - 27 ESCAM: Extended Supplemental Channel Assignment Message
  - 28 FSCAMM: Forward Supplemental Channel Assignment Mini Message
  - 29 RSCAMM: Reverse Supplemental Channel Assignment Mini Message

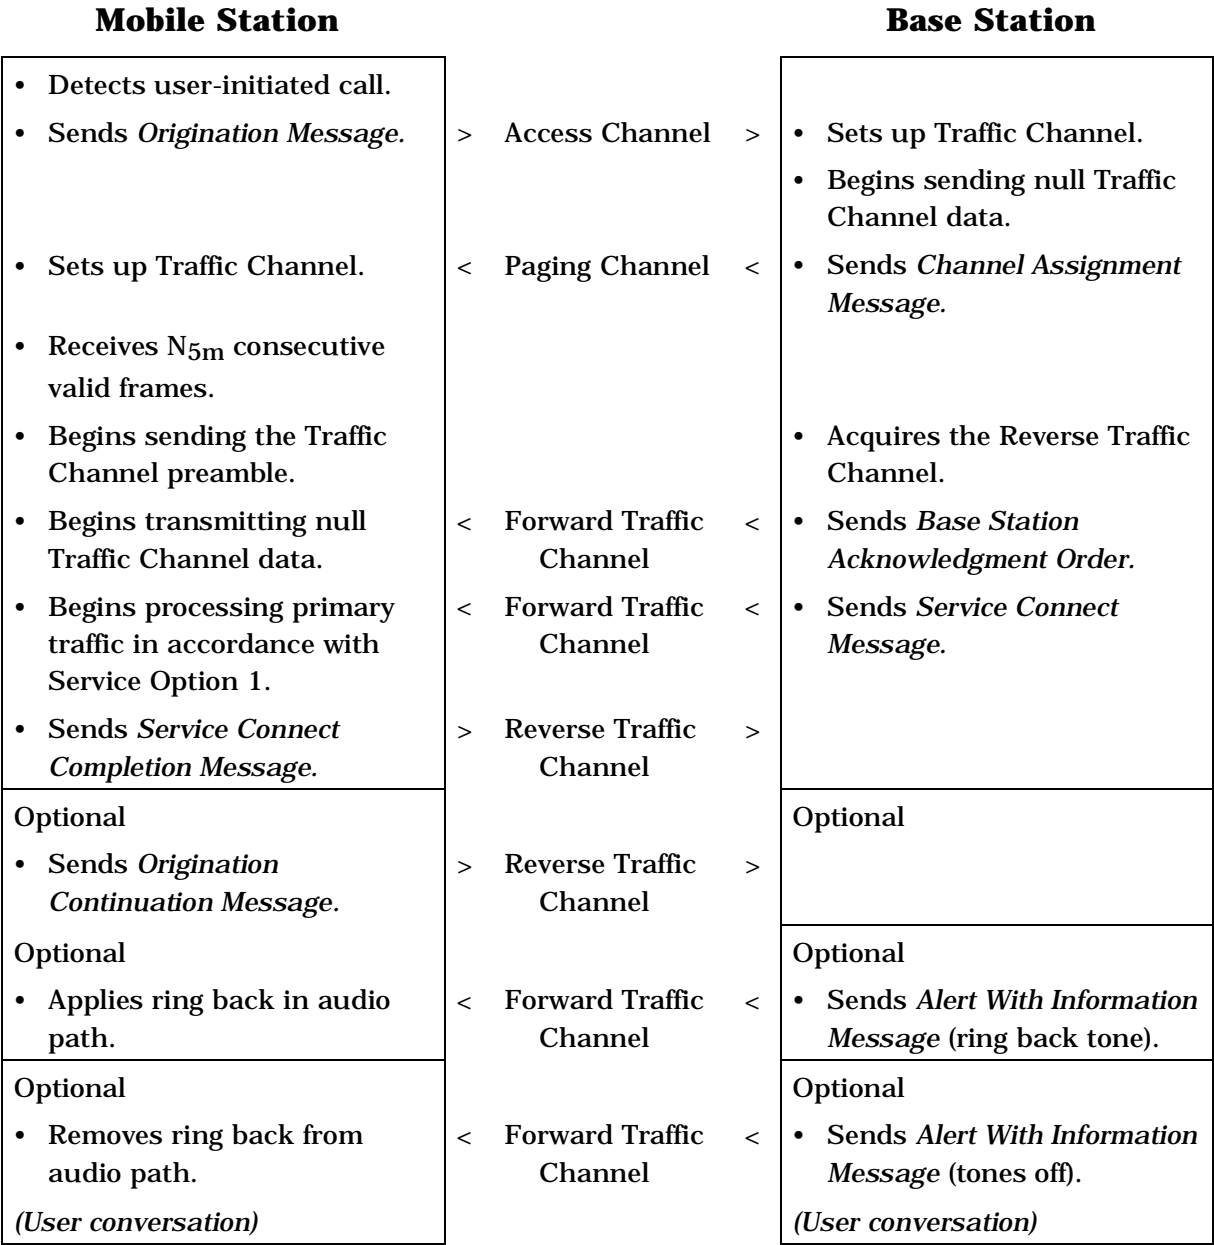

1 HCM: (Extended) Handoff Complete Message

3

4 Figure B-10 illustrates call processing operations for failure recovery for hard handoff on  
5 the same frequency. Figure B-11 illustrates call flow for failure recovery for inter-frequency  
6 handoff when the mobile station does not search the Candidate Frequency. Figures B-12  
7 and B-13 show the call flow for mobile-assisted inter-frequency handoff (handoff preceded  
8 by searching of the Candidate Frequency Search Set by the mobile station), where the  
9 search is started by using the *Candidate Frequency Search Control Message*. Figures B-14  
10 and B-15 illustrate call flow for inter-frequency handoff when failure recovery also includes  
11 searching the Candidate Frequency Search Set. In the periodic search examples (Figures  
12 B-13 and B-15), it is assumed that the mobile station performs a search of the Candidate  
13 Frequency Search Set in a single visit to the Candidate Frequency. Figures B-16 and B-17  
14 illustrate the interaction of inter-frequency handoff operations with an ongoing periodic  
15 search of the Candidate Frequency Search Set.

Annex D is a normative annex which contains tables that give specific values for the constant identifiers. These identifiers take the forms such as  $T_{20m}$  and  $N_{5m}$ . The subscripted numbers vary to identify the particular constant. Typically the subscripted letter “m” refers to the mobile station and the subscripted letter “b” refers to the base station. The following tables provide values for identifiers given in the text:

7 Table D-1. Time Limits

8                      Table D-2. Other Constants

10 **Table D-1. Time Limits (Part 1 of 5)**

<b>Time Limit</b>	<b>Description</b>	<b>Value</b>	<b>References</b>
T <sub>5m</sub>	Limit of the Forward Traffic Channel fade timer	5 s	2.6.4.1.8
T <sub>20m</sub>	Maximum time to remain in the <i>Pilot Channel Acquisition Substate</i> of the <i>Mobile Station Initialization State</i>	15 s	2.6.1.2
T <sub>21m</sub>	Maximum time to receive a valid Sync Channel message	1 s	2.6.1.3
T <sub>30m</sub>	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message	3 s	2.6.2.1.1.1
T <sub>31m</sub>	Maximum time for which configuration parameters are considered valid	600 s	2.6.2.2
T <sub>32m</sub>	Maximum time to enter the <i>Update Overhead Information Substate</i> of the <i>System Access State</i> to respond to an <i>SSD Update Message</i> , <i>Base Station Challenge Confirmation Order</i> , <i>Authentication Challenge Message</i> , and <i>Authentication Request Message</i>	5 s	2.6.2.4 2.6.4

1

**Table D-1. Time Limits (Part 2 of 5)**

<b>Time Limit</b>	<b>Description</b>	<b>Value</b>	<b>References</b>
T33m	Maximum time to enter the <i>Update Overhead Information Substate</i> of the <i>System Access State</i> (except in response to authentication messages)	0.3 s	2.6.2 2.6.5.5.2.3
T34m	Maximum time to enter the <i>Update Overhead Information Substate</i> or the <i>Mobile Station Idle State</i> after receiving a <i>Channel Assignment Message</i> with ASSIGN_MODE <sub>r</sub> equal to '001' or '101' or <i>Extended Channel Assignment Message</i> with ASSIGN_MODE <sub>r</sub> equal to '001'	3 s	2.6.3.3
T40m	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message before aborting an access attempt (see T72m)	3 s	2.6.3.1.8
T41m	Maximum time to obtain updated overhead messages arriving on the Paging Channel or Broadcast Control Channel	4 s	2.6.3.2
T42m	Maximum time to receive a delayed Layer 3 response following the receipt of an acknowledgment for an access probe in the <i>System Access State</i> .  The maximum time to receive a Layer 3 response to an <i>Enhanced Origination Message</i> on the <i>Mobile Station Control on the Traffic Channel State</i> .  The maximum time to receive connection reference after call control instance is instantiated.	12 s	2.6.3.1.1.2 2.6.3.3 2.6.3.5 2.6.4

T50m	<p>When a F-CPCCH is not assigned:</p> <ul style="list-style-type: none"> <li>Maximum time to obtain (<math>N_{5m} \times 20</math>) ms of sufficient signal quality on the physical channel corresponding to FPC_PRI_CHAN<sub>S</sub> when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i></li> </ul> <p>When a F-CPCCH is assigned:</p> <ul style="list-style-type: none"> <li>Maximum time to obtain (<math>N_{18m} \times 1.25</math>) ms of sufficient signal quality on the Forward Common Power Control Subchannel assigned to this mobile station when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i></li> </ul>	1 s	2.6.4.2
T51m	Maximum time for the mobile station to receive a <i>forward dedicated channel acquired</i> indication from Layer 2 (see [4]) after the transmitter was last enabled.	2 s	2.6.4.2
T52m	Maximum time to receive a message in the <i>Waiting for Order Substate</i> of the Call Control processing that transits Call Control instance to a different substate or state	5 s	2.6.10.1.1

1  
2

1

**Table D-1. Time Limits (Part 3 of 5)**

<b>Time Limit</b>	<b>Description</b>	<b>Value</b>	<b>References</b>
T53m	Maximum time to receive a message in the <i>Waiting for Mobile Station Answer Substate</i> of Call Control processing that transits the Call Control instance to a different substate or state	65 s	2.6.10.1.2
T54m	Maximum time for the Call Control instance to send an <i>Origination Continuation Message</i> upon entering the <i>Conversation Substate</i>	0.2 s	2.6.10.2
T55m	Maximum time to receive a message in the <i>Release Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> that transits the mobile station to a different substate or state	2 s	2.6.4.4
T56m	Default maximum time to respond to a received message or order on the Forward Traffic Channel	0.2 s	2.6.4 2.6.6
T57m	Limit of the power-up registration timer	20 s	2.6.5.1.1 2.6.5.5.1.3
T58m	Maximum time for the mobile station to respond to a service option request	5 s	2.6.4.1.2.2
T59m	Maximum time for the mobile station to respond to a <i>Service Request Message</i> or a <i>Service Response Message</i>	5 s	2.6.4.1.2.2
T60m	Maximum time to execute a hard handoff without return on failure involving a new frequency assignment using the same base station	0.06 s	2.6.6.2.8.1
T61m	Maximum time to execute a hard handoff without return on failure involving a new frequency assignment using a different base station	0.08 s	2.6.6.2.8.1

2

3

1

**Table D-1. Time Limits (Part 4 of 5)**

<b>Time Limit</b>	<b>Description</b>	<b>Value</b>	<b>References</b>
T62m	Maximum time to execute a hard handoff without return on failure involving the same frequency assignment	0.02 s	2.6.6.2.8.1
T63m	Reserved (Previously: Maximum time to execute a CDMA-to-Analog handoff)		
T64m	Maximum time to wait for a <i>Base Station Challenge Confirmation Order</i>	10 s	2.3.12.1.5
T65m	Maximum time for the mobile station to wait for a <i>Service Connect Message</i> while the <i>Waiting for Service Connect Message Subfunction</i> is active	5 s	2.6.4.1.2.2.4
T66m	Maximum time for the mobile station to delete the TMSI after TMSI expiration time has exceeded the System Time	200 s	2.6.2
T68m	Maximum time for the mobile station to wait for a <i>Service Request Message</i> , <i>Service Response Message</i> , or <i>Service Connect Message</i> while the <i>Waiting for Service Request Message Subfunction</i> or <i>Waiting for Service Response Message Subfunction</i> is active	5 s	2.6.4.1.2.2.2 2.6.4.1.2.2.3
T69m	Fixed portion of the full-TMSI timer	24 s	2.6.3.1.6
T70m	Maximum time between the mobile station's obtaining a measurement and sending a <i>Candidate Frequency Search Report Message</i> which contains that measurement	0.8 s	2.6.6.2.8.3 2.6.6.2.10
T71m	Maximum time for the mobile station to send a <i>Candidate Frequency Search Report Message</i> after completing a search	0.04 s	2.6.6.2.8.3
T72m	Maximum time to receive a valid Paging Channel or Forward Common Control Channel/Broadcast Control Channel message before aborting an access attempt, when there exists at least one access handoff candidate pilot for the access attempt (see also T40m)	1 s	2.6.3.1.8
T73m	Maximum time for the mobile station to send a <i>Handoff Completion Message</i> after the action time of a received handoff message directing the mobile station to perform a hard handoff without return on failure	0.3s	2.6.6.2.5.2
T74m	Default value of the slotted timer	0.0s	2.6.4.2

2

1

**Table D-1. Time Limits (Part 5 of 5)**

<b>Time Limit</b>	<b>Description</b>	<b>Value</b>	<b>References</b>
T75m	Default value of the key set-up timer	10 s	2.3.12.5
T78m	Maximum time for the mobile station to receive a Physical Layer PDCH SDU destined for this mobile station when in the <i>Traffic Channel State</i>	30 s	2.6.4.1.8.2
T79m	<p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain sufficient signal quality on the forward link when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> and when early reverse link transmission is allowed.</p> <p>When a F-CPCCH is not assigned:</p> <p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain (<math>N_{5m} \times 20</math>) ms of sufficient signal quality on the physical channel corresponding to FPC_PRI_CHAN<sub>S</sub> when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>.</p> <p>When a F-CPCCH is assigned:</p> <p>Maximum time the mobile station is allowed to keep the transmitter on while attempting to obtain (<math>N_{18m} \times 1.25</math>) ms of sufficient signal quality on the Forward Common Power Control Subchannel assigned to this mobile station when in the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>.</p>	0.1s	2.6.4.2
T80m	Maximum time the mobile station is allowed to remain in the <i>Traffic Channel Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i> while waiting for the <i>Base Station Acknowledgment Order</i> .	0.1s	3.6.4.2
T81m	Default maximum time the mobile station's transmitter can be disabled before the MAC Layer is to perform Forward Packet Data Channel initialization.	0.1s	2.6.3.3 2.6.3.5

2

T <sub>1b</sub>	Maximum period between subsequent transmissions of an overhead message on the Paging Channel by the base station	1.28 s	3.6.2.2
T <sub>2b</sub>	Maximum time for the base station to send a <i>Release Order</i> after receiving a <i>Release Order</i>	0.8 s	3.6.4
T <sub>3b</sub>	Minimum time the base station continues to transmit on a code channel after sending or receiving a <i>Release Order</i>	0.3 s	3.6.4.5
T <sub>4b</sub>	Maximum time for the base station to respond to a service option request	5 s	3.6.4.1.2.2.1
T <sub>5b</sub>	Minimum time a base station should wait before assigning a Forward Common Power Control Channel subchannel to another mobile station when the mobile station previously assigned this subchannel did not respond to the Layer 3 message sent to release the call.	10 s	3.6.4.4

1

**Table D-2. Other Constants (Part 2 of 2)**

N <sub>11m</sub>	The duration, of sufficient signal quality (e.g. good frames), in units of 20ms, received on the Forward Traffic Channel before a mobile station re-enables its transmitter after disabling its transmitter during a CDMA-to-CDMA Hard Handoff	1	2.6.6.2.8
N <sub>12m</sub>	Number of frames over which the mobile station maintains a running average of the total received power	10	2.6.6.2.8.3
N <sub>13m</sub>	Maximum number of pilots reported in an Access Channel message	6	2.6.3.1.7 2.7.1.3.1.3
N <sub>16m</sub>	The duration of insufficient signal quality, in units of 1.25ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station must disable its transmitter.	384 (if F-CPCCH rate is 800 bps) 576 (if F-CPCCH rate is 400 bps) 768 (if F-CPCCH rate is 200 bps)	2.6.4.1.8.2
N <sub>17m</sub>	The duration of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station is allowed to re-enable its transmitter after disabling its transmitter	64 (if F-CPCCH rate is 800 bps) 128 (if F-CPCCH rate is 400 bps) 160 (if F-CPCCH rate is 200 bps)	2.6.4.1.8.2
N <sub>18m</sub>	The duration of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station is allowed to enable its transmitter after entering the <i>Traffic Channel Initialization Substate</i> of the <i>Mobile Station Control on the Traffic Channel State</i>	32 (if F-CPCCH rate is 800 bps) 64 (if F-CPCCH rate is 400 bps) 64 (if F-CPCCH rate is 200 bps)	2.6.4.2
N <sub>19m</sub>	The duration, of sufficient signal quality, in units of 1.25 ms, received on the Forward Common Power Control Subchannels assigned to this mobile station, before a mobile station re-enables its transmitter after disabling its transmitter during a CDMA-to-CDMA Hard Handoff	16 (if F-CPCCH rate is 800 bps) 32 (if F-CPCCH rate is 400 bps) 32 (if F-CPCCH rate is 200 bps)	2.6.6.2.8

1    ANNEX E   CDMA RETRIEVABLE AND SETTABLE PARAMETERS

2    This is a normative annex which describes the parameters that can be retrieved and set in  
3    the mobile station using the *Retrieve Parameters Message*, the *Parameters Response*  
4    *Message*, and the *Set Parameters Message*.

5    PARAMETER\_ID values from 0 through 32767 are reserved for definition by this standard  
6    and shall not be defined by mobile station manufacturers. PARAMETER\_ID values from  
7    32768 through 65535 may be defined by mobile station manufacturers.

## 1 ANNEX F MOBILE STATION DATABASE

### 2 **F.1 Introduction**

3 This is an informative annex which lists the numeric indicators that are described by this  
4 document and stored in the mobile station's permanent or semi-permanent memory. Some  
5 of these indicators are required; other indicators are optional and are so noted.

6 The indicators are organized in this annex according to two categories:

7     • Mobile station indicators     These indicators are global to the mobile station and  
8   independent of the mobile station's NAMs.

9     • NAM indicators                 These indicators specify parameters associated with the  
10   mobile station's NAM.

11 The description of each indicator below includes the indicator's name, the number of bits it  
12 contains, and the section in this document where it is defined. Permanent indicators are  
13 denoted by the "p" subscript; semi-permanent indicators are denoted by the "s-p"  
14 subscript.

15

## 1 **F.2 Mobile Station Indicators**

2 Mobile station indicators are organized into permanent mobile station indicators and semi-  
3 permanent mobile station indicators.

### 4 **F.2.1 Permanent Mobile Station Indicators**

5 Permanent mobile station indicators specify physical station configuration and attributes,  
6 independent of NAM. The indicators are listed in Table F.2.1-1.

7

8 **Table F.2.1-1. Permanent Mobile Station Indicators**

Indicator	Number of Bits	Where Defined	Notes
ESN <sub>p</sub>	32	2.3.2.1	See 2.3.14 for special ESN storage and protection requirements. Includes MOB_MFG_CODE <sub>p</sub> .
MEID <sub>p</sub>	56	2.3.2.2	
ACCOLC <sub>p</sub>	4	2.3.5	
SCM <sub>p</sub>	8	2.3.3	
SLOT_CYCLE_INDEX <sub>p</sub>	4	2.3.11	This is a signed integer that can take the values between -4 and +7 inclusive.
MOB_FIRM_REV <sub>p</sub>	16	2.3.14	
MOB_MODEL <sub>p</sub>	8	2.3.14	
MOB_MFG_CODE <sub>p</sub>	8	2.3.14	
For each band class supported:			
MOB_P_REV <sub>p</sub>	8	2.3.14	

9

10

## F.2.2 Semi-permanent Mobile Station Indicators

Semi-permanent mobile station indicators are retained when the mobile station power is turned off. These indicators are associated with mobile station registration and lock. They are independent of the NAM in use. CDMA indicators are listed in Table F.2.2-1.

**Table F.2.2-1. CDMA Semi-permanent Mobile Station Indicators**

Indicator	Number of Bits	Where Defined	Notes
ZONE_LIST <sub>s-p</sub>		2.3.4	
REG_ZONE <sub>s-p</sub>	12	2.3.4	
SID <sub>s-p</sub>	15	2.3.4	
NID <sub>s-p</sub>	16	2.3.4	
SID_NID_LIST <sub>s-p</sub>		2.3.4	
SID <sub>s-p</sub>	15	2.3.4	
NID <sub>s-p</sub>	16	2.3.4	
BASE_LAT_REG <sub>s-p</sub>	22	2.3.4	
BASE_LONG_REG <sub>s-p</sub>	23	2.3.4	
REG_DIST_REG <sub>s-p</sub>	11	2.3.4	
LCKRSN_P <sub>s-p</sub>	4	2.3.13	
MAINTRSN <sub>s-p</sub>	4	2.3.13	

### 1 F.3 NAM Indicators

2 Each mobile station contains one or more NAMs. Table F.3-1 lists the permanent and  
3 semi-permanent values associated with each NAM.

4

5

**Table F.3-1. NAM Indicators (Part 1 of 2)**

Indicator	Number of Bits	Where Defined	Notes
A_KEY	64	2.3.12.1.5	
SSD_A <sub>s-p</sub>	64	2.3.12.1.1	Shared Secret Data A
SSD_B <sub>s-p</sub>	64	2.3.12.1.1	Shared Secret Data B
COUNT <sub>s-p</sub>	6	2.3.12.1.3	Call History Parameter
IMSI_M_CLASS <sub>p</sub>	1	2.3.1	
IMSI_T_CLASS <sub>p</sub>	1	2.3.1	
IMSI_M_S <sub>p</sub>	34	2.3.1.1	Includes IMSI_M_S1 <sub>p</sub> and IMSI_M_S2 <sub>p</sub> .
IMSI_T_S <sub>p</sub>	34	2.3.1.1	Includes IMSI_T_S1 <sub>p</sub> and IMSI_T_S2 <sub>p</sub> .
IMSI_M_ADDR_NUM <sub>p</sub>	3	2.3.1	Applies to IMSI_M.
IMSI_T_ADDR_NUM <sub>p</sub>	3	2.3.1	Applies to IMSI_T.
IMSI_M_11_12 <sub>p</sub>	7	2.3.1.2	
IMSI_T_11_12 <sub>p</sub>	7	2.3.1.1	
MCC_M <sub>p</sub>	10	2.3.1.1	
MCC_T <sub>p</sub>	10	2.3.1.1	
MDN <sub>p</sub>	See Notes	2.3.1.4	An MDN consists of up to 15 digits based on manufacturer specific coding.
ASSIGNING_TMSI_ZONE_LEN <sub>s-p</sub>	4	2.3.15.2	
ASSIGNING_TMSI_ZONE <sub>s-p</sub>	64	2.3.15.2	
TMSI_CODE <sub>s-p</sub>	32	2.3.15.2	
TMSI_EXP_TIME <sub>s-p</sub>	24	2.3.15.2	

6

1

**Table F.3-1. NAM Indicators (Part 2 of 2)**

<b>Indicator</b>	<b>Number of Bits</b>	<b>Where Defined</b>	<b>Notes</b>
SID <sub>p</sub>	15	2.3.8	
NID <sub>p</sub>	16	2.3.8	
MOB_TERM_HOME <sub>p</sub>	1	2.3.8	
MOB_TERM_FOR_SID <sub>p</sub>	1	2.3.8	
MOB_TERM_FOR_NID <sub>p</sub>	1	2.3.8	
IMSI_10_M <sub>p</sub>	4	2.3.1.1	
IMSI_10_T <sub>p</sub>	4	2.3.1.1

# 1 ANNEX G CDMA EXTENDED ENCRYPTION CALL FLOW EXAMPLES

2 This is an informative annex, which contains examples of extended encryption call flow.  
 3 The diagrams follow these conventions:

- 4 • All messages are received without error
- 5 • Acknowledgments are not shown

6 For all the call flow diagrams, the following conventions hold:

- 7 • The following message acronyms are defined:

8 RGM: Registration Message

9 ORM: Origination Message

10 CAM: Channel Assignment Message

11 ECAM: Extended Channel Assignment Message

12 SMCM: Security Mode Command Message

- 13 • The following short forms are defined:

14 enc.k1: encrypt the message with key k1

15 csch\_enc\_req: C\_SIG\_ENCRYPT\_REQ

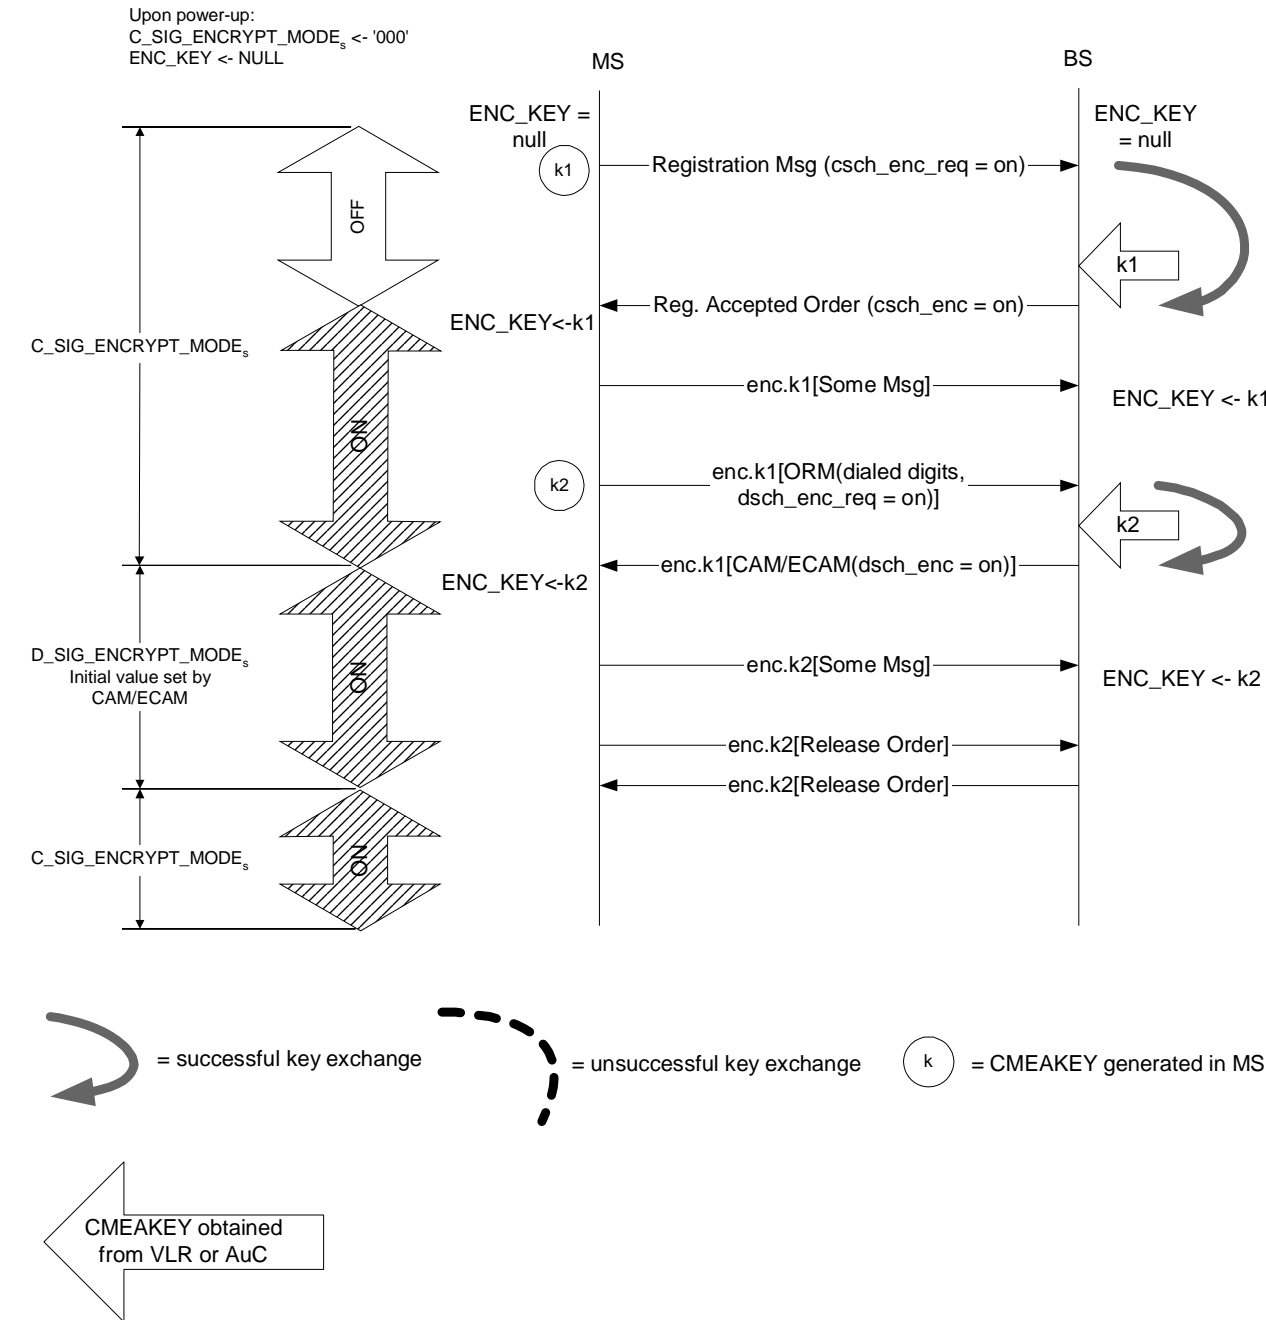

16 dsch\_enc\_req: D\_SIG\_ENCRYPT\_REQs

17 csch\_enc: C\_SIG\_ENCRYPT\_MODE

18 dsch\_enc: D\_SIG\_ENCRYPT\_MODE

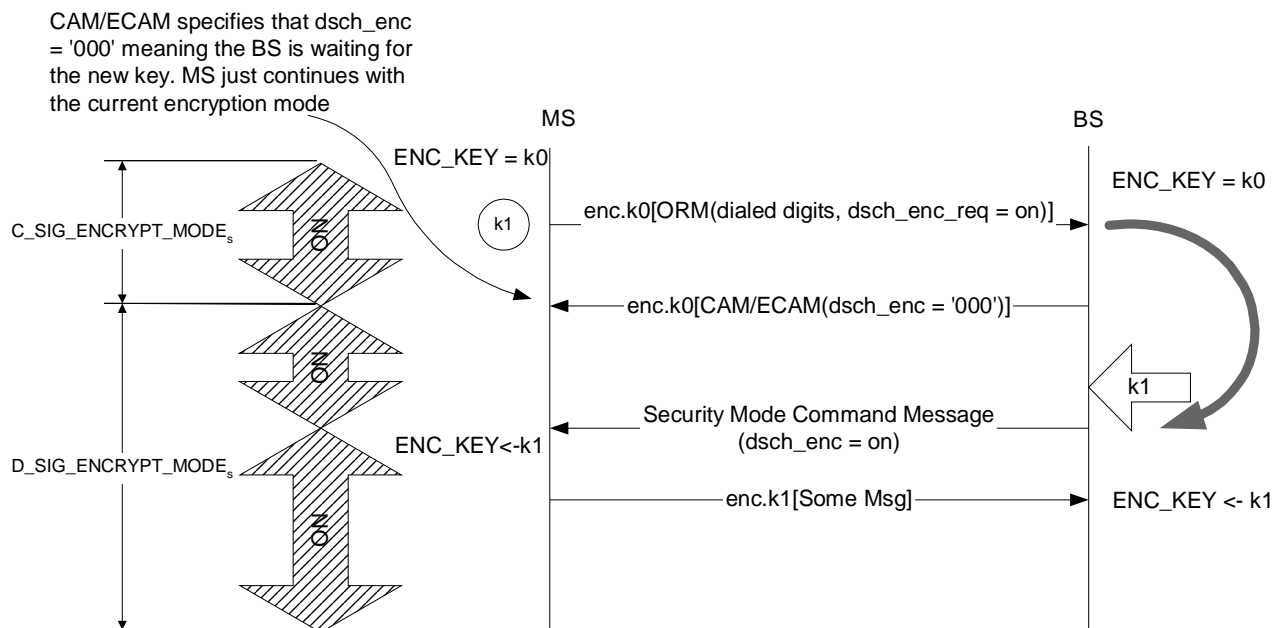

19 A <- B: assign value B to variable A

20
